diseases, a new feature introduced very recently.—**Fidelity Guarantee.** Numerous companies have been established for insuring the honesty of employes in the exercise of their vocations by policies of insurance. Many objections exist against the guarantees of private bondsmen for this purpose; and an immense and rapidly increasing number of employers prefer policies of insurance, to secure themselves against loss by the dishonesty of their servants. An insurance policy will be granted in favour of any person having a good character. The premium varies according to his responsibility, nature of employment, supervision, and remuneration. The lowest is 5s. and the highest about 60s. per cent. Clerks and cashiers are generally charged from 10s. to 30s., while travellers and collectors on small salary and commission are rated at £2 to £7 per cent. A new method of guarantee has recently been started for insuring staffs of clerks. By this system Guarantee Companies issue a collective policy which covers loss from a staff of employes of any number beyond five, so that their employer will be secured against loss by embezzlement on the part of this staff to the amount contracted for, on each of its members. By this arrangement the troublesome one of individual contracts is dispensed with. The policies of the larger Companies are accepted by various departments of the Government, Courts of Justice, the Corporation of London, and Railway Companies, etc. Ten Companies transact fidelity guarantee business, the first of which, the "Guarantee Society," started in 1840. In addition to these Companies who insure employers generally against loss by their servants' dishonesty, there is a Society called the "Bankers' Guarantee Trust Fund," to indemnify against loss by Bank employes. The Bank of England and several of the leading railway companies have a fund contributed by the employes to secure their employers against loss by the dishonesty of the former.—**Hail Storm** insurance is carried on by three Companies, the "General," founded at Norwich in 1843, being the oldest, the "Royal Farmers," having recently been transferred to the "Alliance." Insurances are effected of wheat, barley, oats, rye, and green crops against loss by hail storms at a fixed sum per acre; and crown, plate, and sheet glass at a certain sum per cent. All the Companies are in a good financial position, and do a large business. **Plate Glass** insurance was commenced in 1852 by the Plate Glass Insurance Company. The business is now transacted by 22 Companies, which insure plate and other glass against breakages from every cause except against fire. One of these Companies has paid more than £105,000 for replacing broken glass.—**Steam Boiler** insurance began by the establishment of the "Manchester Steam Users' Association" in 1854, and is transacted by 12 Companies. This business includes the insurance of boilers against explosion and against damage thereby to the surrounding property, and of the employers' liability risk under the recent statute to all accidents to the boilers covered by the conditions in the policies. The premiums vary from £1 per boiler for £100, to £5 or £6 for £1,000, according to the condition, required pressure and locality of the boiler.—**FIRE.** The business of British Fire Insurance Companies in '88 has been but a little more prosperous than it was last year, when the losses to the companies were equal to 58'68 per

cent. of the premium income. There has been a great diminution of serious fires in Mills during '88. On the 31st of October, however, the mills of Todd and Higginbotham of Glasgow were destroyed by fire. It is estimated that the loss to the insurance companies from this accident will amount to about £300,000, which will be sustained by nineteen companies. Flour mills, and especially the larger ones in which the automatic roller system of gradually reducing the wheat into flour is adopted on a large scale, are very dangerous risks. Several fire offices refuse to insure them, and others reluctantly do so, and then only on condition that very heavy premiums are paid and expensive precautions are adopted to guard against explosions from the ignition of flour dust. So intolerable are the insurance rates for nearly all these mills that many of their owners and occupiers do not insure them. Oil mills are also very risky buildings to insure, and the fire companies are not disposed to take them except at higher rates than those paid a year ago. Although unproved machinery, better lubricating oils, and extra vigilance by fire insurance companies surveyors in pointing out faults and risks of fire, have resulted in an appreciable diminution in the destruction of factories, the use of automatic sprinklers properly installed has been mostly recommended for the purpose. It is about five years since sprinklers for the automatic extinction of fires immediately on their outbreak began to be widely noticed in England. Various kinds of these appliances have been invented, and receive more or less favour. These include the "Janic," the "Grinnell," the "Witter," and the "Draper-Houghton Sprinklers." Not only is the value of fire operators well and widely appreciated by fire offices, but many have reduced their premiums when the sprinklers have been satisfactorily installed under stipulated regulations. Some non-tariff insurance companies allow as much as 50 per cent. off shop stores of drapery and upholstery when the sprinklers are used; and the factory premises are gradually gaining this privilege. It is essential that the automatic sprinklers should be more used in flour mills than they are. Some excellent rules have been drawn up by the Mutual Fire Office for the installation of these appliances. Considerable progress has also been made in Great Britain in '88 by the installation of the electric light within buildings under what are known as the "Phoenix Rules." Other regulations exist for laying down electric light plants; but there is an overwhelming mass of testimony that none are accounted safe unless installed according to the "Phoenix rules," which were drawn up by Mr. Heaphy, consulting electrician to the Phoenix Fire Office. No fire has occurred in any building in which the electric light has been provided in accordance with such rules. Great destruction of buildings by fire have, however, occurred abroad from scamped work in electric light installations. Of the new companies formed for the transaction of fire insurance business during '88 in this country are the British Law Fire Office and the Merchants' Fire Office. One of the companies established at Plymouth about seven months ago—viz., the Western Insurance Company, for the transaction of fire and marine insurance, suspended payment in July last.—**LIFE.** The improvement of the general trade of this country in '88, and the increased efforts which life insurance companies have

made this year compared with any previous one to secure new business has materially enhanced their prosperity. As the financial year with the majority of the life offices closes at the end of December, published reports of their pecuniary condition do not appear for several weeks subsequently. In '87 73 offices transacting Ordinary (as distinct from Industrial) Life Insurance notified then new yearly results—being a number larger in proportion to the whole than in any previous year. The new business obtained by the 83 companies then transacting ordinary life insurance was about £30,000,000, representing a new premium revenue of £1,000,000. An increase of premiums over the returns of the previous year is shown in the summary of the revenue account to the extent of £561,476. Out of this amount £280,153 is from the Ordinary, and £281,323 from the Industrial Branch. The amount of claims and matured endowments, which were £12,920,818, exceeded by £436,428 those reported in '86. The expenses in the Ordinary Branch were £1,819,534, being 14.07 per cent. of the premium income, or 0.10 per cent. in excess of the returns of the preceding year. In the Industrial Branch the expenses amounted to £1,660,050, being a decrease of 0.61 compared with the cost of '86. The total income was £4,226,148 more than the outgo. Since the Life Assurance Companies Act '70 came into force, returns have been made to the House of Commons by the Board of Trade for all the years from '71 to '87 inclusive of the premium incomes and of the life assurance and annuity funds of British Life Offices. A branch office of a leading French Life Insurance Company, called Le Phénix, was opened in London in '88, and is now actively pushing for business in Great Britain. It was established in '44 as a proprietary office, and it has now a reserve fund of £5,548,448. Its total income last year was £1,227,088, and its total outgo £670,470, so that it is an institution of the first magnitude. The special feature which this company adduces to attract the British public is its system of Assurance Mixtes, which is a favourable kind of endowment insurance. To outsiders who do not realise how vivid the competition is for new business by British life offices, the disparities between the rates of different offices must be something of a puzzle, seeing how exact actuarial science has become. These disparities arise chiefly from the adoption of different tables of mortality and rates of interest in the construction of the tables of premiums, and through a want of agreement as much with respect to the amount of the addition—commonly known as loading—necessary to provide for profits and expenses as to the form of its application: that is to say, whether the addition should be by a fixed percentage or otherwise. It has been well observed that the company which charges the lowest rate is not necessarily the best to insure in, even if one has decided to effect a non-profit insurance, because its advantages may be fewer than those given by another office which charges higher rates. For instance, in some companies a policy cannot lapse through the non-payment of premiums until the arrears exceed the surrender value of the policy; while in others the policy lapses should the premium not be paid within the thirty days' grace allowed, and it is not revived until a medical examination has been satisfactorily passed and a heavy fine paid. Every company tries some feature of its

own wherewith to tempt the public. In the case of with-profit assurances not only the special features of the company, but also the bonuses already declared, must be taken into account. Some companies, such as the Scottish Provident, have a rule that a member shall not participate in the profits until the premiums paid, with compound interest at the rate of 4 per cent., amount to the sum insured. A rule of this kind enables the office which adopts it to charge a lower late rate than one which gives the right to participate periodically in large bonuses, and sometimes almost immediately. Owing to the varieties of the features or attractions of the different companies, an office of the second class has a good chance of success, provided it has good and novel ideas to lay before the public. Many of the young companies have done the best business during the past year and a half. Some of the companies have recently reduced their premiums for new assurances, in order to give their agents a greater chance to succeed in the struggle with competitors; and it is said that other companies are going to take the same step. When, however, it is remembered that the premiums of some of the most progressive companies are high, a reduction does not appear to be necessary in the case of those companies who give equivalent advantages. As a rule, it will be found that when the premiums of a company are low for young lives they are high at advanced ages, and *vice versa*. Much good has been done by the Institute of Actuaries founded about forty-one years ago for the extension of actuarial knowledge. By the excellent system of examinations conducted by the Institute, much additional proficiency in life insurance transactions has been attained than otherwise would not have been. Future actuaries will have imposed on them a much higher standard of skill relating to their vocation, and far more competence will therefore be required to be shown by candidates for the fellowship of the Institute than at present. The Actuarial Society of Edinburgh, the Faculty of Actuaries in Scotland, the Insurance and Actuarial Society of Glasgow, the Insurance Institute of Manchester, the Insurance Institute of Ireland, and the Birmingham Insurance Institute, have all rendered more or less meritable service to life assurance officials and others interested in actuarial knowledge. Some serious frauds, known as the "Belfast Frauds," were committed in '88 upon the Equitable Assurance Company of the United States. An enormous amount of life insurance business is done for the benefit of poorer classes by Industrial Life Assurance Companies, Collecting Friendly Societies, and the Post Office (*q.v.*) This kind of insurance has immensely increased during the last ten years. The following figures show the large premium incomes received by a few of these companies and societies for the year ending the 30th of September, '87, from industrial insurance: viz., (1) By Industrial Assurance Companies: Prudential, £4,058,501; Kellogg, £399,666; Pearl, £233,130; British Workman's, £173,544; London, Edinburgh, and Glasgow, £82,563. (2) By Collecting Friendly Societies: Liverpool Victoria Legal, £358,504; Royal Liver, £382,607; Royal London, £150,880; Scottish Legal, £94,021. There are 52 of these societies in Great Britain, 47 in England and 5 in Scotland, and all the large English and Scotch Societies have branches in Ireland. The four Societies before mentioned

contain 90 per cent. of the members of collecting societies. The average premiums paid by each member is 14d. per week. Further legislation is sought to reform them. See also MARINE INSURANCE.

International Copyright. Artists and authors have long desired to obtain an international law of copyright, by which works of literature and art might be protected, not only in the countries where they were first published, but in all civilised countries. An important step in this direction was taken by the conference upon international copyright held at **Berne** in September 1885, and attended by representatives of the following states: Germany, Spain, France, Great Britain, Haiti, Honduras, Italy, the Netherlands, Sweden and Norway, Switzerland, and Tunis. At this conference there was settled the draft of a convention for securing to the authors of literary or artistic works published in any one of the countries represented copyright in all the others. Such copyright is not to be more than the author enjoys in his own state, nor more than the state granting it secures to its own subjects. The provisions of the convention extend to dramatic and dramatic-musical works. They extend to all works which at the date of the convention have not become public property. They forbid the publication of a translation not sanctioned by the author of the original work. But if within a certain time there appears no authorised translation, an unauthorised one may be published. Articles which have appeared in newspapers or periodicals may be reproduced, unless such reproductions have been expressly forbidden by the original authors or publishers, and no prohibition by them can have effect in the case of articles discussing politics, current topics or news of the day. A work is not to be indirectly appropriated by a reproduction which, in spite of superficial changes, is essentially the same as its original. The convention establishes an Office of the International Union for the Protection of Literary and Artistic Works, which is to be under the surveillance of the Swiss Government, and is to be supported by contributions from all the contracting parties. Any State, not a party, which is willing to adopt the provisions of the convention, may give in its adherence, whilst any state which is a party to the convention, and wishes to withdraw, must give a year's notice of its intention. The convention is to take effect within three months from the adoption of the draft. **Conferences for its revision** are to be held successively in each of the countries by which it has been adopted. It does not annul or preclude any conventions already existing or hereafter to be made between any two or more of the contracting parties, provided that such special conventions secure at least as ample a protection to authors as it does, and do not otherwise conflict with its provisions. In this country **Act of Parliament** have been passed in 1844, 1852, 1875 and 1886, with the object of securing copyright to authors and artists who are subjects of foreign states which secure copyright to British artists and authors. These Acts empower Her Majesty by Order in Council to

grant copyright to the artists and authors of such countries, and Her Majesty has a large discretion in fixing the conditions with which they must comply. The existence of the copyright of the **foreign author** in his own country may be proved by a certificate under the official seal of a Minister of State in that country or of a British diplomatic or consular officer acting there. Copies of works made in any foreign country other than that in which the protected work was first published and made without the consent of the proprietor of the copyright may not be imported into this country. An **Order in Council** issued under these Acts applies to works produced before the date of the Order, but not so as to prejudice any person who has lawfully produced any work in the United Kingdom. It shall be taken to apply to every British possession, saving only those which are expressly excepted. The Act of 1886 contains several modifications of previous statutes intended to harmonise with the provisions of the convention of Berne above noticed. Conventions for the mutual protection of copyright have been made between the United Kingdom and several foreign states. The question of an International Copyright Treaty between **England and America** has been much discussed during the past few years, on both sides of the Atlantic. In England the **Incorporated Society of Authors (q.v.)** have kept the question prominently before the public, and the **American Copyright League** have been similarly occupied. See also COPYRIGHT.

International Geological Congress. See GEOLOGY.

International Law in '88. In the case of the Republic of Peru *v.* Dreyfus (Chancery Division, February), the question arose whether internal acts of State performed by a revolutionary Government which has been recognised by foreign States, for international and diplomatic purposes, as a Government *de facto*, are to be recognised as valid upon the restoration of the original or constitutional Government, especially as regards contracts entered into by the revolutionary Government with foreigners. The question in the present case related to the right of the plaintiffs, the present Republic of Peru, on the one hand, or of the defendants, Messrs. Dreyfus Brothers & Co., on the other, to the proceeds of eleven cargoes of guano shipped from Peru about the month of January '80, and which arrived in this country in April of that year. Mr. Justice Kay, in deciding against the plaintiffs, made the following important pronouncement:—"It is a question of international law of the highest importance whether or not the citizens of a foreign State may safely have such dealings as existed in this case with a Government which such State has recognised. If they may not, of what value to the citizens of a foreign State is such recognition by its Government? There have been successive Governments in European countries—usurpations of the power of previous Governments overthrown, altering the constitution essentially. These have in turn been recognised by this and other nations. When the Government of this country recognised the third Emperor of the French, if any Englishman entered into contracts with his Government, could it be maintained that the validity of such contracts must depend upon the law of France as settled by decree of the Republic which was established on his deposi-

tion? Obviously it would follow that no Englishman could safely contract with the present Government of France, or, indeed, with any existing Government, lest it in turn should be displaced by another Government which might treat its acts as void. There is no authority for any such proposition."

International Telegraphy. The results of the International Conference held at Berlin in 1885 took practical effect on the 1st of July, 1886. Previous conferences were held at Paris in 1865, Rome, 1879, St. Petersburg, 1875, and London in 1879. At the last-mentioned conference the whole of the regulations and tariffs affecting the traffic on international telegraph lines was revised, and one very important change which resulted from that conference was the substitution of a word rate for the then existing twenty-word rate. For some time previously a word rate had been applied with much success to what is known as the extra-European system, and it was probably that fruitful experience which led the London Telegraph Conference of 1879 to adopt a general word-rate for the European system. The business transacted at the Berlin Conference of 1885 consisted mainly in revising and modifying the existing regulations; but some important reductions were also made in the rates to several countries, of which the following are a few examples:—Russia, from 9d. to 6d.; Spain, from 6d. to 4d.; Italy, from 5d. to 4d.; India, from 4s. 7d. to 4s.; China, from 10s. to 8s. 9d.; Australia, from 10s. 8d. to 9s. 4d. Under the new convention the names of both the office and country are now counted in the address as one word each, whatever their length, provided they are written by the sender in the recognised official way. The charges for repeating a telegram from office to office during transmission have been reduced to the payment of an additional quarter-rate instead of a half-rate as formerly. The charges for any words omitted during the transmission of an extra-European telegram will be refunded. Another important alteration resulting from the Berlin Conference, which it is right should be generally known, is that if the sender of a European telegram prepays a reply, and the reply form is not used by the addressee, the amount prepaid for the reply is not now refunded, as was formerly the case. Many other new regulations respecting foreign telegrams were also agreed upon at the Berlin Conference. See SESSION '88, sect. 55.

Inter-oceanic Railway. Towards the end of July '88 it was reported that the first order of rails for this line had been placed with a Workington firm, light sections, 40 lb. flanged, at under £5 a ton the quantity being 20,000 tons. The capital of the company is £2,500,000, and the line (of which Messrs. Livesey & Son of London are the engineers) will extend from Vera Cruz to Mexico City, and ultimately connect with New York. The concession, it seems, was granted to Lord Gosford as the representative of certain English contractors and engineers, and the terms of the contract show that £2,000,000 will be paid if the line, 265 miles long, is completed in four years from the commencement, a higher payment being paid for a shorter time. The 265 miles may be finished by the end of '89.

Intervention of Peers in Parliamentary Elections. On Feb. 4th, '87, a Select Committee of the House of Commons was appointed to consider the Sessional Order with reference to the intervention of peers or prelates in Parliamentary elections, and to report whether any, and, if so, what alterations are advisable therein. The Sessional Order referred to declares it to be a high infringement of the liberties and privileges of the Commons for any lord of Parliament, or other peer or prelate, not being a peer of Ireland elected to serve, or standing as a candidate, for any county, city, or borough of Great Britain, to concern himself in a Parliamentary election; or for any Lord Lieutenant of a county to avail himself of any authority derived from his commission to influence any election of an M.P. The Committee reported on Feb. 18th that the Sessional Order referred to appeared to be a declaration by the House of its privilege, as well as of that which was, in the opinion of that House, the common law of the land; that such declaration was first made in the year 1647, and since the year 1700 had been renewed annually in almost identical terms; that, as far as the Committee had ascertained, this declaration of the common law had never been controverted by the House of Lords or by any judicial tribunal; that the Sessional Order had been recognised by the Courts as a declaration of the law; and that, although a rescission of the Order would not alter the common law, it would be calculated to give rise to a mistaken idea, either that the law had been incorrectly stated, or that it was obsolete. The Committee recommended that the Sessional Order should be continued. See SESSION '88, sect. 55.

Intoxicating Liquors (Sale to Children) Act, '86. See ed. '88.

Ireland and Scotland Tunnel. This is a scheme which has the advantage, in some minds, of settling a great political difficulty, besides bringing about the ordinary material advantages supposed and expected to arise from a great engineering work. The proposal is to construct a tunnel from Portpatrick, in Scotland, to Donaghadee in Ireland, an undersea distance of over a score of miles, at a cost of six or seven millions sterling. A modification of the original suggestion was made during the year 1886, by proposing a railway tunnel; and it was reported in July of that year that Mr. Douglas, engineer to the Board of Irish Lights, was engaged in taking soundings with the view of reporting on the subject. The following figures in reference to this semi-political matter will be interesting: cost of tunnel £5,000,000; land approaches £1,000,000; greatest depth of water midway 780 feet, and the roof of the tunnel would have to be 200 feet below that; the deep-sea portion would be 2½ miles. (For further details see ed. '88.) No steps seem to have been taken with regard to this project during '88.

Ireland. An island lying to the west of England and Scotland, bounded on the east by the Irish Sea or St. George's Channel, and on the south, west, and north by the Atlantic Ocean. Greatest meridional length 225 m.; breadth about 120 m.; area, 32,520 sq. m.; or 20,873,271 acres. Pop. (in 1881) 5,174,836. Till the middle of the eighteenth century the industry was almost exclusively pastoral, and at the present time the crops chiefly grown

are hay, oats, and potatoes, with flax for the supply of a not too prosperous linen industry, the other principal manufactures being porter, whisky, and butter. (For concise history of Ireland to fall of Lord North's Ministry, see ed. '88.) On the fall of Lord North, in 1782, the short-lived **Rockingham Ministry** repealed the Act annulling the jurisdiction of the Irish Peers, and the next year established the Irish courts and parliament in the same position in Ireland that their counterparts occupied in England. At another time, and under changed circumstances, the experiment of two legislatures under one Crown might have succeeded. But the Irish had found the additional strength which the Catholic Relief Act and the arming of the Volunteers had given them; they had before their eyes the example of the successful revolt of the American Colonies; and the concession of much only made them long for more. Upon people so disposed came the example of the **French Revolution**, and the advantages it seemed to offer them. Although the desire for further Catholic emancipation was no doubt in itself genuine enough, this was soon seen to be desired only as a means to an end; and when secret negotiations with the French Directory seemed to promise a shorter road to independence they were entered into, and rebellion and massacre were timed to coincide with a French invasion in 1798. The abortive invasion and the bloody revolt cost Ireland 100,000 lives, and England 20,000, and upon peace being restored the Union had become a political necessity. It was Pitt's idea that with the Union he could safely grant the **Catholic Emancipation**, which alone would pacify the Irish, and which could not be granted except on the condition of Union. In this he was thwarted, and Ireland had to wait nearly thirty years till the concession was granted as the alternative of reconquest. Since the Union, but more especially since Catholic emancipation and the last two Reform Bills, the parliamentary history of Ireland has consisted in the formation and organisation of a **Repeal Party** in the House of Commons. The creation of such a party, acting upon the party system of English government, has had most pernicious effects in both countries. Even when what was called the Irish vote was comparatively small, it might decide a critical division, and was bought by concessions, the effect of which was neutralised by coercive measures whenever Irish disaffection so provoked the English constituencies that to tamper with it became politically dangerous. In this way England's Irish policy has for the last half-century alternated between severity and surrender, with the result that we have now presented to us the largest demand of all; and Mr. Gladstone has staked his political existence upon compliance with it. The political machinery which gave force to the demand was provided by Mr. Gladstone himself in the **Reform Act of 1885**, by which Ireland retained an excessive representation, and electoral power was thrown into the hands of the classes most disaffected. Returned to Parliament at the head of eighty-six supporters, unanimous in their demand for **Home Rule** (*q.v.*)—which means Repeal, or as near a measure to that as can be had—and ready to give their support to any leader who will aid them in getting it, Mr. Parnell soon found an ally in Mr. Gladstone, who recently (1886) brought forward two measures to secure

his object. The first gave Ireland a parliament free to legislate on all Irish subjects, but restricted from legislation concerning the Crown, war or peace, the army and navy, foreign affairs, trade and navigation, and other minor matters. There were also provisions intended to secure religious freedom and unjust taxation. It was also provided that the revenue of Ireland should be paid over to an English receiver, who should hand back the balance after deducting Ireland's share of Imperial burdens. The second bill—to be read as one with the first—provided a scheme for buying out the landlords and handing over their estates to the tenants, whose payment of reduced rents should go to repay the purchase money and interest. The Irish party accepted the scheme so far as to vote for it, but did not conceal the fact that they objected to the restrictive provisions, and did not regard the measure as final. A section of the **Liberal Party**, believing in the finality, and relying on the restrictive safeguards, also supported the bills. The **Conservatives** and a considerable number of **Liberals** (**Liberal Unionists**) combined to defeat the project by 341 against 311; and on a dissolution this verdict was confirmed by the country. At the present moment there is no scheme of Home Rule before the country. Mr. Gladstone refuses to put into concrete form his ideas on the subject, and the Liberal Unionists decline to follow him until he does. It is not our function to pronounce on the merits of the dispute. (See article HOME RULE.)—The political history of Ireland during the past year ('88) may be described as a continuation of the struggle between the Government on the one side and the forces of the Land League on the other to obtain the upper hand in the country. Mr. Balfour has unflinchingly carried out the **Crimes Act**, dispersed meetings of the Land League wherever he found them, and put members of Parliament into prison without hesitation who had been convicted of breaking the law. This stern policy has diminished the crop of outrages and weakened the influence of the Land League, but it has also led to an increase in the bitterness felt by the Land League towards the Government. According to official statements made in Parliament Ireland is at present more orderly than it has been for a considerable period, but the Land League officials declare this state of things to be due to the coercion practised by the authorities of the Castle. Mr. Balfour, the Chief Secretary, particularly has been the recipient of the maledictions of the Irish party. The arrest of Mr. Fyne and Mr. Gilhooly, two members of the Home Rule party, almost within the precincts of the Houses of Parliament, and at the very opening of the Session, led to a heated debate, which was followed soon after by another on an amendment to the Address, moved by Mr. Parnell, condemning generally the administration of the Crimes Act. The amendment, after a long debate, was lost by a majority of 88. On the report stage of the Address, another discussion took place, on a motion of Mr. Shaw Lefevre, calling attention to the absence of any reference in the Queen's Speech to the arrears of excessive and unjust rents in Ireland. Mr. Balfour pointed out that, no matter what was done to alleviate by legislation the condition of the people of Ireland, it was absolutely necessary to maintain the supremacy of the

law. The motion was defeated by a majority of 93. Throughout the sitting of Parliament the Irish Executive pursued its policy of suppressing illegal meetings and arresting those who had taken part in them. **Mr. Dillon** was imprisoned, and so was **Mr. Redmond** and other influential members of the Land League. **Mr. Mandeville**, an active adherent of the League, after undergoing his term of imprisonment, died during the summer, seven months after his release. His death was at once attributed to his prison treatment, and an agitation arose, the echo of which has not yet died away. **Evictions** on a considerable scale have been carried out during the year, a large number of **Lord Clanricarde's tenants** having been turned out of their homes amid scenes of very unusual excitement. In many cases the tenants barricaded their houses, and when the police advanced poured upon them hot water, stones, and missiles of every description. Huge battering-rams had to be employed to force the doors. These evictions gave rise to much excitement both in Ireland and in England, and the usual crop of contradictory statements as to the justification of the landlords soon appeared. **Mr. T. W. Russell, M.P.** for Tyrone, who was an eye-witness of the Clanricarde evictions, declared that in every case he inquired into he found that the tenants were able to pay their rents; but his statement was met by flat contradiction on the other side. The autumn recess was marked by the usual political harangues, a large portion of which were devoted to Ireland. Active controversies arose between **Mr. Balfour** on the one hand and several leading Gladstonians on the other with respect to points raised in recent Irish history, into the merits of which it is not necessary to enter.—**The Land Question.** After all, however, it is urged, the great question in Ireland is the Land Question and that of the condition of the people. Here, too, a brief retrospect may be interesting and useful. For present purposes it would be useless to go back beyond the reign of **James I.** In 1626 Ireland exported 449 tons of iron, 557 tons of lumber, 400,000 barrel staves and 25,000 pipe staves. The country was not yet cleared of its woods, and the exports of lumber continued for forty years longer. Agricultural produce and fish were also exported, and some coarse manufactures flourished. This prosperity was checked by the civil wars, but revived at the Restoration, and in 1665 the export trade amounted to £358,077, of which England took about half. Of this £309,000 was for agricultural produce, including some woollen goods; linen (yarn and cloth) appears for the first time, and figures for £18,000. "Manufactured iron" stood at £1,116. Imports the same year amounted to £339,000. By 1681 exports had risen to £583,000, and imports to £433,000. The wars of the Revolution utterly paralysed Irish trade, and it was not till 1697 that these figures were again reached. But the next year, after the peace of Ryswick, exports rose to close on £1,000,000, and imports to £576,000. Then began the policy of restrictions on Irish trade, and for a time the figures were kept down, but by 1715 had risen to £1,250,000 exports, and £882,000 imports. Varying from time to time from political causes, but rising on the whole, in 1772 the imports and exports stood respectively at £2,415,000 and £3,302,000. During the ten years that

England was weakened and embarrassed by the American War, Ireland recovered her freedom of trade. By a series of statutes, tobacco was allowed to be grown and imported in Britain; bounties were given on the importation of hemp; woollens and glass were allowed to be imported from Ireland; and free trade with America, the West Indies and Africa, was conceded; the Turkey trade was opened to Ireland, and the exportation of gold and silver to that country was permitted. By these means, in spite of war, the Irish trade held its own, and after the peace with America largely increased. At the present day, now that the population of the country is again about what it was at the time of the Union, the exports of cattle, sheep, and pigs to Great Britain alone are worth at least £12,000,000 annually, whilst the value of the fish sent to us is close upon £1,000,000, and likely to increase. But while these and other figures might be quoted to show the comparative progress in wealth made during the century, they do not touch the real grievance that has been at the bottom of Irish discontent and has given strength to every anti-English agitation. No doubt that grievance was in the first instance the evil of **absentee landlords**—often men who neither by birth nor sympathies were Irish, but who drew from the Irish tenants the means of enjoying in England the comforts and civilisation which they must have missed had they done their duty by their estates. If they had contented themselves with their rents less harm might have been done; but they encumbered their property with mortgages, while the agents they employed farmed their rents for a lump sum, and seized their own profit out of the unlucky occupier. Doubtless the Union, by centralising the Government in England, aggravated the evil which perpetual disturbances had encouraged; but during the **Continental Wars** the high prices of produce kept the Irish farmer alive though rents were going up. The battle of Waterloo and the **Peace** brought a sudden collapse, and soon we begin to hear of starvation, default, evictions and outrages. The "**Threshers**" of 1806 developed into the **Whiteboys** or **Rockettes** of 1820, or took the more constitutional form of the Catholic Association, to be duly suppressed by Peel's Police and Peace Preservation Acts. Catholic emancipation (1829) removed a stigma, but brought no food to hungry people; and soon the weary round of suffering, outrage, and repression was repeated. At length the Government set to work to grapple with the real evil, and the **Devon Commission** was issued in 1844, and reported early in 1845. Before this report could be acted upon came the potato blight and the **famine of 1845 and 1846**, during which time by death and emigration the **Irish population** was diminished by more than 1,000,000. The total in 1841 had been 8,175,124; in 1851 it was 6,515,794. There can be no doubt that, though not perhaps more than the land could support, the Irish population had been, and probably still is, greater than could be supported by the existing state of industry. At any rate, since the relief afforded by emigration has been discovered, the Irish have not been slow to avail themselves of it, as the present diminishing population of less than 5,000,000 sufficiently shows. It is also significant that for the last thirty years every Irish disturbance has been of foreign origin. Soon after the famine

an Act was passed for the relief of encumbered estates by compulsory sale. This tended to clear away a number of landlords who could never have done anything but hang uselessly on the land; but they were not succeeded by men who put capital into the land. On the contrary, estates were largely bought by men who merely looked upon the purchase money as an investment on which, without further trouble to themselves, the rents would be a good return. They too were absentees, and the last state of the tenant was worse than the first. The gradual drain of population did something to mitigate the lot of those who were left, but the agitation for tenant-right increased rather than diminished, and growing discontent prepared the soil for the Fenian movement of 1865 to 1870. To this movement belongs the credit of having stirred up Mr. Gladstone to devote himself to the Irish question. The disestablishment of the Irish Church put the priesthood on his side; and his Land Bill of 1870 gave the tenant some guarantees against capricious disturbance, and compensation for his unexhausted improvements, and had fair provisions to enable tenants to become proprietors. Had it been followed by a long series of good years it might have done much; but the years from 1877 to 1880 were bad, and disaffection, promoted as before from America, revived. The Irish parliamentary party were now much stronger, and Mr. Gladstone's Act of 1881 was accordingly more drastic. It established a Land Commission to revise rents and fix them for fifteen years, and to this fixity of tenure added freedom of sale. The extent to which tenant rights have since increased in value is a reasonable measure of the freedom with which rents have been reduced. A subsequent measure, known as Lord Ashbourne's Act, passed by the Conservatives, to advance money to tenants anxious to buy their estates, has been largely taken advantage of, and already heavy loans have been granted, with the result that land is slowly but steadily passing from the hands of the old landlords into those of the tenants. See HOME RULE, and ENGLISH POLITICAL PARTIES.

Ireland, Government of. The head of the executive is the Lord Lieutenant, who is assisted by a Chief Secretary, the Lord Chancellor of Ireland, the Attorney-General for Ireland, the permanent officials, and a Privy Council (which is a separate and distinct body from the Privy Council of Great Britain); but the government of the country is in all essential points carried on under the direction of or in concert with the Ministry of the day in London. The Lord Lieutenant is charged with the maintenance of peace and order; the Irish Constabulary are under his control, and he may, if he think it to be necessary, direct the Commander of the Forces to send troops to their aid. He has power to commute sentences and pardon criminals, and he may by and with the advice of his Council issue proclamations under the Criminal Law and Procedure (Ireland) Act 1867 (*q.v.*). There are, however, more agreeable and less anxious functions attaching to the office; for, as representing Her Majesty, the Viceroy, assisted by his wife, holds courts, drawing-rooms, levees, and maintains in Dublin an establishment of a semi-regal character. On occasions he confers the honour of civil knighthood. During his absence the duties of chief governorship are performed by three or

more Lords Justices, those who act in this capacity being usually the Lord Chancellor of Ireland, the Commander of the Forces, and some of the judges. The Chief Secretary to the Lord Lieutenant, or Chief Secretary for Ireland, as he is usually called, has been described as prime minister to the Viceroy; and although he is in theory subordinate to the Home Office, he has his own establishment at the Irish Office in London, as well as in Dublin, and is directly responsible to the House of Commons for the acts of the Irish administration. He is assisted by a Permanent Under-Secretary (Sir J. West Ridgeway: salary £2,000), and other officials. (The late Col. King-Harman acted for a while as Parliamentary Under-Secretary without salary. See SESSION '88, sec. 39.) There is a separate Local Government Board for Ireland; a Board of National Education, by which the grant made by Parliament for public education is administered, the inspection of Irish fisheries is kept separate from the supervision of those of England or Scotland; and there is a veterinary department in Dublin for dealing with cattle diseases, etc. See MINISTRY.

Ireland, Royal Commission on Material Resources of, '87. See ed. '88.

Ireland, Royal University of, Earlsfort Terrace, Dublin, founded 1879 under the University Education (Ireland) Act. On its establishment Queen's University, founded 1850, at Dublin, dissolved; and the relations of the Queen's Colleges at Belfast, Cork, and Galway to the new University were revised. Its degrees, exhibitions, and scholarships are open as well to female as male students, who number about 1,000. Chancellor, the Marquis of Dufferin and Ava. These degrees and hoods are:—**L.L.D.** (hood scarlet cloth, lined with pink silk); **L.L.B.** (h. black silk faced with white); **M.D.** (h. scarlet cloth lined with scarlet silk); **M.B.** (h. black silk faced with scarlet); **M.Ch.** (h. black silk, lined with white and faced with blue); **M.A.O.** (h. black silk, lined and faced with purple); **D. Mus.** (h. white figured silk, lined and faced with rose-coloured satin); **B. Mus.** (h. blue silk, lined with rabbit skin); **M.E.** (white silk, lined and faced with green); **B.E.** (h. black silk or stuff, lined and faced with green); **D. Sc.** (h. scarlet cloth, lined with blue silk); **D. Lit.** (h. scarlet cloth, lined with white silk); **M.A.** (h. black silk, lined with blue silk); **B.A.** (h. black silk or stuff, lined with rabbit skin). In '85 the Princess of Wales received the degree of **D. Mus.**

Irish Exhibition, The, '88. This Exhibition, which owed its initiation largely to the efforts of Lord Arthur Hill, was opened on June 5th, and continued till the autumn, at Olympia, West Kensington. The object of the Exhibition was to attract attention and give an impetus to purely Irish industries. The opening day saw the Lord Mayor of London (Sir P. De Keyser) and the Lord Mayor of Dublin (Mr. Sexton, M.P.) on the platform advocating the industries of Ireland. Mr. Sexton, made a speech calling attention to the great natural resources of his country, and pleading for a better commercial understanding between the peoples of England and Ireland. The Exhibition itself gave an excellent view of the principal manufactures of Ireland by exhibits of machinery in motion, and of labourers at work; and the articles shown ranged from the most elaborate and costly products of the factories of Belfast to the sewing and knitting done by the wives and daughters of the poor peasants of Donegal.

One of the chief features of the exhibition was the **Irish village**, where dairy-farming was carried on by Irish dairymaids. The historical and antiquarian features of Ireland were well represented. The utilitarian objects of the Exhibition were well carried out, and in addition to them various **spectacular and other entertainments** were offered to the public, by whom the show was well patronised. The Baroness Burdett-Coutts, the Earl of Leitrim, the Marchioness of Waterford, the Marchioness of Londonderry, Mrs. Gladstone, Canon Bagot, Mr. and Mrs. Ernest Hart, and many other ladies and gentlemen prominently known in connection with the advancement of Irish industries, took an active part in the work of organising and carrying on the undertaking. An incident that created some political feeling at the time was the alleged refusal of the Cork band to play the National Anthem, it being said that they dare not go back to Ireland after playing it. Their defence, however, was that they had not the music of "God Save the Queen," that they could not play without it, and that they had no intention of insulting the English people. A certain proportion of the profits of the Exhibition were to be devoted to **Irish industrial schools**. During the year the Executive of the Exhibition published "A Handy Book of Reference for Irishwomen," edited by Miss Helen Blackburn, and giving a systematic survey of Irish industries.

Irish Land Question. See SESSION '88, sec. 21; and IRELAND, *supra*.

Irish Land, Royal Commission on '86. This Commission was appointed on Sept. 21st, 1886, to inquire into the operation of the **Irish Land Act 1881**, and the **Land Purchase (Ireland) Act 1885**; and likewise to ascertain whether any and what combinations existed, directed against the payment of rent, and, if so, how far non-payment was due to financial inability of tenants, arising from a succession of bad seasons, and the enormous fall in the price of stock and agricultural produce, and how far to other causes. See ed. '88.

Irish Nationalist Party. See POLITICAL PARTIES (ENGLISH).

Irish Peers. See PEERAGE.

Irish Sea and Birkenhead Ship Canal. In the next session of Parliament powers are to be sought to construct a ship-canal from the **Irish Sea**, through **Wallasey Pool**, and a portion of the low-lying lands of **Leasowc**, to the **Mersey**, where there will be a float or basin and locks. The cutting of some such canal through the **Wirral peninsula** to avoid the sandbanks at the mouth of the **Mersey** has long been discussed, and the construction of the **Manchester Ship Canal (q.v.)**, the **Dee Bridge (q.v.)**, and the **Mersey Tunnel Railway (q.v.)** have undoubtedly enhanced the position of **Birkenhead**. It is said that a vigorous fight is expected in Parliament, for years ago **Liverpool** did her utmost to thwart schemes of this nature.

Iron and Steel. Generally speaking, iron is employed in three different forms—namely, cast iron, wrought iron, and steel. Cast iron is a hard and comparatively brittle substance of crystalline character, which can be fused at a high temperature and moulded. Wrought or malleable iron is soft and tenacious, its structure being fibrous. Steel forms an intermediate link between ordinary cast and malleable iron, and unites within certain limits the properties of both. Steel is produced in a variety of ways,

but the methods now adopted in most countries for producing steel, especially in large quantities, are the **Bessemer**, the **Siemens-Martin**, and the **Thomas-Gilchrist** processes, which are named in the order of their invention. By the latter process, steel is successfully produced from iron obtained from inferior ores of the more highly phosphuretted kind, which could not be converted into good steel by either of the other methods. The production of steel by this process from phosphoric pig-iron continues steadily to increase. As was to some extent anticipated in our last issue, the iron and steel trades for '88 proved prosperous, there being a marked improvement, especially about the beginning of the second half. It is pleasing to add that the development was seen in both iron and steel production, and all branches to a greater or less extent shared in the enhanced sales and prices—from **Glasgow** to the **Black Country**, and from **Middlesbrough** to **South Wales**. During the nine months ending Sept. 30th, '88, the following were the values of the exports of the different classes of articles named, compared with the corresponding period of '87:—**Pig and puddled iron**, '88, £1,698,564, against £2,113,229 in '87; **bars, angles, etc.**, £1,228,220, against £1,046,053; **railroad**, £3,574,606 against £3,372,123; **wire**, £643,097 against £450,761; **telegraphic wire**, £397,139 against £657,064; **cast and wrought**, £3,618,192 against £2,999,286; **hoops, sheets, etc.**, £3,035,299 against £4,408,052; **old iron**, £318,312 against £651,528; **steel, unwrought**, £1,120,309 against £1,639,050; **tinplates**, £4,255,794 against £3,603,023; **tin, unwrought**, £583,459 against £306,682. It will be observed that the chief increases in this excellent return were in the higher-class goods, which of course means that more absolute work was done in the country in respect to the total volume of the exports. Take, for instance, the export of old iron: it fell off more than 50 per cent., showing that more was kept at home to work up for re-manufacture. A few more figures as to typical sections of the trades will indicate the course of business during the year. According to the September returns of the **Cleveland Iron Masters Association**, the **stocks of iron** held in the district had been reduced by 22,400 tons in the month, bringing up the reduction since the previous December to no less than 177,000 tons. Later, however, the setting in of what threatened to prove an early winter, with violent weather, materially checked the clearance. The total production of pig iron during the first half of the year was estimated at 3,902,804 tons; while that of finished Bessemer steel, other than rails, in the **United Kingdom** for the same period was as follows:—**Plates**, fish plates and angles, 32,609 tons; **bars**, tees and forgings, 104,759 tons; **blooms and billets**, 170,711 tons; **sleepers**, 46,961 tons; **castings**, 2,234 tons. The quantities of **open-hearth steel ingots** produced in the **United Kingdom** during the first half of the year were as follows:—**Scotland**, 223,192 tons; **South Wales**, 131,703; **Lancashire and Cheshire**, 39,152; **Sheffield and district**, 45,500; **North-east coast**, 141,103; other districts, 35,771: total, 626,421 tons, against 405,390 tons in the first half of '87, showing an increase of 221,031 tons. The production of **Bessemer steel rails** for the first half of the year was 487,174 tons, against 445,785 tons in the corresponding period of '87; the increase in **South Wales**, **Cumberland** and **Lancashire** in '88 was 76,192

tons; the decrease in Cleveland, Sheffield and other districts was 34,803 tons, leaving a net increase for the half-year of 41,389 tons. It may be added here that the **Board of Trade Returns** for October indicated an improving condition of trade, for while the increase in the exports of iron and steel was only small, the values went up 9·2 per cent. In **machinery** there was an increase in value of nearly 27 per cent. and in **hardware and outlery** the increase was 12·1. It is a remarkable sign of the times that, in the midst of all this prosperity, the demand by the **United States** for our **unwrought steel** for the first ten months of the year only amounted to £397,990, against £1,047,915 during the corresponding period of '87. As to prices, it is sufficient to call attention to what occurred at the quarterly meetings at Wolverhampton and Birmingham at the beginning of October. For the first time for two and a half years the price of Staffordshire marked iron was changed, the figures going up 10s. per ton, so that the minimum for common marked bars went up to £7 10s. The former figure, £7, was the lowest point touched for thirty years. Enough figures of a miscellaneous character have been quoted to signify the nature of the trade, and the indications during the last quarter of the year seem to show that the opening of the next shipping season will witness a continuance of the heavy despatch abroad, and therefore of the prosperity which has again visited the trade in nearly all, if not all, its branches. It is interesting to notice that the **steel sleeper** manufacture is developing in an encouraging manner in South Wales, the demand coming not only from foreign lines, where they seem to be growing in favour, but from the local collieries. Probably the opening of the new Dowlais branch works at Cardiff will push on this comparatively new industry in that quarter. The utilisation of **Basic slag** as a fertiliser was not neglected during the year. The Staffordshire Steel and Ingot Co. laid down an extensive plant for the grinding of the slag, but not finding the demand sufficient in England, followed the example of the North-Eastern Steel Company, and entered into contracts with Germany to forward all it could manufacture, about the first consignments being 12,000 tons underground and 900 tons in the ground state. Another use for **Bessemer slag**, which was at one time an encumbrance, was made public in November, the idea being to grind it fine, adding chrome ore, and mixing these with tar so as to form the mass into blocks, and then smelting them down in the blast furnace, the product being chrome-manganese iron. The re-formation of the **International Steel Rail Syndicate** was again talked of during the autumn, it being stated that the Belgian, French and German makers had agreed to join the English manufacturers in a combination to last five years; but no public announcement of this being carried out seems to have been made. Another scheme of the same kind—an **Iron Syndicate**, in fact—was mooted from Scotland a little later in the year, but nothing came of it. The usual crop of **wages questions** naturally arose as a consequence of the improvement of trade, especially in the North-east of England and in the Black Country, but there are no serious disputes to record. On Dec. 1st Mr. W. H. Smith, in informing Mr. C. Graham—who asked that a day might be given for the discussion of a motion on the condition of the chainmakers

of Cradley Heath, arising out of a Board of Trade report—that he could not make any other disposition of business than that already made, called forth an expression from the latter involving the words "dishonourable trick." On declining to withdraw the words, Mr. Graham was requested to leave the House, and did so.

Ironclads. See NAVY, THE BRITISH.

Irredentists. Members of the "Italia Irredenta" (Unfreed Italy), a political organisation promoted in Italy in 1878. The organisation aims at freeing all Italians from foreign rule, and at reuniting to the Italian kingdom all those portions of former Italy which have passed under foreign domination. The "Italia Irredenta" is especially directed against Austria, the chief sphere of its agitation being the South Tyrol (Trient) and Trieste.

Irrigation, or Aquaculture. The watering of land by artificial means. Its purpose is to supply the deficiency of rain-water and provide sufficient moisture in the soil for the support or accelerating the growth of vegetation, or to deposit on the land fertilising matters which are conveyed by the water. In Colorado, Egypt, India, the system is much employed. See ed. '88, and, further, ed. '86.

"Irving, Henry." The "stage name" of John Henry Brodribb, the famous actor. Born at Keinton, Glastonbury, 1838. Educated by Dr. Pinches at his school, George Yard, Lombard Street, London. Made his first appearance at the Sunderland theatre in 1856, and subsequently proceeded to Edinburgh, where he played for two and a half years. Appeared at the Princess's Theatre, London, in September 1859, for about three months. In April 1860 Mr. Irving proceeded to Glasgow, where he played till the end of the ensuing September; subsequently going to the Manchester Theatre Royal. From January 1866 to July of that year Mr. Irving was engaged at the Prince of Wales's Theatre, Liverpool, and then returned to Manchester. A London engagement followed at the St. James's Theatre. In December 1867 he was engaged at the Queen's Theatre, Long Acre, and at various other houses, till in the spring of 1870 he made a great success as **Digby Grant** in the "Two Roses" at the Vaudeville Theatre. In November 1871 he made his first appearance at the Lyceum. His first great effort here was in "The Bells." Mr. Irving scored a series of remarkable successes subsequently, in "Charles I." and "Eugene Aram" (by Mr. Wills), "Richelieu" and "Hamlet"—his Shakespearean revival being a red-letter day in the history of the drama (1874). His claim as an English tragedian was further emphasized in September 1875 by the production of "Macbeth," and "Othello" (1876); and then followed an artistic study in the **Philip** of the Poet Laureate's "Queen Mary." A triumphal tour was next undertaken in England, Scotland, and at Dublin. At the Lyceum, in 1877, "Richard III." was produced, and then the curious piece "The Lyons Mail," in which Mr. Irving "doubled" in **Duboseq** and **Lesurques**. This was followed by the poetical drama "Vanderdecken." In the December of that year Mr. Irving took over the Lyceum from Mrs. Bateman, and revived "Hamlet." Since this time the Lyceum has been looked upon as the home in England of high dramatic art, and both as actor and manager Mr. Irving has spared neither pains nor expense in

the representations he has undertaken. In "*Othello*" he for one season alternated the characters of *Othello* and *Iago* with Mr. Edwin Booth, the American tragedian; and to exhibit the scope of his peculiar genius he at one time played "*The Bella*," with an adaptation of one of Dickens's well-known characters, "*Jingle*," as an afterpiece. Mr. Tenynson's later piece, "*The Cup*," was also produced at the Lyceum (1881), the stage mountings of the ancient surroundings being perfect. In July 1883 Mr. Irving was accorded a public banquet at St. James's Hall, Lord Coleridge presiding over a brilliant company, previous to his first visit, with Miss Ellen Terry (*q.v.*) and the rest of the now far-famed *Lyceum Company*, to the United States. The experiences of this little band of artists in America were unprecedented; speculators bought up all the tickets, and admission to the theatres could only be obtained at "famine" prices. A second visit to that country was made in 1884; and the latter end of 1885 was marked by the unprecedented success of a new dramatic version of "*Faust*," Mr. Irving taking the part of Mephistopheles. This was revived at the same theatre in September '87, on the return of Mr. Irving from another American tour. The new scene, the *Witches' Kitchen*, was introduced into the play January '88. Subsequently Mr. I. made a tour of the provinces, and on his return to London re-produced "*Macbeth*." On June 26th, 1886, Mr. Irving lectured in the new University Examination Schools at Oxford, by invitation of the then Vice-Chancellor (Prof. Jowett). At the close of the lecture, which was of the nature of a critical history of dramatic art, Mr. Irving was presented with an address, and also a handsomely bound volume of Plays "*Life of Shakspeare and his Works*."

Islam. See MOHAMMEDANISM.

Isle of France. Old French name for Mauritius (*q.v.*).

Isle of Man. Lies in the Irish Channel, equidistant from England, Scotland, and Ireland. Area 220 sq. m., pop. 54,080. — **Divisions** are 6 shreadings and 17 parishes. The principal towns are Douglas, Castletown, Ramsey, and Peel. **Castletown** is the ancient capital, but **Douglas** (pop. 15,719) is the chief town and the seat of government. — **Physical aspect** mountainous, well watered, and exhibiting lovely scenery. There are peculiar breeds of ponies, cattle, cats, etc. — **Government** is "home rule" under a Lieutenant-Governor, who, with Council and House of Keys, makes up the Tynwald Court. Acts, after assent of the Crown, must be proclaimed on Tynwald Hill. — **Industries** are farming, fishing, mining of lead, copper, iron, zinc, and reception of tourists. The land is in a high state of cultivation. For **financial statistics** see BRITISH EMPIRE, etc. (table). Railways exist between the various towns. — The Manx people are a distinct Celtic nationality. Their language and old customs are rapidly disappearing. The island has had many **sovereigns** — Welsh, Scots, Northumbrians, Norse, English. The last kings were the Dukes of Athole, who sold their revenues in 1765, but did not give up entire rights till 1829, since when only has Man been an actual dependency of the British Crown. See Scott's "*Peveril of the Peak*," Introduction.

Isle of Pines or Pinos. An island south of Cuba (*q.v.*), and politically a part of it. Area,

600 sq. m.; pop. 29,000. For many years notorious as a resort of pirates.

Ismail Pasha, ex-Khedive of Egypt, was b. at Cairo in 1830. He is the father of the present Khedive, Tewfik Pasha. He ascended the throne of Egypt on January 18th, 1863. Previously educated at Paris. Under his reign the negotiations with M. de Lesseps for the construction of the *Suez Canal* took place. In 1869 he visited many of the capitals of Europe, and invited many sovereigns to be present at the inauguration of that great engineering work. In 1873 he obtained from the Sultan a firman giving autonomy to Egypt, and assuring to his family the khedivate of Egypt. In 1875 he sold to the Government of England, through the agency of Lord Beaconsfield, his shares in the Suez Canal for the sum of £4,000,000. But Ismail Pasha had, in consequence of his extravagance, brought the *Egyptian Finances* into so bad a condition towards the end of 1875, that Mr. Stephen Cave, M.P., and Colonel Stokes, R.E., were sent by the English Government to report on the financial position. In 1876, Mr. Goschen for the English, and M. Joubert for the French bondholders, were dispatched on a similar mission. From these proceedings the Dual Control had its origin. In June 1879 Ismail Pasha was deposed by virtue of a firman from the Sultan, obtained at the solicitation of England and France, by which Tewfik, his son, was raised to the throne. Ismail Pasha made, in March 1886, a claim against the *Egyptian Government* for £5,000,000. Mr. (now Sir) W. T. Marriott, who assisted a counsel for Ismail in the settlement of the dispute, succeeded in securing for his client a considerable portion of the claim.

Italian Dependencies. See COLONIES AND DEPENDENCIES OF EUROPEAN POWERS, ASSAB, and MASSOWAH.

Italian Exhibition. This Exhibition, unquestionably the most successful of those held in London during the year, was opened at **West Brompton**, by the Lord Mayor of London on May 12th, and closed on Oct. 31st. The purpose of the Exhibition was to give a unique display of *Italian industries and of Italian art*, both painting and sculpture, and to bring before the eyes of untravelling English people the scenes and life of ancient and modern Italy. The organiser and Director-General was Mr. J. R. Whitley, to whom the conception and carrying out of the undertaking is largely due. From the outset he received strong Italian support. The **King of Italy** was patron of the Exhibition, and the **Crown Prince** president. Committees were formed in the chief cities and towns of Italy; and the London Committee, of whom Sir Frederick Leighton, Bart., P.R.A., was president, comprised numerous influential noblemen and gentlemen whose names are associated, in a political, literary, and artistic sense, with Italy. The **Italian Chamber of Commerce** in London gave, through Cav. L. Bonacina, warm support to the project, and the result of the combined efforts of the various countries was that the exhibition was a signal success. The buildings were those used in the previous year for the American Exhibition, but they were thoroughly Italianised. The exhibits were restricted to Italian products, and altogether there were over two thousand exhibitors. The central gallery was filled with attractively displayed exhibits of Italian manufactures;

art furniture, metal-work, jewellery, and articles of ornament being shown in profusion. The art galleries contained a splendid collection of Italian statuary and painting, and were daily thronged with visitors. There has never been an exhibition of Italian art in this country to be compared, either in quantity or quality, with that on view during the continuance of this Exhibition. The statuary, in exquisite purity of material, variety of subject, and excellence of execution, surpassed anything before seen in London. The pictures were very numerous, and made a most interesting display. They were hung topographically, the visitor being able to study in one room the work of Florentine painters, in another Neapolitan, Roman, Milanese, Bolognese, etc., respectively. One room was allotted to the paintings of Signor Scutti, who exhibited, amongst others, two battle pieces on the "heroic" scale, and a "match past" of gladiators, which attracted much attention. Though many of the works in the galleries were severely dealt with by art critics, it was generally admitted that the collection was excellently representative of modern Italian art. The grounds of the Exhibition were attractively laid out, abundance of instrumental music was provided, and many forms of amusement were offered to the public. Chief among the latter were the Brändin Marionettes, an imitation of the grotto of Capri, representations of the gladiatorial games of ancient Rome, and a switchback railway. Notwithstanding the rain that fell during the summer months, the Exhibition was always numerously attended, and maintained from the first its leading place in public favour.

Italian Political Parties and Parliament. The legislative authority of Italy rests with the King and two chambers, the Senate and Chamber of Deputies. The former (unlimited in number) is composed of princes of the royal house, after attaining their majority, and of members nominated for life by the King. The Chamber of Deputies (Camera de' Deputati) is elected by *scrutinio di liste* (*q.v.*) by conditional universal suffrage for periods of five years, and contains 508 members, or one to every 57,000 of the population. For electoral purposes Italy is divided into 135 districts, which again are sub-divided. One-eighth of the inscribed electors must vote to render an election valid. The present Chamber of Deputies was elected on May 23rd, 1886, a dissolution having been decreed by the king on April 27th. His appeal to the country was necessitated by the inability of the Opposition to form a ministry after a virtual defeat of the Depretis Cabinet on March 5th on its budget. The result of the general election was to give the ministry a majority of about 50. Since then there has been more than one reduction of this majority on critical divisions, and notably when the policy of the Government on the Massowah question has been before the Chamber. On one of these occasions, in Jan. '87, after the Italian disaster at Dogali, when the Government majority was reduced to 33, the Count di Robilant, Minister for Foreign Affairs, feeling his policy assailed, resigned his portfolio, and the remaining members of the ministry followed his example. At the request of the King, however, Signor Depretis reconstructed his cabinet, four of the ministers, including the Count di Robilant and

Signor Ricotti, the Minister of War, retiring, and being replaced by others. Among these latter were Signori Crispi and Zanardelli, both prominent members of the Pentarchist Left, who received respectively the portfolios of the Interior and of Justice. The division of parties in the Chamber is somewhat singular. The majority and the bulk of the minority alike profess Liberal principles, the one being known as the Ministerial Left, and the other as the Opposition Left, or Pentarchists, led by Signor Cairoli (*q.v.*); other prominent members of the party are Signori Nicotera and Baccarini. There is also little difference in their political programmes. Forming part of the Opposition are some minor groups of varying tendencies, including a knot of advanced Republicans, or Socialists, and the so-called Moderates. There is little or no union in the Opposition, and it is this that has constituted the chief strength of the Ministerial Left, which has, after successfully surviving some nine or ten ministerial crises, been uninterrupted in power for twelve years, a result in large measure due to the skilful leadership of the late Signor Depretis. On the death of the latter, on July 29th, '87, the ministry underwent no change. As a matter of form its resignation was tendered, but was withdrawn at the request of the King, Signor Crispi taking over the Presidency of the Council in addition to the portfolios of the interior and of Foreign Affairs. Since his advent to power, Signor Crispi, although an old Garibaldian, a Republican, and a professed friend of France, has been the loyal and devoted servant of the monarchy, and so far from disturbing Italy's relations with Austria and Germany, as the Irredentists (*q.v.*) fondly hoped, it has remained for him to definitively cement the alliance of the Central European powers. In spite of parliamentary differences, however, on one point Opposition and Ministerialists are alike united—namely, in the desire to maintain the present Savoy dynasty, which they regard as the key-stone of Italian unity.

Italian (Trans-) Canal. It was reported in July '88 that Signor Victor Brocca, an Italian engineer, had just completed a survey of a proposed canal across Italy, the object being to save the long journey round Cape Leuca. The new waterway would begin on the western side, near Castro, on the Tyrrhennian Sea, and pass to the eastern coast at Fano, on the Adriatic, the length being about 180 miles, breadth 110 yards, and depth 40 feet. The two lakes Bolsena and Thrasimene would be drained. The estimated cost is twenty millions sterling.

Italy. A kingdom governed by Humbert I., second constitutional King, assisted by a Senate (composed of the Princes of the royal house and of royal nominees of eminence, paying taxes to annual amount of £1200), and Chamber of Deputies, elected by all citizens over twenty-one who can read and write, and pay annual taxes amounting to 16s. 8d. Area 114,410 sq. m.; pop. 29,943,607. Estimated revenue '88-9, £61,897,662; expenditure, £62,502,932; public debt, £21,410,119. (For army and navy see ARMIES, FOREIGN, and NAVIES, FOREIGN.) The Pope is the spiritual head of the Roman Catholic world, and enjoys the dignity of a reigning prince. He is selected by a two-thirds vote, taken by ballot, of the College of Cardinals, which consists of seventy members and acts as his Council of State. Temporal power taken away in 1870, but he retained his sovereign rights, his guards, palaces, etc.,

free from taxes and from the jurisdiction of the common law of the land. In 1870 Italy was ruled by Victor Emmanuel, with the exception of the so-called Patrimony of St. Peter, the freedom of which was guaranteed by the "September Convention" between France and Italy. Pope Pius IX. summoned Ecumenical Council at Rome: doctrine of Papal Infallibility promulgated; session interrupted by Franco-German war. After Sedan Victor Emmanuel declared himself released from September Convention, and occupied Rome and its territory. The Assembly voted Rome to be the capital on Dec. 5th, and on Dec. 31st the King made his public entry. (For history to '88 see previous eds.)—**Political.** In relation to European Powers, Italy has generally maintained during the year '88 fairly cordial relations, the Triple Alliance having brought her into closer *rapprochement* both with Germany and Austria, which the visits of **Signor Crispi** (*q.v.*) to Prince Bismarck and to **Count Kalnoky** during the month of August assisted to strengthen. Speaking in the Italian Parliament (May 3rd), Signor C. remarked on the policy of Austria-Hungary, and gave an exposition of the aims of the Triple Alliance. Some friction, however, arose between Italy and France on the subject of the occupation of **Massowah**, the Italians claiming this right by possession. France denied the accuracy of this claim, and declined to admit Italy's right to levy local taxes on foreign residents. **Diplomatic correspondence** between Signor Crispi and M. Goblet ensued (July), and both statesmen communicated their respective views of the situation to the Powers. Nothing definite, however, resulted; but a very hostile attitude was assumed by the Italian press towards France. With respect to **Abyssinia**, the proposed terms of peace submitted to the Negus were rejected by him. Desultory skirmishes occurred from time to time between the Abyssinian and the Italian troops, a severe disaster occurring to the expedition of the latter to **Saganeiti** (August), when the Italian forces were defeated. In the Chamber of Deputies General Vralé stated that the Italians would keep Sahati, and that the Cabinet was firmly resolved to maintain its present position. A dispute arose between Italy and **Zanzibar**, due to the neglect of the Sultan to ratify the cession

of **Kismayu** and **Sala**, territory which had been demanded as compensation to Italy for an alleged insult offered by the late Sultan to King Humbert. The Italian Consul hauled down his flag, and refused to continue diplomatic relations; later on it was stated that the question had been satisfactorily settled. A tariff war with France ensued on the termination of the commercial treaty in the early part of the year. Relations between the Vatican and the Government have been more or less strained throughout '88. Among leading events have been the fête and exhibition at Bologna (May); the celebration of the 800th anniversary of the foundation of the University of Bologna (June), which attracted from all parts of the world a very brilliant and distinguished gathering of savants, the Marquis of Lorne being among the number as a representative of Canada; the visit of the German Emperor (in October) to King Humbert and the Pope; and the residence of Queen Victoria at Florence, during which visits were exchanged between the sovereigns. Other royal personages also visited Italy during '88. In October Count Robilant, Ambassador to the Court of St. James, died. In August a destructive volcanic eruption took place in the Lipari Islands. A terrible railway accident also occurred (Oct. 22nd) near Potenza, resulting in many persons losing their lives. Floods in North Italy (Sept.) occasioned much mischief. The survey of the proposed new canal across Italy was made in July. The International Co-operative Congress was held at Bologna (Oct. 1st); and the Sugar Bounties question (*q.v.*) occupied considerable attention. The new Canadian Ecclesiastical College was inaugurated (Nov. 11th) by a splendid fête and banquet presided over by the Cardinal-Vicar. Italy has joined England and Germany, with the view of suppressing the slave trade, in the blockade of the Zanzibar coast, which at present (Dec. 6th) is in progress. Consult "Italy" (Story of the Nations Series), *Statesman's Year Book*, *Almanach de Gotha*, etc.

Ivory Coast. A portion of Guinea, between Grain and Gold Coasts. The stations of Grand Bassam, Assinie, and Kutchu were reoccupied by France (1884). The coast is low and sandy and the climate inimical.

J

Jam Manufacture. See FRUIT FARMING.
Jamaica. The largest of the British West India Islands, lying 90 miles south of Cuba. Area 4,193 sq. m., pop. 580,804. Divided into three counties—St. Andrew, Middlesex, and Cornwall. **Turk's and Caicos Islands** have been annexed to the colony. Capital **Kingston** (pop. 40,000), with Spanish Town (the old capital) of next importance. The principal ports are Port Royal (the harbour of Kingston), Montego Bay, and Falmouth. A mountain chain (the Blue Mountains) traverses the island, rising to 7,360 feet, and there is an extensive plain on the south. There are many streams, some navigable by boats. Soil very fertile, but climate, except in the highlands, unhealthy for Europeans. All insalubrity ceases at an elevation of 1,400 feet. Earthquakes frequent; hurricanes less so than in the other West India Islands.

The precious metals have been found, and, together with copper, cobalt, tin, lead, etc., are believed to exist in quantity. The products are sugar, rum, pine-apples and various fruits, coffee, pimento, logwood, cacao, ginger, etc.—The island is ruled by a Governor, with a Privy Council and a partly elective Legislative Council. For financial statistics see **BRITISH EMPIRE**, etc. (table). Besides local industry, Jamaica is an emporium of West Indian trade. One of the black West Indian regiments is ordinarily stationed here. Nine-tenths of the population are black and coloured. Since the abolition of slavery in '33, the colony has retrogressed, but is now recovering. It was taken from the original Spanish owners in 1655, and has since remained a British possession. In '65, the blacks rose in insurrection, which was promptly

suppressed. Of late many Chinese and coolies employed. The **Maroons**, descendants of runaway Spanish slaves, still live in the Blue Mountains. Consult Bates's "South and Central America and West Indies," and "Her Majesty's Colonies."

James, Henry, was b. in America 1843, his father being the Rev. Henry James, a well-known philosophical writer. Began the study of law, but ultimately attached himself to literature. His novels, which deal largely with American life and character, are very popular. "**Princess Casamassima**" ('87) fully sustained his reputation, differing from most of his others by its study of English life. Mr. J. has been for many years a resident in England. His most recent works are "**The Reverberator**" ('88) and "**Partial Portraits**," both of which were most successful.

James, Rt. Hon. Sir Henry, Q.C., M.P., P.C., son of Mr. Philip Turner James, of Hereford, was b. at Hereford, 1828. Educated at Cheltenham; Lecturer's Prizeman at the Inner Temple (1850-52); called to the bar at the Middle Temple (1852). Nominated to ancient office of "**postman**" of Court of Exchequer (1867); appointed Q.C. (1869). Was Solicitor-General (1873), in which year he was knighted; **Attorney-General** (1873-74), reappointed (1880). Returned in the Liberal interest as member for Taunton (1869-85), Bury (1885). On the formation of Mr. Gladstone's Government in 1886, Sir Henry James refused to join it, though offered the Lord Chancellorship, because he could not follow Mr. Gladstone upon the Home Rule question. Since then Sir Henry has been one of the active leaders of the **Liberal Unionist** party. It is understood that he refused a high legal office offered him by Lord Salisbury in 1886, preferring to remain in the sphere of active politics. In March '88, Sir H. J. was entertained at a dinner of the Liberal Union Club. Sir Henry was one of the counsel for the *Times* in the action of *O'Donnell v. Walter*, and is one of the leading counsel for that organ in the *Parnell Commission* (q.v.).

Jamestown. Capital and port, *St. Helena* (q.v.).

Japan. An empire adjacent to China, from which it is separated by the Eastern Sea and the Straits of Corea, formed of the archipelago of Nippon, which consists of four large islands, Yesso, Hondo, Kiushiu, and Shikoku, and of nearly 4,000 rocky islets. Its area is about 147,345 square miles, with a population of 38,507,177. Its history is almost as ancient as that of China, the present Mikado being the representative of a dynasty which claims to have possessed the throne since B.C. 660; but the legendary period comes down to a time much nearer our own than the well-authenticated annals of the Middle Kingdom during the last 2,000 years. The name of the present Mikado is Mutsu Hito, and he was born in 1852. (For other details see ed. '88.) One of the first events of political interest reported in this country in '88 was the death of **Shimadzu Hisamitsu**, ex-Prince or Regent of Satsuma (briefly referred to in our last issue), which occurred on Dec. 6th, '87, at Kagoshima. To foreigners, by whom he was hated as a leader of the old exclusive party, he was better known as **Shumadzu Saburo**. Later news came over that **Count Inoue**, Minister for Foreign Affairs, had resigned in consequence of the defeat of his policy on treaty revision, and that **Count Okuma** had succeeded him, this statesman having been

former Minister of Finance, and his appearance in the Cabinet giving that body an appearance of a coalition. A telegram (Yokohama, May 1st) subsequently reported that the Prime Minister, **Count Ito Hirobumi**, had resigned, and had been succeeded by Count Kura, Ito having become widely known for having had charge of the constitutional revision which is to give Japan in 1890 a Representative Assembly elected by the people. But another light was thrown upon this matter by a published letter from the Japanese legation in London (May 8th), to the effect that Count Ito had only resigned the Premiership to assume the post of **President** of the newly-created **Sumitsu-Iu**, or **Privy Council**. A description of the high functions of this new body was published in the *Times* of June 23rd (Tokio, May 11th). A further Cabinet change was reported from Tokio (Berlin, Aug. 22nd), to the effect that Count Inoue had returned as Minister for Commerce and Agriculture, the progressive party thus not losing a valuable ally. The **Budget** of the Government for the fiscal year '88-9 gave an estimated revenue of 80,705,923 dollars, and the expenditure 80,747,854 dollars; of the latter amount a fourth was to be devoted to the reduction of the national debt, 12,000,000 dollars to the army, and 11,000,000 dollars to the navy. An increase in the expenditure was caused by the construction of fortifications. The army, it may be added, is in a transition state. It is under the German model, and was calculated during the year to number 150,000 men, but is increasing. The cavalry are very few in number, but the artillery numbers 120 guns, with a regular train and a telegraph staff. It was reported in this country in November that by a recent imperial decree an important financial change had been made in Japan, the treasury practically divesting itself of its note-issuing functions, and transferring them to the recently-established bank of Japan, which thus becomes the only source of note issue in the country. The trade and commerce of Japan, according to the latest published returns in this country, still show great development. The total imports for '88 were 44,304,251 yens, the exports were 52,407,681 yens; total trade 96,711,932 yens (6½ yens are equal to £1). It should be pointed out that the expansion of the exports is not fairly represented here, owing to the decline of silver necessitating the adoption of a lower rate for the silver dollar or yen. The bulk of the increase in imports is credited to Great Britain and her colonies. It is pointed out that in order to get at a correct estimate of the total value of British trade with Japan the calculation must include nearly the whole of the trade which is credited to the East Indies and Siam, and portion of that to China, a large volume of trade passing through Hong Kong; and in this manner the total is put at over £7,000,000. The United States stands next on the list, the British and American trade of '87 representing 70 per cent. of the total trade of Japan with foreign countries. As to railways, it was calculated, in a consular report published in May, that there were 598½ miles in the country, 294 more being in course of construction, and 680 contemplated. Some idea of the difficulties met with on some of the new lines appear in the official report of the "**Japanese Railway Bureau**" for '87. One line of 205 miles in length involves the construction of 16 tunnels 16,000 feet long, and the bridging of 11 rivers. One

of the latter has a velocity of 27 feet per second, and in another the brick piers have to be sunk to a depth of 80 feet. A range of mountains has to be crossed at a height of 1,468 feet. Such is the progress of **telegraphy and telephony** in Japan that, after experiments into the system of utilizing existing telegraph wires for simultaneous telephony, it was announced early in the year that a complete plant for the purpose had been ordered in Belgium. The **cotton spinning** industry is making immense strides. As to the imports of yarn in '87 the import from Great Britain was 21,741,401 lb., and from Bombay 22,754,305 lb.; the figures in '86 were 18,100,366 lb. from Great Britain, and 14,740,120 lb. from Bombay. According to native statistics, the Japanese Empire on Jan. 1st, '85, contained a population of 37,868,087. On July 15th a mountain known as Sho-Bandai-San, of a volcanic group in the northern part of the island, experienced an **eruption** of such a violent character as to practically obliterate the mountain and deluge the country with lava and ashes, destroying hundreds of lives, and causing immense damage to property. An extraordinary "**open letter**" was addressed during the year by a number of American ladies, headed by Mrs. Cleveland and Mrs. Garfield, "to Japanese women who are adopting foreign dress." Most of the text of this missive, which was intended to warn its recipients of many recognised evils, was published in the *Times*, August 28th. For Ministry see **DIPLOMATIC**. Consult Sir E. J. Reed's "Japan: its History, Traditions, and Religions"; Miss Bird's "Unbeaten Tracks in Japan," etc.

Japanese Art. See ART '88.

Java. An island of the Asiatic Archipelago, the chief seat of Dutch power in the East Indies. With Madura Island, area 50,848 sq. m.; pop. 21,974,161. Divided into 25 Residencies. Capital **Batavia** (500,000), a large and important seaport. Other chief towns, Samarang and Sourabaya. Mountains traverse the interior, with many active volcanoes. Java was formerly considered very unhealthy, but with the exception of a few marshy places on the coast, the climate is as healthy as that of any other inter-tropical country. Flora and fauna rich, mainly as in **Borneo** (*q.v.*). Coffee, sugar, tea, rice, indigo, pepper, tobacco, etc., chiefly cultivated for export. Administered by the Residents of Provinces and their subordinates under the Governor-General of the Dutch Indies. The mode of government is called the "culture system," and is based on officially directed labour. The army, as well for Java as for the other Dutch possessions in the East Indies, numbers about 15,000 Europeans and 16,000 natives, associated together. The colonial navy consists of 88 vessels, manned by 1,271 men. There are 599 miles of railroad. Estimated revenue of Dutch East Indies, '88, £11,148,670; expenditure, £11,573,000; average imports, £12,800,000; average exports, £16,000,000. Land is government property, except in the west, and is let on hereditary lease. Enforced cultivation insures provision for the large population. People are, Europeans, 46,837; Chinese, 364,028; Arabs and Orientals, 16,194; Hindoos, 8,324; Javanese Malays, 20,665,570. During the year '88 various conspiracies and insurrectionary movements against the Dutch have taken place. Consult Money's "Java" and Wallace's "Malay Archipelago." See **BORNEO**, etc.

Jebb, Richard Claverhouse, LL.D., the

eminent Greek scholar, was b. in Dundee 1841. Educated at St. Columba's Coll., co. Dublin, Charterhouse School, London, and Trin. Coll., Camb., where he graduated Senior Classic '62. Public Orator of his Univ. '69, Professor of Greek in the Univ. of Glasgow '75, hon. LL.D. Edin. and Harvard Univs., and has received from the King of Greece the Gold Cross of the Order of the Saviour, in recognition of his services in promoting the study of both classical and modern Greek. Amongst the most important of his works are "The Attic Orators," "Modern Greece," and a "Life of Richard Bentley." Dr. J. has for some time past been engaged in editing the *Complete Works of Sophocles*. It is mainly through his efforts that a **British School of Classical and Archaeological Studies** has recently been established at Athens.

Jenner, Sir Wm., Bart., K.C.B., M.D., F.R.S., b. at Chatham 1815. Educated at Univ. Coll., M.D. Lond. '44. Has held successively the appointments of Professor of Pathological Anatomy in Univ. Coll.; Physician to the Hospital for Sick Children, Physician to Univ. Coll. Hospital, Professor of Clinical Medicine, and Professor of Principles and Practice of Medicine in Univ. Coll., and is **Physician in Ordinary to the Queen and the Prince of Wales**, he attended with Sir William Gull in the serious attack of typhoid fever which prostrated H.R.H. in '71. Sir William J. also attended the **Prince Consort** in his last illness. His eminence as a physician is chiefly based upon his discovery of the symptoms which differentiate typhus from typhoid fever. President of the Royal College of Physicians '81.

Jerryandering—derived from Gerry, the surname of a Governor of Massachusetts; a member of Congress from 1776 to 1784, and Vice-President 1812; first applied to such division of a district as gave political advantage to one over another.

Jersey. One of the Channel Islands (*q.v.*).

Jerusalem. *The.* See ed. '88; more fully ed. '86.

Jesuit Missions. The number and distribution of the Jesuit missionaries abroad at the beginning of '88 have recently been given by the *Etudes Religieuses*. These numbers are those of the various orders of the priesthood, priests, coadjutors, and "scolastiques," but in every case the number of priests is more than twice that of the other two orders put together. There are in the **Balkan Peninsula** 45 Jesuit missionaries; in **Africa** (especially Egypt, Madagascar, and the Zambesi region), 223; in **Asia** (especially, Armenia, Syria, certain parts of India, and parts of China), 669; in **China** 195, all of French nationality; in **Oceania** (including the Philippines, the Malay Archipelago, Australia, and New Zealand), 270; in **America** (including certain specified States of the Union, portions of Canada, British Honduras, Brazil, and Peru), 1,130; the total number of Jesuits engaged in purely missionary work being 2,377, the great majority being French. In their distribution great attention is paid to nationality; those engaged among the Indians of Canada are Canadians, in the British West Indian Colonies English, in Central America Spaniards, in South America Italians, Spaniards, and Germans; the Italians and Germans having all Brazil to themselves, probably because of the enormous Italian and German immigration to Brazil. The spheres of labour of the different orders, Jesuit, Lazarists, Franciscans, etc., are care-

fully laid down at Rome, no two orders, as a rule, working in the same region; these spheres once fixed, the distribution within them is left to the head of the particular order, whatever it might be. In an illimitable field like China all the orders are represented, but the districts of each are specified, and were rearranged some two years ago. The Jesuits have Kiangsu province and the south-eastern part of Chih-li, the metropolitan province; they have 145 fathers in the former and 50 in the latter district. In Africa they touch only on the east coast at certain points, and are represented in no other part of the continent; in India they have nothing to do with Madras, Ceylon, Central India, or the North-West Provinces, and their work in the United States is very limited. In Japan, the Malay Peninsula, Siberia, Indo-China (Burmah, Tonquin, Siam, Annam), they are not found at all. The great centres of Jesuit missionary activity on the globe are the Zambesi, Syria (where there are 42 French Jesuits), Bengal, Kiangsu province in China, the Philippine Archipelago, the central States of the Union (here they are all German Jesuits), Central America and Cuba, Ecuador and Peru, Chili and Paraguay.

Jews. The number of Jews in the various countries of Europe at the date of the last census in each (about 1880-1) was as follows:—Russia, 4,008,639; Austria-Hungary, 1,643,708; Germany, 561,612; Roumania, 260,000; Turkey (about) 100,000; Holland, 81,693; France, 76,000; England, 65,000; Italy, 50,000; Switzerland, 7,373; Scandinavia, 6,973; Servia, 3,492; Greece, 2,654; Iberian Peninsula, 2,102. **Total in Europe, 6,879,238.** Outside Europe no satisfactory enumeration is possible, but it is probable that Asia contains 200,000; Africa, 220,800; the Americas, 250,000; and Australia, 15,000. There are probably eight millions of Jews in existence at the present date (1889). Until very recently Jews were restricted in their rights throughout the world; and those of eastern Europe, Africa, and the East still labour under many disabilities, which it is the object of the "Alliance Israélite" of Paris, and similar societies in Germany, Austria, and England (Anglo-Jewish Association, 100, Sutherland Avenue, W.), to remove. Even in western Europe much of the feeling of ill-will which led to earlier restrictions still remains. The chief country in which anti-Semitism still exists is Roumania, which, though enfranchised by the Treaty of Berlin on condition of freeing its Jews, still evades fulfilment of its treaty obligations. (See D. F. Schloss, "Persecution of Jews in Roumania" (Nutt)). In England, full emancipation was granted to Jews in 1858. English Jews number some 65,000, of whom 50,000 live in London, three-quarters of them in the East-end, chiefly recruited from Russia. They possess a special Jewish Board of Guardians (1, Devonshire Square, Bishopsgate), which provides for indigent Jews, a large orphan asylum at West Norwood, many other charities, and there are Jewish wards in several hospitals. There are six large Jewish elementary schools in London, the principal being the Jews' Free School, Bell Lane, Spitalfields, the largest and one of the most successful elementary schools in the world. Similar schools and charities are connected with the principal Provincial congregations; the most important are those of Liverpool (2), Manchester (4), Birmingham, Leeds, Newcastle, Hull, and Sheffield. The spiritual wants of Jews are provided for in the

East-End by a number of *hebras* or minor congregations, which have been united (Federation of Minor Synagogues); while eleven of the larger synagogues are organised by the United Synagogue (2, Charlotte Street, Portland Place, W.). Ministers for these are mostly trained at Jews' College (Tavistock House, Tavistock Square), which has a very extensive library of works dealing with Jewish subjects. Another library specially noteworthy for Hebrew MSS. is situated at the Beth Hamidrash (St. James' Place, E.C.), where the sittings of the Beth Din, or ecclesiastical tribunal, are held, at which points of Jewish law are decided. Ecclesiastical matters are under the control of the Chief Rabbi, Dr. N. M. Adler, whose son, Dr. H. Adler, now acts as his delegate. His mandates are only binding on the so-called *Orthodox Jews*, while there are 'Reform' congregations at Upper Berkeley Street, London, Manchester and Bradford. There has been a marked *rapprochement* of recent years between these two bodies. There are, besides, some 3,000 Spanish and Portuguese Jews (*Sephardim*) in London, who are under the spiritual charge of the Rev. Dr. Gaster and whose ritual slightly differs from that of the more numerous German and Polish Jews (*Ashkenazim*). As a religious term "Jew" has nowadays the very vaguest connotation, ranging from the superstition of the Chassidim of Russia and Galicia to the advanced agnosticism of the Society of Ethical Culture in New York. Jews have some special enactments connected with registration of their marriages, modifications of the Factory Acts to suit their Sabbath, etc. These, and other legislation likely to affect them, are looked after by the Jewish Board of Deputies (36, Finsbury Circus). During the past year (88) the events with which the Jewish community has been principally concerned are the sittings of the select committee on the immigration question; whilst many Jewish witnesses were examined by the Lords' committee on the sweating system (*q.v.*). The expulsion of Jews from various parts of Russia still continues, and no amelioration of their condition appears to be imminent. Some relaxation of restrictions under which Jews laboured in Roumania was made during the year. There are three Jewish weeklies, of which the most important is *The Jewish Chronicle* (2, Finsbury Square, E.C.). A new *Jewish Quarterly Review* was also started in Oct. '88. Consult J. Loeb's article *Juifs*, in St. Martin's "Dictionnaire de Géographie"; I. Davis, *Jews, Modern*, in "Encyclopædia Britannica"; on the literature of the *Judenhetze*, J. Jacobs, "The Jewish Question," 1875-84 (Trübner); on their social and vital statistics, J. Jacobs "Studies in Jewish Statistics" (*Jewish Chronicle Office*). "Jezreelites," or the "New and Latter House of Israel." See ed. '88, more fully ed. '87. *Jingoes*. See ed. '88.

Joachim, Joseph. This distinguished violinist was born near Presburg, in Hungary, in 1831. Already famous as a youthful prodigy, he went to Leipzig in 1843, to the Conservatoire previously founded by Mendelssohn, who saw his genius and encouraged him. He first came to London in 1844, and has since annually visited us. Herr J. has been principal violinist of the Monday and Saturday Popular Concerts from their very commencement. In 1869 he became the head of the newly developed Academy of Music at Berlin. He has written

several works for his instrument and the orchestra, the chief being the Hungarian Concerto. The University of Cambridge conferred on him the degree of Mus. Doc. in '77. Herr J. in '87 visited Paris, and had an enthusiastic reception. The University of Oxford recently conferred upon him the honorary degree of D.O.L. In March '89, Herr J. will have been before the public for fifty years.

Jockey Club. See TURF.

Johanna. One of the Comoro Islands (*q.v.*).

Johannes II., the present ruler (Negus) of Abyssinia (*q.v.*), was by English influence placed on the throne after the overthrow of King Theodore by Lord Napier at Magdala (1868). Since the occupation of Massowah by the Italians the Negus has assumed an attitude of hostility against them, and in August '88 his troops inflicted a severe defeat upon a portion of the Italian forces.

Joint Stock Companies. A Parliamentary return, giving the names, objects of business, places where business is or was conducted, date of registration, number of persons who signed the memorandum of association, total number of shares taken up by such subscribers, nominal capital, number of shares into which it is divided, number of shares taken up, amount of calls made on each share, and the total amount of calls received, of all joint stock companies formed in 1887, distinguishing whether the companies are limited or unlimited, and also the number of shareholders in each of the said companies at the date of the last return, and whether still in operation or being wound up; of the total number having their registered office in the city of London, or within five miles of the General Post Office; and of the total number and the paid-up capital of all registered companies which are believed to be carrying on business at the present time. This return can be obtained from Messrs. Hansard and Son, 32, Abingdon Street, Westminster (price 1s. 7d.). The following table shows the progress of the joint stock company movement during the last five years.

DATE.	TOTAL.	
	No. of Cos.	Paid up Capital.
April 1884 . . .	8,692	£475,551,294
April 1885 . . .	9,344	494,909,862
April 1886 . . .	9,471	529,637,684
April 1887 . . .	10,494	591,508,692
April 1888 . . .	11,001	611,430,371

Journalism, New. See ed. '88.

Journalists, The National Association of, is the present outcome of a movement of organisation amongst British journalists for the advancement and protection of their professional interests. The movement first took shape at a conference held at Birmingham in Oct. '84. The constitution drawn up in '86 states that "the objects of the Association are to secure the advancement of all branches of journalism; to obtain for journalists, as journalists, formal and definite professional standing; and to promote and serve in every possible way the interests of the profession of the Press." At a Special General Conference, held at the Guildhall, Bristol, in Sept. '88, a scheme was adopted for conversion of the Association

into an incorporated Institute. The executive were instructed to effect this conversion from such a date as might be found suitable; and the organisation will probably adopt the name and constitution of The Institute of Journalists early in '89. The business of the N. A. J. is conducted by a president, eight vice-presidents, officers, and district representatives, forming the central executive body. Each district is managed by a district committee and officers, and many of the districts are divided into subdistricts. The central executive holds movable meetings in the principal towns. Matters of detail and emergency are dealt with by a sub-committee, called the Committee of Administration, which holds frequent meetings at the Central Office, and special questions by various special committees. Annually a general conference of members and delegates is held. This conference also is movable, being held this year ('89) at Manchester. The proceedings of the Association are chronicled in a small monthly official publication, under the title of *Journalism*, which is edited by the General Secretary, and issued gratis to members. The President (at the beginning of '89) is Mr. H. G. Reid, of Watley Hall, Birmingham (formerly M.P. for Aston Manor), who succeeded to Sir Algernon Northwick, Bart., M.P., of the *Morning Post*. Should the conversion take place at the time expected Mr. Reid will become first President of the Institute. Hon. Sec., Mr. B. T. Barton, Bolton; Hon. Treas., Mr. J. F. Andrews, London; Counsel, Mr. R. J. Griffiths, M.A., LL.D.; Gen. Sec., Mr. Herbert Cornish; Central Office, (*proprietors*) 23, Temple Chambers, Bouverie St., Fleet St., E.C.

Jovis, M. See BALLOONING.

Jowett, Rev. Professor B., D.D., b. at Camberwell 1817. Became Scholar of Balliol College, Oxford (1835), Fellow (1838); appointed Regius Professor of Greek on the recommendation of Lord Palmerston (1855). Was member of a commission for taking into consideration mode of admission by examination to writings in Civil Service of India. Professor Jowett has written commentaries on some of the Pauline Epistles, and an essay on the Interpretation of Scripture in "Essays and Reviews." In 1870 he was elected Master of Balliol College. He published a translation of the "Dialogues of Plato," 1871; second edition (5 vols.) 1876; also a "Translation of Thucydides with Notes and Essay," 1880 (2 vols.); and a "Translation of Aristotle's Politics, with Notes and Essay," 1885 (2 vols.). The honorary degree of D.D. was conferred on him by the University of Leyden (1875), LL.D. University of Edinburgh (1884), and University of Dublin (1886). Dr. J.'s term of office as Vice-Chancellor of Oxford University (*q.v.*) expired in '87, when he was succeeded by Dr. Bellamy.

Jubilee Coinage and Medals. See COIN-AGE, ed. '88.

Jubilee of Royal Agricultural Society. See ROYAL AGRICULTURAL SOCIETY.

Jubilee, Queen Victoria's, '87. For concise history of, see ed. '88, and for detailed history of H.M.'s reign see ed. '87.

July, Cape. A low sandy point, on the west coast of Sahara, opposite the Canary Islands, where the North African Company (British), have recently established themselves.

Judge-Advocate-General is the legal adviser of the Government on military questions, and reviews the sentences of courts martial, recom-

mending whether they should be confirmed or rejected. He is always a member of the Privy Council. There are three permanent officials in the department—viz., one legal and two military deputy judge-advocates-general. In the Estimates for 188-9 no provision is made for the payment of any salary to the judge-advocate-general.

Judicial Separation. It was in the power of the ecclesiastical courts, which formerly determined all matrimonial causes, to grant a divorce *à mensâ et thoro*, which released the husband and wife from the duty of cohabitation, but did not enable either of them to marry again. By the "Matrimonial Causes Act, 1857," it was provided that such divorces should no more be granted, but that in every case in which a decree might have been made for a divorce *à mensâ et thoro*, a decree might thenceforward be made for a judicial separation. A decree for judicial separation may be obtained either by the husband or by the wife on the ground of adultery or cruelty, or desertion without cause for two years or upwards. Cruelty in this sense may be defined as injury to person or to health, or conduct raising a reasonable apprehension of bodily hurt. Even threats to a wife, not accompanied by personal violence, and cruelty to children in the presence of their mother, have been in some cases regarded as cruelty giving ground for a decree. Desertion must be wilful, and against the will of the person who complains of it. From the date of a decree for judicial separation, and so long as the separation continues, the wife is considered as a *fenie sole* with respect to all property which she may acquire; and should she again cohabit with her husband, all such property is to be held to her separate use. But this provision has been made superfluous by the Married Women's Property Act, 1882 (*q.v.*). The court has power to order such alimony for the wife, and to make such provision for the custody, maintenance, and education of the children of the marriage, as it may think proper. Should the decree have been pronounced in the absence of one of the parties, and on the ground of desertion by him or her, the party so absent may present a petition setting out such absence and reasonable ground for the alleged desertion, and may obtain a reversal of the decree. The separation, moreover, may be ended at any moment by the deliberate consent of the parties separated to a renewal of cohabitation. See SEPARATION AGREEMENTS.

Julian Period, The. Rather a measure of time than a true era, consisting of 7,980 years, which the sun, moon, and earth will take to come into precisely the same positions with regard to each other.

Juries.—COMMON. The qualification of a common juror is as follows:—He must be between twenty-one and sixty years of age, and he must either have freehold or copyhold estate to the value of £10 a year, or leaseholds on lease for twenty-one years or more to the value of £20, or be assessed to the poor-rate or inhabited house tax at not less than £30 a year in Middlesex and £20 a year in any other county. The churchwardens and overseers in each county annually make out a list of qualified persons, and from these lists the jurors' book for each county is made out. In preparation for the next assizes, or next sessions, a precept is issued to the sheriff ordering him to summon a sufficient number of jurors. He there-

upon makes out the panel, a list on parchment containing the names of the jurors summoned; and this panel is printed and kept open to public inspection. The panel contains the names and addresses of not less than forty-eight nor more than seventy-two qualified persons. The cause having been called on in court, the jury is called and sworn. All the names of the jurors on the panel are put into a box and then drawn out; and the names are called in the order of drawing. The first twelve of these who appear are sworn. But before swearing they are liable to challenge; and a challenge may be either to the array, that is, to the whole panel; or to the polls, that is, to individual jurors. The former questions the honesty or impartiality of the sheriff, or at least suggests reasons for doubting either, such as his relationship to one of the parties. The latter may challenge individual jurymen on the ground that they are peers, or that they have not the qualification, or that they may reasonably be suspected of bias, or that they have been convicted of some infamous crime. In criminal cases the prisoner may, without showing any reason, challenge twenty, and in certain cases thirty-five of the panel, and the Crown may similarly challenge as many as, if disallowed, would yet leave enough on the panel to form a jury. Should the panel have been exhausted by challenges, provision has been made for obtaining more persons qualified to serve. Members of parliament, or of the legal, clerical, or medical professions, and certain other classes of persons, may claim exemption when called upon. The twelve jurymen finally obtained are sworn to try the case. The function of a jury cannot be precisely stated in few words; but it may be said to consist in deciding what credit is to be given to evidence. What can be considered evidence (what is relevant to the issue tried), and what legal consequences flow from the facts established, it is for the judge to decide. The verdict of a jury must be unanimous, and if they persist in disagreeing they must be discharged. In cases of felony they are kept together, under supervision, until they agree or are discharged. A jury called to try a criminal case is sometimes called a petty, as opposed to a grand jury.—**GRAND (England).** The antiquity of the grand jury is considerable. Like the common jury, it may be traced up to the time of Henry II., if not earlier. But here it is impossible to state more than its present constitution and functions. The sheriff of each county is directed by precept to return to every session of the peace, and to every commission of oyer and terminer and gaol delivery, twenty-four good and loyal men of the county. The qualification of a grand juror at the sessions is the same as that of a petty juror in the trial of civil causes at the assizes. The qualification of a grand juror at the assizes is uncertain. He must be a freeholder, and is usually a gentleman of consideration. The grand jury must consist of at least twelve, and not more than twenty-three, jurymen. Their function is in the formal prosecution of persons accused of crime. They may proceed either by presentment, or by finding an indictment. They proceed by way of presentment when from their own knowledge, and without any indictment laid before them, they take notice of any offence. In this case an indictment

must be framed before the person presented can be proceeded against. An indictment is a written criminal accusation. The grand jury, after hearing a charge from the presiding judge of assize, retire to receive indictments. These are preferred in the name of the sovereign, but at the suit of a private prosecutor. As the grand jury have only to inquire whether there is sufficient ground for calling on the party accused to answer the accusation, they hear only the witnesses for the prosecution. If not satisfied, they endorse upon the bill the words "not found," or "not a true bill," and the person indicted is discharged. Another bill against the same person, for the same offence, at the same assizes or sessions, cannot be found by the grand jury; but fresh bills may be preferred to subsequent grand juries. If satisfied of the truth of the accusation, they endorse upon the bill the words "a true bill." Twelve at least of the grand jury must agree to find a true bill, and it is their duty not to find a bill unless the evidence submitted to them is in itself satisfactory. The indictments are then returned into court, and the finding of the grand jury is publicly announced. —**GRAND (Ireland).** The grand jury in Ireland has administrative as well as judicial functions. The administration of an Irish county is divided between the grand jury and the presentment sessions. The grand jury, which must not consist of more than twenty-three members, is appointed for each assize by the High Sheriff from among the £50 freeholders or £100 leaseholders whose lands are situate within the county. One resident freeholder or leaseholder must be summoned from each barony within the county, a barony being a subdivision of an Irish, corresponding to the hundred in an English, county. In some counties, as in Cork, the number of baronies is equal to the maximum number of grand jurors. The presentment sessions are held separately for each barony and for the county at-large before the assizes. At these sessions every justice for the county, who is not a stipendiary magistrate, may attend; and with the magistrates are associated a certain number of cess-payers. For the baronial sessions the cess-payers, who must not be less than five nor more than twelve, are selected by the grand jury from a list of the hundred highest cess-payers in the barony. At the sessions for the whole county only one cess payer from

each barony may attend. The division of power between the grand jury and the presentment sessions may be roughly expressed as follows: that the sessions alone can initiate expenditure upon county works by making presentments to the grand jury, whilst the grand jury have an almost absolute power to ratify or to reject any presentment made to them. The presentments being, in certain instances, made imperative by statute or by direction of some lawful authority, the power of ratification possessed by the grand jury is in so far merely ministerial. Provision is made by statute for certain cases of neglect of duty either by the presentment sessions or by the grand jury. The grand jury must complete its administrative business before the judge opens the commission of assize. Its part in the administration of justice is the same in Ireland as in England. See Mr. O'Brien's report on Local Government and Taxation in Ireland (Parliamentary Papers), and the statutes therein cited. —**SPECIAL.** In civil causes either the plaintiff or the defendant may insist upon having the cause tried by a special jury. Every man on the jurors' book (see above, **Jury, Common**) who is legally entitled to be called esquire, or is a banker or merchant, or occupies a house assessed to the poor-rate or inhabited house tax, in a town of 20,000 inhabitants or more at £100 or upwards, and elsewhere at £50 or upwards, or occupies premises other than a farm so rated or assessed at £100 or upwards, or a farm so rated or assessed at £50 or upwards, is qualified to serve as a special juror. When the assizes are approaching, the sheriff is directed to summon a sufficient number of special jurymen, and a panel is prepared in the same way as for common jurymen. In London and Middlesex a special jury may be called, if the judge so order, in a particular way known as striking a special jury. The rules which regulate the special are usually the same as those which regulate the common jury. —**Justices of the Peace** were first appointed in England by Edward III. 1327; they were empowered to try felonies 1360-61; their wages were fixed by Richard II., 1389; their form of appointment settled by the judges, 1590; attorneys, solicitors, and proctors while in practice declared incapable of office by George II., 1732; jurisdiction in general and at quarter sessions defined by the Queen, 1842; duties further defined, 1848, 1853, and 1855.

K

Kaffirs. The most important of the races of South Africa. They are a branch of the great Bantu family. See ed. '86.

Kafraria. The country of the Kaffirs, in eastern South Africa. The name, when used now, implies the **Transkeian Territories** (*q.v.*), which lie between Basutoland and the sea, and from the Kei river to Natal. A district south-west of the Kei, formerly called **British Kafraria**, was annexed to Cape Colony in 1863, and is now divided into the two districts of King William's Town and East London.

Kaiser Wilhelm's Land. The German portion of **New Guinea** (*q.v.*), together with the islands of New Britain and New Ireland.

Kalahari Desert. A vast, sandy plain of South Africa, north of Orange River, much of it included in the British Protectorate of **Bechuanaland**. It extends for about a distance of about 600 miles, at an elevation of 3,500 feet above the sea. It is of vast extent, subject to long-continued drought, and devoid of running water. Saline pools, called salt-pans, occur. It is inhabited by Bushmen, and there is abundance of antelopes and other game. The infrequent rains are stored by Nature in water-melons, and in certain tubers, both of which are amazingly plentiful, and retain their water in spite of fiercest drought. Man and beast can therefore exist in the desert. The soil is sandy, but patches of grass are found. Consult Farini's "Through the Kalahari Desert."

Kalnoky, Count Gustav Siegmund, an Austrian statesman, b. Dec. 20th, 1832, at Lettowitz in Moravia. After serving for a few years in the army, he entered the diplomatic service (1850), and from 1860 to 1870 he was Councillor of Legation at the Austrian Embassy in London. In 1874 he went as Minister to Copenhagen, whence he was transferred (1880) as ambassador to St. Petersburg. Thence he was recalled in 1881 to assume the important office of the joint **Austro-Hungarian Minister of Foreign Affairs**, in succession to Baron Haymerle—a post which Count Kalnoky has since filled with much ability, pursuing the peace policy which is the foundation of the alliance with Germany. Count Kalnoky had an interview with Prince Bismarck and Signor Crispi, the Italian premier, after the meeting of those statesmen in August '88. The **Star of the Black Eagle** in brilliants was conferred on Count K. by the Emperor William in October '88; and in Nov. the Order of the Annunziata was bestowed on him by the King of Italy.

Kamaran. An island in the Red Sea, off the Arabian coast, acquired in 1854 by Great Britain as a station for the Indian telegraph cable. It is now unoccupied.

Kandy. A town in Ceylon (*q.v.*), the former capital of the Sinhalese power. Near the centre of the island is an amphitheatre of hills.

Karoo. A Hottentot-Dutch name for certain elevated and comparatively barren plateaux in Cape Colony. The Great Karoo extends between the coast range and the main range of Cape Colony. It is 100 miles across, and covers an area as large as Ireland. Its elevation is 3,000 to 4,000 feet above sea-level. It affords excellent pasturage for sheep, cattle, Angora goats, and ostriches; and immense tracts are now occupied as farms. These are watered by permanent springs, and by large reservoirs,

constructed for storing the superabundance of rain which in two years out of three falls during the summer thunderstorms. See ed. '87.

Kars. A famous Turkish fortress in North Armenia, now in the possession of Russia. Situated on the frontier of the two countries, it has been repeatedly besieged. In 1854 it was gallantly, but unsuccessfully, defended by Sir Fenwick Williams. Captured by the Russians after defeating Mukhtar Pasha's army, (Nov. 1878). After the war the Russians connected it with Batoum and Tiflis by military roads, and enlarged the fortifications, so that Trans-Caucasia, hitherto slightly protected on the side of Armenia, is now able to defend itself against a very powerful European army, Kars being a place of great strength of strategic importance.

Kashmir (N.W. India). For President see DIPLOMACY.

Kaulbars, Major-General Baron Nicolas. General Kaulbars is best known as the agent of Russia in the events which followed the overthrow of Prince Alexander of Bulgaria. He was completely balked in his endeavours to make the revolution subservient to Russian aims and when his failure was complete he was recalled to St. Petersburg, where he was received with honour by the Tsar. He was subsequently attached to the staff of the Grand Duke Vladimir, Commander-in-chief of the Guards Corps and of the military district of St. Petersburg.

Kay, Sir Edward Ebenezer, b. 1822. Educated at Cambridge. Called to the bar at Lincoln's Inn (1847). For some years he was the authorised law reporter in the Court of Vice-Chancellor Wood (afterwards Lord Hatherley), Q.C. (1866). Relinquished his leadership in Vice-Chancellor Bacon's Court (1878), confining his practice to the House of Lords and special business. Appointed a judge of the High Court (1881).

Keeling Islands. A dependency of the Straits Settlements (*q.v.*), 700 miles S.W. of Java.

Keewatin. A Canadian district under the jurisdiction of the Government of **Manitoba**. It lies between that province and Ontario, and stretches from United States boundary to Hudson Bay. Area not determined. Part has been assigned to Ontario. It is a difficult region of rock, swamp, and wood, with few tracts available for agriculture or pasturage; but mineral wealth is great, including copper and silver, and game is plentiful. See MANITOBA and HUDSON BAY RAILWAY.

Kekewich, Sir Arthur, b. in 1832. Called to the bar in 1858, made Q.C. (1877), Bench of his Inn (1881). He enjoyed a considerable Chancery practice, and for a long time was standing counsel to the Bank of England and several large insurance companies. He was raised to the Judicial Bench in '86. Mr. Justice Kekewich made several unsuccessful attempts to enter Parliament.

Kepton Park International. See TURF.
Kennedy, Rev. Benjamin Hall, D.D.; b. at Birmingham 1804. Educated at King Edward's Sch. (where his father was second master), at Shrewsbury, and St. John's Coll. Camb., where his career was one of the most brilliant upon record. Graduated B.A., senior Classic and senior Chancellor's Medallist, '27; Fellow

and Classical Lecturer of his college '28; assistant master at Harrow '28-30; head master of Shrewsbury Sch. '30, which position he resigned '66, on his appointment as **Regius Professor of Greek at Cambridge**; Canon of Ely '67. Professor K. is the editor of "**The Public School Latin Grammar**," and of a number of school books, and has afforded evidence of the ripeness of his scholarship by his translations from Aristophanes, Æschylus, and Sophocles, and in his **Ely Lectures on the Revised Translation of the New Testament**.

Kentish Fire. A form of continuous applause by voices in unison. First adopted in the county of Kent at meetings of Protestants held in 1828-29, for the purpose of preventing the passing of the Catholic Relief Bill.

Kerguelen Land. An island in the Southern Ocean, about midway between the Cape of Good Hope and Australia. Area probably not less than 1,500 sq. m. Lying within Antarctic currents, the climate is severe. The island is composed of igneous rocks rising into mountains. Its flora is very limited, including only one useful plant, a sort of wild cabbage; and its fauna comprises only marine animals and birds. Possession is claimed by France, in right of first discovery by Kerguelen in 1772. Captain Cook visited it in 1776, and called it "Land of Desolation." It has been included in lists of British possessions, but is really a "No man's land," visited only by occasional whalers and sealers.

Kerr, Mr. Robert Malcolm, Commissioner of the City of London Court, was b. in Scotland 1821, and called to the English bar in 1848. He has twice unsuccessfully contested Kilmarnock in the Liberal interest. Mr. Commissioner Kerr, who is a rigid stickler for the observance of professional etiquette, and who is well-known for his just administration of the law for the protection of the victims of unscrupulous attorneys, has edited several valuable legal works.

Kew Gardens. First formed as Botanic Gardens, 1750-60. Parliamentary Committee to consider the management appointed 1838; Lindley's report presented 1840; gardens transferred to Commissioners of Woods and Forests 1840. Opened to the public free 1841. Palm-house built 1848. **Open free** to the public every weekday from noon, and on Sunday afternoons. Distributions of bedding out plants are annually in the autumn made to applicants.

K. G. See GARTER, ORDER OF THE.

Kharkoff. A rapidly developing Russian town (population 167,000), situated about 420 miles S. of Moscow. The development of the iron and coal fields of S.E. Russia is producing a favourable effect upon its industries, yearly increasing in number and importance. The University, containing 600 centres, was the most active Nihilist centre during the troubles culminating in the death of the late Tzar.

Kherson. A Russian town of 63,000 inhabitants on the Dnieper, about forty miles from Nicolaieff, the growth of which as a dockyard has dwarfed the previous naval importance of Kherson. It is best known as the resting-place of Howard the philanthropist, to whom a monument is erected. Founded by Potemkin 1778.

Khokand. A town (pop. 28,000) in Turkistan, alternately ruled by Khokand and Bokhara, which General Romanovsky captured (June 5th, 1866). Formerly of considerable commercial importance, it has decayed somewhat

since. It was the scene of a serious outbreak in 1875, when Khokand revolted against Russia.

Khokand. A Mussulman khanate in Central Asia, the power of which was shattered by General Tchernayeff in 1864-65. A portion was left independent until 1875, when an outbreak caused the Russians to overrun and annex it. This campaign was the hardest the Russians had had in Turkestan in point of national resistance, but the people have since become reconciled to their rule. Khokand now forms the Turkestan province of **Ferghana**, an ancient name restored in 1876. The city of Khokand (pop. 35,000) ranks next in commercial importance and size to Tashkent and Bokhara.

Khorassan ("The country of the Sun"). One of the richest provinces of Persia, forming the north-east portion of that kingdom. It consists of 140,000 square miles, comprising nearly a quarter of Persia: population 860,000. The country is wonderfully fertile, except where the great desert of Persia encroaches upon it, and its prosperity may be expected to increase now that the Turcoman raids all the way along the north are suspended, in spite of the tyranny and imbecility of the rulers. The Russian outposts stretch for nearly 1,000 miles round the north, from the mouth of the Atrek to the Zulfikar Pass. On the south the great desert separates it from the rest of Persia. Communication with Teheran is only maintained by a couple of roads through the narrow cultivated gullet alongside the Caspian. Early in 1886 an exploring expedition under the direction of Dr. Radde and other eminent scientists, and the auspices of the Emperor of Russia, started from Tiflis to investigate the natural history of K.

Kidnapping. The term applied to the abduction of a man.

Kilima-Njaro. A mountain mass in East Africa with snow-clad peaks. Discovered 1847. Annexed by Germany in 1885-6, and forms part of the territory of the **German East African Company**. It is situated about 100 miles inland from the port of Mombasa, on the Suaheli coast, north of Zanzibar Island. The district has been lately explored. Its climate is said to be perfectly healthy for Europeans, with various plateaux and valleys suitable for the cultivation of coffee, cinchona, etc. The natives are not intractable, and the country is excessively beautiful—a sort of East African Switzerland. The highest peak was ascended in 1887 by Dr. Meyer, who estimated its elevation at 19,686 feet. Consult a paper by H. H. Johnston, in "**Proceedings of the Royal Geographical Society**," March 1885.

Kilmainham Treaty. So called from an alleged arrangement between Mr. Parnell and the Gladstone Government—the Irish members, who had been imprisoned as "suspects," being released from Kilmainham Prison. On the release of Mr. Parnell, Mr. Forster resigned the Irish Secretaryship. See ed. '87.

Kimberley. A fertile district lying between King Sound and Cambridge Gulf in the tropical portion of the colony of **Western Australia**. Has been recently explored and opened up for settlement. There are immense tracts of splendid pasturage. The chief port is Derby. In 1883 gold was discovered, a gold-field "proclaimed," and a great rush from all parts took place. Enormous finds were at first reported, but general disappointment was experienced, privations incurred, and the field practically abandoned. See **WESTERN AUSTRALIA**.

Kimberley. The capital of the province of Griqualand West, Cape Colony, and chief centre of the diamond diggings. Though young, it is a large and important town, well provided with institutions and accessories of civilised life; pop. 25,000. Declared value of diamonds exported in 1886 was £3,504,750. It is connected by rail with Cape Town and Port Elizabeth. The extension of the line into Bechuanaland and into the Orange Free State is proposed. See DIAMOND FIELDS, and *Times*, Jan. 11th, '88.

Kimberley, John Wodehouse, P.C., 1st Earl of (creat. 1866); b. 1826; succeeded his grandfather in the barony of Wodehouse (1846). Was Under-Secretary for Foreign Affairs (Dec. 1852 to April 1856), Envoy Extraordinary and Minister Plenipotentiary to Russia (May 1856 to March 1858); again Under-Secretary for Foreign Affairs (June 1859 to July 1861); was Lord Privy Seal (Dec. 1868 to July 1870); and Secretary of State for the Colonies (from the last date to Feb. 1874, and May 1880 to Dec. 1882); Secretary of State for India (Dec. 1882 to June 1885); Chancellor of the Duchy of Lancaster for a short time (1882); sent on a special mission to Copenhagen (Dec. 1863); Lord Lieutenant of Ireland (Oct. 1864, to June 1866), when he was created an earl. Secretary of State for India in the Gladstone cabinet ('86). Lord K. has followed Mr. Gladstone in his Irish policy.

King's Advocate. See ADVOCATE, LORD.

King's College, London. Established by Royal Charter 14th August, 1829, opened 31st charter annulled by Act of Parliament 10th May, '82, and College re-incorporated for the purpose of "giving instruction in literature, science, and the doctrines and duties of Christianity." The visitor is the Archbishop of Canterbury, and among the perpetual governors are the Lord Chancellor, the Home Secretary, the Lord Mayor of London, and the Lord Chief Justice of England. There are nine departments in the College—viz., theological, literature, science, engineering, medical, ladies', evening classes, civil service, and the school. To students who have acquired a certain degree of proficiency it grants the diploma of "Associate of King's College," to which is attached the privilege of free admission to all the classes in the department from which they have been elected, as also the use of the college libraries and museums. The associates of the theological department wear a distinctive hood—viz., black, poplin, edged on the outside with a quarter of an inch, and on the inside with one inch, of mauve silk. In addition to King's College School (Head Master, Rev. T. H. Stokoe, D.D.), four other schools are in union with the College, and the pupils of these schools may become associates in two instead of in three years. The ladies' department is conducted in Kensington Square; certificates of proficiency are granted in passing the examinations, after a regular attendance of three terms. The students of the evening classes, which meet from October to March, and from April to June, receive certificates, and may become associates. The civil service department prepares for the excise, customs, Post Office, the navy, and other examinations; women also prepared. The whole of the college is under the supervision of the Principal, Rev. H. Wace, D.D. Last session there were 88 matriculated students

in theology, 36 in general literature, 82 in engineering, 210 in medicine, and 53 in the evening classes.

Kingston. Capital of Jamaica (*q.v.*), pop. 40,000.

Kingstown. Capital of St. Vincent (*q.v.*).

Kirghiz. A nomad people dwelling chiefly in the steppes and deserts stretching from the northern part of the Caspian Sea to the Chinese Empire. Russia completed her conquest over them after the Crimean war, with the exception of a few settled in Chinese territory and near the Pamir. The majority, occupying the borderlands of the Aralo-Caspian basin, suffered dreadfully during the severe winters of 1879 and 1880, which thinned their numbers, and by the destruction of their herds shattered their prosperity. The expansion of Russia is bringing them yearly more and more within civilised influence, and by degrees their territories are being placed under the direct administration of Russian officials. See ed. '87.

Knapp, F. W. See CYCLING.

Knights. In modern days knighthoods are conferred as a mark of the Sovereign's esteem, or as a reward for services of any kind, military or civil. They are bestowed by the Sovereign, or occasionally by the Lord Lieutenant of Ireland as directly representing her. The Royal Orders of Knighthood are: the Garter, the Thistle, St. Patrick, the Bath, St. Michael and St. George, Star of India, and the Indian Empire (see respective headings). Knights not belonging to any of these orders are termed knights bachelors. This last-mentioned dignity is that which is conferred upon the judges of the High Court, the Attorney-General and Solicitor-General, upon civic dignitaries, and upon persons who have attained distinction in various walks of life. The Sovereign bestows the dignity either by a tap with a sword upon the shoulder of the kneeling person honoured, who is then commanded to rise ("Sir" J. B., or by letters patent. All knights are entitled to the prefix of "Sir," and their wives to that of "Dame or Lady" (see forms of address; also next article for knightships conferred during '88).

Knightships conferred, and Promotions made in the different Orders, between January 1st and December 6th, '88. The office or rank given after several of the names was that held at the time the dignity was conferred, and some changes in that respect have taken place since.

Wilson, Daniel, LL.D., Pres. Univ., Toronto

Knights of Labour. A labour organisation in the United States, originating with the tailors of Philadelphia in '69. Under Mr. Powderly, grandmaster workman, its increase became very rapid. The operations of the order are conducted secretly. Its avowed objects are to include within its organisation all departments of productive industry, to secure for workmen a proportionate share of the wealth produce, to establish co-operative institutions, the revision of the land laws, and all legislation hearing unjustly on labour. It also claims equality of the sexes in pay and work, the reduction of the hours of labour, and the abolition of the contract system, with some other points of detail. The official report of the Executive Committee published in July '88 showed that the order had lost a considerable proportion of its members, and that dissensions had arisen, causing the number of members to decrease.

"Knocks-out." See ed. '88.

"Knowledge." A monthly scientific magazine (6d.) was originally started as a weekly record of scientific progress. In 1885 it was changed to magazine form. *Knowledge* treats of the newest and most advanced scientific theories and researches, and gives especial prominence to astronomy. The late Mr. R. A. Proctor (q.v.) was for some years editor. Office, 13, Waterloo Place, S.W.

Knowles, Mr. James, F.R.I.B.A., was b. 1831. Educated at Univ. Coll., Lond. From early years he pursued literature, and contributed articles to various magazines; and in '60 he published the "Story of King Arthur." Succeeded Dean Alford ('70) as editor of the *Contemporary Review* (q.v.), and on the establishment of the *Nineteenth Century* (q.v.) became its editor ('77). In addition to his literary work, Mr. Knowles has acquired reputation as an architect. Aldworth, the Surrey residence of Lord Tennyson, Kensington House, the Thatched House Club, and several churches having been erected from his designs.

Knox-Little, Rev. William John, was b. at Stewartstown, co. Tyrone. Educated at Trin. Coll., Camb., where he graduated in '62. Subsequently became Assistant Master in the Grammar Schools of Lancaster and Sherborne; curate of Christ Church, Lancaster, of Turweston, Bucks, and St. Thomas', Regent Street; rector of St. Alban's, Chertwood, '75; Canon of Worcester '81. He is a High Churchman, and has published, in addition to a number of sermons, "Characteristics of the Christian Life," "Meditations on the Three Hours' Agony of our Blessed Redeemer," and "Motives of the Christian Life." Canon Knox-Little has also published several novels.

Koran, The. See ed. '88.

Kossuth, Lajos, or Louis, Hungarian dictator and patriot, b. at Tapio Bicski, near Pesth, 1805. In '32 he was elected to the National Diet of Pressburg. For publishing reports of the proceedings of that body he was, in '37, after a warning from the Government, prosecuted and sentenced to four years' imprisonment. In '40 founded the *Pesti Hírlap*, which became the organ of the Radical opposition. In '47 he was again elected to the National Diet, and forthwith became leader of the opposition. In March '48 he demanded the re-establishment of an independent government for Hungary with a ministry responsible to the country. Returned to Pressburg as Minister of Finance for

Hungary in the cabinet of Count Batthyány. President of the provisional government ('48-49). In April '49, in the Diet at Debreczin, he declared Hungary an independent state. Created **Governor of Hungary**, he entered Pesth, but was compelled to retreat on the entry of the Russian troops. Kossuth, accompanied by a large number of refugees, entered Turkish territory on August 17th, and in the February following ('50) was, with his companions, interned at Kutahia, in Asia Minor. Liberated in September '51, Kossuth came to England, where, save for a visit to the United States, he lived for many years. He subsequently made several attempts to incite the Italians and Hungarians against Austria. For the last quarter of a century he has resided at Turin, where he has devoted himself to scientific studies.

Koti. A river, state and Dutch settlement in Borneo (q.v.).

Koumys, or Kumiss, prepared from mare's milk, used as a beverage and for medicinal purposes by the Kirghiz, Kalmucks, Turkomans, Nogavs, and other nomadic tribes of the steppes of Russia and Tartary. See ed. '88.

Kowloon. A peninsula of South China, adjacent to **Hong Kong** (q.v.) and appertaining to that colony. Area about 3 sq. m.

Kraal (pron. krawl). The village or town of natives of South Africa. It usually consists of many huts surrounded by a palisade.

Krakatoa, an uninhabited volcanic island in the Straits of Sunda, between Sumatra and Java. After being dormant for two centuries, it showed signs of feeble activity on May 20th, 1883; and on August 26-28th it burst into a state of violent eruption. During this paroxysm a large part of Krakatoa was actually blown away, and the physical features of the island entirely altered. An immense sea-wave swept over the shores of the neighbouring islands, destroying numerous villages and more than 35,000 inhabitants. Soon after the eruption a succession of brilliant sunsets and other atmospheric phenomena were observed in all parts of the world; and it was suggested that these effects were connected with the presence of extremely fine volcanic dust floating in the higher regions of the atmosphere. Consult "Krakatoa" (R. D. Verbeek: Batavia, '85), and an article by Prof. Ball on Krakatoa in the November number of the *Contemporary Review*.

Krapotkin, Prince Peter Alexievitch, A noted Russian revolutionary leader. Formerly aide-de-camp to the Military Governor of Transcaubalia (1863-67), during which he made many journeys in Siberia and Manchuria. Studied at the St. Petersburg University ('68-72), and joined the most advanced Anarchist section of the **International Working Men's Association** in Belgium in '72. Returning to Russia, he took part in the Tchaikovsky conspiracy; was arrested '74, and after two years' imprisonment escaped to England. In '79 founded the Anarchist paper *Le Revolté*, at Geneva, whence he was expelled '81. Commenced then a **crusade against Russian Government** in the English and French press. In '82, while on a visit to Thonon, was condemned by the Police Correctionnelle at Lyons to five years' imprisonment for participating in the International Working Men's Association, this harsh measure being due to the desire of the French Government to conciliate Russia. Released '86, and

returned to England. Is a frequent contributor to scientific journals on geographical, ethnographical and other subjects. Holds ultra-revolutionary views, and represents the most Anarchist section of the Russian Nihilist party.

Kriegspiel, or War Game. See ed. '88.

Kuching. Capital of **Sarawak** (*q.v.*), and now generally called **Sarawak**.

Kumassi. Capital of Ashanti, taken and burned by a British force in 1874. See **GOLD COAST COLONY**.

Kurdistan. A country of 50,000 sq. m. in Asiatic Turkey, situated on the Persian frontier. The Kurds (the ancient Karduchi) are tolerably brave, and good horsemen, but for want of proper training they have never proved efficient irregular cavalry in recent Turkish wars. See ed. '87.

Kuria-Muria Islands. A group off the coast of Oman, Arabia. Area 21 sq. m. Acquired by the Bombay Government in 1854, as a station for the Indian telegraph cable.

Kyrie Society. The, owes its origin to a letter written by Miss Miranda Hill, calling attention to the dull, common-place lives of the poor, and suggesting means to enliven and beautify their lives. In 1877 the Society was started, and its work has increased steadily up to the present time. The work is apportioned between four branches, each of which is regulated by a sub-committee, the superintendence of the whole being taken by the executive committee. **Objects of the K. S.:**—1. **Decorative Branch.**—To decorate by mural paintings, pictures, stencil

works, mottoes, and other means, workmen's clubs, hospital wards, parish rooms, or any room used for social gatherings, without distinction of creed. 2. **Open Spaces Branch.**—To secure and assist in securing any open spaces in or near the Metropolis, and to prevent spaces being illegally built upon. To co-operate with local societies for the preservation of commons, footpaths, village greens, and roadside strips. To render available as public gardens, disused burial grounds and other waste spaces, and to provide seats, plants, etc., for them. To distribute cut flowers, plants, ferns, and bulbs to hospitals, workhouses, and other institutions, and amongst the homes of the poor. 3. **Musical Branch.**—To organise a voluntary choir of singers to perform oratorios for the poor. These are frequently given in churches, halls, and schoolrooms situated in poor neighbourhoods and districts of London (where good music could hardly otherwise be heard). To give miscellaneous concerts in halls, schoolrooms, and other places, with a view to provide recreation and amusement in poor districts; and in connection with this branch of the society the Countess of Meath provides entertainments in workhouses and hospitals during the winter months. 4. **Literature Distribution Branch.**—To distribute as loans or gifts to hospitals, infirmaries, workhouses, clubs, and libraries for the benefit of the poor, books, magazines, and periodicals. **Hon. gen. secs.,** T. Slingsby Tanner and Miss Lilian James. **Office,** 14, Nottingham Place, W.

L

Laager. A South African word meaning an encampment more or less fortified. The original *laager* of the Boers was an inclosure formed by drawing together several waggons, within which the cattle could be heided at night.

Labouchère, Henry, M.P., was b. 1831. Educated at Eton. Entered the Diplomatic Service (1854), from which he retired (1864), having become 2nd Secretary. Edits and owns *Truth*. Sat as a Radical for Windsor (1865-66), Middlesex (1867-68), and for Northampton since 1880. Mr. Labouchère is noted for his vivacious speeches and quick lively repartee—gifts which render him popular in the House of Commons. He is an advanced Radical, and one of Mr. Gladstone's most energetic supporters.

Labourers' (Ireland) Acts, '83, '85, '86. For concise summary see ed. '88.

Labouring Classes, Society for Improving of the (Incorporated by Royal Charter). Established under present name (1844) by H. R. H. the late Prince Consort and the late Earl of Shaftesbury. **Object:** To improve the dwellings of the poor by erecting model buildings and renovating old courts and alleys. **Pres.,** Hon. Evelyn Ashley; **Sec.,** A. Humphreys; **Office,** 8, Southampton Row, W.C.

Labrador. A great peninsula on the east coast of British North America, lying between the Gulf of St. Lawrence and Hudson Bay. Area 500,000 sq. m. It is rocky and desolate, infested with ice, but the fisheries are valuable. Resident pop. about 4,000, consisting chiefly of Eskimos, among whom dwell Moravian missionaries at the settlements of **Hopedale**, **Nain**, **Okak**, **Zoar**, **Ramah**, and **Hebron**. The

population is more than doubled during the short summer by an influx of whalers, sealers, and fishermen. Some furs are collected. The portion drained by rivers flowing into the Atlantic belongs to Newfoundland. Figures included with those of Newfoundland. A report, current in 1886, that the settlements were hopelessly icebound during summer, famine-stricken, and exposed to the attacks of ferocious bears, was without foundation in fact.

Labuan. An island and British colony, situated in a bay on the north-west coast of Borneo. Area 31 sq. m., pop. 5,883. The port and town is **Victoria Harbour**. Labuan is mostly level, well watered and wooded. Climate hot, moist, and unhealthy. Flora and fauna like those of **Borneo** (*q.v.*). Soil fertile.—Labuan is administered as a Crown colony by a Governor, and there is a nominated Legislative Council. There is a body of fifty armed police. The colony is a market for produce of **Borneo** and the islands, interchanged for goods from Singapore. **Exports:** sago, beeswax, edible birds' nests, camphor, hides, rattans, tortoise-shell, and trepang. **Imports:** cotton goods, hardware, opium. A valuable coal mine, the seam being 11 feet thick, is worked. There are sago factories. For financial statistics see **BRITISH EMPIRE**, etc. (table). There are only about a score of Europeans resident, the population being composed of Kyans, Malays, Borneans, Klings, and Hindis. Labuan was purchased of the Sultan of Brunei in 1846. Governor is Consul-General for Borneo.

Lacrosse. The home of this game is Canada. It was introduced to this country by a celebrated

Canadian team some fifteen years ago, since which time it has taken root in a kindly manner, more especially in the northern portion of England, although clubs are now scattered all over the three kingdoms. The **Irish Association** was formed in '79, the **North of England Association** in '80, and the **Southern Counties** (of which Mr. E. T. Sachs is hon. sec.) in '82. The **Toronto Lacrosse Club**, holder of the **Canadian championship** in '87, visited this country in April '88, and proved themselves superior to their British antagonists, winning all their engagements save one (abandoned). The match between **North and South** terminated in a victory for the North by 12 goals to 1. The **England v. Ireland** contest, played at Sydenham, was decided in favour of England by 7 games to 3. In the final tie for the **Irish championship** in September the **Windsor team** beat **North of Ireland** by 4 games to 2. The **North of England Challenge Flags** were credited to **Owen's College**, and the **South of England** to **Blackheath**. The **North v. South** match is fixed for April 13th, '89, at Richmond. The **Lacrosse championship of the world** is held by the **Ottawa (Canada) team**. For the first time since the introduction of the game into this country a match was played in **Windsor Home Park**, opposite the Castle, on May 5th, the contest, by a remarkable coincidence, taking place whilst the Princess Louise and the Marquis of Lorne were visiting the Queen at the Palace, whence an excellent view of the sport was obtained. The competing clubs were the **West London** and **Snaresbrook**, and the latter won by 8 goals to 2.

Ladakh. For Commissioners see **DIPLO-MATIC**.

Lady Clerks. See ed. '87.

Lager Beer. A light beer, of but a small intoxicating character compared with the best English pale ales. See ed. '88.

Lagos. A British colony on the Guinea coast, West Africa. Consists of Lagos, town and island, on the coast of Right of Benin, 150 miles east of Gold Coast, together with Badagry, Palma, and Lekke on the mainland. Area, 1,071 sq. m.; pop. 75,270, chiefly blacks. Climate very inimical to Europeans. Products are palm-oil and kernels, peppers, grains, lentils, cola and ground-nuts, cotton, and silk, camwood, indigo, and lead-ore. Manufactures are cloths, embroidered robes, mats, basket and bamboo-work, leather-work, and brass-work. For financial statistics see **BRITISH EMPIRE**, etc. (table). Ruled by an Administrator and Legislative Council, subordinate to the Governor of the **Gold Coast Colony** (*q.v.*). Erected into separate colony 1886.

Lagthing. See **SWEDEN**.

Laissez-faire. The maxim of *laissez-faire* ("let be," or non-interference) is, that the intervention of a public authority in the business of a community ought to be restricted to the narrowest compass. See ed. '87. Consult Professor Sidgwick's paper on *Laissez-Faire*, British Association meeting, Sept. 1886.

Lake Michigan and Erie Ship Canal. It was reported from America in May '88 that a number of Western capitalists had united in a project to connect the two lakes by a ship canal, 40 miles long, across a narrow neck of the upper Michigan peninsula. The scheme will obviate a dangerous water journey of 300 miles, and will cost £7,000,000.

Lake School, or **Lakists**, is the name given to a school of poets who arose at the com-

mencement of the present century. See ed. '88, and more fully ed. '87.

Lakh. A term used in India to express the number 100,000 in the computation of money. A lakh of rupees = 100,000 rupees. In 1835, when the currency was remodelled, the value of the rupee was fixed at two shillings. A lakh of rupees is therefore equivalent to £10,000.

Lambeth Conference. The Began its meetings with an imposing function at Canterbury on June 20th, '88, followed by a service at Westminster Abbey on July 2nd. The members, the Bishops of the Anglican Communion scattered over the world, were invited to assemble for general deliberation by the Archbishop of Canterbury. There were 209 invitations issued. The actual attendance was 146. For a month the meetings were well nigh continuous. The method of procedure was briefly as follows:—The subjects debated were fixed in outline previous to the general meeting. During the first week of session these were introduced in turn for short discussion. Then a committee was moved for and appointed, and the report of committees, of which there were fourteen, were printed and presented at the last session; and resolutions upon these were moved and discussed, amended and passed or rejected, as the case might be. The reports of committees were only received, not formally adopted by the Conference. The Conference is only directly responsible for the resolutions on each subject, and for the **Encycloidal Letter** which summarises the general result of its deliberations. The different subjects touched on in the Encycloidal may be grouped into three divisions. (1) General social questions; (2) The internal relations of the Anglican Communion; (3) Movements towards reunion at home and abroad. This remarkable letter was published in an authorised form by the S.P.C.K.

Lammas Fields. See **LAND QUESTION**, ed.

'88.

Lamp Accidents. The fatalities arising from paraffin lamp accidents in the United Kingdom were estimated at a meeting of the **Birmingham Trades Council** in July '88 as ranging between 200 or 300 a year, while at least ten times as many persons are severely injured. Since the Legislature provides an elaborate system of inspection to prevent deaths from lamps, etc., in mines, the total number of fatalities in the United Kingdom in '87 being only 147, an agitation has been set on foot for a law to suppress the dangerous lamps of the masses, occasioning twice that mortality. In '88 an **International lamp competition** was organised by the Russian government in connection with the **Petroleum Exhibition at St. Petersburg**, at which no medal for safety was given to any type of lamp denounced as dangerous in "The Moloch of Paraffin," the only medal for a safety lamp awarded to any European or Russian competitor being assigned to the English **Defries Company**. As new inventions of **safety lamps** are announced almost every day, it may be well to define the conditions they should fulfil, in the opinion of the best petroleum experts. Sixty per cent. of accidents arise from breakable reservoirs. Glass and china lamps should never be used. On this point the Imperial Russian Technical Society, the German Government Standards Commission, and the Metropolitan Board of Works are unanimously emphatic in their condemnation, and no palliative such as extinguishers are accepted as a remedy for the danger involved in their use. No metal

reservoir lamp is a safe one in which an inferior oil cannot be safely used, or in which the oil cannot be safely raised to the temperature of boiling water. If upset, the light should be immediately extinguished; but an extinguisher alone will not make a lamp safe, because a person ignorant of its existence may blow down the chimney; therefore the burner must be so constructed as to render the lamp perfectly safe even if this be done. It is understood that during the session of '89 the Government will introduce a **Petroleum Bill**, dealing primarily with the storage of oil, which will contain a clause legislating for the suppression of dangerous lamps. Consult "The Moloch of Paraffin," by Chas. Marvin.

Land Act, The (Ireland), passed in 1881, gave practically what were known as the "three F's"—fixity of tenure, free sale, and fair rents. Under the Act tenants are empowered to apply to land courts for a revision of their rents, and the rents then fixed are called judicial rents. A parliamentary paper was published in '88, giving statistics, connected with the **Land Judges' Court (Ireland)** for the four years ending '86. From this we learn that in '83 the number of petitions filed was 308; the rentals of 110 estates were settled; 128 receivers were appointed; the number of yearly settlements was 530, and the gross amount collected was £426,842. There was but little change in the number of petitions, rentals settled, and receivers appointed, in the years '84 and '85, although the yearly settlements rose in '85 to 735, and the gross amount collected to £543,063. But in '86 the number of petitions filed were 302; rentals settled, 110; receivers appointed, 135; yearly settlements, 797; and gross amount collected, £460,905. The salaries of officials in the Land Judges' Court ('86) amounted to £5,400.

Land Law (Ireland) Act, '87, extends the Act of '81 to leases expiring within 99 years of the passing thereof, and to any longer lease if the court is satisfied that it was forced upon the tenant. A written notice may be substituted for the execution of an ejectment where the rent does not exceed £100 a year, and upon the determination of the tenancy by the service of such notice the person served shall be deemed to have been readmitted as a caretaker. Other enactments relate to town parks and land purchase. The equitable provisions set forth that as soon as possible after the passing of the Act the Land Commission, having regard to the difference in prices affecting agriculture, should without application determine what alteration ought equitably to be made in judicial rents fixed before Jan. 1st, '86; and the Commission were in '88 and '89, if necessary, to make a similar adjustment of rent. Power is given to the court on any proceedings for the recovery of a holding valued at not more than £50 a year, for non-payment of rent, or any action for debt or damages against the tenant, to stay execution of an ejectment, or of a writ of *per vi facias* as against the tenant's interest in the holding, for such time as it thinks reasonable, and to order that the arrears and costs, or such sum in satisfaction thereof as may be agreed on between the parties, shall be paid by instalments. If the landlord offers to accept in full satisfaction of arrears such lesser sum as the court shall think reasonable, and the tenant refuses, no stay of execution shall be granted.

Landlord and Tenant. The relation of landlord and tenant is created wherever a person

having an estate in land grants to another person in consideration of a rent a lesser estate in this land. Thus, when a freeholder lets his land to a farmer for a term of years, he becomes landlord and the farmer becomes tenant. **Tenancies** are of many kinds; and the most usual are a tenancy for a term of years, a tenancy from year to year, a tenancy at will, and a tenancy on sufferance. A tenant for a term of years is a leaseholder; and if the term be longer than three years the lease must be by deed, although, where no deed has been executed, evidence is admissible to prove that there has been an agreement for a lease. Where there is a lease in proper form the tenant is secured in his possession so long as he pays his rent, and at the expiry of his term he is supposed to give up possession without the formality of a notice to quit. Formerly a breach of any of the covenants contained in the lease was enough to avoid it; but now any breach may be compensated by a money payment. A tenancy from year to year arises when land is let from year to year, or when it is let without any express stipulation to that effect, but with the reservation of a yearly rent, or when the tenant holds over after the expiration of his term and pays rent for so doing. This tenancy cannot be terminated by either party otherwise than by giving a half-year's notice; so that if this notice be not given before the expiration of the first half-year, another year is added to the tenancy, and so on. A tenancy from year to year may be created by word of mouth, and a verbal notice to quit is valid, although it is always desirable, as a precaution, to give written notice. A tenancy at will is a tenancy terminable at the pleasure of either party. The Courts are reluctant to construe any tenancy as a tenancy at will unless there is an express agreement to that effect. But this agreement need not be in writing. A tenancy by sufferance is little more than the fact of possession. It occurs when a tenancy of a higher kind, such as a tenancy from year to year, has expired, and the tenant remains in possession without either hindrance or sanction from the landlord. Tenancy by sufferance cannot be created by the will of the parties, but only by legal construction. If the landlord accept rent from the tenant by sufferance, he immediately creates, according to circumstances, a tenancy at will or from year to year. A tenant under a lease or from year to year may sub-let unless expressly restricted from so doing, but a tenant at will or on sufferance cannot do so. For the recovery of rent in arrears the landlord has, beside the other remedies of a creditor, the remedy of distress. He may in person or by his bailiff take possession of so much of his tenant's chattels upon the holding as by their sale will produce a sum sufficient to discharge the arrears. He must distrain at one time for the whole of that which is due. No arrears of rent can be recovered by distress but within six years of their becoming due. After five days have elapsed from the seizure of the goods they may be sold, having been valued by two sworn appraisers, and the surplus, if any, must be repaid to the tenant. If the distress was unlawful the tenant has an action of replevin. It is a general rule that whatever is affixed to the freehold goes with the freehold; and this rule with its exceptions gives rise to a large part of the law of landlord and

tenant. **Fixtures** made by the tenant may be subdivided into three classes: (1) fixtures for purposes of trade, (2) fixtures for ornament or convenience, and (3) fixtures for agricultural purposes. As regards (1) trade fixtures, like machinery, furnaces, brewing vats, salt-pans, etc., these may be removed by the tenant who has set them up, in every case in which their removal occasions no material injury to the freehold. (2) Fixtures for ornament or convenience, like window-blinds, marble chimney-pieces or kitchen ranges. These also, if set up by the tenant, may be removed by him, provided always that in removing them he does little or no damage. (3) Fixtures for agricultural purposes. The law relating to these is chiefly contained in the *Agricultural Holdings Acts*. Somewhat analogous to fixtures are **emblements**—that is to say, crops resulting from the tenant's cultivation which at the expiration of his tenancy are still uncut and growing. The general rule with respect to these is that the cultivator has the right, after such expiration, to enter on the land to reap and to carry away the produce of his labour. If he die before the harvest, such crops fall into his personal estate, and his executor or administrator succeeds to the rights which he had. Where a tenant from year to year holds of a landlord who has only a life estate, and the landlord dies in the course of the current year, the tenant is entitled to occupy the holding until the year has expired, and the new landlord is entitled to a proportionable part of the year's rent. The non-payment of rent does not affect the validity of a notice to terminate a tenancy. Thus, a notice given on March 25th to take effect on Sept. 25th is good, even though the rent due on March 25th may not have been paid.

Land Question, The. See detailed article, ed. '88.

Land Registration. See **LAND QUESTION**, ed. '88.

Land Tax. The existing land tax dates from the year 1692, when the parliament granted to William and Mary an aid of sixty in the pound to meet the expenses of the war with France. This aid was to have been levied on the rackrent of all real estate, upon all stipends or salaries, and upon personal property; the annual income from this last being assumed at £6 per cent. of the capital value. The tax was renewed from time to time subsequently, but personal property contrived to evade assessment. The valuation of real property, made in 1692, was never replaced by a new one. In the year 1798 the tax produced about £2,000,000, of which only £150,000 was levied upon personal property. In that year it was replaced (a) as regards land by a perpetual rent-charge, power of redemption being given to those interested in the property which paid it; (b) as regards personal property by a tax annually imposed; this tax was abolished in 1833. So much of the land tax has since been redeemed, that it now produces not more than £1,000,000 a year. Upon the subject of this tax there have been many inaccurate statements. Consult Dowell, "History of Taxation and Taxes," vol. iii., Bk. II., chapter i., § 5.

Land, Transfer of. See **LAND QUESTION**.

Lands Clauses Consolidation Acts comprise sundry provisions usually incorporated with Acts of Parliament relative to the acquisition of lands required for undertakings or works of a public nature, and to the compensation to be made

for the same. **Power is given to purchase lands by agreement** between the promoters and the owners of the lands required; and lands may also be purchased otherwise than by agreement. See ed. '88.

Langtry, Lillie, daughter of Rev. W. C. Le Breton, Dean of Jersey, was b. 1852, and after her marriage with Mr. Langtry in '74, she became one of the chief attractions of London society. Her success at amateur theatrical performances subsequently induced her to adopt the stage as a profession. Her first public appearance was at the **Haymarket Theatre**, Dec. 15th, '81, when she took the part of Miss Hardcastle in "She Stoops to Conquer." Besides playing in London, Mrs. Langtry has started the provinces, and engaged in a tour in America, where she is now resident. She has taken a farm in the valley of Howell mountains in California. Mrs. L. is understood to be engaged in writing her "**Recollections**."

Lang, Andrew, M.A., LL.D., was b. at Selkirk, 1844, and educated at Edinburgh Academy, St. Andrews University, and Balliol College, where he graduated first class in classics. Elected a Fellow of Merton, '68. He has for some time been on the literary staff of the *Daily News*, and is a well-known contributor to periodical literature. His style is characterised by a light touch, at once scholarly and humorous. His "**Ballades in Blue China**," '81, brought him into prominent notice. His subsequent works, especially "Helen of Troy," "Rhymes à la mode," and "**Custom, Ritual, and Myth**," increased his reputation. He is joint translator with Prof. Butler of the "**Odyssey**," and with Mr. Myers and Mr. Leaf of the "**Iliad**." Mr. L. was last year ('88) appointed the first Lecturer on Natural Religion at St. Andrews University under the Gifford Trust (*q.v.*). In Feb. '88 appeared "Aucassin and Nicolette," done into English by Mr. L.; and during the year he also published "**Perrault's Popular Tales**" and "**The Gold of Fainville**."

Lankester, Edwin Ray, M.A., F.R.S., b. 1847. Educated at St. Paul's School and Christ Church, Oxford. Appointed Fellow and Lecturer of Exeter College, Oxford (1872), and Professor of Zoology and Comparative Anatomy in University College, London (1874). In 1876, Professor Lankester prosecuted the spirit-medium Slade. He has taken a prominent part in the defence of scientific experiments on live animals, in the discussion of University reform, and in the advocacy of State endowment of scientific research.

Lansdowne, Henry Charles Keith Fitz-Maurice, 5th Marquis of (creat. 1784); eldest son of the 4th Marquis by the Hon. Emily Jane, daughter of the Comte de Flahault and the Baroness Keith and Nairne, was b. 1845; succeeded his father 1866. Was Under-Secretary for War (April 1872 to Feb. 1874), and Under-Secretary India Office (May to Aug. 1880); was Governor-General of Canada '83-'88. His appointment was particularly popular with the French Canadians, owing to the fact that his lordship's mother was a French lady. The first Marquis (better known as Lord Shelburne) was a distinguished minister in the reign of George III.; the third Marquis was also a very distinguished minister during the reigns of George IV., William IV., and her present Majesty. The fourth Marquis, who sat in the House of Lords as Baron Wycombe for some years before he inherited the marquise, was

a Secretary of State and a Lord of the Treasury. Lord Lansdowne was invited to join the second Salisbury administration on the resignation of Lord Randolph Churchill. The invitation was, however, declined. On the retirement of Lord Dufferin from the Governor-Generalship of India, in '88, Lord Lansdowne was appointed his successor, and his arrival at Bombay was announced in December.

Latham, Peter. See RACQUETS.

Law. For important decisions given during '88 see under. Actors' Salaries; Arbitration; Auctioneers' Commissions; Banking Law; Barristers and Clerks; Betting; Bill of Sale; Breach of Promise; Borough English; Building Societies; Clubs; Company Law; Contempt of Court; Copyright; Criminal Prosecutions; Distress; Divorce; Dogs; Ecclesiastical Law; Extradition; Fire Insurance; Garnishee; Gunpowder Storage; Illegitimacy; Income Tax; Infancy; Inhabited House Duty; Insurance Accidence; International Law; Libel; Licensing Law; Limited Liability Co.s; Lord Mayor's Court; Mandeville Case; Master and Servant; Mineral Rights; Mobbs' Estates; Money Changing; Municipal Election Law; Negligence; Obstruction; Patent Law; Railway Law; Rights of Way; Riot; Separation Agreements; Solicitor and Client; Trade Combinations; Trafalgar Square; Trust Deeds; Trustees; Liability of; Universities; Water Supply; Witnesses' Expenses.

Law and Liberty League. See ed. '88.

Law Courts, The New. There are nineteen Courts in all, with entrances from the Grand Central Hall, the Strand and Carey Street. The Courts are: Two Courts of Appeal; the Lord Chancellor's Court; the Lord Chief Justice's Court; four Chancery Courts; two Probate Courts; and nine Queen's Bench Courts. The Royal Courts of Justice were built from the designs of the late Mr. G. E. Street, whose statue is on the floor of the hall, and were opened by her Majesty, Dec. 11th, 1882. The central hall is 230 feet long, 80 feet in height, and 48 feet in width.

Law Officers of the Crown are the Lord Chancellor (*q.v.*), Attorney-General (*q.v.*), Solicitor-General (*q.v.*), Judge-Advocate-General (*q.v.*); for Scotland, the Lord Advocate (*q.v.*) and Solicitor-General; and for Ireland, the Lord Chancellor for Ireland, and Attorney-General and Solicitor-General for Ireland; all of these being political appointments changing with each administration. See also MINISTRY, and IRELAND, GOVT.

Lawn Tennis. Major Walter Wingfield, late of the 1st Dragon Guards, must be looked upon as the pioneer of lawn tennis in this country, and it may safely be conceded that no pastime ever more rapidly made its way into general favour. The gallant officer first introduced the game some sixteen years ago, under its classical appellation of *Sphæristiké*, and he gave birth to and fostered a large industry, as scarcely a country seat is now without the appliances necessary for the game, which quickly became known as lawn tennis. An Association has been formed, consisting of recognised lawn tennis associations and clubs willing to conform to the rules for the purpose of advancing the interests of the pastime generally throughout the United Kingdom. The officers consist of a president (W. Renshaw), twelve vice-presidents, hon. sec. (H. Chipp), and hon. treas. (H. E. Hickson). For the Covered Court Championship, played at Bays-

water, E. W. Lewis (holder of title and challenge cup) defeated E. G. Meers (winner of the All-Comers' Tournament), by 18 games to 4. At the All-England Meeting at Wimbledon, W. Renshaw (ex-champion) was beaten by W. J. Hamilton in the Single-handed Championship by 3 sets to love; and E. Renshaw defeated E. W. Lewis (champion of Middlesex) by 3 sets to 1. For the Ladies' Singles Championship Miss L. Dod (holder) beat Mrs. Hillyard by 2 sets to love; E. and W. Renshaw won the Gentlemen's Doubles from E. G. Meers and A. G. Ziffo. The title of champion and the right to hold the All-England Lawn Tennis Club Challenge Cup was contested by E. Renshaw and H. W. Lawford, the former proving unsuccessful. At the London Athletic Club Tournament, held at Stamford Bridge, the Gentlemen's Singles (London championship) was won by E. W. Lewis (holder), who easily defeated H. S. Barlow, and the Ladies' Singles (London championship) fell to Mrs. Hillyard (holder), who beat Miss Jacks by 2 sets to love. At Bath, Miss L. Dod won the West of England Ladies' Single-handed Championship, and H. S. Barlow the Gentlemen's Championship, whilst in the Doubles, H. Grove and Miss Bracewell beat A. Dod and Miss L. Dod. The Open Championship of Derbyshire (Gentlemen's Singles), at Buxton, was secured for the third time by T. S. Campion; the Ladies' Singles by Mrs. Hillyard; and the Ladies' Doubles (for the third time) by Miss L. Dod and Miss M. Langrishe. The South of England Tournament was held at Eastbourne in September, when, in the Gentlemen's Singles Handicap, E. Renshaw (owes 20) met with defeat by H. S. Barlow (scratch), the event being won by W. Baddeley (half 15 and 2 bisques). A. G. Ziffo won the challenge cup in the Gentlemen's Singles, and Mrs. Hillyard defeated Miss Bracewell (holder) in the Ladies' Singles. The Doubles (open) fell to E. G. Meers and E. W. Lewis, and the Ladies' and Gentlemen's Doubles to H. S. Barlow and Miss Bracewell. At the North of England Tournament Miss Bracewell won the Ladies' Singles (open), and also, with Miss Hall, secured the Scratch Doubles. The Northern Championship Tournament was held at Aigburth, Liverpool, when W. J. Hamilton won the Gentlemen's Singles, and also the Northern Championship (beating H. Grove, holder); Mrs. Hillyard, Ladies' Singles; Miss L. Dod, Ladies' Northern Championship; W. and E. Renshaw, Gentlemen's Doubles championship (beating H. S. Scrivener and H. W. Carlton); Miss Dod and Miss L. Dod, Ladies' Doubles; and E. Renshaw and Mrs. Hillyard the All-England Mixed Doubles Championship (beating J. C. Kay and Miss L. Dod). At Bournemouth, E. W. Lewis won the Gentlemen's Singles for the Challenge Cup (second time); Miss M. Langrishe took the Ladies' Singles, and also, with Miss B. Langrishe, the Doubles. At the Irish Lawn Tennis Championship competition, the Singles fell to E. Renshaw (holder), who defeated W. J. Hamilton (winner of All-Comers' Singles) by 3 sets to 2; W. J. Hamilton and T. Campion retained the All-Comers' Doubles; Mrs. Hillyard beat Miss B. Steadman by 2 sets to love in the Ladies' Singles; E. Lewis and Miss Bramwell won the Ladies' and Gentlemen's Doubles by 3 sets to 1; and the Ladies' Doubles fell to the Misses Steadman. The Inter-counties contest at the Exmouth Tournament resulted in favour of Middlesex; E. W. Lewis won the

jingles Challenge Plate; in the Gentlemen's pairs, Lewis and Hillyard beat Renshaw (champion) and Sweet; Miss Dod and Renshaw won the Double Contest, the former taking also the Invitation Handicap. The championship of Kent is held by E. G. Meers, who defeated C. G. Eames by 3 sets to love, and Miss Jacks is the Lady Champion. H. S. Scrivener is the Midland Counties Champion, J. W. Hayes champion of Cheshire, and T. Coventry champion of Lancashire. E. W. Lewis and Mrs. Hillyard hold the championship of Middlesex. The Essex Championship was won by E. G. Meers, who defeated E. H. Christy by 5 sets to love. Oxford University beat Clifton by 17 sets to 3, and Cambridge University defeated Kent by 8 games to 1.

Lawson, Sir Wilfrid, Bart., b. at Bray-on-Hall, Cumberland, Sept. 4th, 1820, and succeeded to the baronetcy on the death of his father, who was a gentleman of strong temperance and anti-slavery principles. Returned in 1859 as member for Carlisle, and lost his seat for that borough in consequence of the introduction into the House of Commons of his "Bill for the Legislative Suppression of the Liquor Traffic" on March 4th, 1864. He was, however, again returned in 1868 for the same city, which he continuously represented till the general election of 1885, when, Carlisle becoming a one-member constituency, he stood for the Cocker-mouth Division of Cumberland, but was defeated by ten votes. At the general election in the following year he was returned for that division by a large majority. Sir Wilfrid Lawson has thrice successfully proposed his Local Option (q.v.) Resolution. Sir Wilfrid Lawson is best known as the President of the United Kingdom Alliance, to which office he was elected on the death of Sir W. C. Trevelyan. He is a familiar figure in the House of Commons, where, as in the provinces, he is very popular. His speeches, enlivened with humorous touch and racy anecdote, are appreciated even by those who differ from him. Since his first appearance in Parliament he has been a consistent and thorough-going Radical.

Lawyers Deceased (Jan. 1st to Dec. 6th, '88). See OBITUARY.

Layard, Rt. Hon. Henry A., G.C.B., b. 1817, and commenced his active career as special correspondent of a London paper at Constantinople. Between '39 and '49 Mr. L. travelled much in the East, devoting his attention to the study of Oriental languages and antiquities. With the assistance of Sir Stratford Canning, in '45 he commenced to make the series of discoveries of Assyrian antiquities, of which he gave a most interesting account in his well-known works "Nineveh and its Remains" (49) and "Monuments of Nineveh" (49-53). Mr. L. subsequently abandoned Oriental research for diplomacy. He was Under Sec. for Foreign Affairs for a short time in Lord Russell's first administration ('52), when he sat as member for Aylesbury. During the Crimean War Mr. L. proceeded to the scene of hostilities to ascertain the condition of the British troops, and was an active supporter of Mr. Roebuck in demanding the committee of inquiry into the state of the army. He subsequently proceeded to India, to ascertain for himself the causes of the outbreak of the Mutiny, in '57. He unsuccessfully contested York in '59; but was returned in the Liberal interest for South-

wark, '60 (re-elected '66 and '68). He was Under Sec. for Foreign Affairs '61-66, and was Chief Commissioner of Works in Mr. Gladstone's first administration. In '69 he was appointed Ambassador at Madrid, and in '77, on the failure of Lord Salisbury's mission to Constantinople, was sent as our plenipotentiary to that city. He has recently published his "Reminiscences."

Laymen, House of. A House of Laymen for the Province of Canterbury assembled for the first time with the Houses of Convocation at the opening of the new parliament. It is composed of ten representatives from the diocesan conferences of London, six each from Winchester, Rochester, Lichfield, Worcester, and four each from the remaining dioceses of the province. To the representative body so formed the Primate may add ten laymen by nomination. Chairman, Lord Selborne; Vice-Chairman, Mr. G. A. Spottiswoode; Secretary, Mr. R. Holland. The first sitting took place Feb. 17th, 1886, when rules of procedure were adopted, the most important being that the procedure of the House of Commons should be as far as practicable followed. The House of Laymen does not concern itself with doctrine. Like Convocation, the House of Laymen is elected with every fresh Parliament. Members of the House of Laymen are named thus: "we were members of the last House of Laymen." Canterbury—*Earl Stanhope, *Viscount Cranbrook, *Lord Northbourne, Lord Harris, London—*Earl Beauchamp, Lord Addington, *Hon. T. H. W. Pelham, *J. A. Shaw Stewart, *G. A. Spottiswoode, *J. G. Talbot, M.P., *Eugene Stock, P. V. Smith, F. A. Bevan, L. T. Dibdin, Winchester—*Earl of Selborne, *Lord Montagu, Lord Basing, *Melville Portal, *James White, Bangor—Lord Penrhyn, *T. R. Williams, T. Pritchard, Hon. W. E. Sackville-West, Bath and Wells—Sir R. H. Paget, Bart., M.P., *F. H. Dickinson, *C. J. Elton, Q.C., M.P., *E. J. Stanley, M.P., Chichester—*Sir W. Barttelot, Bart., C.B., M.P., *Hon. Justice Grantham, *F. Barchard, *W. E. Hubbard, Ely—*A. Sperling, *O. C. Pell, Professor Stokes, P.R.S. Exeter—*Sir J. H. Kennaway, Bart., M.P., *J. Shelly, *Lieut.-Col. White-Thomson, Gloucester and Bristol—*Sir J. E. Dorington, Bart., M.P., J. Harvey, *W. K. Wait, B. St. John Ackers, Hereford—*Sir O. Wakeman, Bart., *Sir J. R. Bailey, Bart., M.P., *C. Purton, *J. Rankin, M.P., Lichfield—*Earl of Harrowby, *C. E. Boothby, *C. J. Blagg, *S. Leighton, M.P., *T. Salt, M.P., Major-General Buller, Lincoln—*Right Hon. E. Stanhope, M.P., *Sir W. E. Welby-Gregory, Bart., *A. G. Leslie Melville, Sir C. H. Anderson, Bart., Llandaf—*O. H. Jones, *J. A. Rolls, *J. E. Ollivant, *J. Watson, Norwich—Lord Henniker, *H. Rodwell, *S. Hoare, M.P., Oxford—*Earl of Jersey, *Right Hon. Sir J. R. Mowbray, M.P., *A. W. Hall, M.P., *J. H. Wilson, Peterborough—*The Duke of Rutland, *W. A. Heygate, *E. P. Monckton, *S. G. Stopford Sackville, Rochester—*Sir C. D. Fox, Kt., D. Christopherson, Col. H. de Geary, *Sydney Gedge, M.P., *E. H. L. Penrhyn, *G. B. Richardson, St. Albans—*Right Hon. Sir H. J. Selwin-Ibbetson, Bart., M.P., *James Round, *A. Unwin Heathcote, *H. Hucks Gibbs, St. Asaph—*Earl of Powis, *P. P. Pennant, *W. Trevor Parkins, *Sir W. W. Wynn, Bart., St. David's—*Viscount Emlyn, *H. Davies-Evans, *W. S. de Winton, Salisbury—*Earl Nelson, *Hon. Sidney Herbert, M.P., *H. B.

Middleton, R. Williams, jun. Southwell.—*H. H. Bemrose, *J. Borough, *F. Wright, *H. E. Thornton, Truro.—*Earl of Mount Edgcombe, E. Carlyon, R. Foster, C. C. Ross. Nominated members.—C. T. Dyke-Acland, M.P., Right Hon. G. Cubitt, M.P., Viscount Hardinge, F. Dixon Hartland, M.P., Lord Norton, Sir K. Temple, Bart., M.P.

Learned Societies. The rapid progress of art and science during the present century has led to the establishment of innumerable societies and institutions for the furtherance of the study of special subjects. A list of these associations would occupy so much space that we are only able to indicate the chief of them. The names, as a rule, explain the special object of the society:—**Anthropological Institute**, 3, Hanover Sq., W.; **British Association for the Advancement of Science**, 22, Albemarle St., W. (President, Sir F. Bramwell, annual meeting for 1889 will be held at Newcastle-on-Tyne); **British Archaeological Association**, 42, Sackville St., W.; **British Medical Association**, 490, Strand; **Chemical Society**, Burlington House, W.; **Clinical Society**, 53, Berners St.; **Entomological Society**, 11, Chandos St., W.C.; **Geological Society**, Burlington House, W.; **Institute of Painters in Oil Colours**, Piccadilly, W.; **Institution of Civil Engineers**, 25, Great George St., S.W.; **Institution of Naval Architects**, 5, Adelphi Terrace, W.C.; **Iron and Steel Institute**, Victoria Mansions, S.W.; **Numismatic Society**, 22, Albemarle Street, W.; **Pathological Society**, 53, Berners St., W.; **Royal Academy**, Burlington House, W.; **Royal Academy of Music**, Tenterden St.; **Royal Archaeological Institute**, Oxford St.; **Royal Asiatic Society**, 22, Albemarle St., W.; **Royal Astronomical Society**, Burlington House; **Royal College of Physicians**, Pall Mall East; **Royal College of Surgeons**, 40, Lincoln's Inn Fields; **Royal Geographical Society**, 1, Savile Row, W.; **Royal Historical Society**, 11, Chandos St., W.C.; **Royal Institute of British Architects**, 9, Conduit St., W.; **Royal Institute of Painters in Water Colours**, Piccadilly; **Royal Institution**, 21, Albemarle St., W.; **Royal Meteorological Society**, 30, Great George St., S.W.; **Royal Society**, Burlington House; **Royal Society of Literature**, 21, Delahay St., S.W.; **Royal Society of Painters in Water Colours**, Pall Mall East; **Society of Antiquaries**, Burlington House; **Royal Society of British Artists**, Suffolk St., S.W.; **Royal Statistical Society**, 9, Adelphi Terrace, W.C.; **Victoria Institute**, 7, Adelphi Terrace, W.C.; **Zoological Society**, 3, Hanover Sq., W.

Leasehold Enfranchisement. See SESSION '88, sec. 72.

Leaseholds. See LANDLORD AND TENANT. **Lecky, W. E. H.**, b. in Dublin, 1818, where he was educated at Trin. Coll. In his "Leaders of Public Opinion in Ireland" Mr. L. showed strong tendencies towards Irish Nationalism, but since the formulation of Mr. Gladstone's Home Rule policy has distinguished himself by magazine articles written against it. Mr. L. is the author of "History of the Rise and Influence of the Spirit of Rationalism in Europe" ('65); "History of European Morals from Augustus to Charlemagne" ('69); "History of England in the Eighteenth Century" ('78).

Lectures, Endowed. For the principal E. L. see under their respective alphabetical headings.

Lee (or Robert Lee) Lectures were instituted in commemoration of the late Rev. Robert

Lee, D.D., who at the time of his death, in 1868, was **Regius Professor of Biblical Criticism and Biblical Antiquities in the University of Edinburgh**, minister of the parish and church of Old Greyfriars in that city, Dean of the Chapel Royal of Holyrood, and Chaplain in Ordinary to the Queen. Dr. Lee was born at Tweedmouth, 1804, and was educated successively at the Grammar School of Berwick-on-Tweed and at the University of St. Andrews, where he carried off several high distinctions. As a professor, a parish minister, or a member of the ecclesiastical courts, Dr. L. did much for the intellectual life and theological freedom of the Church of Scotland. But he is chiefly remembered by his connection with his action in respect of the worship, government, and doctrine of the Church of Scotland. He aimed to recover for that Church some of the ritual observances and liturgical elements which had been in use on the authority successively of the Books of Common Prayer and Common Order, and the "Westminster Directory." For the "innovations" he introduced into the public worship of his own congregation he suffered much misunderstanding and obloquy. The provisions of the trust deed are (1) That the lecture or lectures shall be delivered in St. Giles' Cathedral, Edinburgh, at such time of each year as may be fixed by the trustees—who are ten in number, four being laymen—on arrangement with the minister and kirk-session; (2) That the lecturer shall be a clergyman or layman of the Church of Scotland, but the trustees are not precluded, in exceptional circumstances, from inviting an eminent clergyman of the Church of England to lecture; and (3) That the lecturer shall deal with questions of Biblical Criticism, Theology, or Ecclesiastical History or Polity, with reference more particularly to the circumstances of the time when the lecture is delivered. The first incumbent of the lectureship was the Rev. Robert Herbert Story, D.D. (Edin.), minister of Rosneath, the friend and afterwards the biographer of Dr. Lee, and one of the trustees of the lectureship, which was devoted mainly to an apologetic and historical retrospect of the Reformed Ritual in Scotland.

Leeward Islands. The westward section of the Lesser Antilles (so called in distinction from the Windward Islands, with reference to the trade winds). Those which belong to Great Britain are grouped together in one federal colony, and consist of the five presidencies of **Antigua**, **Montserrat**, **St. Christopher**, **Dominica**, and the **Virgin Islands**. Area 722 sq. m., pop. 119,546. The Leeward Islands confederation has representative government, with a Governor, Executive, and General Federal Council. The islands have possessed various forms of government in past times. The capital and seat of government of the Leeward Islands is **St. John**, Antigua. See under the names of the respective islands. Consult "Layard's "Through the West Indies," "Her Majesty's Colonies."

Legal Tender. The following are legal tender up to and including the annexed amounts:—

Of the	Gold coins	.. up to any amount.
Royal	Silver coins	.. £2.
Mint.	1d. and ½d. coins	.. 7s.
	½d. coins (farthings)	.. 6d.

Bank of England notes are legal tender in England and Wales (except by the Bank of England itself), but a creditor cannot be com-

pelled to give change. If a debtor require a receipt, he must prepare it, stamp it, and offer it for signature to his creditor, who by refusal to sign it renders himself liable to a penalty. The actual notes or coins must be produced by the debtor, and offered in payment, otherwise legal tender has not been made.

Legion of Honour, The. Instituted under the Republic of France (May 1802), was intended as a reward for military and civil services. There were three ranks—Grand Officers, Commanders, and Legionaries (see ed. '87). On the coronation of Napoleon I., the Grand Officers were divided into two classes—Knights of the Grand Eagle, and Grand Officers. The constitution of the Legion was remodelled by Napoleon III. in 1852, and during his reign upwards of 6,000,000 francs were distributed annually amongst the members. In 1871 the palace belonging to the Legion was destroyed by the Communists (see ed. '87).

Leighton, Sir Frederick, P.R.A., b. at Scarborough, 1830. Studied alternately at Rome, Berlin, Frankfurt-on-the-Main, Florence, Paris, and Brussels. His first exhibited work was a large picture of "Cimabue," which, appearing at the Royal Academy (1855), excited much interest. Purchased immediately by the Queen, it was re-exhibited at several exhibitions. Subsequently Mr. Leighton resided at Paris, where he had the benefit of the advice of Ary Scheffer, Robert Fleury, and other French painters. Since his residence in London, whence he returned in 1860, Sir Frederick Leighton has been a constant contributor to the Royal Academy, of which he was made an associate (1864), and R.A. (1869). His genius as a painter and sculptor is no less remarkable than his industry, and in '78 he was chosen President of the Royal Academy, in succession to the late Sir Francis Grant. He was knighted at that occasion, and created a baronet in '86. Sir F. Leighton was for many years colonel of the Artists' Corps of Volunteers. On Jan. 9th, '88, Sir Frederick was elected a member of the Royal Society of Painters in Water Colours. He exhibited at the Royal Academy in '88 a magnificent decorative painting, entitled "Andromache in Argos." In Dec. '88 Sir F. L. delivered an eloquent address at the first annual meeting of the National Art Congress in Liverpool.

Leitmotif. See ed. '88.

Lema Islands. A group of small islands adjacent and belonging to Hong Kong (q.v.).

Leo XIII. See POPE, THE.

Leopold II., King of the Belgians, b. at Brussels, 1835, son of King Leopold I., to whom he succeeded. King Leopold has travelled much in Europe, Asia Minor, and Egypt. He is the head of the International Association, whose object is to open to Europeans the Congo and its tributaries. He was the friend of Gordon, whom he had taken into his employ, but was deprived of his services when the latter was summoned from Brussels to go to the Soudan. King Leopold is the staunch friend of the great explorer Stanley. As head of the International Association, he has contributed very largely to the funds of the Society from his private purse. King Leopold married, in 1853, the Archduchess Maria of Austria, by whom he has had two daughters and one son, the Duke of Brabant, who died when two years old.

Léopoldville. Capital of Congo Free State (q.v.), on Stanley Pool.

Les Îles Malouines. The French name for the Falkland Islands (q.v.).

Leslie, George Dunlop, R.A., son of the late C. R. Leslie, R.A.; b. 1835. He first exhibited at the British Institution in '57, and has been a constant contributor to the Royal Academy since that date. A.R.A. ('68), R.A. ('76). Mr. Leslie's aim in art has always been to paint pictures from the sunny side of English life, and as much as possible to render them cheerful companions to their possessors. He has recently published "Our River: an Artist's Life on the River Thames," and exhibited "Rosebuds" at the Grosvenor Gallery '88.

Les Saintes. A group of islets in the West Indies, forming part of the French colony of Guadeloupe. Area 9 sq. m., pop. 1,532. Among them is one of the best roadsteads in the West Indies, strongly fortified.

Lessar, M. Gospodin, a young Russian officer of Engineers, b. June 25th, 1851. He was first brought to notice when employed by the controller of the Russo-Caspian Railway, Prince Khukoff, to survey the section of the projected line from Askabad to Sarakhs, lying through a country which had never before been traversed by a European. This he satisfactorily accomplished, returning to Askabad; and then proceeding to Europe to obtain maps of Persia and Afghanistan, in order to prosecute a further survey from Sarakhs to Herat. M. Lessar returned, after this survey, *via* Meshed, to Askabad, and afterwards proceeded on another surveying expedition to Merv, in order to ascertain whether the waters of the Oxus could be diverted into a channel, by which means the country up to Askabad could be irrigated and made fertile. His familiar acquaintance with all this region mentioned above led to his being despatched to England by the Russian Government in the character of a negotiator in the Afghan difficulty, having thus acquired a special knowledge of all the "incidents" belonging to the territory which was the subject of negotiation. He was appointed Russian Consul at Liverpool, April '87.

Letters of Distinction. See ABBREVIATIONS, LIST OF.

Levuka. In Fiji (q.v.); formerly the capital.

Lewes Meeting. See TURF.

Lewis, Mr. George, the celebrated London solicitor, was b. in 1833. He first made his mark in conducting the prosecution of the directors of the Overend and Gurney's bank, and many other mercantile and financial prosecutions were afterwards put into his hands. The prosecution of Madame Rachel the restorer of female beauty, and Dr. Slade the medium, are among the cases which he superintended as a solicitor. In 1886 he was professionally engaged in the Dilke and Colin Campbell divorce cases. Mr. Lewis is an active man, commanding an enormous practice. In '88 Mr. L. appeared as solicitor for Mr. Parnell and the Irish Party at the Parnell Commission.

Libel Law Amendment Bill. See SESSION '88, sect. 24.

Libel Law in '88. The past year has been unusually prolific of libel actions, many of which have excited public interest in a marked degree. In *Gallagher v. Minton*, which came before the Queen's Bench Divisional Court on Feb. 7th, the plaintiff had been in the employment of the defendant as a clerk, and had left

of his own accord. The defendant advertised in a local newspaper as follows:—"Notice.—T. Gallagher is no longer in my employ, nor is he authorised to solicit orders or transact any business whatever on my behalf." The innuendoes were that the plaintiff had been dismissed, that he was unworthy of trust, and was endeavouring to use defendant's name without authority. At Assizes plaintiff got a verdict and judgment for £5, and the Queen's Bench Court refused to set this judgment aside on the ground of absence of evidence of the innuendoes.—*Hurlbutt v. Bolham*, tried before Mr. Justice Manisty and a common jury in the Queen's Bench Division on Feb. 15th, was an action for damages for slander at a Salvation Army meeting. The plaintiff was in the habit of attending the meetings of the army, and on one occasion defendant denounced him as guilty of "roguery or thievery," and went on to predict that "the moment he dies he will go straight to hell." Mr. Justice Manisty held that the words were not actionable, as they did not impute any indictable offence.—*Reg. v. Wansborough* decided that it is not a libel for a railway company to post at their stations the name and address of a person who has been convicted of travelling on their line without paying his fare. The case was removed from the Central Criminal Court and tried before Baron Huddleston on May 7th.—The *Rev. Stewart Headlam's* action against the proprietors of the *Record*, tried before Baron Huddleston, May 11th, is only noticeable as arising out of the Trafalgar Square controversy (*q.v.*). The defendants described the plaintiff in their paper as "one of those who distinguished themselves in Trafalgar Square by the violence of their language." The plaintiff admitted having said that "If Jesus Christ were to appear in Trafalgar Square He would be arrested," and having spoken of the Dukes of Westminster and Bedford and other landlords as robbers. Verdict for the defendant.—*Ward v. The Newspaper Publishing Co.*, tried before Baron Pollock on June 13th, was an action for libel against the *Star*. On Feb. 23rd that newspaper published, under the heading "Swindles on the Workless," a letter from Mrs. Langworthy, quoting the following advertisement of the defendants:—"A manager of a leading Theatre has a splendid opening for a lady of talent. Apply Mr. John Ward, Olympic Theatre." Mrs. Langworthy stated that she answered the advertisement, and the plaintiff promised her £30 a week, but required £10 for preliminary expenses. This she obtained with great difficulty and handed to him, but no engagement followed, and on calling at Ward's she found his door besieged by a crowd of angry dupes of both sexes. The theatre was closed. Ward swore that he took the money for lessons only, and did not promise an engagement, but admitted that he only had the Olympic for one week and did not pay the rent. The jury returned a verdict for the defendants.—*Hutt v. The Governors of Haileybury College* was a mixed action arising out of the expulsion of Henry Hutt from school for alleged thefts. Father and son were joined as plaintiffs, the father, the Rev. William Wayman Hutt, suing for damages for breach of contract, and the son, Henry Robert Mackenzie Hutt, for assault, false imprisonment, libel and slander. A number of petty thefts had taken place at the College, and in order to detect the offender the head master, Mr. Robertson, authorised one

Campbell, a servant at the College who acted as a sort of proctor, to mark money and put it in one of the boys' desks. Campbell asserted that he afterwards found one of the marked pieces of money in Hutt's desk. Hutt was charged with stealing by Mr. Fenning, the house master, and at once denied the charge. He was thereupon exhorted to confess, threatened with a prosecution, locked up for three days, and eventually expelled the school. Mr. Fenning communicated with his father by letters, which constituted the libels complained of, and declared him proved beyond all doubt guilty of stealing. The trial came on before Mr. Justice Field and a special jury, and lasted from the 13th to the 19th of June. The jury found specially that Hutt had not committed the theft, but that the masters acted *bona fide* in suspecting and expelling him. Judgment was reserved, but the parties ultimately agreed to a nominal judgment for the plaintiff. The importance of the case, outside the personal interest it excited, consists in the judgment of Mr. Justice Field dealing with the powers of governing bodies as to expulsion and detention. There was an almost total absence of authority on the point, but it is now laid down that masters of schools have a discretion in these matters which is not absolute, but must be exercised on reasonable grounds.—*Wood v. Cox*, or the "turf libel case," as it was called, occupied the Lord Chief Justice and a special jury for nearly a fortnight, the trial commencing on Tuesday, the 19th June, and not concluding till Friday the 29th. Mr. Charles Wood, the well known jockey, sought to recover damages against the *Licensed Victuallers Gazette* for the following libel:—"How abate the running of Success at Lewes and Alexandra Park, when Charley Wood nearly pulled his head off on each occasion?" The consequence of the libel the plaintiff alleged he had suffered in reputation, and the Jockey Club had stopped his licence to ride, thereby depriving him of his means of livelihood as a jockey. The defendant justified, and attempted to prove the truth of the libel, both by direct evidence of eye-witnesses of the alleged dishonest riding, and by inference from the in-and-out running of the horse. He also alleged that the plaintiff's reputation as a jockey was such that the libel could not have materially affected it. The jury returned a verdict for the plaintiff, with one farthing damages, and on a later day the Lord Chief Justice decided to disallow the plaintiff's costs.—*O'Donnell v. Walter*, tried before Lord Coleridge and a special jury, July 2nd to July 5th inclusive, was an action for libel arising out of certain articles published in the *Times* last year, and entitled "Parnellism and Crime." This case owes its chief importance to the fact that it led to the appointment of what is popularly known as the Parnell Commission (*q.v.*). Lord Coleridge commented on the injustice of trying the truth of charges against a number of persons who could not be heard in their defence, and ultimately this part of the case was withdrawn from the jury. There remained only the comments of the *Times* on Mr. O'Donnell's letter of explanation, and these the jury found to be "justifiable criticism." Verdict for the defendants.—*William v. Smith*, heard before Lord Coleridge July 17th, was an action by a tradesman, a hatter, against the publishers of the *Hatters Gazette* for publishing a notice of

a judgment against him in a county court as if it were unsatisfied, whereas, in fact, it had been satisfied. This was held to be sufficient evidence of malice in law to go to the jury, who found for the plaintiff, damages £25.—The "sausage-roll case." *Browning and another v. Solly*, tried at Chester on the 27th July, was a libel action brought by the railway refreshment contractors at Chester against Mr. Ernest Solly, surgeon at St. Thomas's Hospital, London. The defendant declared that a sausage-roll supplied to him at the refreshment-rooms was stale, and refused to eat it. The manager maintained that it was quite fresh, on which the defendant left, and immediately afterwards telegraphed to the inspector of nuisances at Chester as follows: "Please examine sausage-rolls, refreshment-rooms at station. Bad meat. Will write to-night." This was the libel complained of. In consequence the authorities seized all the sausage-rolls at the refreshment-rooms, but they were found to be quite wholesome. Defendant swore that the one tendered to him contained meat which he described as "high." Verdict for the plaintiffs, one farthing damages. Each party was ordered to pay his own costs.—The *Kertch* libel cases came before Lord Coleridge and Mr. Justice Hawkins on Aug. 7th under the following circumstances: One Colledge, the British Vice-Consul at Kertch, was accused of piracy by a press agency, and he brought a series of actions against every newspaper that had received and published the agency's information. Colledge had made a private arrangement with King, his solicitor, to pay him half the damages in lieu of costs. This agreement he now sought to set aside as "unreasonable." The point was not argued, however, as the agreement was unstamped, and the Court refused to recognise its existence on that ground.—Pleading guilty at the Central Criminal Court to a charge of obscene libel in publishing non-expurgated editions of some of *M. Zola's works*, Mr. Henry Vizetelly, publisher, was fined £100 and compelled to enter into recognisances.—Towards the close of the year Mr. Parnell made certain "arrestments" in the Scotch law courts as a preliminary to an action in that country for libel by the *Times* in respect of "Parnellism and Crime." Earlier in the year Mr. Wm. O'Brien, M.P., sued the proprietors of the *Cork Constitution* for a similar libel, and obtained £100 damages.—An action for libel brought, February '88, against the *Times* by Mr. Gibbons, formerly a judge in Jamaica, ended in a verdict for the defendants, on the ground that the article did not exceed the limits of fair criticism. But in a somewhat similar action, brought against the same newspaper by Sir J. Pope Hennessy later in the year, the *Times* admitted its liability, and undertook to pay all the plaintiff's costs. In the case of *Shaw v. Collingridge*, where the plaintiff alleged that his character was reflected upon by a report in a newspaper, it was again laid down by Mr. Justice Manisty (Queen's Bench Division, March '88) that where a newspaper report is fairly and reasonably accurate, although it may reflect upon the character of some person, the newspaper is not liable.

Libel, Law of. There are various species of libel: the defamatory libel, the seditious libel, and the obscene libel. Every libel must be written, printed, or in some other way addressed to the eye. One publication might combine the

characteristics of all three kinds of libel, but they can best be explained separately. In order to constitute a publication a defamatory libel, it must be false. It must also be malicious in the legal sense; the law presuming malice in every injury done intentionally and without justification. It must further have a tendency to bring its object into hatred or contempt. Further, it must not be privileged. A privileged communication in this sense is either privileged absolutely, or privileged when not malicious. A statement made in a court and in the administration of justice, or in either House of Parliament in the transaction of public business, is privileged absolutely. A statement presumably made in fulfilment of a moral duty to inform the person to whom it is made—e.g., by A to B, his relative, concerning the character of C, whom B is about to marry; or by A, an employer, to B, another employer, concerning the character of C, who has left A's employment and is about to enter B's; or a free criticism of public men, artists, etc.—is privileged, unless it can be shown to be malicious.—A libel is published if seen but not by a person other than the person libelled.—Publication of a defamatory libel gives ground both for civil and criminal proceedings. The publisher, as well as the writer, is liable to either. In criminal law it is a misdemeanor to publish or threaten to publish a libel, or, as a means of extortion, to offer to abstain from or to prevent others from publishing a libel. The maximum punishment is three years' imprisonment with hard labour.—Any publication published with a seditious intention is a seditious libel, and a seditious intention is an intention to bring into contempt the Sovereign or either House of Parliament, or the administration of justice, or the constitution, or to promote sedition or civil discord, or to bring about alterations in Church or State otherwise than by lawful means. To publish such a libel is a misdemeanor.—Any obscene publication may constitute an obscene libel. To publish such a libel is an offence punishable by imprisonment with hard labour. The truth of such a publication is not sufficient to justify it; but Sir James Stephen, in his "Digest of Criminal Law," suggests that the publication may be justified if it be no more than is necessary to secure some important public good. See SESSION '88, sect. 24.

Liberals. See ENGLISH POLITICAL PARTIES.

Liberal Union. German. See GERMAN POLITICAL PARTIES.

Liberal Unionist Association. This Association was formed to resist the legislation proposed by Mr. Gladstone embodied in his Irish Government Bill and Irish Land Bill, and which threatened the destruction of the British Empire by the repeal of the Union with Ireland. In the contested election of 1886 this Association did much to influence the defeat of the Gladstone party, and was effective in returning to the House of Commons some eighty Liberal Unionist members. These, under the leadership of Lord Hartington, now hold the balance of power which was formerly held by Mr. Parnell and his Irish adherents. *Chairman*, Rt. Hon. the Marquis of Hartington, M.P.; *Offices*, 31, Great George St., Westminster, S.W.

Liberation Society. See DISSENT.

Liberia. A Negro Republic on the Grain Coast of West Africa. Area, about 24,000 sq. mi., pop. 1,068,000, including 18,000 civilised Americans.

Liberians and 1,050,000 half wild aborigines. Capital, **Monrovia**, pop. 3,400. The shore is low, but the country rises towards the interior, and is well wooded and watered by numerous streams. The climate is hot, and unhealthy for Europeans. The soil is fertile, and well adapted for the growth of tropical crops, such as rice, sugar, coffee, and cocoa. These, with palm oil, nuts, caoutchouc, and ivory, form the principal exports. The bulk of the trade is with Great Britain, Holland, Hamburg, and America. **Revenue** (in '85), £40,000; **expenditure**, £32,500. In '71 a debt of £100,000 was contracted in England, on which no interest has been paid since '74. Liberia was founded in '22 by American philanthropists for the settlement of freedmen. It was declared independent in '47, was recognised as a sovereign state by Great Britain in '48, and by the United States in '61. The constitution is on the model of that of the United States. The President is elected for two years, the House of Representatives (13 members) for two years, and the Senate (8 members) for four years. For Ministry, etc., see DIPLOMATIC.

Liberty and Property Defence League, The (motto "*State-help versus State-help*"), was established in 1884 for resisting over-legislation, for maintaining freedom of contract, and for advocating individualism as opposed to socialism, entirely irrespective of party politics. The corporate action of the League is confined to.

- (1) The defence of the principle of individual ownership and freedom of contract in property of all kinds, real and personal; and the assimilation of the laws regulating their possession.
- (2) The defence of private enterprise in agriculture, ships, railways, mines, manufactures (textile, metal and miscellaneous), professions, and trades (wholesale and retail) of all kinds from harassing State regulation and inspection.
- (3) The furtherance of the rights and freedom of labour by voluntary and direct adjustments between trade-unions and employers, and the enjoyment by each workman of the full fruits of his own labour.
- (4) The federation of all these industries in the mutual defence of their common liberties and rights of self-government against encroachments by the State.

Federated with the League are 83 **Defence and Protection Societies**, representing nearly every interest in the kingdom, the representatives of these societies forming a strong **Parliamentary Committee** for taking steps to resist the passage of measures introduced into Parliament having for their object the interference with the freedom and property of the individual. The League conducts the propaganda of its principles both by public lectures and the publication and dissemination of literature. Of the latter there are several pamphlets by Lord Bramwell, the Earl of Wemyss, the Earl of Pembroke, Earl Fortescue, Sir Frederick Bramwell, Mr. J. A. Froude, M. Léon Say, Wordsworth Donisthorpe, W. C. Crofts, and also Mr. Herbert Spencer's "Overlegislation," and "The Man *versus* the State." Central offices: 4, Westminster Chambers, S.W. Sec., W. C. Crofts. Branches exist in all the great commercial and industrial centres in England, Scotland, and Ireland, and also in America, Australia, France, and Italy.

Liberty Statue, New York. This statue, the history of which is given in our '87 ed., was unveiled in Nov. '86. The effigy, which is the work of M. Bartholdi, an eminent French engineer, is that of a draped female figure

wearing a spiked crown, and holding aloft at arm's length a torch, which is lighted by electricity. The statue is 220 feet high.

Libraries. Attempts have sometimes been made to measure the intellectual development of nations by comparing the statistics of their book-collections. The data, however, necessary for a satisfactory comparison do not as yet exist, the United States being the only nation which has carried out anything like a complete census of libraries. A **Special Report** issued by the Bureau of Education in 1876 recorded over 3,000 public libraries, which number has since been largely increased. The peculiar feature of the American library system is the large number of popular libraries. The library systems of Europe are characterised by the number of large collections of books of historical interest. This is peculiarly the case with Italy, Germany, and France. The amount of popular reading in these countries is small as compared with England and America, and their large collections are chiefly used by professional scholars. In France of late years attempts have been made to provide popular reading by a system of libraries in primary schools, of which over 20,000 have been established by the Government. The special feature of our **English library system** has been the work done under the **Public Libraries Acts** (*q.v.*). These Acts date from 1850, the Act of that year having been followed by Acts extending the principle to Scotland and Ireland and amending matters of detail. The Acts enable towns, local board districts, and parishes to establish libraries, to be maintained by a rate not exceeding 1*d.* in the *£*. The entire number of places which have adopted the Acts since 1850 was at the end of 1888 about 200. They include most of the larger towns of the country, though there a few notable exceptions. The capitals of the three kingdoms have been singularly backward in adopting the Acts. Dublin only established two libraries, without adopting the Acts, in 1884. Edinburgh only adopted them in 1886, when Mr. Carnegie (*q.v.*) offered a sum of £50,000 on condition of their adoption. London until quite recently had only adopted them in a single parish of Westminster, but in 1885 and 1886 Wandsworth, Fulham, and Lambeth followed suit, and in 1887-8 they were adopted in eleven other Metropolitan districts. Altogether the Acts were adopted in thirty-three places as a suitable means of celebrating the Jubilee year. There can be no doubt as to the value of the work done by these institutions, and there is a growing tendency to regard them as a necessary corollary to our system of compulsory primary education. In the year 1882 eighty-one of these libraries returned their stock of volumes as 1,448,192, and the total issue for a year as 9,023,742 volumes, which figures do not include the use made of the newsrooms usually connected with the libraries. The largest and most successful libraries are those of Birmingham, Bristol, Leeds, Liverpool, Manchester, and Newcastle; but the work accomplished in some of the smaller towns, having regard to their population and resources, will not suffer by comparison. Of the older libraries of the country the most important, of course, is that of the **British Museum** (*q.v.*), which is only exceeded in extent by the **Bibliothèque Nationale** at Paris. It possesses over 1,450,000 volumes and 100,000 MSS. and charters. It is entitled under the

Copyright Acts to a copy of every work published in this country—a privilege which is also enjoyed by the Bodleian Library, Oxford (425,000 vols. and 30,000 MSS.), and the Cambridge University Library (225,000 vols. and 5,000 MSS.), the Advocates' Library, Edinburgh (285,000 vols. and 3,000 MSS), and the library of Trinity College, Dublin (215,000 vols. and 2,000 MSS.). Valuable and extensive libraries are attached to the other universities, to the colleges of Oxford and Cambridge, and to most cathedrals.—The most important **Subscription Libraries** outside London are those at Bristol, Edinburgh, Hull, Leeds, Liverpool, Manchester, Nottingham and Newcastle. But the tendency is for the smaller subscription libraries established during the last hundred years to disappear, from inability to compete with Smith and Mudie, or by being absorbed or replaced by the libraries established under the Public Libraries Acts. There are a number of important **professional libraries** in London, Dublin, and Edinburgh, and a few **endowed libraries**, such as the Chetham at Manchester (1653). The concentration of literary and intellectual interests in London has naturally given birth to a large number of **special libraries**, many of which are open to the student upon proper introduction. The more important of them are included in the following **alphabetical list of the principal London libraries**:—Admiralty (25,000 vols.); Chemical Society (8,000); Colonial Office (12,000); Corporation, Guildhall (85,000), open free; Dr. Williams' (30,000); Foreign Office (70,000); Geological Society (17,500); Gray's Inn (13,000); House of Commons (40,000); House of Lords (30,000); Incorporated Law Society (30,000); India Office (10,000); Inner Temple (37,000); Institute of Civil Engineers (18,000); Lambeth Palace (30,000 and 14,000 MSS.); Lincoln's Inn (45,000); London Institution (70,000, subs.); London Library (100,000, subs.); Middle Temple (32,000); Museum of Practical Geology (20,000); Patent Office (85,000); Royal Society (50,030); Royal Asiatic Society (13,000); Royal Astronomical Society (8,000); Royal College of Physicians (16,000); Royal College of Surgeons (45,000); Royal Colonial Institute (5,000); Royal Geographical Society (25,000); Royal Institution (42,000, subs.); Royal Medical and Chirurgical Society (34,000); Royal Society of Literature (8,000); Royal United Service Institution (21,000); Russell Institution (18,000, subs.); St. Paul's Cathedral (9,000); Zion College (51,000); Society of Antiquaries (21,000); Society of Telegraph Engineers (4,000); South Kensington, Educational (43,000); National Art (58,000); Dyce (14,500); Forster (10,000); Statistical Society (10,000); University College (105,000); University of London (11,000); War Office (25,000); Westminster Chapter (11,000).—The provision which these libraries, together with the British Museum, have made for the studious classes, is not altogether inadequate, while the trade circulating libraries, together with the club and subscription libraries, provide for the well-to-do. But the needs of the poorer classes are still very slenderly provided for. The British Museum is not adapted to their requirements, and the library of the Corporation, though freely opened for reference, cannot suffice for so large and scattered a population. During the past year a library has also been established by voluntary effort in Paddington, and a similar scheme is on foot in St. Pancras. As already mentioned, only four districts have

adopted the Libraries Acts, in only two of which are libraries actually open, although several libraries of the same kind as those contemplated by the Acts are maintained by voluntary effort in Bethnal Green, Lambeth, and at the People's Palace. In the provision for popular reading London still offers a striking contrast to Paris, where, beside four important libraries, not including the Bibliothèque Nationale, freely open to the public, the municipality has established a system of popular libraries, of which there are now nearly sixty, with an annual circulation of over a million volumes. **The Library Association of the United Kingdom**, founded 1877, now numbers nearly 500 members, including the chief librarians of the country. **Hon. Secs.**, J. Y. W. MacAlister, 53, Berners Street, W.; E. C. Thomas, 2, South Square, Gray's Inn, W.C.

Licensing Acts, '72, '74. These Acts contain only a part of the statute law with regard to licensing. The Act of 1872 is the principal Act. It applies only partially to Ireland, and not at all to Scotland. It imposes severe penalties upon the illicit sale of liquor, upon drunkenness in any public place or highway, upon permitting drunkenness or gambling or harbouring prostitutes on licensed premises, upon harbouring any constable on such premises in his hours of duty, and upon bribing or attempting to bribe him. It fixes the hours of closing (altered by the Act of 1874), but enables the local authority to grant exemptions from them when the convenience of many persons engaged in lawful business so requires. It provides that if any licensed person on whose licence two convictions for offences against the Act have been recorded is again convicted, he shall forfeit his licence, and he shall be disqualified for five years, and his premises for two years, from receiving another. But a conviction more than five years old is not to be taken into account for the purpose of increasing any penalty. In every licensing district must be kept a register of licences showing particulars of all convictions, etc., and this register must be open to inspection by any ratepayer, holder of a licence, or owner of licensed premises. In counties and in boroughs the justices must annually appoint from among themselves a licensing committee of not less than three members. But in boroughs no licence granted by this committee is to be valid unless confirmed by the body of justices who would, but for the Act, have been authorised to grant licences. Premises not already licensed at the passing of the Act cannot receive a licence unless they are of an annual value fixed by the Act with reference to their situation. Penalties under the Act are recoverable by summary conviction, subject to an appeal to Quarter Sessions. No justice who has any beneficial interest in the manufacture or sale of intoxicating liquors can do anything under this Act. The Act of 1874 contains many modifications of the Act of 1872, and of these several mitigate the severity of the law. But both are so long and intricate that for precise information a reference to the text is necessary. **Important decisions, '88.**—A number of important decisions have been given during '88. In the case of *Bent v. Lister*, heard in the Queen's Bench Division in April, it was laid down that a beer-house keeper who has a licence for billiards may keep the billiard-room open for billiards beyond closing time. In this instance the

closing hour was 11 p.m., but the billiard licence permitted play till 1 a.m. The case of *Sharp v. The Justices of Westmoreland*, tried in the Queen's Bench Division in May, raised an important question as to the discretion of justices in refusing the renewal of the licence to an old-established inn. The refusal was based upon the ground of "the remoteness of the house from police supervision, and the character and necessities of the locality and neighbourhood," and the point was whether the Court of Quarter Sessions was entitled to refuse on these grounds. Justices Field and Wills laid it down that a licence was granted for one year only, and that the power of granting implied the right to refuse. In granting or refusing a new licence on an application for renewal, the justices had therefore an absolute discretion. Another question raised before Justices Manisty and Stephen, also in the Queen's Bench Division, was whether the licence of a beerhouse, the tenant of which had been convicted of using the premises as a brothel, was not forfeited under the Act of '72. The Court held that the magistrates were right in regarding the licence as forfeited.

Lichfield, Rt. Rev. William Dalrymple MacLagan, Lord Bishop of. The see was founded in 656; income £4,200. His lordship, b. 1826, is the son of David MacLagan, Esq., M.D., physician to the forces, who served with distinction in the Peninsular War. Educated at St. Peter's Coll., Cambridge; graduated B.A., Junior Opt. '56; M.A. '60; D.D., *jure dign.*, '78. Was ordained deacon '56, and priest '57, by the Bishop of London; consecrated Lord Bishop of Lichfield '78. Formerly curate of St. Saviour, Paddington, '56-'58; St. Stephen, Marylebone, '58-'60; curate in charge of Enfield, '65-'69; rector of Newington '69-'75; vicar of Kensington '75-'78; **Prebendary of St. Paul's Cathedral** '78; **Chaplain-in-ordinary to the Queen.** In '70 his lordship edited "The Church of the Age," and is the author of various charges, pamphlets, and pastoral letters, among which may be mentioned "Parochial Papers"; "The Church and the People; an Inquiry into the Neglect of Public Worship," 1882, etc.

Lick Observatory. Situated at Mount Hamilton, about sixty miles south-east of San Francisco. It was founded under the will of **James Lick**, an organ and pianoforte maker, b. in Pennsylvania in 1796, who died in '76 worth 3,000,000 dols. Before his death he had placed 700,000 dols. in the hands of trustees for "erecting a powerful telescope, superior to and more powerful than any telescope yet made, with all the machinery appertaining thereto." The object-glass of the great Lick equatorial is 36 in. in diameter, and thus larger than any in existence. The construction of the observatory and its appliances has occupied several years, but it is now complete, and on June 1st, '88, its management was formally transferred to the University of California.

Liddon, Rev. Henry Parry, D.D., D.C.L., Canon of St. Paul's, was b. 1829. Educated at Ch. Ch., Oxford, where he graduated B.A. ('50), and ('51) obtained the Johnson Theological Scholarship; M.A. ('53). Vice-Principal of the Theological College at Cuddesdon, in the Diocese of Oxford ('54-'59). Examining Chaplain to the late Bishop of Salisbury. Prebendary in Salisbury Cathedral ('64); Bampton Lecturer ('66), his subject being "The Divinity of Jesus Christ"; Canon Residentiary of St.

Paul's Cathedral ('70); **Ireland Professor of the Exegesis of Scripture** in the University of Oxford ('70), that University conferring upon him the degrees of D.D., D.C.L. Canon L. is one of the most prominent and distinguished members of the High Church party; his Easter sermon (1885) having emphasized his position as the leading exponent of that school at the present time. Canon L. is a very popular preacher, and when in residence his discourses always attract large congregations to St. Paul's. In addition to many sermons published, he has written several important theological works. In '88 Canon L. published a volume of sermons entitled "**Advent in St. Paul's.**"

Lieutenant, Lord, of a county, is appointed by the Crown, and as a rule holds office for life. He attends the sovereign when she passes through the county, and nominates to the Lord Chancellor persons to serve as justices of the peace for the county (except in Lancashire). By modern legislation, his jurisdiction and powers over the militia, yeomanry, and volunteers, save as to raising the militia by ballot when such a course may be necessary, have been vested in the Crown, though he may still recommend for first commissions in the Reserve Forces. He appoints at least twenty duly qualified persons in the county (and the qualification is somewhat high) to be deputy-lieutenants, the appointments being subject to the approval of Her Majesty. In the county he is chief representative of the Crown, principal executive authority, and head of the yeomanry.

Lifeboats (for their origin and development see ed. '87). The **Royal National Lifeboat Institution**, which is supported by voluntary contributions, was founded 1824. It has 293 lifeboats in Great Britain. Of this number, 212 are on the English coast, 44 on that of Scotland, and 37 on the Irish coast. Total number of lives saved since Institution founded, 33,668. Pecuniary rewards paid for gallant services since 1824, £100,200; besides gifts of 97 gold and 1,120 silver medals. The payments for last year amounted to £74,162; of which £36,812 were expended on lifeboats, lifeboat carriages and boat-houses, £8,785 on stores, and £8,719 on wages, rewards, and special grants. During the past thirty-four years the self-lighting boats have been launched more than 6,000 times on service, and have saved upwards of 12,500 lives. The boats have been capsized altogether 42 times, while out on service but only on 19 of those occasions was there any loss of life. The number of lives lost (counting 27 men who perished on the occasion of disasters which befell the Southport and St. Anne's lifeboats on 9th Dec., 1886) amounts to 92, including 14 shipwrecked persons. The 78 lifeboat men lost represent about 1 in 880 of the men employed in the boats on service; and the upsettings were at the rate of 1 in each of the 125 service launches. The sum required to provide and endow a boat is £3,000. See, Mr. Charles Dibdin, 14, John Street, Adelphi, W.C.

Life Insurance. See **INSURANCE**, '88.

Lighthouses. For history of, see ed. '87.

Lighting. Under this general title are included the leading inventions and improvements effected in systems of lighting in '88. Lighting by electricity has made steady progress. During the past year a great many public buildings and those of private firms have been electrically lighted, and in addition the system has been extensively introduced into

dwelling-houses, and on board vessels of all kinds of build, among the latter the Queen's yacht *Victoria and Albert* (see ELECTRICITY ON SHIPBOARD). The *Electric Lighting Amendment Act* (see SESSION '88, sect. 156), which received the royal assent June 26th, '88, has given an immense impetus to the industry. Through its operation many of the restrictions hitherto imposed have been removed, and capital is being invested with a corresponding degree of safety. We may instance in illustration the recent formation of the *Metropolitan Electric Supply Company*, designed to supply the light in the Metropolitan area upon an extensive scale. There has also been established an *Electrical and Allied Trades Section* in connection with the *London Chamber of Commerce*, mainly to advance the interests of electric lighting. A noteworthy feature has been the increase in the number of *central lighting stations*, both in London and the provinces, upwards of thirty having been started or projected. The Deptford station is a remarkable instance of enterprise in this direction. Mr. Ferranti is the engineer to this gigantic undertaking, which aims at conveying the light to all parts of the metropolis. Consult "Central Station Electric Lighting" (Spohn); "Electric Lighting: its Present Position and Future Prospects" (Hammond & Co.) Most of the great railway companies have now installations at their termini and elsewhere, and experiments with the lighting of the carriages have also made great progress. The London, Brighton, and South Coast Railway have fifteen electrically-lit trains running. The electric light has been installed in the lighthouse on St. Catherine's Point, Isle of Wight. There are three other lighthouses along the English coast with this method of illumination, —viz., at Souter Point, the South Foreland, and the Lizard; but the new St. Catherine's light far eclipses them in power, and is in fact believed to be the most far-reaching in existence on any coast. The previous oil burner gave a light with an intensity equal to about 730 candles, whereas the new light has an illuminating power equivalent to more than 7,000,000 candles. An installation lately effected at the *Haustrholm lighthouse*, on the west coast of Jutland, gives a concentrated light equal to 5,000,000 candles. An efficient *miners' electric safety lamp* generally accepted in place of the many kinds of oil lamps now in use has still to be invented, although the solution of the question depends largely upon the successful handling of the many practical difficulties, and not in the discovery of any new scientific principles. The *Swan lamp* still continues to hold its own. It is worked by secondary battery, and charged from a dynamo; a small incandescent lamp being mounted on the side of the case, and a fire-damp indicator attached. The full size is 7 in. by 4½ in., the weight of the whole lamp about 7 lb., and the price 27s. It gives a light of from 1 to 1½ candle-power. Eight hundred of these lamps are in use in the *National Colliery*, in the Rhondda Valley, South Wales, and upwards of two thousand in the *Risca and Abercrombie Collieries*. The *Fitkin*, secondary battery, is also in use. The weight is 8 lb., and the price 42s. This lamp has a switch to put on the light, the latter being from 4 to 5 candle-power. The *Sum*, secondary battery, has been tried in many collieries with satisfactory results. It is introduced by the *New Portable Electric and Power Lamp Syndicate*. Its

weight is 4½ lb., the light of 1½ candle-power, and the price 21s. The lamp has a toughened glass casing, which, if broken, causes the current to stop by an automatic arrangement, and explosions are thus guarded against. The *Schanschleff*, primary battery, has grown largely into favour. The elements consist of carbon and zinc, and the excitant is a mercurial solution of Mr. Schanschleff's invention. The battery can be recharged by any one unacquainted with electricity. The weight, with a 4-cell battery, is 4½ lb., giving a light of 2 candle-power, and the price is 30s. The *Walker* is also a primary battery lamp. It is made in two sizes, the smaller weighing 5 lb., the price being 30s., while a light is given enabling newspaper print to be read six feet away from the lamp. The above are the chief competitors for electric safety lamps; the decision as to the best all-round lamp has not yet been made, and probably will not be for some time. The problem is to find a lamp which shall compete with the ordinary oil lamp in price, weight, and light-giving power, and at the same time combine absolute safety. The operation of the new *Mines Regulation Act* will no doubt help indirectly towards a solution, as the use of oil lamps has thereby become greatly restricted. — From electric systems we pass on to briefly review the present condition and the prospects of *gas lighting*, giving also some account of improvements effected in appliances both for gas and mineral oil lighting. The gas industry is not as yet seriously affected by the progress of electricity. The amount of gas sold has suffered no diminution, nor has there been an appreciable falling off in the number of consumers. But there can be no doubt that the industry is being put upon its trial, both on account of the cheapness of mineral oil and the electric lighting schemes now being so actively put forward. The former doubtless will continue as a bar to the introduction of gas into the homes of the humbler classes of the community, so that gas cannot make up any losses by pushing the consumption there. The poor do not favour gas, and moreover the gas companies have not shown much consideration in the matter of cheaply installing it. In the future, to successfully compete with other systems, gas companies must not only supply good gas, but also see that the gas fittings and the burners are so constructed as to afford proper illuminating power, and be conducive at the same time to a healthy atmosphere. It has been well said that each of the three principal systems of lighting will have a place in the future according to their respective deserts and adaptability to public wants. Coal gas will have to compete with both mineral oil and electric lighting; and according to the ability of those entrusted with its development, will it hold its own. The various ventilating systems of lighting are entirely in the right direction, supplying light where it is wanted, and not light and an uncomfortable degree of heat. Among introductions of recent years have been the incandescent and regenerative systems. Well-known and successful examples are the "*Clamond*" and "*Welsbach*" *Incandescent Gas Lights*. A late introduction is that brought out by Messrs. Johnson, Matthey & Co., called the *Iridium Platinum Incandescent Gas Burners*, worked on the patents of Lewis and Sellon. The makers

claim to have overcome the difficulties connected with fragile mantles for the burners. Then there is the **Wenham Light** (see ed. '88), which has met with great favour; the **Ridsdale Company's Lamp**, and the **Defries** system, each securing a good light and ventilation. Powerful artificial lights produced in special forms of lamps or burners, and intended for night work, such as excavations, and for large workshops, are receiving increased attention from manufacturers. A form which has been adopted extensively is the **Lucigen**, the light being produced by burning creosote oil, tar oil, crude petroleum or other heavy hydro-carbons by means of compressed air. It is used at the Forth Bridge works, at Woolwich Arsenal, and many other places; but we have heard objections regarding its use at the former on account of the flaring of the flame and the amount of oil diffused as spray. The new "**Doty**" Light, invented by Captain Doty for the above purposes, has been successfully tried at the works of Messrs. Braby and Co., Deptford. The oils suitable for use are ordinary paraffin, petroleum, and Russian. The base of the lamp is formed by an oil-tank or cylinder of galvanised iron, and air is pumped in to force the oil up a tube into the burner, the latter being outside at the top of the cylinder. When the oil reaches the burner it is passed along heated coils, and so gets converted into vapour, and may be burnt then as a gas. The lamp is lighted by first heating the coils, which can be done by a small oil flame in a few minutes. The conversion of oil goes steadily on—that is, the lamp is self-generating, the only condition being that air should be pumped in every few hours. The lamp is made in three sizes, yielding a maximum light equal to 1,000 candles, but its illuminating capacities may be still further increased. It gives a brilliant flame some 3 feet high. In a 500-candle-power lamp, the consumption of oil is stated to be three-quarters of a gallon per hour, and at a cost of less than *6d.* Another introduction in the same direction is the "**Jupiter**" Light, brought out by the Harden Star, Lewis and Sinclair Company, Limited, and they claim advantages for the light over others "for the reason that, as there is complete combustion no oil can possibly pass away in spray." The oils burnt are the same as in the **Lucigen**, and in this case also compressed air is used. At a recent trial on the Thames Embankment there were lighted two jets of 3,500 candle-power, and it was stated that *2½d.* per hour covered the cost of each of the flames. The general adoption of some safe form of ordinary oil lamp, such as is used in houses, is greatly to be desired. It is notorious that the majority of lamps on sale are unsafe. The chief source of danger lies in the breaking of the glass or china reservoirs so frequently in use, while defective burners also help to promote accidents. Paraffin oil lamps are especially dangerous, the number of deaths from casualties whilst using them being nearly double those through mine accidents. Mr. C. Marvin is well known as a writer on this subject. The "**Moloch of Paraffin**" is a recent pamphlet of his. At the recent petroleum lamp exhibition and competition at St. Petersburg, Messrs. **Defries** and Messrs. **Wright & Butler** were awarded medals for the production of safe lamps and burners. An admirable field for invention is open here, though there are safe

lamps in the market already; but a lamp must be not only free from danger, but small in cost, to come into general use. The **Defries** lamp is perfectly safe. Mr. E. Sherring has brought one out called the **Victoria Safety Lamp**. The **Shaftesbury**, referred to in ed. '88, is a good form, and cheap.

Li Hung-Chang, General, one of the most intelligent and enlightened Chinese of the present age, was b. 1823, in the province of Anu-Huei. Became Imperial Secretary (50). Commanded the royal troops against the rebels, whom he defeated (63 and '67). Governor of the **Thiang-Sin** Province, and afterwards created Viceroy of the United Countries (65); Minister Plenipotentiary (66); Viceroy of **Hong Kuang** (67); Grand Chancellor (68). In '70 he was disgraced for not having suppressed a rebellion, but was (72) restored to his former honours and position. **Li Hung Chang** is known as a friend to foreigners and to European culture and industry, and obtained much distinction for his successful negotiations with the United States on the occasion of the murder of Mr. Margery.

Limitations, Statutes of. These statutes limit the time within which a man may seek redress for an injury he has sustained. Lapse of time will not protect any one who has ever committed a crime from being prosecuted for it. Redress from a trustee for a breach of trust may always be had, however long the interval since its commission. But with this exception the remedy for any civil injury may be barred by lapse of time. An action of debt or covenant, if founded on a deed, must be brought within 20 years of breach; if founded on any less formal agreement, within 6 years of breach. An action to recover land must be brought within 12 years after the right to bring it first accrued. Should the right have accrued to a person under disability, as an infant or lunatic, an action may be brought within 12 years of its accruing, or within 6 years of the disability ending or the disabled person dying, but in no case of disability are more than 30 years to be allowed altogether. The above term of 12 years applies also to an action brought by a mortgagor to recover possession of his land, and to an action brought to recover money charged upon land by mortgage or otherwise. Only such arrears of rent as have accrued within 6 years before bringing an action for them can be recovered. Actions of trespass to goods, of assault, battery, wounding or imprisonment, must be brought within 4 years of the time when the injury was committed; actions for slander being limited to 2 years. Actions on penal statutes, if brought by the party aggrieved, are limited to 2 years; if brought by a common informer, are limited to 1 year. The lapse of 60 years bars actions for the recovery of real property, when brought by the Crown against a subject. The remedy in all the above cases may be lost by the lapse of time, but the right survives and may sometimes be made available in other ways than by action. Formal acknowledgment of a right by the person to whom it is adverse will render of no effect any lapse of time which has taken place, but time will run afresh from the acknowledgment. The law upon this subject is very complex and difficult. Consult **Banning** on the "Limitation of Actions."

Lincoln, Rt. Rev. Edward King, Lord Bishop of. The see was known formerly

as Lindisse, then Leicester, then Dorchester, when in 1067 it became the diocese of Lincoln. The old see dates from 680. The present income is £4,200. His lordship, the son of the late Ven. Archdeacon King, and the 106th bishop of the total succession, was b. 1829. Educated at Oriel Coll. Oxon., where he graduated B.A. ('51), M.A. ('55), and D.D. ('73); was ordained deacon ('54), and priest ('55) by the Bishop of Oxford, and consecrated Lord Bishop of Lincoln April 25th, '85. Formerly Dr. King was curate of Wheatley, Oxfordshire ('54-58); chaplain and assistant lecturer at Cuddesdon College ('58), being made Principal ('63). Ten years later he became Canon of Christ Church and Regius Professor of Pastoral Theology at Oxford. From this position he was promoted to the episcopate. His lordship is also Provincial Chancellor of Canterbury, and Visitor of King's Coll., Cambridge, of Brasenose Coll. and Lincoln Coll., Oxford, and of Eton College. Dr. K., who is an enthusiastic High Churchman, is known as an author by his sermons "Ezra and Nehemiah," "Addresses to Men and other Sermons," ('78); "Meditations on the Last Seven Words" ('76); "Church Treasures" ('74). Besides other sermons, his lordship has prefaced one or two works, and edited a devotional book, "The Communicant's Manual" ('69), a second edition of which appeared in '71. In '88 proceedings were instituted against Dr. K. by the Church Association (*q.v.*) for alleged illegal ritualistic practices.

Lincolnshire Handicap. See **TURF**.

Lincoln's Inn. See **ED.**

Lindley, The Rt. Hon. Sir Nathaniel, eldest son of the late Dr. John Lindley, F.R.S., Professor of Botany at University College, Oxford, was b. 1828. Educated at University College, London. Called to the bar at the Middle Temple ('50). He practised with such success that he became Q.C. ('72). Appointed a judge of the Court of Common Pleas ('75), became one of the Lords Justices of Appeal and a member of the Privy Council ('81). Lord Justice Lindley is well known in legal circles as the author of an "Introduction to the Study of Jurisprudence," and "A Treatise on the Law of Partnership and Companies."

Linton, Mrs. E. Lynn, daughter of the late Rev. J. Lynn, was b. at Keswick 1822. Is a well-known essayist and writer of fiction, and at one time a constant contributor to the *Saturday Review*. The authorship of the famous article on "The Girl of the Period" was attributed to Mrs. Linton. Her letters *versus* the Women's Rights agitation are characterised by that vigorous style for which she is so justly celebrated. Among the best known of Mrs. Linton's works are "Grasp your Nettle"; "Sowing the Wind"; "Patricia K. Lomball"; "The Rebel of the Family"; "Christopher Kirkland"; and "Paston Carew, Millionaire and Miser." In '88, Mrs. L. issued "Through the Long Night." Her husband is the well-known engraver and author, Mr. W. J. Linton, to whom she was married in '58. An article by her, entitled "An Eighteenth Century Abbé," appeared in the *Fortnightly Review* for Sept. '88.

"Lion Sermon." Preached annually on Oct. 16th at the church of St. Katharine Cree, Leadenhall Street, to commemorate the escape of Sir John Gayor, a wealthy merchant of London in the reign of James I., from a ferocious lion. On his return to England the grateful

knight bequeathed £200 to his parish church for the relief of the poor, on condition that a sermon should be annually preached in memory of his extraordinary deliverance. The date of the first sermon is given as 1647.

Literary Men Deceased (Jan. 1st to Dec. 6th, '88). *See **OBITUARY**.

"Literary World" (weekly, *id.*). Founded Feb. 14th, '68. First editor, the late James Clarke. The *L. W.* supplies a weekly survey of the best new books, combining choice extracts with critical reviews. It aims to be a faithful reflector of the best books in all departments of literature. Its "Queries and Answers" on literary subjects constitute a special feature. Office: 13 and 14, Fleet Street, E.C.

Literature of '88. With a few conspicuous exceptions, it must be said of the quality of the Literature of the year it was comparatively dull and commonplace. The year, however, was made memorable by the publication of one work at least which is destined to take high rank among British classics. We refer to **Robert Elsmere** (*q.v.*), a book which created a vast sensation, and which, in some sense, would have caused Dr. Arnold of Rugby—the author's grandfather—to "stare and gasp." Popular support was still unstintingly accorded to the cheap serial issues of standard works, as was noticeable in the cases of Messrs. Cassell and Company's **National Library** and their **Red Library**, and of Mr. Walter Scott's **Camelot Classics**, his **Canterbury Poets**, and his admirable collection of **Great Writers**. Additional evidence was furnished of the growing demand for low-priced editions of the best authors by the promptness with which several editions of those of Carlyle's works whose copyright had expired, made their appearance on the market. But notwithstanding this proof that the activity of publishers and the voracity of the reading public were as vigorous as ever, the original writings of the year showed that their authors had indeed responded to the stimulus, but in a half-hearted and almost wholly uninspired manner. An interesting incident, which may be properly chronicled here, was the turning of the well-known publishing house of Sampson Low & Co. into a limited company. It is understood that the shares were at once taken up privately.

BIOGRAPHY.—Mr. Wm. Reid's **Life of the Right Hon. W. E. Forster** (*Chapman & Hall*) was the most important work in this branch of literature. Although he spent several years in the preparation of the biography, undertaken with the approval of the Forster family, Mr. Reid must have been compensated for the arduousness of his task by the enthusiastic reception which the book met with on the part of the newspaper press, of which Mr. Reid has for so many years been an ornament, and by the cordial recognition which its merits obtained from Mr. Gladstone and Mr. W. O'Brien, M.P. **Mr. and Mrs. Bancroft On and Off the Stage** (*Bentley*) was one of those pleasantly garrulous books for which the public has shown a special liking of recent years. Mr. Bentley was put to some inconvenience by the Custom House authorities, whose interpretation of the Merchandise Marks Act forced him to issue one edition without the portraits. In his **William of Germany** (*Cassell*) Mr. Archibald Forbes had an opportunity of telling the story of his war-experiences over again, and the pages in which

he describes the Austro-Prussian and Franco-German battles are among the most vividly powerful things he has ever written. In his **Fighting Verses: Lives of Sir Francis Vere and Sir Horace Vere (Sampson Low)** Mr. Clements R. Markham sustained his reputation for solid and painstaking workmanship. Of the Rev. W. Rogers's **Reminiscences (Kegan Paul)** we need only say that they are more laughable than 99 per cent. of the farces which are produced on the stage. Mention must also be made of a trio of books which dealt with three able but very differently gifted bishops—viz., the Rev. Sir G. W. Cox's **Life of Bishop Colenso (Ridgway)**; the Rev. Canon Overton's and Miss Wordsworth's **Christopher Wordsworth, Bishop of Lincoln (Rivingtons)**; and Richard Chevenix Trenoh, Archbishop (**Kegan Paul**), whose Letters and Memorials were edited by the author of "Charles Lowder." Biographies of Irish "leaders," past and present, are just now "all the rage," and an especially excellent example of them was found in Mr. W. Dillon's **Life of John Mitchel (Kegan Paul)**, to which a Preface was contributed by the author's brother, Mr. John Dillon, M.P. Another timely volume was **Daniel O'Connell, the Liberator: his Letters and Correspondence (Murray)**, ably edited by Mr. W. J. Fitzpatrick. The sad death in the flower of his youth, remote from native land and friends, lent a pathetic interest to the Rev. Robert Sinker's **Memorials of the Hon. Ion Keith-Falconer, M.A., late Lord Almoner's Professor of Arabic in the University of Cambridge, and Missionary to the Mohammedans of Southern Arabia (Deighton, Bell & Co.)**. Miss C. M. Yonge's graceful and practised pen was seen to advantage in her monograph on **Hannah More, written for the "Eminent Women" Series (Allen)**. Somewhat of a melancholy interest attached to **My Sayings and Doings, with Reminiscences of My Life, by the Rev. William Quekett, M.A., Rector of Warrington (Kegan Paul)**, inasmuch as he did not long survive the publication of his Autobiography. Two particularly interesting biographies appeared in the series of "**Great Statesmen**" (**Allen**), one of **Lord Beaconsfield, by Mr. T. E. Kebbel**, a writer admirably qualified for the work, and one of **Lord Palmerston, from the competent pen of Mr. Lloyd C. Sanders**, the industrious editor of the series. A letter of the Queen's directed special attention to **Letters from General Gordon to his Sister (Macmillan)**. The **Correspondence of Sir Henry Taylor (Longmans)**, excellently edited by Professor Dowden, charmingly revealed the accomplished poet and essayist at his best. Though not in its original form belonging to British literature, such intense interest is taken by English-speaking people in the doings of the heroic subject of it, that mention must be made of Mrs. R. W. Felkin's translation of **Emin Pasha in Central Asia; a Collection of his Letters and Journals (Philip & Son)**, edited and annotated by Professor G. Schweinfurth, Professor F. Ratzel, Dr. F. W. Felkin, and Dr. G. Hartlaub. The Rev. Canon Ainger's masterly edition of **Charles Lamb's Letters, newly arranged, with Additions (Macmillan)**, was gladly welcomed by all lovers of the gentle and kindly, the genial and witty "Elia." Mr. J. B. McMaster gave a good deal of freshness to a well-worn subject in his **Benjamin Franklin as a Man of Letters (Kegan Paul)**. The "**Great Writers**" series (**Walter Scott**), under the editorship of Pro-

fessor Eric S. Robertson, has maintained so uniform a standard of excellence that it is hard, and almost invidious, to make a selection where all are capitally done. The following volumes, however, certainly claim decided notice: **Burns, by Professor Blackie, Goethe, by James Sime, Adam Smith, by R. B. Haldane, M.P., and Emerson, by Dr. R. Garnett**; while the bibliography compiled for each volume by Mr. J. P. Anderson, of the British Museum, is simply invaluable. Two "popular favourites" greatly amused a much wider audience than they ordinarily appeal to, Mr. George Grossmith dubbing himself with good-humoured cynicism **A Society Clown (Arrow-smith)**, and Mr. Conroy Grain, by himself (**Murray**), reciting many of his funny experiences. The public have long been familiar with Messrs. Macmillan's enterprise, and grateful for the various forms in which it finds expression. Hence arose the warm welcome which greeted the appearance of their series of "**Twelve English Statesmen**." Mr. Freeman led the van with a masterful monograph on **William the Conqueror**, and was ably supported by Mr. Frederic Harrison's brilliant **Oliver Cromwell**, Mr. H. D. Traill's **William III.** Mrs. J. R. Green's **Henry II.**, and Professor Creighton's **Wolsey**. In the **Mapleson Memoirs (Remington)** we were introduced to many matters respecting which there is always great avidity in the general public. Mr. W. P. Frith, encouraged by the popularity of the previous volumes, added a third entitled **Further Reminiscences (Bentley)**. It goes without saying that Mrs. Oliphant did ample justice to her subject in her **Life of Principal Tulloch (Blackwood)**. Little interest is now left in "the great Elchi," and this may account for the heaviness of Mr. Stanley Lane-Poole's **Life of the Right Hon. Stratford Canning, Viscount Stratford de Redcliffe, K.G., from his Memoirs and Private and Official Papers (Longmans)**. No one knows better how to do a graceful thing gracefully than Mr. Walter Besant, as his **Eulogy of Richard Jefferies (Challor & Windus)** so pleasantly proved. Great literary charm, besides other merits, characterised Dr. Westland Marston's **Recollections (Sampson Low)**. Mr. T. A. Nash, in his **Life of Richard, Lord Westbury, Lord High Chancellor of England (Bentley)**, told for the present generation the story of a brilliant and blighted career. Ever-popular "Johnny" Toole appeared in quite a new part when he related, and Mr. Joseph Hatton chronicled, the **Reminiscences of J. L. Toole, the Comedian (Hurst & Blackett)**. Full of interest, and well worth the recording, was Mr. J. C. Francis's literary chronicle of half a century entitled **John Francis and "The Athenæum" (Bentley)**. Curious and amusing was **The Letters from and to Charles Kirkpatrick Sharpe, Esq., edited by Mr. Allardyce, with a Memoir by the Rev. W. K. R. Bedford (Blackwood)**. To Dean Burgon's **Lives of Twelve Good Men (Murray)**, an exceedingly interesting book, full of anecdotes admirably told, attached the melancholy association that its author did not live to see its publication. Scholarly and thorough, as all Dean Plumptre's work is, his **Life of Thomas Ken, D.D. (Isbister)** may be commended as a capital piece of biography.

FICTION.—Good, but not very good, must be the verdict on the bulk of the fiction of the year. Some of the books, however, disclosed qualities of the highest order. There was, to

begin with, Mrs. Humphry Ward's *Robert Elsmere* (*Smith, Elder*), already and elsewhere alluded to. Mr. Walter Besant took us into the regions of spiritualism in his *Her Father's House* (*Chatto & Windus*). Mr. William Black's careful art was revealed in his *In Far Lookahoe* (*Macmillan*), with its beautiful local colour, for which he has such fine feeling; while in his *The Strange Adventures of a House Boat* (*Sampson Low*) he broke new ground. *Beyond Compare* (*Sampson Low*) invites a protest against Mr. Charles Gibbon's too long intervals of silence. If any one doubt whether Mrs. Oliphant's hand has lost its cunning, let him be referred to *The Second Son* (*Macmillan*), partly written in collaboration with Mr. T. B. Aldrich; and to *Joyce* (*Macmillan*). Mr. D. Christie Murray and Mr. Henry Herman recalled the days of the Druids, not altogether with success, in their *One Traveller Returns* (*Chatto & Windus*). Mr. Murray, however, displayed all his best talent in his *The Weaker Vessel* (*Macmillan*). The Author of "Mchalah"—who might, by the way, drop an *incognito* which is no longer a disguise—proved his industry by *Richard Cable: a Lightskipman* (*Smith, Elder*), and *Eve* (*Chatto & Windus*). Prolific as ever, Mr. George Manville Fenn gave us a taste of his quality in *One Maid's Mischievous*, *The Man with a Shadow* (*Ward & Downey*), and *Commodore Junk* (*Cassell*), the last eminently lively and readable. Mr. Grant Allen continues to successfully relieve his scientific pursuits with occasional incursions into the fields of fiction, as *The Devil's Die* and *This Mortal Coil* (*Chatto & Windus*) showed. Mr. Rider Haggard sought the "bubble reputation" and not in vain, by his *Mr. Meeson's Will* (*Spencer Blackett*) and *Maiva's Revenge* (*Longmans*); the former, however, being marred by a supposed attack on a publishing house (although the author declares that he had no particular firm in view), and the latter lending itself too easily to a biting parody in *Punch*. Mr. James Payn was hardly seen at his best in *The Mystery of Mirbridge* (*Chatto & Windus*); and the same judgment may be passed on Mr. R. L. Stevenson's *The Black Arrow: a Tale of the Two Roses* (*Cassell*), and Mrs. Molesworth's *The Third Miss St. Quentin* (*Hatchards*). Mr. F. M. Crawford was well represented by *With the Immortals* (*Macmillan*), while Lucas Malet "struck oil" in *A Counsel of Perfection* (*Kegan Paul*). Much ingenuity was exhibited in Mr. Richard Whiteing's *The Island; or an Adventure of a Person of Quality* (*Longmans*). Mrs. Parr's *Loyalty George* (*Bentley*) had many excellent points. *Thoth* (*Blackwood*), a romance by an unknown hand, revealed very considerable powers of imagination. Dr. George MacDonald's rare characterisation and ripe judgment were displayed in his *The Eldest Lady* (*Kegan Paul*). Mr. George Moore's *Confessions of a Young Man* (*Sonnenschein*) and *Spring Days* (*Vizetelly*) contained some smart enough writing. By adroit advertising an enormous circulation was obtained for Mr. Fergus W. Hume's *The Mystery of a Hansom Cab* (*Hansom Cab Publishing Company*) which was described as "a startling and realistic story of Melbourne social life." From a purely literary point of view, however, it did not bear serious criticism. The public did not seem to "catch on," as the Americans say, to its successor, *Madame Midas*, by the same author. The Author of "Molly Bawn" gratified her admirers with her stories

of *Marvel* (*Ward & Downey*), *The Duchess* (*Hurst & Blackett*), and *The Hon. Mrs. Vereker* (*White*). There was excellent promise in three of Mr. Bentley's novels—*His Cousin Betty*, by Miss Beard; *Only a Governess*, by Miss Rosa N. Carey; and *Narka*, by Miss Kathleen O'Meara. The Rev. Henry Solty, though known in other walks, is new, we think, to fiction; and his 'prentice work may be noted—namely, *Lady Stella and Her Lover* (*Ward & Downey*). On the other hand, Mr. R. E. Francillon, in his *King or Knave?* (*Chatto & Windus*), and Mr. L. Farjeon in his *Miser Parbrother* (*Ward & Downey*), well maintained their reputation. Professor Minto's *The Mediation of Ralph Hardelet* (*Macmillan*) was a remarkable production. Miss Frances Forbes-Robertson, a member of a talented family, made her *début*, not without success, in her *In Herself Complete* (*Vizetelly*). Readers of Miss Margaret Deland's truly powerful story, *John Ward, Preacher* (*Longmans*), will be glad to hear from her again. Miss Braddon, facile, vigorous, and interest-compelling as of yore, was seen to advantage in *The Fatal Three* (*Simpkin*). Having shown us "Mary Jane Single," Mr. George R. Sims was in duty bound to write of *Mary Jane Married: Tales of a Village Inn* (*Chatto & Windus*). Mrs. Alexander's *A Life Interest* (*Bentley*), Mr. Gissing's *Joy Cometh in the Morning* (*Hurst & Blackett*), and Mr. J. Freeman Bell's *The Premier and the Painter* (*Spencer Blackett*) were specimens of really good work of their respective kinds. *Chris* (*Macmillan*) and *The Rogue* (*Bentley*) were very favourable examples of Mr. W. E. Norris's powers, and mark a decided advance. A brace of Americans who appeal as forcibly almost as any native writer are named in Mr. Henry James and Mr. Julian Hawthorne. The former was represented by *The Reverberator* (*Macmillan*), the latter by *A Dream and a Forgetting* (*Chatto & Windus*). Mrs. Cashel Hoey's *All or Nothing* (*Spencer Blackett*) was worthy of her, which is saying a good deal. *A Woman's Face* (*Ward & Downey*) proves that Miss Florence Warden has ambition and courage equal to it. Mr. Oswald Crawford's *Sylvia Arden* (*Kegan Paul*) is exciting and interesting without resort to *bizarre* mechanism. Need it be said that Mr. Thomas Hardy displayed a master's touch in his *Wessex Tales* (*Macmillan*)? Mr. J. Thompson and Miss E. Harris-Smith took us very far from the madding crowd in their romance of *Ulu* (*Sampson Low*). It is time that Mr. J. Runciman tried his hand at sustained narrative, but meanwhile his *The Chequers* (*Ward & Downey*) displayed power of a sort. A baker's dozen of meritorious novels may be grouped, although no precedence is suggested in the order in which they come:—*The Rebel Rose*, H. Erroll's *The Academician*, Hush, by Curtis Yorke, Mr. E. J. Goodman's *Paid in His Own Coin* (*Bentley*); Mrs. J. Croker's *Diana Barrington*, Mr. Richard A. King's *A Leal Lass*, *Handsome Jack and Other Stories*, by Mr. James Greenwood, *The Last Hurdle: a Story of Sporting and Courting*, by Mr. Frank Hudson (*Ward & Downey*); *Ninette: an Idyll of Provence*, by the author of "Vera"; Mr. Henry Lander's *A Creature of Circumstances* (*Hurst & Blackett*); Mr. J. Law's *Out of Work* (*Sonnenschein*); Major Norris Paul's *Moonlight by the Shannon Shore* (*Jarrod*); and *A Garden of Tares*, by Mr. John Hill and Mr. Clement Hopkins (*Vizetelly*). Almost in his best manner was Mr. F. W. Robinson's *The Youngest Miss*

Green (*Hurst & Blackett*). "Q." displayed rare power of humour and comicality in *The Astonishing History of Troy Town* (*Cassell*). *Ideals: a Study from Life* (*E. W. Allen*), by an anonymous hand, was quite a masterly performance. Excellent in their way were Mr C. J. Willis's *The Pit Town Coronet* (*Ward & Downey*), Mr W. Raymond's *Misterton's Mistake* (*Sonnenschein*), the late Mrs. Henry Wood's *The Story of Charles Strange* (*Beniley*), *The Haunted Tower* (*Spencer Blackett*), edited by Bevis Cane, and Mrs. H. Jenner's *An Imperfect Gentleman* (*Longmans*). The surprising adventures of *The Admirable Lady Biddy Fane* (*Cassell*) excited such general interest while they were being related by Mr. Frank Barrett from week to week in the popular pages of "Cassell's Saturday Journal" that their publication in volume form became imperative. Mr. Justin McCarthy, M.P., and Mrs. Campbell-Praed repeated their experiment in joint authorship with *The Ladies' Gallery* (*Beniley*). All her customary vigour was exhibited in Mrs. Lynn Linton's *Through the Long Night* (*Hurst & Blackett*). Mr. Westall gave us excitement enough, if not to spare, in his Andean romance, *Nigel Fortescue; or the Hunted Man* (*Ward & Downey*). In *The Death Ship* (*Hurst & Blackett*) Mr. Clark Russell displayed all his well-known powers of imagination. Though not a work of fiction in the sense in which we are here using that term, this seems the proper place to mention Mr. Oscar Wilde's graceful *The Happy Prince and Other Stories* (*Nutt*), beautifully illustrated by Mr. Walter Crane and Mr. Jacob Hood. Messrs Macmillan commenced new and cheaper editions of Charles Kingsley's and Miss Charlotte M. Yonge's novels, while Messrs. Smith, Elder & Co. began a pocket edition of the works of the sisters Brontë.

MISCELLANEOUS.—In this department will be found several of the most interesting volumes of the year. A prominent place must be assigned to the collection of *Papers, Literary, Scientific, etc., of the late Fleeming Jenkin*. F.R.S., LL.D. (*Longmans*), which were edited by Sidney Colvin, M.A., and J. A. Ewing, F.R.S., and to which Mr. R. L. Stevenson contributed an admirable memoir of the versatile and gifted author. In *A History of England: Period IV.*, by the Rev. J. F. Bright, D.D. (*Rivingtons*), a very important undertaking reached its completion. Professor Dowden's fugitive essays under the title of *Transcripts and Studies* (*Kegan Paul*), were well worth bringing together. Earl Grey gave expression to an extraordinary method for meeting the Irish crisis in his *Ireland* (*Murray*). An exceedingly useful and more rational work arising out of the same prolific subject was *Two Centuries of Irish History, 1691-1870* (*Kegan Paul*), edited by Professor James Bryce, M.P. Col. Maurice, R.A., in *The Balance of Military Power in Europe* (*Blackwood*), replied with singular ability to the somewhat pessimistic position taken up by Sir Charles Dilke. In an eminently clear and simple fashion Mr. Edward Clodd told *The Story of Creation* (*Longmans*). Mr. R. A. Proctor's *magnum opus*, entitled *Old and New Astronomy* (*Longmans*), left unfinished by its talented author's untimely death, will be completed by another hand. As every one knows, Mr. William Morris has of late years devoted much of his creative force to the cause of Socialism, and in *A Dream of John Bull and a King's*

Lesson (*Reeves & Turner*) he found a fit subject for his pen. Mr. E. Burne-Jones furnished a frontispiece for Mr. Morris's volume. But for the Queen's Jubilee, it is doubtful whether Mr. Walter Besant would have cared to write his *Fifty Years Ago* (*Chalto & Windus*). Mr. J. F. Hogan discoursed vivaciously of *The Irish in Australia* (*Ward & Downey*). No one was better qualified in respect of judgment and knowledge than Mr. P. G. Hamerton to write of *Imagination in Landscape Painting* (*Seeley*). Mr. W. T. Marchant's *In Praise of Ale* (*Redway*) was a curious compilation, evidencing considerable research, of songs, ballads, epigrams, and anecdotes relating to beer, malt, and hops, with interesting particulars concerning ale, wines, and brewers, drinking clubs, and customs; but it may be doubted whether the book had a large circulation among the ranks of the Blue Ribbon Army. Mr. Karl Pearson discussed with conspicuous power *The Ethic of Free thought* (*Fisher Unwin*). Mr. Ignatius Donnelly's laborious onslaught on the "so-called" Shakespeare plays in his work named *The Great Cryptogram* (*Sampson Low*) ended in smoke. Mr. Henry James's well-known literary qualities were fully displayed in his *Partial Portraits* (*Macmillan*). "Stepniak" treated, as certainly few else could, of *The Russian Peasantry: their Agrarian Condition, Social Life, and Religion* (*Sonnenschein*). One of the most striking original works of the year was Mr. Lawrence Oliphant's *Scientific Religion; or, Higher Possibilities of Life and Practice, through the Operation of Natural Forces* (*Blackwood*). Sir Charles Dilke's volume on *The British Army* (*Chapman & Hall*) disclosed an unsatisfactory condition of things in our military matters. Mr. Percy Fitzgerald's *The Chronicles of Bow Street Police Court* (*Chapman & Hall*) contained a vast amount of very entertaining reading; and another work of the same class, but with higher literary qualities, was the late Lord Cockburn's *Circuit Journeys* (*Douglas*). The industry of Miss Laura Smith in collecting several of the "chanties" of sailors resulted in a curious and interesting volume entitled *The Music of the Waters* (*Kegan Paul*). Useful and thorough was Mr. W. J. Ashley's *Introduction to English Economic History and Theory* (*Rivingtons*). Lady Wilde told with great art some of the beautiful *Ancient Legends of Ireland* (*Ward & Downey*); the "Speranza" of an earlier day still cherishing an ardent love for her unhappy country. *The Lawn Tennis Player* ("Pastime" Office), though an unpretending manual, deserves special mention here because of the marked literary power, besides knowledge of the game, with which Col. Osborn handled his theme. The "Badminton Library of Sports and Pastimes" was enriched by the addition of a capital work on *Cricket* (*Longmans*), edited by Mr. A. G. Steel and Mr. R. H. Lytton, and rendered especially valuable by contributions from Mr. Andrew Lang, Dr. W. G. Grace, Mr. R. A. H. Mitchell, and Mr. F. Gale. An important book on the *Literature of Egypt and the Soudan* (*Trubner*) appeared from the capable pen of Prince Ibrahim Hilmy. One of the best fine-art volumes of the year was *Pictures of East Anglian Life* (*Sampson Low*), which was illustrated with thirty-two photographs and fifteen small drawings, and to which Dr. P. H. Emerson supplied the general and descriptive text. Some of the most beautiful plates in the volume were produced by Messrs. Walker and Boutall, and are so good that

one cannot but regret that their contributions to the work were not more numerous. Many students were grateful for Mr. Walter Rye's *Records and Record Searching: a Guide to the Genealogist and Topographer (Stock)*. Mr. G. M. Theal worked out with much painstaking devotion the *History of South Africa from 1486-1891 (Sonnenchein)*. Dr. F. H. Mules' *George Doggett, Keeper (Heywood)*, possessed many charms for followers of the gentle art. Mr. T. A. Walker, in *The Severn Tunnel: its Construction and Difficulties (Bentley)*, modestly related the story of a grand piece of engineering. Mr. E. T. Cook met a "felt want" by his *Popular Handbook to the National Gallery (Macmillan)*, to which Mr. Ruskin supplied an appreciative preface. Mr. A. J. Balfour is a man *sui generis*, and the address which he delivered before the Church Congress at Manchester on *The Religion of Humanity (Douglas)* showed him at his best intellectually, although his appearance under such auspices was thoroughly characteristic. One of the most conscientious and valuable books of its kind was Mr. Alfred Nutt's *Studies of the Legend of the Holy Grail, with especial reference to the Hypothesis of its Celtic Origin (Nutt)*. The *Truth about Russia (Cassell)* was a spirited account by Mr. W. T. Stead of his recent visit, well worth the close attention of all who would wish to possess more rational views of Russian politics and social conditions than the average Briton has hitherto held. *Cassell's Miniature Cyclopædia (Cassell)* contained a vast quantity of information in a compendious form, and reflected the utmost credit on the industry and skill of its competent compiler, Mr. W. Laird Clowes. We are fortunately not called on to take part in the unseemly squabble which arose over the dead Emperor. In the autumn of the year Sir Morell Mackenzie contributed his share to the controversy by publishing his reply to the Report of the German doctors. His book was entitled *The Fatal Illness of Frederick the Noble (Sampson Low)*, and although it created considerable sensation in England and Germany (where its circulation was prohibited), it is by no means clear that he had the best of it. Another volume in which the late Kaiser was largely concerned was *The Emperor's Diary of the Austro-German War, 1866, and the Franco-German War, 1870-1, to which is added Prince Bismarck's Rejoinder, with a helpful introduction by Mr. H. W. Lucy (Routledge)*.

POETRY.—Although none of the poets of the year can be said to have been possessed with an *afflatus* positively divine, it yet remains true that the work done in this department was very good, despite the further fact that there was not much of it. A sign of the times, surely, was visible in the issue of a popular edition, begun in '88, of Mr. Browning's Poetical Works (*Smith, Elder*). *Heartsease and Rue (Macmillan)* displayed all the well-known qualities of Mr. Russell Lowell at his best. Mr. Robert Buchanan's *The City of Dream (Chatto & Windus)*, was an ambitious epic, which, though decidedly unequal, contained much that will rank with his finest work. Mr. Stopford Brooke's *Poems (Macmillan)*, discovered the author in a new rôle, which he sustained with considerable ability. A graceful memorial volume appeared in the late Principal Shairp's *Glen Denaroy: and other Poems, Lyric and Elegiac (Macmillan)*, which was edited by Professor Falgrave, a successor of Shairp's in the Oxford Chair of Poetry. *And Lilt Idylls (Hodder & Stoughton)*,

revealed great promise in Mr. J. M. Barrie, their singer. High merit must be awarded to Mr. R. St. John Tyrwhitt's *Free Field Lyrics (Macmillan)*, and to Mr. Rennell Rodd's *The Unknown Madonna, and other Poems (Stott)*. Mr. O. W. Holmes' *Before the Curtain, and other Poems: Chiefly Occasional (Sampson Low)*, showed that an old poetic hand had lost little of its cunning, though to what extent we are justified in ranking him and Mr. Lowell among the British poets, is certainly open to debate. In *A Book of Verses (Nutt)*, ample evidence was forthcoming that Mr. W. E. Henley was probably the most original and most powerful singer of the year. Mr. W. Sharp's *Romantic Ballads and Poems of Fantasy (Walter Scott)* exhibited a good deal of graceful charm, but more excellent still in this respect was Miss A. Mary F. Robinson's *Songs, Ballads, and a Garden Play (Fisher Unwin)*. Mr. Allen Upward won his spurs by his *Songs in Ziklag (Sonnenchein)*, and Mr. W. Canton's *A Lost Epic and other Poems (Blackwood)* disclosed much beauty and power. *A Marriage of Shadows and other Poems (Smith, Elder)*, by the late Margaret Veley, proved that their author might have reached a high place among latter-day poets had her life been prolonged. Much that is dainty and musical will be found in Miss Bessie Craigmyle's *A Handful of Panes (Aberdeen: John Adam)*.

SERIALS.—Two of the colossal serials were completed within the year. These are Cassell's admirable *Encyclopædic Dictionary*, and the *Encyclopædia Britannica (Black)*. Dr. Murray's *New English Dictionary on Historical Principles (Clarendon Press)*, has now come down to "Cass," and it is expected that the rate of production will in future be somewhat accelerated. Of Mr. Leslie Stephen's *Dictionary of National Biography* seventeen volumes have now appeared. Mr. Walter Scott's three excellent series—*Canterbury Poets*, *Camelot Classics*, and *Great Writers*—are each richer by twelve monthly volumes. Professor Henry Morley's unique enterprise—the *National Library (Cassell)*—continued to win public approval, while he also succeeded in adding two more volumes (iii. and iv.) to his *English Writers (Cassell)*. A new and vastly improved edition of *Chambers' Encyclopædia* was likewise begun during the year. Already the first two volumes have been issued. The whole work has been re-set, in great part re-written, and largely added to, and the number of maps has been increased. Two new magazines also put in a claim for favour. These were *The Archaeological Review (Nutt)*, of which the first number came out in March, and *The Universal Review (Sonnenchein)*, edited by Mr. Henry Quilter, the first number of which appeared on the 15th of May. The latter has two distinctive features. In the first place, many of its articles are illustrated; in the second, it is published in the middle of the month and not at the usual date. *The International Scientific Series (Kegan Paul)*, almost a library in itself, was increased by three volumes—Sir J. W. Dawson's "The Geological History of Plants," Professor Henslow's "The Origin of Floral Structures through Insect and other Agencies," and Sir John Lubbock's "On the Senses, Instincts and Intelligence of Animals, with Special Reference to Insects."

TRAVEL AND GEOGRAPHY.—Though the works in this department were few in number, they were mostly excellent, and at least one of

them—*Tropical Africa (Hodder & Stoughton)*, by Professor Henry Drummond, of which separate mention has been made elsewhere—will probably take a permanently high place in the literature which is already shedding so much light on the Dark Continent. Madame Gerard's *The Land Beyond the Forest (Blackwood)* comprised a thorough and exhaustive account of Transylvania. Not less full and satisfactory was *The Long White Mountain (Longmans)*, in which Mr. H. E. M. James, of the Bombay Civil Service, narrated his journey in Manchuria, and described the history, administration, and religion of that province. Mr. L. D. Powles gave an entertaining recital of his experiences in the Bahamas under the title of *The Land of the Pink Pearl (Sampson Low)*. Two volumes on New Guinea were alike meritorious—Capt. J. Strachan's *Explorations and Adventures in New Guinea (Sampson Low)*, and the Rev. S. Macfarlane's *Among the Cannibals of New Guinea (London Missionary Society)*, in which he told the story of mission work in the island. In *A Fight with Distances (Kegan Paul)*, Mr. J. J. Aubertin carried us through the States, the Hawaiian Islands, Canada, British Columbia, Cuba, and the Bahamas. *Inewadi Yami (Sampson Low)*, does not seem to convey much information as the title of a book, but the work so named contained Dr. J. W. Matthews' twenty years' experience of South Africa. Mr. W. B. Churchward, in his *Blackbirding in the South Pacific, or the First White Man on the Beach (Sonnenschein)*, narrated in a most interesting style some of the disgraceful dealings of the kidnapper among the South Sea Islands. Wisely bidding adieu for awhile to British politics, Mr. W. S. Caine, M.P., made the grand tour, and recited his experiences of men and things in a pleasant volume entitled *A Trip Round the World in 1887-8 (Routledge)*. As readable as the best sensational story, with the added value that its details are quite true, may be mentioned *Tent Life in Tiger Land (Sampson Low)*, in which the Hon. James Inglis, Minister for Public Instruction in Sydney, New South Wales, describes his twelve years' sporting reminiscences as a pioneer planter in an Indian frontier district. If Mr. Froude had kept more strictly to the subject proper of his journeyings, his *The English in the West Indies (Longmans)* would have been less irritating to the reader without losing any of its value to the traveller. But Mr. Froude has "the defects of his qualities."

Liverpool, Rt. Rev. John Charles Ryle, D.D., 1st Bishop of (founded 1880), eldest son of the late John Ryle, Esq., M.P., of Macclesfield, b. 1816. Was educated at Eton, and at Christ Church, Oxford; graduating (1836) Craven Scholar and first-class Classics. Rector of Helmingham (1844-61); vicar of Stradbroke (1861-80); appointed Bishop of Liverpool by Lord Beaconsfield (1880). Author of "Christian Leaders a Hundred Years Ago," "Expository Thoughts on the Gospels," in 7 vols., and other works.

Liverpool Royal Jubilee Exhibition, '87. See ed. '88.

Liverpool Steeplechases. See TURF.

Llandaff, Rt. Rev. Richard Lewis, Lord Bishop of. See founded in the 6th century. His lordship, the 93rd bishop, is the son of John Lewis, Esq., of Henllan, Narbeth, co. Pembroke, and was b. 1821. Educated at

Bromsgrove School, and Worcester Coll., Oxford. Graduated B.A. hon., 4th class Lit. Hum. '43, M.A. '46, D.D. by diploma '83, in which year he was consecrated Lord Bishop of Llandaff in St. Paul's Cathedral. The income of the see is £4,200. His lordship was formerly rector of Lampeter Velfry '51-83; Prebendary of Caerfeghelli and of Mydram in St. David's Cathedral '67-75; Archdeacon of St. David's, and chaplain to the Bishop of St. David's '75-83. In '88 his lordship refused to institute Mr. Gosse to the incumbency of Goytre, chiefly on the ground that he could not speak Welsh.

Lloyd, Edward, the famous tenor vocalist, was born in London 1845. When seven years old he entered Westminster Abbey choir. Afterwards he became solo tenor at the Chapel Royal, St. James's. Mr. L. was engaged in '67 at Novello's Concerts, and in (71) at the Gloucester Festival, where he attracted much attention from his singing in Bach's "Passion." In '88 Mr. L. went on a tour in America, taking part in the Cincinnati Festival, where he obtained much applause. His singing in the Handel Festival ('88) also created a sensation. A rumour was circulated that Mr. L. intended commencing an operatic career in '89.

"Lloyd's Clauses." These clauses are so important, and they are passing into such general use, particularly in London, Liverpool, and Glasgow, in contracts for marine insurance, that we give them, with the remark that although a bill of lading whose terms shall be absolute and unvarying is probably an impossible dream, the increasing adoption of Lloyd's clauses shows that this is not the case with contracts of marine insurance.

F.P.A. Warranted free from particular average unless the vessel or craft be stranded, sunk, or burnt, each craft or lighter being deemed a separate insurance. Underwriters, notwithstanding this warranty, to pay for any damage or loss caused by collision with any other ship or craft, also to pay any special charges for warehouse rent, re-shipping, or forwarding, for which they would otherwise be liable, and to pay the insurance value of any packages which may be totally lost in transshipment. Grounding in the Suez Canal not to be deemed a strand, but underwriters to pay any damage or loss which may be proved to have directly resulted therefrom. **G.A. General Average** and salvage charges payable according to foreign official adjustment, if so claimed, or per York-Antwerp Rules, if in accordance with the contract of affreightment. **F., O. and S. Warranted free of capture, seizure, and detention**, and the consequences thereof, or of any attempt thereat, piracy excepted, and also from all consequences of hostilities or warlike operations, whether before or after declaration of war. **Deviation.** In the event of the vessel making any deviation or change of voyage, it is mutually agreed that such deviation or change shall be held covered at a premium to be arranged, provided due notice be given by the assured, or receipt of advice of such deviation or change of voyage. **Continuation Clause (Ship or Ships Policies).** In the event of any shipment coming upon this policy, the value of which is in excess of the sum then remaining available, it is mutually agreed that the underwriter shall grant a policy for such excess up to, but not beyond the amount of this policy, and the assured shall pay the

premium thereon at the same rate. **Continuation Clause (Time Policies).** Should the vessel hereby insured be at sea on the expiration of this policy, it is agreed to hold her covered until arrival at port of destination at a premium to be arranged, provided due notice be given on or before the expiration of this policy. **No Thirds as applying to Iron Ships and Steamers.** No thirds to be deducted except as regards hemp, rigging, and ropes, sails, and wooden deck. **Lloyd's Warranties.** Warranted not to sail from the Baltic, White, or Black Seas, or British North America, between the 1st day of October and the 1st day of April, nor from the West Indies or Gulf of Mexico between the 1st day of August and the 12th day of January, nor to go to the Azores, nor to sail the Baltic before the 20th day of March or after the 10th day of September. **M. C. Warranted free from particular average below the load waterline, unless occasioned by fire or contact with some substance other than water.**

"Lloyd's Weekly London Newspaper" (ed.), founded Nov. 1842, is an exponent of advanced Liberal principles. It gives the latest telegrams and news, and contains much information of literary and general interest. **Douglas Jerrold**, who filled the editorial chair until his death, was succeeded by his son; while the present Editor is Mr. Thomas Catling. Office, 12, Salisbury Square, Fleet Street, E.C.

Load Line. This is a mark placed upon British ships to indicate the depth beyond which they cannot with safety be loaded. For history of the question, the various Acts relating to it, the Load Line Committee, etc., see ed. '87.

Loan Societies. The latest returns of the Registrar-General of Friendly Societies, issued Sept. '88, gives an abstract of the accounts of the certified Loan Societies for the year '88. Out of 414 societies, 408 made returns. The following table shows the increase or decrease on the principal items, as compared with the previous year:—

Local Government Board, which was constituted August 19th, 1871, under an Act passed earlier in the same year, was established to take over all the powers and duties vested in or imposed on the Poor Law Board (which Board from that time ceased to exist) under the Acts relating to the relief of the poor, the powers vested in or imposed on the Home Secretary in regard to the registration of births, deaths and marriages, public health, local government, sanitary matters, baths and washhouses, public improvements, towns improvement, artisans' and labourers' dwellings, returns as to local taxation, and the powers and duties of the Privy Council with regard to the prevention of disease and vaccination (*q.v.*). Since that time its powers have been increased, and its sphere and operations extended by many statutes. The Board consists of a president and of certain *ex-officio* members, all of whom are members of the Government for the time being. The president is assisted by a parliamentary secretary, a permanent secretary (Sir Hugh Owen, K.C.B., salary £1,500), and a numerous staff of officers and inspectors, etc. The duties of the Department include a general supervision and control of the administration of the **Poor Law** (*q.v.*), the inspection especially of Metropolitan vagrant wards, workhouse schools, and the regulation of infirmaries; and it may authorise the emigration of orphan and deserted children. Its medical department includes a medical inspector and staff for general sanitary purposes, under it being the **National Vaccine Establishment** and the animal vaccine lymph station. It may order the appointment by sanitary authorities of medical officers of health and inspectors of nuisances, may constitute a port sanitary authority in certain cases, carry out local inquiries as to special epidemics, and may make orders as to dairies and cowsheds. It inspects **alkali works** (*q.v.*) and canal boats (*q.v.*). It has certain statutory powers as to bridges and highways. It examines the accounts of boards of guardians

Loanda. Capital of Angola (*q.v.*).

Local County Government. For former constitution of L. C. G. see ed. '88.

Local Government Act. See Session' 88, secs. 26-28.

and other local bodies, and may make disallowances and surcharges. It may sanction, after due inquiry by members of its staff, the borrowing of loans for cemeteries, sanitary improvements, improvement schemes, workhouse buildings, water supply, baths and wash-

houses, and for other purposes; and it satisfies itself that any sums advanced by the Public Works Loans Commissioners are applied to the work for which they were intended. It grants provisional orders (see BILL, PRIVATE) for the constitution or alteration of unions and the division of parishes, for the acquisition of land, and for other local objects. It reports to Parliament upon local bills, and it publishes periodical returns as to the prevalence and cost of pauperism, sanitary matters, vaccination, local taxation and the valuation of property, and the financial position of the local authorities of England and Wales. It makes regulations as to the distribution of the grants in aid of distumpiked and main roads, and distributes grants in aid of the salaries of poor law medical officers, teachers in poor law schools, medical officers of health and nuisance inspectors. A water examiner under the Board reports on the condition of the water supplied by the eight Metropolitan Water Companies. The powers of supervision and control exercised by the Department extend over the Metropolitan Asylums Board. See Local Government Act under heading, SESSION '88, SECS. 25-28.

Local Government Boundaries Act, '87.
See ed. '88.

Local Option. This phrase is now applied to such legislation as would enable the inhabitants of districts to reduce or extinguish the sale of intoxicating liquors in their own midst. The Local Option resolution was first moved by Sir Wilfrid Lawson on March 17th, 1879, and again on March 5th, 1880, being rejected by majorities of 88 and 114. But on June 18th, 1880, he again brought it on in the Parliament recently elected, and it was carried by a majority of 29. In 1881 another motion was carried by 42 majority, and a third motion in 1883 by a majority of 87. There has yet been no legislation on the subject, but it is believed that some means will be adopted before long by which the issue or renewal of licences will be put under the power of localities. There are several schemes of Local Option seeking to effect a reform in the licensing system, but Sir W. Lawson and the United Kingdom Alliance are only desirous of a power of direct veto, by which the electors of any place might veto, if so pleased, the issue of all licences for the sale of liquor, and thus stop among themselves the sale of strong drink with its attendant evils. The phrase "Local Option" is borrowed from a letter by Mr. Gladstone in 1868, when, writing on the subject of the Permissive Bill, he said that he was disposed to "let in the principle of local option wherever it is found satisfactory." The difficulty which has hitherto stood in the way of Local Option in the liquor trade has been that of deciding what considerations should determine a "locality," who should be the constituents, and what should be the majority necessary to vote the abolition of the trade. A further question is that of compensation to those who have invested in the trade in a locality where a subsequent vote excludes it.

Local Taxation and Valuation. The annual report of the Local Government Board for 1879-80, issued in November last, gives the local taxation returns for '85-6. From these it appears that there are 34,401 local authorities in England and Wales, whose aggregate receipts, excluding loans, were from—

Public rates	£26,142,891
Treasury subventions and payments	3,773,640
Tolls, dues, and duties	3,553,201
Revenue from real and funded property	1,148,617
Sales of property	484,369
Fines, penalties, fees, and licences	1,064,173
Waterworks	2,106,667
Gasworks	3,298,874
Other undertakings producing revenue	696,492
Repayments in respect of private improvement works	756,799
Receipts from other sources	1,395,847
Total	£44,381,540

The expenditure of the authorities during the year, so far as it was not defrayed out of loans, amounted to £44,518,206. The following are some of the principal purposes in respect of which it had been incurred:—

Relief of the poor	£6,579,664
Pauper lunatics and lunatic asylums	1,471,477
Police	3,500,271
Education	3,473,629
Highways, street improvements, and turnpike roads	5,556,951
Gasworks	2,441,497
Public lighting	880,317
Waterworks	816,233
Sewerage and sewage disposal	848,166
Harbours, docks, and piers	1,162,796
Other public works and purposes	4,579,516
Private improvement works	484,927
Principal and interest on loans	9,972,120
Salaries and remuneration of officers	1,445,569
Establishment charges	429,450

The receipts from loans during the year amounted to £11,623,295, and the expenditure out of loans to £9,446,666. The following are some of the principal purposes for which the loans were raised, and the amounts raised for each purpose:—

Highways and street improvements	£2,694,502
Waterworks	1,741,396
Schools	1,563,055
Sewerage and sewage disposal	1,307,854
Gasworks	690,556
Poor law purposes	607,963
Harbours, docks, and piers	576,092
County purposes	204,968
Markets	161,388
Artisans and labourers' dwellings	
Improvement schemes	161,305
Bridges and ferries	157,689
Tramways	151,954

The outstanding loans of the local authorities at the end of the year amounted to £181,488,720.

The following statement shows, so far as it has been found practical to apportion them, the amounts outstanding in respect of the principal purposes for which these loans had been raised:—

Waterworks	£31,870,895
Harbours, docks, and piers	29,179,812
Highways, street improvements, and turnpike roads	28,649,170
Sewerage and sewage disposal	17,799,980
Schools	28,098,214
Gasworks	14,431,509
Poor law purposes	6,686,575
Markets	3,226,661

Public buildings, offices, etc. (not included under other headings)	3,702,530
Artisans' and labourers' dwellings improvement schemes.	3,641,394
Lunatic asylums	3,408,780
Bridges and ferries	3,139,959
Parks, pleasure grounds, commons, and open spaces	2,584,363
Cemeteries and burial grounds	2,380,865
Land drainage, embankment, and river conservancy	2,157,344
Tramways	1,322,176
Private improvement works	902,623
Police stations and gaols	859,594
Baths and washhouses	610,217
Hospitals	431,017
Libraries and museums	379,515
Fire brigade.	309,136
Cattle Diseases Prevention Act, '66	129,668
Slaughter-houses	71,364
Public lighting	36,751
Loans charged on Church rates	15,513
Other purposes	5,537,499

£181,488,720

Lockwood, Frank, Q.C., M.P., was b. 1846. Educated at Cambridge. Called to the bar at Lincoln's Inn '72; Q.C. '82; Benchers '86. Appointed one of the Commissioners to inquire into corrupt practices at Chester '80. Recorder of Sheffield '74. Elected Liberal member for York '85, which he still represents. Mr. L. is possessed of a humorous faculty, and is an accomplished caricaturist. In October '88 he appeared, in company with other eminent counsel, on behalf of the Irish Party at the *Parnell Commission* (q.v.).

Lockyer, Joseph Norman, F.R.S.; b. at Rugby 1836. Appointed to the War Office (57), and editor of *Army Regulations* ('65). He was subsequently transferred to the Science and Art Department. Elected F.R.S. ('69). He was chief of the *English Government Eclipse Expedition to Sicily* ('70), and to *India* ('71). He has published several works on astronomy, and has done much to advance the interests of that science.

Lodgers' Goods Protection Act, '71. See ed. '88.

Loeb Respirator. This new apparatus is designed as a means of protection from the effects of noxious vapours, smoke, or fumes. It can be used in chemical works, sewers and mines, and in the dense smoke caused by fires. The whole apparatus weighs only fifteen ounces, and briefly described consists of a metal respirator, with two cylinders containing a filtering medium, and a set of valves for respiratory purposes. The eyes are covered with spectacles, and the nose has a clip to protect the nostrils. Some interesting experiments with smoke and sulphur were carried out last summer to demonstrate the value of the system.

Logographic Printing. A system invented by a compositor, **Henry Johnson**, about 1785, whereby the types were common whole words and syllables instead of single letters. See ed. '88.

London Central Subway Railway. Notice was given in November '88 that application would be made to Parliament for leave to bring in a bill for the construction of subway railways from

St. James Street, Piccadilly, to Holborn Circus. The railway is to be in three sections, of the standard gauge 4 ft. 8½ in., and be worked by electricity.

London Chamber of Commerce. The Incorporated under the Limited Liability Act, Oct. 31. First President, Mr. Chas. Magniac, M.P. The L. C. C. takes cognisance of all questions affecting the good of the community at large, and which have from time to time occupied the attention of the mercantile world. Among these topics may be mentioned the Anglo-French Treaty Negotiations, the Burmah Monopolies, the Russo-Chinese Treaty of Kuldja, and Telegraph Rates in Russia; in '82 Coffee Adulteration, the Bill for Amending the Laws relating to Customs and Inland Revenue, Eastern Bills of Lading, Cattle Plague Regulations, Consular Reports, Bankruptcy Reform, Thames Communications, different matters relating to the Suez Canal (q.v.), Parcels Post, the Spanish Treaty, Coal and Wine Duties (q.v.), Sixpenny Telegrams, Colonial and Imperial Federation (q.v.), Merchant Shipping Bill, Railway Rates and Fares, Postal Reform, Arbitration, State Guarantee of War Risks, Technical Education, Emigration, Commercial Treaties with Morocco, Mexico, Spain, and various foreign countries, Annexation of Burmah (approved of), Commercial Museums, Decimal Coinage, the Silver Question, Merchandise Marks Act '87, Development of Burmah. A number of subjects similar to these are considered yearly by the meetings, and whatever steps after due deliberation are considered advisable to be taken upon them, by way of petitioning Parliament or otherwise, are adopted. The Chamber, too, has frequently been consulted confidentially by Government concerning bills affecting trade. The affairs of the Chamber are governed by a Council. From its first formation the Chamber has adopted the principle of dividing itself into sections, each dealing with some particular subject. So completely has this idea been carried out that a thorough sectional subdivision has been effected. The Chamber has on its premises the nucleus of a valuable commercial library, to which presentations have been made by the late Mr. Samuel Morley, Sir John Lubbock, M.P., and others. A new feature was commenced in '88—viz., a series of monthly commercial dinners, as a means of bringing the members together to talk informally over commercial matters. President, Sir John Lubbock, M.P. *Organ, Chamber of Commerce Journal* (monthly). Office, Botolph Lane, E.C. Sec. and Editor, Mr. H. B. Murray.

London Congregational Union. This, the only society representing the interests of London Congregationalists, was formed in March 1873. The limits of its operations are comprised within the area known as Greater London, including the whole of Middlesex, and such portions of Surrey, Kent, Essex, and Hertford as are within twelve miles of Charing Cross, these being divided into ten districts. The objects of the Union are to promote spiritual intercommunion between the Congregational Churches of the Metropolis, to aid such of them as are weak, and to promote church extension, and secure their common, religious, and social interests. An annual average of about £3,000 is expended in aiding churches to support their ministers and in extending and consolidating mission work. In addition, grants

are made in aid of **Chapel Building**, and **Free Loans** are granted for a term of years from a fund amounting to £11,050. About £15,000 has been raised during the last five years for **children's breakfasts**, and other philanthropic work. The membership of the Union consists of the representatives of affiliated churches and of ministerial, personal, and honorary members. The **Council** consists of sixty members; thirty ministerial and thirty non-ministerial, together with the Chairman, ex-Chairman, Chairman-elect, Treasurers, and Secretary. Each District Committee is entitled to nominate for the Council in the proportion of one member for every seven affiliated churches in the district. Fourteen members retire annually, and these are not eligible for reappointment before the following annual election. **Offices**, Memorial Hall, Farringdon St., E.C. Sec. Rev. A. Mearns.

London Corporation (Charges of Malversation). For concise report of the Committee of the **House of Commons** appointed to consider certain charges preferred in the House against the Corporation see ed. '88, and **Sission '88**, sec. 3.

London, Corporation of the City of, consists of the whole body of the citizens or freemen, under the style of "the Mayor, Commonalty, and Citizens." The small portion of this great Metropolis which is comprised within the City and its liberties is divided into **27 wards**, including Bridge Without. There is an alderman for this ward, but no freemen and no common councillors. Each of the other wards, with the exception of the two Cripplegate wards (which return an alderman jointly), elects one alderman and a number of common councillors varying from 4 to 16, but amounting in all to a total of 212. An alderman is elected when a vacancy occurs, and holds office for life, the councilmen are elected on St. Thomas's Day, and hold office for one year, but are of course eligible for re-election. The electors are in each case freemen, who may have obtained their freedom by birth, apprenticeship, purchase, or gift; but who must be rated householders before they can vote at a ward-mote, as a meeting of the ward is termed. A **liveryman** is a freeman who, by payment of a fee, has entered the livery of one or other of the City companies or guilds, and was first so called because he was entitled to wear the livery of his company. He has the right to vote at the elections of Lord Mayor, sheriffs, chamberlain, and other Corporation officers, and also for M.P.'s for the City. The **Lord Mayor** is elected on Sept. 29th by the liverymen of the several companies assembled together at the Guildhall, and as it is termed in Common Hall, and to be eligible he must have served as sheriff (q.v.) of London. The Livery may select any alderman thus qualified, but they almost invariably accept the names of the two senior aldermen who have not passed the civic chair. These two names are submitted to the general body of the aldermen, who choose usually the first, but sometimes, for a special reason, prefer the second. The Lord Mayor elect is presented to the Lord Chancellor to receive the assent of the Crown to the election; he is sworn before the retiring Lord Mayor and aldermen on Nov. 9th, and on Nov. 9th he goes in procession to the Royal Courts of Justice to be presented to the Lord Chief Justice and again sworn. The mayoralty thus commenced lasts a year, but the same alderman

has in some instances been re-elected for a second, and in ancient times for even a third period of service. His public duties absorb every moment of the Lord Mayor's time, and the £10,000 annually voted by the Corporation does not anything like cover his expenses while in office. He is expected to preside during the day over meetings for public or benevolent objects, and to take part in many important ceremonies: to open schools, distribute prizes, initiate subscriptions for relief of distress; and by night to entertain eminent and distinguished personages at his official residence. As head of the Corporation he presides at Common Hall, the Court of Aldermen, and the Court of Common Council, and may have to attend committees, and the Commissioners of Sewers; he presides at the justice room of the Mansion House, and is first commissioner of the Central Criminal Court; he is a trustee of St. Paul's and a governor of several charities. He is head of the Thames Conservancy Board. He is styled "right honourable," and although not of the Privy Council, he attends when, on the demise of the Crown, the new sovereign is proclaimed; and at the coronation he is present as chief butler, receiving therefor a golden cup and cover. [The Lord Mayor's private secretary is Mr. W. Soulsby, Mansion House.] The alderman of the ward presides over the ward-mote for the election of common councilmen. Each alderman is a justice of the peace, and may preside at the Guildhall or Mansion House justice rooms. The aldermen are the bench of magistrates for the City, the visiting justices to the prisons; they admit and swear brokers, and decide disputes at ward elections. When a vacancy in the aldermanic representation of the ward of Bridge Without occurs, they choose one of their number, usually the senior alderman, to fill it, whose successor in the ward he retires from is elected in the usual manner. They sit in the Court of Common Council, the full title of which is "Lord Mayor, Alderman, and Commons of the City of London in common council assembled," and no business can be done unless some of each body be present. The **Common Council** manages the financial and general affairs of the Corporation, has charge of its own police (see METROPOLITAN and CITY POLICE), lets its lands, has full power over its funds, and has charge of certain of the Thames bridges. The **Recorder** (Sir T. Chambers, Q.C., salary £3,500, and £57 as steward of Southwark) presents the Lord Mayor elect to the Lord Chancellor and to the Lord Chief Justice, is principal adviser of the Lord Mayor, and attends him on all occasions of State ceremony. He tries cases in the Mayor's Court, is one of the judges in the Central Criminal Court, and is chairman of quarter sessions for the City. He is appointed for life by the Court of Aldermen. The **Chamberlain** (Mr. Benjamin Scott, F.R.A.S., salary £2,500, who has held this office since 1858) is elected by the Livery on Midsummer Day, and comes up annually for re-election. He receives the revenues of the Corporation or City cash, pays all salaries, charges, and outgoings, and has the custody of accounts, admits all duly qualified persons to the freedom, and is custodian of the records relating to freemen. The **Common Berjeant** (Sir W. T. Charley, Q.C., D.C.L., salary £2,000) attends the Lord Mayor on all public occasions, and is present at meetings of

the Court of Aldermen or Common Council; he is a legal adviser of the Corporation, one of the judges at the Central Criminal Court, a judge of the Mayor's Court, and acts on occasions as Deputy Recorder. The **Town Clerk** or Common Clerk (Sir J. Monckton, F.S.A., salary £3,000) keeps the charters and records of the City, and attends all courts held before the Lord Mayor and aldermen. He signs documents with his surname only. The **Remembrancer** (Mr. G. P. Goldney, salary £2,000) attends the Lord Mayor on certain days, puts the Corporation in mind of the business to be transacted, attends the Parliament House during session, and watches the interests of the Corporation in all legislative matters. The **Sword Bearer** carries the sword, being the emblem of justice, before the Lord Mayor. The last four are appointed by the Common Council.

London County Council. See **Session**, sect. 26.

"**London Gazette.**" The. Originally a two-paged fortnightly journal—founded in 1642, and removed in 1665 to Oxford, whither the court had retired to escape from the contagion of the plague, and whence the first extant series was issued—it is the official organ for all public announcements, and is now published bi-weekly. It is Government property, and all bankruptcies, dissolution of partnerships, etc., are advertised in it. Office, Princes Street, Westminster, S.W.

London Government Bill, '84. See ed. '86.

London Missionary Society. See **MISSIONARY SOCIETIES**.

London Parks and Works Act, '87. See ed. '88.

London, Rt. Hon. and Rt. Rev. Frederick Temple, P.C., Lord Bishop of. This see was founded at a very early date, the bishops formerly possessing archiepiscopal powers. The income of the see is £10,000, and in precedence it ranks after Canterbury and York. His lordship is the son of the late Lieut.-Governor of Sierra Leone, and was educated at Triverton Grammar School and Balliol College, Oxford, graduating B.A. (double first, '42), B.D. and D.D. ('58). Formerly his lordship was Fellow and Mathematical Tutor of his College, and was appointed Principal of the Training College at Kneller Hall, Twickenham ('48), resigning this appointment '55. Appointed ('58) **Head Master of Rugby School** and **Chaplain-in-ordinary** to Her Majesty; Bishop of Exeter ('69), translated to London ('85). His lordship is the author of the opening essay, "Education of the World," in the "**Essays and Reviews**." This article led to numerous pamphlets attacking his lordship's position. His lordship is the author of "Sermons Preached at Rugby," ('58-66); "The Relation between Science and Religion, being the Bampton Lectures for '84" ('85); "Good Manners" ('83). He is a prominent leader of the Temperance movement. He preached a sermon on the occasion of the visit of the delegates to the Pan-Anglican Synod to St. Paul's Cathedral in August last.

London Salvage Corps. Was established in 1866, when the London Fire Engine Establishment was transferred to the Metropolitan Board of Works by the Fire Insurance Companies, and re-formed as the Metropolitan Fire Brigade. The S. C. was established by and has since been maintained at the expense of the Fire Insurance Companies, who bear the cost ratably. It is managed by a Committee of the leading officials of the Companies, the Secretary

of each of which is a member. Mr. E. Brace Hall is the **Chief Officer of the Corps**. The remainder of the **Corps** consists of 5 superintendents, 8 foremen, 18 first, 20 second, and 40 third class men. A good system of **pensioning and insuring the lives of the members** exists, somewhat similar to that of the Metropolitan Fire Brigade (*q.v.*). The number of fires attended in '87 (latest return) by the S. C. was 2,177, at which 579 salvage services were rendered by the Corps. The number of **watching duties** performed was 23,390, which has caused the employment of temporary assistance. The receipts of the corps for '87 amount to £26,048 2s. 10d., made up as follows: viz., £4,341 for rate in aid from the Fire Insurance Companies, £3,367 18s. 4d. for services and turn outs, £255 from the Wharf and Warehouse Committee, £1,390 0s. 3d. from rents, £58 as 6d. from interests, and £8,302 22s. 8d. from watching. The expenditure was £26,048 2s. 10d., which, among numerous items, includes £12,474 19s. for salaries, £5,769 7s. 5d. for rents and taxes, and £1,444 16s. 10d. for coach and horse hire. The Corps has five stations, and owns a great number of salvage vans. All the stations are in communication by telegraph or telephone, and with the Chief Office and superior Stations of each District of the Metropolitan Fire Brigade. Headquarters of the S. C., Watling Street, E.C.

London School Board. See **SCHOOL BOARD FOR LONDON**.

London Society for the Prevention of Cruelty to Children has for its object the prevention of the cruel treatment, wrongful neglect, or improper employment of children, also all conduct by which life or limb or health is wrongfully endangered or sacrificed, or by which morals are imperilled or depraved. These objects are sought to be secured by (1) remonstrance and moral suasion; (2) enforcement of existing laws; (3) promotion of any amendment of the law that may be necessary or desirable. The Rt. Hon. the Lord Mayor is **Patron**, the Duke of Abercorn is **President**, and among its **Vice-Presidents** are Cardinal Manning (whose paper, "The Child of the English Savage," in the *Contemporary Review*, excited much attention), the Bishop of London, and Archdeacon Farrar. **Hon. Sec.**, Rev. B. Waugh; **Sec. Director**, J. Anderson. **Organ, The Child's Guardian**; Editor, Rev. B. Waugh. Office (where a shelter for children is provided), 7, Harpur St., Bloomsbury, W.C.

London University is an examining body with the power of conferring degrees, which it does under a royal charter granted in '63. In '78 it received an additional charter admitting women to all degrees without exception. Besides holding examinations in London, the University extends them when required to the provinces and the colonies. From its foundation, in '38, to '87, it had examined 62,050 candidates. Lord Granville is the Chancellor, and Sir James Paget the Vice-Chancellor. Parliamentary representative, Sir John Lubbock, Bart. The **DEGREES** with their distinguishing hoods are:—**D.D.** (hood scarlet cloth, with a lining of blue silk); **LL.B.** (h. black silk, with an edging of blue silk; if a member of Convocation, black silk, lined with white silk, with an edging of blue silk); **M.D.** (h. scarlet cloth, with a lining of violet silk); **M.S.** (h. black silk, with a lining of violet silk); **M.B.** and **B.S.** (h. black silk, with an edging of violet silk; if a member of

Convocation, black silk or stuff, with a lining of white silk, edged with violet silk; **D. So.** (*h.* scarlet cloth, lined with gold-coloured silk); **B. So.** (*h.* black silk or stuff, edged on the inside with gold-coloured silk, or, if a member of Convocation, lined with white silk edged with gold-coloured silk); **D. Lit.** (*h.* scarlet cloth, lined with russet-brown silk); **M. A.** (black silk, lined with russet-brown silk); **B. A.** (*h.* black or stuff, edged on the inside with russet-brown silk, or, if a member of Convocation, with a lining of white silk, edged with russet-brown silk); **D. Mus.** (*h.* blue silk, with a lining of white watered silk, or, if a member of Convocation, scarlet cloth, with a lining of white watered silk); **B. Mus.** (*h.* blue silk, with a lining of white watered silk).

London University College, founded 1826, was opened in '28 as the University of London; King's College, opened in '31, was a branch from this College. In '36 it was thought desirable to separate the College from the University, and the former was incorporated in that year as "University College, London," by royal charter, which was annulled in '69, and the College re-incorporated with additional powers. There are, therefore, two distinct institutions—the one a teaching body and the other an examining body. The curriculum includes courses in arts, law, science, theoretical and applied, medicine, and the fine arts. There is also **University College Hospital**, with upwards of 200 beds. Lord Kimberley is the president, and Lord Justice Fry the vice-president of the College. The students number in all about 2,000.

London Wesleyan Mission, The. This movement was the outcome of the interest aroused by the "Bitter Cry" issued in '85 by the **Congregational Union**. On March 10th, '85, a great meeting was held in the City Road Wesleyan Chapel to initiate a work amongst the outcast classes of London. A large sum of money was speedily raised, and the work was started. (1) In the East End by the Rev. Peter Thompson, at St. George's-in-the-East, who, assisted by several lay agents, has since extended his work to "Paddy's Goose" (a notorious old public-house in Ratcliff Highway, now used as a mission hall), Wellclose Square, and Spitalfields. (2) **St. John's Square, Clerkenwell**, by the Rev. E. Smith (*q.v.*). This branch is intended as an effort amongst the working rather than the outcast classes, though both are aimed at. The chapel at St. John's Square was an old one, worked under the ordinary Wesleyan rules, with a very small congregation. In two years the congregation has been increased from about 100 to 800, and is extending on all sides, and a working men's club and girls' parlour have now been added. (3) What is known as the **West End Mission**, at St. James's Hall, Prince's Hall, Wardour Hall, Lincoln House, Katherine House, and Wiclif House, with the Rev. Hugh Price Hughes (*q.v.*) at the head, assisted by the Rev. Mark Guy Pearse and a powerful staff of lay agents. This branch of the mission illustrates what is known as the **forward movement** of Wesleyan Methodism, and orchestral and military bands are used for the musical part of the services at St. James's Hall, social and high-class entertainments at Wardour Hall, a house for the lady workers of the mission to reside in—these ladies wearing a uniform and being called "Sisters of the People"—all indicate the broad views held by

the superintendent, Mr. Hughes. **Sec.**, Rev. J. Ernest Clapham; **Treas.**, R. W. Perks, Esq. **Offices**, Wesleyan Mission House, Bishopsgate Street, E.C.

Longitude. Paris—Greenwich. On the Continent for some years **Geodetic operations** have been prosecuted with much zeal, and the surface of Europe charted with great exactitude. To connect this work with the British Triangulation, it is requisite to know very precisely the difference of longitude between Greenwich and some principal geodetic station on the Continent, such as Paris. The longitude Greenwich—Paris has been open to doubt. The determination made in 1854 under the direction of Sir G. Airy and M. Leverrier gave 9' 20.64" a result implying a correction of a whole second to the then accepted value. Incidentally in '72 the Americans found 9' 21.06" which agrees with neither. A re-determination by modern methods was inevitable, and the autumn of '88 was chosen as the time. Four observers were selected—Col. Raschot and Major Defforges of the French Survey, and Messrs. Turner and Lewis of the Observatory. The plan was to secure four sets of observations and signals, each set to consist of three good nights. By interchanging observers between the sets, it was thought to eliminate personal errors and secure eight separate determinations by each observer. The work was commenced at the end of September, and three sets completed by Oct. 21st. The remaining set, owing to the bad weather here and at Montsouris (the Geodetic station at Paris), was not effected till Nov. 13th. As there is necessarily a large amount of computing to be done, the result cannot now be known before '89.

"Longman's Magazine" (monthly, 6d.), founded November 1882; contains serial stories, essays, elementary science, and occasional poetry. Editor, Mr. G. J. Longman. Offices, 39, Paternoster Row, E.C.

Lopes, The Rt. Hon. Sir Henry Charles, 3rd son of the late Sir Ralph Lopes, 2nd Bart., b. 1828. Called to the bar at the Inner Temple (1852). Joining the Western Circuit, he soon became a leading junior. Elected to Parliament in the Conservative interest as member for Taunton (68-74), Q.C. ('69). M.P. for Frome (74-76). Appointed to a judgeship in the Court of Common Pleas (76), and a Lord Justice of Appeal (85).

Lord Cairns' Act, '82. See LAND QUESTION, ed. 82.

Lord Campbell's Act. By this Act, passed in 1846, and more precisely entitled "An Act for Compensating the Families of Persons Killed by Accidents," it is provided that when the death of any person is occasioned by such a wrongful act or default as would (if death had not ensued) have entitled the party injured to recover damages in respect thereof, then the person who would in that case have been liable shall still be liable to an action for damages, notwithstanding the death of the injured party. Every such action must be for the benefit of the wife, husband, parent, and child of the deceased, and must be brought by or in the name of his executor or administrator. The jury may give such damages as they think proportioned to the injury resulting from the death to the parties respectively for whose benefit the action is brought; and the amount so recovered, after deducting costs not recovered from the defendant, is to be divided among the parties

in such shares as the verdict shall direct. No more than one action lies in respect of the same subject-matter; and every action must be commenced within twelve calendar months after the death of the injured person. The plaintiff must deliver to the defendant a full particular of the person or persons on whose behalf the action is brought, and of the nature of the claim in respect of which he seeks to recover damages. Damages under this Act can be recovered only where pecuniary advantage or the reasonable expectation of such advantage has been lost in consequence of the injured person's death. No damage can be given for funeral expenses or the cost of mourning. On the other hand, the receipt of insurance money cannot be taken into account in reduction of damages. The Act is chiefly important in its bearing on railway accidents.

Lord Chamberlain. See CHAMBERLAIN, LORD.

Lord Privy Seal, The, was so denominated from his having the custody of the privy seal, which was used to all charters, grants, and pardons signed by the king before they came to the great seal. Modern legislation has deprived the office of all but the most nominal duties, but the holder is fifth great officer of State, and as such takes precedence next after the Lord President of the Council.

Lord Mayor's Court. An action will lie in the Lord Mayor's Court when a debtor "shall dwell or carry on business within the City of London," or if the cause of action arises in the City. A question was raised (April '88) whether a solicitor's clerk engaged in the City, but living in Canonbury, "carried on business in the City" in such a way as to entitle him to bring an action in the Court. A Divisional Court of the Queen's Bench Division held that such a person did not carry on business in the City, and granted a prohibition to restrain the action he had commenced.

Lords, House of, Alphabetical List of. See PEEAGE, and ENGLISH POLITICAL PARTIES.

Lords Justices were appointed by William III. to govern England during his absence in 1694. Two Lords Justices, assigned to the Court of Appeal in Chancery, were selected Oct. 1st, 1851, and the salary was fixed at £6,000. There are now five **Lords Justices**—Sir H. Cotton, Sir N. Lindley, Sir C. S. C. Bowen, Sir E. Fry, and Sir H. C. Lopes, each of whom receive a salary of £5,000.

Lords of Appeal. See PEEAGE.

Lords, Privileges of. See PRIVILEGES OF PEERS.

Lords Spiritual and Temporal. See PEERS.

Los Hermanos. West Indian islands on the Venezuelan coast, belonging to that State.

Loss of Life at Sea. See ed. '88.

Louis I., King of Portugal, b. 1838. He ascended the throne in succession to his brother, Pedro V. (1861). He had attained the rank of captain in the Portuguese navy, in which he had served in his youth as Duke of Oporto. King Louis is a writer of no mean importance; he has translated into Portuguese several plays of Shakespeare, among which are *Macbeth*, the *Merchant of Venice*, and *Hamlet*. He married, in 1862, the youngest daughter of the late Victor Emmanuel, King of Italy, the Princess Pia, by whom he has two sons, Prince Carlos and Prince Alfonso. In '88 His Majesty paid a visit to the Queen Regent of Spain at Madrid, and also to the principal capitals of Europe.

Lourenzo Marquez. The port and settlement in *Delagoa Bay* (q.v.). Now a rising town. Belongs to Portugal, which has a garrison there. Is the starting-point of railway to Transvaal gold-fields, and hence likely to become a place of consequence.

Low Church. See CHURCH OF ENGLAND.

Lowell, James Russell, D.C.L., LL.D., son of Rev. Charles Lowell, D.D., was b. at Cambridge, Massachusetts, U.S.A., 1819. Graduated at Harvard College (1838), and at Harvard Law School (1840). Published some poems (1841) entitled "A Year's Life," another volume of poems (1844); some directed against slavery (1848); followed by the "Biglow Papers," a satirical essay against slavery and the Mexican war. Travelled in Europe (1851-52); delivered a course of lectures before Lowell Institute, Boston, on "British Poets" (1854-55); appointed Professor of Modern Languages and Literature at Harvard College (1855); spent a year at Dresden; was editor of the *Atlantic Monthly* (1857-62), and *North American Review* (1863-72); published (1868) "Commemoration Ode" in honour of the alumni of Harvard who fell in the Civil War, and afterwards six other works; travelled again in Europe (1872-74), and received the above degrees from Oxford and Cambridge respectively. His wife, Maria W. Lowell, was a poet of considerable merit and a native of the same State. In 1880, he was appointed Minister of the United States, America, to Great Britain, from which he was recalled (1885). Under the title of "Democracy and other Addresses" Mr. L. in 1887 republished the speeches which he delivered on important occasions during his residence in this country. Mr. L. again visited England in '88, and on leaving Liverpool made the relations existing between England and America the subject of a speech conceived in his happiest vein. Another volume of poetry, entitled "Heartsease and Rue," was issued by Mr. L. in '88.

Lower Canada. The former name of Quebec (q.v.).

Loyalty Islands. A dependency of the French colony of New Caledonia (q.v.).

Lubbock, Sir John, Bart., M.P., F.R.S., b. in London, 1834. Educated at Eton. Entered (48) his father's bank in Lombard Street, becoming a partner in '56. Sir J. L. has been a member of many Commissions, including the Public School Commission, the International Coinage Commission, and the Advancement of Science Commission. In '70 he entered Parliament as member for Maidstone, and continued to represent that constituency until '80, when he was elected by the Univ. of London, which seat he still holds. During his parliamentary career Sir John has taken an active interest in educational and financial questions, and several public measures of importance (the principal being the Bank Holidays Act and the Bankers' Books Evidence Bill) owe their existence mainly to his influence and exertions. He has recently devoted himself to the promotion of the Shop Hours Bill. Sir J. L. is also distinguished as a scientist. In '65 he published "Pre-historic Times," and in '70 the "Origin of Civilisation and the Primitive Condition of Man." He is also the author of various works on Ants, Bees, and Wasps, besides many other valuable scientific works. He was elected first President of the Institute of Bankers, and in '81 President of the British Association.

He has also been Vice-President of the Royal Society. He has received the hon. degrees of D.C.L. from Oxford and LL.D. from Dublin, and held the office of Vice-Chancellor of the Univ. of London, which he resigned in '80, on becoming the parliamentary representative of the University. Sir John is a Liberal Unionist. His latest work, "The Senses, Instincts, and Intelligence of Animals, with special reference to Insects," was published in the autumn of '88. In November he was entertained at a banquet in honour of his labours in connection with the Early Closing movement.

Lucerne (Burgenstock) Electric Mountain Railway. The opening of this line, the first of its kind, was announced towards the end of the summer of '88. It was built under the superintendence of M. Abt, and the rails form one curve on an angle of 112 degrees; the Burgenstock being nearly perpendicular, it would have been impossible to make a railway on the old plan. The total length of the line is 938 metres. It begins with a gradient of 32 per cent., which is increased to 58 per cent. after the first 400 metres. A single set of rails is used, except a few yards of passing line at half distance, and here the Swiss Government insist on passengers changing—"to avoid accident." The motive power is generated by two dynamos each of 25 horse power, worked by a water-wheel of 125 horse, placed on the river Aar, three miles off.

Lucy, Henry W., b. at Crosby, near Liverpool, Dec. 5th, 1845. Entering the journalistic profession, he was successively on the staffs of the *Shrewsbury Chronicle* ('64) and *Pall Mall Gazette* ('70). Joined the *Daily News* as special correspondent, chief of the gallery staff, and writer of the parliamentary summary ('73). He was appointed editor ('86); but in '87 resigned the editorship, and returned to his old post in the gallery. Mr. Lucy is the author of a "Handbook of Parliamentary Procedure," and "Men and Manners in Parliament," "Diary of Two Parliaments" (Vol. I., published '85, deals with the Disraeli Parliament; Vol. II., published Feb. '86, treats of the Gladstone Parliament). Published ('82) his first novel, "Gideon Fleyce." On the death of Mr. Tom Taylor, who in succession to Mr. Shirley Brooks had written the "Essence of Parliament" for *Punch*, Mr. Lucy was invited to continue the work. This he did in a new style, now familiar as "The Diary of Toby, M.P."

Luderitzland and Angra Pequena. A German colony on the west coast of Africa. Administered by the German West African Society. Area under 100,000 sq. m.; pop. probably 100,000. Coast extends from Wallfisch Bay to the Orange river. Inland it is bounded by the 20th meridian E. long., including Great Namaqualand. **Angra Pequena**, now called Luderitz Bight, is the port and nucleus of settlement, with Moravian missionary village of Bethany further inland. Regular sea communication with the Cape has been established. Climate favourable, but soil sterile and sandy. Water at present has to be brought from Cape Town. Natives are docile, of the Namaqua Hottentot tribes. There are copper-mines. Herr Luderitz, who is supposed to be dead, effected purchase of land from Namaquas and settled here. The German Government annexed the territory in '84-5. See DAMARALAND.

Lunacy. According to the latest returns made to H.M. Commissioners in Lunacy for England and Wales, the number of persons registered as lunatics, idiots, or persons of unsound mind, was 82,643. On January 1st, '88, the total was made up as follows:—7,795 (3,974 male and 3,821 female) private patients (excluding criminals), 74,171 (33,171 male and 41,054 female) pauper patients, and 677 (510 male and 167 female) criminal patients. These figures show an increase on the record of 1st Jan., '87, of 1 male, and a decrease of 13 female private patients, an increase of 962 male, and 266 female pauper patients, and an increase of 29 male and 7 female criminal patients. The aggregate increase for the year was 1,752 (992 males and 760 females). This considerably exceeds the average annual increase of the previous ten years (1,425), and justifies the doubt as to the permanence of the decline in the rate of increase shown by the figures of 1st Jan., '86 and '87. A remarkable fact in connection with the statistics of lunacy, is that for the four years, '85 to '88, the annual increase of males was considerably greater than that of the females while in the period ('50-'84), the proportion was almost always largely the other way.

Luxemburg. The King of the Netherlands is Grand-Duke of Luxemburg, and nominates the Government; but by the Treaty of London, 1867, Luxemburg is declared neutral territory. Area, 998 sq. m., pop. 213,283. Capital, Luxemburg, pop. 17,964. Revenue ('87), £320,284; expenditure, £291,927; debt, £646,800. For commercial purposes the Grand-Duchy is included in the German Zollverein. The Chamber of Deputies consists of 42 members, elected directly by the cantons for six years.

Lytton, Rt. Hon. Edwd. Robt. Bulwer-Lytton, 2nd Baron and 1st Earl of, only son of the late Lord Lytton, the novelist and dramatist, was b. in 1831. Was educated at Harrow and the Univ. of Bonn, and early gave promise of the inheritance of his father's literary genius, by the publication of "Clytemnestra and other Poems," under the nom de plume of "Owen Meredith." He early entered the diplomatic service. In '63 he was appointed Secretary of Legation at Copenhagen, and the following year served in the same capacity at Athens. He subsequently became chargé d'affaires at Lisbon, and at Madrid, and Vienna, and in '72 was appointed secretary of the embassy to Paris. Two years later he was sent as Ambassador to Lisbon, and in '76 was appointed Viceroy of India. His viceroyalty is memorable for the proclamation of the Queen as Empress of India, and for the declaration of war upon Afghanistan. Lord L. resigned simultaneously with Lord Beaconsfield after the defeat of the Conservative Ministry in '80. He was raised to the rank of an earl in the same year. Lord Lytton was in '87 appointed Ambassador to Paris in succession to the late Lord Lyons. In addition to the volume of poems already mentioned, Lord L. is the author of "Lucile," "Tannhäuser," "The King of Amasas," "Fables and Songs," "Glennaveril," etc., and of a Life of his father. In Nov. '88 his lordship delivered his rectorial address at Glasgow University. (q.v.) Previous to the address, Principal Caird conferred the degree of Doctor of Laws upon Lord Lytton.

M

Macao. A Portuguese trade-port and settlement at the mouth of the Canton river, China. Has declined since the opening of the Chinese free ports. Area, 2½ sq. m.; pop. 66,036. Ceded to Portugal in 1586.

McCarthy, Justin, M.P., was b. at Cork in 1830, and educated in that city. In '53 he commenced his career as a journalist in connection with a Liverpool paper, and in '60 joined the staff of the *Morning Star* as parliamentary reporter, becoming (84) chief editor. In '68 he severed his connection with the *Morning Star*, and subsequently visited the United States. On his return he joined the editorial staff of the *Daily News*, from which he retired in '86. It is reported that he has recently '88 rejoined it. Mr. McCarthy represented Longford '79-85. He unsuccessfully contested Derry at the general election of '85, but was returned by a large majority for Longford. In '86 he again contested Derry, against Mr. (now Sir C. E.) Lewis, who was returned by a majority of three. On petition, however, Mr. M. was declared to be the sitting member. He is one of the most powerful of Mr. Parnell's supporters. Mr. McCarthy is also well known as a novelist and historian, and, besides being the author of "A Fair Saxon," "Dear Lady Disdain," "Linley Rochford," "Carniola," etc., he has written "A History of Our Own Times," "The Epoch of Reform," "History of the Four Georges," a volume of essays entitled "Con Amore," and "Prohibitory Legislation in the United States." In Oct. '88, Mr. McC. brought out a new novel entitled "The Ladies' Gallery," written in collaboration with Mrs. Campbell Praed.

Macdonald, Dr. George, poet and novelist, b. 1824, at Huntly, Aberdeenshire. Educated at University of Aberdeen, and subsequently at Highbury Independent College, with the idea of becoming a Congregational minister. He afterwards, however, decided to devote himself to literature. Mr. Macdonald's works are characterised by deep poetic and religious feeling, and great power of mental analysis. His views are extremely broad and liberal, and the charm of his style has a peculiar fascination. His best known works are "David Elginbrod," "Adela Cathcart," "The Portent, a Story of Second Sight," "Annals of a Quiet Neighbourhood," "The Seaboard Parish," "Robert Falconer," "The Vicar's Daughter," "Thomas Wingfield, Curate," "The Maquis of Lossie," "At the Back of the North Wind," "The Gifts of the Child Christ," "The Wise Woman, a Parable," etc. Dr. M. is also an eloquent preacher and lecturer, and frequently occupies Congregational and other pulpits.

Mackay, Charles, LL.D. b. at Perth 1824. Educated in Belgium, and witnessed the events of the Revolution of '30. In '34 he became connected with the *Morning Chronicle*, and in '44 editor of the *Glasgow Argus*. When the *Daily News* was started under the editorship of Charles Dickens Dr. Mackay contributed to that journal the popular songs entitled "Voices from the Crowd." He is the author of several volumes of poems and other works, of which "Memoirs of Extraordinary Popular Delusions" obtained a large circulation in its day. It is, however, as the author of "There's a good time coming, boys," and other popular songs, that Dr. Mackay

is best known. A testimonial was presented to him in '88.

Mackenzie, Alexander Campbell, author of the oratorio "The Rose of Sharon" (written for the Norwich Festival of 1884). The son of a Scottish musician, he was b. at Edinburgh 1847. He studied and played as violinist in Germany (1857-62), when he became King's Scholar at the Royal Academy of Music, London. Since then, till his great success, his life was one of hard work, and his compositions, very scholarly and original, though few, were on a scale too small to make known the great genius he is now seen to possess. Mackenzie composed a violin concerto for the Birmingham festival of 1885, which was very favourably received. He has produced two operas, "Colomba" and "The Troubadour," both brought out at Drury Lane by Mr. Carl Rosa, the last-named in the summer of '86. In the autumn of the same year his cantata "The Story of Sayid" was brought forward at the Leeds Festival. He was elected Principal of the Royal Academy of Music (q.v.) in Feb. '88, in succession to the late Sir G. Macfarren.

Mackenzie, Sir Morell, Bart., M.D., was b. at Leytonstone, Essex, 1837. Educated at the London Hospital and the medical schools at Paris and Vienna; M.D. Univ. of London. In '63 he was awarded the Jacksonian prize for an essay on "Diseases of the Throat." Sir M. M. has been for some years physician to the London Hospital, and lecturer at that institution on diseases of the throat. He was sent for by the German Crown Prince on the occasion of the development of alarming symptoms of disease in his Imperial Highness' larynx, and recommended that the diseased portion, which he considered to be not of a cancerous nature, should be excised. The Prince submitted to the operation, which Dr. Mackenzie very skilfully performed; and in recognition of his services to her august relative Her Majesty conferred a baronetcy upon him. Dr. M. by his treatment prolonged the life of his august patient until some weeks after his accession to the throne. Shortly before his death the Emperor conferred upon Dr. M. the Grand Cross of the Hohenzollern Order, with the Star of the same Order. Dr. M. at first disagreed with the German doctors as to the nature of the disease from which his Majesty suffered, urging in opposition to them that there was no evidence of cancer. Difference of opinion, unfortunately led to a personal quarrel between Sir M. M. and Dr. Bergmann. Serious charges were made by the former against the latter in the book, which he subsequently published, on "The Fatal Illness of Frederick the Noble" (Oct. '88). Dr. Bergmann replied by denying Sir M. M.'s statements, and threatening him with legal proceedings. Sir M. M. proposed that the quarrel should be submitted to an impartial American tribunal. The book in question was prohibited in Berlin (Oct.), but the restriction has since been removed. Sir M. M. is the author of standard works on diseases of the throat, and founded the Hospital in Golden Square for the treatment of those diseases. He claims the merit of having introduced the laryngoscope into English practice.

Macleod, Rev. Alexander, D.D., the Moderator of the Presbyterian Synod for '89,

was b. at Nairn; educated at Glasgow University, where he obtained a Gold Medal, and first prize for Moral Philosophy. Minister of United Presbyterian Church at Strathaven 1844-55; at John Street Church, Glasgow, as Dr. W. Anderson's colleague, '55-64. Since '64 he has been minister at Trinity Church, Cloughton, Birkenhead. Visited the United States ('70) as a deputy representing the United Presbyterian Church at the Reunion of the Old and New Presbyterian Assemblies; also in '80, representing the English Presbyterian Church at the Pan-Presbyterian Alliance. Author of "Christus Consolator," "Talking to the Children," and other works.

MacMahon, Ex-President Marshal Marie Edmé Patrick Maurice de, Duke of Magenta, b. of an Irish family, at Sully, in France, July 13th, 1808. He was educated for the army at St. Cyr. From 1830 to 1848 Captain MacMahon was mostly engaged in the Algerian war. He distinguished himself in the storming of Constantine. Major in 1840, and Colonel of the Foreign Legion, he was made a General in the Crimean war, and succeeded General Canrobert at the head of a division. For his gallantry in storming the Malakoff he received the G.C.L.H. and K.G.C.B. In the Franco-Italian war he came unexpectedly upon the Austrians at Magenta, and defeated them. For this deed he was created Field-Marshal and Duke of Magenta. He was made Governor of Algeria in 1864. In the Franco-Prussian war he commanded the First Army Corps. He was forced to retreat before the Crown Prince after two preliminary battles, and suffered a crushing defeat, after having been severely wounded at Sedan. He was commander-in-chief of the French army at Versailles, which invested Paris under the Commune. In Nov. 1873 Marshal MacMahon was elected President of the Republic for a term of seven years, but resigned Jan. 1879. He was succeeded by M. Grévy, and has since retired from political life.

"**Macmillan's Magazine**" (Bedford Street, Covent Garden—monthly, 1s.) was founded October 1859. It contains articles and essays of general literary interest, and fiction. Editor, **Mr. Mowbray Morris**.

Macnaghten, Edward, son of Sir Edw. Macnaghten, 2nd Bart., b. 1830. Educated at Cambridge. Called to the bar (1857); Q.C. (1880). Appointed a Lord of Appeal in Ordinary (1887), in succession to Lord Blackburn. He was returned to Parliament as Conservative member for Antrim in 1880, and continued to sit for that constituency until his appointment as a Lord of Appeal.

Macwhirter, John, A.R.A., b. 1839, at Slaford, near Edinburgh. Elected an Associate of the Royal Scottish Academy (1863). In the following year he came to London, and was elected an Associate of the Royal Academy (1879). Hon. member of the Royal Scottish Academy (1882). Mr. M. has painted some some excellent pictures, chiefly relating to the **Highland Scenery**. Among his recent works are "The Three Witches," "Winter Morning," "Autumn Evening," "Edinburgh from Salisbury Crags," "Misty Gleams," "Harbour of Genoa," and "Shores of Iona."

Madagascar. Native name **Nossi Dambo**. A large island separated by the Mozambique Channel from south-eastern Africa. Now virtually a French Protectorate. It is about 900 miles long by 350 broad, area 228,500 sq. m.,

pop. 3,500,000. Capital **Antananarivo**, a striking and well-built town of pop. 80,000, upon a lofty hill about two hundred miles inland. Ports are **Tamatave**, pop. 3,000, on E.; **Mojanga**, on N.W. An enormous mountain mass traverses the island from north to south. The soil on the eastern slopes is fertile, and the island has rich deposits of silver, copper, iron, and salt, and magnificent forests of valuable timber. Coal is found in the north-west; cattle, hides, gum, indiarubber, wax, cotton, sugar, vanilla, rice, lard, and coffee are exported to Mauritius, Réunion, and Europe. Climate very hurtful to Europeans, especially on the east coast. There are no large animals, but crocodiles abound in the rivers, and the lakes are remarkable for their enormous harvests of fish, which, with rice, are chief articles of diet amongst the poorer classes. Immense herds of cattle roam over the grassy plains. Cattle herding and agriculture are the principal occupations. Government an absolute monarchy, the Queen (Ranavalona Manjaka III.) being assisted by a Council of nobles and heads of clans chosen by herself. Power really in the hands of Prime Minister (Ranjaminirivony), who is husband of the Queen. By treaty, December 1885, a French Resident, with military escort, resides at the Court and controls foreign relations. The standing army consists of 20,000 men, armed with modern weapons; during the war 50,000 were mobilised and trained by English officers. Christianity has taken firm root amongst the Malagasy, and a system of national education has been introduced with marked success. Total imports and exports before the war with France valued at £800,000 annually, official returns. The trade of the island has, in consequence of the war, suffered considerably. Manufactures consist of ornaments, hardware, beautifully dyed textiles made of the fibre of the palm, silk and woollen weaving. The ruling and most civilised section of the Malagasy are the Hova (central province). Other tribes are the Betsumasarak (east coast), Sakalava (north and west coasts). They are an intelligent, industrious, and progressive people, speaking Malay dialects, and though black, are believed to be chiefly of Malayo-Polynesian origin. There are Arabs and Africans in the island, and probably some admixture. Since 1642 France has made repeated efforts to obtain a footing in Madagascar, and has long held some small islands on the coast. In 1883-5 regular conquest was attempted, but failed, a desperate resistance being offered. But the Malagasy, being unable to find any Power to aid them against the invader, were obliged to cede **Diego Suarez Bay**, to be formed into a French naval station, to pay £800,000 war indemnity, and to enter into a treaty giving France the control of foreign relations. Early in 1887 French troops withdrawn. During the year rupture of French Resident with Hova Government on account of alleged British encroachments. Peaceable solution of difficulty. On Feb. 22nd, '88, a terrific hurricane raged at Tamatave, proving to be one of the most disastrous storms that have visited the island during the present century. See FRANCE; and for Prime Minister, etc., see DIPLOMATIC. Consult Sibtrees' "Great African Island"; Shaw's "Madagascar and France"; Leioy's "Les Français à Madagascar"; and the "Antananarivo Annual."

Madeira Islands. A group off N.W. African coast, belonging to Portugal, and regarded as an

integral part of the kingdom. Area, 505 sq. m., pop. 132,223. Capital and port **Funchal**, a fine town of 20,000. Climate and scenery renowned. Products, wine, fruit, sugar, coffee. People Portuguese. A celebrated sanatorium. Wine has lost its former excellence, and trade is not what it was. The group consists of the two islands of Madeira, and Porto Santo, and the three islets called the Deserts. Discovered 1420. Consult "Reports of H.M.'s Consuls, '82, Part ix., and '84, Part vii. (Madeira)."

Madras. See INDIA; and for Ministry, etc., see DIPLOMATIC.

Madrigal. See ed. '88.

Magdala. A hill-fort in **Abyssinia** (*q.v.*), taken and destroyed by a British force, '68.

Magenta, Duke of. See MACMAHON.

Mahaffy, Rev. John Pentland, D.D., was b. in Switzerland, 1839. Received his early education in Germany, but at the age of seventeen matriculated at Trinity College, Dublin, where he graduated in '59 with high honours both in Classics and Philosophy. Since '71 he has held the chair of Ancient History in that college. In '82 he was elected an honorary Fellow of Queen's College, Oxford. Prof. M. is a kind of "Admirable Crichton," being an excellent musician, an expert angler, a crack shot, and an accomplished cricketer, as well as an eminent scholar and philosopher. He was for some time piercer of the Chapel at Trinity College. He is the author of many learned works, amongst which the best known are those illustrative of old Greek life. He has recently contributed, with the collaboration of Mr. Arthur Gilman, "Alexander's Empire" to "The Story of the Nations" Series. For Professor Knight's series of "Philosophical Classics for English Readers" Professor M. has written "A Sketch of the Life and Teaching of Descartes."

Mahé. Chief of the **Seychelles Islands** (*q.v.*).

Malne, Sir H. R., K.C.S.I., LL.D., the most distinguished of modern writers on civil law and jurisprudence, was b. 1822, and died Feb. 4th, '89. Educated at Pembroke College, Cambridge, where he graduated senior classic. Was appointed **Begius Professor of Civil Law** in the same university (1847), and was elected **Reader on Jurisprudence at the Middle Temple** (1854). Appointed **law member of the Supreme Government of India** (1862), and during his seven years' tenure of this important office succeeded in introducing important reforms. On his return home (1869) he was appointed **Corpus Professor of Jurisprudence at Oxford**. Elected **Master of Trinity Hall, Cambridge** (1877). His chief works are "Roman Law and Legal Education," "Ancient Law in Connection with the Early History of Society and its Relation to Modern Ideas," "Village Communities in the East and West," and "Lectures on the Early History of Institutions."

Maintenance. Word used in law to signify the illegal helping of one person as against another in carrying on a law-suit.

Malacca. A town and territory of the **Straits Settlements** (*q.v.*).

Maldivé Islands (The Thousand Islands). An extensive chain of coral islets, 500 m. due west of Ceylon, forming seventeen atolls, each enclosing deep lagoons fringed with reefs. Richly clothed with cocoanut palms. Sultan pays yearly tribute to the Ceylon Government.

Mallock, William Hurrell, was b. 1849. Educated privately. He studied at Balliol

College, Oxford, and obtained second-class honours in the Final Classical School; Newdigate prize (1871). Mr. Mallock is a frequent contributor to the monthly magazines, especially to the *Nineteenth Century*. Among his published works are "The New Republic," "The New Paul and Virginia," "Is Life Worth Living?" "The Old Order Changes" (1886), in each of which he, in one form or another, propounds his political and social views, which may be termed philosophical conservatism.

Malta. Anciently **Melita**. Situated in the Mediterranean, 56 miles south of Sicily. Is a British Crown colony and stronghold. With lesser islands, Gozo and Cumino, area 117 sq. m., pop. 160,679, exclusive of garrison, about 20,000.—Capital **Valetta**, a fine city, impregnable fortified, commanding a noble harbour. It is a great naval station, with dockyards and arsenals, and seat of some commerce. To the west of Valetta is Porto de San Paolo, the traditional scene of St. Paul's shipwreck.—Originally barren rock, Malta has been fertilised, water stored in vast reservoirs, and is now highly cultivated. It yields fine crops of grain, cotton, vegetables, fruit, etc., and has extensive pastures. Climate dry and healthy.—

Executive in the hands of a military Governor and Executive Council.—**A New Constitution** was provided for by letters patent issued in Dec. '87. Legislative Council to consist of Governor as president, without vote; 6 official members; 4 members who will represent clergy, nobility, landowners, the University, and merchants, on basis of £60 franchise; and 10 members elected by present electorate, but for single constituencies instead of *scrutin de liste* as formerly. Elected members to have full control of finance and local matters, and 3 of them to be salaried members of Executive Council. Right of veto reserved to Governor; right of legislation by letters patent or order in council reserved to Crown. Salaries and pensions provided for by permanent civil list of £48,000. A **Royal Commission** to divide the dependency into electorates was appointed.—The forts require 25,000 men to man them in case of siege. There is a regiment of Malta Fencible Artillery. For financial statistics see BRITISH EMPIRE, etc. (table). Gardening, agriculture, pastoral farming, and fishing, are the pursuits of the people, who are of African origin, with Italian and English admixture.—In 1522 Malta came into the hands of the Knights of St. John. It was taken from the Order by Bonaparte in 1798, and was captured from the French by the British in 1800, assisted by the Maltese. Finally annexed 1814. The central position of Malta in the Mediterranean makes it an important commercial depot, and an invaluable naval station. Accordingly the British have provided it with excellent docks and strong fortifications. For Governor, etc., see DIPLOMATIC.

Malthusianism. A term loosely applied to designate any and all theories for checking over-population—i.e., increase in population in excess of the power of providing food and work for it. It originated in a "Treatise on Population," first published in 1798 by Thomas Malthus, Professor of History at Haileybury College, wherein the author pointed out the dangers and miseries of over-population, and expounded various theories respecting it. A society called the **Malthusian Society** exists, whose objects are to promote and extend thrift

and the principles of political economy among the people.

Mammoth Hunters' Steeplechase. See TURF.

Man. See ISLE OF MAN.

Manchester Grammar School. Founded in 1575 by Hugh Oldham, Bishop of Exeter, and others. Upwards of twenty scholarships of the annual value of about £50 to both Universities. De Quincey was educated at this school, from which he ran away. **Head Master,** M. G. Glazebrook, M.A.

Manchester New College, founded in Manchester 1786, now in University Hall, Gordon Square, London, "exists for the purpose of promoting the study of Philosophy, Theology, and Religion, without insisting upon the adoption of particular doctrines." No subscription or doctrinal statement is required either of trustees, professors, or students. Exhibitions and free admission to lectures are given to students for the ministry, without restriction as to the sect in which they will minister. The lectures are open to all persons on payment of fees. **Principal,** Rev. James Drummond, LL.D. The centenary of the institution of the College was celebrated in '87.

Manchester November Handicap. See TURF.

Manchester, Rt. Rev. James Moorhouse, Lord Bishop of. The see was founded 1847; income £4,200. His lordship was b. at Sheffield, 1826. Educated at St. John's Coll., Cambridge, graduated B.A., Sen. Opt., 1853, M.A. 1860, D.D. *poet dig.* 1876. Was ordained deacon 1853, and priest 1854, by the Bishop of Ely. Consecrated Lord Bishop of Melbourne 1876, where he succeeded Dr. Peiry, and translated to Manchester 1886. Formerly curate of St. Neots 1853-55, Sheffield 1855-59, Hoinsey 1859-61; perpetual curate of St. John, Fitzroy Square, 1861-67; vicar of Paddington and rural dean 1867-76; Warburtonian Lecturer 1874; chaplain-ordinary to the Queen, and prebendary of Coddington Major in St. Paul's Cathedral 1874-76. His lordship is also known as the author of "Nature and Revelation—Four Sermons," 1861; Hulsean Lecturer ("Our Lord Jesus Christ the Subject of Growth in Wisdom") 1865; "Jacob—Three Sermons before the University of Cambridge," 1870; and "The Expectation of Christ." Dr. M. presided at the **Church Congress (q.v.)** held at Manchester, Sep. '88.

Manchester Ship Canal. This great engineering scheme, which is to convert the cotton metropolis, Manchester, into a seaport, was introduced in the shape of a parliamentary bill early in the session of 1883. (For early history of this scheme, the original project, and the amended plan, with details of progress to Jan. '88, see ed. '88.) On Nov. 11th, '87, the works were commenced at **Eastham Ferry**, on the Cheshire side of the Mersey. At the half-yearly meeting of the Company held in Feb. '88 it was stated that the total receipts since the formation of the Company were £2,834,971, and the total expended £2,409,363. It was added that twenty miles of land had been handed over to the contractors, and soon they hoped to hand over the whole, good progress being made with the works. The Company later in the year presented a petition to Parliament praying for leave to deposit a bill to enable them to make important alterations at the Manchester end of the canal. It appeared that the late Sir Humphrey de Trafford strongly objected to

the construction of works upon that part of his property known as the House Farm, but having died since the passing of the original Act, the Company came to terms with his successor, and now wished to act upon them. Early in June both the Commons and Lords' Committee agreed to the suspension of the Standing Orders, the Bill was brought in and read, there being no opposition. What appeared to be an important discussion arose towards the end of the year on the water supply of the Ship Canal, Manchester, being, it was stated, 60 ft. higher than Liverpool. On Sept. 2nd the members of the **Manchester Association of Engineers**, to the number of nearly 250, visited the works, special arrangements having been made for their reception.

Manchester (Thirlmere) Water Supply. This great work has been commenced, the idea being to convey to Manchester the waters of Thirlmere, in the Lake district. The contracts for the first part were let towards the end of 1885, the first works consisting of some 5½ miles of tunnelling and 1½ mile of open cutting. The aqueduct is to convey 50,000,000 gallons of water daily. After leaving the tunnel, the aqueduct, it is arranged, will appear in the valley leading to Grasmere, keeping to the high land above Rydal and Windermere, and passing under Chapel Green, Nab Scar, and Skelgill Wood. After crossing Troutbeck, the water, passing through inverted iron siphon pipes, covered with earth, will pass behind several residences by means of a tunnel, leaving Windermere railway station two miles to the east. Then the valleys of the rivers Kent, Lune, and Ribble will be crossed by inverted siphon pipes, and the rivers by bridges, till the neighbourhood of Bolton is reached; when the water will pass through cast-iron pipes chiefly laid along main roads to the Manchester reservoirs. It is calculated that there will be nearly thirty-three miles of 40-inch cast-iron siphon pipes, nine miles of 36-inch piping, and about eighteen miles of 33-inch. The works are still in progress (see previous eds.).

Mandamus, Writ of (Latin *mandamus*, "we enjoin"). A writ to enforce performance of a duty, especially a duty of a public or quasi-public nature. It issues in all cases where a party has a right to have a thing done and no other specific means of enforcing his right. Application for the writ must be made to the Queen's Bench Division of the High Court. See further ed. '88.

Mandeville Case, The. The death of Mr. John Mandeville, who was sentenced to a term of imprisonment under the Irish Crimes Act, and who died a month or two after his release from Tullamore prison, was the subject of considerable discussion both in Parliament and out of it during the autumn of '88. The allegation of the Irish party was that, owing to the severity of the prison treatment, Mr. Mandeville's constitution was so broken down as ultimately to produce his death. This aspect of the case is, on the other hand, officially deprecated, and among other things it was suggested that death was due to intemperate habits. Public opinion in Ireland, however, is so convinced that Mr. Mandeville suffered from his prison treatment that a person dying in gaol, or shortly after his release, is now said to be "Mandevilled."

Manilla. Capital of the Spanish colony of the Philippine Islands (q.v.); pop. 182,242.

Manisty, Sir Henry, b. 1808. Educated at Durham Grammar School. Practised as a solicitor (1830-42). Called to the bar at Gray's Inn (1845). He rapidly acquired an extensive practice. Q.C. (1857). Appointed a Judge of the Queen's Bench Division of the High Court of Justice (1876).

Manitoba. A province of the Dominion of Canada, formerly known as the **Red River Settlement**; entered the Dominion in 1870. It takes its name from **Lake Manitoba**, which is situated 60 miles S.W. of **Lake Winnipeg**, Area, 73,720 Sq. mi.; pop. 130,000. Capital, **Winnipeg**, at the junction of the Assiniboine and Red rivers. Province divided into counties, which are grouped into eastern, central, and western. District of **Keewatin** now under government of Manitoba. General surface a level prairie, 80 feet above **Lake Winnipeg** and 700 feet above the level of the sea. Principal stream the **Red River**, which rises in Minnesota, U.S., flows north through the province for 140 miles, and empties itself into **Lake Winnipeg**. Climate healthy, but great extremes of temperature. Owing to dryness of atmosphere, winter cold not felt severely, snow falls lightly, and horses winter on the prairies without shelter. Soil very fertile, wheat being staple crop, and yields abundantly, twenty-five bushels to the acre being commonly raised. All other cereals, roots, and fruits of Europe thrive well. Flax and hemp have also been grown with success. The prairie grasses furnish excellent pasturage and good hay. Large numbers of horses, cattle, sheep, and swine are raised. Wood is scarce, and is chiefly confined to narrow strips along the Red and Assiniboine rivers. Principal trees are elm, oak, maple, and poplar, spruce, cedar and fir also occurring; the ash-leaved maple yields sugar. Rivers and lakes swarm with fish of several kinds. Game is plentiful, and coal abounds throughout the province.—Executive vested in a Lieutenant-Governor appointed by the Governor-General of the Dominion, and an Executive Council, consisting of 5 members, with a Legislative Assembly, numbering 31 members, elected by districts for four years. Three members are called to the Dominion Senate, and five elected to the House of Commons. Religion and education are provided for in Winnipeg and other centres. Laws are enacted to protect and further agriculture, and stringently enforced. Grain-growing and other kinds of farming are the main industries. The Canadian Pacific Railway (*q.v.*) traverses the province; there are local branches, a junction with the United States systems, and a line is to be built through Keewatin to Hudson Bay. Serious disputes with the Red River Railway Co. took place in '83. Quarter section of square mile = 100 acres, free grant. Lands reserved to support free education. Many half-breeds among the population. See CANADA; and for Ministry see DIPLOMATIC. Consult Bryce's "Manitoba," Macoun's "Manitoba and the Great North-West," etc.

Manning, His Eminence Henry Edward, Cardinal, Archbishop of Westminster, was b. 1808. Educated at Harrow and Balliol Coll., Oxford. Graduated (1830), and became Fellow of Merton Coll. Rector of Lavington and Graffham, Sussex (1834-40); Archdeacon of Chichester (1840-51). Resigned these preferments (1851) and joined the Church of Rome. He was ordained a priest of the Roman Catholic

Church (1851), and appointed rector of St. Helen's and St. Mary's, Bayswater, where he founded a congregation entitled the "Oblates of St. Charles Borromeo." The degree of D.D. was conferred upon him at Rome. On the death of Cardinal Wiseman he succeeded him as Archbishop of Westminster (1865); Cardinal (1873). Besides numerous volumes of sermons, he has written a large number of works on the doctrines of the Church of Rome and its relations with civil society, including "The Temporal Power of the Pope," a reply to Mr. Gladstone's "Exposition," as to the Vatican Decrees (1873), "The True Story of the Vatican Council," etc. Cardinal Manning takes a leading part in all the social and philanthropic movements in the Metropolis; and is also an earnest supporter of temperance, being President of the Catholic Total Abstinence League of the Cross. In a recent number of the *North American Review*, Cardinal M. ('88) contributed an article in connection with the Ingersoll controversy.

Manor. A manor is a territorial division derived from feudalism. Concerning its origin and the details of its organisation there prevails much dissension among scholars and antiquaries. It took shape at a time when law and custom were hardly to be distinguished. Each manor had its own customs; so that of the thousands of manors existing in England no two are exactly alike. Consult Stubbs' "Constitutional History of England," and generally the writings of Sir Henry Maine and Mr. Elton; Scriven on "Copyholds," and Williams' "Principles of Real Property." See *ed.* '88.

Mansfield College. Established for the education of men for the Nonconformist ministry, but its classes are open to all persons possessed of the requisite academic qualifications. It is purely theological, and its students must, before entering on its distinctive studies, be graduates of some recognised university, or undergraduates of Oxford who have passed Moderations. It has two kinds of **Scholarships**: (1) Arts, value £60 a year, tenable by undergraduates at any college in Oxford (other than Mansfield); (2) Theological, value £60 a year, with tuition free, tenable during the course at Mansfield, which extends over three years. The staff consists of five Professors and as many Fellows. The lectures are held meanwhile in temporary premises, but buildings from designs by Basil Champneys, Esq., will be opened in '89.

Manslaughter. See CORONERS' INQUESTS.

Manufacturing Inventions, '88. A selection is here given of inventions which in the course of the year have attracted more or less attention. A few which could not be conveniently treated of under this general title will be found under separate headings. Last year we alluded to a new and important mechanical process for glass-bottle-blowing by compressed air. This has now been developed and perfected, and the turning out of bottles is still further aided by an automatic repeating machine, which Mr. Ashley, the original inventor, has introduced. The moulding of the bottles is done mechanically, and the blowing by means of compressed air, thus dispensing with the old and injurious process of blowing by the mouth. A large number of bottles were made per day before the ingenious repeating

machine was used, but with this in addition an immense increase has been obtained, and also a great saving in labour. Messrs. Sykes, Macvay, and Co., are now manufacturing bottles upon an extensive commercial scale at their works in Yorkshire.—The **fare-checking machine**, which has been invented by Mr. Hope, of Liverpool, is intended for use on tramcars and omnibuses, in order to check the takings of the conductors, and the number of passengers, and to secure other records. The contrivance is fixed inside and at the end of the conveyance so that its index, which is worked by the conductor, can be seen by the passengers. There are three levers, each in itself a register; they record the ingress and egress of inside and outside travellers, and the names of the streets as entered, while there is an arrangement for constantly changing a series of advertisements placed under the indicator. A record of passengers carried up to 10,000 is also provided. It is intended that the conductor should make up his way-bill from the indicator. One of these machines was recently shown at the Cannon Street Hotel, and it was announced that trials were to be made at Liverpool.—In another field of enterprise, and one of growing importance, must be instanced the **bar-lock type-writer**, a new form introduced from America by Messrs. Richardson and Co. It is really a modification of the Remington machine. The type bars strike downwards on the paper instead of upwards, as in the Remington, and this allows the last line printed to be seen without lifting the carriage, while the depression of the keys is shorter and lighter, which is in favour of rapidity of production. The ink-riband travels as the writing progresses, so that a fresh spot is presented to each type. The bar-lock, which gives the instrument its name, would appear to be an improvement of value. A series of pegs are arranged in a semicircle, which has its centre at the printing point, and each type-bar when printing a letter is locked between two of these pegs. The pegs are made of phosphor bronze, to avoid wearing the type-bars, and are cheaply replaced. Another instrument which possesses several new and distinct improvements is the "**Crandall**" type-writer. It is very simple in construction. There are no type-bars, the letters being placed in one solid sleeve which contains three fields of type, each including small letters, capitals, figures, etc. A feature of the machine is that it is a **variable spacer**, besides keeping the writing always in sight. There are 28 keys, representing 81 characters, the keyboard having the more common letters near the centre.—The **Cure Perdue process of casting in bronze** has been revived as an industry, Messrs. J. W. Singer and Sons, art metal workers, having set up the system at Frome. It was practised by Cellini, and in the sixteenth century a large number of statues were cast. Attempts have been made to re-introduce the process from time to time, but without much success, although in China and Japan the casting has long been in vogue, despite the failure, to produce many articles successfully and with a due economy of labour. The object to be cast is moulded in wax, and the model is then covered with a matrix of sand; the mould when set is placed in a hot oven, this melting the wax very gently, and allowing it to run out of the mould. After this the metal is carefully poured in. As a result

of this process there are no joints or seams, as a "pattern" has not been used. Messrs. Singer have produced a large number of works of art by this system—such as vases, lamps, and door-handles—which were exhibited recently in illustration.—Among new appliances for protection from fire we may mention two of the sprinkler class. The "**Grinnell**" automatic sprinkler is of American origin, but Messrs. Dowson, Taylor, & Co., are the agents here. For the purpose of an experiment, a building of inflammable material was lately erected at Messrs. Ransome's dock, Battersea. Pipes are carried under the ceiling, the water supply being obtained by means of a large pipe connected with the main, which acts as a feeder. If this should fail, provision is made for a supply from a tank on the building. This sprinkler has undergone most satisfactory trials, and extinguished fires of considerable dimensions in a short space of time. It has been specially approved by numerous fire insurance companies. One of the earliest to adopt them in London was Mr. William Whiteley, of Bayswater, who succeeded in effecting insurances on his premises through adopting the Grinnell system. The "**Mayall**" sprinkler is also an efficient fire extinguisher. Experiments with this one were made upon a shed 14 ft. square, with various inflammable materials in addition, and proved satisfactory. Sprinklers are now being extensively used, and there are a great number in the market.—A very useful invention, and one comparatively new, is **woodite**, a material now being largely used where asbestos, leather, etc., has hitherto been adopted. Thus it is in use for pump valves, and by the Metropolitan Board of Works for delivery valves. The compound owes its name to Sir Edward Reed, who has recommended it for a variety of naval purposes, as, for instance, for supplying buoyancy to lifeboats, and for protection against collisions, shots, and blows upon ships. For the latter class special blocks are made, that offer a great resistance of surface. Sir E. Reed says that certain parts of ships "offer highly favourable opportunities for the introduction of woodite, which, being of somewhat less specific gravity than water, neither inflammable nor perishable under the given conditions, and yet endowed with the power of closing up after penetration, may be employed there with great advantage." For certain purposes it has been found desirable to mix whalebone with woodite. The compound is then called **whaleite**. Tires for the wheels of cabs, stair treads, and waterproof mats are being made of this. A torpedo cable of whaleite, covering a steel hawser sufficiently to maintain buoyancy, has also been invented. It is made to foul the screw of any torpedo boat attempting to cross while it is floating. Mrs. A. M. Wood is the inventor of both compounds.—Messrs. H. A. Goodall and Co. have introduced a new **blind roller**. No nailing or sewing is required. They are machine made, and the blind hangs perfectly square. A small galvanised rod runs through the top of the blind, fits into a shaped groove in the roller, and suspends the blind.—A new **cigarette case**, with which the public became familiar during the past year, was that patented by Messrs. Needham and Co. The cigarette is removed upwards through an aperture, the action automatically lifting the lid and closing it, while another

cigarette falls into the place of that taken out. It was exhibited for the first time at the Anglo-Danish Exhibition, obtained recognition there, and has sold well.—In conclusion we may allude to an ingenious **sewer gas exhauster and destroyer**, the invention of Mr. Keeling, which has been exhibited through Mr. Holman, C.E. It is intended to render innocuous the poisonous vapours which under the present system of sewer ventilation are allowed to escape into the atmosphere. It consists of a ventilating column like a lamp-post. In the base is a special air-gas burner with suitable surroundings. By the burning of the gas an exceedingly high temperature is produced, which causes an up-draught, and the vitiated air from the sewer is brought into contact with heated iron surfaces, all fever germs being consequently completely destroyed. The apparatus has been tested and found very satisfactory.

Margarine Act, '87 (see PARLIAMENTARY SESSION, ed. '87), enacts that substances, whether compounds or otherwise, prepared in imitation of butter, and whether mixed with butter or not, shall only be sold under the name of "Margarine"; and every package, whether open or closed, containing that substance shall be branded or durably marked "Margarine" on the top, bottom, or sides, in printed capital letters not less than $\frac{1}{4}$ in. square; there is to be attached to each parcel exposed for sale by retail, and in such manner as to be clearly visible to the purchaser, a label marked in printed capital letters not less than $\frac{1}{4}$ in. square "Margarine"; and the paper wrappers in which the article is delivered to the purchaser are to have the word printed on them in capital letters not less than $\frac{1}{4}$ in. square. The Act came into force Jan. 1st, '88.

Margarita, or Nueva España. An island off the coast of Cumana, Venezuela, to which it belongs. Formerly the seat of extensive pearl fisheries.

Marianne Islands, or Ladrões. A group in N. Pacific, east of the Philippines, discovered by Magellan, 1521. Capital, San Ignacio de Agaña, which serves also as a penal settlement. Area 440 sq. m., pop. 8,665. See COLONIES OF EUROPEAN POWERS.

Marie-galante. A West Indian island in the Leeward group. A possession of France, included in colony of Guadeloupe. Area 60 sq. m. Is hilly, producing a little cotton and coffee.

Marine Biological Laboratories. Institutions near the sea-shore, provided with dredging apparatus, tanks, and scientific instruments, for scientific study. The object is the study of marine animals, for the twofold purpose of gaining information as to the habits of our food fish and extending our knowledge of marine zoology and botany. They are thus of commercial and scientific importance. On the European and American coasts several laboratories are in existence. Of the former the one on the Mediterranean at Naples, founded by Dr. Dohrn, is the most important. Its cost has been about £20,000, and its annual expenses are about £4,000. A marine laboratory has recently been established in Japan, under Professor Mitsukuri. The United States Fish Commission have erected several small laboratories, and are now laying out £10,000 on one at Wood's Hole, and £20,000 on fishponds protected by piers of masonry. This Commission has received in all from the Imperial revenue some £300,000. In England a Marine Biological

Association has been founded, towards which a site at Plymouth, a sum of money, and an annual income has been granted by the Government. The Fishmongers' and other City Companies, the leading English scientific societies, and private individuals have subscribed. Altogether above £15,000 has been raised. The Laboratory was formally opened on June 30th, '88, and soon afterwards naturalists began to make use of the facilities afforded by it for research. The record of work done in the Laboratory is to be found in the *Journal of the Association*, published at Plymouth. Pres., Professor Huxley; Hon. Sec., Professor Ray Lankester; Sec. and resident director, Mr. G. C. Bourne.

Marine Insurance, '88. This business has been in a very depressed state during the year, which is mostly owing to the very low rates that are charged for policies, and which are greatly inadequate to the risks involved. These reduced rates have been occasioned by the influx of a great number of small marine insurance companies who, for the purpose of getting business, have recklessly issued policies at such remarkably small premiums that they cannot be remunerative. Many first-class underwriters and insurance brokers condemn this practice as one that will become ruinous to marine insurance companies, since it will materially increase over-insurance of ships—a grievance which was forcibly pointed out in the House of Commons as existing in '84, and for the suppression of which Mr. Chamberlain's Merchant Shipping Bill was mainly introduced. In consequence of the prevalence of very low premiums for marine insurance during the last three years, the large and old-established underwriting companies have refused to reduce their rates to anything like a level with the of the new companies, and hence the former have done much less business during this period than they previously did. They are, however, convinced that such rates will soon terminate, and then their business will be far greater and more profitable than previously. The most experienced underwriters properly state that as premiums for policies by marine insurance companies materially vary for similar risks, specific rates cannot reasonably be stated for publication, as they would be challenged by the representatives of nearly all the marine insurance associations. Unlike fire and life insurance companies, Underwriters, as a class, endeavour to conceal from both shipowners and shippers, as well as the general public, their premium rates and their general financial position. This is another reason why they have so much ruinous competition to contend against beyond life and fire insurance companies. Of the nineteen leading marine insurance companies in Great Britain the oldest are the Royal Exchange and the London Assurance Corporation, both established in 1720; and the Alliance and Indemnity Companies, both founded in 1824. The premium income of these nineteen leading companies in '87 (latest returns) was £2,583,589, their losses and averages £1,889,486, and their expenses £303,727; the percentage of losses and expenses to premiums being 84.9.

Market Rights and Tolls, Royal Commission on. was appointed in '87 to inquire as to the extent to which market rights are in the hands of (1) local authorities; (2) trading companies; and (3) private persons or bodies of persons other than trading companies; and to inquire generally how and under what

authority such rights are exercised, what are the revenues in respect of those rights, distinguishing the receipts from tolls, rents, stallages, and other dues from other sources of receipt; what is the accommodation given in return for the charges levied; in what ratio market tolls and dues stand to the value of the marketable commodities on which they are levied, and how far market rights, market bye-laws and regulations, market tolls, rents, stallages, and dues, and tolls affecting market towns, are restrictive of trade; and to report as to the advisability of local authorities acquiring existing market rights, and the arrangements desirable for that purpose, and as to the advisability of prohibiting the farming by local authorities of market tolls, rents, stallages, and other dues, and the placing of restrictions on the sale of goods outside the market that may be lawfully sold in the market, and also of providing that the tolls, etc., of markets held by local authorities shall from time to time be revised with the view to their being regulated by the necessary expenditure in connection with the markets, and that such markets shall be free and open when the capital charges in respect of them have been paid off by the incomes from the markets or otherwise; and also to report generally as to the alterations which may be desirable in the existing law relating to markets, having due regard to the interests of those concerned. The Commissioners are Lord Derby (Chairman), Lord Balfour of Burleigh, Mr. Childers, Sir J. P. Corry, and Messrs. Thomas Martineau, Charles J. Elton, Francis W. Maclean, Spencer Charrington, John J. Harwood, William C. Little, J. Allan-on Pictou, Pierce Mahony, and Henry A. P. Rooke (Secretary). The Commission issued their first Report in October '88. It contains much interesting information respecting the markets under the control of the Corporation of the City of London.

Markets and Fairs, Weighing of Cattle Act, 1887, enacts that in or near to every market and fair in which tolls are taken, accommodation for weighing cattle shall be provided. The Local Government Board may exempt any market or fair where the sale is likely to be so small that it is inexpedient to enforce the Act.

Marlborough, Rt. Rev. Alfred Earle, D.D., Bishop of the new Suffragan Bishop of London, b. 1832. Educated at Oxford, and ordained deacon in '58 by the Bishop of Sarum. Was for some time vicar of Marlborough, and afterwards of West Alvington, in the diocese of Exeter. Appointed Archdeacon of Totnes in '72, and Canon Residentiary and Prebendary of Exeter in '65. His recent appointment as rector of St. Michael's, Cornhill, and Bishop Suffragan of London, under the title of Bishop of Marlborough, was made, it is understood, on the strong recommendation of Dr. Temple, the Bishop of London, with whom Dr. E. actively co-operated at Exeter. The living of St. Michael's, Cornhill, is worth £1,500 a year. Dr. E. is a moderate High Churchman.

Marlborough College, Wiltshire Founded 1843, incorporated by royal charter 1845, received additional charter 1853. Exhibitions to Universities, one each of £50, £40, and £30 for three years, offered annually, and every three years the "Old Marlburian," £50, the Council Exhibition £30, and Leaf Exhibition £22 10s., fall vacant. Pupils, 580. **Head Master**, Rev. G. C. Bell, M.A.

Marquesas Islands. A Polynesian group belonging to France. Area 478 sq. m., pop. 5,776. Chief island Nukahiva. Mountainous, picturesque, fertile. Natives handsome, warlike, barbarous. Consult Bonwick's "French Colonies," Wallace's "Australasia," etc.

Marriage, Is it a Failure? This question, originally broached in the *Westminster Review* (q.v.) by Mrs. Mona Caird (q.v.), formed the subject of a voluminous correspondence in the *Daily Telegraph*. No fewer than 27,000 correspondents sent their opinions to the editor, among the writers being M. Zola and M. Dumas fils. The general opinion was undoubtedly favourable to the existence of the marriage tie; but many correspondents argued that in the matter of obtaining a divorce a wife should be placed in the same position as the husband, and that early marriages among the poorer classes should, if possible, be restricted by the State.

Marriage, Law on, '88. *Bethell v. Hildyard*, or the Baralong case, as it was called (Chancery Division, Feb. '88), was extremely interesting from the facts involved, although it laid down no new law. An Englishman named Bethell went out to South Africa in '78, and was appointed British Resident with Montsioa, the chief of the Baralongs, a tribe inhabiting part of Bechuanaland. This appointment was afterwards withdrawn, but Mr. Bethell remained as a store-keeper among the Baralongs. When disturbances arose with the Boers he joined the Bechuana mounted police, and met his death in the service of the British Government. It was admitted that he had never abandoned his intention of ultimately returning to England, and that he still retained his domicile of origin. In '83 he asked the permission of Montsioa to marry a Baralong woman, and the chief gave him his niece—Tu Poo for a wife. Mr. Bethell refused to marry her in a church, although he might easily have done so, and the marriage was celebrated according to the customs of the Baralongs. Certain animals were sacrificed and the heads sent to the parents of the bride, and the bridegroom ploughed his mother-in-law's garden. These acts, coupled with cohabitation, were proved to constitute valid marriage among the Baralongs, and Mr. Bethell was undoubtedly regarded by them as married to Tu Poo. A daughter was born of the marriage, for whom the father provided by a testamentary document. This action was brought to determine whether this child was entitled to succeed to her father's real property, which consisted of lands in Yorkshire of the annual value of £600. Mr. Justice Stirling delivered judgment against the claim. He reviewed the authorities, and showed that the English law only admits as a valid marriage "the voluntary union for life of one man and one woman, to the exclusion of all others," per Lord Penzance in *Hyde v. Hyde and Woodmansee* (L.R. 1 P. and D. p. 130). It was proved that the Baralong law or custom permitted, in addition to one principal wife, several concubines. It was true that Mr. Bethell had had no concubines, but still his union with Tu Poo was such that she would have had no cause to feel aggrieved if he had introduced one or more into his household. His lordship next dealt with the question of Mr. Bethell's intention in marrying. Did he mean to marry in the Baralong or the English sense? He had never informed any of his

relations in England of his marriage, although he corresponded with them. He did not speak of Tu Poo as his "wife," nor would he marry her in church. The provision he made for the child's maintenance, moreover, was small, and hardly reconcilable with his regarding her as legitimate. His lordship was, therefore, of opinion that the union between them was a marriage in the Baralong sense only, and was not a valid marriage according to the law of England.

- Miller**, John Ontario, Bengal C.S.—Mary Evelina, *d.* Sir Alfred Lyall, K.C.B. (July 4)
- Milln**, James Stocks—Rosa Marion, 3rd *d.* of Col. Sir Robert Harley, K.C.M.G., C.B.
- Montague**, Johnstone Muir Mackenzie, s. late Sir John Muir Mackenzie, Bart.—Hon. Sarah Napier Bruce, *d.* Lord Aberdeen (Aug. 17)
- Montrose**, Caroline Agnes, Duchess Dowager of Montrose, whose 1st husband was the 4th D. of Montrose (ob. 74), who next w. Mr. W. S. Stirling Crawford (he died '83), and who is known on the turf as "Mr. Manton"—Marcus Henry Milner, br. Lady Gerard and Lady Durham (July 26)
- Nares**, William Grant, *e. s.* Rear-Admiral Sir George S. Nares, K.C.B.—Emma F. Dent, *d.* W. Blackett Bewsher (May 25)
- Newdigate**, Francis, late of Coldstream Guards—Hon. Elizabeth Sophie Lucia Bagot, *y. d.* of Lord Bagot (Oct. 13)
- Norman**, George Schuyler Cardew, *y. s.* late J. F. Norman, of Staplegrave, Taunton—Ada Emily, *y. d.* Sir Malcolm Fraser, K.C.M.G., Col. Sec. for W. Australia (Jan. 2)
- Ogilvy**, Henry T., and s. of Sir John Ogilvy, Bart.—Constance, *d.* of Rt. Hon. R. C. Nesbit Hamilton (Sept. 11)
- Oliver**, Thomas Creswick, *e. s.* W. C. Lomas Oliver, of Bollington, Macclesfield—Maria Louisa, *y. d.* Edward Henry de Moleyns, of Vesey Place, Kingstown (Feb. 8)
- O'Malley**, Sir William, Bart., aged 72—Miss Caroline Favey, aged 80 (Aug. 7)
- Ormsby**, Rev. Fredk. A., M.A., s. late Rt. Hon. Henry Ormsby—Caroline Ellen Mary, *d.* late T. F. Fraser (Feb. 20)
- Oulless**, Staff-Commander Philip, R.N.—Violet Frances, *e. d.* Rev. George Washington, Chaplain H.B.M. Embassy, Constantinople (Feb. 11)
- Peacocke**, Lieut.-Gen.—Hon. Mrs. Charles Lennox Butler (May 14)
- Persse**, Lieut.-Col. Dudley, late 13th Lt. Infantry—Mary Sadlier, *wid.* Lieut. F. H. Tabor, R.N. (Aug. 16)
- Petre**, Philip Benedict Joseph, 3rd s. late Lord Petre—Julia Mary, *e. d.* George Cavendish Taylor (July 19)
- Phillips**, John Wynford, *e. s.* Rev. Sir J. E. Phillips, Bart., vicar of Warminster—Nora, *y. d.* late J. Gerstenberg, Esq. (Feb. 14)
- Piercy**, Benjamin, J.P.—Teresa Margherita, only *d.* of Count and Countess Alliata Vaghiuti (Oct. 13)
- Playfair**, Major George, R.A., only s. Rt. Hon. Sir Lyon Playfair, K.C.B., M.P.—Augusta Mary, only *d.* Henry T. Hickman, of Hagley
- Portman**, Claude Berkley, *g. s.* of Viscount Portman—Mary A. Gordon-Cumming, *c.* of Lady Middleton (Feb. 9)
- Prussia**, Prince Henry of, and s. of the late Emperor Frederick of Germany—Princess Irene, 3rd *d.* of the Grand Duke of Hesse-Darmstadt. The bride and bridegroom are cousins, and grandchildren of Queen Victoria, the anniversary of whose birth was selected as the date of the wedding, at Charlottenburg (May 21), in presence of the Emperor and Empress of Germany, the Dowager Empress, the Prince of Wales and other distinguished persons.
- Rathbone**, Mr., *e. s.* of R. Rathbone, late High Sheriff of Anglesey—Evelyn, and *d.* of W. Rathbone, M.P. (Oct. 20)
- Raymond**, Henry Warner, Capt. Royal Irish Rifles—Maud, *y. d.* late Major-Gen. Sir E. R. Wetherall, C.B., K.C.S.I.; Under Sec. State for Ireland (June 2)
- Roberts**, F. G. Hodgson—Violet Cunliffe, *e. d.* Ellis Brooke Cunliffe (July 23)
- Rollo**, Hon. Eric Norman, and s. Lord Rollo—Constance Maud, *y. d.* H. B. Hohler, of Fawkham Manor, Kent
- Roosevelt**, Robt. B., Envoy Extraord. and Min. Plenip. of the United States to the Netherlands—Mrs. Marion T. Fortescue (Aug. 18)
- Roxburgh**, His Honour Sir Francis, Q.C.—Eleanor M. A. Chambers, 3rd *d.* Sir T. Chambers, Q.C., Recorder of London (Jan. 24)

- Russel**, Col. F., of Aden, late Royal Dragoons—*Philippa, y. d.* of late Rt. Hon. Henry J. Ballie (Sept. 1)
- Russell**, Lord Herbrand, of the Gren. Guards, *y. s.* Duke and Duchess of Bedford—*Miss Tribe, d.* of the acting Archdeacon of Lahore (Feb. 1)
- Samuelson**, Francis Edwd., and *s.* Sir B. Samuelson, Bart., M.P.—*Fanny Isabel, e. d.* late William Merritt Wright (April 24)
- Sargeant**, James Shapland, of Tewkesbury Park—*Bessie, y. d.* Charles Andrew, of Coughton Court, Warwickshire (April 5)
- Savile**, William Hale, M.A., vicar of Wykeham, Yorks.—*Mabel, only d.* Countess M. von Bothmer, and Count Hippolyte Alexander von Bothmer (July 21)
- Savory**, Joseph, Alderman of City of London—*Helen Pemberton, only d.* Lieut.-Col. George Archibald Leach, R.E. (July 26)
- Scott**, Archibald Edward, youngest *s.* of late J. Winter Scott—*Cecilia, second d.* of late William Boltho (Nov. 22)
- Scott**, Capt. Buchanan P. E., C.I.E.—*e. d.* Chas. - Theo. Metcalf, C.S.I. (Aug. 9)
- Scott**, Hon. Walter George, Master of Polwarth, eldest *s.* of Lord and Lady Polwarth—*Edith Frances, eldest d.* of Sir Thomas Fowell Buxton, Bart. (Nov. 23)
- Scully**, James A.—*Gertrude Annie, e. d.* William Court Gully, Q.C., M.P. (May 17)
- Shaw**, William Rawson, only *s.* Thomas Shaw, M.P.—*Mary Josephine, only d.* late Joseph Crook, J.P., formerly M.P. Bolton
- Smith**, George Batchelor—*Emily Cook, e. d.* Sir William Long, of Oaklands, Sheffield (July 12)
- Smith**, G. W. Duff Assheton, of Vaynol Park, near Bangor—*Laura Alice, and d.* Colin Stanhope Jones (April 10)
- Somerset**, Hon. Fitzroy, sec. Conservative Central Office—*Mrs. Stanley Thompson* (June 15)
- Spicer**, Capt. J. E. Philip, J.P.—*Lady Margaret Fane, y. d.* of Earl and Countess of Westmorland (Oct. 2)
- Stanhope**, Hon. Evelyn T. Scudamore, *s.* late E. of Chesterfield—*Julia Dasha, y. d.* J. G. Potter (April 21)
- Stanforth**, E. Wilfred, of Kirk Hammerton Hall, York—*Evelyn, d.* Rear-Adm. Barnardiston (March 12)
- Stewart**, Edward—*Lady Philippa Fitzalan Howard, d.* of Henry Granville, Duke of Norfolk (Oct. 18)
- Stirling**, Rt. Rev. W. H., Bishop of the Falkland Islands—*Lucinda, wid.* late Wm. McClymont (May 2)
- Stopford**, Capt. the Hon. E. B., Royal Irish Fusiliers, second *s.* of Earl of Courtown—*Isabel Alice, only d.* of late Capt. Barrington Dashwood (Nov. 22)
- Stuart**, Frederick Wm., *y. s.* late Sir Cunliffe H. Stuart, Bart.—*Mildred Florence, 4th d.* W. G. Ashby, The Highlands, Burgess Hill (May 28)
- Stuckey**, William Innes, only surviv. *s.* George Stuckey—*Annie Beatrice, e. d.* Sir F. T. Cunynghame, Bart. (July 31)
- Sutton**, Sir Richard, Bart.—*Edith Constance, d.* of Sir Vincent Corbet, Bart. (April 3)
- Sweden and Norway**, H.R.H. Prince Oscar of—*Mlle. Ebba Henrietta Munk, who formerly held an appointment at the Court of Sweden; at St. Stephen's Church, Bournemouth, in the presence of the Duchess of Albany, the Crown Princess of Denmark, and the Queen of Sweden* (March 15)
- Sworder**, Hugh, *s.* of William Sworder, of Tawney Hall, Essex—*Elizabeth Mary, e. d.* late Wm. Hart, of Fingrith Hall, Blackmore, Essex (June 2)
- Symonds**, Thomas Raymond, of Mynde Park, Herefordshire—*Margaret Ethel, and d.* James Rankin, M.P. (April 4)
- Tanner**, Dr., M.P.—*Miss Welch, of Cork* (April 14)
- Tarleton**, Alfred, only *s.* late Admiral Sir Walter Tarleton—*Henrietta Charlotte, d.* of Admiral and Lady Henrietta Tennyson D'Eyncourt, of Bayons Manor, Lincolnshire (Feb. 8)
- Taylor**, John W., 3rd Batt. Essex Regiment—*Florence Irene Emily, only d.* Sir James Crichton Browne, M.P., LL.D., F.R.S. (Aug. 5)
- Thursby**, John O., *s.* of Sir John Thursby—*Ella, d.* of Col. T. and Lady Mary Crosse (Nov. 28)
- Tottenham**, Major Fred. St. Leger, 7th Royal Fusiliers—*Mabel Caroline, d.* late Very Rev. J. Garnier, Dean of Lincoln, and Lady Caroline Garnier (July 17)
- Trotter**, Alexander Edmund Coutts—*Madeline Philippa Selby Lowndes, d.* of Rev. O. C. Selby Lowndes, of Blitchley (Oct. 9th)
- Vaughan**, Fredrick Lewis, only *s.* Lt.-Gen. Sir J. L. Vaughan, K.C.B.—*Mary Evelyn Hilda, e. d.* Major Stocks (July 11)
- Watkin**, Edward, of Heaton Chapel, Manchester—*Hannah Rebecca, d.* Thomas Copping, formerly of Coningsby
- Weston**, Sir Joseph Dodge—*A. Beloe, y. d.* of late C. P. Beloe (Oct. 11)
- Whistler**, Mr. (artist)—*Mrs. Godwin* (Aug. 11)
- Wigram**, William Arthur—*Edith Constance, 2nd d.* of Col. and Hon. W. P. and Lady Emma Talbot (Sept. 6)
- Williams**, Major H. D., 98th Regt., *s.* late Canon Henry Blackstone Williams—*Ethe, Louisa, only d.* Rev. Montagu Hankey, rector of Marden Newton (Feb. 9)
- Wilmot**, Sir Richard, Bart.—*d.* Hon. Hugh Hare (April 10)
- Wingfield**, Anthony H., *e. s.* late George Wingfield, of Amphil House, Beds—*Julia, y. d.* Richard Benyon, of Englefield Park, Reading (Feb. 9)
- Wingfield**, Major Charles G. L., Dorsetsh. Regt.—*Beatrice Marion Lysaght Griffin* (April 18)
- Wolff**, Louis—*Caroline Louisa Jane, e. d.* of late Peter Rylands, M.P. (Sept. 8)
- Yerburgh**, Robert Armstrong, M.P. for Chester—*Elma Amy, only d.* Daniel Thwaites, J.P., D.L., late M.P. for Blackburn (Aug. 8)
- Younger**, William, 16th Lancers, of Auchan Castle, Dumfriesshire—*Helen Caroline Benyon, e. d.* Col. Gunter, M.P. (Jan. 24)

Married Women (Maintenance in case of Desertion) Act, '86. This Act provides that it shall be lawful for any married woman deserted by her husband to summon him before two justices in petty sessions or a stipendiary magistrate. If satisfied that the husband being able partly or wholly to maintain his wife, or wife and family, has wilfully neglected to do so, and has deserted his wife, the justices or magistrate may order him to pay to her such weekly sum not exceeding £2 as may be considered to be in accordance with his means and any means the wife may have for her support, the payment to be enforced in the same way as the payment of money under an affiliation order. The order may be varied by the justices or the magistrate upon proof given that the means of husband

or wife have varied since the order was made. No order for payment shall be made in favour of a wife proved to have committed adultery, unless such adultery has been condoned; and any such order may be discharged upon proof that the wife since the making thereof has committed adultery. The Act does not extend to Scotland.

Married Women's Property Act, '82. A short historical preface is necessary to the explanation of this Act. At common law the husband and wife were regarded as one person. By marriage the woman was merged in the man. He became entitled to all her personal property and to the rents and profits of her real property. He also became answerable for her debts. In equity a married woman was always regarded as capable of holding property, and the word and thing "separate estate" owe their origin to the Court of Chancery. The chief sources of the separate estate have been settlements, devises and bequests to the separate use of married women. Over this separate estate the married woman enjoyed all the rights of an owner, save that in gifts to her separate use it has always been usual to insert a proviso against anticipation of income. This anomalous proviso has been enforced by the courts upon a consideration of the strong pressure which may be put upon a married woman improperly to anticipate her income. In this way the common law became in a great degree obsolete in so far as it affected women of the richer class, who have been almost invariably protected by settlements. But it continued to press hardly upon married women in other classes; and the Married Women's Property Act 1870, amended by the Married Women's Property Act 1874, was designed to protect married women in the enjoyment of several important kinds of property. Both of these Acts have been repealed by the Married Women's Property Act 1882, the effect of which may be summed up by saying that it almost altogether annuls the effect of marriage upon a woman's right of property. In the case of all marriages, contracted after the last day of 1882, the married woman, the feme covert, has the same rights of acquiring, holding and transmitting property which are possessed by the spinster or widow, the *feme sole*, or by the man. In the case of all marriages contracted before that day the married woman has the same rights in reference to all property accruing to her after that day. In respect of her *separate estate* the married woman has all the means of redress by civil or criminal proceedings which are enjoyed by any other owner of property. She is also liable in every respect as though she were unmarried; she is liable for her ante-nuptial debts, and to the parish for the maintenance of her husband and children. Such, subject to judicial construction, is the general effect of this statute. It provides no restraint upon the anticipation of her income by a married woman; nor does it annul such restraint, thus leaving marriage settlements nearly as useful as ever. It provides that **money lent by the wife to the husband shall in the event of his bankruptcy be treated as assets, and shall not be recoverable by the wife until all other creditors have been satisfied.** It does not allow husband or wife to take **criminal proceedings** against each other so long as they are living together. It protects as a trust in favour of wife and children a *bond-fide* insurance by the husband of his life for their benefit,

and a similar insurance by the wife.—**Law on, '88.** *In re Armstrong v. ex-parte Trustee* (Court of Appeal, June '88), turned on a question of construction under the M. W. P. Act '82. In November '81 Mrs. Armstrong, at that time a widow entitled to certain freehold houses, settled them on herself for her separate use without restraint on anticipation, with a power of appointment and resulting trusts for her children. In December of the same year she married her present husband. Mrs. Armstrong continued to carry on the business of her late husband, and was made bankrupt in May '84. The trustees in bankruptcy took possession of the property included in the settlement, and collected the rents. Mrs. Armstrong now claimed to have the amount collected paid over to her for her own use, while the trustee claimed to retain it for the benefit of the creditors. Sect. 1, subs. 5 of the Act says that "every married woman carrying on a trade separately from her husband shall, in respect of her separate property, be subject to the bankruptcy laws, in the same way as if she were a *feme sole*." By section 10, however, "nothing in this Act contained shall interfere with or affect any settlement . . . respecting the property of any married woman," etc. The Court of Appeal held that the trustee was entitled to the rents. Sect. 19 only meant that settlements were not rendered inoperative by the Act. Here the trustee did not seek to invalidate the settlement. On the contrary, he claimed the life estate of the bankrupt under and by virtue of the settlement, as any other alienee of the life interest might claim, the only difference being that here the alienation was the act of the law and not the voluntary act of the party. The Master of the Rolls delivered a dissenting judgment. His lordship, referring to the words of the section, "interfere with or affect," said that it was "too fine a distinction for the affairs of real life" to say that every advantageous effect of the settlement could be taken away and yet the settlement not be "interfered with."

Marsellaise Hymn. So called because first heard at Paris in 1792, sung by troops from Marseilles. Words and music composed (1791) by **Rouget de L'Isle**, an engineer officer, to cheer the spirits of conscripts at Strasburg.

Martin, Sir Theodore, K.C.B., b. in Edinburgh 1816. Educated at the High School and University of Edinburgh, subsequently practising as a solicitor in that city. In '46 he removed to London, and in '58, under the *nom de plume* of "Bon Gaultier," published, with the assistance of the late Professor Aytoun, his "**Book of Ballads**," and a translation of the "**Poems and Ballads of Goethe**." His "**Life of the Prince Consort**" was written by command of her Majesty, who, on the completion of the work in '80, created him a K.C.B. The most important of his other works are translations of "Odes of Horace," the Complete Works of Horace, Ehenschlager's dramas, *Corregio* and *Aladin*, Goethe's *Faust*, the "Vita Nuova" of Dante, and Henrik Hertz's drama *King René's Daughter*, and a "Life of Lord Lyndhurst." In '51 he married the celebrated actress **Helen Faucit**. Sir T. M. was elected **Rector of the University of St. Andrews** in '80. In '88 Sir T. M. issued a book dealing with the Shakespeare-Bacon controversy; he also composed a **sonnet** (Nov.) in honour of the visit of the widowed Empress Frederick to England.

Martineau, Rev. James, D.D., LL.D., one of the most eminent of Unitarian divines, is a brother of the late Harnett Martineau, b. at Norwich 1805. Educated at the Norwich Grammar School, Dr. Lant Carpenter's School at Bristol, and at Manchester New College (*q.v.*). He entered the Unitarian ministry in '28. After officiating for some years as minister in Dublin and Liverpool, accepted the chair of **Mental and Moral Philosophy at Manchester New College** '41. Was appointed minister of Little Portland Street Chapel '59, and **Principal of Manchester New College** '68. Dr. M. is a voluminous writer on ethical and theological questions, and amongst the best known of his works are "Studies of Christianity," "Modern Materialism," "Ideal Substitutes for God Considered," "Hours of Thought on Sacred Things," "Types of Ethical Theory," and "Study of Religion" ('88). Dr. M. is hon. LL.D. Harvard and D.D. Leyden and Edinburgh, and D.C.L. Oxford, '88.

Martinique. A West Indian island of the Windward group. It is a French colony. Area 779 sq. m.; pop. 169,232. **Fort Royal** (or **Fort de France**) is the seat of government; **St. Pierre**, pop. 18,000, the principal town. Interior high and rocky, of volcanic origin. There are many streams. Lowlands very fertile; cultivation of sugar, coffee, cacao, and cotton largely carried on. The colony is governed as a French Department. Trade amounts to over £1,000,000. Originally settled by France in 1635, it has several times been in English hands, but was finally confirmed to France in 1814. See **COLONIES OF EUROPEAN POWERS**; and consult Vignon's "Les Colonies Françaises," Noiman's "Colonial France."

Marvin, Charles, author and journalist, b. 1854. Spent his early life in Russia; entered the English Civil Service '75. The untoward disclosure of the Anglo-Russian Agreement led to his retirement from the Foreign Office, in '78. His first work, "Our Public Offices," attracted considerable attention; this was followed by "The Russian Campaign against the Turcomans." A series bearing upon the Russo-Asian question succeeded, of which the best known is "The Russians at the Gate of Herat." Sent on a mission to Russia by Mr. J. Cowen, late M.P. for Newcastle, to ascertain Russian views of Central Asia. Accompanied the English mission to the Czar's coronation ('83), and subsequently travelled in the Caucasus and the Caspian district. Mr. M. is an authority on petroleum, his "Moloch of Paraffin" having reached a large circulation. He has also written on African affairs ("English Africa," '88).

Mass, Days of Attending. See **DAYS**.

Massage. A term applied to specific mechanical manipulations, such as "kneading" and "rubbing," which are intended to influence the human tissues and the functions of the body in various disorders and diseases, such as nerve prostration, muscular degeneration, infantile paralysis, wasted limbs, spinal distortion, impaired writing power, and other conditions. See ed. '88.

Massey, Gerald, poet and lecturer, b. at Tring 1828. His parents being very poor, his childhood was passed under all the distressing circumstances to which children were liable previous to the adoption of the Factory Acts. At the age of fifteen he obtained a situation as errand boy at Messrs. Swan and Edgar's, Regent Street, and picked up his education by

reading at the second-hand bookstalls at such odd moments as he could spare. He subsequently became editor of a Radical paper, the *Spirit of Freedom*, and in '54 published the "**Ballad of Babe Christabel and other Poems**," which attracted the attention of Walter Savage Landor, who pointed out the great promise which the young poet gave in this volume. Mr. M. subsequently published other poems, which won for him great popularity; and for some years he wrote the poetical criticisms for the *Athenæum*. Mr. M. has also devoted much attention to the subject of **spiritualism**, and has lectured with great success in England, America, and the Colonies. Mr. M. was some years ago placed as a pensioner on the Civil List in recognition of his services to literature as "a poet sprung from the people." He has recently (Sept. '88) completed his new work on **Shakespeare**, and has started on a lecturing tour in the United States and the Australian colonies.

Massowah. An island and town at the entrance of a bay on the African coast of the Red Sea, about 330 miles N. of the Straits of Bab-el-Mandeb. It is the natural port and commercial outlet for Tigré and Northern Abyssinia. Was an Egyptian possession till 1885-6, when taken possession of by Italy. War with Abyssinia soon broke out, and some reverse was at first experienced by the Italians, who, afterwards reinforced, have effectually made good their position, and have occupied territory to some distance inland, through which they are now pushing a railway. Massowah has been fortified, and its development as an Italian dependency may be anticipated (see **ITALY**).

Master and Servant. Servants are practically of two kinds—domestic servants or menials (Lat. *intra mœnia*, within the walls), and labourers or workmen employed with a view to profit. **Domestic servants**, in the absence of express stipulation, are understood to be hired for the year, subject to a month's notice by either party. They are entitled to proper lodging and food, but not, as a rule, to medical attendance. Illness and consequent incapacity to work does not render them liable to be dismissed without notice; but wilful neglect or disobedience does. On leaving service they cannot claim a character from the employer, or obtain damages for an unfavourable character which he may give *bona fide* to a person having a right to ask for information. But they can obtain damages for an untrue character maliciously given. The relation between **employers** on the one hand, and on the other **labourers** or **workmen**, has been regulated by many statutes. In the first place the employer in getting servants must not transgress the **Factory or Elementary Education Acts**. In the next place the **Truck Act** compels the employer in all the more important trades to pay his workmen in current coin, and not otherwise; and an **Act of 1883** forbids him to pay his workmen in any premises used for the sale of intoxicating liquor. Thirdly, a variety of **Acts** give to the **county courts** and to the **justices** a certain jurisdiction in disputes between employer and workman, and provide for the appointment, by consent of both parties, of **arbitrators** and **boards of conciliation**, whose awards the law will enforce. As a rule, breach of the contract of service by either party now

gives ground for a civil action only. But as regards merchant seamen, the captain, the employer's agent, is necessarily invested with extraordinary powers of discipline. A workman is criminally liable for a wilful breach of contract in cases where he has reasonable ground to believe that the result of such breach would be to stop the public gas or water supply, or to occasion serious injury to life or property. But in the prosecution of a trade dispute any number of persons may combine to do anything which, if done by one person, would not constitute a crime. A master is not criminally liable for any act of his servant; but he is civilly liable for everything done by his servant in the course of service. A master is now civilly liable to one servant for injuries inflicted by the negligence of another servant. A master may bring an action for any injury done to his servant whereby he loses the benefit of the service—e.g., an assault, a seduction, etc. A master may justify an assault committed in defence of his servant, and *vice versa*. A master may maintain, *i.e.* aid and abet, his servant in an action—a thing generally unlawful. If any one wilfully entice a servant to quit his master's service, the master has an action against him and the servant. Formerly it was only by apprenticeship that persons could qualify themselves to exercise a trade. But at the present day the necessity of serving an apprenticeship survives only to a limited degree. The apprentice was an infant bound out by indenture for so many years to serve a master, who undertook to maintain and teach him, and exercised over him a parental authority. The children of parents unable to maintain them may still be apprenticed till the age of twenty-one years by the guardians or overseers to persons willing to take them. In all cases the infant's consent is necessary.—Chief actions under the Employers' Liability Act (*q.v.*) in '88. It has been laid down by the courts that a notice under the Act, though defective, is still a good notice if the judge is of opinion that the defects or inaccuracies do not prejudice the defendant. On the other hand, the special rights of public bodies to a full and regular notice given them of claims for personal injuries, made by persons in their employ, was emphasized in the case of *Edwards v. The Vestry of St. Mary, Islington*. The action of *Walsh v. Whitley*, carried to the Court of Appeal, raised the question whether a particular form of carding machine largely used in Lancashire, was "defective" under section 7, sub-section 1, of the Employers' Liability Act. The machine was admittedly dangerous, but the court held that that did not make it "defective," or imply negligence on the part of the employer, if an accident happened to the workman to whom it was furnished for use with reasonable care. The *Factory Act* requires that if a person injured by machinery in any factory cannot return to his ordinary work within forty-eight hours after the accident, such accident must be reported with a view to official investigation. It has been argued that the returning to work in the factory to sort pieces of tin plate with one hand constituted a return to work within the meaning of the Act, and thus rendered a report unnecessary; but it has been decided that returning to work means returning to the performance of ordinary work as before the accident. *Harding v. Barker & Son* (Queen's Bench Division, Nov. '88) decided that the employer of a driver who had acci-

dentally injured a street lamp in the Metropolis was not liable for the damage.

Master of Faculty. See DEANS.

Master of the Rolls. See ROLLS.

Matabeleland. An extensive country in South Africa, between Limpopo and middle Zambesi rivers, north of Transvaal and Bechuanaland. It is mountainous, and has been famous from a very early age for its productive gold mines. Ancient ruins of unknown origin have been seen here by Mauch, who passed through the country. Was conquered fifty years ago by King Moselekatsé and a Matabele army, the native tribes, Mashona and Makalaka, subdued and incorporated, and a military despotism set up on the model of Chaka's in Zululand. This endures under Lo Benguela, successor of Moselekatsé. Its proximity to the British Protectorate, and its auriferous wealth, are also likely to bring Matabeleland into public attention ere long. The Matabeles (near kinsmen of the Zulus) are numerous, warlike, drilled in regiments, every able-bodied man a soldier, and they are said to be well armed. The king is an absolute autocrat, possessing unquestioned authority. It is announced that arrangements are being made for the establishment of a postal service by native runners, between British Bechuanaland and Matabeleland (Sept. '88).

Mathew, Sir James Charles, was b. in 1830. Educated at Trinity College, Dublin. Called to the bar at Lincoln's Inn ('54). He was a member of the South-Eastern Circuit, and, like Lord Justice Bowen and Mr. Justice A. L. Smith, had not taken silk when he was appointed a Judge of the Queen's Bench Division. Just previously Mr. Mathew had acted as a member of the Committee on the subject of the "Costs of Legal Proceedings." Mr. Justice Mathew was the third Catholic judge appointed since the Catholic Emancipation Act, the two previous ones being Mr. Justice Shee and Mr. Justice Hayes.

Matthews, Rt. Hon. Henry, M.P. for East Division of Birmingham, and Home Secretary, is the son of the Hon. Henry Matthews, late puisne judge of Ceylon, where he was born in 1826. He was educated partly on the Continent and partly in England. Having graduated at the Univ. of Paris B.A., he studied law at Univ. Coll., London, and subsequently graduated LL.B. at the London Univ., where he obtained the Univ. Law Scholarship of £50 a year for three years. In the same year he was appointed a Fellow of Univ. Coll., the only other Fellow of the year being Bagehot the economist. In '45, when he was only eighteen, Mr. Matthews was admitted at Lincoln's Inn, and in '50 he was called to the bar. Eighteen years later he took silk, was elected a Bencher of Lincoln's Inn, and was returned to the House of Commons as Liberal member for Dungarvan. From '72 to '76 he acted as Examiner in Common Law to the Council of Legal Education. In '85 he unsuccessfully contested North Birmingham as a Conservative. In July '86 he contested East Birmingham, and by the fusion of the Unionist Liberals with the Conservatives was returned. When Lord Salisbury formed his second administration after the general election, Mr. Matthews was appointed Home Secretary. He has been connected with several causes célèbres, notably the *Borghese* case, the *Slade* case, *Lyon v. Home* (the spiritualist), *Boulton and Park*, the *Tichborne*

case, Armstrong case, Crawford divorce case, Cass case, the Trafalgar Square riots, etc. His refusal to offer a reward for the discovery of the perpetrator of the Whitechapel murders gave rise to much comment. Tension having arisen between the Home Secretary and Sir G. Warren, owing to the publication of an article in *Murray's Magazine*, Mr. M. announced the resignation of Sir Charles in the House of Commons (Nov. '88).

Mauritius. So named by the first Dutch occupiers in 1598, after Prince Maurice of Holland. An island in the Indian Ocean 500 miles east of Madagascar, 2,000 miles from India, and 2,300 from the Cape. It is a British Crown colony. Area 708 sq. m., pop. 368,145. The island is divided into nine districts. Capital and chief port is **Port Louis**, pop. 30,000, connected with other centres by lines of railway and excellent macadamised roads. Dependent appanages of the colony, under the administration of its governor, are various groups in the Indian Ocean. The **Seychelles**, **Rodriguez**, the **Amirantes**, **Diego Garcia**, and the **Chagos Islands**, are the chief of them. Total area about 350 sq. m., pop. 16,000. **Mauritius** is mountainous, the highest peaks attaining 2,700 feet. It is well watered and fertile, vegetation luxuriant and scenery charming. Climate of the uplands delicious, that of the lowlands hot and unhealthy. Violent, frequent and destructive hurricanes. Some uncleared forest still remains, in which are deer and game. A unique native bird, the dodo, was exterminated by the Dutch. Barrier reefs surround the shore. A Governor presides over administration, which is conducted by Executive and Legislative Councils, both of Crown nominees. Staple industry is cultivation of sugar-cane. Cotton, coffee, indigo, tortoise-shell, ebony, vanilla, and aloë-fibre are also exported. For financial statistics, see **BRITISH EMPIRE**, etc. (table). The capital is strongly defended, but former large garrison now reduced to 400. There is a constabulary of about 1,000. The Church of England and the Roman Catholic bodies receive some State aid. There is a Royal College, and also many Government and other schools. Many of the people are of African, Hindoo, Chinese, and Malagasy race. Among the whites is a preponderance of French blood. Mauritius is the scene of St. Pierre's tale of "Paul and Virginia." The Dutch abandoned the island in 1710. In 1721 the French took possession, and the island was then called **Ile de France**. Its prosperity was founded by the French Governor, Mahé de Labourdonnais. A British force under Abercrombie captured Mauritius in 1810, since when it has remained a colony of England.—In 1886 the Governor (Sir John Pope Hennessy) became involved in serious disputes with the people. The Governor of Cape Colony was sent to investigate matters, as Royal Commissioner, and he exercised the authority delegated to him by suspending Sir J. P. Hennessy, who was ordered home for further inquiry (see **DIPLOMATIC**). This resulted ('87) in Sir John's acquittal and reinstatement as Governor. Consult **Fleming's "Mauritius"** and **"Her Majesty's Colonies."**

Medical Acts, '58-86. See ed. '88.

Medical Progress, '88. During the past year there have been no startling discoveries, but medical workers have been persistent in adding to our knowledge in the regions of high and applied pathology, in practical surgery, and in therapeutics. **Bacteriology** has made rapid strides in its progress from the transcendental to the practical, and Professors Crookshank and Klein, in their investigations into the causes of the Hendon and other epidemics, have thrown much light upon the development and propagation of the *Bacillus Searlatinae* and the micro-organisms found in cases of cow-pox. In his **Harveian oration**, Professor Latham summarised recent investigations into the connection existing between micro-organisms round, corkscrew and straight-rod shaped, and disease. Thus Koch proved that after inoculating an animal with the smallest drop of anthracis blood—provided it contained bacilli or their spores—it dies within twenty-four or thirty-six hours, and that on post-mortem examination, in the capillaries of the liver, spleen, lungs, kidneys and stomach, huge numbers of bacilli can be seen permeating this part of the vascular system, whilst in larger vessels they may be entirely absent or only rarely seen. The rate at which bacilli develop is almost incredible, for with favouring conditions and a temperature of 124° below human blood heat, the organism doubles in length and divides once in every half-hour. Multiplication therefore proceeds to the extent of about eight hundred million millions in twenty-four hours. The *bacillus anthracis* is said to be the responsible source of wool-sorters' disease, malignant pustule and intestinal anthrax in the human subject. In relapsing fever, a disease in the spread of which contagion direct from the patient or through articles in common use plays an important part, an ever-moving, slender, threadlike organism—the *Spirochaeta Obermeieri*—can be detected during the febrile stages in the blood. During the intervals between the attacks no spirochaetae can be found in the blood. These organisms outside the body show active movements at a temperature of about 65°; they become languid at 98°, and die at fever heat. For these reasons it is supposed that the febrile condition of the patient destroys the organism, which breaks up into granules, some of which probably are the spores from which the disease may re-develop. In this case the blood of the infected animal is intermittent in its power of passing the disease on to other animals. Certain bacilli of the so-called non-pathogenic character are, when injected into the blood of lower animals, incapable of development or even of continued existence, though spores remain active for a considerable time. The propagation of certain bacteria in animals other than those in which they were originally developed is therefore—until new methods of acclimatisation are discovered, at least—impossible. As regards the changes that take place in blood or tissues in which the micro-organism is able to develop, Dr. Latham is of opinion that they are of the nature of fermentation, and that death actually results from the presence of chemical poisons thus developed. These chemical poisons include certain animal alkaloids or *ptomaines*, similar in nature and chemical composition to some of the vegetable alkaloids. Professor Brieger has succeeded in crystallising certain of these bodies—amongst

them *neuridin*, *neurin*, *cholin*, *nuscarin*, *gadinin*, *cadaverin*, *putrescin*, *saprin*, and *mydalein*. Most of these substances are developed by the action of bacilli on dead animal matter, and not necessarily on living tissue. Other poisonous alkaloids have been shown by Gautier to be developed in the living body independently of the action of bacteria; these he has termed *leucomaines*. From these and other facts, Professor Latham inferred that, in living animal organisms, owing to slight departures from the normal nutrition of the parts, various substances will be produced, which, if not eliminated or neutralised, may lead to pathological changes independently of any bacterial action. It is possible, as Burdon Sanderson has stated, "that germs are not so much 'mischief makers' as mischief spreaders; that is to say, that, although an inflammation may come into existence without their aid, their presence communicates to it, after it has come into existence, the power of reproducing itself in previously healthy tissues, whether by extension or dissemination." Another question in connection with micro-organisms is that of their *transmutation*. Is it possible that by cultivation or attenuation their properties (virulence, etc.) may be modified? There is as much difference of opinion on this point as there is on the question whether oxygen or heat plays the more important part in the process of the attenuation of virus—which is usually accomplished by exposure of the germs to the combined action of those agents. Bearing upon this question may be mentioned the attenuation of small-pox that undoubtedly takes place in transmission of that virus from the human subject through the bodies of the horse and the cow. In this instance it can scarcely be contended that excess of oxygen has much to do with the attenuation; the rise in temperature, though slight, must be credited with the diminution in virulence, which is most marked after passage through the cow, and which persists even when re-inoculation into a susceptible human subject has been performed (vaccination). *Laryngology* has been brought prominently before the public in the case of the late Emperor Frederick. The question of which diagnosis was correct will continue for some considerable time to agitate the English and German schools of scientific thought. The post-mortem examination of the illustrious patient's vocal organs, and of the adjacent parts, might be supposed to have settled the matter definitely; but it was scarcely thorough enough to justify a pronouncement *ex cathedra* on the accuracy of the statements made by one side or the other. Whether a false passage into the tissues immediately in front of the trachea was really made by the German surgeon or not, and whether such a false passage was or was not the origin of the abscess which was the proximate cause of death, are questions upon which the German and the English scientists seem determined to disagree. When those who have had the opportunity of examining the parts fail to be unanimous, it is scarcely possible for those who have not been so favoured to come to a correct determination on the point. *Lung diseases* have during recent years passed more and more under the care of the surgeon. Formerly the physician both diagnosed and treated most of the ailments attacking those organs, if we except cases of effusions (purulent or otherwise) following

pleurisy; nowadays the physician makes the diagnosis, whether in empyema, gangrene of the lung, abscess of the lung, tubercular cavities, hydatids, foreign bodies, or bronchiectasis, but in many cases the surgeon's knife has to lend its powerful aid in rendering treatment efficacious. In the section of Surgery, at the annual meeting of the British Medical Association at Glasgow in August, Mr. Fridgin Teale described the history of several cases of abscess of the lung, in some of which free incisions were made not only into the pleural cavity, but into the lung itself. The results were fairly satisfactory, though recovery did not result in every instance. At a meeting of the East Anglian Branch of the British Medical Association at Eye, Mr. Howard Marsh advocated free drainage in cases of empyema, and "where the condition is chronic and suppuration continues after a free opening has been made, Estlander's operation, consisting of the removal of a portion of two or more of the ribs, should be performed." Mr. Henry Morris and Mr. E. J. Godlee have been prominent in their efforts at advancing this special branch of surgery, and Dr. Finlay has narrated an interesting case in which Mr. Morris operated by incision and drainage for bronchiectasis. Other regions of the body, until lately considered almost sacred, have been fully subjected to operation, Mr. Victor Horsley's case of removal of a growth from the vertebral canal being a recent example of the beneficial progress made. Surgery of the brain itself has not been neglected, Dr. MacEwen and other gentlemen already named (Messrs. Horsley and Godlee) having been active in that department of advanced operative treatment.

Medical Relief Disqualification Removal Act, '85. The occasion for this Act was in the passing of the Representation of the People Act of the same year, which assimilated the borough and county franchises. It was found that in rural districts many persons who would otherwise have obtained the franchise under that Act were regular recipients of medical relief given by the poor-law authorities, and would be disqualified from voting by the rule until then maintained, that by receipt of poor-relief within a certain time of the elections an elector lost his right to vote. The Act therefore provides that no person shall lose his right to be registered or vote at any parliamentary or municipal election because he has received for himself or his family any medical or surgical assistance, medicine, etc., at the expense of the poor-rate.

Melissonier, Jean Louis Ernest. A French painter, b. at Lyons, 1811. Came to Paris in 1830 to study. He made very rapid progress in his art, and being gifted with an original order of talent, he adopted a particular branch of art—namely, that of painting pictures of very small size, but remarkable for the truth and correctness of the figures, the extreme fineness of touch, and precision of detail. He sent some works to the "Salon" in 1836, which attracted much attention and won high approbation. From that time till 1855 he continued to devote himself to the small works above mentioned, imparting such truth to his figures that they almost wore the semblance of life. Theophile Gautier passed a high eulogium upon him. Besides medals which he received at different "salons," he obtained the cross of Knight of the Legion of Honour in 1845, and the grand medal of honour at the Universal

Exhibition of 1855, the cross of Officer in 1856 and Commander in 1867. He was elected a member of the Academy "des Beaux Arts" in 1861. In 1864 he adopted a new branch of art, painting historic subjects in the same small dimensions. Among his famous paintings are "Napoleon and his staff, 1814," the "Battle of Solferino," etc., and he has recently completed an enlarged copy in water-colours of his famous picture "1807." It was exhibited at Tooth's Gallery, April '88.

Melbourne. Capital of Victoria (*q.v.*), on Port Philip; pop. 380,000.

Melbourne Centennial Exhibition, opened on Aug. 1st, '88, to celebrate the centenary of the foundation of the Colony of New South Wales. It was international in character, exhibits coming from all parts of the world. The opening day was made a public holiday, and the ceremony, which was performed by the Governor, Sir Henry Loch, evoked much colonial enthusiasm. The Governors of the various Australasian Colonies, and representatives from the various Australasian legislatures were present. The address, read by Sir J. MacBain, as President of the Executive, thus defined the purpose of the Exhibition: "To do honour to the mother country, to foster the sentiment of Australian federation, and to exhibit the various resources" of Australia. The objects of the Exhibition were promoted in this country by a Royal Commission, of which H.R.H. the Prince of Wales was president, and of which the Hon. Sir George Verdon, K.C.M.G., C.B., was the official representative at Melbourne. Through the efforts of the Commission the British Courts were well filled, and a splendid contribution of pictures, showing modern British art at its best, made to the art galleries. Mr. F. H. Cowen was specially engaged, at a remuneration of £5,000 for six months' services, to take charge of the musical arrangements, and vocal and instrumental concerts were given under his direction daily. The whole cost of the Exhibition was not to exceed £25,000, but it considerably exceeded that figure. The Exhibition gave rise to much discussion in the Australian press on the subject of Colonial Federation and Imperial Federation (*q.v.*), and politically the Exhibition gatherings had the effect of strengthening the relations between the Colonies, most of which, judging from speeches made by the various Governors visiting Melbourne, recognised the desirability of united action in matters material to all.

Merchandise Marks Acts, '87, consolidates and strengthens the law relating to fraudulent marks on merchandise. The Act is applied to watches, and every person who sends or brings a watch-case, whether imported or not, to any assay office in the United Kingdom for the purpose of being assayed, stamped, or marked, shall make a declaration as to what country or place the case was made in, and if the case was made in some country or place outside the United Kingdom, the assay office is to place on the case a mark differing from the mark placed by the office on a watch-case made in the United Kingdom. All goods which if sold would be liable to forfeiture

under the Act, and all goods of foreign manufacture bearing any name or trade mark being or purporting to be the name or trade mark of any manufacturer, dealer, or trader in the United Kingdom, unless such name or trade mark is accompanied by a definite indication of the country in which the goods were made or produced, are prohibited to be imported into the United Kingdom. There is a provision in the Act which renders any person who falsely represents that any goods are made by a person holding a royal warrant, or for the service of the Queen or any of the royal family or any Government department, liable to a penalty not exceeding £20. Consult the treatise by Mr. Howard Payn of the Secretary's Department of the Board of Custom.

Mercantile Marine of the World. The total number of steamships and sailing vessels in the world, of 100 tons register and upwards, in '88, is 33,200, and their estimated tonnage about 20,738,645 tons. According to Lloyd's Universal Register of Shipping, from which most of our particulars are taken, the number of such ships belonging to the different countries of the world are as follows, viz.:—

Countries.	No. of Ships.	Tonnage net of sailing-vessels and gross of steamers.
British (United Kingdom)	9,091	9,127,454

The number of sailing vessels of all countries is 23,310, with a net tonnage of 9,820,492 tons. The number belonging to the above-mentioned nations and our Colonies are given in Table B. The number of steamships in the world is 9,890, having a gross tonnage of 10,918,153 tons. Of these steamers, the number owned by the before-mentioned countries are given in Table C. Table D. shows the number and tonnage of all ships of 100 tons and upwards built by each

of the several countries of the world during '87, as recorded in the "Universal Register." Table E. shows the material of construction of which vessels of 100 tons and upwards are built in the world in '87, and their tonnage. Table F. gives an account of the number of ships classed by each of the principal classification societies of the world.—The late Liverpool Underwriters' Registry is now amalgamated with Lloyd's Register. The figures stated above as to the latter do not include ships classed in the Society's Yacht Register. Germany and France are the only two foreign nations which build any appreciable number of iron and steel ships, though Sweden and Nor-

way construct what merchantmen they require. There is but little for British shipbuilders to fear from competition with France, but much from Germany, as the latter is fast becoming a shipbuilding country, and now builds about two-thirds of her large requirements. No nation, however, except the United Kingdom, can now supply a demand for shipbuilding beyond itself. Much improvement in the British Mercantile Marine has been effected in '88 by

triple expansion engines and by re-engining steamers and having their old engines altered to triple expansion. This change will be a gain to the owners of nearly 30 per cent. per annum upon the alterations, on account of the economy in fuel which will be effected. During the last five years the first-class ocean passenger steamers have been better constructed than formerly for safety and speed. Triple expansion instead of compound engines have been generally adopted in these ships, which effects an average saving of 25 per cent. for the propulsion of the steamers. During this short period also the comfort of passengers has been improved, and especially by the enlargement

of cabins, and better food and sanitary accommodation, and the installation of the electric light (see ELECTRICITY ON SHIPBOARD). As regards the extraordinary speed of ocean steamers during '88, the most noteworthy are the two runs of the *Onarder Etruria*, from Queenstown to Sandy Hook, near New York,

in both of which voyages she broke the speed record between those places; the time taken in the former voyage was 6 days 1 hour and 55 minutes, and in the latter five minutes less. A greater distance by 68 knots, was run on the voyage from 27th May to 3rd June than in the one made from Sept. 16th to 27th. On the fifth day's passage in June the *Etruria* made 503 knots. These two voyages are the fastest on

record for long distances on the ocean. The *Oceana*, belonging to the P. and O. Company, left Brindisi on July 23rd, and arrived at Adelaide, S.A., on August 10th, her net speed at sea being 15.8 knots per hour over a distance of 8,758 knots. The fastest passages between England and the Cape have been made this year. These voyages were by two liners of the Union Steamship Company. The *Tartar* was driven from Cape Town to Plymouth in 17 days 6 hrs. 15 min., including detentions, and the *Athenian* in 17 days 9 hrs. and 10 min. on one voyage and in 17 days 16 hrs. 25 min. on the other. The straining time of the *Tartar* was 17 days 15 min. when she was propelled at an average speed of 14.35

knots per hour. The outward voyages of this company's steamers were rather slower. The splendid North German Lloyd's liners, which consist of nine steamers, all built at the Fairfield Shipbuilding Yard, have during '88 maintained a very high speed at sea. They have been driven at an average rate of from 17 to 17½ knots per hour. The Messageries Maritimes Company have materially shortened their route from Marseilles to Australia since May '88, by going direct from Mahé to King George's Sound, whereby about four days are saved in the passage. The most appreciable steamers of a new type which have been built in Great Britain during '88 are the *Oceana* and *Arcadia*, of the P. and O. Company, and the

City of New York and *City of Paris*, of the Inman and International Steamship Company. These two last-mentioned ships, which are for the Atlantic passenger trade, are provided with twin screws, and are the largest steamers afloat. They have better water-tight compartments than any other steamers, whereby the safety of passengers is further insured. These splendid ships, which are similar to each other, are respectively illuminated with electricity by more than 1,000 incandescent lamps. These ships and the two before mentioned of the P. and O. Company, have been specially constructed for use as armed cruisers. Two steamers of a further improved type are being built for the White Star Line, and are expected to be ready for sea next year. It is expected that their speed will be faster than that of any ship afloat, and that they will therefore be able to steam between Queenstown and New York in less than six days. The General Transatlantic Company are now constructing a new twin-screw steamer at St. Nazaire, to be christened *La Touraine*, which will be ready for making her first voyage to New York next year. Although this French company own four celebrated liners, which have made voyages between Havre and New York nearly as quickly in their daily runs as the *Etruria* and *Umbria* of the Cunard line, the new steamer being built for them will be propelled at a considerably greater rate than any of their present ships. Three new ocean liners, built in Marseilles for the Messageries Maritimes Company, of 164 knots speed, will be ready for sea next year. These also will be of a new type, and will afford the best accommodation for long voyages. The number of merchant steamers built and building, capable of being propelled at 16 knots an hour and upwards as armed cruisers for four or five hours consecutively if chasing or in chase in warfare, is 46. Of these 23 belong to Great Britain, 10 to Germany, 10 to France, and 3 to Italy. Oceanic passenger traffic in sailing vessels is now practically limited to the carriage of first and second class passengers to Calcutta, Bombay, and the Antipodes, to whom economisation of time is no object. Since '68 these vessels have not been constructed for speed; the new type of such have been built for carrying larger cargoes. There are now several four-masted vessels capable of transporting five thousand tons of cargo. The fastest long distance voyages by sailing vessels were made by the *Crusader*, belonging to the Shaw, Savill, & Albion Company's Line, about twelve years ago, and by the *Thermopyla* of the Aberdeen Line in '68. The former vessel performed a voyage from London to New Zealand in 65 days, and the latter a passage between London and Melbourne in 60 days. In one day the *Thermopyla* made 335 knots on the voyage, and she ran at the rate of 17 knots an hour for a few hours consecutively. The business of British shipowners has greatly improved during '88, on account of the increase of freights, which have improved from 25 to 30 per cent. all round, compared with the last two years. In some cases they have improved about 50 per cent. or more, and shipbuilders are busy with many orders in hand for forward delivery, and most of the inferior cargo ships that have been so long idle have been chartered and are now fairly occupied at remunerative freights.

Merchant Shipping Bill, '84. See ed. '88, and further ed. '87.

Merchant Shipping (Fishing Boats) Act, '87. See ed. '88.

Merchant Shipping, Life-Saving Appliances Act. See Session '88, sect. 31a.

Merchant Taylors' School, London. Founded (1561) by Sir Thomas White, founder of St. John's College, Oxford, and the court of the Merchant Taylors' Company. The company remains the governing body of the school, which has always continued a day school. In 1875 it was reorganised, enlarged, and removed from Suffolk Lane to its present site in Charterhouse Square. Amongst the famous scholars of Merchant Taylors' are Edmund Spenser, author of the *Faerie Queene*; Archbishop Juxon; Bishop Lancelot Andrewes; Bishops Wren and Buckridge of Ely; Dove, Bishop of Peterborough (called by Queen Elizabeth "the Dove with the silver wings"), and many other bishops and church dignitaries; James Shirley, the dramatist; Lord Clive, founder of the Indian Empire; Charles Ewing, the tragedian; Charles Mathews, the elder and younger; Albert Smith, and Edward Bond, late of the British Museum. Amongst alumni recently deceased: Edward Hawkins, Provost of Oriel; Dean Mansel; Dr. Samuel Birch; Sir Charles Bright; Bishop Woodford (Ely). Twenty-six scholarships, and exhibitions of £86 and £100 for five and seven years, to St. John's College, Oxford; others, ranging from £50, to Cambridge—altogether 33. Pupils 500; on entrance must be over nine and under fourteen. **Head Master.** Rev. W. Baker, D.D. *Motto*—*Homo plantat, homo irigat, sed Deus dat incrementum.*

Merchants' Lecture, The. Was established (1672) during the reign of Charles II., by the Presbyterians and Independents conjointly, at Pinners' Hall, being supported by contributions from the principal merchants of the City of London. Its professed design was "to uphold the doctrines of the Reformation against the errors of Popery, Socinianism, and Infidelity." From Pinners' Hall it was removed (July 1778) to New Broad Street Chapel, and thence to the Poultry Chapel (1844), Weigh House Chapel (1869), and Finsbury Chapel, Moorfields (1883). The lecture is delivered every Tuesday morning (12 to 1).

Meredith, George, poet and novelist, is a native of Hampshire; and after studying for some time in Germany he commenced his literary career with the publication of a volume of poems in 1851. This was followed by the "*Shaving of Shagpat, an Arabian Entertainment*" ('55), "*Marina, a Legend of Cologne*" ('57), "*The Odelet of Richard Fevral*" ('59), "*Modern Love: Poems and Ballads*" ('62), "*Emilia in England*" ('64), "*Rhoda Fleming*" ('65), "*Vittoria*" ('66), "*The Adventures of Harry Richmond*" ('71), "*The Egoist*" ('79), "*The Tragic Comedians*" ('81), "*Poems and Lyrics of the Joy of Earth*" ('83), and "*Diana of the Crossways*" ('85). Mr. Justin McCarthy, in his recent lecture on novels and novelists, placed Mr. M. in the front rank of modern romance writers.

Mersey Tunnel. As its name implies, this is a passage constructed under the river Mersey, to connect the two shores at Liverpool and Birkenhead, for railway purposes. On Feb. 13th, '85, the tunnel was formally opened; but, of course, much work had to be done before traffic could be commenced, and the actual

inauguration was eventually fixed for the end of Jan. '86, when the Prince of Wales performed that ceremony. The length of the tunnel, including the approaches, is $4\frac{1}{2}$ miles. There are two stations in the city, a lift being used at one of them (James Street) calculated to raise 230 passengers to the road level in 40 seconds; on the Birkenhead side there are four. The height between the bed of the river and the roof of the tunnel is given as about 30 ft., the tunnel itself being 21 high and 26 wide. Alongside the tunnel is the ventilation heading, 7 ft. 4 in. in diameter, and there are ventilating fans 40 ft. and 30 ft. in diameter. It may be added that 100 ft. below is the drainage heading driven to test the strata beneath the river. The Rt. Hon. H. Cecil Raikes, M.P., was chairman of the Company, Messrs. Waddell & Sons were the contractors, and Messrs. J. Brunlees, C. Douglas Fox, and J. Fox were the engineers. On the day of opening it was stated that the expenditure was £1,250,000 sterling. The passenger traffic by boat across the river has been estimated at 26,000,000 yearly. During '86 the Queen conferred the honour of knighthood upon Mr. Brunlees and Mr. C. Douglas Fox. (For other details see ed. '88.) According to the half-yearly report of the Company, ending June 30th, '88, the progress of the works had suffered from lack of funds; but as Parliament had during the session passed, as amended, the Company's Finance (No. 1) Bill, they looked forward to material help. The sum spent on capital account during the six months was £31,521, and the amount estimated for the current six months was £56,000. At the meeting on Sept. 27th the Rt. Hon. E. Pleydell Bouverie, in moving the adoption of the report, said it was partly with the view of making the necessary connections with the Great Western and North Western railways, and the connection on the Liverpool side, that the shareholders had been asked to sanction the Bill introduced into Parliament during the session; but now the directors had decided not to ask them yet to sanction the capital that would be required. The motion was agreed to.

Merv. An oasis in Central Asia, situated almost midway between Meshed and Bokhara, and Herat and Khiva. In ancient times the city of Merv, now in ruins, was famous for its vast size, magnificence, and prosperity. The locality became notorious when Russia, having conquered Khiva in 1873, threatened to occupy the oasis. The oasis has an area of 1,600 square miles, and a population of a quarter of a million Turcomans. There is no town of Merv; the thickly packed prosperous settlements spread over the oasis constituting what is recognised under that name. Outside the country is not desert in the usual sense of the term, but consists of good clayey soil, which fails to grow vegetation because the water supply is too limited to irrigate it. The Russians, however, are rapidly enlarging the cultivable area by extensive irrigation works, and have successfully introduced the culture of American cotton. The Transcaspian Railway (*q.v.*), which is to connect the Caspian with the Amu-Daira, was completed in July '86 to Merv. About 10,000 troops are maintained in the oasis, distant 200 miles from Herat, and also including in its administrative area Fendeh, half that distance from the key of India. The Turcomans of Merv are considered the bravest and best mounted horsemen in Central Asia.

"Message, Royal." See PARLIAMENTARY PROCEDURE.

Metamorphism. A term used in geology to denote the changes which certain rocks have undergone, whereby their original characters are more or less obscured. Almost every rock has suffered either mechanical or chemical change, but the term "metamorpho" is restricted to those rocks in which the alteration has been intense. See ed. '87.

Meteorological Society, The Scottish. See BEN NEVIS OBSERVATORY.

Meteorology. See ed. 88.

Metropolitan and City of London Police.

—**Metropolitan.** Established by Act of Parliament (1829), and the protection of the district by watchmen was discontinued by that statute and entirely intrusted to the then newly appointed force. The Metropolitan police area includes nearly 700 sq. miles, and embraces all places within a radius of fifteen miles of Charing Cross, except the City of London, which is protected by its own police (*v. inf.*). The former force has also jurisdiction on the river Thames. A great number of the Metropolitan police are employed at the Government dockyards, naval hospitals, and military stations. Many members are also engaged by other Government bodies, and a few by public departments, public companies, and private individuals. The Metropolitan police district consists of twenty-two land divisions and one on the Thames. Every land division is under the immediate charge of a superintendent, and the subdivisions under that of two or four inspectors. A certain number of beats are provided in each subdivision to be patrolled by constables, and are visited by sergeants who have sections of beats allotted to them for this purpose, and who report to their inspectors the occurrences thereon. The sections are also supervised by the inspectors both day and night, and very frequently by the superintendent. The former officers send reports daily to their superintendents respecting public matters in their subdivisions, and the superintendent furnishes diurnal reports to the Commissioner concerning occurrences in the division under his charge. Each subdivision has a station house in charge of inspectors, who are sometimes assisted by sergeants. Mounted police patrol the more distant parts of the outer subdivisions. In each division there are from thirty to forty men selected as a reserve force to carry out special duties, headed by an inspector and assisted by several sergeants. The supreme government of the Metropolitan police is under a Commissioner appointed by the Home Secretary. The former is empowered to make rules and regulations for the service, subject to the approval of the latter. The superior officers under the Commissioner are three Assistant Commissioners, five Chief Constables, and two Assistant Chief Constables. In Jan. 1888 (latest returns) the strength of the force was 14,081, comprising 30 superintendents, 820 inspectors, 1,363 sergeants, and 11,868 constables. There is also a receiver, a chief surgeon, two surveyors, and about thirty Civil Service clerks. There are local surgeons of the police in divisions. The most important branch of the police not engaged in ordinary divisional duty is the Criminal Investigation Department, started in 1878. It is now under the immediate direction of Mr. Anderson, assistant commissioner,

who is assisted by Mr. Chief Constable Williamson. A part of this service is the Scotland Yard department, and consists of a superintendent, five chief and three first-class inspectors, seven second-class inspectors, and about fifteen sergeants. There is also a branch of the Criminal Investigation Department in each division, under the charge of an inspector. The number of members belonging to each branch is regulated according to local circumstances. When vacancies occur in the higher branch of the detective service, meritable divisional detectives are appointed to fill them. The higher grade of detectives go to the most distant and other parts of the world for the arrest of criminals. Much valuable service is also rendered by this part of the department to police forces in Great Britain and Ireland, India and the Colonies, as well as to the police of foreign governments. The Convict Supervision Office, established in 1879, is in connection with the Criminal Investigation Department. It registers the names and particulars of discharged convicts on licence, and persons sentenced to police supervision in England, and retains photographs and marks of these persons, under the provisions of the Prevention of Crimes Act of 1871. Among other departments of the Metropolitan police are the executive branch, the public carriage branch, the lost property branch, and the common lodging-house branch. The salaries of the force are as follows: The commissioner (with allowances), £2,100; two of the assistant commissioners (with allowances), £1,250, and one who incurs no travelling expenses in connection with his duties, £1,100; chief constables, various salaries ranging from £650 to £800 per annum; the two assistant chief constables £400 per year each; the receiver, £1,200; divisional superintendents, £300 to £475; three inspectors of the Criminal Investigation Department, £300 to £350; and nine other inspectors, not engaged in divisional work, £200 to £275; the chief inspectors of divisions, £190; the remainder, £127 to £187. The highest pay of a sergeant is £156, which is received by two only. Three receive £151, six £146, 176 from £100 to £130, and 918 from £88 to £99. As regards the wages of the constables, more than half of them have from £62 to £75, and nearly the whole of the remainder £78 a year. The highest payment to constables is £83, which sixty-six receive. Clothing is found for all ranks, or money in place of it at various rates, from £15 to £5 per annum. Men in the reserve force obtain extra pay—viz., inspectors 4s., sergeants 3s., and constables 1s. 6d. per week. The allowances to the police engaged on special duty in addition to their pay ranges from 2s. to 19s. per week, according to rank. Satisfactory provisions are made for rewards for diligence and praiseworthy acts by the police, as well as for punishment for breaches of discipline. Appreciable regulations also exist for promotion and testing by examination the qualifications of members to fill the higher offices. A superannuation fund for pensioning the police is made up from various sources, the great bulk of which comes from the Metropolitan Police Fund. The total receipts for the year ending March 31st, '88, were £185,838 10s. 6d., while the payments during the same period amounted to the same sum: to 3,905 pensioners, and £5,018 6s. 8d. to fifty-eight constables as gratuities. No member of the Metropolitan police

is entitled to retire on a pension in any grade under sixty years of age unless certified by the chief surgeon of the force to be unfit for further work. For grave misconduct a member of the force may be deprived of a pension which he otherwise would receive. Nearly one-half of the funds required for the expenses of the police is from the money voted by Parliament, but the greater amount is from parochial rates. The total expenditure of the Metropolitan police for the year ending March 31st, '87, is £1,753,237 3s. 9d. A report is presented annually by the Commissioner of the Metropolitan police to the Home Secretary as to the result of its operations. Mr. J. Moore, C.B. (q.v.), has (Nov. '88) been appointed Chief Commissioner.—City of London Police. This force is under the control of a Commissioner, who is appointed by the Mayor, Aldermen, and Common Council, subject to the approval of Her Majesty. He is assisted by a chief superintendent. The strength of the force is 890, consisting of one superintendent, one chief inspector, 13 inspectors, 94 sergeants, and 782 constables. The force has also a receiver, a chief clerk, several assistant clerks, and a surgeon. Nearly the same regulations exist for the discharge of ordinary day and night duty as in the Metropolitan police, but the beats in the City are much shorter than in the inner subdivisions of the Metropolitan police district. This is necessary on account of the offices and warehouses and the very many streets, courts, and passages which are deserted at night after business hours and on Sundays. The headquarters are at the Old Jewry. The police area contains six divisions, each of which is under the immediate care of two inspectors, who are assisted by two station-house sergeants. The detective department consists of one inspector, 12 sergeants, and 22 constables attached to the chief office at the Old Jewry, and 42 constables distributed among the divisions. The most competent men are selected for this service. They are chiefly concerned in the prevention and detection of commercial frauds. If, however, a banker or merchant requires a City police detective to be sent abroad, or for a long distance from London, for the arrest of an absconding criminal, he is obliged to pay the expenses of this mission. Many of the City police are required to regulate traffic, for which they receive, some 2s. 6d., some 1s. a week allowance beyond their pay. Several other members of the force are employed on special duty at banks, offices, exchanges, railway stations, and at the Post Office. Their services are paid for by the authorities who engage them. The salary of the Commissioner is £2,000 a year, and that of the chief superintendent £650. The superintendent of the divisions receives £337 per annum, the chief inspector and the inspector of detectives £212 each. The twelve divisional inspectors receive different rates of pay, as there are three classes. Four of these officers receive £3 11s. 9d., four £3 6s. 7d., and four £3 1s. 6d. per week. To the twelve detective sergeants and the fourteen station-house sergeants £2 11s. per week is paid, while the remainder of the sergeants are paid from £1 17s. to £2 per week. The pay of the constables, who are divided into three classes, as in the Metropolitan police force, is from £1 7s. 7d. to £1 1s. 3d. per week. Each member of the force also receives 3s. per month as boot money,

and an allowance is made to the detectives for plain clothes in lieu of uniform. The Superannuation Fund is mainly provided partly from stoppages of the pay of the force, which is not to exceed a fortieth, and partly from fines inflicted on the police or persons who assault them. The balance is provided from the City cash. No member of the City police is legally entitled to a pension. All pensions are granted at the discretion of the Corporation, subject to the recommendation of the Commissioner. The total expenditure of the City police is about £112,000 per annum. Of this amount £75,000 is received from a rate of 5d. in the pound on the assessable rental of the City, £27,000 is paid from the City cash, the remaining £10,000 by those who employ the police in their private service.

Metropolitan Asylums Board. See POOR LAW.

Metropolitan Board of Works (Money) Act, '87. See ed. '88.

Metropolitan Board of Works. This Board, which will cease to exist on March 31st, '88, was constituted by the **Metropolis Management Act of '55**. According to the provisions of the Local Government Act (see SESSION '88, sect. 26), the City Council upon its election will appoint a provisional committee to carry on the multifarious duties entrusted to this Board. Although this body has during its existence carried out some magnificent works of public utility and improvement, the revelations before the Royal Commission appointed by the House of Commons have tended considerably to shake public confidence in its administration. Since the Board came into existence its duties and functions have been greatly increased. Sir John Thwaites was the first chairman, and at his death in '70 Sir James McGarel Hogg (now Lord Magheramorne) was appointed, and has been annually re-elected (salary £5,000 per annum) up to the present time. The most extensive of the Board's works, and the most important from a sanitary point of view, has been the system of main drainage by which the contents of the sewers are prevented from passing into the river Thames within the limits of the Metropolis, and are conveyed to outfall works, at which costly experiments have been conducted latterly under the supervision of Sir Henry Roscoe, M.P., with a view to the purification of the effluent. The main and intercepting sewers are about two hundred and fifty miles in length. Foremost amongst the improvements for which the Metropolis is indebted to the Metropolitan Board of Works is the **Thames Embankment**, the north side from Blackfriars to Westminster and from Grosvenor Road to Battersea bridge, and on the south side from Westminster to Vauxhall. These embankments reclaimed from the river a considerable extent of ground, in all fifty-two acres. The **Victoria Embankment** was completed in '70, the **Chelsea Embankment** in '74, and the **Albert Embankment** in '69. All the bridges over the Thames upon which tolls were levied have been made free by the Board, at a total cost of nearly a million and a half sterling. A new bridge in place of the old and defective timber structure has been built at Battersea, and a new bridge has also been built connecting Putney and Fulham. **Hammersmith Bridge** has been rebuilt, and the accommodation for pedestrian and vehicular traffic considerably increased; and **Albert and**

Lambeth bridges have been strengthened. The Board has obtained powers for establishing a steam ferry for foot passengers, horses, and vehicles across the Thames from Woolwich to North Woolwich, and to form a tunnel under the Thames at Blackwall (q.v.), with approach roads at either end. It has formed or widened many leading thoroughfares, such as Queen Victoria Street, Northumberland Avenue, Garrick Street, Southwark Street, Great Eastern Street, Clerkenwell Road, Charing Cross Road (opened to the public, Feb. '88, by the Duke of Cambridge), Shaftesbury Avenue, and many others. The widening of Upper Street, Islington, the Tower Hill improvement, the Hampstead and Hammersmith improvements, are also among other important works recently carried out; and considerable progress has been made with a much needed line of route from Gray's Inn Road to St. John's Street Road. In '88 important additions were made to the parks and open spaces under the Board's control. Victoria, Battersea, and Kennington parks were, in pursuance of an Act of Parliament, transferred to the Board. Wandsworth Common was placed under its jurisdiction, and the Board acquired by purchase a fine extent of ground at Hammersmith known as Ravenscourt Park (q.v.). On the 31st Dec., '87, the total area of all the parks, gardens, and open spaces under the Board's control, was 2,603 acres. Twenty-two improvement schemes under the **Artisans' and Labourers' Dwellings Improvement Act** have been prepared by the Board, and sanctioned by Parliament; and according to the Board's last report the blocks of buildings then erected in the Metropolis upon ground cleared by the Board under these Acts were 244 in number, and dwelling accommodation is provided in them for 25,953 persons. The **Metropolitan Fire Brigade Act** was passed in the year '65, and came into operation on the first day of the following year (see MET. FIRE BRIGADE). The quantity of water used for extinguishing fires in the Metropolis during the year '87 was over twenty-six million gallons. In connection with the gas supply the duty of the Board is for the most part limited to making arrangements for the daily testing of the gas of the three principal companies, in order to ascertain if it is of the quality prescribed by the Acts of Parliament. The Board have also other duties cast upon them in reference to tramways, the Building Acts, the formation of streets, and the structural arrangements of theatres and music halls. The Board is the local authority in the Metropolis, exclusive of the City of London, under the Contagious Diseases (Animals) Acts; it is empowered to regulate certain offensive businesses carried on in the Metropolis, and is the local authority for regulating the manufacture, conveyance, storage, and sale of explosive substances; and also the storage and sale of petroleum. The Board is also the responsible authority for carrying out the provisions of the Infant Life Protection Act, except so far as the City of London is concerned. It advances money on loan to the London School Board (q.v.), the Metropolitan Asylums Board the Boards of Guardians, the vestries and district boards of the Metropolis. Its expenditure for '87 (latest return) including £692,676 advanced on loan to local authorities, £495,825 invested in Treasury bills, and £128,807 applied to repayment of temporary loans and reduction

of debt, amounted to £3,678,445, of which £757,478 was defrayed out of money raised by the issue of Metropolitan consolidated stock.

Metropolitan Board Commission Act. See SESSION '88, sect. 32.

Metropolitan Board of Works, Royal Commission on, '88. Appointed on the motion of Lord Randolph Churchill to inquire into the workings of the Metropolitan Board of Works, commenced its sittings on Wednesday, May and. The commissioners were Lord Herschell (chairman), Mr. F. A. Bosanquet, Q.C., and Mr. H. K. Grenfell. At the fourth sitting of the Commission it was announced that Mr. T. J. Robertson, an assistant surveyor and valuer in the service of the Board, was not in attendance. Mr. Robertson had previously received notice from the Board that his services would not be retained after the 24th June, it being alleged that he had given certain information to Mr. Villiers as to the amount for which the Board would let the Pavilion site—a matter that had aroused a great deal of public comment. At the next meeting of the Commission a letter was read in which Mr. Robertson intimated that he should not attend. At the fourth meeting, on May 15th, Mr. Alderman J. E. Saunders, an architect, and a member of the Board for twenty-five years until January last, was examined, and stated that he acted as architect for Mr. Villiers for the Pavilion, and that his commission came to £1,800, the total of his charges being £2,000. He also stated that he had been concerned in the erection of the Hotel Metropole and the Grand Hotel. He received half of £5,000 as joint architect of the Grand Hotel, and his commission on the Hotel Metropole was about £1,200. He was paid 100 guineas for professional advice in connection with the Criterion Theatre. Mr. F. H. Fowler, also a former member of the Board, and a member of the Building Act and Theatres Committees, stated that his firm acted as architects for the Avenue Theatre, and that he had been connected with other buildings on the Board's sites. On the eighth day, June 8th, Mr. Villiers stated that for six years he paid Mr. F. W. Goddard, surveyor and valuer to the Board, the sum of £200 a year; and he further stated that he gave Goddard £5,000 in debentures for his assistance in obtaining the site and his previous services, and that he had given Robertson £1,000 and other sums. At the meeting of the Board on the same day Mr. Goddard was suspended. During the course of the inquiries other witnesses proved paying considerable sums to Goddard and Robertson, and allegations were made against several members of the Board. At the meeting of the Board on the 15th June Mr. F. W. Goddard was dismissed, and a week later his son, Mr. Matthew Goddard, who was employed in the department under his father, and who had admitted before the Commission that he had received "presents," was also dismissed. At the thirteenth sitting (June 26th) Mr. Robertson attended the Commission, and, through counsel, offered to give evidence; but Lord Herschell said that Mr. Robertson did not make a full disclosure and withdrew himself from the jurisdiction of the Commission, and the Commissioners would consider what course they would take with regard to him. On August 14th (the twenty-fourth sitting) the Commission adjourned *sine die*. An interim report was laid on the table of

the House of Commons on its reassembling, on Nov. 6th. The Commissioners stated that they reserved to themselves power to proceed further with the inquiry. The course pursued by Mr. Fowler and Alderman Saunders was censured, but the Commissioners stated there was no evidence that the fact of these gentlemen having been professionally employed induced them to act at the Board, as they might otherwise have done. They also expressed the opinion that there were no circumstances which disclosed to the Board in general that irregularities were going on, but in some respects the Board's proceedings facilitated the misconduct disclosed. The Commissioners further reported that, with the exception of Messrs. Saunders and Fowler, there were, generally speaking, no suspicious circumstances shown to be within the cognizance of the Board, and that the irregularities, so far as disclosed, affected only a small part of the Board's operations, and that there was no evidence that malpractice or corruption affected the greater part of the work of the Board, which had really rendered valuable services to the Metropolis. With regard to Goddard and Robertson, transactions are mentioned in which the Commissioners say that the Board was distinctly defrauded. Enough had transpired to show that for many years Goddard was altogether undeserving of the confidence reposed in him; and with regard to Robertson also, it was clear that he grossly betrayed his trust. The Commissioners further stated that they were not satisfied that the latter could materially add to their knowledge of the facts, and they were not disposed, unless there was good reason for doing so, to afford him the opportunity of making a true and full disclosure, and so entitle him to a certificate indemnifying him against the consequences of his misdeeds. There was no evidence that either Mr. Fowler or Alderman Saunders was in the habit of throwing unnecessary difficulties in the way of applicants to the Building Acts Committee and the Theatres Sub-committee, but great dissatisfaction existed at the mode in which applications were dealt with, and the impression prevailed that matters would be made smoother by the employment of these gentlemen. In view of the facts elicited by this inquiry, the Commissioners thought it might have a wholesome effect if it were made a criminal offence to offer to any member or official of a public body any kind of payment, fee or reward, having any relation to the affairs of the body of which he was such member or official, and also to make the person accepting any such payment, fee, or reward, amenable to the criminal law.

Metropolitan Commons Act, '66. See cd. '88.

Metropolitan Fire Brigade (established Jan. 1st, 1866). The duty of extinguishing fires in the Metropolis for thirty-three years previously was almost entirely performed by the Fire Insurance Companies, who had a brigade called the London Fire Engine Establishment. By the Metropolitan Fire Brigade Act of 1865 the Metropolitan Board of Works was charged with this work, and that of protecting life and property in the Metropolis in the event of fire; and in 1866 the stations, engines, appliances, officers, and men of the old fire brigade were transferred to the new one. In 1867 the Royal Society for the Protection of Life from Fire assigned its

escapes, apparatus, and staff to the **Metropolitan Board of Works**, and then the Metropolitan Fire Brigade were intrusted with the protection of life as well as property against fire. During the twenty years of its existence the strength and appliances of the Brigade have been more than quadrupled, although no material alteration has been made in the constitution of the force. The chief officer, **Captain Shaw**, who has had the command of the Brigade since its commencement, is now assisted by a second officer, **Mr. J. S. Simonds**, appointed 1881. The area protected by the Brigade is about 122 square miles, including the City of London and the Metropolitan Board of Works district, and extends from Highgate in the North to Sydenham in the South, and from Roehampton in the West to Plumstead in the East. According to the last report of the chief officer of the Brigade, the number of calls for fires, or supposed fires, exclusive of chimneys, received during '87 was 3,059. Of such calls 528 were false alarms and 168 chimney alarms. Only 175 of the fires resulted in serious damage. The number of persons who were greatly endangered by fire was 198, of whom only 55 lost their lives. The total number of calls attended by firemen for actual and supposed fires and chimney fires and supposed chimney fires in '87 was 4,714. According to the report referred to, the strength of the Brigade is as under: 55 land fire engine stations, 4 floating or river stations, 26 hose cart stations, 127 fire escape stations, 5 steam fire engines on barges, 45 land steam fire engines, 78 six-inch manual fire engines, 37 and six-inch manual fire engines, 63 hose carts, 30 miles of hose, 2 self-propelling fire-floats, 5 steam tugs, 7 barges, 140 fire-escapes, 9 long fire ladders, 9 ladder vans, 2 ladder trucks, 1 trolley for ladders, 1 trolley for engines, 11 hose and coal vans, 10 waggon for street duties, 5 street stations for ditto, 102 watch-boxes, 591 firemen, including chief officer, second officer, 4 district superintendents, and all ranks, 16 pilots, 67 coachmen, and 131 horses. An excellent system of **Fire Alarm telegraphs and telephones** between fire stations, and to police stations and to public and other buildings, is provided. At the end of 1886 every land station had an appreciable method of fire alarm which gave about 350 call points within the Brigade area. The substitution of telephones for telegraphs is now completed throughout the whole of the system. The remuneration of the members of the service is as follows: The 4 district superintendents receive from £195 to £245 per annum, and rooms, lighting and firing; 63 engineers or officers in charge of stations are paid from £2 1s. to £2 7s. per week, including rooms, lighting and firing; 76 first-class firemen receive £1 14s. 3d.; 81 second-class firemen £1 10s.; 130 third-class firemen £1 7s. 5d.; and 200 fourth-class firemen £1 4s. per week. Gratuities and pensions are paid to the men of the Brigade upon equitable terms. After thirty years' service any man who has reached the age of fifty-five can retire on two-thirds of his pay. The total annual expenditure of the Metropolitan Fire Brigade is about £113,000. Of this sum the fire insurance companies contribute £26,000; the Government £10,000, for the protection of the public buildings; and the ratepayers £77,000—being the amount realised at 4d. in the pound on the estimated gross ratable value of the Metropolis. An interesting **Fire Rescue Exhibition** was held at the Portman

Rooms, Baker Street (July '88). **Head Quarters**, Southwark Bridge Road, S.E.

Metropolitan Police (Compensation) Act, '86. See ed. '88.

Metropolitan Public Gardens. The invasion of bricks and mortar at almost every point of the green border-land of London, and the increasing congestion of the population within, have made the provision of Metropolitan recreation grounds necessary for sanitary, if for no other reasons. The difficulty of securing breathing spaces for the people in the overcrowded districts, however, is annually increasing; and would probably be insurmountable, but for the action of the **Metropolitan Public Gardens Association**. Much of the income of the Association is subscribed on the condition that it should be expended in wages to the "unemployed." Last year the income was increased by subsidies received from Mansion House funds raised for the benefit of the unemployed. The provision of seats in thoroughfares, the planting of trees, the formation of public gymnasia and the opposing of illegal encroachments upon commons, burial-grounds, etc., are among the several undertakings carried out by this society. **Chairman**, the Earl of Meath; **Sec.**, Basil Holmes. **Office**, 83, Lancaster Gate, W.

Mexican (Gulf and Pacific) Railway. It was reported from Philadelphia Sept. 9th, '88, that Mr. Joseph Pool, of an English-American syndicate, proposed to construct a railway across Mexico from the Gulf to the Pacific, stating that he had obtained a subsidy from the Government for the purpose. The western terminus was fixed at Tonalá, and the eastern at San Juan Baptista, on the river Grijalva, 100 miles from the Gulf. The river, it was calculated, would take vessels drawing 25 ft. up to the terminus of the line. The railway would be 225 miles long, the necessary capital had been subscribed, and President Díaz was said to be actively interested in the scheme. The route from the western point to New York would be shorter by 800 miles than that *via* Panama.

Mexico. A country forming the southern extremity of North America, and stretching into Central America. Bounded on the north by the states of Texas, New Mexico, Arizona, and California; on the south by Guatemala and British Honduras. **Area**, 741,791 sq. m.; **pop.** 10,447,974. **Capital Mexico**, **pop.** 300,000. Chief ports on Gulf of Mexico are Vera Cruz, Campeche, and Tampico; on the Pacific, Mazatlan and Guaymas. Besides these some twelve important cities. Divided into twenty-seven states, one territory, and one district.—The country is an elevated plateau, varied in contour, with volcanic peaks, Popocatepetl, etc., attaining nearly 18,000 feet. There are three great divisions: the torrid regions, chiefly on the coast, very unhealthy at some seasons; the temperate regions, occupying the lower slopes of the mountains, limited in extent, agreeable, humid, and prolific; and the cold regions, not less than 5,000 feet above sea-level. With the exception of the Rio Grande del Norte, which is the boundary of the United States, rivers are few and unimportant. There are lakes, some large, mostly impregnated with sodic carbonate. Resources enormous, but, from political and social causes, inadequately developed. All cereals, fruits, and vegetable

produce of southern Europe thrive in Mexico. Wheat, barley, maize, pulse, pepper, sugarcane, potatoes, coffee, cotton, tobacco, vanilla, flax, grapes, etc., are the chief crops. The forests abound in valuable timber, mahogany, rosewood, ebony, caoutchouc, the maguay (from which a sort of wine is produced), fibre-plants, etc. The flora and fauna are rich and profuse, the bird and insect tribes being especially notable for beauty and variety of colouring. Vast herds of cattle are bred, but the sheep are of inferior breed. Horses, of a fine description, are wild in great numbers, and even beggars ride. Mules, of a beautiful and vigorous breed, are raised in large numbers. The mineral wealth is great, comprising gold, silver, mercury, iron, tin, zinc, lead, antimony, arsenic, and sodic carbonate. The Republic is governed by a President and Ministry. There is a Senate, each state electing two members, and a House of Representatives elected by universal suffrage. The states have also their individual autonomous local governments. Prevailing religion Roman Catholic; but all sects tolerated, and none state-aided or allowed to possess land. Primary education nominally compulsory, but the law is not enforced. There are some 9,000 schools publicly supported. There is an army of 30,000 on the peace footing, raised to 150,000 in time of war. The navy consists of five small gunboats.—Industry, comprising mining and smelting of silver and other metals, agriculture, and cattle-herding. From 1821-80 the mines produced £180,000,000 of silver, and £968,200 of gold. Estimated revenue ('87), £6,350,000; expenditure, £6,347,187; debt about £42,000,000; exports ('86), £9,723,000. There are 3,703 miles of railway. Capital joined to New York by rail. Of the inhabitants 19 per cent. are Europeans or of European origin, 38 per cent. are Indians, and 43 per cent. are of mixed race. Proclamation of independence, 1820; Emperor Huibide shot and republic proclaimed, '24; Emperor Maximilian shot and republic again proclaimed, '67. Of late years there has been decided progress and less disorder. The opening of railways and spread of education are aiding in the development of this fine country. In Sept. '88 a severe earthquake occurred in Mexico. For Ministry, etc., see DIPLOMATIC. Consult Hamilton's "Mexican Handbook," Conkling's "Mexico and the Mexicans," etc.

Michel, Louise. A well-known figure and actor in recent political agitation in France. In 1871 she was an active Communist, and was suspected of being a *petroleuse*. Along with many others conspicuous in the Commune rising, she was banished to a French penal settlement in the Pacific, where she remained until the proclamation of an amnesty some years ago. Her return to Paris was made the occasion of a great popular demonstration. A year or two after her return she took part in some bread riots in Paris, and was tried and convicted for inciting the mob to break into bakers' shops. She was sent to prison, whence she was released in January '86, on the proclamation of an amnesty in commemoration of M. Grévy's re-election as president. In the winter of '87 she took part in some street disturbances in Paris, the result of the Wilson-Limonin scandals. Mlle. M. was early in the year shot at and wounded by a Communist, but refused to prosecute her assailant.

Microphone. See ed. '86.

Middle Temple. See INNS OF COURT; ed. '88.

Middlethian Campaigns. See ed. '86.

Milan Obrenovitch I., King of Serbia, b. 1854, at Jassy, in Moldavia. He studied at Paris, at the Lycée Louis-le-Grand. The assassination of his cousin, Prince Michael, caused his recall to Serbia, where he was proclaimed prince at the age of fourteen. A Council of Regency administered the government till the Prince came of age (1872). In 1875 he married the Princess of Stourdza, from whom he is now divorced, and by whom he has a son, Prince Alexander. Much attention was attracted to King Milan in '88, owing to his summary treatment of Queen Natalie. See SERBIA.

Military and Naval Men Deceased (Jan. 1st to Dec. 6th, '88). See OBITUARY.

Military Ballooning. See BALLOONING.

Militia. See ARMY.

Mill Hill School. Situated in the N.W. district of London, founded 1807, reconstituted '69. Awards the "Bousfield" scholarship of about £50, tenable either at University College or New College, London, for three years. Pupils, 150. Head Master, C. A. Vince, M.A.

Millais, Sir J. Everett, Bart., R.A., was b. at Southampton 1829. At the age of eleven he became a student at the Royal Academy, gaining the principal prizes for drawing. His first picture "Pizarro seizing the Inca of Peru," was exhibited at the Academy (1846). In conjunction with Dante Rossetti and Holman Hunt he set up a school of painting from nature, which obtained the title of "pre-Raphaelite" (*q.v.*), and published a periodical entitled *The Germ, or Art and Poetry*, in support of this school (1850). Their views were afterwards supported by Mr. Ruskin (*q.v.*) in the *Times*, as well as in a pamphlet on pre-Raphaelitism, and in "Lectures on Architecture and Painting." He was elected an A.R.A. (1853) and became R.A. (1863). He has exhibited a large number of pictures up to the present time. A large and representative collection of his works, embracing from his earliest to his latest styles, and illustrating his emancipation from the trammels of "pre-Raphaelitism," was exhibited at the Grosvenor Gallery in '87. Sir J. E. M. was decorated with the "Legion of Honour" ('78), and a baronetcy was conferred upon him ('85). He is chiefly distinguished for his portraits and exquisite delineation of child faces. His portrait of Mr. Gladstone is considered one of his finest efforts. He contributed to the *Magazine of Art*, June '88, an article on "Thoughts on our Art of To-day," in which he endeavoured to show that modern art is as excellent as that of classic or mediæval times. In the past year, Sir J. E. M. contributed to the Royal Academy "Murthly Moss, Perthshire." He also exhibited a portrait of Sir A. Sullivan at the Grosvenor Gallery, and "The Forlorn" and "The Last Rose of Summer" at the New Gallery.

Milne, John, F.G.S., Associate and Hon. Fellow of King's College, London, Royal Exhibitor of the Royal School of Mines, and now Professor of Mining and Geology in the Imperial College of Engineering, Tokio, Japan,

a portion of the Imperial University of Japan. He has travelled in Iceland; was engaged in 1873-74 in mining Newfoundland; accompanied Dr. Beke as geologist to north-west Arabia; and travelled across Russia, Siberia, Mongolia, and China, to Japan. He founded the **Seismological Society in Japan** for studying earthquakes. He has written the volume on "Earthquakes" in the **Natural Science Series, 1886**, has established observatories in Japan, and has also written on the volcanoes there. He has been described as the most daring of seismologists.

Mineral Rights.—**Clay, Law on**, in '88. The House of Lords has decided that clay is not included among the "minerals" which a seller of land had reserved to himself.

Minority Representation. The Reform Bill, which was passed August 15th, 1867, contained provisions for the representation of minorities in such constituencies as returned three members. The principle was to limit each elector to two votes. Lord Cairns introduced the proposal on the bill being brought into the Lords (July 30th), and the principle was afterwards accepted by the Commons.

"Mint Par of Exchange." See FOREIGN EXCHANGES.

Miquelon and St Pierre. Islands in the Gulf of St. Lawrence, south of Newfoundland. They belong to France; area 90 sq. m., pop. 6,300; and are chief centre of French cod-fisheries. Export to France valued at £1,000,000 per annum. Consult Bonwick's "French Colonies," and Norman's "Colonial France."

Ministry. When a Ministry resigns it is the function of the Sovereign to call upon some person to form another administration. There is no restriction upon the Royal choice, but the statesman usually selected is the leader of the opposing party in one of the two Houses. If the individual chosen undertake the task of forming a ministry, he commences by nominating his Cabinet, taking himself the principal position, which is variously designated as head of the Government, or First Minister, or Prime Minister, or Premier. The offices which invariably give the holder Cabinet rank are those of First Lord of the Treasury, Lord Chancellor, Lord President of the Council, the Secretaries of State for the Home Department, Foreign Affairs, the Colonies, for War, and for India, Chancellor of the Exchequer, and First Lord of the Admiralty. The Prime Minister usually takes the office of First Lord of the Treasury himself, but Lord Salisbury has twice given that position to another member of the Cabinet, and associated with himself the office of Foreign Secretary; or the Prime Minister may be First Lord of the Treasury and Chancellor of the Exchequer, or First Lord of the Treasury and Lord Privy Seal. The other offices, the holders of which may or may not be in the Cabinet, include those of Lord Privy Seal, Chancellor of the Duchy, First Commissioner of Works, Postmaster General, Lord Lieutenant of Ireland, Lord Chancellor of Ireland, Chief Secretary for Ireland, Secretary for Scotland, President of the Board of Trade, President of the Local Government Board. Appointments to all these offices, and to many others, a full list of which follows this article, are made by, or on the recommendation of, the

new Prime Minister, and each person so appointed may hold office as long as he does. Cabinets vary in number from eleven or twelve to sixteen or seventeen; their members are necessarily Privy Counsellors, and their deliberations are confidential. If a cabinet minister was in office before election there is no re-election necessary, as there is when the acceptance of office comes after a general election. Ministers on going from one office to another do not vacate their seats. There is, in effect, no limit to the duration of a ministry but the confidence of the Commons; it will not now resign upon the adverse vote of the House of Lords, nor if it be defeated upon a trifling matter in the Commons, but only when it is placed in a minority there upon some question of importance. In such a case the Prime Minister either places his resignation in the hands of Her Majesty, or asks leave to appeal to the country, and should the latter course be decided upon a general election follows. If the elections go against the Government it is now the custom for the ministry to resign and a new administration to be formed before the meeting of the new Parliament. The chief Executive power (see CROWN), though theoretically vested in the Crown, is actually exercised by the Cabinet, which is responsible to Parliament, and to the House of Commons more especially, for all its acts. While each minister conducts the ordinary business of his own office without reference to his colleagues, the most important business of every office is brought under the consideration of the whole Cabinet, who in Parliament are bound to act together on all executive questions. From an early period the kings of England were advised on public affairs by a privy council; matters of state being discussed in the sovereign's presence, and the result determined by vote subject to his pleasure. The selection by the sovereign of a few of the whole number was no doubt the origin of the Cabinet Council. It was not until the Restoration, says Macaulay, that the interior council began to attract general notice. "It at length drew to itself the chief executive power, and has now been regarded, during several generations, as an essential part of our polity. Yet, strange to say, it still continues to be altogether unknown to our law; the names of the noblemen and gentlemen who compose it are never officially announced to the public; no record is kept of its meetings and resolutions; nor has its existence ever been recognised by any Act of Parliament." The sovereign cannot now constitutionally preside at a Cabinet Council. "The Cabinet," says Mr. Gladstone ("Gleanings of Past Years"), "is the threefold hinge that connects together for action the British constitution of King or Queen, Lords and Commons. . . . Every one of its members acts in three capacities: as administrator of a department of State, as member of a legislative chamber, and as a confidential adviser of the Crown. Two at least of them add to those three characters a fourth; for in each House of Parliament it is indispensable that one of the principal ministers should be what is termed its leader." On the next pages is given a full list of all those who go out of office at a change of ministry, and under corresponding headings throughout this work will be found a summary of the powers and duties exercised by most of them, whether they be ministers or officers of the Royal Household. See CROWN, PARLIAMENT.

Ministries from 1880 to 1888.

Notes.—The names of Cabinet Ministers are indicated by an asterisk (*). In columns 1, 2, and 3, the names of those forming the original administrations are printed in roman type, and those who took any particular office subsequently in italics.

Mining. (See ed. '88 for descriptive explanation of mining, districts, works, legislation, etc.). During '88 mining operations in general shared the continued prosperity which marked the trade and industry of the year, and although in the coal section (which see) a great strike was threatened in the autumn, happily we have no considerable mining revolt to record. In Parliament there was no special legislation as to Mines Regulation, as in the Session of '87, but on the semi-political question of the payment of **Miners' Members in Parliament** there was an interesting development. It will be remembered that in '87 the members of the Northumberland Miners' Union decided against the payment of the salaries of Mr. Burt, M.P. for Morpeth, and Mr. Fenwick, M.P. for Wansbeck, both of whom may be described as typical Miners' members. But this was overruled by the delegates in November, who rescinded the resolution. Again, as the feeling of dissatisfaction was still manifest, another vote was taken, by ballot as before, in the spring of '88; and the result was made known on April 7th, but not the figures, to the effect that the payment of the members be continued, which was carried by a small majority. Mr. Burt has continuously sat in the House of Commons since '74, and his salary from the Union was fixed at £500 a year; Mr. Fenwick was elected in '86, and the Union agreed to make up any deficiency to secure a salary of £300, the first contribution to come from a public fund raised by the Liberal party in his division. Amongst some of those who opposed the payments, a feeling seemed to exist that the mining and other labour representatives in the House should form a **Labour Party**, and not tie themselves to any other political section. In regard to the interesting question of **female labour** at coal mines—above ground, of course—the Home Secretary stated in the House on March 8th that in '87 the number of females so employed under 13 years of age was 2; between 13 and 16 years of age, 259; and above 16 years of age, 3,922, making a total of 4,183. The old question, **Is there coal under London?** was revived in October in connexion with a boring for water carried on by the Southwark and Vauxhall Water Company, at Streatham, in the south of London. At a depth of 1,095 feet the boring came upon the Lower Jurassic limestone, and as the practical result was to prove the absence of the Lower Greensand, from which the Company hoped to obtain water, it was announced that they contemplated ceasing operations. This caused Mr. William Whitaker, of the Geological Survey, to suggest that there was here a good opportunity for continuing the boring for purely scientific purposes, for thereby the question of the existence of coal, in a locality supposed to be favourable, might be settled. Another interesting experiment of this description was being carried on at the end of the year in **South-east Durham**. A boring was commenced between West Hartlepool and Seaton Carew, to ascertain if the salt beds of South Durham extended thither. A brine spring was found, and it was determined to continue the boring in search of coal, although it had been held that the mineral had been removed by denudation from this part of the country. At a depth of between 500 and 600 feet the magnesian limestone was met with, and at about 1,400 feet the carboniferous strata. At a little over 1,500 feet a seam of coal about

14 inches thick was passed. According to a report published on November 16th, a depth of 1,800 feet had been reached, the indications being encouraging. As to the mineral statistics, it appears that in '87 there were 428,540 persons employed in underground coal mining, and 97,737 above ground, making a total of 526,277. In the same year there were 995 fatal accidents, and 162,119,812 tons of coal raised, making 162,924 tons per fatality. During '88 the two most serious calamities of this nature were at St. Helen's colliery, Workington, on April 19th, when an explosion killed seventeen men outright, two or three others being brought out in a dying condition; and at Aber colliery, Tyncwydd, Gmorgre Valley, where an explosion killed five men on May 14th. Amongst the inventions to check this loss of life were the "Deflector" miners' lamp, the invention of Mr. Andrew Howat, of Manchester, which is designed as an improvement upon the Marsaut or bonneted Mueseler, and a new portable electric lamp, the joint invention of Messrs. David Uiquhart, Mr. D. G. Fitzgerald, and others. With regard to the **drainage of the Black Country mining area**, at the meeting of the Commissioners at Wolverhampton, on Feb. 1st, it was agreed to levy a surface rate of 1d. per ton on all minerals raised, and it was decided to take steps with regard to those owners who had made false returns as to their output. Something like an organised opposition to the general policy of the Commissioners appeared later in the year, especially as regarded a proposed application to the Parliament for extended powers. The result of this was seen at the triennial election at the beginning of November, when the ten sitting members were rejected and the Ratepayers' Society candidates elected. At the first meeting of the **New Drainage Board** on Dec. 5th, at Wolverhampton, the ratepayers' representative members succeeded in upsetting the policy of the old body. Towards the end of the year a scheme to establish an **Imperial Institute of Mining Engineers** was being freely discussed, a scheme promulgated by the late Mr. T. W. Bunning, in '87, when Secretary of the North of England Mining Association, being taken as a basis. It seems there are no less than eight bodies of associated engineers connected with mines, including the Mining Institute of Cornwall, and the object is to amalgamate them.

Missionary Societies. The earliest missionary operations in modern times were carried on by the Jesuits in Japan, where great progress was made; but their work was overthrown, and the missionaries expelled before the sixteenth century. They also carried on operations in China and India. The **Society for the Propagation of the Gospel in Foreign Parts** was established by Act of Parliament in 1647, and work commenced amongst the North American Indians. Frederick IV. of Denmark founded a mission on the coast of Coromandel in the beginning of the eighteenth century. The **Moravian Church** was the first to begin missionary operations in its corporate character by establishing mission stations at the Cape of Good Hope, in the West Indies, and at Labrador. Norway sent missionaries to Greenland in 1721, which work has since been carried on successfully ever since. The **Baptist Missionary Society** was founded in 1782, the **London Missionary Society** in 1795, the **Church Missionary Society** at the commencement of the

present century, and the Wesleyan Methodist Missionary Society in 1814. The following details are extracted from the last published reports of each society.—**Baptist Missionary Society.** Received on behalf of the Society during 1888, £66,209; deficiency on the operations of the year £5,859. In India operations are carried on in South India, Western India, Bengal, and the North-West Provinces; there are 156 stations and sub-stations, 59 European missionaries, and 116 native evangelists. In China the principal stations are in Shansi and Shantung; there are 57 stations and sub-stations, 21 European missionaries, and 5 native evangelists. Japan has a station at Tokio, and 10 sub-stations; there are 3 European missionaries and 4 native evangelists. In Palestine the chief station is at Nablous, and there are 5 sub-stations, and 1 European missionary. Africa has 3 stations on the Lower Congo and 2 on the Upper Congo. There are 22 European missionaries at work, and 2 female school teachers. Mission work is also carried on in the island of Ceylon; in the West Indies; at Jamaica; and in Norway, Brittany and Italy. The statistics for 1887 summarised show the following results:—missionaries, 133; self-supporting churches, 62; evangelists, 699; baptised, 3,020; number of members, 46,902; day-school teachers, 379; Sabbath-school teachers, 2,328; day-scholars, 17,445; Sabbath-scholars, 27,465. **Mission House, 19, Fumival Street, Holborn, E.C.**—**Church Missionary Society.** Amount raised in 1887-8 £221,330. The Society labours in West Africa (Sierra Leone, Lagos and Yoruba country, and the Niger); in Eastern Equatorial Africa (Mombasa, Taita and Chagga, Usagara and Unyamwezi, and Uganda). Palestine (Jerusalem, Nazareth, Salt, Nablous, Jaffa, Gaza, and Haifa). In India it has five missions, having headquarters in Calcutta, Lahore, Bombay, Madras, and Travancore and Cochin. Besides these, mission work is carried on in Egypt, Arabia, Persia, Ceylon, the Mauritius, China, Japan, New Zealand, North-west America, and the North Pacific. The summary of the work shows the following results:—Stations, 294; Missionaries in holy orders, including European, Eurasian, and native clergymen, 539; European laymen, female teachers, and native unordained teachers, 3,711; native adherents, the great majority baptised, 185,538; native communicants, 47,531; schools, 1,028; scholars, 77,451. **Mission House, Salisbury Square, London.**—**London Missionary Society.** Amount received in 1888, £124,866. Mission operations carried on in China, at Hong Kong, Canton, Amoy, Hankow, Tientsin, and Peking. In India at Calcutta, Berhampore, Benares, Mirzapore, Kumaon, Almora, and Kanee Khet, in the north; and at Belgaum, Bellary, Cooty, Cuddapah, Bangalore, Triplicator, Madras, Travancore, and other places in southern India. In Madagascar 28 principal stations are sustained. In South Africa there are 12 and in Central Africa 3 stations. Mission work is also carried on in the West Indies and Polynesia. A general summary shows that the Society has 184 European missionaries and 5,668 native agents; 78,618 Church members, and 347,015 native adherents, while they conduct 1,647 native schools, with 115,240 scholars. The total amount raised and appropriated at mission stations was £19,404. **Mission House, 14, Blomfield Street, London Wall, E.C.**—**Wesleyan**

Methodist Missionary Society. The total sum received in 1887 (last received) from the home districts amounted to £105,382 os. 7d., Ireland £4,917 os. 11d., foreign districts £5,803 os. 6d.; these sums, with a number of extraordinary receipts, amount to £131,867 2s. 6d. The expenditure was £137,967 10s. 3d., leaving a deficiency, inclusive of the debt of 1886, of £16,869 7s. 8d. Mission operations carried on in France, Germany, Italy, Spain and Portugal, and Malta; in four districts of Ceylon, seven districts of India, two districts in China, in Southern and Western Africa, and in the West Indies. The summary of the year gives the following results:—Circuits, 1,663; chapels and preaching places, 7,619; missionaries, 1,730; other paid agents, 6,678; unpaid agents, 28,203; full church members, 223,164; on trial for church-membership, 24,633; scholars, 79,213. **Mission House, Bishopsgate Street Within.** An interesting classified catalogue of the missionary enterprises of all the Protestant Churches, and of the Greek Orthodox Church to the non-Christian world, was given by the *Record* (June 9th, '88). **Great Britain and its colonies** support 113 organisations, as follows:—Undenominational, 26; Episcopal, 25; Methodist, 6; Congregationalist, 1; Presbyterian, 7; Friends, 2; Bible Christian, 1; Baptist, 2; Plymouth Brethren, 12; miscellaneous, 5; Colonial, 26; total, 113. There are 110 organisations supported in foreign countries, as follows:—Germany, 20; Switzerland, 4; France, 1; Denmark, 2; Sweden, 8; Norway, 3; Russia, 2; Netherlands, 14; United States (North America), 56; total, 110. In June '88 an interesting **International Missionary Conference** was held in Exeter Hall; also an important gathering in celebration of the centenary of Protestant Missions. Consult Johnson's "Report of International Missionary Conference," and "Handbook of Foreign Missions."

Mississippi River Bridge. It was reported in October '88 that operations had been commenced on the bridge for the Kansas City, Birmingham, and Memphis Railroad, across the river at Memphis, Tennessee, to replace a tiam ferry. There is to be a cantilever channel span of 770 ft., and two others of 620 ft.; the width will be 34 ft., and the height above high water mark 75 ft. On the east, the approach will be an embankment and an iron trestle 1,000 ft. long, on the west an embankment 1,800 ft. long, and an iron trestle 5,200 ft. long. The cost is estimated at 2,250,000 dollars. The project has been in contemplation for a number of years.

Mivart, St. George, F.R.S., a well-known naturalist and writer on scientific subjects, b. 1827. Educated at Harrow, King's College, London, and St. Mary's College, Oxon. He was called to the bar in '51. Appointed lecturer at St. Mary's Hospital '62. He is a Fellow of the Royal Society, which, along with the Linnean and Zoological Societies, has published many of his papers, and has written extensively in popular and scientific periodicals. He is the author of "The Genesis of Species," a work of much power, in which he grapples with Mr. Darwin's theories of evolution. Mr. M. does not dispute the existence of the principle of evolution, but contends that it does not extend to men. He further denies the Darwinian doctrine that natural selection can be the cause of evolution, even granting that evolution were true. In another work he has condemned evolution on the ground that between man and the lower

animals there is a fundamental distinction—a distinction which clearly manifests itself in the superiority of the human intellect over the instinct of the brutes. Among other works written by M. Mivart are "Man and Apes," "Lessons in Nature," "Contemporary Evolution," "Defence of Freedom and Liberty of Conscience," "The Cat," etc. Mr. M. became a member of the Roman Catholic Church in '44.

Mobbs's Estate. This estate, in the parish of Hoxton, has been the subject of an extraordinary amount of litigation, and innumerable persons rejoicing in the name of Mobbs have from time to time put in a claim for its possession. In May '88, however, Lord Alington was successful in an action of ejectment brought against one Russell, who claimed to hold certain property under the will of John Mobbs, and since then comparatively little has been heard of the dispute.

Mobilisation Scheme. See ARMY.

Mohammedan Era, The. Dates from the flight of Mohammed to Medina, July 12th, 622 A.D. This date is frequently spoken of as the *Hegira*.

Mohammedanism. For detailed article on, see ed. '88.

Mohilla. One of the Comoro Islands (*q.v.*).

Mojanga. A port on the north-west of Madagascar (*q.v.*).

Moltke, Field-Marshal Helmuth Carl Bernhard, Count Von. A great European strategist, b. Oct. 26th, 1800. He left the Danish service ('22) for that of Prussia, and became ('32) one of the staff officers. In '35 he superintended the Turkish military reforms, and went through the Syrian rebellion ('39). He was in '56 aide-de-camp to Prince Frederick William of Prussia. He was appointed ('64) chief of the staff in the Danish war. In '66, in the Austro-Prussian war, his successful tactics as General of infantry won the battle of Sadowa. On the conclusion of the war the decoration of the Black Eagle was conferred upon him, and he was created General-in-chief of the staff. The successful conduct of the Franco-Prussian war ('70-'71) was also due, in great measure, to the tactical plans of Count Moltke. He was made Field-Marshal in '71, Count, '72. For some years past Field-Marshal Moltke has been assisted by General Waldersee (*q.v.*), who has now succeeded him as chief of the General Staff of the German Army. On the retirement of the Count in Aug. '88, the Emperor William II. appointed him President of the National Defence Commission, an office held by the first German Emperor when Prince of Prussia, and by the late Emperor Frederick when Crown Prince.

Moluccas, or Spice Islands. A group of the Asiatic Archipelago, between Celebes and New Guinea, all more or less under Dutch authority. Area, 42,420 sq. m.; pop. 353,000. Amboyna is the chief seat of Dutch government and trade. See COLONIES OF EUROPEAN POWERS.

Mommsen, Theodor, the eminent German jurist and historian, b. at Garding, Schleswig, 1817. Educated at the Univ. of Kiel. Professor of law successively at Leipzig, Zurich, Breslau, and Berlin; and in '82 he was tried on a charge of libelling Prince Bismarck, and was acquitted. His best known works, in addition to his splendid collection of Latin inscriptions, are his "Earliest Inhabitants of Italy," and "History of Rome." In '80, when Prof. Mommsen suffered

the misfortune of having his library destroyed by fire, he was presented by his admirers in England with a collection of historical classics printed in this country. On the occasion of his seventieth birthday, in November '87, a congratulatory address was sent to him by members of Oxford University, signed by sixty-two Dons.

Monaco. A principality, surrounded on all sides by the French department of Alps Maritimes, except to the south where it borders on the sea. Consists mainly of the town of Monaco and its suburbs, 9 miles north-east of Nice. Area 9 sq. m., pop. 12,548; pop. of town 3,242. Italian in language and traditions, but virtually under French control. Noted-casino, where gambling is licensed.

Monarchists. See FRENCH POLITICAL PARTIES.

Moncrieff, Sir Colin Campbell Scott, C.B., Colonel R.E. Appointed chief of Irrigation Department in Egypt, '83, and Under Secretary of State P.W.D. Egypt, '84. Has done excellent service in improving the irrigating capacity of the Nile.

Money Changing, Law of. The question whether money changing is a matter of sale and purchase, or merely a transaction in which one of the parties is entitled to a commission, was raised in the action of *Firth v. Cook*, May, '88. The plaintiff had obtained from the defendants, who are tourist agents and bankers, a quantity of Russian roubles at the rate of 1s. 10d. per rouble. Afterwards, finding that the rate for bills on St. Petersburg was 1s. 8½d., he brought an action for "excess commission," and recovered the sum of £1 in the City of London Court, Mr. Commissioner Kerr holding that the rate should have been 1s. 10d. On the case being carried to the Queen's Bench Division, Mr. Justice Field held that no question of commission could arise. It was nothing but a case of sale, and the appeal must be allowed.

Money Market. The Money Market in this country is composed of three groups of dealers—the Bank of England, the private and joint-stock banks, and the bill brokers (discount houses). The last named, as their title indicates, act as intermediaries between the banks, finding money for those who want to discount bills, and bills for those who want to invest money. The banks, on the other hand, collect and utilise the deposits entrusted to them by the public, issue notes, etc. There is, however, a great distinction between the Bank of England and the other banks of the country. The Bank of England is not only the banker of the Government, but also the bankers' bank. All the other banks keep their bullion-reserves at the Bank of England, and it is this circumstance which gives that establishment its special importance as the centre of our monetary system. The Bank's reserve is really the banking reserve of the entire kingdom, and for this reason it forms the barometer of the Money Market. We work, as it is said, on a "one reserve" system, and the value of money in this country mainly depends upon the amount of reserve held by the Bank of England. The discount rates quoted by the other banks and bill brokers, who collectively are called "the market," are generally below the Bank of England rate; and one reason for this is, that there is a very important difference between "gold" and "money" as these terms are technically used. It is quite possible to dis-

cover that gold is scarce, whilst money is plentiful. For example, the Bank's reserve may be low,—which means that gold is scarce,—but if under such circumstances the bill-brokers or merchants borrow money from the Bank for ten days or a month, the supply of money in the market would immediately be plentiful, although the Bank's stock of bullion would not have been increased by a sovereign. This is what is constantly occurring, and the level at which the private deposits at the Bank of England stand is therefore a very important element in controlling the course of market rates. The "price of gold" is another expression which constantly puzzles the public. It seems strange that anything can have a price measured in terms of itself, but the paradox is easily explained. By law the Mint is compelled to coin gold sovereigns for any person tendering bar gold at the rate of £3 17s. 10½d. per ounce; but, owing to the time taken by that establishment in minting, importers usually resort to the Bank of England, and sell it outright at the buying-price fixed by law for that institution—viz., £3 17s. 9d. As, however, the Bank, when selling bar gold, only does so at the price of £3 17s. 10½d., the difference of 1½d. per ounce allows bullion brokers to make a profit in times when gold is in demand for export by intercepting imported gold and selling it to the exporters at a little below the Bank's price. The gold movements at the Bank are the result of banking operations made either on home or foreign account. The internal movements are remarkably regular. There is always an outflow of cash to the provinces during the spring and autumn, and a subsequent reflux of money to London in the early summer and the winter. These movements, however, have become less important during recent years. It is the foreign movements of gold that are of chief interest; and as regards these, the only law, if law it can be called, is that gold usually tends to leave the country during the autumn. It is then that we frequently export gold to the United States in payment for imports; and it is then, too, that the Continent and other parts of the world often draw upon our gold reserve for payments on foreign loans subscribed for here during the earlier part of the year. The Bank's reserve is seldom allowed to fall below £10,000,000. A fair average is £12,000,000 to £14,000,000. The Bank rate is never reduced below 2 per cent., and it has never exceeded 10 per cent.

Money Orders. See Post Office.

Monier-Williams, Sir Monier, the distinguished Orientalist, b. at Bombay 1819, of which Presidency his father was Surveyor-Gen. Educated at King's Coll. Lond., and Balliol and Univ. Colleges, Oxford. Professor of Sanscrit at Haileybury, '44-58, and in '60 Boden Sanscrit Professor at Oxford. Prof. M.-W. is the author of a well-known Sanscrit Grammar, an English and Sanscrit Dictionary, and has edited a number of Oriental classics. His "Hindooism," "Modern India and the Indians," and "Religious Thought and Life in India," are amongst the most popular of his writings. Professor M.-W. has been instrumental in founding an Indian Institute and a School of Indian Studies at Oxford. He represented the Government of India at the International Congress of Orientalists at Berlin, in '87, and was knighted in '86. Was appointed Duff Lecturer at Edinburgh, '88.

Monro, James, C.B. Chief Commissioner of the Metropolitan Police; is a son of the late Mr. George Monro, solicitor, of Edinburgh, and was born in that city in 1838. At the age of nineteen he entered the Bengal Civil Service, and successively held various appointments, both magisterial and executive, including the secretaryship to the Bengal Board of Revenue, a district and sessions judgeship, the chief inspectorship of the Bengal police, and Commissioner of the Presidency Division. He was, on the retirement of Mr. Howard Vincent, appointed Director of the Criminal Investigation Department at Scotland Yard, with the title of Assistant Commissioner. Shortly after the appointment of Sir Charles Warren to the Chief Commissionership, Mr. Monro resigned his appointment. On the resignation of Sir Charles Warren, in November last, Mr. Monro was nominated his successor by the Home Secretary (Mr. Matthews). The nomination received the approval of the Queen on Nov. 28th.

Monroe Doctrine. The. James Monroe, President of the United States (1816), declared that no European Power ought to be allowed to found fresh settlements on the Continent of America. This has since been interpreted in a much wider sense, to signify that no European Power should be allowed to interfere in restraining the progress of liberty in North or South America.

Monsoons. See METEOROLOGY, ed. '88.

Monte Carlo. The casino at Monaco (q.v.). First stone laid in '58.

Montenegro. A principality under the patriarchal rule of Prince Nicholas I., which is practically absolute, though nominally shared with a council of eight, half elected by the inhabitants capable of bearing arms, and half nominated by the prince. Area (including town and district of Dulcigno, ceded by Turkey in '80), 3,630 sq. m.; pop., 236,600. Capital, Cetinje. pop. 1,500. Prevailing religion, Greek Church. Education compulsory and free. No official returns of the revenue exist, but it is supposed to be about £60,000. A debt of £100,000 was raised on security of the salt monopoly in 1881. An annual pension of £4,800 has been paid by Russia in return for consistent support, and an annual sum of £3,000 from Austria as a subvention for carriage roads. Imports valued at £20,000; exports at £200,000. Chief exports, shumac, flea powder, smoked sardines, smoked mutton, cattle, goats, etc. There is no standing army except a bodyguard of 200 men; but all the male inhabitants capable of bearing arms (about 29,000) are called out in war time. The nation joined the Servians in their war against Turkey in 1876, repelling with heavy loss all attacks made by the greatly superior forces of the Turks; at the close of the war they were declared independent, and accessions of territory were granted. During the past few years the Black Mountain has been comparatively quiet, though the army has been increased, in view of the unsettled state of affairs in Bulgaria. Various cases of brigandage took place during '88. A solemn promulgation of the New Civil Code by Prince Nicholas took place (July) in the presence of the whole diplomatic corps, in which he expressed deep gratitude to Russia, alluding to the Czars Alexander II. and III. as "the protectors of all the Slavs." A clause was included by which no foreigner is to be allowed to acquire land in Montenegro by inheritance, purchase, or donation, unless it be

a personal gift from the Prince. For Ministry, etc., see DIPLOMATIC.

Montreal. The largest and most attractive city in Canada, and the present commercial and financial centre of the Dominion. Pop. 200,000. Situated on the St. Lawrence river, in the province of Quebec (*q.v.*).

Montserrat. A British West Indian island, forming a presidency of the Leeward Islands. Area 32 sq. m., pop. 11,097. Capital, **Plymouth.** The island is of volcanic formation, and there is no good harbour. About half of it consists of mountain and forest. Is called the most healthful and pleasant of the West India Islands. Soil extremely fertile. Sugar, limes, and fruits principally cultivated. The woods afford many valuable drugs, dyes, timbers, etc. Sulphur, iron, and aluminous schist are its minerals. Governed as a Presidency of the Leeward Islands. Education well provided for. For financial statistics, see BRITISH EMPIRE, etc. (table). Montserrat was colonised by English in 1632. It passed into French hands for a time, but was finally restored in 1784.

Moore, Miss Mary, actress, made her *début* about five years ago. She quickly established herself as a favourite in London by her impersonation of "Wild Oats" at the Criterion. At the end of '87 she appeared with Mr. Charles Wyndham, at Berlin, in a German translation of "David Garrick," and received great praise for her performance from the German critics.

Moravians, The. A body of Christians, thought to have formed at one time a part of the Hussites. Withdrew into Moravia in the fifteenth century. In 1722 they formed a settlement called "The Watch of the Lord" on the estate of Count Zinzendorf. There were 500 members of the Church in 1727. The Society was introduced into England by Count Zinzendorf in 1738. In 1817 a London Association was formed. They also founded settlements abroad in 1732. See MISSIONARY SOCIETIES.

Moreton Bay. Port of Brisbane, capital of Queensland (*q.v.*).

Morganatic Marriage. Morganatic or "left-handed" marriages are by the common law of Germany permitted to the royal houses and the higher grades of nobility; the Prussian law allowing a like indulgence to the lower nobility. They are, practically, marriages contracted by princes and nobles with their inferiors in rank, so far recognised that they do not reflect upon the wife's honour or the children's legitimacy, but do not preclude a subsequent full marriage with an equal in rank during the lifetime of the morganatic wife. The arrangement is purely dynastic and social, and does not possess the direct sanction of any Christian religious body. The term "morganatic" is said to be derived from the fact that the wife's rights were limited to the *Morgengabe* (*dowry malutinate*), or, according to others, from the old Gothic *morgan*—i.e. "to shorten, to limit." Inequality of social condition, however, is not necessary to an alliance of this kind. It may be made between persons of equal rank, so as not to prejudice the children of a first marriage by giving rights of inheritance to the offspring of a second.

Morley, Rt. Hon. John, M.P., was b. at Blackburn, 1836. Educated at Cheltenham and at Lincoln Coll., Oxford, where he graduated B.A. ('59), subsequently called to the

bar at Lincoln's Inn ('73). Hon. LL.D. of Glasgow Univ. Author of various works on the French Philosophers of the 18th century, of an essay on Compromise, and of a "Life of Cobden" and "Edmund Burke." He has also recently published an essay on aphorisms. He was for some time editor of the *Literary Gazette*, the title of which he altered to *The Parthenon*, and for fifteen years ('67-82) conducted the *Fortnightly Review* (*q.v.*). For three years he was editor of the *Pall Mall Gazette* (*q.v.*), with which he terminated his connection in 1883, on his acceptance of the editorship of *Macmillan's Magazine*, from which he retired in '85. In '60 Mr. Morley unsuccessfully contested Blackburn as a Liberal. He was also defeated in Westminster in '80. Three years later, however, he succeeded at Newcastle-on-Tyne, for which he has sat ever since. When Mr. Gladstone propounded his Home Rule scheme he found in Mr. Morley one of his ablest and most enthusiastic supporters, and who subsequently became Chief Secretary for Ireland. Mr. Morley retired with his leader when the Government collapsed in June '86, but he has never swerved from the advanced position he took up at first. He is one of the five Liberals who met (Jan. '87) for the purpose of discovering a *modus vivendi* for the reunion of the Liberal party. During the past year Mr. Morley has been one of the most active leaders of the Home Rule campaign both in and out of Parliament. Early in the year he visited Dublin in company with Lord Ripon and was received with demonstrations of the most extraordinary enthusiasm. Mr. M. took part in a debate at the Oxford Union (March); and addressed a meeting at Newcastle (April). He subsequently visited his native town, and both there and at a mass meeting held at Lord Ripon's seat in Lincolnshire, in August, delivered powerful speeches against the Irish policy of the Government. Mr. M. also visited Ipswich in October, and accompanied Mr. Gladstone to Birmingham in November last, on the occasion of the meeting of the National Liberal Federation. His literary work during '88 included an introductory essay to "The Complete Poetical Works of William Wordsworth," and "Walpole" in the "Twelve English Statesmen" series.

Mormonism. The Mormons, or Latter Day Saints, are a sect founded by Joseph Smith at Manchester, New York (1830). (For history of Mormonism up to last year, see ed. '88.) On Jan. 12th, '87, the House of Representatives passed without division a bill for the suppression of polygamy in the Territory of Utah. The bill is a substitute for that passed by the Senate, though it aims at similar results. Its chief provisions are: (1) Polygamy is declared to be a felony; (2) The chief financial corporations of the Mormons are dissolved, and the Attorney-General is directed to wind them up by process of the courts; (3) Polygamists are made ineligible to vote; (4) All voters in Utah are to be required to take an oath to obey the laws of the United States, and especially the laws against polygamy; (5) Woman suffrage in Utah is abolished; (6) Lawful wives and husbands are made competent witnesses against persons accused of polygamy.

"**Morning Advertiser,**" daily paper (3d.), founded February 8th, 1794, is the recognised organ of the licensed victuallers. It possesses distinctive features of its own; while being

Liberal and Independent and Constitutional in politics, it is not exclusively the advocate of any one party. Editor, **Thos. Wright**. Offices, 127, Fleet Street, E.C.

"**Morning Post**," daily (*rd.*). Conservative in its politics, it is the fashionable chronicle of the party, giving events of interest among the higher circles of society. It also, in addition to news of the day, home and foreign, gives critiques on literature, science, and art. Offices, Wellington Street, Strand.

Morocco. The westernmost of the Barbary States, occupying the N.W. corner of Africa. An empire consisting of the kingdoms of Fez and Morocco, and the territories of Suse, Draha, and Taflet, with the oasis of Twat. Area (estimated) about 260,000 square miles, of which the Tell, or coast-region, occupies 76,000, the steppes 26,000, and the Sahara districts 158,000. Population estimated at from 2,500,000 to 5,000,000. There are three capitals: Fez (pop. 80,000), Morocco (pop. 50,000), Mequinez (pop. 56,000). Chief ports are Mogador and Tangier, on the Atlantic; Tetuan and some smaller places on the Mediterranean. Taflet is the point of arrival and departure for the caravans through the Sahara. Country little known to Europeans. The highlands are said to be romantically beautiful, well wooded and fertile. Products are wheat, barley, maize, olive oil, esparto grass, hemp, many fruits, wool, etc. It is said there are coal, iron, antimony, copper, lead, tin, gold and silver, and other minerals in quantity. Chief manufactures are carpets, slippers, and famous leather. Exports, produce and manufactures, also tawls, eggs, cattle, gums, ostrich feathers. Ruled by a sultan (*Muley Hassan*) usually styled "emperor" by Europeans. He is absolute, but the tribes beyond the mountains scarcely acknowledge his authority. The sultan is head of religion as well as of the state. He has six ministers, from whom he receives advice, and through whom he carries on the executive: Vizier, Ministers for Home and Foreign Affairs, Chief Chamberlain, Chief Treasurer, and Chief Administrator of Customs. Disciplined standing army 10,000 infantry, 400 cavalry, and some artillery; militia infantry 10,000, cavalry 10,000; irregular forces 40,000. Imperial revenue about £500,000 per annum. Imports ('86), £1,547,219; exports, £1,312,985. Trade chiefly with Great Britain, France, and Germany. Three-fourths of the trade with Great Britain, which takes maize and beans, gum, almonds, olive oil, and sends cotton manufactures. Trade passes mainly through Tangier, which is under European influence. Inhabitants are Berbers, descendants of ancient Numidians; Moors, half-caste descendants of Arab conquerors of eighth century; Arabs, Negroes, and Jews. Religion, Mohammedanism. In '83 Spain acquired a port south of Mogador, and holds some "presidios" on the coast. (See SAHARA COAST.) In '86 the Moors declined new commercial treaties with the Powers, on the ground that foreign consuls already abused rights conceded to them. Some of them gave "protections" to Jews and others, who were thus enabled to set the government at defiance and exact sums from Moorish subjects under false pleas of debt. The first step towards remedying this state of things was taken by the United States Government early in 1887. A new consul (Mr. Reed Lewis) was appointed to Morocco. He abandoned the claim to "protections" on the part of his Government, and

caused all persons imprisoned on such pretext to be released. The representatives of other Powers have more or less followed this example. In October an alarming illness of the Sultan caused a general fear of revolution and resulting anarchy. Most of the Powers despatched war-ships to Tangier for the protection of their subjects. The alarm subsided with the Sultan's recovery. During '88 the dervishes at Taflet proclaimed a holy war. Serious disputes arose between the United States and Morocco, which were ultimately settled in May. A Spanish Red Book on Morocco was issued early last year. (For relations of Morocco with Spain see SPAIN; and for Ministry see DIPLOMACY.) Consult De Amicis' "Morocco," Hooker's "Tour in Morocco," Leared's "Morocco, and the Moors," Watson's "Visit to Wazan."

Morris, Lewis, author of the "Epic of Hades," "Songs of Two Worlds," "Gwen," "The Ode of Life," "Songs Unsung," etc., originally published anonymously as the productions of "A New Writer," was b. in Carmarthen. Graduated First Class in Classics at Jesus College, Oxford, 1855. Called to the bar '61, and ('80) served on the Committee of Inquiry into Intermediate and Higher Education in Wales. He succeeded the late Mr. W. Adam as vice-chairman of the political committee of the Reform Club. He unsuccessfully contested Pembroke as a Home Ruler in '86. Mr. M. (Jan. '88) received a silver medal from Her Majesty in recognition of his Jubilee Ode.

Morris, Philip Richard, A.R.A., b. at Devonport, 1838. He early attracted the notice of Mr. Holman Hunt, by whose advice he studied the Elgin marbles at the British Museum. Afterwards, a most successful student of the Royal Academy. His first exhibited picture appeared under the title of "Peaceful Days," since when Mr. Morris has become celebrated for his tender and poetic rendering of scenes of humble life, and his delicate arrangement of colour. Among his best known pictures are "The Shadow of the Cross," "Prison Fare," and "A Procession at Dieppe." Elected A.R.A. (1877).

Morris, William, artist and poet; b. at Walthamstow in 1834, educated at Marlborough and Exeter Col. Oxford. Mr. M. turned his attention for some time to the study of architecture; and in '68, together with his friends Dante G. Rossetti and Burne Jones, endeavoured to elevate the artistic taste of the public. For this purpose a business of "art fabrics," wall-papers, and stained glass, was started. Though undertaken rather as an artistic venture than as a business speculation, the concern—now carried on by Morris and George Wardle—has been extremely successful, and has effected something like a revolution in the art of designing. Mr. M. published in '67 his poem, "The Life and Death of Jason," which was followed in '68-70 by "The Earthly Paradise," a series of 24 romantic tales. His later works include "Love is Enough," "The Story of Sigurd the Volsung," and "Hopes and Fears for Art." He has also translated the *Æneid* of Virgil, and in conjunction with Mr. Eirikr Magnusson has rendered into English verse a number of Icelandic Stories. Mr. W. M. is one of the leaders of the Socialistic Movement in England.

Morrisonianism, a name used to designate the principles held by members of the Evangelical Union, formed by Dr. Morrison and others, in May 1843, of those who disagreed

with the doctrine held by the Presbyterian Churches that Christ only died for the elect. Evangelical Unionism first originated in 1841, when its founder and three other ministers separated from the United Secession Church. The Evangelical Union Churches, which are mainly confined to Scotland, have a theological hall, where a number of students attend; and a weekly official organ, the *Christian News*. Many of the ministers, all of whom are total abstainers, have settled in England in Congregational churches, which are somewhat similar in church government. In all there are about ninety E. U. churches. The distinctive tenets are that the Divine Father loves all, the Divine Saviour died for all, and the Divine Spirit strives with all.

Mortgage. See ed. '87, and consult Williams' "Principles of Real Property," the chapter entitled "Of a Mortgage Debt."

Mortmain, Statute of. Gifts in mortmain first prohibited by Henry III. (1225); afterwards by Edward I. (1290) applied to restrain growth of Church funds; Richard II. (1392) extended prohibition to all lay corporations; statutes suspended by Philip and Mary (1554); legacies by Mortmain restricted by George II. (1736).

Moyer (or Lady Moyer's) Lectures. The history of these lectures may be almost sufficiently understood from the following extract from the will of the founder, Lady Moyer, or, as she is therein styled, "Dame Rebecca Moyer, late of the parish of St. Andrew, Holborn, in the county of Middlesex, widow." The will of Lady Moyer, who was a daughter of Alderman Sir William Jolliffe, and widow of Sir Samuel Moyer, Bart.—a rich Turkey merchant who was sheriff of Essex in 1698, and who died in 1716—bears date Dec. 16th, 1722, and was proved Feb. 21st, 1723. She had, however, endowed the Lecture about three or four years before her death. The first Lecturer on the Lady Moyer foundation was the celebrated polemic and apologist, Dr. Daniel Waterland, who in 1719-20 inaugurated the series with "Eight Sermons, preached at the Cathedral Church of St. Paul, in Defence of the Divinity of our Lord Jesus Christ"; and who in his published volume describes them as having been delivered "upon the encouragement given by the Lady Moyer, and at the appointment of the Lord Bishop of London." In 1757-8, the Moyer Lectures were preached by the Rev. William Clements, A.M., then curate at St. Mary-at-Hill, London, and afterwards librarian at Sion College, who published them for the first time in 1797, with a dedication "to the Right Reverend Beilby, Lord Bishop of London." In the years 1764 and 1765, the preacher was the Rev. Benjamin Dawson, LL.D., rector of Burgh, in Suffolk, who printed his lectures under the title of "An Illustration of several Texts of Scriptures, particularly those in which the Logos occurs," and whose title page has the statement made, without any further identification of the lady referred to, that they were delivered "at the appointment of Mrs. Heathcote, and by permission of the Lord Bishop of London." The Rev. Thomas Morell, D.D., is supposed to have been the last of the Moyer Lecturers; one of his discourses "preached in the Cathedral Church of St. Paul, London, June 2nd, 1774," having been published as "The Scripture Doctrine of the Trinity justified." This lecture, which was published anonymously, was conceived in opposition to

Theophilus Lindsey, and was printed "with occasional remarks on the preacher's (Lindsey's) first sermon in Essex House, Essex Street, April 17th, 1774." It has been currently affirmed that Lady Moyer founded her lectures for a limited number of years: and, again, that they terminated with the expiration of the lease of the estate out of which the Lecturer's stipend was provided. Bishop Van Mildert, however, in his "Review of the Life and Writings of Dr. Waterland," points out the circumstance of "no limitation" being mentioned in Lady Moyer's will. "But since," he says, "there is no compulsory obligation in the will to perpetuate the Lecture, the probability is, that in course of time (perhaps immediately after Dr. Morell's turn expired) the property fell into other hands, and the Lecture was no longer continued."

Mozambique. A Portuguese possession on the east coast of Africa, nominally extending from Cape Delgado to Delagoa Bay, over 1,200 miles, with area 382,683 sq. m., pop. 350,000. In reality the Portuguese only occupy a few points, to which their authority is limited. The chief of these settlements on the coast, mostly on islands, are Mozambique (the capital), Quillimane (at one of the entrances to the Zambezi), Sofala, Inhambane, and Lourenço Marques, in Delagoa Bay. Up the Zambezi 120 miles is Sena, of little importance; 260 miles up is Teta, and 500 miles up the stations of Zumbo and Chioova. This territory has been in Portuguese hands since 1497, yet nothing has been done by them to open up the country. Government and trade are in the most debased condition. A small military force, composed of convicts and natives, is little respected. The slave trade continues in spite of laws against it. The coast is unhealthy, but rich in products. Gold has been worked at some places inland. Recently a splendid harbour has been discovered—Nakala, in Fernao Veloso Bay. Some portions of the inland border are now being opened up by the Blantyre Mission of the Universities' African Missions. The settlement in Delagoa Bay (q.v.), isolated and almost lost, has lately come into notice through the efforts made by the Boers to obtain it as a port for the Transvaal.

Müller, Frederick Max, b. 1823. Educated at Leipsic Univ., where he graduated (43). Studied for some time in Paris, and (46) came to England, where he found employment in collating MSS. at the East Indian Museum and at the Bodleian. Appointed (50) Deputy Taylorian Professor, and (54) Taylorian Professor at Oxford. Made the first Professor of Comparative Philology in Oxford (68), with which University he has been associated ever since. Professor Müller is one of the eight foreign members of the Institute of France, and is a Knight of the *Ordre pour le Mérite*. He is an honorary LL.D. of Edinburgh and Cambridge. Among his published works are "The Rig-Veda: Translation from the Sacred Books of the East," "The Religions of India," "A Survey of Languages," "Buddhism and Buddhist Pilgrims," "Lectures on the Science of Language," "Chips from a German Workshop," "Biographical Essays," "Biographies of Words and the Home of the Aryas," etc.

Municipal Election Law. The House of Lords decided, March '88, in the case of Pritchard v. The Mayor of Bangor, that an

alderman is eligible for election as a councillor, before he has actually resigned the former office.

Murray. See VICTORIA.
"Murray's Magazine" (monthly is.) Started January 1887 by the well-known firm of John Murray, Albemarle St. Is a popular magazine for the general reader, containing articles upon topics of the day, sport, travel, literature, and art, and devoting considerable space to fiction. Short notices of new books are given monthly under the heading of "Our Library List."
Editor, Mr. Edward A. Arnold (a nephew of the late Matthew Arnold). **Office,** Albemarle St., W.
Muscat. For Political Agent see DIPLOMATIC.

Musha and Efat Islands. Two small unoccupied islands in Tadjurah Bay, Gulf of Aden. Acquired by Great Britain in 1883. In 1887 formally admitted by the British Government to be within the sphere of French claims.

Musical Festivals. For short history of these see ed. '86.

Music, '88. There would be no difficulty in recalling an English musical year in which more important novelties were produced than in '88, but no season can be considered uneventful that includes the celebration of a **Handel Festival** under such conditions as are afforded at the Crystal Palace. By drafting contingents from the leading musical centres of the country, the **triennial meeting** has assumed the character of a national gathering that is both significant and impressive. Greater honour could not be paid to any representative of Art, whether past or present, than that bestowed at these fixed intervals upon the genius of Handel. Though the programme is virtually the same—being of necessity indeed almost unalterable—the patronage of the general musical public remains as steady as it was ten or fifteen years back. With such an enterprise the fluctuation of three or four thousand persons in the attendance matters little. The numbers cannot be always the same, and a few less or more are not worth mention when the total is about 80,000 during the three days of the Festival and the preliminary rehearsal. In '88 as much interest as ever was evinced in proceedings long since familiar to the great majority of supporters, and the entire performance, under the direction of Mr. August Manns, was in every detail equal to the best in preceding years. As usual, the Monday and Friday were respectively devoted to "**Messiah**" and to "**Israel in Egypt**," those imperishable monuments to the power of the master; but in the Selection on Wednesday a successful attempt was made to exhibit in chronological order various specimens of his workmanship, from early Italian operas to his latest productions in the domain of sacred music. This arrangement allowed of the performance of some excerpts from operas, cantatas, and oratorios not previously heard at Sydenham. The result of the Festival was again eminently satisfactory to all concerned. Having acquired **Covent Garden Theatre for Italian Opera, Mr. Augustus Harris** soon bestirred himself to fulfil the expectations created by his initial venture with this costly branch of entertainment at Drury Lane in '87. He now trusted to singers for whom his subscribers had already shown great partiality. The catalogue of his company included nearly a dozen ladies who had earned the right to be considered *prime donne* both here and elsewhere; and among the male principals were the

Brothers De Reszke, M. Lassalle, Signor Del Puente, and Signor Ravelli. Signor Mancinelli and Mr. Randegger were once more the conductors. Mr. Harris, by personally directing the *mise-en-scène*, not only secured pictorial completeness, but evolved much that was new in the way of grouping, etc. The co-operation of Madame Albani and the De Reszkes in "**Lohengrin**," the further assistance in "**Faust**" of Madame Scalchi and M. Lassalle, and the appearance in "**Les Huguenots**" of Madame Nordica, Miss Ella Russell, Madame Scalchi, the two De Reszkes, Signor Del Puente, and Signor Navarrini, caused these three fine examples of varying styles of composition to be so frequently heard during the season (always to densely crowded audiences), that Mr. Harris was induced to prolong the performances a fortnight beyond the period announced at the outset of his campaign. During these extra representations the attendance did not decline, and on the final night (when *Les Huguenots* was played) the assemblage did not depart until they had summoned the manager and extorted a few words of grateful acknowledgment, in which better things, if possible, were promised for the succeeding year. Mr. Harris was not rash enough to say exactly what he hoped to do during his second season at Covent Garden, but as it was whispered that he intended to witness the performance of the *Meistersinger* at Bayreuth, the conclusion was arrived at that he would probably place the only comic opera of Wagner upon the stage in the Italian language. It has since transpired that Mr. Goring Thomas's English opera "**Esmeralda**" (originally produced by Mr. Carl Rosa) has been translated into Italian with a view to Madame Albani—for whom the composer has provided an additional air—playing the heroic. Madame Minnie Hauk appeared several times in "**Carmen**," and celebrated the tenth year of her performance in London of the gipsy girl; **Adèle**, **Sigrid Arnoldson** played some lighter characters, and as **Cherubino** joined Madame Albani and **Miss Ella Russell** in *Le Nozze di Figaro*; such a pronounced success was gained by **Miss MacIntyre**, a *debutante*, that Mr. Harris towards the close of the season permitted her to represent **Margaret** in Boito's "**Mefistofele**," the character of Helen of Troy (hitherto in the Metropolis assigned to the same *prima donna*) being sustained by Miss Ella Russell; and a favourable impression was made by **Madame Rolla**, whose useful readiness was shown by the manner in which at short notice she sang the music of **Donna Elvira** in the Mozartian *chef d'œuvre*. Mr. Harris gave about twenty operas with perfection of ensemble, and on no occasion throughout the season was compelled to change the performance advertised. For the first time for many years **Mr. Carl Rosa** did not bring his company to London, so that enterprise in elaborate opera was restricted to Covent Garden. The provincial musical festivals of the year were held at **Birmingham, Chester, Hereford, and Bristol**. Of the three latter nothing need be said, inasmuch as the programmes were chiefly made up of pieces often heard elsewhere. True, the **Three Choirs meeting** on the banks of the Wye brought about the first performance in England of the *Ode* for chorus and band composed by **Mr. F. H. Cowen** for the inauguration of the **Melbourne Exhibition**, and also led to the revival of **Sir F. G. Osseley's** oratorio "**St. Polycarp**," written as his "degree

exercise" more than three decades back; but neither of these could be looked upon as musical items of supreme consequence. The committee of the **Birmingham Festival** was called upon to endure a series of provoking disappointments. It was not designed to have so many altogether fresh works as in '85, when novelty was rather overdone, but two or three composers who had been invited to contribute were for divers reasons unable to respond. At length the list of new compositions dwindled to two—**Dr. Hubert Parry's** oratorio "**Judith; or the Regeneration of Manasseh**," and **Dr. F. Bridge's** cantata "**Callirhoe**." Both these works were received with hearty approval, and were generally held to manifest qualities with the possession of which their respective composers had not heretofore been credited. **Dr. Parry's** oratorio was found to be clear, melodious, and based on the methods of the distinguished producers of sacred music in the past; while **Dr. Bridge's** cantata displayed dramatic strength in addition to the elegance and knowledge of instrumental resource patent in former essays. **Sir Arthur Sullivan's** "**Golden Legend**" (which here, as elsewhere, drew an overflowing audience), **Borlino's** "**Messe des Morts**" and **Handel's** "**Saul**" were also given during the Festival week, with **Herr Richter** wielding the bâton. The question of the conductorship of the concerts of the **Philharmonic Society** was settled by the appointment of **Mr. F. H. Cowen**, notwithstanding that it was known he would soon have to leave for Melbourne, in order to direct the musical performances in connection with the Centennial Exhibition. To fill the void thus occasioned the directors hit upon the happy idea of persuading **M. Tschankowsky**, **M. Widor**, and **Herr Grieg**, as representatives of the **Russian**, **French**, and **Scandinavian** schools, to bring to England (and conduct) some of their newest compositions. In each case the issue of the visit proved decidedly interesting. Certainly the **Philharmonic** directors had no reason to regret their liberal policy. Another foremost artist absent from England during some weeks of the busiest portion of the season was **Mr. Edward Lloyd**, the tenor singer, who accepted an engagement for the **Cincinnati Festival**. As was expected, he was received with enthusiasm, and was compelled to promise that he would again visit America professionally. In October, after a series of revivals, of which "**The Mikado**" seemed the most welcome, a new **Gilbert-Sullivan** opera called "**The Yeomen of the Guard**" was produced at the **Savoy**, and the composer's share in the work was unanimously and cordially approved. For the second year continuously, "**Dorothy**" was a fixture at the **Prince of Wales's**; "**Carina**" at the **Opera Comique** contained some pretty music in the **Balfre-Wallace** vein by **Madame Julia Wolff**; the half-fair opera "**Nadgy**" at length ousted "**The Old Guard**" from the **Avenue**; and "**Pepita**" at **Toole's Theatre** justified the good opinion delivered for many months in the provinces. **Novello's Oratorio Concerts**, the **Richter Concerts**, the **London Symphony Concerts**, the **Crystal Palace Concerts**, the **London Ballad Concerts**, and the **Monday and Saturday Popular Concerts**, profitably pursued their respective paths. The **Royal Albert Hall Choral Society**,

in May, gave a performance of "**The Golden Legend**" by command of the Queen, who was present, and **Mr. Barnby's** force is henceforward to be called the "**Royal Choral Society**." As usual, there were **Promenade Concerts** at **Covent Garden Theatre** in the autumn.—Among occurrences that had some bearing upon the musical proceedings of the year was the death of **Sir George Macfarren**, and the consequent vacancy in the lofty position of **Principal of the Royal Academy of Music**. As the time approached for the election, the number of candidates was reduced to two, **Dr. A. C. Mackenzie** and **Mr. Joseph Barnby**, the former being ultimately chosen. The boy pianist, **Otto Hegner**, delighted the admirers of rare juvenile talent, just as did **Josef Hofmann** twelve months before; and other noteworthy incidents of the year were the farewell (at the **Royal Albert Hall**) of **Madame Nilsson**, the revival in November by **Mr. E. Prout** and the **Hackney Choral Society** of **Handel's** long-neglected oratorio "**Joshua**," the performance of the ill-fated **Georges Bizet's** beautiful music to **Daudet's** "**L'Artesienne**" during representations of the drama at the **Prince of Wales's Theatre** in January, and the arrival of a **Russian Opera Company**. The latter acquired a very sad experience. After playing in the provinces, they gave some concerts at the **Royal Albert Hall** under circumstances that afforded little hope of their talents being effectively demonstrated. Subsequently they appeared in **Rubenstein's** opera "**The Demon**" at the **Jodrell Theatre** (the newly-named **Novelty**), but here again ill-luck attended their performances. The work they chose had been tried in London nine years before, with an exceptionally strong cast, and had failed. Operatic amateurs were disappointed that the company did not play **Tschankowsky's** "**Mazeppa**" (one of the favourite operas in their repertoire), which would have been a novelty here. When the speculation suddenly, but not altogether unexpectedly, came to an end, a number of **Russian** choralests, ignorant of the **English** language, were found helpless, starving, and destitute at the **East End**, and for funds to send them back to their native country an appeal was made to the public. Towards the end of November **Mme Patti** (*q.v.*) sang at **Paris** in **Gounod's** opera "**Romeo et Juliette**" (conducted by the composer) with great success. The **150th anniversary** of the **Royal Society of Musicians** was celebrated on **Nov. 29th** by an unusually imposing performance of "**The Messiah**" in **Westminster Abbey**.

Mutiny Act. See ed. '88.

Mutsuhito. The present **Mikado** (or Emperor) of **Japan**; b. 1852. Ascended the throne in 1867. His reign has been marked by great reforms, prompted by a liberal spirit, resulting in abolishing entirely the feudal system which has impeded the general progress of the country. Under the rule of the present **Mikado**, **Japan** has entered into an unprecedented era of prosperity. Civilisation has made rapid progress, and the introduction of Western arts and ideas has secured for **Japan** a foremost place amongst the Asiatic nations.

Mysore. For Resident see **DIPLOMATIC**.

Mythology. See ed. '88.

N

"**Named.**" See PARLIAMENTARY PROCEDURE.

Napier of Magdala, Robert Cornelius Napier, P.C., 1st Baron (cr. 1868), was b. 1810. Was brigade-major in the *Sutlej* campaigns (45-46), where he was severely wounded; acting Chief Engineer during part of the siege of Moulton, where he was again wounded; commanded the Engineers during the operations which ended in the capture of Lucknow (58); was made K.C.B. for his services (58), and received the thanks of Parliament (59). Again received the thanks of Parliament (61) for the "skill, zeal, and intrepidity" shown in the operations which terminated in the capture of Peking. Appointed to conduct the expedition to Abyssinia (October following), on the successful conclusion of which, and capture of Magdala, he once more received the thanks of Parliament, was created a peer, and granted a provision of £2,000 per annum for himself and his next heir. Subsequently Governor of Gibraltar. *Constable of the Tower* ('87).

Napoleon, Victor, son of Prince Napoleon and Princess Clotilde, b. 1862, has taken little part in public affairs. When his father, after the death of the Prince Imperial in '79, took up the position of head of the house of Bonaparte, the claim was disputed by M. Paul de Cassagnac and several other Imperialists, who put forward the young Prince Victor as his father's rival. But this move was not encouraged by the son, though the latter, it is understood, was nominated in the Prince Imperial's will as his successor. When the Expulsion Bill of '86 became law, the Prince and his father were exiled from France. In Aug. '88 the annual Bonapartist banquet was held in Paris, when an address was presented to the Prince.

Narcissus Farming. The great horticultural homes of the beautiful narcissus flower are Holland and the Riviera. It is also successfully cultivated in the *Chanel* and in the *Scilly Islands*. The mercantile value of the flower depends on the period when it reaches the London market. The *Scilly Islands* have been especially fortunate in bringing the narcissus early to market, when their rivals are hopelessly out of the field; and the narcissi which brighten and beautify the shop-fronts of fashionable florists in the early New Year have, as a rule, the little Cornish archipelago as their place of birth. The narcissus increases and multiplies rapidly. Consequently, in the great growing centres, the plant is grown for the sale of the root or bulb as much as for the sale of the flower. Bulb culture is a horticultural art by itself, and has long been lucratively practised in Holland, which country is being imitated at a distance by the *Scilly Isles*.

Nassau. Capital of the *Bahama Islands* (q.v.).

Nasser-ed-Deen, Shah of Persia, son of the late Mehemet Shah; b. in 1829. He ascended the throne in '48. In '52 he occupied Herat, when an expedition under General Outram was sent against him, and after a very successful campaign compelled Persia to sign a treaty of peace at Paris, on terms favourable to England. Under his reign a treaty uniting Europe and India by telegraph across Persia was signed in '66 at Teheran. In '73 he made a tour in Europe, and met with a cordial

reception in London and elsewhere. He proposes to repeat this tour in '88.

Natal. A British colony, on the south-east coast of Africa, discovered by Vasco da Gama on Christmas Day 1497, and hence named *Terra Natalis*. Sea-board extends from the Umamfuna river on S., to the Tugela on N., a distance of 170 miles. Zululand borders the colony on the N.E., Transvaal on N., Orange Free State and Basutoland on W., Transkeian Territories on S.W. Area 24,000 sq. m.; pop. 477,100. Capital *Pietermaritzburg*, pop. 14,429; the only port is *Durban*. Other centres inland are Verulam, Isipingo, Richmond, Ladysmith, etc. The colony is divided into fourteen districts.—The coast scenery is bold, and the whole country inland romantically beautiful, being dominated everywhere by the precipitous heights of the Drakensberg, some of the peaks of which attain an altitude of 9,500 feet. The numerous rivers are not navigable, although some of them are considerable streams, so that the country is well watered and fertile. The climate is very fine: the winter bright and tolerably cool, and the summer heat tempered by cloud and rain. Country divisible into three belts or terraces—coast-land, midland, and upper. The low-lying coast-land, extending about fifteen miles inland, is highly fertile, and has been found suitable for the growth of sugar, coffee, arrowroot, spices, tobacco, cotton, flax, silk, and tropical fruits; at present sugarcultivation is a profitable and flourishing industry. For sugar cultivation it has been found necessary to introduce Indian and Chinese coolies. Coal and lime are worked; iron, copper, and gold are found. The native fauna and flora are extensive and interesting; the hippopotamus is still to be found, as also crocodiles, iguanas and chameleons, leopards, hyenas, tigers, etc. Timber trees are numerous and valuable, especially the yellow wood, the stink wood, and the iron wood. The middle region is well adapted for cereals and European farming. The upper region, mountainous, is pastoral—sheep, cattle, and horses being reared in great numbers.—The colony has representative government. There is a Governor, an Executive Council of officials, and a Legislative Council of thirty members, of whom seven are nominated by the Governor and the remainder elected by property-holders in the boroughs and counties. Religion well provided for by denominational bodies, but no State aid. There are 10 Government schools, 42 aided, besides others, and 85 native and Indian schools. There is a force of 350 mounted police and 800 volunteers.—For financial statistics see *British Empire*, etc. (table). **Principal exports**, wool, hides, sugar, arrowroot, maize, ostrich feathers, mohair. Of the area, 8,000,000 acres have been acquired by colonists, 2,000,000 reserved to Kaffirs, and 2,800,000 are Crown property, open to lease, sale, or grant. 88,000 acres are under cultivation: leading crop, sugar. Nearly 300,000 more are cultivated by natives. The colonists own 170,000 cattle, 84,000 Angora goats, 520,000 sheep, 24,000 horses. Kaffirs own 400,000 cattle, 200,000 goats, 35,000 sheep, and 20,000 horses. There are 217 miles of railway, now extending inland to Ladysmith, near the Transvaal border and the goldfields. **Natives** are chiefly of the

Zulu nation. Most of them belonging to the colony are peaceable, orderly, good herdsmen, farmers, or labourers. But the recent troubles in Zululand, particularly the invasion of it by Boers, have caused and are causing a large influx of Zululand natives into Natal, giving rise to no little anxiety for the future.—In 1837 a party of Dutch Boers "trekking" from Cape Colony settled in Natal. Their conduct speedily brought about a series of desperate struggles with the powerful Zulu nation. Owing to these disturbances, the Governor of the Cape sent troops to take possession of Natal, and in 1843 the country was annexed, whereupon many of the Dutch re-crossed the Drakensberg. In 1849 numerous British settlers located themselves in Natal. In 1853 a bishopric was created, under **Bishop Colenso**. In 1856 Natal was ejected into a separate colony, distinct from the Cape. In 1873 there was an outbreak of the Amalubi Kafirs, under Chief **Langalibalele**. Colonial troops were employed to quell it. Langalibalele and others were brought to justice, transported and imprisoned, though afterwards amnestied. The question of native government was brought into prominence. The Imperial authorities sent out **Lord Wolsley** as Administrator, and in 1875 an Act came into force for the better management of native affairs. In 1879 Natal became the base of operations in the Zulu war. In 1886 a serious dispute arose between the Governor (Sir A. Havelock) and the Legislative Council and people of the colony. Appointed by the Imperial Government to settle affairs in Zululand, where Boer raiders had established themselves, the Governor gave way to the Boer claims, whereas the people of Natal desired their expulsion and the annexation of Zululand to the colony. The Legislative Council adopted resolutions of censure, and refused supplies to the Governor. But this difficulty has since passed over. See ZULULAND, SWAZILAND, TRANSVAAL, GOLDFIELDS, etc.; and for Executive Council, etc., see DIPLOMATIC. Consult Peace's "Our Colony of Natal," Brooks' "Natal," Gillmore's "Great Thirst Land," and Petherick's "Catalogue of York Gate Library."

Natalie, Queen. See SERVIA.

National Anthem. For origin, see ed. '87.

National Biography, Dictionary of. Projected by Messrs. Smith, Elder, & Co., under the editorship of **Mr. Leslie Stephen**, assisted by a staff of eminent writers. The first volume, published in '85, began with Dr. Abbadie, Dean of Killaloe, and ended with Queen Anne. Volume xvi., published Sept. '88, reached to Drant—Edridge. Office: 15, Waterloo Place, S.W.

National Defence Act. See ARMY AND VOLUNTEERS.

National Footpath Preservation Society. The was formed Sept. 20th, 1884, for the "preservation of ancient foot and bridle paths, and all other rights of way by land and water, fishing, vacant spaces, as village greens, roadside slips of land, etc." Branch societies have been started in Henley, Kendal, Lancaster, Stockton, Keswick, Carlisle, Cardiff, Leicester, Bristol, Flackwell Heath, Witney, North Ditcham, and elsewhere. The patron of the parent society is the Duke of Westminster. The Earl

of Bective is president, and among the vice-presidents are the Archbishop of Canterbury, Lord Claud J. Hamilton, Baron Henry De Worms, M.P., Lord Randolph Churchill, M.P., Sir Lyon Playfair, M.P., Earl Granville, Viscount Cross, Mr. W. H. Smith, M.P., Marquis of Hartington, M.P., Sir Henry James, M.P., Lord Brassey, Mr. Chaplin, M.P., and Lord Tennyson. The society publishes a lengthy list of **honorary solicitors**. The subscription is 5s. a year, but a 10s. 6d. subscription entitles the member to legal advice gratis. It is stated that scarcely a week elapses but the newspapers chronicle attempts to close footpaths, or other encroachments. It may be assumed that an encroachment on an ancient common or open space, such as a village green, can generally be successfully resisted, if care is taken to adopt a legal course of procedure. Complaints may be addressed either to a local Footpath Society or to the **Sec. and Surveyor**, Mr. Henry Allnutt, 42, Essex St., Strand, W.C.

National Fruit Growers' League. See FRUIT FARMING.

National Gallery. (For earlier history of, see ed. '88). The present trustees of the Gallery, in the order of their nomination, are:—Sir Henry Layard, Sir William H. Gregory, Lord Northbourne, Viscount Hardinge, Mr. George J. Howard, and Sir Richard Wallace. The Director is Sir F. W. Burton; the Keeper and Secretary is Mr. C. L. Eastlake. The abolition of the autumnal recess, during which the Gallery was formerly closed for six weeks; the admission of the public by payment on students' days (Thursdays and Fridays); the extended hours for keeping the collection open to the inspection of visitors; and the annual grant by means of which the contents of the library have been supplemented, are all recent measures which indicate that the trustees and directors are keeping pace with the times. What has been for a long time urgently needed—viz., a new edition of the official catalogue—is now promised to be published shortly. It will contain many improvements upon the old and now inaccessible catalogue. The public are admitted free, Mondays, Tuesdays, Wednesdays, and Saturdays. The National Gallery, as may be supposed, contains by far the best examples of the English school of painting to be found, comprising as it does the masterpieces of Turner, Reynolds, Landseer, Gainsborough, Wilkie, Romney, Constable, Herring, Callcott, Eddy, and others. On the other hand, the foreign masters are well represented, the paintings including works of Raphael, Rembrandt, Vandyck, Rubens, Cuypp, Teniers, Correggio, Titian, Murillo, and others. Among the most recent additions are five landscapes by Constable, and a Gainsborough. The "Madonna degli Ansideri" of Raphael was purchased by the Government out of the Blenheim collection for £70,000, and Vandyck's "Equestrian Portrait of Charles I." obtained from the same source for £17,500. The purchase of these two pictures led the Government to suspend for a term of years their annual grant of £20,000 to the Trustees of the National Gallery for the augmentation of the collection. An endeavour was recently made to get this decision reversed, but so far without success. During '88 a portion of the series of portraits recently exhibited by Mr. Flinders Petrie at the Egyptian Hall, discovered by him in excavations in

Hawaráh, has been acquired by the N. G. A Rembraut, three pictures by Nicolas Maas, a portrait by Van der Helst, a Virgin and Child by Morales, and three small panels, two by Mocetto and one by Pedro Campaña, have also been added by gift and purchase. **Mr. Harry Furniss** (*g.v.*), in his lecture on "Portraiture," at the Birkbeck Institute, in Oct. '88, criticised the arrangements for purchasing pictures for the National Gallery, and lamented the absence of good contemporary portraits. Consult Cook's "Popular Handbook to the National Gallery."

Nationalisation of the Land. See LAND QUESTION, ed. '88.

National League, founded in 1882 on the ruins of the Land League, after the suppression of the latter by the Government. It is both a political and an agrarian organisation, its main objects being the reform of the Land Laws, the weakening of the power of the landlords, the increase of peasant proprietors, and the creation of some kind of independent or semi-independent Government for Ireland, under the name of Home Rule. There are nearly 2,000 branches of the League scattered throughout Ireland, each with its president, secretary, and treasurer. In America there is an organisation of a similar character, and another in England, whose chairman is Mr. T. P. O'Connor, M.P. (*g.v.*); Scotland also has a League, principally composed of Irishmen, which advocates the principles of the parent institution north of the Tweed. The main resources of the N. L. are drawn from America, whence, a year or two ago, from £2,000 to £3,000 were often received between one and the other of the fortnightly meetings in Dublin. Though **Mr. Parnell** is President of the League, neither his health nor his disposition fit him to carry on the practical work of such a great political organisation, which is mainly done by **Mr. T. Harrington, M.P.**, the Secretary. In the columns of *United Ireland* (*g.v.*), the organ of the N. L., **Mr. William O'Brien**, the editor, propounded about two years ago what was known as "The Plan of Campaign." This "Plan" was, in brief, a recommendation to tenants not to pay rent to landlords, but to pay to officials representing the N. L. what was deemed a fair rent, which would be handed over to the landlords provided the latter accepted it as payment in full. The "Plan" was not long in being put in operation, and proved so embarrassing that the Government proclaimed it as illegal. In spite of this, however, the "Plan" was long subsequently in operation in remote districts, and is so even now, though it gives much less trouble to the Government. On the 19th of August, '87, it was announced in both Houses of Parliament that the N. L. had been proclaimed as "a dangerous association"; thus giving the Government power to suppress at any moment the League or its branches, or disperse its meetings. The proclamation produced much excitement both in England and Ireland, and gave rise to a great Parliamentary debate on a Resolution brought forward by **Mr. Gladstone** condemning the action of the Lord Lieutenant (see Session '87, c. d. '88). The Government emerged from the debate with a large majority, but the League persevered with their meetings in spite of the efforts made by the Government for their suppression. **Mr. O'Brien**, **Mr. Wilfred Blunt**, **Mr. T. Harrington**, **Mr. Dillon**, **Mr. Redmond**, and other prominent Home Rulers were imprisoned, but

they were no sooner released than they continued their opposition. **Mr. Mandeville**, a local agent of great activity, was imprisoned, and his death seven months after his release led to exciting discussions in Parliament and the Press. **Mr. O'Brien** declared that he had been murdered, and he was habitually written about as "a martyr." The Chief Secretary, on the other hand, pointed out that **Mr. Mandeville** lived for many months after he left prison, that during that period he carried on an active propaganda as a League agent, that the seeds of his disease were not in gaol, as was asserted, but more probably during his open-air work in connection with the Land League. The net result of the struggle is that there has been a great diminution of agrarian crime in Ireland, and that, though meetings of the League are surreptitiously held, the power of the organisation has been greatly weakened.

"**Nature**," a scientific journal and review (weekly, 6d.), founded Nov. 4th, 1869. Treats of current scientific topics, with articles contributed by the leading specialists of the day. Its columns are also open to correspondence on scientific questions. Editor, **J. Norman Lockyer** (1869).

Naval Construction and Equipment. See NAVY, BRITISH.

Naval Manœuvres. Many of the Continental Powers have for several years past exercised a portion of their fleets annually, for the purpose of giving their officers and men instruction, testing the new material of war, and solving, so far as is possible by operations in peace time, problems of naval tactics under modern conditions. In this country we have also essayed something of the kind, but not on so large a scale until '87, when, after the Jubilee Review, most of the ships present were divided into various squadrons and manœuvred against one another. In '88, however, the most complete operation of this nature which Great Britain or any other nation has yet attempted was made. With the manœuvres was combined a partial mobilisation of the Fleet, with a view to test the scheme prepared by the new Admiralty Intelligence Department, which is to enable the vessels in the First-class Reserve to be completed for active service in a much shorter time than was possible under the old system, or rather want of system, which ruled in '85, when we were on the verge of war with Russia. Preparations were made in the dockyards some months in advance, and on July 2nd orders were issued from the Admiralty to mobilise all the ships in

the First-class Steam Reserve. Next day the Channel Coast Guard and Training Squadrons were ordered to rendezvous at Portsmouth and Portland. On July 4th there were commissioned 2 armourclads, 5 cruisers, and 10 torpedo boats at Portsmouth, 2 armourclads, 9 cruisers and 10 torpedo boats at Devonport, and 4 cruisers and 4 torpedo boats in the Medway at Chatham and Sheerness. July 5th and 6th were occupied in getting in powder and making trials, and by the beginning of the next week all the vessels were ready for sea. Such an act of mobilisation had never taken place previously, and it is indisputable that if it had not been for the formation

of the Intelligence Department and the able exertions of its staff of naval officers, under the late Director of Naval Intelligence, Captain W. H. Hall, R.N., such a mobilisation would not have been possible. The immeasurable value of being in a position to place the Fleet on a war footing with such rapidity requires no stating. On July 14th the whole of the vessels were assembled in two squadrons, under the command of Admiral Baird and Sir George Tryon at Portsmouth and Portland, and were there inspected by the Lords of the Admiralty. The composition of the squadrons was as follows:—

Squadron A 1 (Admiral Baird).

Ships.	Commanders.	Speed in knots.	Armament.*	Men.
Northumberland	Capt. S. C. Darwin.	11'5	7-12t. M.; 20-9t. M.; 11 m.; 4 T.	710
Benbow	Capt. A. T. Powlett.	15'5	2-110t. B.; 10 5t. B.; 5 Q.F.; 7 m.; 5 T.	500
Collingwood	Capt. H. L. Pearson	14'6	4-45t. B.; 6-5t. B.; 15 Q.F.; 13 m.; 4 T.	459
Monarch	Capt. U. C. Singleton	12'8	4-25t. M.; 2-12t. M.; 1-71n. M.; 4 Q.F.; 14m.; 2 T.	560
Northampton	Capt. R. H. Harris.	11'2	4-18t. M.; 8-12t. M.; 14 Q.F.; 8 m.; 2 T.	474
Conqueror	Capt. A. H. Alington	13'5	2-45t. B.; 4-5t. B.; 6 Q.F.; 12 m.; 6 T.	290
Hotspur	Capt. Stewart.	10'5	2-25t. M.; 2-5t. B.; 4 Q.F.; 9 m.; 2 T.	224
Mersey	Capt. E. G. Hutton.	16'0	2-15t. B.; 10-6t. B.; 3 Q.F.; 12 m.; 6 T.	300
Arcturion	Cpt. F. R. Boardman	15'0	10-5t. B.; 16 m.; 4 T.	281
Raceon	Com. J. M. McQuhae	15'6	6-5t. B.; 8 Q.F.; 2 m.; 5 T.	156
Archer	Com. G. L. Poe	14'3	6-5t. B.; 8 Q.F.; 2 m.; 5 T.	158
Active.	Comdre A. Markham	13'1	10-4t. B.; 2-64pr. M.; 10 m.; 2 T.	374
Rover.	Capt. G. H. U. Noel	12'5	14-4t. B.; 8 m.; 2 T.	373
Battlesnake.	Lieut. T. W. Ingram	17'2	1-25cwt. B.; 6 Q.F.; 4 T.	61
Number 25.	Lieut. C. F. Lambert	18'0	(Thornycroft); 4 T.	16
" 41.	Lieut. A. T. Taylor	18'5	(Thornycroft); 4 T.	16
" 42.	Lt. A. R. C. Warren	18'5	(Thornycroft); 4 T.	16
" 49.	Lieut. F. J. Patteson	18'5	(Thornycroft); 4 T.	16
" 67.	Lieut. J. J. White	20'0	(Yarrow); 4 T.	16
" 76.	Lieut. R. Hudleston	20'0	(Yarrow); 4 T.	16
" 79.	Lieut. S. Nicholson.	20'0	(Yarrow); 4 T.	16
" 81.	Lieut. H. B. Jackson	16'0	(White); 4 T.; Q.F.	20

* m. = Muzzle-loading guns; b. = Breech-loading guns; Q.F. = Quick-firing guns; m. = Machine-guns; T. = Torpedo-ejectors.

The first-named seven vessels counted as battleships, although the *Northampton* is properly speaking a cruiser.

Squadron A 2 (Admiral Rowley).

Ships.	Commanders.	Speed in knots.	Armament.*	Men.
Agincourt	Capt. S. C. Holland	11'7	7-12t. M.; 15 m.; 2 T.	710
Indefatigable	Capt. R. D. King.	11'5	4-80t. M.; 6-65cwt. B.; 6 Q.F.; 14 m.; 4 T.	460
Iron Duke	Capt. Rodney Lloyd	10'5	10-12t. M.; 6-65cwt. B.; 4 Q.F.; 14 m.; 4 T.	482
Neptune	Capt. J. F. G. Grant	12'3	4-38t. M.; 2-12t. M.; 14 Q.F.; 10 m.; 2 T.	538
Belleisle	Capt. Hon. R. Hare	10'0	4-25t. M.; 6 Q.F.; 7 m.; 2 T.	231
Shannon.	Cpt. F. R. Blackburne	10'5	2-18t. M.; 7-12t. M.; 10 m.; 2 T.	454
Mercury	Capt. E. F. Jeffreys.	15'3	13-2t. B.; 4 Q.F.; 7 m.; 4 T.	276
Thames	Capt. C. B. Theobald	15'8	2-15t. B.; 10-5t. B.; 3 Q.F.; 12 m.; 6 T.	300
Inconstant	Capt. A. P. Hastings	14'3	10-12t. M.; 6-64t. M.; 13 m.; 2 T.	618
Tartar.	Com. G. C. Langley	15'6	6-5t. B.; 8 Q.F.; 2 m.; 5 T.	156
Mohawk	Com. R. P. Humpage	15'3	6-5t. B.; 8 Q.F.; 2 m.; 5 T.	156
Grasshopper.	Lt. F. L. Campbell	17'2	1-25cwt. B.; 6 Q.F.; 4 T.	16
Number 50.	Lt. St. E. Traherne	18'5	(Thornycroft); 4 T.	16
" 66.	Lt. C. D. Granville.	20'0	(Yarrow); 4 T.	16
" 72.	Lt. S. A. G. Calthorpe	20'0	(Yarrow); 4 T.	16
" 80.	Lieut. A. Dodgson	21'5	(Yarrow); 4 T.; Q.F.	20

* m. = Muzzle-loading guns; b. = Breech-loading guns; Q.F. = Quick-firing guns; m. = Machine-guns; T. = Torpedo-ejectors.

These two squadrons represented the British fleet in the future operations.

Squadron B 1 (Admiral Sir G. Tryon).

Ships.	Commanders.	Speed in Knots.	Armament.*	Men.
Hercules . . .	Capt. C. E. Buckle .	12½	8-18t. M.; 2-12½t. M.; 4-6½t. M.; 6-65cwt. B.; 5 Q.F.; 14 m.; 4 T.	630
Ajax . . .	Capt. F. Durrant .	11½	4-38t. M.; 2-5t. B.; 6 Q.F.; 13 m.; 2 T.	382
Warspite . . .	Capt. E. J. Church .	15½	4-24t. B.; 6-5t. B.; 6 Q.F.; 14 m.; 6 T.	514
Hero . . .	Capt. A. E. Dupuis .	13½	2-45t. B.; 4-5t. B.; 12 Q.F.; 5 m.; 6 T.	290
Rupert . . .	Capt. St. J. Garforth .	11½	2-18t. M.; 2-5t. B.; 4 Q.F.; 8 m.; 4 T.	237
Severn . . .	Capt. A. F. St. Clair .	16½	2-15t. B.; 10-5t. B.; 3 Q.F.; 12 m.; 6 T.	300

* M. = Muzzle-loading guns; B. = Breech-loading guns; Q.F. = Quick-firing guns; m. = Machine-guns; T. = Torpedo-ejectors.

These two squadrons represented the "Enemy's" fleet.

The general idea of the operations was that a maritime nation, with whom hostilities are imminent, prepares two squadrons in two ports some distance apart, ready to commence operations the moment war is declared; but before their preparation has been completed, war breaks out and the British blockade both ports. Of course it was the duty of the British to keep the "enemy" in; of the "enemy" to get out and do what damage he could. The ports chosen for the "enemy" were Berehaven, in the S.W. corner of Ireland, Lough Swilly, on the north coast of the same island. On July 16th the various squadrons proceeded to their stations—Admiral Tryon with that part of his fleet called B 1 to Berehaven, where he arrived on July 18th, and prepared to make himself secure from attack by laying down booms and mines, etc. The second portion of his fleet, called B 2, under the second in command, Admiral Fitzroy, proceeded to Lough Swilly, and arrived there on July 19th. Admiral

Baird proceeded to Milford Haven with A 1, and Admiral Rowley with A 2 to Lamlash in the Bay of Arran. During the operations England and Scotland were considered friendly to the British fleet, and Ireland to the "enemy." Pembroke, Plymouth, Portland, Spithead, Lamlash, Milford Haven, and the Medway were to be considered strongly fortified British ports, which could not be attacked by the "enemy's" squadrons; and Berehaven, Queenstown, and Lough Swilly were likewise strongly fortified "enemy's" ports. Rules were laid down to determine capture or destruction of vessels or property, etc., and umpires were appointed to settle questions in dispute. The area of the operations included the British Isles and waters within the following limits: on the north 62° north latitude; on the east 3° east longitude; on the south 48° north latitude; on the west 13° west longitude. On July 22nd Squadron A 1 left Milford to blockade Berehaven, and established a blockade on the morning of the 24th.

On July 23rd Squadron A 2 left Lamlash for a similar purpose, and took up position off Lough Swilly the following morning. July 24th, at noon, war was declared, and the blockade began. From that date until the night of Aug. 2nd the ports were closed, but it is now known that Admiral Tryon had secret orders not to attempt to escape before the 1st of August. These orders were not known to the blockading fleets, and they wore themselves out in rough and nasty weather endeavouring to prevent what appeared to be attempts to break the blockade, but were in reality feints. The "enemy" also made torpedo-boat attacks on the blockading squadron, successfully torpedoing the *Inconstant* of Rowley's division, and obliging both British admirals to keep at a greater distance from the blockaded ports. The difficulty of coaling ships when employed on such work, and also keeping up communication with the bases at home, was fully shown. On Aug. 2nd the *Calyso* and *Spider* cruisers escaped from Lough Swilly, and the first intimation the blockaders had of their getting away was the capture of a torpedo boat engaged in running mails from Rowley's squadron to the base, and the news of the destruction of shipping at Oban. The next night the *Warspite*, *Iris* and *Svern* cruisers escaped at Berehaven. Admiral Baird, fearing lest these vessels should join hands with Fitzroy and overwhelm Rowley, despatched the *Mersey* to warn that officer and acquaint him with the fact that the British admiral intended to raise the blockade. The same morning (Saturday) Baird left Berehaven for the Mull of Galloway to join Rowley, who was also in full retreat, the *Rodney* and *Amphion* having broken out of Lough Swilly and rendered his position untenable. Sunday, Aug. 5th, found the British squadrons endeavouring to effect a junction before dark, which, however, they failed to do, but shortly after midnight met off the Mull of Galloway. Meantime Tryon, finding Baird gone, left Berehaven with the *Hercules*, *Ajax*, *Hero*, and *Cossack*, and proceeded round the west coast of Ireland to the northward. The same day the *Rodney* from Lough Swilly, and the *Warspite*, *Iris*, and *Svern* from the southward, met by preconcerted arrangement 20 miles north-west of St. Kilda on the Scotch coast, and proceeded to carry out a dashing plan, the conception of which is due to the author of "The Great Naval War of 1887" (which read, the design to Admiral Sir George Tryon, and the execution to Admiral Fitzroy and his subordinates in this flying squadron. On Monday they passed Cape Wrath, Tuesday threatened Aberdeen and Edinburgh, destroying the shipping off these ports; Wednesday the Tyne, Tees, Scarborough, Grimsby and Hartlepool were all threatened or destroyed; and having made this daring raid, they turned back and arrived once more safely at Lough Swilly on Aug. 12th, without having seen a British cruiser. On the very day that Fitzroy was reported off Cape Wrath, Baird, fearing lest an attempt should be made on the Thames, took his squadron, or such of the ships of A 1 as were coaled, round the south coast to the Downs, where he arrived on Aug. 10th, and the same day ordered Rowley, whom he had left in the Irish Channel, to join him. The absence of British ships enabled Tryon to make his appearance in the Mersey, where he captured the *Bellerophon*, and off Holyhead, which he bombarded, and then returned to Lough Swilly on Aug. 11th. Thus, in seven days from the raising of the

blockade the whole of the coast towns of England and Scotland not between Bristol round the south coast to Harwich had been visited by the "enemy." On Aug. 13th Baird and Rowley were in the Downs, Tryon and Fitzroy were in Lough Swilly, both fleets occupied in coaling. During the next week, up to Aug. 21st at noon, when war ceased, Tryon's cruisers succeeded in making raids on the south-coast ports much as they had done in the north; but the immunity they enjoyed at this time may have been due to the illness of Admiral Baird, who appears to have broken down from over-work. Not only did four admirals accompany the fleets as umpires, but all the principal newspapers sent correspondents, and many officers and gentlemen interested in the services were spectators on board ships engaged. To the Times, in addition to the letters from their special correspondents on board the *Northumberland* and *Ajax*, Lord Brassey, Lord Charles Beesford, Admiral of the Fleet, Sir G. Hornby, and others, contributed letters on the lessons of the operations. The Standard had correspondents on board the *Agincourt*, *Hercules*, *Rodney*, *Northumberland*, and *Amphion*; the Daily News in the *Svern*, the Daily Telegraph in the *Arctura*, the Morning Post in the *Northumberland*, the Daily Chronicle in the *Rodney*, the Morning Advertiser in the *Thames*, and the Army and Navy Gazette in the *Agincourt*. The Illustrated London News and Graphic were also well represented in both fleets, and their pictures aided not a little in enabling the country to get an intelligible knowledge of what was taking place. Since the close of the operations articles on the subject have appeared in the Fortnightly, Blackwood, the National Review, and other periodicals. The following is a summary of the lessons which the various writers claim to have been taught by the operations:—(1) Sealing up an enemy's port so as to prevent egress to swift, well-armed cruisers for raiding purposes is practically impossible in the face of steam and torpedoes. Strict blockade even cannot be carried out except by an immeasurably superior force, and even then its success is doubtful. (2) Coast towns, and shipping entering and leaving them, cannot be adequately protected by forts, mines, and torpedo boats alone, but require a mobile defence as well. (3) Speed is not only a desideratum in cruisers for blockading, keeping touch of an enemy, protection of commerce, etc., but also in battle-ships: the present "official" speeds of vessels cannot be kept up in practice. (4) An increase to our fleet of battle-ships, cruisers, rams, torpedo boats, torpedo boat destroyers, and small speedy seaworthy despatch boats, is much wanted. (5) Behind a blockading fleet or fleets must be a second fleet to hold the Channel. A system of coast defence in which the materiel is supplied by Government, the personnel by volunteers, is imperatively needed. (6) Better telegraphic communication between signal stations on shore and between these and defending cruisers is very desirable. (7) The manoeuvres should be annual, as it is proved that both officers and men require experience in the new machinery of war. (8) The means of coaling the fleet is woefully deficient. (9) The engines and boilers of many of the ships appear untrustworthy, from their flimsy construction and the cramped space allowed to them. (10) The position of the naval lieutenants requires to be remedied. (11) There is an admitted deficiency of stokers and

of signalmen. (12) To rely upon a reserve of officers, seamen and stokers from the Royal Naval Reserve is fallacious under existing conditions.

Naval Volunteers. See NAVY, BRITISH.

Navies, Foreign.—AUSTRIAN. (See also ed. '88.) The naval appropriations for '88 provide for the commencement of a ram cruiser of 4,200 tons, and a torpedo vessel of 360 tons displacement. A torpedo cruiser named the *Tiger*, somewhat similar to the *Panther* but larger, was laid down at the *Stabilimento Tecnico Triestino* in '86, and was launched at their yard at San Rocco, near Trieste, in the end of '87. Her armament consists of four 4.72 inch B.L. for the main battery mounted in sponson ports. The secondary battery consists of six 14-pounder R.F.G., four rifle calibre guns and four torpedo discharge tubes. The estimated speed with forced draught (*q.v.*) is 19 knots. Her principal dimensions are, length 230 feet, beam 34 feet, mean draught 14 feet, displacement 1,641 tons. Another torpedo vessel, called the *Meleor*, made and launched at Schichau's firm at Elbing, completed at Pola in September '87, and has there been supplied with her armament in all respects like that of the *Panther*. Her dimensions are—length 187 feet, beam 22 feet, displacement 350 tons. She carries a complement of 5 officers, and 41 men, and has made the mean speed of 21 knots in a run from Barcellona to Messina with everything on board. The torpedo vessel, of about the same displacement mentioned above, is also to be built by Schichau. A coast-defence ironclad called the *Kronprinzessin Erzherzogin Stefanie*, launched at San Rocco April '87, is now reported as complete. She takes the place of the *Ferdinand Max*. Her protection consists of a complete steel belt of nine inches thick, an oval shaped barbettes tower forward eight inches thick, a complete steel protective deck over top of belt, and steel shields for all the guns. Another coast-defence ironclad, called the *Kronprinz Eicherzog Rudolf*, but of somewhat larger dimensions, is building in the Pola dockyard. Five torpedo boats were built at Pola during the year; three were of sixty tons and two smaller: seven more boats have been ordered. The Trieste firm of shipbuilders mentioned above have recently built a 135-ft. boat, which the Government will probably purchase. The ordinary and extraordinary credits for last year's ('88) navy estimates have been adopted by the Budget Committee without amendment. They include the building of a torpedo catcher of the following dimensions: length 298 feet, beam 23 feet, draught 8 feet 4 inches, displacement 480 tons. Her estimated speed is 20 knots, and she will carry ten quick-firing guns besides torpedo discharge tubes. This vessel will be built on the Tyne.

BELGIUM has no navy.

BRAZILIAN. (See ed. '88.)

CHILIAN. (See also ed. '88.) In November '86 this Government ordered of the Elswick firm a powerful protected steel cruiser of 4,500 tons displacement and 19 knots speed, to carry the following armament: two 8-ton B.L., one 14-ton B.L., two 5-ton B.L., four 6-p. R.F., eight rifle calibre, and eight torpedo discharge tubes. Her cost to be about £300,000. The two principal ironclads of this Power have been recently repaired in this country and re-armed. The *Blanco Encalada* and the *Almirante Cochrane* are now reported to be equal to any modern second-class battleship.

CHINESE. (See also ed. '88.) This nation continues to build or order rapid cruisers. Six gun-vessels are building at the Foochow yard, and four 1,500 ton torpedo cruisers are about to be laid down. A dispatch vessel, the *Huan Tai*, carrying eight 4-in. guns, has been finished at the same yard. Three revenue cruisers, well armed vessels built by the Elswick firm, sailed for China April 2nd, '88. A small steel cruiser, designed to act as an armed submarine telegraph cable layer, has also proceeded to her destination. Two torpedo boats, one 144 feet long, built by Schichau, the other a 128-feet boat, built by Yarrow, have proceeded safely from Euroje to Foochow.

DANISH. (See also ed. '88.) A small ironclad, the *Iver Høvsfeldt*, made on her steam trials a speed of 15.6 knots, and a similar vessel for coast defence has been ordered. A steel cruiser of 2,900 tons displacement, called the *Valkyrien* has been launched, and a smaller vessel of the same type, with a displacement of 1,280 tons, has been commenced. The displacement of the *Valkyrien* is 2,900 tons, length 260 feet, beam 42 feet, draught 77 feet. She will be armed with two 8-inch 270 cwt. guns on the upper deck, six 6-in. 95 cwt. guns in sponsons, four R.F.G., eight machine guns, and two mitrailleuses. Her complement is 300, and the estimated speed is 17 knots. The deck of this protected cruiser is covered with 2½ inches of steel. She is to be completed early in '89. Two Thornycroft torpedo boats of 124 feet length have been added to the Navy, and twenty-eight new boats are ordered to be built.

DUTCH. (See also ed. '88.) The *Friso*, launched last year, is unfinished. This is the last of six large cruisers, of which the others are the *Afje*, *Tromp*, *Ennmade Nederlanden*, *De Ruyter*, and *Van Speyk*. They are of 3,400 tons displacement, built of iron and steel, wood sheathed and coppered. They are ship-rigged, and then heaviest guns are 7-in., of which they carry six apiece. Their speed is about 14.5 knots, complement 340. Two small armed cruisers for the Dutch Indies have also been built by contract and completed this year.

FRENCH. (See also ed. '88.) The ship-building policy of this nation appears to be mainly directed towards the supply of fast cruisers for attacking commerce or making sharp destructive dashes against an enemy's coast towns, "fortified or unfortified, whether purely peace establishments or warlike," to quote a late Minister of Marine. At the same time a return to the construction of armoureds with side protection has been also made, and "speed" is not made the paramount element in ship design at the expense of all other features. The number of fast cruisers building is considerably in advance of that in this country, as may be seen by the table. (See NAVY, BRITISH.) Of the *Brennus* and *C. Martel*, two first-class ironclads mentioned last year, the former is now to be built at L'Orient on designs that allow for protection against mine and other explosive shell. The heaviest gun will be 13.4 inch B.L., speed estimated at 18 knots. There will be a complete six feet deep steel belt at the waterline of 17.7 inches thickness amidships, tapering towards the ends. The turrets will also carry the same thickness of armour, and a steel deck will cover the vitals above the armour belt. Another battleship of the first class is to be

laid down at L'Orient. Two 20-knot steelclad cruisers are also to be built, the first, called the *Dupuy de Lôme*, at Brest, the second at Rochefort. A cruiser protected by coir or cellulose, on a system invented by Admiral de la Barrière, is to be built at St. Nazaire. The *Dupuy de Lôme* will have a 4-inch steel complete belt, steel decks and cofferdams of cellulose as protection against quick firing and high explosive shell. Her dimensions are—374 feet long, 52 feet beam, draught 23 feet, and displacement

NAVAL MANŒUVRES.) It having been settled that torpedo boats are unsuitable for purposes other than coast defence, the programme of '87 has not been carried out. Five sea-going boats have been added to the fleet, and the number of first-class boats ordered and on order amounts to thirty. The *Ouragan*, a sea-going craft, has proved successful, and five similar vessels are to be taken over from the contractors. Thornycroft has also launched a new boat called the *Courcour*, sister to the 147-feet boat *Ariele*, by

Battleships, Cruisers, and Torpedo Craft of the French Navy building or ordered.

Ordered to be laid down at L'Orient: one battleship and two torpedo boat destroyers; at Rochefort, the *Wattignies* torpedo cruiser and another cruiser *blindé* similar to the *Dupuy de Lôme*. Those vessels marked * are already launched; those marked † have been built, or are building, in private yards.

6,250 tons, complement 403 officers and men; cost £400,000. A torpedo cruiser, the *Wattignies*, is to be commenced at Rochefort, and two *avisos torpilleurs* at L'Orient. Among the vessels launched during '88 are the *Grenade*, armoured gunboat, *Forbin*, *Cecille*, and *Troude* cruisers, and *Raine* transport. In May a 24-miles run was made near Toulon with the six battleships, giving results as follows:—*Courbet* 15 knots, *Redoubtable* 14 knots, *Admiral Duperre* 14 knots, *Devastation* 13.5 knots, *Indomptable* 13.4 knots, *Colbert* 13 knots. (Compare with

the same builder. A submarine boat called the *Gymnote* has also been launched. During the year satisfactory experiments have been made in transporting torpedo boats complete from Toulon to Cherbourg overland by rail. Twelve small floating docks for the repair of torpedo boats have been constructed, and are to be placed at suitable ports round the coast. During the year the rapid mobilisation of the fleet has been tested with success. Six battleships and eight smaller craft were commissioned at Channel Fleet at Cherbourg and Brest, and

upwards of fifty craft, including armourclads, hoisted the pennant at Toulon. In an order to the fleet subsequently issued by the Préfet Maritime of Toulon, the Minister of Marine expresses his gratification at the satisfactory result attained. The estimates of Admiral Krantz for the Navy have been voted; and, save in respect to torpedo boats and perhaps the two cruisers *Mogador* and *Chansy*, the ship-building programme of Admiral Aube, of '86, is being carried out, but with greater rapidity. To this may be practically added the new armourclads, *Brennus* and another, and the two armoured cruisers. The following expenditure has also been authorised: for the defence of Cherbourg 39,400,000 francs, Brest 21,900,000 francs, Toulon 210,000 francs, and for provision of electrical communication between these ports, Paris and Rochefort and L'Orient, 500,000 francs. A survey has been of the littoral, with a view of drawing up a comprehensive plan of coast-defence, including the establishment of a number of fortified torpedo-boat stations, upon a settled system, within semaphore distance of one another. Armaments have been provided for the Transatlantic steamers starting from Havre and Cherbourg. Altogether '88 has been a year of energetic activity for the French navy; as the Minister of Marine said at Toulon, "Although our navy is not the first in the world, it can look its rivals in the face, and as regards our men and our material we can stand a comparison."

GERMAN. (See also ed. '88.) A reorganisation of the Admiralty has taken place since the accession of the Emperor William II., the executive and administrative departments being separated, so that the exclusive command of the former branch will now be in the hands of professional officers. Vice-Admiral Count von Monts has been appointed chief of the executive department in succession to General von Caprivi. The new Naval Academy at Kiel was opened in October '88. During '87 two protected cruisers were launched, the *Irene* and *Prinzess Wilhelm*. The heaviest guns carried are 5.9 inch B.L. Krupps, and their expected speed is 18 knots. The principal dimensions are—length 308 feet, beam 45 feet, draught 21 feet, and displacement 4,400 tons. Their complement consists of 320 officers and men. A composite cruiser called the *Schwalbe* was completed in May '88, and two smaller vessels have hoisted the pennant—the *Wacht* and the *Eber*. The *Sperber* and *Jade* gunvessels have been launched. The following ships have been ordered to be built:—An armoured gun-vessel, one of six for the protection of the canal between the Baltic and North Seas; a protected cruiser, same type as the *Irene*; two composite cruisers like the *Schwalbe*, and a despatch vessel like the *Wacht*. Four first-class torpedo boats, Schichau type, of 188 feet length, have been completed. Of the sixty-four 121-foot boats ordered of Schichau, forty-two have now been handed over to Government. During '88 the Germans had their usual annual naval manoeuvres, ending by a fight in the river Jade, which is considered to have proved Wilhelmshaven impregnable. It began with encounters near Chilig and Rucstersiel, in which the attacking force was successful. An attempt to land failed, but the defending squadron had to withdraw to a point close off Wilhelmshaven, so that the mouth of the Jade was forced. The attacking squadron consisted

of four ironclads, four cruisers, a torpedo division boat, and six other torpedo-boats. The defending squadron consisted of an ironclad, an artillery training-ship, a cruiser corvette, four coast-defence ironclads, a torpedo division, several small steam-pinnaces, and the despatch-boat *Blitz*. It was also supported by all the coast fortifications, with their artillery, and by the submarine defences. The attacking squadron reopened the fight in the Jade by directing upon the defending squadron and the shore batteries a fire of which at times the smoke completely shut out the view. On both sides the torpedo boats took an active part in the conflict. The attacking ships advanced with great audacity, and came very near the defenders, but were at last repulsed. The construction of the Baltic and North Sea Canal, from the Gulf of Kiel to the mouth of the Elbe, began June 3rd, '87, and the projected continuation of this canal across the province of Hanover to the mouth of the Weser has brought about a reconsideration of the German naval ship-building programme. The completion of these canals will enable the German squadron to rendezvous at Kiel, Wilhelmshaven, or Brunsbüttel as desired, and for the protection of the canal and efficiency of the fleet, more ships are considered desirable. A memorandum attached to the Naval Budget for '88-9 contains the following scheme: Ten ironclads for coast defence, of from 2,000 to 2,500 tons displacement; one is now building, four more to be laid down at once and five later on, ten in all; four new battleships, to replace one lost and three obsolete, 8,000 to 10,000 tons displacement; seven protected cruisers of from 3,000 to 4,000 tons displacement (one is already ordered); four unprotected cruisers, two despatch vessels and two torpedo cruisers. The cost of this programme will be about £6,000,000, and will be charged to the Budgets of several years, ending in 1945.

GREEK. (See ed. '88.)

ITALIAN. (See also ed. '88.) The building programme of '88-89 proposes a gradual increase during the next ten years to a strength of 313 effective vessels in '98. One armoured vessel will be added to the fifteen already in service or under construction. The number of protected cruisers will be augmented by nine of the *Fina* and *Dugali* types. Two of this type were building at the commencement of the year; three have since been laid down. Eighteen torpedo cruisers of the *Tripoli* type are to be built, six of which are in hand. Ten torpedo vessels of the *Folgare* class are to be built. Six improved gun-vessels are also to be constructed. Italy is also adding to her torpedo depot ships and armed sea-going tugs. The programme above-mentioned includes seventy-three sea-going torpedo boats. Ten 121-ton boats have been delivered. Schichau, Thornycroft, Yarrow, and White, as well as native builders, are or have been at work in the completion of the above number. Two vessels of the *Tripoli* class, referred to above, called the *Monsambano* and *Montebello*, were launched in March '88. The *Lepanto* made at her trials in May '88 a speed of 18.4. The *Re Umberto*, described below, was launched in October, on the occasion of the visit to Italy of the Emperor William of Germany. The *Piemonte*, a fast cruiser, has also been completed at Elswick. The naval manoeuvres off the ports of Genoa and Spezia this year were full of interest. The object was

to attack the latter port. The principal operations of the hostile fleet against Spezia having been unsuccessful, an unexpected attack was made upon Genoa. This attempt likewise failed, and two torpedo-boats of the "enemy" were declared *hors de combat*. The results of the

manœuvres have been very satisfactory, as showing the efficiency of the system of naval and coast defence. The *Lepanto, Italia, Duilio, Dandolo, Giovanni Bausan*, and many other powerful ships, were engaged in these manœuvres.

Battleships, Cruisers, and Torpedo Craft of the Italian Navy building or ordered.

Five torpedo vessels of Folgore type.	"	317	20'0	"	"	

One specimen of each of three types—*Dogali, Tripoli*, and *Folgore*—will be built in the Government yard at Castellamare, the remainder by contract.

JAPANESE. (See also ed. '88.) During the five years '88-'93 it is proposed to increase the strength of the navy by fifteen vessels and thirty torpedo boats. Two coast defence vessels have been ordered at the *Société des Forges et Chantiers de la Méditerranée*, and another has been laid down at the Yokosuka navy yard; a smaller armoured gun-vessel is also being built in Japan. Seventeen first-class torpedo boats are being built for this service—seven at Kobe and ten in France. An order has also been placed with Messrs. J. and G. Thomson, of Clydebank, for the construction of a new cruiser to replace the *Unchi-Kan*, lost at sea. The new vessel will be called the *Shioda Kan*. Her particulars are: length 300 feet, beam 41 feet, displacement 2,400 tons, speed 19 knots, armament eleven 12 cm. guns, besides machine guns and torpedo discharge tubes.

PORTUGUESE. (See also ed. '88.) Two small composite cruisers of 500 tons displacement are building at Lisbon. They are to carry complements of 107 officers and men, and a battery of two 6-in. Armstrong B.L. Their dimensions are as follows: Length 143 feet, beam 26 feet, draught 10 feet 10 in., and the estimated speed is 10 knots. Laird of Birkenhead has launched two steel gunboats of 220 tons for service on the African coast. They are 120 feet long, 19 feet beam, and 8 feet draught; will carry 3-in. R.T. guns, and have a speed of 12 knots.

ROMANIAN. A steel-protected cruiser of 1,320 tons displacement has been completed for this government by the Elswick firm, and called the *Elsabeta*. Estimated speed 18 knots. Three gunboats are also building at Blackwall for the Roumanians.

RUSSIAN. (See also ed. '88.) Great activity continues to be shown in shipbuilding, principally in the Black Sea, where in '89, for the first time since the Crimean war, an evolu-

tionary squadron will proceed on a cruise. It will consist of the new armoured battleships *Catherine the Second* and *Tchesma*, and the new cruisers *Kubanets, Terets*, and *Uralets*. The third new armoured, *Smope*, will be completed shortly, and make her trial trips. This vessel and the new torpedo cruiser *Captain Sacken* were launched in August '88. In February '88 two new 8,000-ton ironclads were commenced, one at the Government yard at Nicolaieff, the other by the "Kundester Volodin" Shipbuilding Co. Four more cruisers of the *Uralets* type have been ordered, and twenty new vessels of from 500 to 1,000 tons displacement are to be built for the Caspian service. Of two new armouredclads commenced in the Baltic in '86, the *Nicholas I.*, built by the Franco-Russian Co., was to have been launched in October, but owing to the early closing in of the Baltic by ice, will not take the water till next spring. Her dimensions are as follows: Displacement, 8,000 tons; length, 326 ft.; beam, 57 ft.; draught, 22 ft.; horse-power, 8,000 tons; twin-screws, and estimated speed, 16 knots. Armour, 10 in. on belt, 10 in. on battery, 12 in. on each of her two barbettes towers, 3 in. steel deck. Armament—Two 12-in. 36 ton B.L., four 8-in. 9 ton B.L., eight 6-in. 4 ton, fourteen machine and quick-firing guns, four torpedo discharge tubes. Her sister ship, the *Alexander*, has received her armament. The *Pamyat Azova*, a belted cruiser of the English *Imperieuse* type, was launched in June; and the *Admiral Komoff*, a steel protected cruiser, built at Ste. Nazaire, in France, and launched in '87, will be completed this year. Russia is still adding to her torpedo fleet, and in addition to a number of boats building in the Government yards, twelve have been ordered in France. The bicentenary of the founding of the Russian Navy was celebrated on May 30th. The Russian marine force, which corresponds to our coastguard service, has been increased from 16,000 to 24,000 men; nineteen Baltic regiments, and six for the Black Sea. A subsidy of 15,000 roubles a year for five years has also been granted to the Patriotic Fleet Commission, for

founding a line of steamers—suitable for cruisers in war time—to run between Vladivostok and Eastern ports. 250,000 roubles have

been voted for replacing the steam engines and boilers of part of the torpedo fleet by electrical propelling apparatus.

SPANISH. (See also ed. '88.) Although the naval policy expressed in the royal decree of January '87 has been somewhat modified, it is only in the direction of building fewer, larger, and faster armoured cruisers in place of a greater number of smaller protected ones. Three 7,000-ton belted cruisers are to be built in the public yards at Ferrol, Cartagena, and Cadiz, and three by the Naval Construction and Armament Co. in their new works at Bilbao. Three torpedo vessels have been begun in the public yards, and these are to be built by contract. Three 3,000-ton unprotected cruisers, the *Cretina*, *Mercedes*, and *Alphonso XII.*, have been launched, as well as some smaller vessels. The *Reine Regente* and *Isla de Cuba* and *Isla de Luzon* have been completed by the contractors and handed over to the Spanish authorities. Of torpedo boats the *Ariete* and *Rayo* have been delivered by Thornycroft, who is building four more of the same type. This firm also built the *Habana* for the merchants of Havana to defend their port. Crossing the Bay of Biscay, an accident to her boiler was fatal to four of her crew. Yarrow has built two boats for Spain, the *Halcon* and *Azor*, which have given great satisfaction. Upwards of twenty boats are under construction by contract or in the public yards. The following vessels have been or are to be added to the Spanish Navy since '79. In that year first-class cruiser *Aragon*, 3,290 tons, 14'5 knots; two torpedo boats. '80—Transport *Cebu*, 1,000 tons; school-ship *Argos*, 700 tons. '81—First-class cruisers *Navarra* and *Castilla*, each 3,290 tons, 14 knots; second-class cruiser *Velasco*, 1,140 tons, 14'7 knots; second-class gunboats *Par* and *Pilar*, each 215 tons; five torpedo boats. '82—Second-class gunboats *Alsedo* and *Eulalia*, each 215 tons. '83—Transport *Manila*, 1,000 tons; three torpedo boats. '85—First-class torpedo boat *Orion*, 19'8 knots; second-class cruiser *Infanta Isabela*, 1,130 tons, 14 knots; first-class gunboats *Elicano*, *General Leno*, and *Magallanes*, each 520 tons. '86—Torpedo boat catcher *Destructor*, 460 tons, 21 knots; second-class cruiser *Isabela II.*, 1,130 tons, 14 knots. '87—Steel ironclad barbet-ram *Pelayo*, 9,650 tons, 15 knots; protected cruiser *Reina Regente*, 5,600 tons, 20 knots; torpedo boats *Azor*, *Ariete*, *Halcon*, and *Rayo*, each 108 tons, 23 knots; two other torpedo boats; second class protected cruisers *Isla de Cuba*

and *Isla de Luzon*, each 1,030 tons, 15 knots, first-class unprotected cruisers *Alphonso XII.*, *Reina Cristina*, and *Reina Mercedes*, each 3,040 tons, 17'4 knots; second-class unprotected cruisers *Cristobal Colon*, *Don Antonio Ulloa*, and *Juan de Austria*, each 1,130 tons, 14 knots. '88—(Building or ordered). Six cruisers, each of 7,000 tons, 16 to 20 knots; first-class protected cruisers *Alphonso XIII.* and *Lepanto*, each 5,600 tons, 20 knots; second-class protected cruisers, *Ensenada*, 1,030 tons, 16 knots; second-class unprotected cruiser *Conde de Venadito*, 1,130 tons, 14 knots; two gunboats, *Cancha*, 520 tons, *Legaspi*, 102 tons; four torpedo-boats, each of 108 tons, 23 knots; twenty torpedo boats, each of 60 tons, 18 knots. In April a portion of the Spanish fleet assembled at Cadiz for manoeuvres, and afterwards proceeded to Barcelona to be present at the opening of the Exhibition (*q.v.*) at that port, when a large number of the ships of all nations likewise assembled. In October an electrical submarine vessel, the invention of Lieut. Peral, was launched at Cadiz, and is to be completed this year. The Spanish navy has also been deprived of the services of the *Lealtad*, a frigate of 3,000 tons displacement; 1,400 horse power. This vessel foundered in Batabano Harbour in September, in a hurricane.

SWEDEN AND NORWAY. (See also ed. '88.) A sister ship to the *Loca* has been ordered from the Motala Co. in Sweden, the armour for the hull and turret to be made in France. A 14-knot torpedo cruiser is also contemplated, and a small sum has been appropriated for her construction.

TURKISH. (See also ed. '88.) The Minister of Marine, it is reported, has been ordered to renovate some of the obsolete ironclad ships, and to order four new powerful vessels of the latest type. The expenditure would amount to about £4,000,000 if this order is carried out. At the German works at Gaarden, near Kiel, Turkey has several smaller vessels under construction, one of 25, one of 23, and one of 20 knots speed, all torpedo cruisers; also a despatch boat and a torpedo boat catcher, and nine boats, Schichau model, of 128 feet length. Two or three small cruisers and four T boats are also under construction at Constantinople; and Maudslays, Sons, & Field have completed a 126-foot boat for them, which averaged 21 knots at the trials.

UNITED STATES. (See also ed. '88.) All the new vessels authorised by Acts of Congress in '85-86 and '87 are now commenced; the unarmoured vessels are to be completed by '89, the armoured ones by '91. The *Texas* battleship is of 6,750 tons displacement, and is to be built at the Norfolk Navy yard from designs by Mr. W. John of the Naval Construction and Armaments Co. The *Maine*, to be built at the New York Navy yard, will be an enlarged and improved *Riachuelo*; her displacement is 6,700 tons. The *Charleston*, a cruiser of the *Namwakan* type, was launched at San Francisco on July 19th, '88. The *Newark*, protected cruiser, is building at Cramp & Sons' Shipbuilding Co. The *Baltimore*, protected cruiser of 4,400 tons, is building by the same firm. The *Philadelphia*, a sister ship, is also building by this Company.

The *San Francisco*, another protected cruiser of slightly improved type, is building by the Union Iron Works of San Francisco. The *Petrel*, 870-ton gunboat, is building at Baltimore. The *Yorktown*, partially protected cruiser of the *Archer* or *Scout* type, is completed by Cramp & Sons, having been launched on April 28th, '88. The *Concord* and *Bennington*, two sister vessels, are building at Chester, Pa., by the Delaware River Iron Shipbuilding Co. The *Vesuvius*, dynamite gun cruiser, something of a large torpedo boat type, but constructed to carry three pneumatic tubes, was launched at Cramp's yard on April 28th, '88. The U.S. Government have also acquired the *Stiletto* torpedo boat; and a larger boat of somewhat similar type is being built.

Battleships, Cruisers, and Torpedo Craft of the U.S. Navy building or ordered.

Name.	Description or Class.	Tonnage.	Speed in Knots.	Heaviest Gun, all Breech-loaders.	Promised Date of Completion.	Where Building.
<i>Texas</i>	Battleship	6,750	17'0"	12 in.	All these vessels to be completed by 1890.	Norfolk Navy Yard.
<i>Maine</i>	Arm'd. cruiser	6,700	17'0"	10-in.		New York Navy Yd.
<i>Charleston*</i>	Protected cr.	3,730	18'5"	8-in.		San Francisco.
<i>Newark</i>	"	4,083	18'0"	6-in.		Cramp & Sons, Phila.
<i>Baltimore*</i>	"	4,400	20'0"	6-in.		" " "
<i>Philadelphia</i>	"	4,000	19'0"	6-in.		" " "
<i>San Francisco</i>	"	4,000	19'0"	6-in.		San Francisco.
<i>Yorktown*</i>	Torpedo cr.	1,700	17'0"	6-in.		Cramp & Sons.
<i>Concord</i>	"	1,700	17'0"	6-in.		Chester, Pa.
<i>Bennington</i>	"	1,700	17'0"	6-in.		"
<i>Petrel*</i>	Gun vessel	870	13'0"	6-in.		Baltimore.
<i>Vesuvius*</i>	Dynamite G.V.	800	20'0"	15-in calibre pneumatic tube		Cramp & Sons.

Vessels marked thus (*) have been launched. Two single-turret monitor rams for coast defence, each carrying one 16-in. 110-ton gun in revolving turret, and 10-cwt. dynamite shell pneumatic tube, are to be built for coast defence, with twenty smaller craft; their cost to be provided out of appropriations made in '86 for this purpose. The late President is also reported to have authorised the further construction of two steel cruisers of 3,000 tons displacement, and 18 knots speed, two steel cruisers of 2,000 tons and 19 knots, one armoured turret ship of 7,500 tons and 17 knots, and a protected cruiser of 3,500 tons and 20 knots.

Navy, M. Edouard. See **EGYPTOLOGY.**

Navy, The British. (For concise history of Navy from early times to end of French war see ed. '87; for continuation of history and modern progress see ed. '88.) The total cost of the Navy for the financial year '88-9 is £13,082,800. The various heads of expenditure are:—

Effective Services:—

A. No. of officers, seamen, boys, coastguard and royal marine	62,400
1. Wages, &c., of above	£3,112,700
2. Victualling and clothing	956,400
3. Medical establishments and services	119,500
4. Martial law	11,500
5. Educational service	73,500
6. Divine service	33,100

7. Royal Naval Reserves	143,800
8. Shipbuilding, repairs, maintenance, &c.	
Section 1. Personnel	1,824,325
" 2. Material	1,456,560
" 3. Contract work	1,777,085
9. Naval armaments	1,863,500
10. Works, Buildings, and their repairs, at home and abroad	376,300
11. Miscellaneous effective services	117,000
12. Scientific services	55,500
13. Admiralty Office	212,100
Total	£11,118,900
Non-Effective Services.—	
14. Reserved and retired pay	721,000
15. Naval pensions	743,600
16. Widows' pensions and compassionate allowances	168,500
17. Civil pensions and gratuities	330,800
Total	1,963,900
Grand Total	£13,082,800

Considerable changes were made in the arrangement of the **Navy Estimates** for '88-89, the alterations being mainly due to the work and influence of Mr. A. B. Forwood, Parliamentary Secretary of the Admiralty. Fuller details relating to the various votes under which naval expenditure is classified have never previously been submitted to Parliament. It is claimed for these changes that they will

tend "(1) to preserve, as far as possible, continuity of practice, in order to allow of comparisons being made with the expenditure of the previous year; (2) To show the product anticipated from the expenditure, especially as regards dockyard work; (3) To exhibit the aggregate cost of each branch of the naval service, under whatever vote or department of state the provision may, in part or in whole, be made; (4) By abolishing appendices to bring detailed appropriations of expenditure into such direct connection with the votes, that it may be brought under the scrutiny of the Comptroller and Auditor-general." For the first time the Armament vote appears in the Navy Estimates, the charge for ordnance having been transferred from the army votes. The number of commissioned officers, warrant officers, petty officers, seamen, pensioners, and boys serving in the fleet, is 44,753; of coastguardsmen, 4,000; of marines, 12,706; of officers and others serving on shore, 1,041; of Royal naval reserve men, 20,300; of seamen and marine pensioners reserve, 2,155; and of R.N.A. volunteers, 2,000. The number of ships in commission on Oct. 1st, '88, was: **Armoured**—Battleships, 1st class, 10; 2nd class, 12; 3rd class, 2. **Coast defence**, 2. **Cruisers**, 1st class, 2. **Unarmoured**—Cruisers, 2nd class, 7; 3rd class, 24. **Sloops**, 18. **Gun-vessels**, 1st class, 2; 2nd class, 12. **Gunboats**, 1st class, 5; 2nd class, 22; 3rd class, 22. **Torpedo boats**, 4. **Special service vessels**, 16. **Torpedo racer**, 1. **Torpedo depot-ship**, 1. **Despatch vessels**, 2. **Surveying ships**, 7. **Coast-guard tenders**, 5. **Troop and storeships**, 5. **Imperial**, 8; **Indian**, 4. **Royal yachts**, 4. **Sailing vessels**, 31; and stationary, training, and drill ships, 35. **Total**, 258 vessels, of which 23 were in the Mediterranean, 7 in the Channel squadron, 14 North America and West Indies, 4 S.E. coast of America, 8 Pacific, 9 Cape of Good Hope and west coast of Africa, 12 East Indies, 20 China, and 9 in Australian waters. The **combatant branch of officers** is that from which the higher grades, such as admiral, captain or commander, are supplied. To join this branch the aspirant must be nominated a naval cadet, and pass the medical and educational examinations, particulars of which and of the method of obtaining a nomination may be obtained by application to the Secretary of the Admiralty, Whitehall. Those lads who are successful in their examination, which is partly competitive, are sent to the *Britannia* training ship at Dartmouth, where they spend four terms, or two years. During this period, and also while midshipmen at sea, the pay is only nominal, and their friends must allow them an annual sum of from £40 to £60 for at least the first six years, besides supplying an outfit and paying the tailor's bill. From the training ship, after another examination, the boys go to sea, and their education becomes more or less practical as well as theoretical. After four or five years' service the midshipman is examined for the rank of sub-lieutenant in seamanship, in navigation, in gunnery, and in pilotage. All these examinations, however, do not come together, but after various periods of study at the R.N. College at Greenwich, and in the *Excellent* gunnery training ship at Portsmouth. If the midshipman fails to pass he is discharged from the service, but if successful he receives his commission as a sub-lieutenant. His friends must supply him with a new outfit, and his pay is £91 4s. a year. From this time,

if his record is stainless, he may, with luck, rise to lieutenant, commander, captain, and even flag rank, but the proportion of lieutenants that are promoted is not above one in five. Lieutenants' pay varies from 10s. to 13s. 6d. a day when employed, or from 5s. to 8s. 6d. if on half-pay. The salaries of this and senior grades is augmented by extra allowances for special work or duties; the various rates are given in the official *Navy List* issued quarterly, where further information can be obtained on this and the following subjects. The **engineer branch** is supplied by engineer students who enter by competitive examination, open to all British subjects. Those persons wishful to compete must apply to the Secretary Civil Service Commission, London, and they must not be less than 14 or more than 16 years of age when they appear before the examiner. They must all pass a medical examination. Previous to joining the training establishment every student is obliged to join his nearest relative in a bond of £300 that he will enter the navy if required to do so as an **assistant engineer**. Students receive nominal pay, but their friends must also assist in their support. The pay of an assistant engineer after he has passed the examination at Greenwich College is about 6s. a day, rising with various grades according to service to the pay of a chief inspector of machinery, at £584 a year. There are also allowances to the higher grades as charge money, etc. The cost of outfit for an engineer student is about £15; for an acting assistant engineer about £20, and the probable yearly expense he will incur in addition is from £25 to £30. The **clerical branch** is supplied by **assistant clerks** appointed by limited competition at semi-annual examinations. Nominations are procurable through the Secretary of the Admiralty, and the number of successful candidates entered depends upon the demands of the lists at the time. Candidates must be between the ages of 15 and 17, and be found physically fit. The pay of an assistant clerk is 2s. 6d. a day; he messes in the gunrooms, and ranks with the naval cadet. His outfit costs about £70, and his pay must be supplemented at least to the extent of £20 a year by his relatives. After a year at sea he may pass for clerk, getting 4s. a day; and with the higher grades the pay varies from £250 to £600 a year, and those in charge receive additional emoluments. In the **medical branch** a candidate must be on entering between 21 and 28 years of age. He should make application to the Secretary of the Admiralty for the necessary papers to fill up before undergoing the several examinations needed. If successful he goes to Haslar for a course of naval hygiene. The pay of a **surgeon** varies from £200 to £310 5s. a year, besides allowances, and rises in the highest grade to £912 10s. Further information with reference to the entrance examinations for the above rank and those of naval instructors and naval chaplain, and the various schemes of retirement and pensions at present in force, will be found in the official *Navy List*, published quarterly, price 3s. **Warrant officers**, as gunner, boatswain, and captain, are promoted from among the men of their callings by warrant after examination. These officers are eligible for commission; two of them have received this honour lately, and most of them now get it on retirement by being retired with the rank of lieutenant. On

promotion warrant officers receive a gratuity of £25; their pay amounting with allowances to nearly 10s. a day, and pensions from £120 to £150. Seamen join the navy as second-class boys, having the following qualifications:—Written consent of parent or guardian, ability to read or write, a certificate of birth or an affidavit made before a magistrate that the applicant is between the ages of 15 and 16½ years. Every particular on this subject can be obtained at the Head Recruiting Depot, Spring Gardens, or on board any of the reserve ships round the coast, on application to their commanding officers. A particularly strict medical examination is held—malformation, chronic disease, deafness, defect of vision, bad teeth, or feeble constitution disqualifying. Boys that are accepted are sent to a training ship, where they remain for a year or two. A gratuity is given to each boy on entering, and a further one on his obtaining the rating of first-class boy. The pay of this rating is 7d. a day, and he can remit 8s. a month to his parents. When he is 18 he is rated ordinary seaman, with pay of from 1s. to 1s. 3d. a day. His kit or necessary clothing then costs him about £12, and all seamen have to supply from stores on board, at their own expense, materials for their clothing, and many of them make their own things, and are dext and able tailors. Dirtiness or untidiness are almost unknown in a man-of-war, and the sloven is severely punished. There is no excuse for him; for at least once a week opportunity is afforded for making, mending, or washing clothes. Provisions, ample in quantity and excellent in quality, are supplied to the men, and if they do not take all they are allowed, they receive money instead. After passing an examination the ordinary is rated able seaman, and then leading seaman, with pay of 1s. 7d. or 1s. 9d. a day, and an allowance if he re-engaged after twelve years. Extra qualifications carry extra pay, and as he increases in rank as a petty officer, so does his pay and allowances increase, till as a chief petty officer he may be receiving between 3s. and 4s. a day or more, and he can retire on a pension aggregating £63 17s. 6d. a year, and carry off a good conduct medal with a gratuity of from £10 to £20 on retirement, according to his character and length of service. Other grades in the Navy are stokers and firemen, eligible to men of good character between the ages of 18 and 25, not less than 5 ft. 4 in. in height and 32 in. round the chest, and able to pass the medical examination. On entry the pay is about £30 per annum, while chief stokers get nearly £60. Engine-room artificers, who pass an examination at the dockyards, get from £90 to £125 a year. Writers get 2s., 3s., or 5s. a day; but they are almost invariably entered from Greenwich School. Naval schoolmasters are appointed by the Admiralty; their pay varies from £73 to £109 10s. after twelve years' service. All these grades are entitled to good pensions; and men with the knowledge of the following trades, and certain other qualifications, which they can learn by reference to the *Navy List* before-mentioned, can enter the service:—Armourers, blacksmiths, carpenters, caulkers, coopers, painters, plumbers, ropemakers, sailmakers, sick berth attendants, tinsmiths, and domestics of various grades. In the memorandum which was issued by the First Lord with the Estimates this year, for the second time, reference is made to the excellent quality of the personnel

of the Navy. It is, however, to be feared that at all events in some grades it is deficient in the elasticity necessary for meeting the increased demand of war. A concession was made to the prayer of the lieutenants this year in the shape of increased pay after a certain period of service, it being generally acknowledged that this grade has great reason for discontent. Much credit is given to the present Board of Admiralty for the reforms it has initiated and carried out in the dockyards; and it is now admitted that the public establishments are in a fair way to compete with the private shipbuilding yards—either for celerity, economy, or good workmanship of their output. The reorganisation of the Admiralty departments, both at Whitehall and in the yards, which had been the subject of several investigations by various committees in '86 and '87, were still in progress at the beginning of '88, when in February the rumours of internal dissension among the various officials were confirmed by the resignation of Lord Charles Beresford (q.v.), M.P. for Marylebone, on a question of principle connected with administration. For some time the daily press had urged the sea-lords to resign their seats at the Admiralty Board if they considered that the Navy was improperly or insufficiently administered. Up to this date, however, the naval officers at the Board, however much their inclination pressed them to follow this advice, had found it impracticable to do so with any advantage to the State. Lord Charles Beresford, besides being very popular with the public generally, had a seat in Parliament, and was therefore able to put on record the reasons for his proceeding in a peculiarly favourable manner. Primarily, his disagreement with the First Lord was over a matter of cutting down the salaries paid to officers in the newly-organised Intelligence Department; but his resignation was also intended as a protest from the naval service against the manner in which the civil authorities, without any explanation to Parliament or the country, override and misrepresent the opinions of the sea-lords. That this is the case was fully shown later by the evidence given before the Select Committee of the House of Commons on the Navy Estimates, which committee was last year appointed for the first time, and made several interesting and important interim reports. When the House met the agitation for reform and efficiency had assumed such proportions that Government gave way before it, and appointed a Royal Commission, presided over by Lord Hartington, to inquire into the organisation and administration of the services; and shortly afterwards Lord Salisbury announced that the whole question of the defence of the Empire would be considered by a Committee of the Cabinet, over which he would himself preside. Even these concessions hardly prevented the scare from becoming general. Lord Beresford's resignation was the signal for a succession of articles and letters in the daily press and the magazines, which went a long way to open the minds of the country to the national peril. Speeches were made by Lord Wolsey and Sir Geoffrey Hornby, stating their opinion as to the insufficiency of the sea forces. Meetings were held in the City: the question of the moment, in the characteristic words of the *Daily Telegraph*, was "Is England in danger?" and the universal answer of the experts was to the effect that, in case of war with one or more of the

great Continental naval powers, she was. The tone and tenor of the discussion may be learnt from the pages of the following magazines, amongst others: *Fortnightly* for Jan., Feb., March, April, and May; *Blackwood* for Feb., April, and August; *Nineteenth Century* for May, June, and July. The Naval Mobilisation and Manœuvres (*q.v.*) took place in July and August, and in October Lord George Hamilton announced that the Government had come to the determination of proposing a programme which he believed would satisfy the country. This programme is understood to include several armoured-clads—of which class of vessel none had been laid down since '85—and a large number of cruisers. The tendency of the policy of the present Board has been to get the work in hand, left a legacy of the war scare and agitation of '84-'85, finished as speedily as possible, and to lay down no armoured-clads but protected and partially-protected cruisers of greatly increased speed, the latest vessels of this description having an estimated speed of 22 knots, with very large coal capacity. In torpedo craft, also, the first-class boats having proved only fit for coast service, the new construction has grown into vessels of from 500 to 700 tons, of the *Rattlesnake* and *Sharpshooter* classes, with increased

speed and heavier armament. Vessels launched during '88 were:—The armoured battleship *Nile*; cruisers *Magicienne*, *Medea*, *Melpomene*, *Medusa*, and *Marianne*; sloops *Daphne* and *Nymphe*; gunboats *Partridge*, *Pheasant*, *Pewcock*, *Plover*, *Pigmy*, and *Pigeon*; torpedo catcher, *Sharpshooter*; and surveying ship *Research*. The following ships were laid down:—*Blake* and *Blenheim*, 22-knot cruisers; *Vulcan*, torpedo depot cruiser; *Blanche*, *Blonde*, *Barrosa*, and *Barraconta*, 16½-knot cruisers; and *Bellona* and *Barham*, 19½-knot cruisers; 2 sloops, 9 torpedo gunboats, 6 gunboats, and 1 sailing brig. To carry out the provisions of the special agreement for supplying an extra Australasian squadron, four cruisers of an improved *Medea* type and two gunboats of an improved *Sharpshooter* type, have been authorised and ordered. There has been great delay in the provision of guns for the Navy, and several ships otherwise completed are now waiting for their guns; but Lord George Hamilton has stated that arrangements are now made which will obviate this delay in future. The ships building and completing for the British Navy will be found in the following table. For those for the other large naval powers, see NAVIES, FOREIGN.

Battleships, Cruisers, and Torpedo Craft of the British Navy building or ordered.

Name.	Description or Class.	Tonnage.	Speed in Knots.	Heaviest Guns.	Promised date for Completion.	Port and Remarks.

Two " <i>Sharpshooters</i> " for Australia	named	"	<i>Wizard</i>	<i>& Whiting</i>	"	"

Consult Brassey's "British Navy" (5 vols., 1882); "The Naval Annual" for 1886-87 and 1887-88; Sir E. J. Reed ("Steel Shipbuilding and Modern Ships of War"); Sir N. Barnaby (*The Naval Review*); Lloyd's "War-ships of the World"; Bedford's "Sailor's Pocket Book"; Darrassier's "Aide Memoire de l'Officier de Marine"; Sleeman on torpedoes; Bambridge-Hoff on naval tactics; Nordensfeldt on machine guns, and Hovgaard on submarine boats. "Future Naval Battles, and How to Fight Them," "The Battle of Port Said," "The Great Naval War of 1887," "The Russia's Hope," and "Down with England," are works of imagination dealing with maritime warfare of the future from the points of view of various writers.

Negligence, Law of '88. The common law courts have lately decided a number of important cases on the law relating to negligence. In many of these, railway companies have been the defendants. In the action of *Charmian v. The South-Eastern Railway Co.*, two of the plaintiff's horses had been killed on the line at Albury Heath, Surrey, where the road crosses the railway at a level crossing. There were two large gates for carriages, and at the side a wicket-gate for foot passengers. Round the wicket-gate there was a fence to prevent cattle and horses from straying on to the railway. The wicket-gate when closed rested on a post at the end of the fence. The plaintiff's horses pushed open the wicket-gate, broke down the fence, strayed on to the railway, and were killed. The contention on the part of the Company was that there was nothing in the enactment as to fencing round the wicket-gate, and that they were only bound to have gates across the road. The Court of Appeal, however, held that the Company had not kept the gates in an effective condition, and directed judgment to be entered for the plaintiff. In *Simkin v. The London and North-Western Railway Co.*, the negligence imputed to the Company was, among other things, the omission to screen their line at Bletchley station from the adjoining roadway. The plaintiffs had been injured in consequence of their horse taking fright at an engine blowing off steam in the station, which was more or less open to the roadway. The Court of Appeal, however, supported the Queen's Bench Division in holding that the Company was under no obligation to screen its line in the way contended. In the case of *Osborne v. The London and North-Western Railway Co.*, where the plaintiff had slipped in frosty weather while going down a flight of stone steps which were much hollowed out by wear, the defendants were held liable, but in that of *Pike v. the West London Railway Co.*, where the plaintiff had walked off a railway platform, which she alleged was insufficiently lighted, during a thick fog, the Court of Appeal found that no means to prevent such an accident could reasonably have been taken. In *Skipwith v. the Great Western Railway Co.*, Mr. Skipwith had deposited at Paddington station a Gladstone bag, valued, with its contents, at 50 guineas. He did not, however, declare it above the value of £5, but paid *ad.*, and received a ticket in the usual way, one of the conditions endorsed on the ticket being that the Company should not be liable "for loss or detention of, or injury to," any article above the value of £5, unless its value were declared and an additional charge paid. When Mr. Skipwith came again for his bag it was not forthcoming. It was held

that the condition of the contract was good against the plaintiff, and that he could not recover. On the other hand, in the case of *Bunch v. The Great Western Railway Co.*, where a Gladstone bag had been handed over to a railway porter, who assured the plaintiff he would take care of it, whereas it was afterwards stolen, the House of Lords, to which the action was finally taken, affirmed the Company's liability. In the action of *Tolhausen v. Davis*, a lady who had called at the defendant's farm in Cheshire, and was having some tea, had her attention attracted to a runaway horse. Led by curiosity, she left the house, and stood in the farmyard, near the gateway leading into road. Not unnaturally the horse turned in through this gate, which led to his stable, and as he did so knocked the unhappy woman down. She was much injured, and suffered the loss of an eye in consequence of the accident. The county court judge gave her £300 damages, but this verdict the Queen's Bench Judges set aside. They agreed that the facts might establish a case of negligence as regarded the starting of the horse, but decided that this was not enough to give the plaintiff a right to recover. The Judicial Committee of the Privy Council had an important case before them, in which a person named *Oultas* had successfully sued the *Victorian Railway Commissioners* for damages sustained by himself and wife. It appeared that they were driving home in their buggy, when they were nearly run over at a level crossing of one of the Melbourne lines. The man in charge of the crossing had imprudently opened the gate for the buggy, and the vehicle was actually on the line, when a train came in sight. There was a moment of intense alarm and confusion, but the occupants of the buggy managed to escape without actual impact, though the wife received a severe shock to her nervous system. The Privy Council held that the Victorian courts were wrong in awarding damages, as the injury sustained must be a more direct and natural consequence of negligence than could be found in a lady's flight. The case of *Manning v. Bateliff* raised the question whether the owner of a bull is liable for damages caused by such an animal, whether or not he knows it to be ferocious. Mr. Justice Smith held that, just as it is not sufficient to show that a dog is vicious, but that it has been accustomed to bite mankind within the knowledge of the owner, so it is necessary to show that, to the knowledge of the owner, the bull was accustomed to gore mankind. In order to hit the owners of animals other than *feræ naturæ*, it is therefore requisite to prove *scienter* in that sense. A question connected with the liability of bankers in reference to lost circular notes was raised in the case of *Dick v. Herries*. The plaintiff, it appeared, obtained from the defendants circular notes for £250, for the use of his daughter, who was about to travel on the Continent. While travelling, the young lady's desk containing the notes and also the letter of indication was stolen, and ultimately the notes were cashed. The defence was that the plaintiff's daughter was guilty of negligence in carrying the notes and the letter of indication in the same place, and the Court, on this ground, gave judgment for the defendants. In *Meier v. Meinershausen* (Queen's Bench Division, Nov.), the plaintiff recovered £400 damages for injuries sustained through a quantity of snow being

negligently thrown by the defendant's servants from the roof of a house on plaintiff's head.

Neilson, Miss Julia, one of the latest additions to the stage, made her *debut* in London at the Lyceum Theatre in March, when she made a favourable impression as *Cynisca* in Mr. Gilbert's comedy "*Pygmalion and Galatea*." Miss N. has had a successful career at the Royal Academy of Music, having gained the Lilwellyn Thomas prize in '86, and the *Sainton-Dolby Scholarship* in '87, and many other distinctions. For some time Miss N. has been a prominent member of the chorus in the performances of oratorios at the Albert Hall. She has recently (Dec.) created a favourable impression in the new play "*Brantingham Hall*."

Netherlands, Political Parties in the. The political parties in the States-General are divided into *Liberals* and *Anti-Liberals*, the latter being composed chiefly of such opposite elements as *Catholics* and *Orthodox Protestants*, who are also called *Conservatives*. In the *Upper House*, or *First Chamber*, which consists of 50 members, the *Liberals* number 34, the *Catholics* 10, and the *Orthodox Protestants* 6. The members of the *First Chamber* are elected for 9 years, one-third retiring every 3 years. The *Lower House*, or *Second Chamber*, is composed of 100 members, who are elected for 4 years under a limited manhood suffrage. The present *Lower House*, which was elected in March '88, is composed of 45 *Liberals* and 55 *Anti-Liberals*, the latter being thus divided: *Orthodox Protestants*, or *Conservatives*, 28; *Catholics*, 26; and one *Socialist*. In the previous Chamber the *Liberals* had a slight majority, and in consequence of the '88 elections Dr. J. Heemskerk, who had held office as President of the Council since April '83, resigned, his example being naturally followed by his colleagues. An *Anti-Liberal* cabinet, with Baron Mackay as President of the Council and Minister of the Interior, was then formed, and is still in power.

Netherlands, The. A kingdom under William III. of the House of Orange. Area, excluding Luxemburg (*q.v.*), 12,648; estimated pop. in '86, 4,390,857. Constitution of 1848 vests executive in the king, and legislative authority in the States-General, sitting in two chambers: the first, consisting of 93 members, elected by the provincial states; the second, of 86 members, elected by ballot, one to every 45,000 of population. Every two years one-half of the second and every three years one-third of the first chamber retires by rotation, unless dissolved by the king, in which case new elections must take place within forty days. The second chamber alone possesses the initiative in legislation; the upper house having the right of approval or rejection, but not of amendment. The king has a veto. Alterations in constitution to be made by two-thirds vote of both houses, followed by a general election, and confirmation by a similar vote of the next States-General. Entire liberty and social equality granted to all religions. Estimated revenue, '88, £9,667,007; expenditure, £11,163,406; debt, £91,262,779; imports, '86, £91,891,566; exports, £82,850,000. (For army and navy see *ARMIES, FOREIGN, AND NAVIES, FOREIGN*.) Colonies include Java and territories in Sumatra, Borneo, and numerous other islands in Eastern Archipelago; Curaçao and five other small islands in the West Indies, and Surinam in South America. (For history to '88 see previous eds.) The first general election

under the amended Constitution took place early in the year ('88), and a new ministry, with Baron Mackay as premier, was formed (April). In the speech from the throne to the States-General (April 18th), it was stated that relations of the Netherlands to foreign countries were most friendly, and that bills for carrying into force the modification of the constitutional law, for the revision of the law on primary education, and the division of the great towns into separate electoral districts, would be presented. The illness of the king causing great uneasiness, the States-General (Sept.) in joint session passed a bill vesting the guardianship of the Princess Royal (whose eighth birthday was celebrated with great rejoicing) in the Queen, assisted by a council. The seventy-fifth anniversary of the liberation of the Netherlands from French domination, and its restoration to national independence, was commemorated by all the large towns (Nov. 17th). There was also a splendid historical cavalcade in connection with the festivities at Scheveningen (Nov. 30th). The condition of Java caused anxiety to the Home Government during the year. The North Sea Liquor Traffic Convention has been ratified, and a new convention for improving the Flushing-Queenborough mails was entered into with the Zealand Steamship Co. (For action of Holland with respect to the question of sugar bounties, see *SUGAR BOUNTIES*; and for Ministry, etc., see *DIPLOMACY*.) Consult *Statesman's Year Book, Almanach de Gotha*, etc.

Nevis. A British West Indian island included in the presidency of St. Christopher, of the federal colony of the Leeward Islands. Area (including Redonda) 50 sq. m.; pop. 11,864. Capital, Charlestown. The island is simply a single cone-shaped mountain, surrounded by a margin of low lands. Drought is felt, though springs exist in the mountain. It is fertile. Sugar and limes are the chief crops. Redonda is a dependent islet. Statistics included in those of St. Christopher (see *BRITISH EMPIRE*, etc., table). The colony was independent till 1883. Formerly a slave mart, Nevis was completely ruined by emancipation, and is only beginning to recover.

"New and Latter House of Israel." See *JEZREELITES*, eds. '87 and '88.

New Britain. Now part of KAISER WILHELM LAND (*q.v.*)

New Brunswick. A province of the Dominion of Canada. It lies along the Bay of Fundy. Area 27,322 sq. m.; pop. 321,233. Capital, Fredericton; chief commercial centre St. John. Divided into fifteen counties.—Chief rivers are the St. John and the Miramichi, which are navigable in part. Country generally level, but hilly on the north-west. There is much fine timber. Coal abundant; iron, manganese, gypsum, building stone, and albertite. Good agriculture; fertile. Summer warm, winter very cold; healthy.—Administered by a Lieut.-Governor and Executive Council. The people elect a Legislative Council and a House of Assembly. The Province has ten seats in the Dominion Senate and sixteen in the House of Commons. Religion abundantly provided for. Both high and elementary education publicly provided and supported—the latter free, but not compulsory.—Industries are chiefly connected with the forest and the fisheries, but there is good class farming and shipbuilding. Only one-tenth of the land suitable for agriculture yet taken up, and free grants may be had

on advantageous terms. The history of New Brunswick is comprehended in that of Nova Scotia until 1784, when it was made a separate Government. Joined the Dominion in 1867. See CANADA; and for Executive Council, etc., see DIPLOMATIC. Consult Hayden and Selwyn's "North America," etc.

New Caledonia. An island situated about 800 miles E. of Australia, about 900 N. of New Zealand. It is a French penal colony. With adjacent **Loyalty Islands** area 7,624 sq. m., pop. 56,463. **Capital Noumea.** Island mountainous, surrounded by reefs, well watered and wooded, climate warm but healthy. Half the land unfit for cultivation or pasture. Produces copper, cobalt, and nickel. Natives of Negrito or Papuan race. Annexed by France 1853. Frequent escape of convicts to Australia a source of trouble and international dispute. Consult Bonwick's "French Colonies," Norman's "Colonial France."

Newcastle, Right Rev. Ernest Roland Wilberforce, D.D., first Bishop of, third son of the late Dr. Wilberforce, successively Bishop of Oxford and Winchester, and grandson of Samuel Wilberforce, the emancipator; was b. at Briggstone, Isle of Wight, 1840. Educated at Exeter Coll., Oxford, where he graduated in '64. Ordained deacon the same year by his father, and appointed curate of Cuddesdon, Oxon. Subsequently held the curacy of Lea, Lines., the rectory of Middleton Stoney, Oxon. ('66-'73), and the vicarage of Seaford, Liverpool. **Canon of Winchester ('78); Sub-Almoner to the Queen ('71-82);** Bishop of Newcastle ('82).

Newfoundland. A British colony and island lying across the mouth of the Gulf of St. Lawrence. Area 40,200 sq. m., excluding that part of the territory of Labrador on the mainland which appertains to this colony; pop. 193,124. **Capital St. John's**—pop. 23,896. Villages on Avalon Peninsula. Atlantic cable lands in **Heart's Content Harbour.** Interior uninhabited. Great Bank to southward, shallow seas where Gulf Stream and Arctic Current meet; ever foggy, but teeming with fish, especially cod. Climate not liable to so great changes in temperature as that of the neighbouring continental provinces; winter milder, summer not so warm. Timber lands of high importance. Great agricultural capabilities. Valuable coal beds, and copper, silver and lead mines. Some fur-bearing game, deer, dogs, etc. Exports are codfish, cod-liver oil, seal oil, sealskins, and copper ore.—Governor and responsible Ministry form **Executive.** Two houses of parliament: Legislative Council of 15 members, called by Governor; House of Assembly of 33 members, elected every four years on house tenancy suffrage. Religion chiefly divided between Anglican, Roman Catholic, and Wesleyan bodies. Education denominational. There are no defences. Industries mainly fishing and preparing fish: cod, seal, lobster, herring, salmon. Produce has reached £2,000,000 in the year. Mining of copper, silver, and lead becoming important. Farming and dairying very slight. For financial statistics see **BRITISH EMPIRE**, etc. (table). There are 340 miles of railway open, and a line is being constructed across the island to Straits of Belleisle.—Discovered by Cabot in 1497, but not really settled till 1624. Subsequently many vicissitudes, owing to struggle for supremacy between England and France. The latter Power still holds the islands of **Miquelon** and **St. Pierre**, off

the coast. Responsible government granted in 1833. The colony as yet declines to join the Dominion of Canada, though provision has been made for it to do so. In '87 the Legislature pressed upon the Imperial Government a grievance relating to the fisheries, and the encroachment upon them by French subjects. A bill dealing with the matter had been disallowed by the House of Commons. Diplomatic action resulted, but the desires of the colony remain unsatisfied, owing to the state of our relations with France. Public interest during '88 has been much aroused by the **Fisheries Question (q.v.)** between Canada and the United States. Delegates from Newfoundland visited Ottawa (June) to negotiate the terms for the entry of that colony into the Dominion. Consult Hatton and Harvey's "Newfoundland," Murray's "Survey of Newfoundland," etc.

New Guinea, or Papua. An island lying directly N. of Australia, and after Australia the largest island in the world. It is about 1,490 miles from E. to W., with a breadth at centre of 410 miles. The area is now computed to be 305,900 sq. m. That half of the island lying west of the 141st meridian is assigned to Holland, and comprises 150,755 sq. m. The boundary between the German territory on the north, now called **Kaiser Wilhelm's Land**, and the English territory on the south starts from the N.E. coast on the 8th parallel of S. lat., and follows it to intersection with 147th meridian; thence N.W. to intersection of 6° S. lat. with 14° E. long.; thence W.N.W. to intersection of 5° S. lat. and 141° E. long. Adjacent islands north of 8° S. lat. are German, south of that parallel English. Kaiser Wilhelm's Land contains 70,300 sq. m.; pop. 109,000; the English territory 86,457 sq. m.; pop. 135,000, with **Port Moresby** as the official centre. The island is rich in tropical products, possesses a copious and peculiar flora and fauna, and is suitable for tropical agriculture. The coast is miasmatic, the mountainous interior reported healthier. It is becoming better known, various exploring expeditions having been at work. The delimitation and division of the island between Great Britain, Germany, and Holland was settled in 1885. (For history of preceding disputes see ed. '87.) Colonisation and the acquisition of land by British subjects are forbidden in the British territory. The natives, a black Negrito race, called Papuans, are numerous. Some tribes are disposed to be friendly; others are fierce and intractable. German settlers have been massacred, as were the Dutch in past times. For Commissioners, etc., see **DIPLOMATIC.** Consult Chalmers & Gill's "Work and Adventure in New Guinea," D'Alberti's "New Guinea," Bastian's "Der Papua," Fetherick's "Catalogue of York Gate Library," *The Scottish Geographical Magazine* for Oct. 1885, *Proceedings of the Royal Geographical Society* for Feb. 1887, etc. See also **QUEENSLAND**, and **COLONIES OF EUROPEAN POWERS.**

New Gallery, The. The founders are Mr. Comyns Carr and Mr. Hallé, who, as the result of disagreements with Sir Courts Lindsay, of the Grosvenor Gallery (*q.v.*), severed their connection with that institution and announced their intention of establishing a new art gallery in London. The dispute turned upon the management of the Grosvenor, it being alleged that the original aims of the promoters were not being carried out, and that art was

thus suffering. Mr. Burne-Jones took a prominent part in the controversy, and there ensued a long private correspondence, and subsequently a somewhat heated discussion in the public press. Messrs. Carr and Hallé formally withdrew from the Grosvenor, and a new building was erected in Regent Street, and opened in May '88. Architecturally the New Gallery was a surprise, and it has met with general approbation. Whether the new venture would succeed was, of course, an interesting problem, but it appears to have become a decided success. The Gallery opened with an exhibition of paintings, which has been followed by an arts and crafts exhibition, under the auspices of the Arts and Crafts Exhibition Society, of which Mr. Walter Crane is the president. The idea was to furnish an exhibition in which the handicraftsman should be directly represented, and that the public should know who the designers were and who the artificers. The work shown has not, it is true, introduced to public notice much new inventive genius, but undoubtedly the advantages to be derived from the establishment of a direct "touch" between purchaser and producer are manifold. Textiles, wall-papers, metal-work, stained glass, bookbinding, and general decorative work have been represented. Messrs. Morris & Co., Mr. Burne-Jones, Mr. Crane, Mr. H. Holiday, and others, have made important contributions. A special feature has been the issue of a descriptive catalogue embracing articles upon the various classes of exhibits, and they are of a most instructive and educational character. A course of practical demonstrations of the art of letterpress printing was also arranged. It is intended, if possible, to have an annual exhibition of arts and crafts.

New Hebrides. A long chain of volcanic islands in western Polynesia, lying W. of Fiji and N.E. of New Caledonia. Area about 3,000 sq. m. Extremely fertile, producing cocoanut, sandal-wood, fruits, and other Polynesian produce; but the climate is rather unfavourable to Europeans. Native population numerous, of Negrito origin. People barbarous, and formerly cannibals, but missionaries have produced a civilising influence. (For history of the relations between England and France in respect of N. H. see ed. '88.) In Jan. '88 the declaration agreed upon between France and England, defining the functions and powers of the joint Anglo-French Naval Commission was signed. The French troops subsequently evacuated the islands. H.M.S. *Diamond* and *Calliope* were despatched from Sydney (April) to inaugurate the dual protectorate over the group, bringing intelligence (July) that the joint Commission had met and formulated rules for working the Protectorate in accordance with the terms of the Convention.

New Ireland. Now part of KAISER WILHELM'S LAND (q.v.).

New Jerusalem Church. A religious body, sometimes designated the New Church, sometimes Swedenborgian, consisting of those who believe the theologian Emanuel Swedenborg (d. 1775) was inspired by Christ, whom he taught to be the only God, in whom exists the Divine Trinity, to explain a deeper spiritual meaning of the Word of God, and possessed special insight of the objects of the spiritual world. Swedenborg's writings were introduced into this country by a clergyman of the Church of England, the

Rev. John Clowes, rector of St. John's, Manchester. He translated the greater portion of Swedenborg's works, especially his greatest work, the "*Arcaana Coelestia*," in thirteen volumes. The Rev. William Hill, also a clergyman, translated the work second only in importance to this, the "*Apocalypse Explained*," (6 vols.) The Rev. Thomas Hartley, a clergyman, translated "*Heaven and Hell*" (1 vol.) Very early, some clergymen, and others who had been Methodist preachers, students of Swedenborg, formed a separate organisation for worship (1788), which has continued and increased. At the present time there are 75 societies, with 6,000 members, and a large number of hearers who are not members. They have Sunday-schools with 7,000 children, and day-schools with 6,000 scholars. There are twelve societies in London and its neighbourhood, and in various parts of the country there are believers of the teachings of Swedenborg who worship with the Church of England or with some of the other religious bodies. In America the number of the societies of the New Jerusalem Church is much greater; and in every foreign country, both in Europe and elsewhere, they possess numerous and zealous adherents. The body is governed by a Conference in Great Britain, which meets annually, consisting of the ministers and of representatives of societies, from one to three according to the number of their members.

New Journalism. See ed. '88.
Newman, His Eminence Cardinal John Henry, was b. in London 1801. Educated at Trin. Coll., Oxford, where he graduated with classical honours (1820), and was elected Fellow of Oriel Coll. Vice-Principal of St. Alban Hall (1825), under Dr. (afterwards Archbishop) J. Whately. Incumbent of St. Mary's, Oxford, and chaplain of Littlemore (1828-43). By his preaching he acquired great influence, and became, together with Dr. Pusey, one of the recognised heads of the "*High Church*" party, founded at Littlemore. Contributed to the "*Tracts for the Times*," and took a leading part in their publication, bringing upon himself the censure of the University authorities for the doctrines propagated. Seceded from the Church of England (1845) to that of Rome, and was appointed head of the Oratory of St. Philip Neri at Birmingham. Rector of the new Roman Catholic University of Dublin (1845-58); afterwards principal of a Roman Catholic school at Edgworthstown. Elected Honorary Fellow of Trinity Coll., Oxford (1877). Was created a Cardinal (1879) by Pope Leo XIII. Has written several remarkable works sustaining the doctrines of the Church of Rome, and particularly a reply to Mr. Gladstone's pamphlet on the Vatican decrees (1875)—"*Apologia pro Vita Sua*," etc. Cardinal Newman is one of the most learned and remarkable members of the Roman hierarchy at the present day. In Nov. '88 it was announced that the Cardinal was seriously ill.

Newman, Francis W., brother of Cardinal Newman, b. 1805. Educated at Worcester Coll., Oxford, graduating (1826) double first. Fellow of Balliol Coll. (1826), but four years later he resigned, having conscientious scruples about signing the Thirty-nine Articles. Classical tutor at Bristol Coll. (1834), and subsequently held a similar post in Manchester New College. Latin Professor in Univ. Coll., London (1846-63). He is the author of numerous works.

New Postage Stamps. See ed. '87.

New Providence. The most important of the *Bahama Islands* (q.v.).

New Republic, or Nieuwe Republiek. Was formed in Zululand 1886-7, by a party of Transvaal Boers. Lies on the northern and western side of Zululand, adjacent to the Transvaal and Swaziland. Area 1,380 sq. m.; pop. very limited. Capital *Vryheid*. On the death of Cetewayo his rule had been usurped by the chief Usibepu. Dinizulu, son of Cetewayo, sought and obtained Boer assistance against the usurper, and, as the price of it, ceded territory to the Boers. This they were gradually increasing by various means, when they came into collision with the British authorities, which resulted in negotiation. The New Republic was then defined and delimited, and the remainder of Zululand annexed by Great Britain, including all the coast. See *ZULULAND, SWAZILAND, AMATONGALAND*, etc.

News Agencies. See ed. '87.

Newspaper Press. During the last fifty years the newspaper press of this country has been revolutionised in circulation, number, and influence. Looking back half a century ago, we find that not more than 400 newspapers were in existence in the United Kingdom, and of this small number only about a dozen were daily. At the present time ('89) the newspapers of this country represent a total of some 2,400: i.e., London, 500; Provinces, 1,400; Scotland, 200; Ireland, 180; Wales, 80; British Isles, 200; and of this number nearly 200 are daily papers. With these statistics it shows conclusively that the daily press has within the last thirty years made most wonderful strides. Its influence is remarkable, its circulation great, and the power it exercises almost undoubted. At the period above indicated the daily papers were few, high priced, and exclusive—their circulation thousands, or hundreds only; whilst now there are many great daily papers in the country, not only London but provincial, that could count up their circulation by hundreds of thousands. Then a resident of the provinces could only see the county paper at intervals of a week—an organ of limited circulation—the news contained in which was extremely small and of meagre quality, which paper was passed from hand to hand until fairly worn out; but now the halfpenny daily conveys the news of the world to every one's door; it is eagerly sought for, and is eagerly read. To three different causes, is undoubtedly attributable this great development of our newspaper press: viz.—(1) the development of the electric telegraph throughout the universe; (2) the enormous improvement in printing machinery; and (3) the removal of the taxes on knowledge. Thus, while the newspaper press on the whole has increased to a marvellous degree, the particular divisions of it have undergone rapid progress, and interests are now represented that were unknown and almost unheard of half a century ago. It is curious to look over a book such as the *Newspaper Press Directory*, and to note in its pages the class papers and periodicals and the trade papers. In this work we find almost every interest represented; and it is singular to observe that there are trade papers and periodicals for nearly one hundred industries and professions. One noteworthy feature in the

development of the newspaper press of recent years has been the number of essentially local papers throughout the country; and this, too, is particularly noticeable in the Metropolis, the number of such papers being very large, and all devoted to and full of local news not dealt with in the general press of the day. Of the many papers now in existence in the country, the *London Gazette* (q.v.) is the oldest. This was first published on the 7th November, 1665, and is therefore 224 years old. It is the official organ of the Government. The next paper in point of age is the *Public Ledger*, a daily, and exclusively commercial publication. It was first issued in the year 1759. Following this were the *Morning Post* (q.v.), dating from 1772; the *Times* (q.v.) from 1788, and the *Morning Advertiser* (q.v.) from 1794. Of the evening contemporaries the *Globe* is the oldest, dating from 1803. There are two provincial newspapers that can claim to have been established in the seventeenth century—viz., *Berrow's Worcester Journal*, 1690, and the *Lincoln, Rutland and Stamford Mercury*, 1695. The *Newcastle Courant* can claim to be the next in point of age, having been established in 1711. The *Sheffield Daily Telegraph* is the oldest provincial daily newspaper. The periodical literature has likewise made rapid progress. There is no reliable record of the number of magazines and periodicals of the country half a century ago; but we find that the "Directory of Magazines" was first published in the year 1861; and we further note that in that year there were 481 magazines, of which no less than 200 were of a decidedly religious character; whilst now there are published in the United Kingdom and the British Isles nearly 1,600 magazines and reviews, and more than 400 of them are entirely devoted to the interests of the various religious denominations of the United Kingdom. Turning to Greater Britain, we find that in the United States and Canada there are at the present time ('89) about 15,000 newspapers and periodicals published, which figures may be divided as follows: 2,000 daily papers, 11,500 semi-weeklies and weeklies, and 1,500 Magazines and Reviews. In '30 there were only 800 papers in existence on the North American continent. The earliest American newspaper was published in Boston in 1701. Maryland claims to possess the oldest American papers in existence—viz., the *Maryland Gazette*, first published in 1745, and the *Baltimore American*, in 1773. It is important to notice the enormous circulation of special illustrated domestic and literary weeklies in the United States, such as the *New York Fiasco Companion*, *Harper's Weekly*, *Harper's Bazar*, *Lestie's Publications*, etc. The representative class papers in the United States have a very wide and important circulation. The enterprise of the American press is remarkable, but space forbids us to enlarge upon it, though we may mention amongst others the *Paris* edition of the *New York Herald*, and the enterprise of the same paper in publishing a London edition of 50,000 copies, giving full details of the presidential election of last November, with full telegraphic news from every state. In the great English-speaking colonies of Australia and New Zealand the newspaper press has attained proportions that may fairly rival the American and Canadian press. In the former are great daily papers, such as the *Melbourne Argus*, the *Sydney Morning Herald*, the *South Australian*

Register (Adelaide), and the *Brisbane Courier*; while in New Zealand the *Auckland Herald*, *Otago Daily News*, and the *New Zealand Herald* are largely circulated, and possessed of great interest. Some of the largest weekly newspapers in the world are published in Australia, such as the *Melbourne Australasian* and many others that might be named. Still in New Zealand the *Canterbury Times* and the *Auckland Weekly News* would fairly rival our provincial weekly press. In South Africa the press has attained a growth of importance commensurate with a marked progress of the South African trade. In India, besides innumerable enterprising papers, the great exponents of English news still hold their own. The *Calcutta Englishman*, the *Indian Daily News*, the *Statesman and Friend of India*, and the *Indian Mail*, are important and largely circulated organs, while all over the vast empire, and especially in the great towns of the presidencies, important local papers are published for English-speaking readers. Casual mention may be made of the *Continental papers*. Of these it will be sufficient to say that in Paris alone the circulation of the daily papers is enormous. One, *La Petite Journal*, has nearly approached a sale of a million copies per day, while the other daily organs, with very large circulations, represent all shades of political opinion. The number of copies per annum in proportion to the population of some of the principal cities of the world furnishes some very curious calculations. Paris offers 550 copies to each of its inhabitants per annum, London 254²⁵, New York and Brooklyn 254. In Africa and Asia each inhabitant may claim one copy of a paper in ten years. In China there is one periodical for every two million inhabitants. Consult the *Newspaper Press Directory*, Sell's *Dictionary of the World's Press*, etc.

New South Wales. The oldest of the British colonies in Australia. Was founded as a penal settlement in 1788. Originally embraced half the continent. Since 1859 it extends from lat. 28° 10' to lat. 37° 28' S. It has Queensland on the north, and Victoria on the south. From the sea upon the east it stretches to long. 141° E., which meridian divides it from South Australia. Greatest length 900 miles; greatest breadth 850 miles; total area 310,700 sq. miles; pop. 1,042,919. Capital Sydney, on Port Jackson; pop. 230,000. It is a splendid city, and is the oldest, and still the most important, in all Australasia. Among other great public institutions of Sydney may be mentioned the Royal Mint, University, Free Library, National Gallery, and Observatory. Besides the metropolis are 46 boroughs and 45 municipalities. Leading large towns are Albury, Bathurst, Deniliquin, Goulburn, Grafton, Hay, Maitland, Newcastle, Parramatta, Tamworth, Wagga-Wagga, Wollongong, and Yass.—New South Wales is divided into districts and counties. Of the latter there are now 141; but only 20, which occupy the earlier settled territories near the coast, have much individuality. The remainder are part of the 13 pastoral districts. Of these districts, which are extensive regions, Murrumbidgee, Lachlan, Wellington, Bligh and Darling are good grazing lands; Liverpool Plains, New England, Macleay, and Clarence are suitable for agriculture; Monaro is a high and rugged table-land; Gwydir and Albert are both pastoral and agricultural;

Warrego partly barren.—The country may be divided into three sections: coast district, from 30 to 120 miles wide, between coast range and the sea, fertile, settled, well watered; table-lands, extending from coast range westward to long. 141° E., poor pastoral, suffering from drought; plains of interior, well watered and grassed, chief pastoral region. Coast rocky and precipitous, with few indentations. Chief harbours are Port Jackson, Twofold Bay, Jervis Bay, Broken Bay, Port Stephens, and Port Hunter. Dividing range makes two watersheds, east and west. Eastern rivers short: principal, Hawkesbury, Hunter, Shoalhaven, Clarence, Macleay, Richmond, Manning (100 to 300 miles). Western system includes Darling (1,160 miles), Lachlan (900 miles), Murrumbidgee (1,350 miles), Murray (1,120), and their affluents. There are enormous tracts of natural pasture interspersed with more or less wood. Valuable timber abounds, among it some of the largest trees in the world. Flora and fauna present the general types of Australia, and have both been supplemented by many importations. Among the latter the rabbit has proved a dreadful plague. New South Wales gardens and orchards are extremely luxuriant. Large areas are suitable for grain-growing, and almost all productions of temperate and semi-tropical countries can be successfully grown. Orange and lemon groves very prolific. Tobacco, sugar-cane, maize, sorghum, root crops, arrowroot, cotton, and vines do well in sundry districts. The mulberry flourishes, and silk culture is a rising industry. Minerals include gold, coal, silver, tin, copper, iron, antimony, lead, cinnabar, zinc, small diamonds, opals, rubies, and sapphires, kerosene-shale, etc. Climate uniformly healthy, though differing as to heat and moisture in various districts.—Ruled by a Governor and responsible Ministry. Legislative power is vested in a Parliament of two houses. The upper, or Legislative Council, consists at present of 58 members (not to be less than 21) appointed by the Governor for life. The lower house, or Legislative Assembly, is composed of 122 members, elected triennially by 72 constituencies on a basis of manhood suffrage. The Ministry is responsible to the Legislative Assembly. New South Wales as yet refrains from taking part in the Federal Council of Australasia. Education under Government control. Public schools, grammar schools, and colleges of the University; fees very low. The University is of importance, being well endowed and conferring degrees. Religion well provided for. Protestants about three-fifths of population, of whom Presbyterians are most numerous. Church of England has six dioceses in the colony. For defence there is a Naval Brigade of 750 and torpedo corps of 230 men; a paid artillery force of 1,200, engineers 120, partly-paid infantry 4,500, cavalry 400, volunteer reserves about 5,000. Port Jackson is strongly defended by heavy batteries and submarine mines. For latest financial statistics see BRITISH EMPIRE, etc. (table). There are 1,935 miles of railway open, including the line which connects with the Victorian system at Albury, besides that almost finished to connect with Queensland. There are 10,618 miles of telegraph line. Staple export is wool, increased to present amount of about 200,000,000 lb. per annum, value £7,250,000. Next come tin, value £750,000; copper, £400,000; tallow, £380,000; meat, £160,000. Gold output

100,667 oz., value £402,668. Coal mining employs over 6,000 men, about 2,870,000 tons being raised. Area leased in pastoral runs over 220,000 sq. miles, agricultural holdings 38,500,000 acres, cultivated 979,000 acres. Wheat 265,000 acres, maize 115,000 acres, sugar-cane 9,583 acres, yielding 22,000,000 lb. of sugar, vineyards 5,247 acres, yielding 555,470 gallons of wine and 3,893 of brandy, besides fresh fruit and grapes. Orangeries, 7,733 acres. Sheep exceed 39,000,000; cattle 1,300,000; horses 360,000; pigs 210,000. Manufacture is increasing, there being 3,622 factories, works, and mills, employing 33,884 hands. Land of best quality can be bought at £1 per acre, payable by instalments of 2s. per acre at once and 1s. per acre per annum subsequently.—**Convict** immigration ceased in 1840. The colony received a constitution and representative government in 1843, and responsible government in 1855. Gold was discovered in 1851, and produced an immense rush from England and elsewhere to Australia. The first railway was opened in 1855, and telegraph to Melbourne opened 1858. Since 1872 there has been marked progress, free trade introduced, great extension of railways, etc. **Sydney Exhibition** held in 1879. Towards the close of 1883 an **Intercolonial Conference** was held at Sydney, called together principally by the feeling aroused throughout Australia in consequence of Imperial Government disallowing annexation of New Guinea. Federation schemes discussed. In 1885 Imperial Parliament passed the Federal Council Act of Australasia, but New South Wales has found difficulties in the way of her taking advantage of it. In 1884-5 the colony, amidst immense enthusiasm, raised, equipped, and sent a contingent of 800 soldiers to the Sudan—being the first occasion on which colonial troops have served with a British army abroad. A terrible colliery accident occurred at Bulli in March 1887. Eighty-five miners were entombed alive. A bill to change the name of the colony into "Australia" was introduced in 1887. In '88 the leading question of public interest was that of immigration, which aroused much feeling, and led to the passing of certain laws, and communications between the Home Government and New South Wales. A conference of the Australasian Colonies on the subject also took place at Sydney. New South Wales celebrated its centenary as a colony, and is issuing a special series of stamps of an elaborate design to commemorate the event. For Ministry, etc., see **DIPLOMATIC CONSULT**, besides official publications, Blair's "Cyclopædia of Australasia," Gordon and Gotch's "Australian Handbook for 1887," Lang's "New South Wales," Lyne's "Industries of New South Wales," Wallace's "Australasia," Petherick's "Catalogue of York Gate Library," etc.

"**New Style.**" See **CALENDAR**.

New Westminster. A city of British Columbia, in the Dominion of Canada. Situated on Fraser river. The chief town on the mainland, formerly capital, now second city. Pop. 4,000.

New York (Elm St. Route) Underground Railway. See ed. '88.

New Zealand. A colony of the British Empire, consisting of a group of islands in the South Pacific, about 1,500 miles E. by S. from

Australia. There are two large islands: **North Island**, or **Ahinemau**, 500 m. by 250, area 45,687 sq. m.; **South Island**, or **Te Wahi Ponamu**, 500 m. by 200, area 57,579 sq. m.; also **Stewart Island**, area 1,000 sq. m.; **Chatham** and **Auckland Islands** at some distance E. and S., area 377 sq. m. Total area 104,403 sq. m. Population, 645,330. **Capital Wellington**, pop. (including suburbs) 27,833; chief cities, **Dunedin**, 45,538; **Auckland**, 57,048; **Christchurch**, 44,688. Other rising and important towns, mostly seaports, taken in order of size, are **Invercargill**, **Nelson**, **Oamaru**, **Napier**, **Thames**, **Wanganui**, **Lyttelton**, **Timaru**, **New Plymouth**, **Hokitika**, **Greymouth**, **Masterton**, and **Blenheim**. Country divided into 63 counties, which are subdivided into ridings and boroughs. The original provinces, now called "provincial districts," have no longer any political importance.—**Main Islands** are separated by Cook Strait, on north of which is **Port Nicholson** and the capital. Coast is much indented by bays and harbours, estuaries and firths. Chief rivers are **N. Waioa**, **Thames**, **Waikato**, and **Wanganui** in **North Island**; **Wairau**, **Buller**, **Grey**, **Waikaki**, **Taieri**, **Clutha**, **Mataura**, and **Waiau**, in **South Island**; also many smaller streams. Surface rugged. Volcanoes and volcanic belt across centre of **North Island**. Alpine chain descends along west coast of **South Island**. Its eastern slopes are the great grazing region. Lakes numerous: **Taupo** in **North**, **Wakatipu** in **South Island** are largest. Famous "Hot Lakes" and geyser regions between **Taupo** and **Bay of Plenty**, where the **Tarawera Eruption** occurred in June 1886. Immense tracts of forest, containing splendid timber, notably **kauri pine**, in the north E. and S. of **South Island** much open grass. No native animals except dogs and rats, now nearly extinct. No reptiles but lizards. Deer, cattle, pigs, goats, etc., wild in some parts; rabbits a plague in the south. Native birds sufficiently numerous: among them three small species (apteryx) of an extinct gigantic struthious family, are still found. Turkeys, pheasants, etc., introduced and plentiful. Natural productions of most value are **kauri timber** and **gum**, **phormium** or native flax, **coal**, **gold**, **iron**, and other minerals. There are coal mines and gold fields in several parts. Seas contain various excellent food fish in vast abundance. The climates of **New Zealand** are equable, very healthy, and generally of the warmer temperate zone. There is an abundant rainfall. All British plants may be raised to perfection in the fertile soil. For the English labouring class it is a veritable paradise.—**Government** is carried on by a Governor, who is advised by a responsible Ministry. Of the two houses of parliament, the **Legislative Council** consists of 54 members nominated by the Governor for life, the **House of Representatives** of 95 members elected triennially on a manhood suffrage. **Maori** representatives sit in both Houses. **New Zealand** takes no part in the **Federal Council of Australasia** as yet. There is no State-aided church, but most Christian sects are well provided for. Education is compulsory, free, and secular. The **New Zealand University** is an examining board, chartered to grant degrees. Affiliated to it are the **Otago University** (**Dunedin**), the **Canterbury College** (**Christchurch**), and **University College** (**Auckland**), besides some minor institutions. Ports defended by heavy batteries, mines, and torpedo-boats. There are 8,000 to 10,000 volunteers, and

450 armed constabulary. For latest financial statement see BRITISH EMPIRE, etc. (table). Exports consist of wool, grain, gold, kauri gum, fallow, timber, rabbit skins, flax and cordage, leather, meat, etc. Manufacture is progressing well, particularly as regards woollens. There are 1,866 miles of railway, which extent is being rapidly increased, as well as numerous roads, and water communication. Telegraph line, 4,546 miles. There are over 200 daily, weekly, and monthly periodicals. The land under cultivation amounted in 1888 to 6,845,177 acres. The colony has made phenomenal progress since 1840. Its resources are immense, and still inadequately worked. Depression has affected the colony, but wages are very high and living very cheap. Native troubles are now at an end. The public debt, though large, is secured by the works carried out. Government lands are now reserved on a new leasehold system, instead of being sold as formerly; but plenty of land is to be had cheap, and farming is lucrative. Artificial values of land also provided against to some extent.—Maori chiefs signed *Treaty of Waitangi* in 1840, whereby New Zealand became a British possession and a Crown colony. Auckland was founded as the capital. Representative government was soon introduced. Between 1840 and 1850 settlements were formed at Wellington, Taranaki, Nelson, Otago, and Canterbury. These became provinces, with autonomous government under the general direction of central government at Auckland. Subsequently Hawke's Bay, Marlborough, Westland, and Southland, were added to the list of provinces. In these early days there were several small wars with different native tribes, at Wairarā, Wanganui, round the Bay of Islands, and again in Taranaki. In 1852 the colony received a constitution and responsible government. Maori wars 1855 to 1869. The central parts of North Island were the scene. Sundry Maori of various tribes drew together under a "prophet," and professed a new religion called Pāimārriri. The Waikatos elected a Maori "king." These two sections waged a guerilla warfare with British. Finally they became dissociated. After 1869 the "kingites" remained peaceable, but isolated in their own districts, and the "prophet" and his followers withdrew to a village in Taranaki. The latter were eventually dispersed in 1881—about which time, too, the "king" gave up the policy of isolation, visited England, and is now much on a par with chiefs of other tribes, who have become a part of the general community. A disturbance about land occurred in 1886 in Patea county, fomented by the "prophet" Te Whiti and his followers. This was promptly suppressed, Te Whiti and others being arrested and fined. In 1865 the seat of government was removed to Wellington, and in 1873 the Public Works Policy was inaugurated. Large loans were now raised, and the funds devoted to immigration, to the construction of harbours, railways, roads, etc. In 1876 came into force a very important measure. The provinces were then done away with, and their several governments abolished. All government was centralised at Wellington, and the colony divided into 63 counties, as at present. For Ministry, etc., see DIPLOMACY. Consult "The Official Handbook to New Zealand," Hector's "Handbook to New Zealand," Hay's "Brighter Britain," Wallace's "Australasia," Petherick's "Catalogue of York Gate Library," etc.

Niagara. A river connecting Lakes Erie and Ontario, and, throughout its course, forming a part of the boundary between the United States and the Dominion of Canada. The famous Falls occur about midway. Navigation between the lakes is conducted by means of the Welland Canal on the Canadian side. For scheme of utilisation see below.

Niagara (Queen Victoria) Park. On May 24th, '88, being Queen Victoria's birthday, a park, bearing her name, was opened on the Canadian side of Niagara Falls. The effect is that the mills, houses in the swamps, and the crumbling and rugged banks have been replaced by substantial structures and attractive landscape devices. The work, which was carried out in a year, cost about 500,000 dollars, and will be appreciated by tourists who visit this remarkable spot in such numbers every year.

Niagara Utilisation Scheme. For years past the subject of utilising the great water power at Niagara Falls has been a favourite topic amongst engineers; and it is said that the late Sir W. Siemens had a scheme whereby an immense electrical power was to be generated by this means. In '86, according to statements appearing in the British scientific press of April '87, a company was formed calling itself the Niagara River Hydraulic Tunnel, Power, and Sewer Company. They proposed to commence operations by constructing a tunnel from a point about a mile above the Falls to the water level below, the available head being about 120 feet. At the upper end the tunnel was designed to be 16 feet diameter, 20 feet in the middle section, and 24 feet at the outlet, the length being 2½ miles. Lateral tunnels were to be run from the river to the tunnel, and in these laterals were the wheel-pits for the turbines, the main tunnel serving as a tail race. The plan provided for 238 mills of 500 horse power, the charge to be about 10 dollars per horse-power per day. The total cost was estimated at from 2½ to 3 million dollars with land. Early in '87 it was reported that land had been purchased and laid out for mill sites, fronting on the river and the tunnel line, and for streets, railroad, docks, and warehouses. In August, however, it was reported that nothing had actually been done to control the stream, and that President Stafford, of the Business Men's Association, Buffalo, had started a subscription list of 100,000 dollars as a premium for the best scientific scheme. In May '88 it was reported that the Company had sufficient capital, and intended to commence operations in July.

Nicaragua. See CENTRAL AMERICA; and for Ministry, etc., see DIPLOMACY.

Nicaragua Ship Canal. On Dec. 1st, 1884, it was announced in President Arthur's message to Congress that a treaty had been signed between the Government of the United States and that of the Republic of Nicaragua, in Central America, for the construction of a ship canal through the latter country as a connecting link between the Atlantic and Pacific Oceans. Nicaragua is one of the five confederated republics, and is situated south of Guatemala and north of Panama, on the isthmus which connects North and South America. According to this treaty the waterway was to be made by the engineers of the United States army from the plans of Mr. A. G. Menscal, of the United States

navy. (For details of the vicissitudes of the scheme down to the end of '87, see our '88 edition). According to the *Engineering News* of America the surveys were progressing favourably. The prospecting party were in general good health, and it was added that the question of labour would prove much less serious than it had done at Panama. It was reported from America in June that the entire line was expected to be located by the 10th of that month. In the *Engineer*, July 6th, a letter was published from Mr. H. O. Taylor, General Manager of the Nicaragua Canal Construction Co., giving a history of the project, and an account of the position of the Company, in reply to some statements from another correspondent. It may be added that this Company was incorporated at Denver, Colorado, under the laws of that State, with Mr. Menscal as chief engineer, having decided not to wait any longer for a charter from Congress. The cost of the work was calculated at fifty or sixty million dollars, and the Company, it seems, was formed with a capital of 100,000,000 dollars. It was reported in August that the Costa Rican Congress had ratified the Nicaragua Canal Convention, which is similar to that granted by Nicaragua, with the necessary territorial modifications. Under date London, Oct. 11th, Mr. Frederik S. Isaac, Consul General for Nicaragua, published a letter in reference to certain statements of persons representing themselves as acting on behalf of a company denominated "The American Atlantic and Pacific Ship Company," and added that the Government of the Republic recognised the rights of no other Corporation but that of the Nicaragua Canal Association, of 36, Wall Street, New York. This brought a reply from Mr. A. L. Blackman, President of the American Atlantic and Pacific Company, to the effect that in the opinion of eminent English and American counsel the rights conferred on the Company by the Republic remained unimpaired, and, the writer pointed out, the Government therefore had no power to grant a new concession to the Nicaragua Canal Association. A telegram dated New York, Nov. 14th, stated that the Vermont Legislature had passed the Act incorporating the Nicaragua Canal Company.

Nicosia. Capital of Cyprus (*q.v.*), pop. 11,500. Also written Lerkosia and Leucosia, of which it is a corruption.

Niemen and Windau Canal. See ed. '88.
Niger. The greatest river of Western Africa, draining the Western Sudan. Called also Ku Joliba in its upper course, and Ku Kworra in its middle and lower. Was declared a "free trade" river at the Berlin Conference. France is acquiring control of the Upper Niger through Senegambia. Consult Richardson's "Story of the Niger."

Niger Districts. A British protectorate in West Africa since 1884. Extends over the delta from the Rio del Rey and up the Niger to the Benue, its great eastern tributary. In 1887 was added the entire coast from Lagos to the Rio del Rey, and territories in the Niger basin acquired by the Royal Niger Company. Consult Richardson's "Story of the Niger."

Nihilism. Opposition to autocracy. In its original narrow sense a Nihilist meant an Anarchist; the name being derived from the Russian novelist Ivan Tourgheneff, who used it for one of his heroes—a partisan of scientific scepticism and æsthetical agnosticism—in his novel "*Fathers and Sons*"; but the meaning

gradually expanded, and the word is now generally applied to all Russians whose discontent with the autocratic government takes the form of secret or open opposition. The term thus includes a variety of political types, from the ordinary Liberal to the fanatic Anarchist, and different kinds of revolutionaries, who have different aims and work apart from one another. In the reign of the late Emperor Alexander II. the opposition movement commenced in '71, with the attempt of that sovereign to curb and strangle the Liberal institutions he had granted a few years earlier. Conspiracies took place in all the Universities, which were remorselessly crushed, and hundreds of students were imprisoned, exiled, or compelled to seek refuge abroad, where they started revolutionary publications. During the Turkish war there was a lull, but immediately upon the return of the army the discontent of the troops at the maladministration of the grand dukes took the form of plots. Meanwhile the success of torpedoes on the Danube and Black Sea, had shown what single individuals could do with dynamite, and this weapon was impressed by the Terrorists, who managed to secure the aid of several naval officers at Cronstadt skilled in mining operations. Many attempts at assassination with mines were discovered beforehand; but two famous ones—the blowing up of a train by Hartmann on the Moscow Railway (Dec. 1st, '79) and of the floor of the dining-room of the Winter Palace (Feb. 5th, '80) were nearly successful; while had the Emperor survived the hand bombs thrown at his carriage on the Catherine Canal (Mar. 13th, '81), he would have been destroyed by an underground mine on his way home. With the death of the Emperor, Terrorist activity closed, partly because the principal leaders, Jeliaboff, Perovsky, etc., had been caught in the execution of the final plot, and partly because of the reaction in public feeling against such an extreme measure as assassination. Moreover, it was hoped that the ultra-autocratic policy adopted by the new Czar's advisers, Count Tolstoi (*q.v.*), Minister of Home Affairs, and M. Pobiedonostseff, the Procurator of the Synod, would work its own destruction. This period, from '81 until the present year, has been known as the Zastoi, or stagnation. It has been characterised by an absence of Nihilist plots, and equally by an attitude of patient pessimism on the part of the thinking public. Beyond a series of demonstrations by students in '87 against the tyranny of the university authorities, no outbreaks have occurred, and the promptness of the Emperor in remedying the abuses deprived these of significance. Up to '88 it was hoped by the Nihilists that the growing distressed condition of agriculture in Russia would lead to widespread peasant outbreaks; but the great export of corn during that year has unexpectedly improved matters, and it is probable that the Nihilists will now recognise the failure of their policy of allowing "Tolstoi to stew in his own juice," and resort afresh to active operations. For an admirable and impartial account of Russian Nihilism consult the series of articles published by George Kennan (who was sent to Russia specially by the Century Company to investigate the condition of Nihilist prisoners and exiles) in the Century magazine for '78.

Nilsson, Madame Christine. One of the greatest operatic singers of the present

day, b. near Vexio, in Sweden, in 1843. At first she travelled about the country playing and singing at fairs, when M. Törnérhjelms, accidentally hearing her, made her his *protégée*, placing her under the care of Mr. Franz Berwald, of Stockholm, MM. Masset and Wurteh, at Paris, for her musical education. She made her first appearance, which was very successful, at the Théâtre Lyrique, Paris, in the part of Violetta in "Traviata." She visited London in 1867, and the United States in 1870. She again visited London, and sang in Drury Lane. In 1883-84 she made a brilliantly successful tour in the United States. In 1872 she married M. Auguste Rouzard, who died in 1882; she was recently again married at Paris to Count A. de Miranda. In June '88 Mme. N. appeared at a farewell concert at Albert Hall, and received a rapturous reception, the final scene, in which the *diva* bade farewell, being most impressive.

"Nineteenth Century Review" (2s. 6d. monthly). First number issued March 1877. Editor, Mr. James Knowles (q.v.) (1877). Deals with the leading social, scientific, literary, and political questions of the day. The writers are among the foremost men of the time. Mr. Gladstone, Cardinal Manning, and Professor Huxley are among the contributors. Office, 1, Paternoster Square, E. C.

Nial prius. See ed. '38.

Nitrate of Soda. See ed. '88.

Nitroglycerine. See DYNAMITE.

Noms de Plume, etc. The word *nom-de-plume* is not known in French, in which language the proper equivalent is *nom-de-guerre*. The following list of pseudonyms or pen-names deals chiefly with modern and English or American writers; it includes some initials and maiden names used by married ladies in authorship.

[* implies only occasional or early use.]

A., Major C. B. Coles.
A.K.H.B. Rev. A. K. H. Boyd.
A.L.O.E. (= A Lady of England) Charlotte Maria Tucker.
Athena Domestica Miss L. M. Budgen.
Adeler, Max Chas. Heber Clark.
Alexander, Mrs. Mrs. A. F. Hector.
Alexander the Corrector Alexander Cruden.
*Alcibiades Lord Tennyson in *Punch*, 1846.
Ali Baba Abergh Mackay.
Ally Sloper Chas. H. Ross.
Almaviva Clement Scott.
Amateur Angler Edward Marston.
Amateur Casual, An Jas. Greenwood.
Amazat Batuk N. L. Thieblin.
*Amicus ("Times") Sir Thos. Fairbairn.
Ange-Benigne Mme. de Molènes.
Ansley, F. F. Anstey Guthrie.
Antiphanes Dr. P. Hergenroether.
Ape ("Vanity Fair") Pellegrini (caricaturist).
Argles, Mrs. now Mrs. Hungeford.
Aristocratic Tout T. Wood.
Auber Forrester Annie Aubertine Woodward.
*Augustsohn, W. W. von Kotzebue.
*Aunt Fanny Mrs. F. D. Gage.
"Hester" Miss G. M. Craik.
"Judy" Mrs. Alfred Gatty.
"Kitty" Maria Jane Macintosh.
"Louisa" Mrs. Valentine.

Atlas ("World") . . . Edmund Yates.

Autocrat of the Break-

fast Table O. W. Holmes.

B ("Times") Lord Bramwell.

*Bab W. S. Gilbert.

*Baptist Alphonse Daudet.

Barker, Lady now Lady F. N. Broome.

Barrister ("Sat. Rev.") . . . Sir J. F. Stephen.

Basil Richard Ashe King.

Beaumont, Averil Mrs. Marg. Hunt.

Bedr, Cuthbert Rev. Edw. Bradley.

Bee-Master Dr. John Cumming.

Bell, Acton Anne Brontë.

"Currier Charlotte Nicholls (née Brontë).

"Ellis Emily Jane Brontë.

Bertall Albert D'Arnauld.

*Berwick, Mary Adel. Anne Procter.

Besieged Resident in Paris H. Labouchere.

Bettina Eliz. von Arnim.

Bibliophile Jacob Paul Lacroix.

Bickerdyke, John C. H. Cook.

Bickersstaff, Isaac Jon. Swift; and Steele in *Tatler*.

Bideford Postman E. Caperne.

*Biglow, Hosea J. Russell Lowell.

Billings, Josh Henry W. Shaw.

Bodkin, Tammias W. D. Latta.

*Bon Gaultier Sir Theod. Martin and W. E. Aytoun.

*Boz Chas. Dickens.

Braddon, Miss M. E. now Mrs. John Maxwell.

Bretmann, Hans Chas. G. Leland.

British Resident in Egypt C. E. Moberly-Bell.

*Brooke, Nellie Mrs. E. Ross.

Brown, Mrs. Geo. Rose.

Brown, Pisistratus William Black.

Brown, Tom Thos. Hughes.

Brown, Matthew W. B. Rands.

Brown, Philis Mrs. Hamer.

*Brownrigg, Henry Douglas Jerrold.

Bunthorn, Ned E. Z. C. Judson.

Bystander Goldwin Smith.

C. Mrs. Southey.

C. A. W. C. A. Wheeler.

Caballero, Fernan Cecilia Bohl de Faber y Larrea.

Caliban M. Bergerat, also Jules Clarctie.

*Carle Victorien Sardou.

Carmen Sylva Queen Elizabeth of Roumania.

Carroll, Lewis Rev. C. L. Dodgson.

Cavart Emptor Sir Geo. Stephen.

Cavendish H. Jones.

*Caxton, Pisistratus The first Lord Lytton.

Cecil Cour. Tongue.

*Cecil, Davenant Rev. Derwent Coleridge.

Censor ("Don't") O. B. Bunce.

Cham (caricaturist) Amédée de Noé.

Champfleury Jules Fleury.

*Charlist Parson, A Chas. Kingsley.

*Cherith Miss Fannie Surtees.

Cincinnatus Wm. Plumer.

Claribel (song writer) Mrs. Barnard.

Cleishbotham, Jed. Sir W. Scott.

Citizen of the World O. Goldsmith.

Cladpole, Tim Richard Lower.

Cho Joseph Addison.

Clutterbuck, Capt. Sir Walter Scott.

Columbus Dr. C. O'Connor.

Conway, Hugh F. J. Fergus.

Zadkiel Lieut. R. J. Morrison.
**Zeta* J. Anthony Froude.
Zeta ("Graphic") John Lovell.

Norman, General Sir Henry W., G.C.B., G.C.M.G., C.I.E., late Governor of Jamaica, has had a distinguished military career. He joined the Bengal army in 1844, and served through the **Indian Mutiny** of 1857-59. Was present at the relief of Lucknow, where his horse was shot under him. Appointed in '83 the **Governor of Jamaica**, and, on the occasion of colonial opposition to the choice of Sir H. Blake (*q.v.*), Sir H. N. received the **Governorship of Queensland** (Nov. 30th, '88).

North, Sir Ford, b. at Liverpool, 1830. Educated at Winchester and at Oxford. Called to the bar at the Inner Temple ('56). Obtained a large practice in the equity courts and at the Lancaster Chancery and Palatine Courts. Q.C. ('77). On the elevation of Mr. Justice Lindley to the Court of Appeal ('81), Mr. North was appointed a judge of the Queen's Bench Division of the High Court of Justice. He was subsequently transferred to the Chancery Division, for which his training has especially fitted him.

Northern Territory. That portion of **South Australia** (*q.v.*) lying north of 26° S. lat., and between 129° and 138° E. long. Annexed to the colony in 1863. S.W. capital **Palmerston** (on the noble harbour of **Port Darwin**). The outlet for a very large extent of country, and the commercial centre of the trade of the north coast. The Territory possesses a coast line, counting the chief inlets, of 2,000 miles. Watered by several navigable rivers. Is rich in minerals—gold, copper, silver, iron. The gold-bearing areas include both quartz and alluvial workings. Well adapted for tropical agriculture—maize, sugar-cane, indigo, tapioca, cinchona, coffee, rice. Considerable areas devoted to the pasturing of sheep and cattle, the native grasses being rich and nourishing. Timber of a varied character—eucalyptus, pines, palms, banksia, mangroves. There is increasing settlement, but population still very scanty, and labour unobtainable. Local administration, with a Resident and official, appointed by Government of mother colony. The telegraph runs overland from Port Darwin to Adelaide, and a through railway is projected. Consult Daly's "Lite, etc., in the Northern Territory."

North Sea and Baltic Canal. See ed. '88.

North Sea Fisheries Act. See Session '88, sec. 36.

Northumberland Straits (Canada) Tunnel. A plan to pass under the sea from Cape Tormentine to Cape Traverse, in order to run a line of railway from Prince Edward's Island to the mainland, notice of which, it was stated, was lodged in the Canadian parliament near the end of 1885. (For further details see ed. '87.) In March '87 it was reported that the **Submarine Tunnel and Tube Company, of New York**, operating the Hall patents, had been awarded the contracts, the tunnel to be seven miles long, and that the plans, etc., had been prepared. The tube was to be built up under water as it progressed, heavy excavating to be avoided.

North-West Territories. A province or group of provinces of the Dominion of Canada, as yet hardly organised. Including Labrador, District of Keewatin, and Great Prairie Territory to Rocky Mountains; area 2,553,337 sq. m.; pop. 56,446, and 45,472 aborigines; taken as the

region westward from Lake Superior to the Rocky Mountains, and northwards from the boundary to the 60° parallel, area 500,000 sq. m., a territory equal to the British Islands, France, and Germany combined. Capital **Regina**. Contain great lakes and large navigable rivers—the Mackenzie, Slave, Peace, Saskatchewan, among the chief. Great fertile region, similar in character to Manitoba, divided into districts: **Assiniboia**, 95,000 sq. m.; **Saskatchewan**, 114,000 sq. m.; **Alberta**, 100,000 sq. m.; **Athabasca**, 122,000 sq. m. These are destined to become separate provinces. Resources enormous, agricultural, pastoral, mining. 10,000 miles navigable rivers. Railway across.—Administered by Lieut.-Governor and Council of five. Electoral districts in course of formation. General features, land laws, etc., as in **Manitoba** (*q.v.*) See **CANADA**; and for Executive Council, etc., see **DIPLOMATIC**. Consult Tuttle's "Our North Land," Adams' "Canadian North-West," etc.

Norwich, Rt. Rev. and Hon. John Thomas Pelham, D.D. Lord Bishop of, was b. in 1811, and educated at Westminster School and Christ Church, Oxford. He was successively rector of Burgh Apton, incumbent of Christ Church, Hampstead, and rector of Marylebone. Appointed Bishop of Norwich 1857. He is a brother of the Earl of Chichester.

Nossi Bé. A small island on N.W. coast of Madagascar, held by France since 1843; and a flourishing trade-port.

Nossi Dambo. The native name of **Madagascar** (*q.v.*).

"Notes and Queries." A medium of intercommunication for literary men, general readers, etc., was founded Nov. 1849, by the late **W. J. Thoms**. Few literary undertakings of importance have since its establishment been concluded without its assistance. Office, Took's Court, Chancery Lane, E.C.

"Not Proven." A form of verdict in Scotch criminal trials which implies that, although the prisoner has not been proved to be guilty, yet neither has he been proved to be innocent. Its practical effect is the same as that of a verdict of "not guilty."

Noumea. Capital of **New Caledonia** (*q.v.*).

Nova Scotia. A province of the Dominion of Canada. It is a peninsula connected by narrow isthmus with New Brunswick. Incorporated with it is **Cape Breton Island**, formerly distinct colony. Area 21,731 sq. m.; pop. 440,572. Capital **Halifax**, pop. 40,000, a fine city and harbour, also an Imperial military and naval station. Divided into 18 counties.—The interior is a moderately elevated plateau, containing lakes. The rivers are short; the coast much indented, with many harbours. Cape Breton is hilly. There is much forest, and the country is a sportsman's paradise, filled with furred and feathered game, big and little. Between two parallel ranges of hills is a wide and fertile valley, embracing the entire length of Nova Scotia. The agricultural productions are limited. Wheat will not grow and corn will not ripen near the Atlantic and Gulf coasts, but the Bay of Fundy shore is a perfect garden, where the plum, the pear, apples, etc., come to perfection. Nova Scotia is in point of mineral wealth the richest province in the Dominion—productive coal and gold mines, manganese, gypsum, building stone, and (on Cape Breton Island) petroleum.—Administered by a Lieut.-

Governor and Executive. The people elect a Legislative Council and a House of Assembly. The Province has 10 seats in the Dominion Senate and 21 in the House of Commons. Education receives some Government support, and is free and to some extent compulsory. **Industries** are agriculture, fruit-farming, dairying, mining, fishing, lumbering; and manufacture is progressing rapidly. Government uncleared lands are sold at 1s. rod, per acre, and improved farms are often available at £1 to £2 per acre. The colony was originally a French one, and then called Acadia; ceded to England 1714; entered Dominion 1867. See CANADA; and for Executive Council, etc., see DIPLOMATIC. Consult Frearn's "Canadian Agriculture," Small's "Canadian Industries and Manufactures," etc.

Novorossisk. At the beginning of September it was reported in this country that the construction of the port was almost at a standstill, that the contractors were in St. Petersburg seeking fresh capital, and that the general opinion was that the first port could not be finished for at least two years.

Nubar Pasha. Egyptian statesman, Armenian by nationality, Christian by creed, b. at Smvrna 1825. Sec. to Boghos Bey (Mohammed Aly's premier) '42. Married '49, dau. of Kevosh Bey Eramian. Sec. to Ibrahim Pasha at Paris '48, and Cairo '49. Dismissed on accession of Abbas Pasha, '51. Egyptian Minister at Vienna '54. Entrusted with negotiations for Suez Canal '57-60. Created by Ismail Minister of Foreign Affairs '66. Negotiated treaty with Constantinople (giving Ismail title of Khedive and to Egypt practical autonomy), '67. Negotiated judicial reform establishing International Tribunals '68-74. Dismissed from office '74. Formed Anglo-French Ministry with Wilson and Blignieres '78. Dismissed from office by Ismail's *coup d'état* '75. Consulted by Dufferin '83. On Cherif's refusal to abandon Soudan called to office, and formed ministry in January, '84. Disputes with Baring in London, '87. Dismissed by Khedive June '88.

Nurses. The National Pension Fund for. This fund, which was founded by Mr. Henry C. Burdett in October '87, and was incorporated February '88, may be considered to hold the position of an Assurance Company for nurses. Its successful establishment is in a large measure owing to the generosity of Lord Rothschild, Mr. Henry H. Gibbs, Mr. E. A. Hambro, and Mr. Junius S. Morgan, who each deposited £5,000 with the Accountant-General in Chancery as security for the annuitants and policy holders. The fund is open to all responsible paid officials connected with hospitals and kindred institutions. The chief object of the fund is to give nurses an absolutely safe means of providing an allowance during sickness, and a certain income when their strength is declining. Office, 8, King Street, Cheapside, E.C. Sec. Mr. Philip Grove.

Nursing Home. It was stated in May '88 that the surplus remaining over from the Women's Jubilee Offering, which amounts to about £70,000, would, with the Queen's hearty approval, be devoted to the establishment of a great Central Nursing Home.

Nuwara Eliya. An elevated plateau (6,000 ft.) and a favourite sanatorium in Ceylon (p. v.).

Nyassa. A great lake in the south-east of Central Africa, 350 miles long, averaging 38 broad; 1,600 ft. above the sea level, average depth over 100 fathoms, teems with fish. Encircled by lofty mountains, rising 10,000 feet — Livingstone Mountains. Scotch settlement at Livingstonia, on south. Steamer on lake. Settlers growing sugar and coffee. Smaller lake, Shirwa, isolated to south. Outlet the Shire river, affluent of Zambesi. There are several British missions and trading settlements about these lakes. A road has been made from Nyassa to Tanganyika, where there is also a steamer; and another road is in process of construction from Nyassa to Dar-es-Salam, on the Suaheli coast. The blighting Portuguese influence is little felt here; and the gradual formation of a British colony, independent of any government, is a matter for reflection. See BLANTYRE, ZAMBESI, MOZAMBIQUE, etc.

Oaks, The. See TURF.

Oath, Parliamentary. See HOUSE OF COMMONS.

Oaths Bill. See SESSION '88, sec. 37.

Oberammergau Passion Play. See ed. '88, more fully ed. '87.

Obituary, Jan. 1st to Dec. 6th, '88.

*. The date of decease is given after each name, and in cases in which it could not be exactly ascertained the letter *a* is affixed to denote that the death took place at about that time. The italic figures after each name indicate the age of deceased.

- De la Feld**, Lady Cecil Jane, *wid.* of Count John de la Feld, and *d.* 1st E. Limerick (April 24)
- Dietrich**, Baron Albert, head of one of the oldest families in Alsace (Jan. 10 a), 86
- Donovan**, Larry, "champion bridge jumper" (Aug. 13)
- Doulton**, Sarah, *w.* of Sir Henry Doulton (Oct. 26)
- Dumas**, Marie Rose, *sis.* of Alexandre, died in a convent at Avellino, Italy (Jan. 10 a), 84
- Dupont**, Octave, friend and fellow-exile of Ledru Rollin (Feb. 24), 77
- Dyke**, Lady, *wid.* Sir Percyvall Hart-Dyke, Bart. (July 16)
- Eaton**, Capt. John Sumner, R.N., Secretary of Royal Victoria Yacht Club (Sept. 27)
- Elers**, William, of Tunbridge Wells, J.P. and D.L. Kent (June 16)
- Foster**, Richard King, a leading Oxfordshire agriculturist (Sept. 25)
- Fray**, Miss, well-known frequenter of the Law Courts (May 11)
- Gage**, Lady Mary (May 16), 80
- Garfield**, Mrs., *m.* of late President (Jan. 19 a)
- Grattan**, Lady Laura, *wid.* late Right Hon. J. Grattan, M.P. and *sis.* late Earl of Dysart (July 12), 81
- Gundry**, Capt. Tom, Cornish wrestler, champion of Cornwall and Devon for nearly 25 years (Oct. 23), 70
- Halford**, Fredk. Wm., late sec. for 25 years to the Reform Club, Pall Mall (May 6), 59
- Hammond**, Mary Frances, *w.* of (June 14)
- Heathorn**, Catharine, spinster, of Claven Place, Maidstone, the "Maid of Kent" (Feb. 2), aged 104 years 10 months and 7 days
- Henderson**, Mrs. E., Queen's housekeeper for over 20 years (Oct. 13), 70
- Hibbert**, Samuel, formerly a leading jockey; won the Cambridgeshire on Malacca 56, Cesarewitch on Lecturer 66, and Chester Cup 56, 65, and 65 (Feb. 21), 49
- Hibbert**, John, of Braywick Lodge, Maidenhead, J.P. Berks, 15 years a member of the governing body of Eton College (March 28), 77
- Hollingworth**, John, of Tutsby Court, Maidstone, long known for his munificent liberality in Maidstone, and Chm. of Cons. party (April 5), 82
- Hook**, Maria, *c.* and last surviving *d.* of Theodore Hook (April 3), 62
- Hudson**, John Robert, gentleman porter to the Queen, and one of the oldest of Her Majesty's servants, entered service of King William IV. when a youth, and was employed at Windsor Castle for 53 years (Oct. 29)
- Hughes**, Mary Ann, *w.* Col. Hughes, M.P. (March 13), 58
- Hull**, Mrs., oldest and most valued of Queen's servants, nurse to Prince of Wales and all Queen's children (Sept. 24), 78
- Jamieson**, William, of Penrith, for many years champion wrestler in Cumberland and Westmoreland style (Nov. 23), 49
- Jenkin**, John Trevillian, J.P., D.L. Glamorganshire (Feb. 23), 79
- Jones**, Herbert Rhys, of Weston-super-Mare, drowned near Weymouth in a brave effort to save others, by three several attempts to swim ashore with a line (March 8)
- Kanné**, Joseph Julius, the Queen's courier (April 24), 70
- Károlyi**, Count Victor, *n.* of the Austrian Ambassador to Great Britain (April 1)
- Kegel**, Stephan von, Austrian millionaire and man of fashion, suicide (May 11)
- King**, Tom, pugilist and sculler (Oct. 3), 52
- Kirwan**, Lady Victoria, *d.* of 2nd M. of Hastings (March 30), 50
- Knowles**, Mrs. Emma, *wid.* of the dramatist, James Sheridan Knowles, and formerly an actress (Miss Emma Elphinstone) (May), 81
- Kurkowski**, Lubicz, Polish officer, said to be 116 years of age (June)
- Leach**, Robert Valentine, of Devizes Castle, Wilts (May 7), 80
- Lookwood**, John, formerly sergeant-footman to the Queen (July 1)
- Macaulay**, Fanny, *d.* of Zachary Macaulay, and only surviving sister of Lord Macaulay (Nov. 10), 80
- Macdonald**, James, light-weight jockey (Sept. 8)
- McLaurie**, Douglas, bailiff to H.M. the Empress Eugénie (Jan. 13)
- McLean**, Hector, of New College, late captain Oxford Univ. Boat Club (Jan. 19)
- Macliver**, Col. David, *s.* Mr. P. S. Macliver, of the firm of Macliver & Son, proprietors of the *Western Daily Press*, Bristol, J.P. Bristol, and formerly L. and for Clippenham (Jan. 17)
- Maule**, Lady Christian, *d.* of 1st Lord Panmure, and *sis.* Fox Maule, 11th Earl of Dalhousie (March 21), 82
- Meany**, Stephen J., prominent member of the Irish American party (Feb. 8)
- Molesworth**, Lady Andalusia, *wid.* of the Right Hon. Sir W. Molesworth, Bart. (May)
- Montgomery**, Lady Matilda (May 25), 80
- Munster**, Countess Olga, *y. d.* Count Munster, Ambassador to the French Republic, and formerly German Ambassador in London, by Lady H. E. St. Clair-Erskine, *d.* of 3rd Earl of Rosslyn (Feb. 3)
- O'Connell**, Daniel James, 2nd s. late Sir J. O'Connell, Bart., and *n.* of the celebrated Daniel O'Connell (Feb. 26), 64
- Ormerod**, Abraham, J.P., of Ridgefoot House, Todmorden (Feb. 16), 83
- Palmer**, Courtlandt, President of the Nineteenth Century Club, New York (July)
- Parkes**, Lady, *w.* of Sir H. Parkes, Prime Minister of New South Wales (Feb. 1)
- Pearce**, Paulin H., well-known swimmer of Ramsgate, author of numerous poems, including "The Death of Nelson" and "Battle of Waterloo" (Nov. 23)
- Pedley**, Mary, of Chatteris, Cambs., aged 101 years, having 100 children and grandchildren (Oct. 25)
- Rowe**, Lady, *wid.* of Sir Joshua Rowe, C.B. (Oct. 28)
- Powys-Lybbe**, W. R. L., Mayor of Wallingford (April 5), 51
- Russell**, Lady Francis, *d.* of the Rev. Algernon Peyton, *m.* 1stly Lord Francis Russell, s. 6th Duke of Bedford, K.G., and endly John Lorraine Baker (Feb. 2)
- Scarlett**, Hon. Lady, *wid.* of Lieut.-Gen. the Hon. Sir James Yorke Scarlett, G.C.B. (Feb.)
- Seddon**, R. L., famous football player, drowned at Matland, New South Wales (Aug. 16)
- Sewell**, Thomas, oldest professional cricketer in England, one of the Eleven of All England, and for many years engaged at Lord's Cricket Ground (Nov. 3), 82
- Shaw**, J. C., celebrated left-hand bowler, many years principal bowler for the Notts County Eleven, and for a long series of years connected with Geo. Parr's All England Eleven (March 7), 51
- Sherman**, Mrs., *w.* of Gen. Sherman, of United States (Nov. 28)

Statham, Thomas, founder of the Soldiers' Home, Windsor (Feb. 23), 61.

Sturge, George, of Woodthorpe, Sydenham Hill, a munificent benefactor to various charitable, religious, and philanthropic institutions (April 14), 90.

Sumner, Thomas, of Hassall Heath, Cheshire, aged 85; leaves 5 surviving children, 44 grandchildren, and 83 great gr. children (Feb. 7 a).

Thorburn, W. D., Chm. Leith School Board, unsuccessfully contested Leith Burghs in the C. interest '85 (Feb. 19).

Thwaites, Daniel, brewer, native of Blackburn, died worth £2,000,000 (Sept. 21).

Tiesenhausen, Countess Catherine Feodorovna, g.d. of a famous general of the Napoleonic wars, Prince Kutuzoff, and for many years filled high positions at the Russian Court (May 8), 84.

Tite, Lady Emily, *wid.* of the late Sir W. Tite, architect of the Royal Exchange (Feb. 16), 82.

Turner, Lady Caroline, *wid.* of the late Mr. Christopher Turner, and d. of 9th Earl of Winchelsea (March 13), 71.

Wade, Lady, last surviving sis. of Archbishop Tait (April 4 a), 88.

Watkin, Lady, *w.* of Sir Edward W. Watkin, Bart., M.P. (March 8), 65.

Watt, Henry Alexander, chief engineer of the steamship *Cagliari*, which in the year '57 sailed from Genoa to the aid of certain political prisoners of King Bomba, but the mission being successfully accomplished, was captured in returning by a Neapolitan war-vessel, and its occupants, including Watt, taken to Naples and imprisoned; after being imprisoned for seven months and suffering much, Watt and the second engineer were, at the demand of the British Government, released and compensated (June), 87.

Watts, S., foreman of wheelwrights at Prince Consort's workshops, Windsor Gt. Park, (Oct. 3), 69.

Welwood, Lady Margaret P. Maconochie, *w. d.* of late Allan A. Maconochie Welwood, and *v. d.* of 9th Earl of Stair (Oct. 11).

White, Mrs. Clarissa, *wid.* of Jas. White, who founded sect of Jezreelites at Chatham, and ruled herself as "Queen Esther" (June 30).

Wilson, Fleetwood Fellow, D.L. and J.P., of Wappingham Manor, Northants. (April 24).

Wilson, Frederick Marjory, J.P., of The Grange, Uckfield, 3rd s. late Sir J. M. Wilson, Bart. (March 14), 66.

Wynn, Lady Annora William, *w.* of Charles Watkin Williams Wynn, and *y. d.* 2nd Earl of Mansfield (March 22), 65.

Zuylen de Nyevelt, Catherine Henrietta, Comtesse de (March 9).

Obligation Days. See DAYS OF OBLIGATION.

Obock. A French dependency in Tajurah Bay (*q.v.*), on east coast of Africa.

O'Brien, William, M.P. was b. 1852; educated at Diocesan College, Cloyne. After being connected for a long period with the *Freeman's Journal*, Mr. O.B. became the editor of *United Ireland* (*q.v.*). Entered parliament as a Nationalist in '83, and at present represents N.E. Cork. Mr. O'Brien was committed to prison in the early part of '88, under the Crimes Act, and during his imprisonment was deprived forcibly of his clothes, an event afterwards nicknamed "The Breeches" incident. On his release Mr. O.B. delivered a speech in the House of Commons which attracted some attention.

Obstruction, Law on in '88. A Metropolitan police magistrate has (Sept. '88) convicted an omnibus company, whose horses were changed in Parliament Square, on a charge of obstructing the thoroughfare. It was pleaded that the defendants had changed their horse at this particular spot for eight years; but it was held that the company had no right to obstruct the streets for private interests, and a nominal penalty was inflicted. Another question raised (May '88) was, whether the marshing of a funeral procession, which had blocked the tramway lines in South London, could be said to have wilfully obstructed the thoroughfare. The prosecution was instituted by the tramway company, but the magistrate held that the company had no rights other than those possessed by the community at large, and that the processionists had done all in their power to prevent a breach of the law. The case of *Regina v. Long* shows that justices have no right to convict persons charged under the Towns Police Clauses Act, 47, with obstruction, on its simply being shown by the uncorroborated testimony of a policeman that three or four persons were standing on the pavement, and that other persons using the path had to turn off for them.

Obstruction, Parliamentary. See PARLIAMENTARY PROCEDURE for the rules submitted in '87, and PARLIAMENTARY SESSION for the proceedings upon them ed. '88.

O'Connor, Thomas Power, M.P., b. at Athlone, 1848; graduated M.A. Queen's University. Connected with the press from an early age, first in Dublin and afterwards in London. Was elected for Galway at the general election of '80 as a Home Ruler, and took a prominent part in the debates in Parliament. Visited America for the Land League in '81. Was present at the Irish-American Convention of '81, with Mr. Healy (*q.v.*) and Father Sheehy. Returned to England in May '82. Elected for the Scotland division of Liverpool, and for Galway borough—in both cases by large majorities—in '85. Sits for the former. Has written "*Lord Beaconsfield: a Biography*," "*Gladstone's House of Commons*," "*The Farnell Movement*," "*Dead Man's Island*," and many tales and essays. President of the National League in England and Scotland. Became first and present editor of the *Star* (*q.v.*) in '88.

October Handicap. See TURF.

Odessa. A rapidly developing Russian port on the Black Sea. Although less than a century old, its population is 190,000, and in point of size it ranks as fourth city in the Russian empire. Distant 1,137 miles from St. Petersburg and 933 from Moscow, Odessa has good ground for regarding itself as the capital of Southern Russia. It has derived its rapid growth largely from the export of grain. Twenty years ago the total exports were valued at £4,000,000; they now exceed £12,000,000, in spite of the competition of other Black Sea ports and the rivalry of America and India. Recently a new trade feature has been introduced. Tea and other goods from the East, that formerly made their way to London, and were thence despatched to Russia, are now conveyed direct through the Suez Canal to Odessa by the vessels of the Moscow volunteer fleet and the Black Sea Steam Navigation Company.

Ohio River Bridge. The Wheeling and Harrison Railway Co., U.S., on Oct. 10th, '88, commenced operations on the Union railway

bridge over the Ohio river at Wheeling, West Virginia, a work which is to cost several million dollars. The bridge, which was designed by Mr. Gustav Lindenthal, C.E., who is the engineer, will be 2,100 feet long, with a channel span of 535 feet. It is in connection with the new terminal system for the railways centring at Wheeling, and is to be completed with its approaches in January 1890. The terminal arrangements include a tunnel 1,600 feet long, and another bridge over Wheeling Creek.

"Ohm." See **ELECTRICITY**, ed. '88.

Oil Islands. In the Indian Ocean. Part of the **Chagos Archipelago** (q.v.).

"O. K.," a slang phrase, being a facetious equivalent for A. C., "All Correct," and implying "satisfactory."

Old Catholics (*Aiktholiken*). One of the consequences of the declaration of **Papal Infallibility** at the Vatican Council of July 1870 was to lead to the formation of the churches and communities known as "Old Catholics." These, although refusing adhesion to this cardinal principle of the papacy, have never seceded from the Catholic Church, and still claim a joint interest in the possessions of the parent Church, which, indeed, they continue, by state dispensation, to enjoy, both in **Prussia** and **Baden**. Actually, however, the rupture between the two bodies is complete. In **Germany** the Old Catholics at present number some 70,000; in **Switzerland** they are more numerous, reaching about 80,000; in **Austria** there are 10,000; some thousands also in **Spain** and **Portugal**, some hundreds in **Italy**, and a few exist in **France** under the guidance of **Pere Hyacinthe**, who (79) opened in Paris the **Gallican Church**. Old Catholicism also is extending in **North Bohemia**. The **Encyclical** letter lately issued by the 145 bishops who attended the **Lambeth Conference**, in July '88, gave formal expression to sympathy with all these reform movements, on the part of the Catholic Church. And in particular the Old Catholic bishops of **Holland**, and **Bishop Reinke** in **Germany**, and **Bishop Heizog** in **Switzerland**, have received full recognition. For detailed account of the O. C. movement see ed. '86.

"Old Style." See **CALENDAR**.

Oliphant, Mrs. Margaret, b. near Musselburgh, Midlothian, 1828. She is one of the most vigorous and popular of modern novelists, and in addition to her numerous works of fiction (the first of which—"Passages in the Life of Mrs. Margaret Maitland of Sunnyside"—established her reputation before she was twenty-one), she has contributed "Dante" and "Cervantes" to the well-known series "Foreign Classics for English Readers," and written "S. Francis of Assisi," "The Makers of Florence," and "Literary History of England." In '88 she published a new novel, "The Second Son," and also a "Memoir of Principal Tulloch, D.D." Her maiden name was Wilson.

One Thousand Guinea. See **TURF**.
Onslow, William Hillier, K.C.M.G., 4th Earl of; b. 1853; educated at Eton, and Exeter Coll., Oxford. Succeeded to the peerage '70. Is High Steward of Guildford. Appointed Lord-in-Waiting to H.M. '80, and again in '86. One of the delegates at the Conference on the Sugar Question '87. His lordship formed one of the Lords Committee on the Sweating System, '88. Lord Onslow was Under-Sec. of State for the Colonies from '87 to '88, and Parlia-

mentary Sec. to the Board of Trade Feb. to Nov. '88, in which latter month he was gazetted Governor of **New Zealand** in succession to Sir W. D. Jervois. Lord O. has recently presented a recreation-ground to the town of Guildford.

Ontario (from the Indian *Ontonata*—i.e., "village on a mountain"), a province of the Dominion of Canada. It extends along the north shores of the great lakes, and is important as containing the Dominion metropolis, **Ottawa**. Area 144,600 sq. m., with recent accession on north and west; boundaries not fully settled yet; pop. 1,923,228. Provincial capital **Toronto**, pop. 86,445, on Lake Ontario, the second city in Canada in wealth and population, and one of the most attractive. Besides the two capitals, important towns are **Kingston**, **Hamilton**, **London**, **Guelph**, **St. Catherine's**, **Brantford**, **Belleville**, and **Chatham**.—Divided into some forty-six established counties, eighty-eight electoral districts, etc. The peninsular and southern portions of the province are very fertile, and are not elevated. Scenery on the St. Lawrence and Ottawa rivers is very fine. Behind are elevated tracts with immense stretches of forest, abounding in game, large and small, furred and feathered. Besides the shore-line of the great lakes, there are many smaller lakes and innumerable streams. **Niagara River** and **Falls**, between Lakes Erie and Ontario, divide from United States. Climate very healthy; winter cold, with heavy snow and ice, but dry and pleasant. Summer warmer than in England, admitting of a richer flora. The extreme south-west of the province is the track most favoured by climate of any in Canada; the peach ripens in the open air, and the finer kind of grapes grow well. The most important mineral products of Ontario are petroleum, salt, gypsum or "plaster," silver, copper, iron, and phosphate.—Administered by a Lieut.-Governor and responsible Ministry. There is only one Chamber, the Legislative Assembly, elected for four years by 88 constituencies. Ontario has 24 seats in the Dominion Senate and 92 in the House of Commons. Religion not State-aided. Education very good: university, high schools, elementary public schools—the latter in the hands of local boards, supported by rates, free and compulsory.—Industries comprise a good deal of manufacture of various kinds. Agriculturists grow wheat and other grain, hemp, tobacco, hops, etc. Apple and peach orchards are extensive, the fruit export increasing rapidly. Vineyards are being more planted, though the wine made is not yet exported. Mining employs many hands. The fresh-water fisheries are valuable, and pisciculture is attended to. Cheese-making is carried on in 470 factories, dairy stock numbering nearly two million head. There is an agricultural college at Guelph. The timber-trade is large. Homesteads are granted free under certain conditions, but of the twenty million acres already occupied much is very valuable, and land costs £4 to £20 per acre in settled districts.—Ontario, called Upper Canada, became British after the fall of Quebec and the formal cession in 1763. It joined with other provinces to form the Dominion in 1867. See **CANADA**; and for Executive Council see **DIPLOMATIC**.

Open Spaces Act, '87, extends certain provisions of the Metropolitan Open Spaces Acts to sanitary districts throughout England, Wales, and Ireland; amends the principal Acts

in some details; and provides that the powers and duties conferred upon the Metropolitan Board by the Act of '77 may be exercised and performed by any vestry or district board in the Metropolis.

Open Spaces (Metropolitan). See ed. '88.

Opium Trade, Society for the Suppression of. Formed 1874. **Object:** Liberation of China from the forced trade of opium. The Chefoo Convention of '76 gave China increased powers to tax imported opium, and arrest smuggling. Ratification of this treaty was delayed by Indian opposition, and it was not until '85 that the forced opium trade was closed. The trade, however, continues to exist in hardly diminished magnitude. Burmah has also, it is alleged, been seriously injured by the opium trade, which the **Anti-Opium Society** seeks to suppress in India, urging that the existing Government licensing system shall be used only for the production of so much opium as is required for legitimate medical use. **President,** Sir Joseph W. Pease, M.P. **Sec.,** E. A. Williams, B.A. **Office,** Broadway Chambers, Westminster, S.W.

Opportunists. See FRENCH POLITICAL PARTIES.

Orange Association, The. See ed. '88.

Orange Free State. An independent Dutch republic in South Africa. It has Cape Colony on S. and S.W., Bechuanaland on N.W., Transvaal on N., Natal on E., Basutoland on S.E. **Area** estimated at 41,500 sq. m.; **pop.** 133,518, of whom 61,022 are whites. It is divided into 17 districts. **Capital,** Bloemfontein; **pop.** 3,270. Other centres are Ladybrand, Winburg, Kroonstad, Harrismith, Ficksburg, etc. The State is mainly pastoral, scarcity of water rendering great part of it unfit for agriculture. Principal products are wool, hides, ostrich feathers, also diamonds and garnets. There are rich coal-mines. Gold was found in '87. Ostrich-rearing is being developed. Executive vested in President, elected every five years by universal suffrage, and a Council appointed by the Volksraad. **Acting President,** P. J. Bhignat, Esq. There is also a Landrost appointed to each of the districts by the President, if confirmed by the Volksraad. The latter consists of 56 members, elected by universal suffrage for four years, half vacating their seats every two years. Roman-Dutch law prevails. There is a Supreme Court of three judges, and a Circuit Court. There is no standing army, except a small body of artillery at the capital; but about 14,000 men are on the rolls as liable to be called out in case of war. The Dutch Reformed Church is the dominant religion. The State devotes £12,000 a year to education. Estimated revenue for '87-8, £156,300; expenditure, £164,000; debt, £172,500. Commerce passes through Natal and Cape Colony: statistics included in theirs. Imports for '86 estimated at about £1,000,000, exports at £2,000,000. The capital has telegraphic communication with Natal and Cape Colony. The State is, on the whole, prosperous and orderly. It was formed in 1836-40, when Dutch Boers, becoming disaffected towards the new British Government at the Cape, "trekked" northward into the wilds in large numbers. Their outrages on the natives, and the wars that resulted, obliged the British authorities to annex Natal

in 1840, and the Orange River Sovereignty—as it was then called—in 1848. However, by convention in 1854, it was declared to be "a free and independent state," and has since remained so under the title of Orange Free State. A constitution was proclaimed in that year, and was amended in 1866 and 1879. For Ministry, etc., see DIPLOMATIC. **Consult** Norris Newman's "With the Boers," Sandeman's "Quatre Months in an Ox-wagon," Weber's "Quatre Ans au Pays des Boers," Petherick's "Catalogue of York Gate Library," etc.

Orchardson, William Quiller, R.A., b. 1835, first exhibited in Edinburgh, his native city, under the auspices of the Royal Scottish Academy. Subsequently he came to London. Elected an Associate of the Royal Academy (1868). His "Challenge" and "Christopher Sly" at the Paris Exhibition secured the approval of the French critics, and obtained for the painter one of the few medals awarded to British artists. His "Napoleon I. on Boat," **H.M.S. Bellerophon**, exhibited at the Royal Academy in 1880, was purchased under the terms of the Chantry bequest. R.A. (1877).

Orchestra. See ed. '87.

"Order of the Day," in parliamentary language, is a bill, or other matter, which the House has ordered to be taken into consideration on a particular day.

Ordnance Survey Office is a department under Government for the preparation of maps and plans of the United Kingdom, which are issued on various scales. The survey was commenced many years ago, and is approaching completion. A revision of the survey has been undertaken, and is now in progress in Yorkshire and Lancashire. The Chief Office is at Southampton. The Director General is Col. Sir Charles W. Wilson, K.C.B., K.C.M.G., R.E.; assisted by Lieut.-Col. John Farquharson, R.E. (executive officer), Col. George H. Bolland, R.E.; Major C. R. Conder, R.E., and others.

Ordnance, Surveyor-General of the. See WAR OFFICE, ARMY, etc.

Origin of Species See ed. '88.

Ormerod, Eleanor A., consulting entomologist to the Royal Agricultural Society, and lecturer on entomology at the Royal Agricultural College, Cirencester, is a native of Cheshire. She is one of the first of living authorities on the history and habits of insects injurious to crops, trees, and vines, and has published many important works on the subject. See HESSIAN FLY.

Ornaments Rubric. (See RITUALISM.) This rubric, which appears in the English Church Prayer Book immediately before the "Order for Morning Prayer," is the *crux* upon which turns the whole controversy with respect to Ritualism in the Church of England. It reads as follows:—"And here it is to be noted, that such ornaments of the church, and of the ministers thereof, at all time of their ministration, shall be retained and be in use, as were in this Church of England, by authority of Parliament, in the second year of King Edward the Sixth." The ornaments referred to include all the furniture, necessaries, and decorations of a church. The authority of Parliament involves, not merely the statutes then in existence

relating to public worship, but such "other order" as may have been taken by authority of the Crown. It is contended, on the one side, that this rubric (settled in 1662) revives the Act 25 Henry VIII., xix. 7, which decrees that all the old canon laws and ordinances which do not contradict any civil statute or oppose the royal prerogative are still to remain in force; also Henry VIII.'s Injunctions of 1545, the Orders in Council of the first and second years of Edward VI., and the Act authorising the Prayer Book of 1549. On the other hand, it is contended that "other order" was taken in the reign of Elizabeth which puts a different construction upon the rubric. The preamble of the *Advertisements* of Elizabeth (as this order is termed) declares:—"The Queen's Majesty, calling to remembrance how necessary it is that the State Ecclesiastical be conjoined in one uniformity of rites and manners in open prayer and ministration of Sacraments, &c., &c., by her letters, directed unto the Archbishop of Canterbury and Metropolitan, enjoined that some order be taken whereby all diversities and varieties among them of the clergy and people . . . might be reformed and repressed, and brought to one manner of uniformity throughout the whole Realm." This has been adjudged in the ecclesiastical courts to modify the comprehensive significance of the *Ornaments Rubric* of 1662.

Oruba. An island off the Venezuelan coast. Is a Dutch possession, under the government of **Curacao**. Area 69 sq. m., pop. 6,407. Gold has been found on it. See *COLONIES OF EUROPEAN POWERS*.

Oscar II. King of Sweden and Norway, b. 1829. He ascended the throne in '72, in succession to his brother Charles XV., who died in that year. Before his accession he had served in the army, and risen to the rank of lieutenant-general. He is a writer of no mean order, and he has translated Goethe's "*Faust*" into Swedish. In consequence of the merits of this literary production the Frankfurt Academy of Sciences elected him a corresponding member. Issued in '88 a volume of minor poems under his *nom de plume* of "Oscar Frederik." He married, in '57, the Princess Sophia of Nassau, by whom he has as issue four sons: Gustaf, Duke of Wermland; Oscar, Duke of Gotland (who last year married Miss Ebba Munck, dau. of Col. Munck); Carl, Duke of Westergotland; and Eugene, Duke of Nerike. In Aug. '88, his Majesty visited the Emperor William II. at Berlin.

Osman Nubla Pasha, Marshal. Celebrated for the defence of Plevna against the Russians (1877); b. in 1832 in Asia Minor. He took part in suppressing the rebellions of Syria (1860), of Crete (1867), and the Yemen (1874). After his gallant resistance and the fall of Plevna (1877), he returned to Constantinople, and became Commander-in-Chief of the Imperial Guard (1878), Governor-General of Crete, Minister of War 1878-82.

Ostrich Farming. See ed. '88.

Ottawa. Capital of the Dominion of Canada (*q.v.*), pop. 27,417. It is situated on the Ottawa river, province of Ontario, and is a handsome city, containing some of the finest buildings in all America. *Entrepôt* of the timber trade.

Ottoman Empire. See TURKEY; and for Ministry, etc., see DIPLOMACY.

"Ouida" (Mlle. Louisa De la Ramée) was b. at Bury St. Edmunds in 1840. She commenced when very young to contribute to *Colbourn's New Monthly*. The scenes of many of her stories are laid in Italy, where she is now a resident. Her works are very numerous, and comprise the following amongst many:—"Held in Bondage," "Chandos," "Idalia," "Under Two Flags," "Folle Farine," "In a Winter City," "Ariadne," "Pipistrello," "The Village Commune," "In Maremma," "Bimbi," "Wanda," and "Othma." She is a most romantic and impassioned writer, and her novels abound with true poetical feeling. She adopted the *nom de plume* of "Ouida" in memory of her childish pronunciation of her own name "Louisa." In '88 "Ouida's" diatribe on the dulness of London streets was criticised.

Oules, Walter William, R.A., b. in Jersey 1848. Educated at Victoria Coll. Becoming a student of the Royal Academy (1864), he took a silver medal in the Antique school. He has constantly exhibited at Burlington House since 1869, his first works being subject pictures, of which the principal were "*Rome Again*," and "*An Incident in the French Revolution*." In 1872, on the advice of Mr. Millais, Mr. Oules took to portrait painting, and has since devoted himself with great success to that branch of his profession. Elected R.A. (1881).

"Outcast London." See ed. '88, and more fully ed. '87.

Owen, Sir Richard, K.C.B., F.R.S., the veteran comparative anatomist, b. at Lancaster 1804. Educated at Lancaster Grammar School and the Medical Schools of Edinburgh Univ. and Paris. After being in practice for a short time as a surgeon, in London, he became, through the influence of Dr. Abernethy, assistant curator of the Hunterian Museum. In '34 he was appointed Professor of Comparative Anatomy at St. Bartholomew's Hospital, in '36 first Hunterian Professor in the same subject at the Royal College of Surgeons, and in '56 Superintendent of the Natural History Department in the British Museum. Prof. O., from the examination in '39 of a fossil bone sent to him from New Zealand, propounded a theory of the existence, in remote ages, of a bird more gigantic than the ostrich; and the accuracy of his theory was subsequently, by the discovery of the whole fossil, established beyond doubt. This led him to the adoption of his famous theory of the extinction of species. He is a voluminous writer on the subject to which his scientific researches have been successfully devoted. He is an honorary graduate of several universities, a corresponding member of various foreign scientific associations, and in recognition of his eminent services was created a K.C.B. (74).

Oxford and Cambridge Boat Race. See AQUATICS.

Oxford and Cambridge Cricket Match. See CRICKET.

Oxford and Cambridge Locals. Promoted by the delegates of the sister Universities, for the examination, classification, passing or rejection of pupils; the Oxford being held in June, the Cambridge in December. The pupils are divided into Seniors, over fifteen and under eighteen, and Juniors under fifteen years. The examinations are held at various centres throughout the United Kingdom,

each centre being presided over by a secretary, and the examinations conducted by an examiner sent from the University. In the results the pupils are placed in Class I., II. or III., according to merit; or simply catalogued alphabetically as having satisfied the examiners, the names of the unsuccessful being omitted. Trinity College, London, has also instituted Local Examinations. It is estimated that an average of about 6,000 pupils present themselves annually for the three examinations, of which about three-tenths obtain honours, three-fifths satisfy the examiners, the rest being rejected.

Oxford, Rt. Rev. William Stubbs, Lord Bishop of. His lordship, the 32nd bishop, is the son of the late William Morley Stubbs, Esq., of Knarborough, was educated at Ripon Grammar School and Christ Church, Oxford, where he graduated 1st class Lit. Hum. and 3rd class Math. (1848), became a Fellow of Trinity College, and proceeded M.A. (1851), D.D. by decree of Convocation (1879), Hon. LL.D. of Cambridge (1879), and of Edinburgh (1880). Ordained deacon (1848) and priest (1850), by the Bishop of Oxford. **Regius Professor of Modern History at Oxford (1866)**, and has held various other appointments of importance at the University; Fellow of Oriel College (1867), Hon. Fellow of Balliol College, and Hon. Student of Christ Church. His lordship is the author of many learned works, amongst which are "Registrum Sacrum Anglicanum" (Oxford University Press, 1858), "Select Charters and other Illustrations of English Constitutional History, from the Earliest Period to the Reign of Edward I.," and "The Constitutional History of England in its Origin and Development." Formerly his lordship was vicar of Navestock, Essex (1850-67); Librarian to His Grace the Archbishop of Canterbury, and Keeper of the MSS. at Lambeth (1862-67); Examiner in the School of Law and Modern History (1865-66), Select Preacher (1870), Examiner in the School of Theology (1871-72), and of Modern History (1873-76, and '81); rector of Cholderton, Wilts (1875-79), Canon of St. Paul's (1879-84). Consecrated Bishop of Chester (April 25th, 1884) and translated to Oxford in '88. Hon. Fellow of Oriel College, Nov. '88.

Oxford University. This seems to have grown up in the twelfth century, and is one of the three oldest universities of Europe, the other two being Paris and Bologna. The number of students seems to have greatly varied at different periods of its history, and now is about 3,000, it having received considerable impetus from the great Tractarian movement, and the reforms introduced by the University Commissions. By the **Oxford Reform Act (1852)**, the present constitution was fixed. The government of the University is in the hands of three bodies—the **Hebdomadal Council**, of about twenty members; **Congregation**, which includes all resident graduates; and **Convocation**, which is made up of all graduates whose names are on the register. The following is the list of colleges in the University: **Founded (1249), University—Head, J. F. Bright, D.D.—Undergraduates, 110; (1262), Balliol, Benjamin Jowett, M.A., 261; (1270), Merton, Hon. G. C. Brodrick, D.C.L., 119; (1314), Exeter, W. W. Jackson, M.A., 141; (1326), Oriel, D. B. Monro,**

M.A., 99; (1340), Queen's, J. R. Magrath, D.D., 134; (1386), New, J. E. Sewell, D.D., 219; (1427), Lincoln, W. W. Merry, D.D., 55; (1437), All Souls, Sir W. R. Anson, D.C.L., 4; (1456), Magdalen, T. H. Warren, M.A., 163; (1509), Brasenose, A. Watson, M.A., 111; (1516), Corpus, T. Fowler, D.D., 84; (1532), Christ Church, H. G. Liddell, D.D., 264; (1554), Trinity, H. G. Woods, M.A., 145; (1555), St. John's, J. Bellamy, D.D., 122; (1571), Jesus, H. D. Harper, D.D., 70; (1613), Wadham, G. E. Thorley, M.A., 99; (1624), Pembroke, Evan Evans, D.D., 64; (1714), Worcester, W. Inge, M.A., 119; (1869), Keble, Robt. James Wilson, 168; (1874), Hertford, H. Boyd, D.D., 88. **Halls, (1260), St. Edmund's, E. Moore, D.D., 43; (1325), St. Mary, D. P. Chase, D.D., 35; (1392), "Non-collegiate," and students at private Halls, 255: Total, 2,972. Since 1868 students have been enabled to become members of the university without joining any college or hall; they are known as "**Non-collegiate.**" In 1880 arrangements were made for the affiliation of provincial colleges, of which privilege **St. David's College, Lampeter, University College, Nottingham, and Firth College, Sheffield**, have availed themselves. The examinations for the degree of **Bachelor are Responsions (Smalls), First Public Examination (Moderations, Honours, or Pass), Second Public Examination (Finals, Honours, or Pass).** Residence for twelve terms is required, of which there are four in the year. **Honours** may be taken in **Letteræ Humaniores (Ancient History and Philosophy), Mathematics, Jurisprudence, History, Theology, Natural Science, Medicine, or Oriental Languages.** **Women** are admitted to the same examinations, but do not receive degrees. There are three halls for their reception—**Somerville Hall, Lady Margaret Hall, and St. Hugh's Hall.** During the year 1887 New Inn Hall was, on the demise of its principal, annexed to Balliol College, in accordance with the decision of the last Royal Commission. Similarly St. Mary's Hall is destined to be united with Oriel College, and St. Edmund's Hall with Queen's College. A new hall for lady-students has been opened, and the first Honours Examination in Oriental studies held. **Mansfield College (q.v.)** is making progress, and establishing itself in the University.—**Degrees, D.D. (hood scarlet cloth, lined with black silk); B.D. (h. plain black silk); M.A. (h. black silk, lined with red silk); B.A. (h. black corded silk, trimmed with white fur); M.D. (h. scarlet cloth, lined with crimson silk); M.B. (h. dark blue silk, lined with white fur); D.C.L. (h. scarlet cloth, lined with crimson silk); B.C.L. (h. pale blue silk, lined with white fur); Mus. D. (h. white silk, lined with crimson silk brocade); Mus. B. (h. pale blue silk, lined with white fur).—**Chancellor, The Marquis of Salisbury, K.G.; Vice-Chancellor, J. Bellamy, D.D. (St. John's); Parliamentary representatives, Sir J. R. Mowbray, Bart., and Mr. J. G. Talbot.******

Oyer and Terminer, Commission of. The commission issued to judges of assize, giving them authority to try criminal cases in each county into which they go. It is literally a commission "to hear and determine," *oyer et terminer* being the old French equivalent for that English expression.

P

Paget, Sir James, Bart., F.R.S., D.C.L. Oxon., b. at Great Yarmouth 1814. He is Sergeant-Surgeon Extraordinary to the Queen, Surgeon to the Prince of Wales, and Consulting Surgeon to St. Bartholomew's Hospital. He has been an extensive contributor to the transactions of the Royal and other learned societies. Created a baronet (1877), and appointed President of the College of Surgeons (1875). Sir James Paget was one of the scientific celebrities who received an honorary degree in 1882, at the commemoration of the 300th anniversary of the founding of the University of Würzburg.

Pahang. A large state on the east coast of the Malay peninsula, northward of Johore, and touching on the west, Perak and Selangore. A treaty between Great Britain and P., concluded in '88, provides that the ruler shall be styled Sultan of P., and that the guidance and control of the foreign relations of P. is henceforth conveyed to the Straits Government (q.v.).

Palestine Geological Surveys. See ed. '87. "**Pall Mall Gazette.**" Evening newspaper and review. Established 1865, by George Smith, of Smith, Elder & Co. Transferred to Henry Yates Thompson, his son-in-law, in 1880. Edited first by Frederick Greenwood, next (1880) by John Morley, who in turn was succeeded in 1883 by W. T. Stead (q.v.). Its characteristics are the three 'I's'—Independence, Interviewing, and Illustration. It is the first daily illustrated English newspaper. Originally issued at 2d. It was first published at 1d. Jan. 1st, '82. "**Pall Mall Budget**" (weekly 4d.), an illustrated summary of the news of the week with special cartoon offices, 2, Northumberland Street, Strand.

Palmerston. Capital of Northern Territory (q.v.) of South Australia.

Pan-Anglican Conference. See LAMBETH CONFERENCE.

Panama Canal. This waterway, which, if completed, will be the greatest engineering work of the kind the world has ever seen, is designed to connect the Atlantic Ocean, from Aspinwall (or Colon), with the Pacific at the capital city of Panama—the oldest existing European settlement in the whole of America—thus cutting through the southern portion of the narrow neck of land connecting North and South America, generally described as the **Isthmus of Panama**. The idea is to follow the course of the single-line railway already connecting the two cities, except in certain places, where the bed of the river Chagres will be more closely followed. The whole length, from entrance to exit, is calculated at fifty-four miles; and the two chief difficulties are recognised in the flood waters of the river, and the fact that the **Cordilleras** have to be cut through. The river bed is to be crossed several times; and it has been decided to cut through the **Culebra Col.** in the **Cordilleras**, which about the point chosen will mean the excavation of a lengthy ravine about 350 feet deep. (For history of the scheme down to end of 1887 see ed. '88, also previous editions). Adverse criticism, more or less deserved, but heightened by a modification of the scheme and demands for more money, attended the progress of this great work during '87. M. de Lesseps on Nov. 15th himself addressed an important letter to the French premier, in which he stated that, "in view of the indescribable bitterness of

adversaries," he had resolved to do at Panama what he did at Suez—viz., to insure a sufficient passage to the foreseen annual traffic of 7,500,000 tons, and to complete the definitive maritime canal afterwards by small levies, as at Suez, on the annual profits. The Consultative Committee had replied in the affirmative to the two questions: (1) Was it possible to construct in the central mass an upper cutting and continue at the level by dredging? (2) Would it be possible, when this was done, to open up traffic between the two oceans without suspending the work of deepening? This approval, he pointed out, left for extraction only 40,000,000 cubic metres—10,000,000 hard soil and 30,000,000 dredgable soil; and a contract to carry out the work in the time specified had been entered into by M. Eiffel. On Feb. 25th, '88, the *Panama Star* and *Herald* stated that the opening of the Canal through the **Mindi Hill**, four miles from Colon, was accomplished on Feb. 22nd. "There is now a continuous waterway open from the sea at Colon to a point near Bojio station on the Panama railroad—about 15 miles." M. de Lesseps read his usual report to the Company at the Paris meeting of March 1st, and assured them that the Canal would be opened with locks in 1890, the contracts being of the strictest character. The meeting was enthusiastic, and the report was adopted with a resolution authorising a loan of 340,000,000 francs; this, coupled with previous powers for raising 260,000,000, making a total of 600,000,000, besides a sum not exceeding 120,000,000 for the purchase of French Rentes to guarantee repayment and premiums. The amount necessary to finish the Canal, including everything, was estimated at 654,000,000 fr., the loan of 600,000,000 and 110,000,000 in hand meeting this and leaving a good balance. In the street were hawkers offering for sale a pamphlet called *Le Cataclysme fatal du Panama*. The Chamber on March 26th by 290 votes to 170 resolved to consider the **Panama Canal Loan Bill**, the Government, however, taking no part in the discussion, and on April 23rd the Council reported in its favour. The discussion was concluded on the 27th, but a division being demanded, and there not being a quorum of the Chamber present, another vote had to be taken on the 28th, when the Bill was agreed to by 284 votes to 128, a clause being added providing that the prospectus of the loan should point out that there was no State guarantee. On May 24th the Finance Minister appeared before the committee of the Senate on the Panama Lottery Loan, and said that there was no need for the Government to concern themselves about the issue as requested by the company; the Senate adopted the Bill on June 5th by 160 votes to 52. By the 8th the directors had fixed June 26th for the issue of the **Lottery Loan**. There were to be 2,000,000 bonds at 360 fr. bearing 15 fr. interest, and repayable in 99 years at 400 fr. There were to be six drawings a year till 1913, and afterwards four, three of these to have a prize of 500,000 fr. the other three each a prize of 250,000 fr., besides smaller prizes, the aggregate of the annual prizes being 3,300,000 fr. Prizes and guarantees of redemption to be covered by a deposit of French Rentes. What was described by the *Engineer* of August 3rd as "the most trustworthy statement" respecting the progress

of the work done at the canal during the six months ending June showed that the excavations amounted to 7,479,400 cubic metres. This monthly average of 1,246,567 was 96,567 metres more than the contractors' minimum; the excess for the six months being 579,402, or 442,400 metres more than in the corresponding period of '87. It was added that M. Duponchel, another eminent French engineer, proposed to alter the method of excavation altogether—viz., by using the torrent of the river Chagres, which would be turned in the proper direction, to wear away a channel in the hard rocky grounds—very much as hydraulic mining is carried on. At a grand banquet of the representatives of South American Republics given at Paris on June 19th, to M. Antonio Flores, President-elect of Ecuador, M. de Lesseps presided, and the canal was generally referred to in hopeful terms. On Saturday, June 23rd, shortly before the close of the subscription for the new Lottery Loan, hundreds of telegrams announced all over the world the death of M. de Lesseps. This caused a panic; the subscriptions, which were said to be coming in very well indeed, were countermanded wholesale, and at the close only about one of the two million bonds were reported to have been taken up. Of course this *canard* could only have been set afloat by the enemies of the canal. On the 29th M. de Lesseps issued an indignant circular exposing this latest move of his adversaries, and announcing that a strong financial syndicate had at once offered to guarantee all the loan stock not applied for, and this had been accepted. The annual meeting of shareholders was held at Paris on August 1st, when M. de Lesseps, having alluded to the opposition as the result of disappointed ambition, said the amount obtained by the issue of the lottery bonds, with the property of the Company, would at the date fixed for the opening of the canal cover all the expenses of the work, other outlay, and the charges due on coupons. The meeting was enthusiastic. The second drawing was held on Oct. 15th. Several of the prizes at the first drawing fell to bonds not issued, and the Company decided to have them drawn over again for the benefit of the issued bonds. The 500,000 fr. prize fell to a tailor of the Avenue d'Antin, who was not present. On Dec. 1st M. de Lesseps addressed a letter to the shareholders of the Company, saying that the remainder of the bonds were about to be issued, and the subscription would hold good if 400,000 bonds were applied for. In conclusion he said: "I appeal to all Frenchmen, to all my associates whose fortunes are threatened. I have devoted my life to two great works, which were pronounced to be impossibilities—namely, the Suez and Panama canals. The Suez canal is constructed, and has enriched France. If you wish to complete the Panama canal, your chance is in your own hands. You must decide."

Panslavists. A party in Russia, favouring the idea of a grand Slavonic confederation, in which the hegemony would belong to Russia. See ed. '88, more fully ed. '87.

Panthéon (Le). A noble edifice, erected in Paris, devoted to the interment of illustrious men.

Paraguay, Republic of. One of the most rising states of South America, situated between the rivers Parana and Paraguay.

Capital, Asunción, pop. about 25,000. Area, about 145,000 sq. m.; it is therefore about one-fifth larger than the United Kingdom of Great Britain and Ireland. It is governed by a President elected every four years, a congress consisting of a Senate and a Chamber of Deputies, and five Ministers of State chosen by the President. The State religion is Roman Catholic, but all others are tolerated. **Revenue** ('87), \$1,938,176; **expenditure**, \$1,400,503; the **internal debt** at the end of '87, \$1,068,260, of which a large portion will shortly be paid off; **external debt** about £800,000. During the five years' war, '65 to '70, against three of its most powerful neighbours the country was completely ruined; but now, owing to the extraordinary riches of its soil, to its very healthy climate and its central geographical position, it is making such rapid strides that it will very soon become one of the most important states of South America. The country is covered with most valuable timber, and well watered throughout with a great number of small and large rivers, most of them navigable for hundreds of miles. A railway of about 60 miles is now in traffic, and another 30 miles will be opened very shortly. Concessions have been granted for about 300 miles more. The chief crops are maize, rice, coffee, cocoa, indigo, manioc, tobacco, sugar-cane, oranges, cotton, and the celebrated tea called Yerba mate. A law has been lately passed by Congress for establishing a metal currency.

Paramaribo. Capital of Surinam (q.v.).

Parcel Post, The. See POST OFFICE.

Parent and Child. For the legal rights and duties of parent and child see ed. '87.

Paris, Comte de. son of the late Duc d'Orléans, and grandson of King Louis Philippe, b. 1838. He was educated in England, having left France after the overturn of the monarchy in '48. He and his brother the Duc de Chartres served on the staff of General McClellan during part of the American Civil War. He married in '61 the eldest daughter of the Duc de Montpensier, and has three children. After the death, in '85, of the Comte de Chambord, the head of the Royal House of France, the Comte de Paris was acknowledged by nearly all the Legitimists as his successor. In '86, on the passing of the Expulsion Bill, the Comte de Paris once more left for England. He is the author of an interesting and comprehensive work in six volumes on **English Trade Unions**. In July '88 some sensation was caused in Paris by the seizure of a document addressed by the Comte to the mayors of France which the Government regarded as seditious.

Paris Metropolitan Railways. The Convention for this system was approved by the French Government Budget Committee on June 30th, '87, and urgency was voted for the bill in the Chamber of Deputies on July 21st. It was afterwards decided to remodel the original plan; and the engineers, who were deputed to visit the London underground lines and the Mersey Tunnel, have now to report to the Chamber. In the French Chamber on May 17th, '88, the Minister of Public Works (M. Delans-Montaud) in answer to a question, said no doubt all Paris was in favour of the enterprise. He had taken the initiative in negotiations with the Municipal Council and the various railway companies, and he would endeavour to have the new scheme presented soon to the Chamber.

Paris (Neuchâtel) Water Supply. Towards the end of Aug. '88, M. Ritter, a Swiss engineer, who constructed the waterworks at La Chaux de Fonds, etc., submitted to the Paris Municipality a scheme for furnishing that city with an ample supply of water from the Lake of Neuchâtel. M. Ritter stated that the three Jura lakes—Neuchâtel, Biennet, and Murten—owing to the recent regulation of the Jura waters, now form a single collecting basin, and that by the connection of the river Aar there was such a large disposable volume of water that from 20 to 30 cubic mètres per second could be taken from the lakes without causing any perceptible diminution. He proposes to draw off the water from the Neuchâtel by a heading 260 ft. below the surface; the water would be taken through a tunnel, 22 miles long, under the Jura mountains to the Dessoubre valley near Blanchefontaine, in the Department of the Doubs, thence either in a subterranean conduit along the slopes of the hills or in aqueducts to Paris, whence it would arrive at an elevation of about 395 feet. The boring of the tunnel would be greatly facilitated by the supply of hydraulic power furnished by the Reuse (7,000 horse-power) at the south end, and by the Doubs and Dessoubre at the north end. The distance between Paris and the lake of Neuchâtel is 312 miles, and the water would arrive at a temperature of 50 deg. Fah. M. Ritter calculated the work to cost 300,000,000 francs, the revenue to be derived from the supply of drinking water and motive power along the whole route, besides the income from Paris itself; it would take about six years to carry out.

Paris Ship Canal. A somewhat ancient scheme, the connecting of Paris with the sea by a ship canal, was again on the tapis in the spring of '88. It was pointed out that the waterway would be through a level country, the promoters not looking for Government assistance, but depending upon a toll for their revenue.

Paris Underground Tramways. M. Berher, civil engineer, described as the father of the system of pneumatic transmission in use in certain quarters of Paris, brought forward a scheme of underground tramways for that city. He proposed to lay a tube six metres in diameter without opening the streets, electricity to be used for both lighting and traction. The whole system is to consist of three lines starting from the Place de la Concorde, the first, to run to the Bois de Boulogne, by the Champs Elysées, the Place de l'Étoile, and the Avenues Victor Hugo and Bugeaud; the second, towards the Bastille, by the great Boulevards; and the third, by the Rue de Rivoli and the Boulevard Diderot; stations to be built and trams to run on each line according to public convenience. The concession was asked for, without subsidy or guaranteed interest for 24 years, and the cost was estimated at 54,000,000 fr. for the total development of about ten miles. The Prefect of the Seine having asked for authority from the Municipal Council, under the law bearing upon local railways of 1880, it was announced in April '88 that the scheme had been sent back for examination to the third Commission of the Council.

Paris Universal Exhibition. The, for which great preparations are being made, will be held in Paris, on the *Champ du Mars*, during the summer of '89, and is intended to commemorate the centenary of the French Revolution (see

BASTILLE). Attempts were made to obtain the official co-operation of leading foreign Governments, but, with the exception of the United States of America and the Republic of Switzerland, without success. **Executive commissions**, have, however, been formed in all important countries to take charge of the organisation of the various foreign sections. The Exhibition is to be divided into nine groups, as follows: (I.) Works of art; (II.) Education and processes used therein; (III.) Plain and decorative house furniture; (IV.) Textile fabrics; (V.) The raw and manufactured products of mining, forestry, chemistry, etc.; (VI.) Apparatus and methods of mechanical industries; (VII.) Food products; (VIII.) Agriculture, viticulture, and pisciculture; (IX.) Horticulture. Early in '88 the British Government made it known that it had felt itself unable to take part in the Exhibition officially, but at the same time would assist exhibitors by every means in its power. Thereupon steps were at once taken to insure the adequate representation of British industry, manufactures, and art, at the Exhibition, which is expected to eclipse in comprehensiveness and interest the great exhibitions that have preceded it, both in Paris and in London. M. Berger, the Director-General of the Exhibition, placed himself in communication with Lord Lytton, the British Ambassador in France, and suggested that the commercial bodies of this country and the scientific societies should take action with a view to the formation of an executive commission to undertake the management of the British section, to which a space of about six thousand square yards had been allotted. The idea was warmly taken up in London, and at a meeting of the London Chamber of Commerce (*q.v.*) a resolution was carried pledging that Chamber to do what it could in securing the adequate representation of the British Empire. At this meeting it was stated that the cost of the British section would be about £8,000, and might reach £10,000. The Lord Mayor (Sir Polydore de Keyser) lent his aid to the movement, and on March 1st an influentially attended meeting was held at the Mansion House, at which a committee, representative of the manufacturing, commercial, scientific and artistic interests of the country, was appointed to further the proper representation of British art and manufactures, and at which a guarantee fund, headed by the Lord Mayor with £500, was started. Later in the same month a further meeting was held at the Mansion House, when it was stated that the space at the disposal of British exhibitors would be about 150,000 square feet, exclusive of the space available for the fine arts. This area, though less than half that occupied by Great Britain at the Exhibition of '78, is considered amply sufficient for the satisfactory representation of British interests. The French authorities made no actual charge for the space, but required that much of the work of preparing the galleries should be done by the country to which the section was allotted. This necessitated an expenditure of 5s. per square foot, and a public appeal was made for a guarantee fund of £20,000. This fund was promptly subscribed. At the meeting referred to a powerful executive council was appointed, including the names of gentlemen eminent in the mercantile and scientific world. A further meeting was held at the Mansion House on July 23rd, when the Lord Mayor entertained the Executive Council to dinner, and at which M. Waddington, the French

ambassador, made a *speech* advocating the claims of the Exhibition to an adequate representation of British industry. From that date it became clear that the British section would be worthily filled, and that there was no likelihood of any call being made on the guarantors. On Nov. 8th the Lord Mayor, in order to dissipate ideas that had been promulgated to the contrary, informed the public through the press that the success of the British section was assured, and that the only difficulty in the way was the want of space to meet the numerous applications still coming in from the industrial centres of the country. Sir Frederick Leighton, P.R.A., undertook the organisation of the British Art section, and mainly through his efforts a sum of £3,000 was subscribed to meet the expenses of carriage, insurance, etc., of the art exhibits. The progress of the Exhibition buildings and of the Eiffel tower (*q.v.*) was delayed through the Paris strikes of July and August last, but the work is now being energetically pushed forward, and the Exhibition promises to be a great success. Reference may be made to a *speech* by M. Tiaza in May, in which, for reasons connected with the foreign policy, Hungarians were advised not to participate in the Exhibition (see AUSTRIA). Beyond this incident, and notwithstanding that foreign Governments generally have not allied themselves officially with the undertaking, it has received wide support. The United States Government voted \$200,000 to the expenses of the Exhibition, and undertook to send American exhibits free. The London, Chatham, and Dover Railway Co., and the South-Eastern Railway Co., have signified their intention to deal with extreme liberality on all points relating to the Exhibition.

Parker, Rev. Joseph, D.D., minister of the City Temple, was b. at Hexham, 1830. Student in University College, London (1852). Ordained in the Congregational body (1853). Has held the following church appointments:—Banbury, (1853), Manchester (1858), London, City Temple (1869); Chairman of the Congregational Union of England and Wales (1884). Founder of the Nottingham Congregational Institute. Dr. Parker, in addition to being a popular and vigorous preacher, is also an author of repute. Among numerous works written by him may be mentioned "The Paraclete," "Ecce Deus," "Springdale Abbey," "Inner Life of Christ" (3 vols.), "Apostolic Life" (3 vols.), "Weaver Stephen," and "The People's Bible." It was at his house that Mr. Gladstone, in May '87, met a large number of Nonconformist ministers, and expounded to them his Irish policy. Dr. Parker recently visited the United States. Mainly through the instrumentality of Dr. P. a Conference on Preaching was held in London in the autumn of '88.

Parliament is composed of the Sovereign and the three Estates of the Realm, which are the Lords Spiritual, the Lords Temporal, and the Commons; the Lords Spiritual and Temporal sitting together and forming the House of Lords. The Sovereign alone has the power of summoning or proroguing or dissolving Parliament, and gives the Royal assent to measures which have passed both Houses. On the first day of the meeting of a new Parliament the Clerk of the Crown delivers to the Clerk of the House of Commons a list of the names of the members returned at the general election. Members are then summoned to the House of Peers, and the Royal pleasure is signified by

the Lords Commissioners that the Commons do proceed to elect their Speaker (*q.v.*). On the following day the Speaker elect is presented to the Lords Commissioners for the Royal approbation. If the same Government be in office as had been in power at the dissolution, the swearing-in of members goes forward for a week or so, and then Parliament is formally opened; but if there should have been a change of Government after the general election, then members of the administration who hold office direct from the Crown will have vacated their seats, and the leading members of the Government present in the Commons will be the Secretaries to the Treasury. This was the state of affairs in 1874, 1880, and August 1886, on which occasions authority to issue writs for the re-election of Ministers was given by the Crown, through the Royal Commissioners, within a few days after the election of Speaker, and there was then a short adjournment for the re-elections before Parliament was opened. But as in January 1885 the Ministry had not gone out of office, there were no writs to be issued for re-election, and consequently there was no need for any adjournment, and Parliament was opened nine days after it met. Parliament is sometimes opened by Her Majesty in person—this being now the only occasion during a session on which the Queen is personally present—but more frequently by Royal Commission. In either case the Speaker and the Commons are summoned (see BLACK ROB) to hear Her Majesty's Speech. This is read sometimes by the Sovereign, but more often when Her Majesty is present by the Lord Chancellor; and it is always delivered by him when Parliament is opened by Commission. At the resumption of business in the evening of the day on which Parliament is opened, an address in reply to the gracious Message from the Throne is moved in each House. After the mover and seconder have spoken, some critical remarks upon public affairs are usually made by the Leader of the Opposition, and the Leader of the House replies. The debate on the Address in the Lords is usually finished on one evening; the debate in the Commons has of late years extended over several nights. So soon as the Address has been agreed to by the Commons, the House decides that it will on a future day resolve itself into a Committee of Supply, and into a Committee of Ways and Means (see SUPPLY, and WAYS AND MEANS). The Houses at their ordinary daily sittings consider private business (see BILLS, PRIVATE), *Petitions* (*q.v.*) are presented, questions are put to Ministers, motions are made and discussed, and public bills are submitted by the Government and by private members. The ordinary time for the commencement of the session is early in February. There is usually a recess at Easter and at Whitsuntide, and great efforts are usually made to bring the session to a close at about the middle of August. The House, on resuming after an adjournment, takes up business at the stage where it had been left at the previous sitting; but a prorogation puts an end to all uncompleted business. Unless it be dissolved by the Crown, Parliament exists seven years from the date on which it was first to meet. The demise of the Crown does not dissolve Parliament, but, on the contrary, renders an immediate assembling of the two Houses necessary; and if there be no Parliament in

existence, the old Parliament must reassemble, and may sit again for six months, if it be not within that time dissolved by the new Sovereign. When Parliament is about to be dissolved by the Crown on the advice of her Ministers it is customary to prorogue on a given day, and in the evening of the same day to issue the proclamation of dissolution. The writs are posted the same night, and are made returnable not less than thirty-five days after date. But although the new Parliament cannot in any case be summoned to meet in less than thirty-five days after the day of dissolution, it may happen when the general election is over that no necessity for an early meeting of Parliament exists, and in such case the new Parliament may be prorogued by proclamation until a later date. Should it, however, be found desirable to call Parliament together for the despatch of business on an earlier day than that to which it stands prorogued by proclamation, whether that prorogation has taken place before the first meeting of a new Parliament, or during the ordinary recess between sessions, or if the House be adjourned for a longer period than fourteen days, it is in the power of the Crown to call Parliament together by proclamation for the despatch of business in six days from the date of such proclamation. See also CROWN; HOUSE OF COMMONS; PEERAGE; and PARLIAMENTARY PROCEDURE. Consult SIR T. E. MAY'S "Law, Privileges, Proceedings, and Usage of Parliament."

Parliamentary Obstruction. See ed. '88.

Parliament, Privileges of. See PRIVILEGES OF PEERS AND MEMBERS OF PARLIAMENT.

Parliamentary Papers consist of the notices of questions, resolutions, votes, and proceedings in both Houses of Parliament issued daily during the session; the official **Blue Books**, **Drab Books**, and **White Books** (so called from the colour of their covers) are Papers prepared by the different Government departments, and presented by command of Her Majesty to both Houses of Parliament, and also of all reports and returns specially ordered to be printed by either House. As soon as possible after the close of each session lists are prepared of all the papers printed and issued during the year, and are procurable, as also the **Journals of the proceedings of the House of Lords and House of Commons** (price 2s. per volume). To the general public the papers are issued on the following terms: Single papers, Blue Books, etc., are charged for at the rate of one halfpenny per sheet of four pages, excepting in instances where special prices are fixed; but for an annual subscription of £20 subscribers can obtain all the Parliamentary publications issued during the year; an annual subscription of £16 entitles the subscriber to all the Parliamentary Papers excepting the daily votes and proceedings, which can be had separately for an annual subscription of £3; and the reports on petitions and appendix to the votes, which can also be had separately for an annual subscription of £1. The papers of each House can also be had separately. The annual subscription for the House of Lords papers is £10, and for the House of Commons papers £15, or in each case £1 10s. less without the daily votes and proceedings. An additional charge is made for delivery within the town district, according to distance, and a charge of 10s. or 20s. for packing and sending by post or rail the votes or

papers respectively. Lists of the papers for each year, giving title and price, and later ones, even the postage, can be sent post free for 4d. The **Parliamentary Publishers** are Messrs. Eyre and Spottiswoode, East Harding St., London, E.C.; and 32, Abingdon St., Westminster, S.W.; Messrs. A. and C. Black, North Bridge, Edinburgh; and Messrs. Hodges, Figgis and Co., 104, Grafton St., Dublin.

Parliamentary Papers, '88 (Selected). Among the many papers issued during the year none can claim to be of so much importance as the "**Final Report of the Commissioners of Education**" (5s. 6d.). This book contains the Majority Report, with its Reservations; the minority reports; lists of the witnesses examined, of the returns made, and of the recorded divisions of the commission, also a summary of the statistical report; altogether it is a most invaluable book to those now studying the vexed question of free education. Further volumes have been published containing foreign returns, statistical reports, and replies from the principals of training colleges. "**The Report of the Committee of Council on Education**" (3s. 11d.), popularly known as the "**Blue Book**," contains reports on the Training Colleges, selected reports of inspectors in the various districts, and very valuable statistical tables showing the respective positions of the schools. "**Report on the Action of Light on Water Colours**" (2s. 6d.). This report, which was made by Dr. W. J. Russell, F.R.S., and Capt. W. de W. Abney, C.B., R.E., F.R.S., at the request of the Lords of the Committee of Council on Education, deals with the physical effects of light on water colours,—the investigation into the nature of the chemical changes involved being deferred to a second report,—its merits have been carefully considered by a committee of artists duly appointed, and a unanimous resolution adopted in its favour. **Historical Manuscripts**—the second part of the **Cecil Manuscripts** (3s. 5d.) covers the period 1572-82, "one of conspiracy, intrigue, and general unrest throughout Europe, and not least of all in England and Scotland." The first volume of the "**Cowper Manuscripts**," preserved at Melbourne Hall, Derbyshire (2s. 7d.), 1551-1632, consisting entirely of the Coke MSS., also covers a very interesting period of our history. Next perhaps in importance to education is the Royal Commission on **Civil Establishments** (6s. 9d.). This, their second report, makes some very important suggestions as to the future of civil servants, especially of advantage to the lower division clerks. The Reports on the **Elberfeld Poor Law System** (9d.), give an interesting and detailed account of the system of Poor Law relief in some of the German towns, and also on the organisation of charity in Germany. This year has been issued the first annual report of the **Agricultural Adviser** to the Lords of the Committee of Council for Agriculture (3d.). In '87 Mr. Whitehead, who had previously prepared some most excellent pamphlets on insects injurious to crops—was appointed to fill that position; and in his present report, after dealing with the injury reported to have been done during the year, then devotes the remaining portion to an account of numerous insects injurious to crops of the farm, the orchard, and the garden, giving excellent advice as to how to deal with them. The Report of the Royal Commission on **Horse Breeding** (11d.) recommends the

abolition of Queen's plates, and substituting premiums for competition by stallions. An important book, as affecting Savings Banks generally, is the Report by the Hon. E. Lyulph Stanley on the **Cardiff Trustee Savings Bank**, together with the minutes of the evidence, and an appendix (2s. 6d.). Those who are fond of figures can consult the annual statements of trade, of navigation and shipping, mines, railways, tramways, life assurance companies, and savings banks, etc., but those who have little time to spare might derive great benefit from a perusal of the **Statistical Abstract of the United Kingdom** (12d.), as its pages contain extracts from all the larger returns, and moreover show the comparative figures for fifteen years; here may be found the public and local expenditure, the amount of the national debt, income tax assessments, imports and exports; agricultural produce, receipts and expenditure of railways and tramways; particulars relating to the Bank of England, Post Office, Court of Bankruptcy, and a mass of information our space will not permit us to enumerate. And there is one which should be mentioned—the "**Finance Accounts of the United Kingdom**," or, as sometimes called, "**John Bull's Ledger**" (9d.); this gives the total receipts into and the total issues out of the exchequer, gives detailed statements of the annuities and pensions to the Royal family, and for naval, military, political, and civil services; salaries of State officials, judges, etc.

Parliamentary Procedure. The Houses of Lords and Commons differ from each other not only in regard to their constitution, but likewise in respect to their powers and methods of procedure. It is in the **House of Peers**, for instance, that the Sovereign meets Parliament, and the formal ceremonies connected with the opening or proroguing of the Legislature are gone through. On these occasions, as also when the Royal Assent is given to public or private bills, the "faithful commons" merely attend upon their lordships. But, on the other hand, the House of Commons has an individuality of its own, which is yearly becoming more marked. Its powers and privileges are enormous: it is in the Lower Chamber exclusively that the national estimates are voted, and it is in the Commons that the majority of important legislative proposals are initiated. The powers of the **Lord Chancellor**, who presides over the deliberations of the House of Lords, differ widely from those exercised by the Speaker of the House of Commons. He is not the judge or guardian of order, and if two or more peers rise together the House itself decides who shall first be heard. The simple duties of the Lord Chancellor (who need not necessarily be a peer) consist in "putting the question," and he is not debarred from taking part in a debate. He has, however, no casting vote in divisions, and if the numbers are equal the "not-contents" prevail. Another peculiarity of procedure in the House of Lords is that the speakers do not address the presiding peer but the whole House. With regard to the **origination of bills**, the House of Lords has **exclusive power** concerning those relating to a **restitution in blood** and a **restitution in honours**. It has always been held that bills of "**pains and penalties**," or other measures founded on oral testimony, should originate in the Lords; and until 1871 the House of Commons had not the power which their lordships had of exam-

ining witnesses on oath. The **Royal Assent** to bills is always given in the House of Lords, more frequently by commission than otherwise; and it is a curious circumstance that the French language is still employed in connection therewith. When a public bill is approved, the clerk says, "*Le roy (or, la reine) le veut.*" If the measure be a private one he says, "*Soit fait comme il est désiré.*" Should the bill have subsidies for its object, the official says, "*Le roi (or, la reine) remercie ses loyaux sujets, accepte leur bénévolence, et aussi le veut.*" If the Sovereign thinks fit to refuse approval to a measure, the clerk then says, "*Le roi (or, la reine) s'avisera.*" This power of rejection, it may be noted, was last exercised by Queen Anne, in the year 1707. The most striking feature in connection with the procedure of the **House of Commons** is the wide power vested in the **Speaker**. This great officer must have been anciently, as at present, the organ, or spokesman of the Commons, although in modern times he is more occupied in presiding over the deliberations of the House than in delivering speeches on their behalf. Unlike the Lord Chancellor, the Speaker must abstain from debating, unless in committee of the whole House; and even there he rarely takes advantage of his right. The member of the House who is elected to the office of Speaker usually acts quite independently of party considerations. He never votes, save when the numbers happen to be equal, in which case he gives the casting voice. The chief duty of the Speaker undoubtedly is the preservation of order, with respect to which the rules of the House of Commons are very stringent. It is out of order, for instance, for a member of Parliament to refer to any other member by name; he must speak of him as "the honorable member for so-and-so." Again, all remarks must be addressed to the Chair, and not to the House. It is likewise out of order to speak in direct terms of any proceedings of the other House of Parliament, unless they have been formally made known by "**message**," or recorded on the minutes of the House of Peers. When a reference to the proceedings of the House of Lords is desired, however, the difficulty is got over by alluding to what has transpired "in another place." It is irregular, too, to refer to the opinions of the Sovereign, speeches and messages from the Throne being regarded as the sentiments of the Ministry alone. The **rules of procedure** passed in the year 1882 (see '86, '87, and '88 editions), provided among other things that a **member who disregarded the authority of the chair** might under a new standing order (Order in Debate) be "**named**" by the Speaker, and suspended from the service of the House, on the first occasion for a week, on the second for a fortnight, and on the third, or any subsequent occasion, for a month; empowered the Speaker, when in his opinion a **subject has been adequately discussed**, and it was the evident sense of the House that the "**question be now put**," to so inform the House, when a motion to close the debate might be made, and placed restriction upon the practice of making motions of adjournment. In the House of Commons no public bill can be introduced without leave, and on that being given, the measure is formally read a first time. On the **second reading** the principle of the measure receives consideration, and until it has passed this stage it cannot

be altered or amended. The bill is subsequently considered in committee of the whole House, or it may, in certain cases, be sent to a select committee. After amendment in committee, a formal report is received, the measure is subsequently passed, and taken to the House of Lords, where practically the same form is gone through. The only exception to these proceedings arises in the case of an *Amnesty Bill*, which is read but once in each House. Only the royal assent can convert a bill into an Act of Parliament. It occasionally happens that the opponents of a bill are not desirous of meeting the motion for its second reading with a direct negative. An amendment is therefore proposed to the effect that the bill "be read this day three months," or "this day six months," it being understood that three months or six months hence the House will not be sitting. In the cases of motions in respect to which the House is also unwilling to come to a decision, "the previous question" may be carried, in which case the other business of the day is at once proceeded with. The business of both Houses of Parliament, but more especially of the House of Commons, is transacted very largely "in committee." When the whole House is in committee the Speaker vacates the chair, the mace is removed by the Serjeant-at-Arms, and the Chairman of Ways and Means or another member of the House presides. Proceedings relating to the expenditure of public money take place in Committee of Supply (*q.v.*), while in Committee of Ways and Means (*q.v.*) resolutions having reference to the funds by which such expenditure is to be sustained, are passed. There are also Select Committees chosen for specific purposes, and committees for the consideration of private bills, the procedure in respect to which is not very dissimilar to that followed in regard to public measures. No member of the House of Commons can, as a matter of fact, resign his seat, but this end is attained by his acceptance of the "Chiltern Hundreds." No office having emolument attached can be conferred on a member of the House of Commons without his vacating his seat; and therefore by obtaining "the stewardship of Her Majesty's Chiltern Hundreds, the stewardship of the Manor of Poyning, of East Hendred and Northstead, or the Escheatorship of Munster," a member may rid himself of his duties. In cases where appointments are not directly conferred by the Crown, but by the heads of departments, a member need not resign his seat; and by the Reform Act of 1867 it was specially enacted that members already in office should not vacate their seats on accepting other Crown appointments. The first Salisbury administration, in Jan. 1886, made new rules of procedure one of their principal measures; Mr. Gladstone succeeding them in office adopted the main principles indicated, and a Select Committee appointed by the House of Commons to inquire into the rules of procedure of the House held their first meeting March 22nd, 1886, the Marquis of Hartington having been elected chairman at a preliminary meeting on March 18th. (For the names of the Committee, and the substance of the important recommendations they made, see ed. '87.) At the commencement of the session of '87 the Government proposed certain draft Rules of Procedure for the acceptance of the House of Commons, (for the text of these see ed. '88), but the only one of them which

was adopted, and that after many modifications had been made in it, was that which has reference to the *Closure of Debate*. This was found to work somewhat inconveniently inasmuch as it necessitated the presence of not less than 201 members to enforce the closure when the minority numbers 40 or upwards. At the commencement of the session of '88 the subject was once again brought under the notice of the Commons, and being discussed in a conciliatory and non-party spirit was very speedily and satisfactorily disposed of. Subjoined is the substance of the new rules then adopted.—**I. Sittings of the House.** Provides that unless the House shall otherwise order, the House shall meet every Monday, Tuesday, Thursday and Friday, at 3 o'clock, and shall, unless previously adjourned, sit till 1 o'clock a.m., when the Speaker shall adjourn the House without question put, unless a bill originating in Committee of Ways and Means, or unless proceedings made in pursuance of any Act of Parliament or standing order, or otherwise exempted from the operation of the standing order, be then under consideration. At midnight on Mondays, Tuesdays, Thursdays, and Fridays, except as aforesaid, and at half-past 5 on Wednesdays, the proceedings on any business then under consideration are to be interrupted, any dilatory motion which may be before the House is to lapse without question put; and the business then under consideration, and any business subsequently appointed, is to be appointed for the next day on which the House shall sit, unless the Speaker ascertains by the preponderance of voices that a majority of the House desires that such business should be deferred until a later day. On the interruption of business the closure may be moved, and in such case the Speaker or Chairman is not to leave the chair until the questions consequent thereon have been decided. After the business under consideration at midnight, or at 5.30 on Wednesdays, has been disposed of, no opposed business is to be taken. A motion may be made by a Minister of the Crown at the commencement of public business, to be decided without amendment or debate, to the effect that the proceedings on any specified business if under discussion at midnight that night be not interrupted under this standing order. The Chairman of Ways and Means may take the chair as Deputy Speaker, when requested to do so by the Speaker, without any formal communication to the House; and the Speaker is to nominate, at the commencement of every session, a panel of not more than five members, to act as temporary Chairmen of Committees when requested by the Chairman of Ways and Means.—**II. Closure of Debate.** Questions for the closure of debate are to be decided in the affirmative, if when a division be taken it appears by the numbers declared from the Chair, that not less than one hundred members voted in the majority in support of the motion (the standing order of '82 which left it to the Speaker to take the initiative for the closure of a debate was repealed).—**III. Disorderly Conduct.** "That Mr. Speaker or the Chairman do order members whose conduct is grossly disorderly to withdraw immediately from the House during the remainder of that day's sitting; and that the serjeant-at-arms do act on such orders as he may receive from the Chair, in pursuance of this resolution. But if, on any occasion, Mr. Speaker or the Chairman deems that his powers under this Standing

Order are inadequate, he may name such member or members in pursuance of the Standing Order (Order in Debate), or he may call upon the House to adjudge upon the conduct of such member or members. Provided always, that members who are ordered to withdraw under this Standing Order, or who are suspended from the service of the House under the Standing Order (Order in Debate), shall forthwith withdraw from the precincts of the House, subject, however, in the case of such suspended members, to the proviso in that Standing Order regarding their service on Private Bill Committees."—IV. **Irrelevance or Repetition.** Mr. Speaker or the Chairman, after having called the attention of the House or of the Committee to the conduct of a member who persists in irrelevance, or tedious repetition either of his own arguments or of the arguments used by other members in debate, may direct him to continue his speech. (This is only a slight modification of the standing order of 82).—V. **Motions for Adjournment in abuse of the Rules of the House.** "That, if Mr. Speaker, or the Chairman of a Committee of the whole House, shall be of opinion that a Motion for the adjournment of a debate, or of the House, during any debate, or that the Chairman do report progress, or do leave the Chair, is an abuse of the rules of the House, he may forthwith put the question thereupon from the Chair, or he may decline to propose the question thereupon to the House."—VI. **Government Business.** "That on days on which the Government business has priority, the Government may arrange such Government business, whether Orders of the Day or Notices of Motions, in such order as they may think fit."—VII. **Committees of the whole House.** That whenever an Order of the Day is read for the House to resolve itself into Committee, (not being a Committee to consider a message from the Crown, or the Committee of Supply, or of Ways and Means, Mr. Speaker shall leave the Chair without putting any question, and the House shall thereupon resolve itself into such Committee, unless notice of an instruction thereto has been given, when such instruction shall be first disposed of.—VIII. **Amendments on Report.** That upon the report stage of any Bill no amendment may be proposed which could not have been proposed in Committee without an instruction from the House.—IX. **Divisions.** That Mr. Speaker, or the Chairman, may, after the lapse of two minutes as indicated by the sand-glass, if in his opinion the division is frivolously or vexatiously claimed, take the vote of the House or Committee by calling upon the members who support, and who challenge his decision, successively to rise in their places, and he shall thereupon, as he thinks fit, either declare the determination of the House or Committee, or name tellers for a division. And, in case there is no division, the Speaker or Chairman shall declare to the House or the Committee the number of the minority who had challenged his decision, and their names shall be thereupon taken down in the House and printed with the lists of divisions.—X. **Address in Answer to the Queen's Speech.** That the stages of Committee and Report on the Address to Her Majesty to convey the thanks of the House for Her Majesty's most gracious Speech to both Houses of Parliament at the opening of the session be discontinued.—XI. **Public Bills.** That after Whitsuntide

public Bills, other than Government Bills, be arranged on the Order-book so as to give priority to the Bills most advanced, and that Lords' amendments to public Bills appointed to be considered be placed first, to be followed by third readings, considerations of report, Bills in progress in Committee, Bills appointed for Committee, and second readings, —XII. **Standing Committees.** The resolutions of '82 relating to the constitution and proceedings of standing (or grand) committees for the consideration (1) of Bills relating to law and courts of justice and legal procedure, and (2) to trade, shipping, and manufactures, were revived, trade being ordered to include agriculture and fishing (see SESSIOX, sects. 80 and 81). Other resolutions passed by the House provided that motions for Bills and for the nomination of select committees, might be set down for consideration at the commencement of public business, and that, if such motions were opposed, the Speaker, after permitting if he thinks fit a brief explanatory statement from the member who moves, and from the member who opposes, any such motion respectively, may put the question thereon, or the question that the debate be adjourned; that when the House meets at 2 o'clock for a morning sitting, the sitting shall be suspended at 7 (no opposed business to be taken after 10 minutes to 7), and shall be resumed at 9, and continued, unless previously adjourned, until 1 o'clock a.m., when the Speaker is to adjourn the House without question put, unless business exempted from the operation of the Standing Order sittings of the House be then under consideration. It will thus be seen that when the House meets at 3, opposed business is as a rule not taken after midnight, but that when it meets at 2 o'clock opposed business may be proceeded with until 1 a.m. On Wednesdays the House meets at noon, opposed business is not taken after 5.30, and the House adjourns at 6. Several old standing orders, which were inconsistent with or which had been superseded by the new rules, were repealed, among them being the well-known half-past twelve rule.

Parliaments, Clerk of the. An officer of the House of Lords, by whom, in conjunction with the Clerk Assistant and the Reader, Clerk, is performed such duties as making minutes of the proceedings, swearing peers, and witnesses, and signifying the Royal assent to bills which have passed both Houses. The Clerk of the House of Commons acts as chairman and is addressed by members during the election of Speaker. All members are sworn by him and introduced to the Speaker, and the roll is subscribed under his supervision. He reads the order of the day, turns a sand-glass when a division is called, reads petitions if required, and takes charge of accounts and papers. He, like the Clerk of the Parliament, is appointed by the Crown, and is associated with two clerks assistant, who make minutes of the proceedings. The office of Clerk of the Parliaments is held by Mr. Henry J. L. Graham, and Mr. Reginald Palgrave, C.B., is Clerk of the House of Commons.

Parliaments, Local. A debating society founded on the plan and methods of procedure of the House of Commons, each member constituting the "house" taking the name of some selected constituency. See ed. '88, and more fully ed. '87.

Parnell, Mr., and "The Times." See SESSION '88, sec. 31, also PARNELL COMMISSION.

Parnell, Charles Stewart, M.P., b. at Avondale, in county Wicklow, 1846, is a descendant of Parnell the poet, and his family have been associated with Irish parliamentary life for upwards of a century. His great-grandfather, Sir John Parnell, was Chancellor of the Exchequer in Grattan's Parliament, and the most vigorous opponent of the Act of Union, for his denunciation of which he was dismissed from office, he having previously resisted all efforts of the Imperial Government to allure him into acceptance of their proposals. The family came originally from Congleton, Cheshire; and Sir Henry Parnell, grand-uncle of Mr. Parnell, and a prominent member of the English Parliament in the time of Lord Grey and Lord Melbourne, under whom he held offices of distinction, when raised to the peerage, took the title of Lord Congleton. Mr. Parnell was educated at Cambridge University, but did not take any degree. After a tour in America—his mother is an American by birth, daughter of Admiral Charles Stewart, a famous American sailor—he settled down on his property in Avondale; was High Sheriff of the county in 1874; wished to stand for the county, but was not allowed to resign his office. A month later, when Colonel Taylor, on appointment to the Chancellorship of the Duchy of Lancaster, sought re-election, Mr. Parnell opposed him, but was defeated. Stood for county Meath on the death of John Martin (1875), and was elected. First took an active part in parliamentary affairs in the session of 1876, when in association with Mr. Biggar he initiated what was known by the various names of the "obstructive" and the "active" policy. He opposed with great persistence the bill for annexing the Transvaal; the flogging clauses in the Mutiny Act; and the Prisons Bill; and there were many scenes of violence and excitement, and several all-night sittings of the House. He finally succeeded in getting some modifications in the treatment of political prisoners introduced into the Prisons Bill; and being joined by Mr. Chamberlain and other leading Radicals, he led to the abolition of flogging in the army. He joined in the foundation of the Land League (q.v.), and October 1879 was elected its first president. He first, at a meeting at Westport in the previous June, used the phrase "Keep a grip of your homesteads," which became the watchword of the agitation. He went to America in December 1879, raised the sum of £70,000 in aid of the distress then widespread in Ireland, and for the Land League movement. At the general election of 1880 he was elected for county Meath, county Mayo, and the city of Cork; and elected to sit for the last mentioned place. He was elected in May 1880 leader of the new party by twenty-three votes to eighteen for Mr. Shaw. He took an active part in the Land League agitation outside parliament, and in the debates in the House; and after the Land Act was passed was arrested in October 1881 on a charge of intimidation and obstructing the working of that Act. He was released on parole in April 1882, and finally in May. At the general election of 1885 he was elected for Cork, and his action in influencing the Irish vote secured the return of many Conservative candidates, and proportionally weakened the Liberal party, with whom, however, Mr. Parnell later on formed an alliance, and by

the vote of the Irish party overthrew the former Government of Lord Salisbury on Mr. Jesse Collings' amendment to the Address (Jan. 26th, 1886). Mr. Parnell's name has been prominently before the public in connection with the Home Rule proposals of Mr. Gladstone. He introduced a land bill in the beginning of 1887, which was rejected, though its leading provisions with modifications were subsequently embodied in the Government's own measure. Later in the session a sensation was caused by the publication in the *Times* newspaper of the facsimile of a letter purporting to have been written by Mr. Parnell to a member of the party of Irish Invincibles, excusing the murder of Mr. Burke, though regretting that of Lord Frederick Cavendish. On the night of the publication of this document Mr. Parnell returned to the House of Commons, from which he had been absent, and in an animated speech denounced the letter as a base and infamous forgery. Subsequently, on a motion of Sir Charles Lewis—which, though demanding that the publisher of the *Times* should be brought to the bar of the House, was not framed in the interests of the Irish Party—the prominent Irish members promptly demanded that the question of the authenticity of the letter should be investigated by a committee of the House of Commons, composed, if the House thought fit, entirely of Conservative members. The Government declined to grant a committee, but promised that if Mr. Parnell liked to take action against the *Times*, he should have the assistance of the law officers of the Crown;—a proposal which was treated with ridicule by the Irish members and their friends. Mr. Parnell refused to bring an action for libel on account of the alleged forgeries and the charges of complicity with assassins, brought against him and his associates in the series of articles published by the *Times*, under the title of "Parnellism and Crime," because he had no confidence in a Middlesex jury. After the collapse of the action brought against the *Times* in May '88, by Mr. Frank Hugh O'Donnell, a former colleague, at which other damaging letters were put in by the Attorney-General, Mr. Parnell again demanded a Parliamentary inquiry, and alleged that these other letters were also forgeries. The Government refused to grant a committee of the House on a question of privilege, but decided that the whole of the charges against Mr. Parnell and the Irish party should be investigated by a commission of judges, consisting of Sir James Hannen, Mr. Justice Smith, and Mr. Justice Day (see PARNELL COMMISSION). Mr. Parnell made several important speeches on the Irish question during the session (see PARLIAMENTARY SESSION, '88). In an interview with the representative of the *Pall Mall Gazette* in May last, Mr. Parnell expressed the opinion that Home Rule for Ireland would lead to Imperial Federation, which the Irish party would support. During the sittings of the Parnell Commission (q.v.), at which he was frequently present, Mr. P. maintained his characteristic reserve.

Parnell Commission, The. Was constituted under an Act of Parliament for the purpose of inquiring into the charges and allegations made against certain members of Parliament and other persons by the defendants in the trial of an action heard in August entitled "O'Donnell v. Walter and another," in which the plaintiff was

Mr. Frank Hugh O'Donnell, a former member of the Parnellite party in the House of Commons, the action being brought against the *Times* newspaper in connection with the publication of the articles "Parnellism and Crime." The effect of the charges made against Mr. Parnell and other members of the Irish party was that they were members of a conspiracy and organisation which had for its ultimate object the establishment of the absolute independence of Ireland as a separate nation, and the expulsion from the country of the Irish landlords; and that the mode of action was to organise a system of coercion and intimidation in Ireland, which was sustained and enforced by boycotting and the commission of crimes and outrages, and that they knowingly associated with persons guilty of crime or the advocates of treason, sedition, assassination, and violence. Letters were also alleged to have been written by Mr. Parnell proving his complicity in, and sanction of, crime, but these letters are denounced by Mr. Parnell as forgeries. The Commissioners appointed were Sir James Hannen (president), Mr. Justice Day, and Mr. Justice Smith; and Mr. H. Cunyngname was nominated as secretary. A preliminary meeting was held on Sept. 17th, when Monday, Oct. 22nd, was fixed for the actual commencement of the inquiry. The counsel engaged are:—For the *Times*, the Attorney-General (Sir R. E. Webster, Q.C., M.P.) (*q.v.*), Sir H. James, Q.C. M.P. (*q.v.*), Mr. Murphy, Q.C., and Mr. W. Graham of the English bar, and Mr. Atkinson, Q.C., and Mr. Rolan of the Irish bar. Mr. Parnell is represented by Sir Charles Russell, Q.C. M.P. (*q.v.*), and Mr. Asquith, M.P. (*q.v.*); and for such of the other members of Parliament against whom charges and allegations have been brought who do not appear in person, Mr. R. T. Reid, Q.C. M.P. (*q.v.*), Mr. Frank Lockwood, Q.C. M.P. (*q.v.*), Mr. Lionel Hart, Mr. A. O'Connor, M.P., and Mr. A. Russell of the English bar, and Mr. T. Harrington, M.P., of the Irish bar, appear. The opening speech of the Attorney-General occupied five days. He alleged that a connection existed between certain Parnellite members and the extreme men of the dynamite section in America, and referred to the large sums which had been received from that source. He quoted speeches delivered at crimes and outrages committed in the counties of Galway, Mayo, Clare, Kerry, and Cork, in support of his contention that concurrently with the delivery of the speeches, and following directly thereon, outrages increased both in number and violence. Referring to the letters incriminating Mr. Parnell, and which are alleged to be forgeries, the Attorney-General said that at the proper time all the names of the persons connected with the way and the circumstances in which these communications were obtained, and the sum of money which was paid for them, would be laid before the Court. After the first week it was decided that the Commission should sit for four days in each week—Tuesdays, Wednesdays, Thursdays and Fridays. On Tuesday, Oct. 30th, the first sitting of the second week, a long discussion took place as to the disclosure of the bank books of the Land and National Leagues, counsel appearing specially for the Hibernian and National Banks. The result was that an order was made for the disclosure of the books. The evidence commenced with the proof of speeches by public shorthand writers, but at the seventh sitting (Nov. 1st), Capt. O'Shea was called, as it

was stated that he wished to go abroad. He made a statement relating to the *Kilmainham Treaty*, and in cross-examination alleged that all the memoranda relating thereto had been destroyed, as Sir William Harcourt had told him that Mr. Gladstone desired him to be "reticent." Capt. O'Shea added that, from his experience of the handwriting of Mr. Parnell, he believed that the signature to the incriminating letters was Mr. Parnell's. Owing to the time taken up by the reading of the numerous speeches referred to in the opening, an arrangement was come to that they should be printed in full and that the portions relied upon by the *Times* should be indicated. Evidence was then given of the outrages in Galway, Kerry, and other counties; the principal being the murder of the Huddys, whose bodies could not be found for three weeks, and were eventually discovered in Lough Mask. Mrs. Blake detailed the painful circumstances of the murder of her husband and a servant as they were driving into Loughrea on a fair day. Lady Mountmorres was called to prove her husband's murder, and the hostility of the people to herself and her children, and fainting whilst she was under cross-examination by Sir Charles Russell, who asked no further questions. Miss Lizzie Curtin and Miss Norah Fitzmaurice also related the tragic circumstances under which in each case their father lost his life. On Tuesday, Nov. 20th, the Attorney-General called attention to an article in the *Kerry Sentinel*, of which Mr. Edward Harrington, M.P., who is included amongst those against whom allegations are made, is editor, accusing the Commissioners of unfairness and partiality. On the next day Mr. Reid, Q.C., intimated that Mr. E. Harrington, one of the members for whom he appeared, had not thought fit to adopt his views, and therefore he was not in a position to address their lordships. Mr. E. Harrington then said he had nothing to say, except that he accepted the responsibility for what ever appeared in his paper. The judges retired to consult, and on their return the President said he hoped to have been spared the duty which devolved upon him; but following the precedent of the case of *Onslow v. Whalley*, they adjudged Mr. Harrington to pay a fine of £500 to the Queen. Amongst the most important evidence is that of witnesses who have stated that the moonlighting outrages were connected with the League, and were carried out by an "inner circle," known as "The Boys." One witness gave evidence incriminating Mr. Timothy Harrington, M.P.; but Mr. Reid, Q.C., on behalf of the hon. member, characterised the story as a fabrication. It was decided that the Commission should adjourn on Friday, Dec. 14th, and meet again on Tuesday, Jan. 15th, '89. There are still a very large number of witnesses to be called, and at the time of going to press the conclusion of the proceedings appeared as remote as at the commencement of the inquiry.

Passports. Originally, permission to leave a port or to sail into it; and so (1) a document carried by a neutral merchant vessel, in time of war, to certify to her nationality, and protect her from the belligerents—a sea letter; (2) permission granted, in time of war, for the removal of persons or effects from a hostile country—a safe-conduct; (3) a licence for

importing or exporting contraband goods or movables without paying the usual duties. Usually, however, and in times of peace, a passport is (4) a letter, licence, or document, given by an authorised officer of State, granting liberty to the person therein named to enter, travel in, or reside in a foreign country, and entitling him to the protection of its laws. In general, a foreigner, who wishes to leave the country where he has been residing, obtains his passport from the minister or agent or consul of his own State; he then requires to take it to the minister or authorised agent of the country which he is about to visit, and have it signed by him. Passports are demandable from foreigners on their arrival in England by 6 & 7 Will. IV.; but this provision is not enforced in practice. British subjects are now free to enter Belgium, France, Germany, Holland, Italy, Denmark, Sweden, and Norway, without passports, and the rules about passports have been virtually relaxed in other countries; nevertheless, British subjects about to visit the Continent are recommended not to omit to provide themselves with passports, for even in those countries where they are no longer obligatory, they are found to be convenient, as offering a ready means of identification, and more particularly when letters have to be claimed at a *poste restante*.—The principal regulations respecting passports (issued by the Foreign Office, July '87) are the following: (1) Applications for Foreign Office passports must be made in writing, and inclosed in a cover addressed to "The Chief Clerk, Foreign Office, London," with the word "passport" conspicuously written on the cover. (2) The charge on the issue of a passport, whatever number of persons may be named in it, is 2s. (3) Passports are granted to all persons, either known to the Secretary of State or recommended by some person who is known to him; or upon the application of any banking firm established in London or in any part of the United Kingdom; or upon the production of a certificate of identity signed by any mayor, magistrate, justice of the peace, minister of religion, physician, surgeon, solicitor, or notary resident in the United Kingdom. (4) Passports are issued at the Foreign Office, between the hours of 11 and 4, on the day following that on which the application for the passport has been received at the Foreign Office. (5) The bearer of every passport granted by the Foreign Office should sign his passport as soon as he receives it; without such signature either the *visa* may be refused, or the validity of the passport questioned abroad. Travellers who may have any intention of visiting the Russian Empire or the Turkish Dominions, at any time in the course of their travels, must not quit England without having their passports *visés* at the Russian Consulate in London (17, Great Winchester Street, E.C.), or at the Consulate-General of the Sublime Porte (7, Union Court, Old Broad Street, E.C.), respectively. Travellers about to proceed to any other country need not obtain the *visa* of the diplomatic or consular agents of such country resident in the United Kingdom, except as an additional precaution. Other regulations have reference to the issue of passports to naturalised British subjects, and to persons already abroad. It is recommended, as a reasonable precaution, that persons holding passports of old date should either exchange them for fresh passports, on payment of the

usual fee of 2s., or should have their old passports *visés*, before starting on a journey, by the diplomatic or consular authorities of the countries they propose to visit. The question of passports came up in '88, as affecting more especially France and Germany, and Austria-Hungary and Russia. On the 1st of June appeared in the *Gazette* a notification to the effect that on and after Thursday, the 31st of May, all foreigners, without distinction, crossing the Alsace-Lorraine frontier, whether passing through or intending to take up their residence in the country, must be in possession of a passport which had been *visé* at the German Embassy at Paris; and that foreigners who were not in possession of the required passport were not to be allowed to proceed on their journeys, and, if necessary, were to be re-conducted across the frontier. In consequence of these regulations, the *Compagnie de l'Est* made arrangements to enable travellers to and from Switzerland, Austria-Hungary (*viâ* Arlberg), and Italy (*viâ* Gothard) to avoid the transit through the Alsace-Lorraine territory, and take advantage of the Dclla route; while the Great Eastern Railway pointed out that the new regulations applied solely to travellers entering the Reichsland through France, and did not affect passengers travelling *viâ* Harwich, Belgium, and Alsace-Lorraine to Switzerland, Italy, etc. A subsequent notification appeared in the *Gazette* of June 22nd, that passports of British subjects proposing to cross the Alsace-Lorraine frontier could be *visé* at the German Embassy in London (9, Carlton House Terrace), on payment of a fee of 10s. A still later notification appeared in the *Gazette* of July 26th, that foreigners wishing to reside in certain districts of Germany must be furnished with passports or nationality certificates, and again recommending all British subjects, intending to visit Germany, to provide themselves with passports. On Sept. 11th the *Times* correspondent at Vienna wrote to say it was announced that travellers coming from Russia into Austria-Hungary must, for the future, exhibit passports bearing the *visa* of the Austro-Hungarian Consul in the nearest consular town to the place whence the traveller started; that travellers whose passports were not in order would be forbidden to cross the frontier; and that this measure was taken in retaliation for the many passport formalities to which travellers going from Austria-Hungary to Russia were subjected. On Sept. 26th he again wrote to say that the Austrian police had issued information respecting the passport regulations decreed by the police of Russia for travellers entering or leaving that country. "The most noticeable thing in these severe rules," he adds, "is that exceptional measures are ordered against the Jews." All travellers entering Russia must have a passport bearing the *visa* of a Russian diplomatic or consular agent; and on his reaching his destination in Russia the traveller must get his passport *visé* by the local authorities. If he is going from place to place, or means to settle in any one locality for some time, he may obtain a "*licence to sojourn*," which will remain valid for six months, but wherever he goes he must present his passport to the Russian police for a fresh *visa*. Those leaving Russia must also exhibit passports bearing the *visas* of the police in the districts whence they come. In the case of Jews, whether Russians or aliens, the *visa* may be

refused without explanation. Consequently a Jew may be arbitrarily denied the right of entering the Czar's dominions, of travelling in them, or of leaving them."

Pasteur, Louis, b. at Dôle, Jura, 1822. Educated at the University of Jena (1840); took his doctor's degree (1847). Appointed Professor of Physic at the Faculty of Sciences, Strasburg (1848), and subsequently held other appointments. Awarded the Rumford Medal (1856) for his researches on the polarisation of light. Elected one of fifty foreign members of the Royal Society of London (1869). In 1874 the National Assembly accorded to M. Pasteur, as a reward chiefly for his investigations on fermentation, a life annuity of 12,000 francs. Member of the French Academy (1882). Awarded the Albert Medal of the Society of Arts (1882) for his researches in connection with fermentation, the preservation of wines, and the propagation of zymotic diseases in silkworms and domestic animals. M. Pasteur's treatment of hydrophobia was referred to under that heading in our '86 edition. In the following year an English Commission of eminent scientists was dispatched by the Government to investigate M. Pasteur's method for the treatment of this disease, and reported to the effect that he had made a valuable discovery. He has recently suggested the possibility of ridding Australia of the plague of rabbits by spreading disease amongst them by inoculation. The trial of the experiment, however, was not successful. In '88 the Pasteur Institute was opened at Paris, President Carnot assisting at the ceremony.

Patent Medicines. See ed. '88.

Patent Office Library. See ed. '88.

Patent Law in '88 The most important patent case of the year was that relating to the **Edison incandescent lamp**, which occupied Mr. Justice Kay, in the Chancery Division, upwards of twenty-one days. The contention of the plaintiffs, the Edison and Swan Electric Light Co., was that certain lamps furnished by the Anglo-American Brush Electric Corporation constituted an infringement of their patent, the validity of which was sustained in two actions brought in '87. A large amount of new evidence was, however, produced; and Mr. Justice Kay ultimately pronounced the patent invalid, chiefly on the ground that the directions contained in the specification were impracticable, and that the claims set up were too comprehensive. The patent, it seems, does not describe a lamp which ever became, or, in the opinion of Mr. Justice Kay, could ever become, commercially successful. The learned judge declined to find that the plaintiffs had a monopoly of incandescent lamps containing a carbon filament, but at the same time he decided the exclusive right of the Edison and Swan Co. to the employment of the **Chesebrough process** for perfecting carbon filaments by heating them in a vapour or liquid of hydrocarbon. When a filament is thin in places, the weak spots glow more brightly than the rest, and are liable to give way; but if the heating in hydrocarbon is carried out, carbon is deposited on the filament most rapidly in the hottest places, and the irregularity is cured. The Edison Co. therefore secure their right to the only known way of really perfecting carbon threads.

Patents, Designs, and Trade marks Bill. See SESSION '88, sect. 89.

Patmore, Coventry Kearsey Deighton, is a native of Woodford, Essex, where he was b. in 1823. In '44 he made his *début* as an author, but it was not until '54 that he established his reputation by the publication of the first part of "**The Angel in the House**." He has since published "**A Garland of Poems for Children**," "**The Unknown Eros**," "**Amelia**," and a memoir of Barry Cornwall. Mr. P. was assistant librarian of the British Museum '46-'68. The lines of Tennyson's "**In Memoriam**," commencing "**I held it truth with him who sings**," are believed to refer to Mr. Patmore.

Paton, Sir Joseph Noel, R.S.A., b. 1821, first became known by his outline etchings illustrative of Shakespeare and Shelley. Was a successful competitor in the Westminster Hall competitions of '45 and '47, his "**Quarrel of Oberon and Titania**," and "**Reconciliation of Oberon and Titania**," being purchased for large sums for the Scottish National Gallery. His allegory "**The Pursuit of Pleasure**," "**Home**," "**In Memoriam**," and "**Mors Janua Vitæ**," have all been engraved. "**Dawn: Luther at Erfurt**," is considered by many his finest work. Appointed the Queen's Limner for Scotland in '65, knighted '67, LL.D. Edinburgh ('76). Sir N. Paton has of late years devoted his attention almost exclusively to the painting of religious subjects.

Patti, Madame Adelina Clorinda, was b. at Madrid in 1843. She trained professionally under Maurice Strakosch, and made her first appearance on the stage at New York in 1859. Her splendid voice and skill as an operatic artiste of the first rank speedily secured her a leading position. She first appeared in London in 1861, in the character of Amina in "**La Sonnambula**" at Covent Garden, and became the favourite *prima donna* of the day. In London and Paris, Vienna and St. Petersburg, and in the United States, Madame Patti is a universal favourite. In 1870 she received from the Emperor of Russia the Order of Merit, and the appointment of First Singer at the Imperial Court. She married in 1868 M. Roger de Cahuzac, Marquis de Caux, from whom she was divorced in 1883. She has since married Signor Nicolini, the tenor singer. While visiting the United States in '87, at a concert at the San Francisco Opera House, a lunatic threw a bomb, which fortunately occasioned no injury to Madame Patti. Early in '88 Madame Patti accepted an engagement to sing in the **Argentine Republic**. Her tour through that State was the most successful she ever made. The total receipts for 24 entertainments reached £70,000, and Madame Patti received £1,000 per night, or £600 more than she was guaranteed. She returned to her residence in South Wales in August, and subsequently had an enthusiastic reception at Swansea, where she sang gratuitously for the benefit of a local charity. In November Madame Patti sang in Gounod's opera "**Romeo and Juliet**" in Paris, the composer himself conducting.

Pauperism and the Poor Laws. For his historical sketch see ed. '87.

Pauperism. The expenditure during the half-year ending **Lady Day '88** on **In-maintenance** and **Out-door relief** in each Division of England

and Wales is shown in the following table, together with the cost per head of each kind of relief on the estimated population in the middle of the year '87:—

	Estimated population in the middle of 1887.	In-maintenance.	Cost per head on population.	Out-door relief.	Cost per head on population.	Aggregate of in-maintenance and out-door relief.	Cost per head on population.

Payn, James, was b. at Cheltenham, 1830. Educated at Eton and Trinity Coll., Cambridge. Became editor of *Chambers' Journal* (q.v.) '58. Contributed to that periodical "Lost Sir Mas-singberd," which placed him in the front rank of romancers. His subsequent novels include "By Proxy," "Cecil's Tryst," "Married Beneath Him," "Not Wowed, but Won," "High Spirits," "Kit," "The Hour of the Ages," and numerous others. In '85 he became editor of *The Cornhill Magazine* (q.v.). During '88 Mr. P. commenced a series of weekly notes in the *Illustrated London News*, and also issued a new novel.

Peace Preservation (Ireland) Act, '81. See ed. '88.

Peacock, The Rt. Hon. Sir Barnes, was b. in 1810, and called to the bar at the Inner Temple. He was created a Q.C. ('50), and a legal member of the Supreme Council at Calcutta in '52. He was subsequently Chief Justice of the Supreme Court at Calcutta, Vice-President of the Legislative Council of India, and Chief Justice of the High Court of Judicature of Bengal. He retired from the bench in '70, and was appointed a member of the Judicial Committee of the Privy Council in '72.

Peat-bog. Large areas are covered in various parts of the United Kingdom, with peat, or peat-moss, or as it is often called in Ireland, turf-bog. The chief use of this product has been for fuel. Where coal is scarce it is largely utilised; but where coal is cheap, the most profitable use is reclamation for agricultural purposes; hence in England and Scotland peat fuel is comparatively little used, whilst in Ireland it is resorted to wherever it can easily be cut (or baked in a state like mud), winnowed in the open air, and carried to the homestead at a less cost than the price of coal—whether native or imported, which is to be had in every seaport in larger or smaller quantities. See ed. '87.

Pedro II. (de Alcantara), Emperor of Brazil; b. 1825, at Rio Janeiro. On the abdication of Dom Pedro I. (his father), in 1831, he succeeded to the throne, but as he was not of age, the affairs of the country were administered by a Council of Regency till 1840. He is a man of a very high order of intelligence, and well known in Europe, the principal capitals of which he has visited, his most recent visit being that in '88. He has encouraged foreign labour, and his efforts have been crowned with success. His Majesty has done a great deal to develop the material resources of his country, which has prospered much under his rule, and (1871) issued an Imperial decree for the gradual abolition of slavery. The total emancipation of the slaves in his dominion was effected last year. In 1843 he married the Princess Theodora Christina Maria, sister of Francis I., King of Naples. Dom Pedro is a lineal descendant of the Houses of Braganza, Bourbon, and Hapsburg. He has recently recovered from a severe illness, with which he was attacked while travelling in Europe.

Peel, The Rt. Hon. Arthur Wellesley, M.P., P.C., Speaker, youngest son of the late Rt. Hon. Sir Robert Peel, was b. 1829. Educated at Eton and Balliol Coll., Oxford (graduated M.A.), Hon. D.C.L. 1887. Has held the following official appointments:—Parliamentary Secretary to the Poor Law Board (1868-71); Parliamentary Secretary to the Board of Trade (1871-73); Patronage Secretary to the Treasury (1873-74); Under-Secretary for the Home Department (1880). He is D.L. and J.P. for Warwickshire and Bedfordshire. Returned as a Liberal M.P. for Warwick (1865-85); re-elected (L.U.) Warwick and Leamington 1885-86. He was appointed Speaker during Mr. Gladstone's second administration, on the retirement of Sir Henry Brand, now Viscount Hampden, in '84. During '88 Mr. P. has addressed audiences in his constituency on subjects of music and kindred topics.

Peerage. Peers are created by the Sovereign, and, with an exception to be noticed presently, the titles are hereditary, though they may be lost by attainder for high treason. Before the union of the three kingdoms, England,

Scotland, and Ireland had each a peerage of its own containing the five temporal ranks or degrees, and precedence in each degree depended upon the date of the creation of the title. Thus in each country the dukes came first, and took precedence of each other in order of date of title; then came the marquises, earls, viscounts, and barons, precedence in each rank being similarly governed by priority of patent. At the union with Scotland, in 1707, it was arranged that the Scotch peerages should rank after the English peerages then in existence, according to degree, and the Scotch dukedoms were accordingly placed in order of date after all the English dukedoms, and so on through the other ranks. The Act of Union also provided that the Scotch peers should be represented in the House of Lords by a portion of their number only, and as it made no provision for the creation of any new Scotch peers, the peerage of North Britain consists exclusively of those whose titles date from before the year 1707. From that time until the Union with Ireland the peerages created were either Irish or of Great Britain, the latter alone giving seats in the House of Lords, and taking precedence according to degree next after the English and Scotch peerages. The Act of Union with Ireland provided that peers of that kingdom should take precedence next after peers of Great Britain according to rank, and that Ireland should be represented in the House of Lords by a portion of her peers only. It was further enacted that one new Irish peerage might be created on the extinction of three existing Irish peerages, and that when the number should be reduced to one hundred, if one peerage became extinct one other might be created. The peerages of the United Kingdom and of Ireland created since the Union take precedence according to rank and date of patent next after those of Ireland which were in existence at the Union, but of the two classes only the peerages of the United Kingdom give of themselves a seat in the House of Lords. There is no limit to the increase of these but the pleasure of the Sovereign. The peerage collectively may thus be classified as consisting of peers of England, of Scotland, of Great Britain, of Ireland, and of the United Kingdom, but of the Scotch and Irish peers only a portion are peers of Parliament. Irish peers who have not been elected to represent their order in the House of Lords may be returned and may sit for any borough or county constituency in Great Britain. There are at present 86 Scotch peers and 177 Irish peers, but many of these are peers of the United Kingdom also, or are representative peers, and as such are entitled to sit in the House of Lords. In order to avoid repetition in the separate lists given below it thought desirable to include the information relating to all lords of Parliament under the head of the House of Lords, and to put in the separate lists of Scotch and Irish peers only those who are not so included. **The House of Lords** is composed of two of the estates of the realm, the lords spiritual and temporal (see PARLIAMENT). The first consists of the Archbishops of Canterbury and York, and twenty-four bishops of the Church of England, the number not having been increased with the successive creation of new bishoprics. The Archbishops and the Bishops of London, Durham, and Winchester are always entitled to

sit; the other bishops only receive a writ of summons when the avoidance of a see decreases the total number of lords spiritual to less than twenty-six, and then in order of seniority of appointment. The Bishop of Sodor and Man is not included in this rotation, and has no seat in Parliament. A bishop ceases to be a lord of Parliament on resigning his see. The temporal lords may be divided into peers whose right to sit and vote in the House is hereditary, representative peers of Scotland and Ireland, and lords of appeal in ordinary. By the Act of Union between England and Scotland the Scotch peers send sixteen representatives to the House of Lords, who are elected immediately after every general election, and sit until parliament is dissolved. The Irish peers elect twenty-eight representatives for life. The Lords of Appeal, of whom there may not be more than four appointed, enjoy the dignity of a baron for life. By the Act of '76 they were to lose the right to sit and vote on resigning office; but by the Appellate Jurisdiction Act of '87 any retired lord of appeal may sit and vote as a member of the House of Lords during his life. The peers temporal are divided into dukes, marquises, earls, viscounts, and barons, these titles taking precedence in the order given. But it should be borne in mind that a peer may hold a superior Scotch or Irish title (and by which he may be generally known) to that under which he sits as a peer of the United Kingdom. Thus the Duke of Argyll sits as Baron Sundridge and Hamilton, and the Duke of Buccleuch as Earl of Doncaster. The lords spiritual and temporal sit together, and all have an equal voice and vote in the house, whatever may be their rank. As in the House of Commons, each peer must be present to record his vote, the practice of peers giving proxies having been discontinued. A newly created peer, or one who has been elevated to a higher title, is introduced by two other peers of his own degree, who are accompanied by the Earl Marshal (the hereditary officer of the Duke of Norfolk), the Lord Great Chamberlain (Lord Aveland is at present Lord Great Chamberlain), all in their parliamentary robes, attended by Garter King of Arms (Sir Albert Woods has long held this office), and Black Rod (Sir J. Drummond). The procession enters the house at the bar, and bows three times on the way to the woolsack, where the peer kneeling presents his patent and writ to the Lord Chancellor. Both these documents are read by the clerk, and the oath is administered to the peer at the table, and he subscribes the roll. He is then with further formalities conducted to one of the benches of the house, the position chosen varying with the rank of the new peer, where he and his introducers bow thrice to the Lord Chancellor, by whom he is afterwards congratulated. Peers are robed on these occasions, and at the opening of parliament by Her Majesty, but wear their ordinary dress when the House is sitting for business. A bishop is introduced by two other bishops, but without many of the formalities described above; representative peers simply present their writs, and are sworn like peers succeeding to a title. (See also PARLIAMENTARY PROCEDURE.) The peers place themselves somewhat differently to the Commons. There are in this House, as in that, rows of benches running down each side from the throne to the bar; but in the Lords there are, near the bar, a few seats known as

the cross benches, the occupants of which face the woosack. In this quarter of the House sit the Royal dukes, who take no side in politics, and a few noble lords who give a rigid adhesion to neither great party, and are of what Earl Granville once happily termed the "cross bench mind." The lords spiritual sit on the upper benches to the right of the throne, and retain these places no matter which party may be in power. The other lords sit as the Commons do,—the leader of the House and his colleagues in the Ministry on the front bench to the right of the woosack, his supporters taking their places on the benches behind him, and the leader of the Opposition in that House and the ex-Ministers on the left front bench, behind them their adherents. The two parties cross the House on a change of ministry, as the Commons do. There is no arrangement of peers according to rank, the different degrees sitting together indiscriminately if of the same political complexion. The House meets at 4.15 p.m. on Mondays, Tuesdays, Thursdays, and Fridays, and sits for an uncertain period, but seldom after midnight. (See Session, sections 4, 19, and 69.) The House of Lords has both legislative and judicial powers. It is the highest appellate court of the United Kingdom: it may in certain cases try members of its own body, it tries any person who may be impeached by the House of Commons, and it also decides claims to the peerage. The Appellate Court is constituted of the Lord Chancellor and of other legal lords of high standing, such as ex-lord-chancellors and the lords of appeal in ordinary. It may sit during a Parliamentary recess, and its hours of business are from 10.30 a.m. to 4 p.m. In the following list the number to the immediate left of each title denotes the order in which the lords spiritual and temporal stand upon the roll of Garter King of Arms—that is, their relative rank and precedence in the House of Lords, the necessary corrections having been made up to Nov. 23rd, 1888. The Prince of Wales is first on the roll, and next are the Royal Dukes of Edinburgh, Connaught, Albany, and Cambridge, who are followed in turn by the Archbishop of Canterbury, the Lord Chancellor, the Archbishop of York, the Lord President of the Council, and the Lord Privy Seal. After these come the dukes, beginning with His Grace of Norfolk, Earl Marshal and Premier Duke of England, then the marquises, earls, viscounts, bishops, and barons, Lord Savile, as junior baron, being last upon the list. It will be understood, from what is written above, and from an inspection of the list, how essentially the order in which peers are named on Garter's roll differs from the precedence existing among the peers of the three kingdoms collectively. Lord Savile's number (564) is in excess of the total of the lords spiritual and temporal, the discrepancy being caused by the following lords being named twice on the roll:—Lord Halsbury as Lord High Chancellor and as Lord Halsbury, Viscount Cranbrook as such and as Lord President, Earl Cadogan as such and as Lord Privy Seal, the Earl of Mount-Edgcumbe as such and as Lord Steward, the Earl of Lathom as such and as Lord Chamberlain, Viscount Powerscourt and Earl de Montalt each as an Irish representative peer, and also as a peer of the United Kingdom, the Earl of Strathmore and Kinghorne as a Scotch representative peer and a baron of

the United Kingdom, and Lord Knutsford as such and as a Secretary of State. The date of creation refers only to the present title, and does not indicate the year in which the peer or his ancestor may have been first admitted to the House of Lords. The initials S.R.P. and I.R.P. are used to signify that the lord is a Scotch or Irish representative peer. The abbreviations *n., s., b., un., h.b., and g.s.* will be readily understood to mean nephew, son, brother, uncle, half-brother, and grandson. P.C. is used where the peer is a Privy Councillor, and L.L. stands for Lord Lieutenant. The following is the present composition of the House of Lords:—Peers of the Blood Royal, 5; Archbishops, 2; Dukes, 22; Marquises, 21; Earls, 119; Viscounts, 28; Bishops, 24; Barons, 294; Scotch Representative Peers, 15 (one vacancy); Irish Representative Peers, 27 (one vacancy): total, 557. Thirteen of the foregoing are minors, two are reckoned both as peers of the United Kingdom and Irish representative peers, and one is reckoned as a peer of the United Kingdom and as a Scotch representative peer, so that the actual voting strength of the House is 541.

Peers created, Jan.—Nov. '88. (*For particulars see "Peerage."*) The Earl of Dufferin created Marquis of Dufferin and Ava; Sir H. Holland, G.C.M.G., created Lord Knutsford; Sir John Savile Lumley, created Lord Savile.

Peers, English, Deceased (Jan.—Dec. 5th, '88). See OBITUARY.

Peers, Principal Officers of House of. *Chairman of Committees*, Rt. Hon. Duke of Buckingham and Chandos, G.C.S.I.—*Clerk of the Parliaments*, Henry John L. Graham, Esq.—*Deputy Clerk of Parliaments*, Ralph Disraeli, Esq.—*Reading Clerk and Clerk of Outdoor Committee*, Hon. S. own Right.

Peers of the United Kingdom.

<i>Ashwellthorpe Hall, Wymondham, Norfolk</i>	Hon. Eva Mary Fitz-Hardinge Milman, d.	1
13, <i>Grosvenor Place, S.W.</i>	Hon. H. Tyrwhitt-Wilson, s.	2
Married '81 Mr. W. Ashmead Bartlett, who assumed the name of Burdett-Coutts, and was elected for Westminster '85. <i>Holly Lodge, Highgate, N.</i>	Duke of Portland, step-son.	3
Married 45 the 5th Visct. Falmouth. 2, <i>St. James's Sq., S.W.</i>		4
Widow of the 4th M. of Lansdowne. 15A, <i>Grosvenor Sq., S.W.</i>	Hon. E. E. T. Boscawen, C.B., s.	5
Widow of Martin E. Haworth, Esq.	M. of Lansdowne, s. (peer).	6
	Lord Leslie, g.s.	7

Peers who have been Commoners. The following list of names formerly borne in public life by gentlemen who are now members of the House of Lords, and whose present title is dissimilar to their surname, will be found of assistance in making references to the peerage. A few titles of courtesy are included, but the general list of these is given elsewhere.

Commoner.	Peer.
A'Court Holmes, Mr. W., M.P.	Heytesbury, L.
Adderley, Sir Chas., M.P.	Norton, L.
Ailsopp, Mr. S. C., M.P.	Hindlip, L.
Althorp, Lord, M.P.	Spencer, E.
Andover, Visct., M.P.	Suffolk and Berk, E.
Anson, Visct., M.P.	Lichfield, E.
Baring, Mr. A. H., M.P.	Ashburton, L.
Baring, Mr. T. G., M.P.	Northbrook, E.
Bass, Sir Michael A., M.P.	Burton, L.
Bateson, Sir Thomas, M.P.	Deramore, L.
Beckett, Sir Edmund	Grimthorpe, L.
Bective, Earl of, M.P.	Headfort, M.
Berkeley, Col. H., M.P.	Fitzhardinge, L.
Bingham, L., M.P.	Lucan, E.
Bourke, Mr. M.P.	Connemara, L.
Bowmont, Marq. of, M.P.	Roxburghe, D.
Brabazon, Lord	Meath, E.
Brand, Sir H., M.P.	Hampden, V.
Brett, Sir W. B., M.P.	Esher, L.
Brodrick, Mr. W., M.P.	Middleton, V.
Bruce, Mr. Henry, M.P.	Aberdare, L.
Burghey, Lord, M.P.	Exeter, M.
Burke, Visct., M.P.	Clanricarde, M.
Campbell, Mr. W. F., M.P.	Stratheden & Campbell, L.
Castleragh, Visct., M.P.	Londonderry, M.
Castlerosse, Visct., M.P.	Kenmare, E.
Cavendish, Lord, M.P.	Devonshire, D.
Cecil, Lord Robert, M.P.	Salisbury, M.
Cholmondeley, Mr. H., M.P.	Delamere, L.
Clive, Visct., M.P.	Powis, E.
Cochrane-Baillie, Mr. M.P.	Langington, L.
Cole, Visct., M.P.	Enniskillen, E.
Corry, Mr. Montagu	Rownton, L.
Cotton, Major W. H.	
Stapleton, M.P.	Combermere, V.
Cranborne, Visct., M.P.	Salisbury, M.
Crichton, Visct., M.P.	Erne, M.
Cust, Mr. A. W., M.P.	Brownlow, E.
Dalkeith, Earl of, M.P.	Buccleuch, D.
De Grey, Mr. T., M.P.	Walsingham, L.
Denison, Mr. W. H., M.P.	Londesborough, E.
Dodson, Mr. J. G., M.P.	Monk-Bretton, L.
Duncombe, Mr. W. E., M.P.	
Dundas, Mr. L., M.P.	Feversham, E.
Dungarvan, Visct.	Zetland, E.
Eaton, Mr. M.P.	Cork, E.
Ebrington, Visct., M.P.	Cheylesmore, L.
Elcho, Lord, M.P.	Fortescue, E.
Eslington, Lord, M.P.	Wemyss, E.
Fellows, Capt., M.P.	Ravensworth, E.
Finch-Hatton, Mr. M., M.P.	De Ramsey, L.
Fitz-Harris, Visct., M.P.	Winchelsea, E.
Fitz-Patrick, Mr. B., M.P.	Malmesbury, E.
Fortescue, Mr. C., M.P.	Castletown, L.
	Clermont and Carlingford, L.
Fremantle, Sir T., M.P.	Cottesloe, L.
Garlies, Lord, M.P.	Galloway, E.
Gathorne - Hardy, Mr., M.P.	
Gibson, Mr. Edw., M.P.	Cranbrook, V.
Giffard, Sir H., M.P.	Ashbourne, L.
Goderich, Visct., M.P.	Halsbury, L.
	Ripon, M.

Commoner.	Peer.
Greville - Nugent, Mr., M.P.	Greville, L.
Grimston, Visct., M.P.	Verulam, E.
Grosvenor, Earl, M.P.	Westminster, D.
Grosvenor, Ld. Rd., M.P.	Stalbridge, L.
Grosvenor, Ld. Rob., M.P.	Ebury, L.
Guinness, Sir A. E., M.P.	Ardilaun, L.
Hamilton, Marq. of, M.P.	Abercorn, D.
Hanbury-Tracy, Mr. C., M.P.	
Hay, Lord W., M.P.	Sudeley, L.
Heathcote, Mr. G. H., M.P.	Tweeddale, M.
Hill, Mr. R. C., M.P.	Aveland, L.
Hinchinbrook, Visct., M.P.	Hill, V.
Holland, Sir Henry T., M.P.	Sandwich, E.
Howick, Visct., M.P.	Knutsford, L.
Hubbard, Mr., M.P.	Grey, E.
James, Sir W., M.P.	Addington, L.
Johnstone, Sir H., M.P.	Northbourne, L.
Kildare, Marq. of, M.P.	Derwent, L.
Knatchbull - Hugessen, Mr. E., M.P.	Leinster, D.
Lawley, Mr. Beilby, M.P.	Brabourne, L.
Leveson, Lord, M.P.	Wenlock, L.
Liddell, Mr. H., M.P.	Granville, E.
Lindsay, Lord, M.P.	Ravensworth, E.
	Crawford and Balcarres, E.
Lowe, Mr. Robert, M.P.	Sherbrooke, V.
Loyd-Lindsay, Sir R., M.P.	Wantage, L.
Lunley, Sir John S.	Savile, L.
Lygon, Mr. Fredk., M.P.	Beauchamp, E.
Lyttelton, Mr. C. G., M.P.	Lyttelton, L.
Macduff, Visct., M.P.	Fife, E.
M'Garel-Hogg, Sir J., M.P.	Magheramorne, L.
Mahon, Visct., M.P.	Stanhope, E.
Majoribanks, Sir D.	
Coutts, M.P.	Tweedmouth, L.
Mandeville, Visct., M.P.	Manchester, D.
Manners, Lord John, M.P.	Rutland, D.
March, Earl of, M.P.	Richmond and Gosham, D.
Melgund, Visct., M.P.	Minto, E.
Milles, Mr. G. W., M.P.	Sondes, E.
Mills, Sir Charles, M.P.	Hillingdon, L.
Milton, Visct., M.P.	Fitzwilliam, E.
Monsell, Mr., M.P.	Emly, L.
Monson, Mr. W. J., M.P.	Oxenbridge, V.
Moreton, Lord, M.P.	Ducie, E.
Morgan, Major G. C., M.P.	Tredegar, L.
Mulgrave, Earl of	Normanby, M.
Newark, Visct., M.P.	Manvers, E.
Ormsby-Gore, Mr. W. R., M.P.	
Ossulton, Lord, M.P.	Harlech, L.
Palmer, Sir Roundell, M.P.	Tankerville, E.
Parker, Mr. T. A. W., M.P.	Selborne, L.
Percy, Earl, M.P.	Macclisfield, E.
Pevensy, Visct., M.P.	Lovaine, L.
Ponsonby, Mr. C., M.P.	Sheffield, E.
Portman, Mr. E. B., M.P.	De Mauley, L.
Raynham, Visct., M.P.	Portman, V.

 Yarmouth, Earl of, M.P. ... Hertford, M.

Pen Names. See NOMS DE PLUME.

Penny Banks. Such banks exist in most towns throughout the country, and prove a great boon to the humbler classes in enabling them to save penny by penny; and as a great many of these banks place their funds in the Post Office Savings Banks, their depositors have the additional benefit of knowing that their money is safe. To penny banks established in connection with the Post Office Savings Banks special aid is given (1) in furnishing specimen rules approved by the National Debt Commissioners, whose sanction is required before the funds of a penny bank can be received; and (2) in supplying free of charge any number of books for the use of the depositors in the penny bank, on the understanding that they shall be issued gratuitously. Books for the purpose of keeping the accounts at a small charge are also supplied. Under the rules laid down for the penny banks connected with the Post Office, no one is allowed to have more than £5 at one time in the penny bank. So soon as his deposits amount to £1, the depositor is assisted to open a separate account in his own name at the Post Office Savings Bank, to which he can in future, if he wish it, make his payments direct. No deposit of less than a shilling being, however, received by the Post Office, he is permitted to continue paying into the penny bank as before. The working systems of the penny banks generally vary, of course, according to the circumstances under which they are established, but the main principles are similar in all. The National Penny Bank is one of the most important of these banks, its chief office being in London. There are also large penny banks at Edinburgh, Glasgow, Liverpool, York, Manchester, and other cities and towns.

Pensions, Civil List. See CIVIL LIST.

People's Palace for East London. The, opened May '87 by Her Majesty, is situated in the busy thoroughfare of the Mile End Road. It provides for the vast population of the East End a large hall for concerts, entertainments, etc.; a library and reading-rooms, gymnasium, swimming baths, social meeting rooms, game rooms, refreshment rooms, and trade shops and technical schools. The last-named department is intended to instruct youths in their trades (making a beginning even while they are still attending the elementary schools of the district). Great stress is laid upon this feature as a social factor of great probable importance. These trade training schools, built and equipped at a cost of

£20,000 by the Drapers' Company, were opened by the Master and Wardens of that Company Oct. 5th, '88. The main hall is now subscribed for (£25,000), but over £30,000 is still wanted to complete the cost of library, gymnasium, baths, and site, the last of which will have cost in all £22,400. The "Palace" idea is a resuscitation and development of the Beaumont Philosophical Institute, established nearly half a century since in Mile End, the trustees of which are some twenty gentlemen closely identified with the East End. During the year there have been held at the People's Palace a number of varied exhibitions, shows, concerts, exhibitions, etc., including a six weeks' picture exhibition and autumn fête, which was opened by H.R.H. the Duchess of Albany on Aug. 4th, '88, and which attracted over 370,000 persons, at a charge of one penny for admission. Patron, the Queen; Treasurer, Mr. S. Charrington, M.P.; Chairman, Sir E. H. Currie. Offices of the Trust, People's Palace, Mile End Road, E.

Peppercorn Rent. A rent of one peppercorn a year—in other words, a nominal rent to be paid on demand. It is an expedient for securing an acknowledgment of the tenancy in cases where lands or houses are let virtually free of rent.

Peptone. The product of the digestion of albuminoid substances. See ED.

Perak. A Malay state under British protection. See STRAITS SETTLEMENTS.

Perekop Ship Canal. After other rumours had been afloat for some time, it was stated by the *Crossed Messenger* (Times, May 30th, '88) that this canal was to be cut through the Perekop Isthmus in the Crimea, the necessary funds (£5,000,000 roubles) having been appropriated. The canal will traverse Gontchik and Sivassh from Perekop to Guenitcheak, being 74 miles in length, 65 feet in breadth and 12 feet in depth, while at both ends canal ports are to be established for posters. The canal will form the shortest line of communication between the northern coast of the Black Sea and Guenitcheak, at present Marionpol being 434 miles from Odessa, but it will be only 295 miles. Major-Gen. Jilmsky and the French engineers, Messrs. Essant and Carouzet, will carry out the work.

Perlim. A small island in the Straits of Bab-el-Mandeb, since 1855 held by Great Britain. Area 7 sq. m.; pop. 750. It is subordinate to Aden (q.v.), and its batteries completely command the approaches of the Red Sea.

Permissive Block System. See RAILWAY SIGNALLING, ed. '88.

Perpetual Pensions. A Select Committee of the House of Commons was, Jan. 28th, 1887, on the motion of Mr. Bradlaugh, appointed to consider this subject. The Committee took evidence, and reported before the close of the session as follows:—"That pensions, allowances, and payments ought not in future to be granted in perpetuity. That offices with salaries and without duties, or with merely nominal duties, ought to be abolished. That all existing perpetual pensions, allowances, and payments, and all hereditary offices, should be determined and abolished. That in all such commutations the Lords of the Treasury should take into consideration the circumstances of such pension, allowance, or payment, and whether or not any real service had been rendered by the original grantee, or was now performed by the actual holder of the office. That where no service, or merely nominal service, is rendered

by the holder of an hereditary office, and where no service, or merely nominal service, was rendered by the original grantee of the pension, allowance, or payment attached to such office, the pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient. That in all cases the method of commutation ought to involve and insure a real and substantial saving to the nation. That the rate of commutation usually adopted, of about twenty-seven years' purchase, is too high. That since Jan. 1st, '81, three hundred and thirty pensions, payments, and allowances, amounting in all to the annual sum of £18,957 9s. 6d., have been commuted by the payment of £527,983 18s. 4d., and at rates of commutation varying from ten years' to thirty years' purchase. That some of these pensions appear to have been commuted, notwithstanding formal objections in writing lodged with the Lords of the Treasury, and without sufficient inquiry into the matters stated in such objections. An account of some of the perpetual pensions still in course of payment will be found under the head of FINANCE, NATIONAL. See also SESSION '88, sect. 5.

Persia (Iran). An independent Asiatic state lying between Turkey and Afghanistan, three times as large as France (636,000 sq. m.), with a pop. of 6,000,000 or 7,000,000. Revenue ('86-7) amounted to £1,750,000—£280,000 being raised from customs, and £1,470,000 from direct taxes. Expenditure amounted to £1,650,000. There is no public debt. England does trade with South Persia to the extent of £1,000,000 a year. During the year '88 the first Persian railway, from Teheran to the Caspian Sea, was opened, the cost of the first section, ten miles from the capital, being estimated at from £40,000 to £100,000. Sir Henry Drummond Wolff (q.v.), has been despatched as English Minister Plenipotentiary to the Court of Teheran. Under his presumed influence a decree was issued by the Shah granting extraordinary privileges to trade, and protection against the despotism of Russia, for which (July) he received the congratulations of the British Government. The Turkish fortifications at Chat-el-Arab formed the subject of remonstrance by Persia to the Porte (August). According to a telegram from St. Petersburg (Dec.) in the *Cologne Gazette*, the Russian Government was taking serious steps to regain its predominance in Persia, in consequence of the influence of the English ambassador. It was stated (Vienna, Dec. 4th) that M. Giers was about to despatch a peremptory note to the Persian Government, calling upon it to grant the *exequatur* to M. Vlassoff, who was appointed in '87 Russian Consul-General at Resht—the point of contention being the extension of his jurisdiction to Meshed. The relations between Russia and Persia have been much strained since conclusion of Persia's new treaty of commerce and navigation with Great Britain. **Professor A. Vambéry (q.v.)** has recently published a long article in the *Pester Lloyd* on the "diplomatic triumph" of England in opening up the river Karun to the navigation of the world. Consult Wills' "Persia as it is," C. R. Markham's "General Sketch of the History of Persia," *The Statesman's Year Book*, etc. For Ministry, etc., see DIPLOMATIC.

Persian Gulf, etc. For Residents, etc., see DIPLOMATIC.

Persico, Mgr., Roman Catholic prelate, sent

by the Pope in the autumn of '87 to report on the condition of Ireland. See ed. '88.

Personality. See LAND QUESTION, ed. '88.

Perth. Capital of Western Australia (q.v.) pop. 5,044; on Swan River.

Pernu. A republic on W. coast of S. America Area, 483,847 sq. m.; est. pop. ('88), 2,500,000. Cap., Lima; pop. 101,488. The disastrous war with Chili completely shattered the power of Peru, and ended in an ignominious peace. Constitution modelled on that of the United States, the legislative power being vested in a Senate elected by the provinces, two delegates from each, and a House of Representatives nominated by electoral colleges of provinces and parishes, one for every 20,000 inhabitants. Executive in the hands of a President elected for four years. Absolute political but not religious freedom allowed, the constitution prohibiting the public exercise of any but the Roman Catholic religion. Revenue was until recently derived from sale of guano and customs duties; direct taxation did not exist. Estimated revenue ('88), £1,350,000; estimated expenditure, £1,133,000. It is almost impossible to state what is the actual revenue or expenditure, owing to the anarchy caused by the late war, which was nominally terminated by treaty of Oct. 1883. There is a foreign debt of about £31,000,000, chiefly secured on guano deposits, on which no interest has been paid since 1876, with the exception of a small amount paid to England in 1883, under an arrangement with Chili, which now holds the guano islands, that a percentage of the value of guano deposits should be paid to the bondholders. At the close of the struggle in '83, Chili supported Iglesias, as president, who two years after was driven from power by the rebels under Gen. Caceres, who in '86 was elected president.

Peterborough, Rt. Rev. William Connor Magee, D.D., 26th Bishop of (founded 1541), son of the late Rev. John Magee, vicar of St. Peter's, Drogheda, and grandson of Archbishop (Magee) of Dublin; b. at Cork 1821. Educated at Trin. Coll., Dublin. Became Hon. Canon of Wells Cathedral, and was created D.D. (1859). Appointed Precentor of Clogher and to the living of Enniskillen (1864), and Dean of Cork (1864). Is author of numerous works. Consecrated Bishop of Peterborough 1868. Dr. Magee is not only one of the strongest members of the episcopal bench, but also one of the most eloquent speakers in the House of Lords. In '88 his lordship became involved in a correspondence on the subject of the publication of his sermons, and contributed a caustic letter to the *Times*. He also delivered a pastoral address of remarkable power.

Petite Culture, Ia. See AGRICULTURAL HOLDINGS.

Petroleum. A mineral oil springing naturally from the ground in the United States, the Caucasus, Burma, Canada, Galicia, Venezuela, Peru, and other parts of the world. Young started the industry about the time of the Crimean war by distilling paraffin from shale oil, extracted from Scotch shale coal. This industry was checked in '59 by the adoption in America of Drake's system of boring for the petroleum existing naturally in copious deposits at from 500 to 3,000 ft. below the surface. The lamp oil distilled from this was called kerosene, which is the title used all over the world except in England, where "paraffin," "crystal oil," or "refined petroleum," are terms employed for

the American article. Scotland still produces 70,000,000 gallons of paraffin, but America refines nearly 700,000,000, and Russia 200,000,000—making, with Galicia, etc., an output of lamp oil for the whole world of about one thousand million gallons. The largest number of wells are in the **United States**, where there are 26,000; but at **Baku** (Caucasus) the most copious supply exists, a single well there spouting sometimes (11,000 tons a day) more oil than all the wells of America put together. At **Baku** there are 420 wells. According to a scientific report, published in '88 by the **Canadian Government**, the largest petroleum fields in the world have been discovered in the **Athabasca** region. The attempts to obtain oil in **Egypt** were abandoned as hopeless in '88, after an expenditure of £100,000. In **Burmah** are immense deposits, situated at **Yenanyoung**, on the river **Irrawady**, near **Prome**, but the oil is heavy, and no attempt has been made yet to exploit them on a large scale. In **Beluchistan**, near **Sibi**, sufficient oil has been found to furnish a supply for the **Quetta** railway. The large oil deposits at **Lima**, in **Ohio**, discovered in '87, were connected in '88 with **Chicago** by a pipe-line 270 miles long, and the oil is now "piped" thither to be used as fuel. The products of crude petroleum oil are: light oils, **benzoline** and **benzine**, used chiefly for manufacturing purposes; **kerosene**, for lamp oil; **lubricating oil**, for greasing machinery; **vaseline**, or petroleum jelly, for medicinal purposes; and **liquid fuel**—the latter being the refuse after the various distillations. Petroleum varies greatly in character and specific gravity, and in hardly any two countries is alike. The American produces 70 galls. of lamp oil, the Russian 30, and the Galician 15 or 20, from 100 galls. of crude. On the other hand, the Russian and Galician yield more lubricating oil and fuel. Now that thirty tank steamers run regularly with oil from **Batoum** to European ports, Russian kerosene is as widely diffused as American. In '88 there was a vast development of the **Russian lubricating oil trade**, owing chiefly to the export operations of the **Shibajeff** firm at **Baku**. In **England** the monopoly in American lubricants has been quite upset by this rush of **Shibajeff** oil, largely due to remarkable safety qualities of the **Baku** article which has caused a great demand for it in the English cotton mills, many fires having previously been traced to the use of dangerous lubricants. In consequence of this the **Mutual Fire Insurance Corporation** decided last year to analyse their clients' lubricants for nothing, and gave an impetus to the Russian trade by pronouncing the **Shibajeff** oil absolutely safe. No progress took place in the utilisation of light oils, and at **Baku** fifteen million gallons of benzine products were poured as waste into the **Caspian Sea**. Liquid fuel made great strides in '88 in America, where many hundred factory furnaces, locomotives, and steamers were fitted with appliances to burn oil instead of coal. In **Russia** over 1,000 steamers, locomotives, and stationary engines, burn oil exclusively. Bulk transport is now becoming universal. By this system the oil is transported in tanks instead of by the costly system of barrels; pipe-lines "pipe" it from the oil fields to the refineries, thence it is piped on board tank steamers, many of which convey 3,000 tons of oil at a trip; on arrival at port it is piped from the steamer to tanks on shore, and is finally distributed either by tank trucks on railways, by tank waggons in urban

streets, or by means of metal drums. Thanks to the cheapness occasioned by the new method, **Erith** and other provincial towns were last year lit with oil instead of gas. The bulk system has also led to a great development of the pipe line industry—above all at **Glasgow**, where an eminent firm, which has made a specialty of oil pipes, and manufactured several hundred miles of pipes for **Russia**, **India**, **Egypt**, etc., can turn out pipes at the rate of two or three miles a day. In general, however, although **England** owns in **Canada** and **Burmah** the largest deposits in the world, she has done nothing yet to develop the oil industry itself, and obtains nearly all her lamp and lubricating oil from **Russia** and **America**. The **Petroleum Association**, 85, **Gracechurch St.**, **London, E.C.**, represents the **London** trade, and issues certificates for all mineral oil imported into the **United Kingdom**. Consult **Marvin's** "**Region of the Eternal Fire**," and **Crewe's** "**Treatise on Petroleum**."

Petroleum Engine. Some time ago a new petroleum engine was introduced into this country under the name of the "**Etève engine**." For various reasons it was not a success. Attention having been given to the improvements possible, a satisfactory engine has since been produced, and the difficulties which have hitherto stood in the way of using ordinary petroleum as a motive power are now removed. In practice it is simpler even than a gas engine. The oil occupies a closed tank, and contains enough for one day's supply. Air is pumped into this tank at the top, producing a pressure of about 5 lb. per square inch. The oil pipe which fills the vessel dips nearly to the bottom of the tank, and by means of the pressure the oil is forced up the pipe and along it. The vapour formed is passed on into a vaporiser, where it is heated, and from which it is admitted into the engine cylinder and ignited by an electric spark. The cylinder is water-jacketed, the water being kept in circulation by a small pump. To facilitate starting the engine, a small petroleum burner is provided under the vaporiser, which must be lighted before starting; but afterwards the petroleum vapour in the vaporiser is kept hot by the exhaust products of combustion while on their way to the chimney. Ordinary petroleum is used, and combustion is complete. The engine is specially fitted for use where steam is prohibited and coal gas cannot be utilised. The cost of running at the present price of oil is stated to be a little more than 1/4 per horse-power per hour.

Petrology. The study of rocks. See ed. '87. **Pettie, John, R.A.**, b. at **Edinburgh**, 1839, and contributed his earliest works to the **Royal Scottish Academy**. Removing to **London** in 1862, the productions of his brush rapidly obtained notice, and (1866) he was elected **R.A.** Many of his works have been engraved. Mr. P. was elected **R.A.** (73) in the place of **Sir Edwin Landseer**. He is about to commence ('88), it is said, a portrait of the **Rev. Dr. Oswald Dykes**.

Pettitt, Henry, distinguished writer and dramatist, made a brief appearance on the stage, **Sadlers Wells**, at the age of fifteen. A play which he had written together with **Mr. Paul Merritt** turning out a great success at **Mr. George Conquest's** theatre, the **Grecian**, determined **Mr. Pettitt** in taking up dramatic writing as a regular profession; he was for some time treasurer of the **Grecian**, and

began writing the first of the series of successful plays that have made his fame as a dramatist. He is an original and most prolific writer, and has taken part in the construction of most of the new dramas that have been produced in the Metropolis for the past eight years. He is also a writer of fiction, and has contributed numerous articles to various magazines. His **leading works** are "Queen's Evidence," "Black Flag," "The World" (in collaboration with Messrs. Merritt and Harris), "Taken from Life," "Pluck" (Pettitt and Harris), "Love and Money" (Pettitt and the late Charles Reade), "In the Ranks" (Pettitt and G. R. Sims), "Human Nature" (Pettitt and Harris), "Run of Luck" (Pettitt and Harris), "Harbour Lights" (Pettitt and Sims), "Union Jack" and "Bells of Haslemere" (Pettitt and Grundy). His latest drama is "**Hands Across the Sea**," written for the Princess's Theatre.

Phalansteries. See CO-OPERATIVE (APARTMENT) HOMES, ed. '87.

Philippine Islands. A large group of the Asiatic Archipelago and a Spanish colony. Area 114,326 sq. m., pop. 5,559,020. Capital **Manila**, pop. 270,000, in Luzon Island, a fine and spacious city. These islands (two largest, Luzon and Mindanao) are mountainous and volcanic, with many lakes, rivers, and marshes. Volcanic eruptions, earthquakes, and tornadoes. Specially favoured by nature, this magnificent region enjoys every variation of temperature, and produces every variety of produce, of which the chief are sugar, manilla, hemp, coffee, cocoa, cotton, tobacco, rice, indigo, cinnamon, maize, teak, bamboo, and innumerable other valuable timbers; also fruits. Extensive railway lines have been commenced. Ruled by a Governor-General, who is also supreme over the Caroline, Sulu, and Marianae Islands. But though for three centuries the Philippines have been nominally in Spanish possession, the interior of some of the larger islands have never been surveyed, and several of the native tribes, especially in Mindanao, are altogether independent. The pirates of Sulu and Mindanao have been a terrible scourge to the eastern seas. Exports to United Kingdom (1886) £796,741; from United Kingdom £839,658; exports to Spain £1,548,900, imports from Spain £196,580. Chief articles of export, sugar, hemp, and tobacco. A force of 8,256 troops is maintained. Bulk of population Malays, with some Negritos, Mestizoes, or half-breeds, Chinese, and Europeans. Consult Wallace's "Malay Archipelago," Penny's "Ten Years in Melanesia," etc.

Phœnix Rules. See INSURANCE, FIRE AND LIFE.

Phonograph. This instrument is intended for the reproduction of vocal and other sounds. It was invented at the end of '77 by Mr. Thomas Alva Edison, of New York, but the results were tentative only. Sufficient had been attained, however, to justify continued experiment, and the appearance of Mr. E.'s improved phonograph during the present year has therefore occasioned very great interest. The general principle is the same as in the gramophone and graphophone (*q.v.*), the former the invention of Mr. Berliner and the latter of Mr. C. S. Taintet. Both appear to have anticipated the improved phonograph in certain details of construction. The essential parts consist of a mouthpiece and a diaphragm, the latter made to vibrate under the influence of sound waves

produced by the voice or other means; and attached is a fine style in contact with a revolving cylinder of a waxy composition. This style or needle, as the result of vibrations imparted to the diaphragm, traces upon the cylinder a characteristic record of sound in the form of a wavy line. A **reverse process** enables us to obtain from another diaphragm the original sound, which can be magnified by attaching a sound trumpet to the reproducing mouthpiece. The cylinder is revolved by an electric current, the motor being inclosed in a box below the machine. It works the apparatus so that the speed of the cylinder can be controlled, but at present the details have not been made known. The cylinders are about three inches long, and Mr. E. has arranged by an ingenious device for the same cylinder to be utilised for several records. For ensuring purity and distinctness, tubes are used to convey the reproduced sounds from the mouthpiece to both ears of the listener. In the phonograph, as it now stands, there is a marked improvement upon the old form; in fact, it is practically a new instrument. A distinct advance has been made by discarding the metal cylinder covered with tinfoil, which was the great feature of the '77 phonograph, and substituting a waxy material as the medium for trace impressions. There was also no electric motor in the old form, the motions of the cylinder being got by turning a handle. The first improved phonograph was received in England on June 26th, having been sent to Col. Gouraud, Mr. E.'s agent, with some "phonograms," or sound records of conversations and musical renderings, made to the machine by Mr. E. Subsequently better instruments arrived, and a series of trials were made in the presence of members of the press and others, which have shown that the new form is capable of reproducing various kinds of sounds in a most faithful manner, notwithstanding their variety. Thus the phonograph has been sung and whistled to, conversations in French and an ode of four verses recorded, and piano, cornet, and other solos received and faithfully repeated. The instrument was shown at the last meeting of the British Association. Since then even important improvements have been made; and in scientific circles it is considered to have amply justified itself. A new name has been found for the "phonograms"—viz., **mailing-grams**, and a good many are now passing across the Atlantic. It is stated that a considerable number are in course of manufacture, the single price being about £20.

Photography. See SHORTHAND.

Photography, '88. (For outline history of photography and progress see ed. '88.) During the past year many advances have been made in **platinotype printing** (a new process by which prints from negatives can be secured with all the beauty of tone and half-tone of the most perfect engravings), mainly due to the experiments and researches of Capt. Pizzighelli. It is now possible to obtain almost the same shade or tone with what is termed a cold process; the paper is prepared by treatment with (1) gum arabic, (2) arrowroot, (3) ammonia ferric oxalate, (4) sodium ferric oxalate. The **sensitising liquid** is made up first of a mixture of Nos. 3 and 1, or of Nos. 4 and 2. The mixture are thoroughly stirred and filtered; the first would give a blue-black tone, and the second a

black with brown or sepia shade. Mr. W. Willis, the inventor of the platinotype process, has also experimented with a cold process, and read a paper as recently as the 20th of November before the members of the Camera Club, describing very fully the use of platinum salts, and the cold bath process (see *Amateur Photographer*, No. 219, Dec. 14th '88). The autotype process is an outcome of photography, and is deservedly popular for book illustration and picture reproduction. It is now quite customary for notable photographs to be reproduced by this process, and many most charming pictures are the result. About two or three years since **gelatine bromide paper** was introduced by Eastman & Co., an American firm. This paper is developed as a gelatine plate, and gives very beautiful black-and-white prints. Photography is now an adjunct to almost every business. It is possible to take photographs upon negative paper which is made in a continuous roll of sufficient length to take 48 exposures, the paper being afterwards developed in much the same manner as glass plates. **Isoschromatic** photography has made many advances during the year. By this term is meant the rendering of gelatine plates sensitive to colour, giving in the print taken from a negative so treated varying degrees of tone. Isoschromatic plates are also of great service in connection with photo-micrography, as by their use the detail in the subject is given much more distinctly. These plates are being made on a commercial scale, and can be purchased at the same price as ordinary dry plates; in copying old pictures, for which they are especially serviceable, a yellow screen is required, and as a consequence a somewhat protracted exposure. In photographs of landscapes the greens and yellows are well rendered, foliage having a crispness and brightness of tone that does not obtain in the photographs from an ordinary gelatine plate. Efforts have been continued to immerse the gelatine plate in erythrosine, eosine, etc.; but the efforts have not proved stable; the plates so treated will not retain their sensitiveness to the particular rays of the spectrum, and the rendering of greens and yellows soon becomes normal, as with general dry plates. In '87 quite a *furor* was caused by the announcement that **Mr. Mayall** had discovered the secret of taking **photographs in natural colours**. This was almost immediately followed by an announcement that by the **Oellierier-Parkes process** photography in natural colours was an accomplished fact. Photography in natural colours is still in the far distance: the difficulties of preparing a gelatine plate which shall be sensitive to the different rays of the spectrum appear to be practically insurmountable. The latest introduction of this kind is the **Vergara films**, which are made of gelatine rendered insoluble by the action of bichromate of potash or chrome alum. These films are afterwards coated with nitrate of silver emulsion, dried, and exposed in the camera in the same manner as a gelatine plate. The film is perfectly transparent, and after development yields an excellent print on albumenised paper. These films are exceedingly useful for travellers. There is no more difficulty in their manipulation after exposure than with the ordinary glass plate, and there is no fear of breakage. During '88 **hand, or detective, cameras** have been introduced in all shapes and sizes; the tendency, unfortunately, is to cause them

to take pictures that are too small. An apparatus called the "kodak" has been put into the market by an enterprising firm, which will admit of taking 100 exposures without opening the camera; they are taken on a roll of sensitive film, and are afterwards cut off and developed in the ordinary manner. Other hand cameras are in the form of a book, picnic basket, pile of books, writing-cases, despatch boxes, brown paper parcel, etc. A step in the right direction has been made by the introduction of the "Artists' Hand Camera," which will take pictures of $\frac{1}{2}$ and $\frac{3}{4}$ -plate size, and is a most serviceable apparatus. Many improvements have been made in **instantaneous shutters**: these are now so carefully adjusted by mechanical appliances that they can be regulated to the thousandth of a second, and a prolonged exposure can be given to any part of the subject at will. Mechanics are brought to bear upon photography in every branch: cameras, lenses, and all appliances are made to the most exact gauge. The year has seen great advances in all matters connected with photography; many thousands of people are employed in the manufacture of photographic apparatus. It has become a scientific and fashionable pastime, and ladies and gentleman amateurs in many cases far excel professionals. They have an organ devoted specially to their interests—*The Amateur Photographer*. During the year ('89) a "Dictionary of Photography" has been published. The *British Journal of Photography* is the leading organ of professional photography. **Photographic Societies** have been established in most important towns, and exhibitions of professional and amateur work are frequently being held. The head centre of all photographic societies is the Camera Club, which includes amongst its members all the leading amateur photographers. During the winter season technical papers are read every Thursday evening, and the science of photography has been greatly advanced through the experiments and research of its members. On its roll of members are to be found scientists, artists, lawyers, chemists, astronomers, officers in Her Majesty's services, journalists, actors, etc. The present premises are not sufficient for the requirements, and this year it is hoped that the Club will remove to more commodious quarters. **President** (Capt. W. de W. Abney, R.E., C.B., F.R.S.), **chairman** (Sir George Prescott, Bart.); the members and committee are all influential men. The annual subscription is £3 3s. for town and £1 1s. for country members; entrance fee £1 1s. Exhibitions have been numerous during '88, and much good work has been shown. A collection of photographs that have been awarded prizes during the last five years has been arranged by the Fine Art Society. Consult the following books on the art-science of photography: "Instruction in Photography" (Abney); "Modern Photography" (Burton); "Manual of Photographic Chemistry" (Hardwich); "Art and Practice of Silver Printing" (Robinson and Abney); "Modern Dry Plates" (Eder); "Dictionary of Photography" (Hall); "Science of Photography" (Chapman-Jones); "Photographic Printing" (Burton); "Book of the Lantern" (Hepworth); "Photography for All" (Harrison); "Photo-micrography" (Malley).

Photometry. The name given to the different methods employed for comparing the intensity of two luminous sources. See ed. '88, and **HOLOPHOTOMETER**.

Pickersgill, Fredk. Richard, R.A., nephew of the late H. W. Pickersgill, R.A.; b. 1820. Studied at the Royal Academy. Mr. P. has chiefly devoted himself to classical and historical subjects. His "*Combat between Hercules and Achelous*" first brought him into notice. "*The Death of King Lear*" enhanced his reputation. His "*Burial of Harold*," a magnificent picture appearing in 1847, was purchased for the Houses of Parliament. Elected R.A. (1857). He has not exhibited for some few years past.

Pietermaritzburg. Capital of Natal (*q.v.*), pop. 14,429.

Pike's Peak. See BEN NEVIS OBSERVATORY.

Pilotage, Committee on. See SESSION '88, sec. 81.

Pinsk Marshes Drainage. Up to a few years since there existed in south-western Russia, on the borders of Galicia, a vast tract of marshy country, overgrown with dense forests, and quite impassable but to the doubtful characters who found a home here. About 1870 the Imperial Government determined to reclaim the tract, and from that time to the present the work has been carried on by the troops, under a staff of military engineer officers. (For some account of the work already done, see ed. '88.) As the marsh district is one-fifth larger than Scotland, the work of reclamation will occupy some years.

Pipe Roll Society. Established 1883, for the publication of the Pipe Rolls, or Great Rolls of the Exchequer, which are preserved in the Record Office, and are almost perfect from 2 Henry II. to the present date. They relate to all matters connected with the revenue of the Crown, Crown lands, etc., and are thus of considerable importance for historical and genealogical research.

Pisciculture. See FISH CULTURE.

Pitch is a musical term defining the acuteness of musical sound. See ed. '87.

Pitman, Isaac. The inventor of Pitman's well-known system of shorthand writing; b. at Trowbridge, 1813. Educated at the Borough Road College of the British and Foreign School Society, becoming afterwards master of the British School at Barton-on-Humber. He removed to Bath in '39, where he subsequently established the *Phonetic Institute*, and set up a press for printing his own handbooks of phonetic shorthand, and a series of classical works in phonetic type. Mr. P. is editor of the *Phonetic Journal*, which is devoted to the advocacy of writing and spelling reform. On the occasion of the *International Shorthand Congress*, held in London in '87, the family of Mr. P. were presented with his bust.

"Plan of Campaign." See NATIONAL LEAGUE.

Playfair Commission, 1874. See CIVIL SERVICE.

Plough Monday. The first Monday after the Epiphany was fixed upon anciently for the return to agricultural duties after the Christmas holidays. Before the Reformation the countrymen kept lights burning before their patron saints to secure a blessing upon the work in which they were about to engage. Afterwards the day was celebrated with much hilarity in the course of which a plough decorated with ribbons was dragged about, while men dressed up, danced, sang, and played musical instruments.

Plymouth. Capital of Montserrat (*q.v.*).

Plymouth Brethren. So termed because

they first appeared at Plymouth in 1830; twenty years afterwards they only possessed thirty-two places of worship in England and Wales. Mr. Darby, their founder, taught that all should be received into communion who confessed Christ, and acknowledged the inspiration of the Holy Ghost. They have no special order of ministers. The founder separated from the body before his death; their numbers now are considerable, and they are divided into various sects. Correct statistics of their actual numbers are not available, many of them being more or less connected with other religious bodies.

Poet Laureate, is an office in the household of the sovereigns of Great Britain, the appellation having its origin in a custom of the English Universities, which continued to 1512, of presenting a laurel leaf to graduates in rhetoric and versification, the king's "laureate" being a graduated rhetorician in the service of the king. The first appointment of a poet laureate dates from the reign of Edward IV., the first patent being granted in 1630. It was formerly the duty of the poet laureate to write an ode on the birthday of the monarch, but this custom has been discontinued since the reign of George III. Amongst those who have held this office may be mentioned Dryden, Southey, Wordsworth, etc. **Baron Tennyson** is the present Poet Laureate (appointed 1850).

Polce, Legislation. See AUSTRIAN POLITICAL PARTIES.

Police Alarms. The authorities recently gave permission to have a number of new alarms set up in various parts of London, as a matter of experiment. They are similar to those used in Boston, U.S., and much like our present fire alarms. Being placed as near as possible to a constable on "point duty," he can with a key furnished him open any box, and by means of a switch communicate with the nearest police station, while the official there can tell from a paper record what and where anything has happened. In America these alarms are used when a "wagon" is wanted to convey prisoners. In like manner they could be used here when an ambulance is desired, and in similar emergencies.

Police and Constabulary According to the latest official return the total number of police and constabulary in England and Wales was 35,912. This number gave one constable for every 766 of the estimated population for 1887. Since the year 1877 the increase in the total number of police and constabulary in England and Wales has been 6,896, or 22½ per cent., but allowing for the augmented population the real increase during the last decade has been but trifling. The average cost per man in 1887 was £100 11s. 2d. Seven years previously (namely, 1880) the average cost per man was £98 11s. 8d. The borough, etc., constables are in the proportion of 1 for every 722½ of the population of the boroughs and places having constables under local Acts; the county constabulary of 1 for every 1,169¼ of the population of the counties, exclusive of the boroughs, etc.; the Metropolitan Police (*q.v.*), deducting the number employed in Her Majesty's dockyards, parks, etc., of 1 for every 381½ of the population of the Metropolitan Police District; and the City of London Police of 1 for every 561 of the City population. The cost of the police and constabulary for each of the years ending 29th September 1887 and 1886 respectively was £3,711,933 and £3,571,453.—Ireland. The

total strength of the **Irish Constabulary** is about 14,000. The force consists of two bodies: viz., **The Royal Irish Constabulary**, which numbers nearly 13,000 men, and the **Dublin Metropolitan Police**, about 1,200. The proportion of police for the estimated population of Ireland is about 28 for every 10,000 of the people. The total cost of the police establishment of Ireland is about a million and a half per annum. The Irish constabulary is a semi-military body.—**Scotland.** The Scottish Constabulary is about 4,000 strong, and its annual cost £362,000.

Police and Sanitary Regulations, Committee on. See SESSION '88, sect. 68.

Police, City. See METROPOLITAN POLICE, sub-section City.

Police, Metropolitan. See METROPOLITAN POLICE.

Police Courts. **City:** **Mansion House**, presided over by the Lord Mayor; Chief Clerk, C. G. Douglas. **Guildhall**, presided over by the Aldermen; Chief Clerk, H. S. Savill. **Metropolitan:** **Bow Street**, Covent Garden, Magistrates, Sir J. T. Ingham, Knt., J. Vaughan, and J. Bridge, Esqs.; Chief Clerk, J. Alexander. **Clerkenwell**, King's Cross Road, Magistrates, T. I. Barstow and J. R. W. Bros, Esqs.; Chief Clerk, H. Cavendish. **Dalston**, Stoke Newington, N., Magistrates, J. R. W. Bros and Horace Smith, Esqs.; Chief Clerk, Harry Titterton. **Lambeth**, Lower Kennington Lane, Magistrates, G. Chance and R. J. Biron, Q.C., Esqs.; Chief Clerk, T. C. Martin. **Great Marlborough Street**, Magistrates, R. Milnes Newton and J. L. Hannay, Esqs.; Chief Clerk, J. R. Lyell. **Marylebone**, Seymour Place, Magistrates, W. M. Cooke and A. de Rutzen, Esqs.; Chief Clerk, W. Tate. **Southwark**, Blackman Street, Magistrates, W. Slade and J. Sheil, Esqs.; Chief Clerk, H. Nairn. **Thames**, Arbour Street East, Stepney, Magistrates, F. Lushington and T. W. Saunders, Esqs.; Chief Clerk, J. R. Sayer. **Westminster**, Rochester Row, Magistrates, L. C. T. d'Eyncourt and W. Partridge, Esqs.; Chief Clerk, A. H. Safford. **Worship Street**, Magistrates, H. J. Bushby and M. S. Williams, Q.C., Esqs.; Chief Clerk, E. Leigh. **Hammer-smith**, Vennin Street, Magistrates, J. Paget and H. C. Bennett, Esqs.; Chief Clerk, F. E. Lewis. **Wandsworth**, Love Lane, Magistrates, H. Curtis Bennett and A. Chichell-Plowden, Esqs.; Chief Clerk, G. A. Hill. **Greenwich and Woolwich**, Magistrates, R. H. Bullock-Marshall and E. N. Fenwick-Fenwick, Esqs.; Chief Clerk, H. P. Newton. **West Ham**, West Ham Lane, Stratford, Magistrates, E. Bagcalley, Esq., and the Borough Justices; Chief Clerk, W. H. Fowler. **Hours of Sitting:** **Mansion House**, 12 to 2; **Guildhall**, 10 to 4; **Greenwich**, 10 to 1.30; **Woolwich**, 2.30 to 5. **All other Courts**, 10 to 5.

Police Disabilities Removal Act, '87. See ed. '88.

Political Economy. See detailed article in ed. '87. **Consult**, on the side of *Laissez-faire* (q.v.), Mr. Herbert Spencer's "The Man *versus* the State," and, on the other side, "The State in Relation to Labour," by Prof. Jevons.

Pollock, Sir Charles Edward, who comes of an old legal family, was born in 1823, and called to the bar at the Inner Temple in '47. For the first five years he had hadly any practice, being engaged in the production of legal literary works, which ultimately secured him considerable reputation. Q.C. ('66). Appointed a Baron of the Exchequer ('73). Baron Pollock

is a Judge whose patience and courtesy are proverbial, and he is highly popular with the bar. **Pollock, Walter Herries**, son of Sir W. F. Pollock, was b. 1850. Educated at Eton, and Trin. Coll., Cambridge, where he took classical honours ('77). Called to the bar at the Inner Temple ('74). After having been some time on the staff, Mr. Pollock became editor of the *Saturday Review* ('83).

Polo, as at present played, was introduced into this country in 1872 by the officers of a Lancer regiment just returned from India, where they had played against native teams, who, mounted on their small ponies, were very expert in the game. It rapidly gained in popularity amongst the upper classes, and, owing to the necessity of keeping the requisite expensive stud of ponies, it must ever remain among patrician sports. Though of comparatively recent introduction, there is very little doubt that the game was played many years earlier by the Bedouins and other wandering tribes of the desert and Asia Minor, and closely associates itself with the ancient Eastern game of "Chougham," an equestrian pastime which in all probability led to the institution of the English game of **mall**, the street now known as Pall Mall being the favourite resort of the players in the days of its popularity. Lillie Bridge was the spot chosen for the first polo match of importance; but on the International Gun Club and the Hurlingham awarding it their support, contests became frequent, and the ground of the former, at Preston Park, Brighton, affords ample scope for the game, to excel in which the player must be a finished horseman, and be gifted with keen vision and strong nerve. The **Monmouthshire Polo Club** owes its origin chiefly to Mr. Reginald Herbert; and both at **Oxford** and **Cambridge** and **Eton** and **Harrow** the sport has won for itself a secure home, whilst the contests between these Universities and Public Schools at the Hurlingham inclosure, and other matches at the Ranelagh grounds at Bays Elms, attract the *élite* of the fashionable world. The final match for the **Champion Cup of '88**, at the Hurlingham Club ground, was played on June 23rd, between teams representing the **Freebooters** and **Sussex County**, the latter of whom won by four goals to two; and in the concluding contest for the **Inter-Regimental Cup**, decided on the same ground a fortnight later, the **Tenth Hussars** beat the **Ninth Lancers** by five games to nil.

Pondicherry. A town and port of S.E. India, 86 miles south of Madras. It is a French possession. Together with other stations, Mahee, Carical, Yanaon, Chandernagore, France holds 196 sq. m. in India, pop. 275,261. See COLONIES OF EUROPEAN POWERS.

Pondoland. A district of the **Transkeian Territories** (q.v.) lying along the St. John river. Part of it remained independent until 1886-7, when, in consequence of Pondo raids upon the Xesibes, a tribe under British protection, pressure was put upon the Pondo chief Umquikela, and an arrangement came to. He conceded rights and various claims over portions of territory to the Cape Government, receiving in return an annual pension. His authority was limited to government of his tribe within a small district, where he undertook to keep order and maintain peace, and he is practically under protection of the Cape authorities.

Pontiana. Second town and chief Dutch settlement in *Borneo* (*q.v.*).

Poor-Law. The English poor-law is contained in many statutes, the earliest being that of the 43rd year of Elizabeth, and in innumerable reported cases. But the modern system of poor-relief was established by the **Poor-Law Amendment Act of 1834**. Under this Act the parishes which had formerly been areas for poor-law purposes were grouped into unions, a market town being generally taken for the centre. There are in England and Wales 647 unions, comprising 14,827 Poor-Law parishes. Within each union was established a **board of guardians**, consisting firstly of all county justices residing within the union, who have seats *ex officio*; and secondly of guardians elected by the several parishes of the union. The parishes differ much in size, and small parishes may be grouped for representation, but every parish of 300 inhabitants must have at least one representative. The electors in each parish are the owners and ratepayers. In either character an elector may have any number of plural votes not exceeding six, one vote for every £50 rating; so that the maximum number of votes which can be given by any one person is twelve. The qualification of a guardian is fixed in each case by the Local Government Board, but must not be less than £40 rating. The elections take place every April, the term of office being annual. A board of guardians has usually a clerk, a treasurer, registrars of births and deaths, medical, vaccination, workhouse, and relieving officers. They may employ paid valuers and collectors, and form committees of their own number for the relief of the poor in the different parts of the union. All boards of guardians are largely controlled by the **Local Government Board** (*q.v.*), which by its general orders regulates the mode of their election, their procedure, their finance, and their administrative methods, whilst by its special orders it compels observance of the law in particular cases. The expenses of poor-relief are defrayed out of the poor-rate levied in each union upon a special valuation. A valuation list is prepared by the overseers of each parish, and after publication is sent to the assessment committee of the guardians, who must hear objections. After altering the list as they think proper, the committee approve and sign it. From the decision of the committee there is an appeal to quarter sessions. Relief is either indoor or outdoor relief. The former is the relief given in the workhouse, and coupled with the obligation of labour for the able-bodied. The latter is the relief given in money, medicine, etc., to people living in their own homes. The number of persons receiving relief has diminished of late years, partly because of the greater strictness in granting outdoor relief. The total number of persons receiving relief at the present time is about one-thirtieth of the population. Beside the administration of poor-relief other important functions under the Public Health Acts, the Elementary Education Acts, and many other Acts, have been assigned to the guardians of the poor. During the year ended the 25th of March '87 (to which date the latest returns are made up), their receipts, excluding loans, rates levied to meet the precepts of other local authorities, and contributions to the other Poor Law authorities, to whom reference is made below, amounted to £8,280,486. Their expenditure, so far as it was not defrayed out

of loans, amounted to £8,176,768. The loans raised by the guardians during the year amounted to £472,000. Their expenditure out of loans was £307,483. At the end of the year their outstanding debt was £5,387,927. The other Poor-Law authorities, who exercise powers in relation to the relief of the poor, are (1) the **Metropolitan Asylums Board**, who are the Managers of the Metropolitan Asylum District, constituted under the Metropolitan Poor Act (1867) for the reception and relief of fever and small-pox patients and the insane poor chargeable to the unions and parishes in the district; (2) **The Managers of two Metropolitan Sick Asylum Districts**, constituted under the same Act; and (3) **The Managers of School Districts** formed under the Poor Law Amendment Act (1844) for the maintenance of district schools. Excluding loans, the receipts of these authorities during the year ('87) were as follows: the Metropolitan Asylums Board, £337,527; the Managers of the Sick Asylum Districts, £30,118; and the Managers of the School Districts, £181,412. Their expenditure, so far as it was not defrayed out of loans, amounted to £335,684, £32,044, and £189,763, respectively. The Metropolitan Asylums Board received during the year loans to the extent of £113,782. The loan receipts of the Managers of the School Districts were £4,500. No loans were raised by the Managers of the Sick Asylum Districts during the year.

Poor Law Relief, Committee on. See *Session* '88, sec. 63.

Pope, The. His Holiness Leo XIII., the 258th Roman Pontiff, son of Count Ludovico Pecci, was b. at Carpineto, 1810. Educated at the Jesuit Coll. of Viterbo ('18-22). Entered the School of Collegio Romano (24), where he greatly distinguished himself, and proceeded to the College of Noble Ecclesiastics. Having become a Doctor of Laws, he was made by Pope Gregory XVI. Referendary of the Segnatura ('37). Took holy orders, and was consecrated priest ('37) by Cardinal Carlo Odescalchi. The title of "Prothonotary Apostolic" was bestowed on him by Pope Gregory, who also appointed him Apostolic delegate in succession at Benevento, Perugia, and Spoleto. Was sent as nuncio to Belgium ('43), and created shortly after Archbishop of Danietta; nominated Bishop of Perugia ('46); created cardinal ('77). Elected Pope Feb. 20th, '78, and took the title of Leo XIII. Among the events of his Holiness' reign may be mentioned the restoration of the hierarchy in Scotland, the contest with Germany, the Kulturkampf, and the now famous Falk Laws, the *approchement* with Prince Bismarck, on whom the Pope conferred the decoration of the Order of Christ (Dec. 31st, '85),—this *entente cordale* being, however, to some extent interrupted by the amendment to the Ecclesiastical Bill by Dr. Kopp (March '86). On the occasion of the dispute between Germany and Spain over the *Caroline Islands*, the Pope acted as *arbitrator*, to the satisfaction of both parties. Towards the close of '87 and the beginning of '88 Rome was the centre of great rejoicings in connection with the **Papal Jubilee**, intended to commemorate the 30th year of his Holiness' assumption of holy orders. Representatives from Catholic and Protestant states in Europe, from America, from the Indies, and all parts of the world, came to Rome to offer their congratulations. The Duke of Norfolk was sent by the Queen of England as a Special

Envoy, and presented, besides valuable gifts, an Address of Congratulation from Her Majesty. (See ed. '88.) In May last a decree was issued by his Holiness, denouncing in general terms the methods adopted by some of the Irish leaders in the Plan of Campaign. On 13th Oct. he received a visit from the Emperor William II.

of Germany. The relations between the Holy See and Italy are at present (Dec. 6th) strained; and the question of the residence of His Holiness in the event of Italy engaging in war with a foreign power is occupying attention in the Italian and French press.

Population Returns. The births and deaths registered in England and Wales in 1886—the year for which the Registrar-General's last return is made up—numbered respectively 223,866 and 537,276. The natural excess of births over deaths was equal to 1·32 per cent. of the population. The population, when numbered in 1881, was 25,974,439. It is estimated, from calculating the recorded excess of births over deaths, that in the middle of 1886 the population should be 27,046,039. This calculation, however, takes no account of loss by emigration and of gain by immigration; and in consequence, whenever the estimated population is spoken of in a particular year, it is to be understood that the estimate has been made on the supposition that the rate of growth which marked the last intercensal period has continued. On this hypothesis the population of England and Wales in the middle of 1886 numbered 27,870,586, of whom 13,562,621 were males and 14,307,965 were females. The marriages registered during the year 1886 numbered 196,071, giving a rate of 14·7 persons to every 1,000. This is the lowest marriage-rate since civil registration began. The highest rate was 17·6, in 1873. Of the total marriages contracted, 138,567, or 70·7 per 1,000, were solemnised according to the rites of the Church of England; this proportion is slightly higher than usual. With regard to the births of the year, it may be noticed that they were in the proportion of 32·4 to every 1,000 of the population, the lowest rate since 1848. The male sex outnumbered the female by 160,470 to 443,396, though it is evident from the estimate already given that the females have a better chance of surviving. The proportion of legitimate births is 1·5 for every 1,000 of the

population, or, reckoned in another way, was 47 to every 1,000 legitimate births; but this proportion varies greatly in different parts of the country.—The total population of Ireland, according to the census for 1881, was 5,174,836; this number had declined in the middle of 1887 to 4,837,313. The number of marriages registered in Ireland in 1887 was 20,945, or at the rate of 4·33 per 1,000 of the population, being 1·2 over that of '86, but 1·02 under the average for the previous ten years. The number of births registered in Ireland in 1887 was 112,400, of which 57,810 were boys and 54,590 girls. The birth-rate was 23·2 per 1,000 of the population, the lowest average for the last ten years. The deaths registered in Ireland in 1887 were 88,585, at the rate of 18·3 per 1,000.—The total population of Scotland, according to the census of 1881, was 3,735,573; this number, according to the last report of the Registrar-General for Scotland, had increased in 1885 to 3,907,736. The marriages registered in Scotland in 1885 were 25,256, or at the rate of 65 per 1,000 of the population, which is lower than the average rate for the last ten years. The births registered in Scotland in 1885 were 126,110, being at the rate of 32·3 per cent. of the population. The male births were 64,604, and the females 61,506. The deaths registered in Scotland in 1885 were 74,603, being at the rate of 19·9 per cent., the lowest on record.—**International Vital Statistics.** The vital statistics relating to thirteen of the principal European States, including the United Kingdom, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872, show that the marriage-rates in the various countries manifested in 1886 a general decline, except in Austria and the Netherlands. The

rates in 1886 of persons married, per 1,000 of the estimated population, ranged from 14.1 in the United Kingdom and Norway to 15.5 in Austria, 15.6 in Italy, and 15.8 in the German Empire. The birth-rates in most of the countries also showed a general decline, which was most marked in Italy. The birth-rates in 1886 ranged from 23.9 per 1,000 in France, 27.5 in Switzerland, 37.1 in the German Empire, and 37.7 in Austria. The death-rates in 1886 in the various countries did not materially differ from those recorded in the previous year, excepting a marked increase in Italy. The mean death-rate in 1886 in the nine Continental states furnishing returns was higher than that of the United Kingdom by 6.5 per 1,000.

Port-au-Prince. Capital of the republic of Hayti (*q.v.*), pop. 40,000.

Port Darwin. On the northern coast of Australia. The chief harbour of the Northern Territory (*q.v.*) of South Australia, and said to be only second in magnitude and importance to Port Jackson. Here the overland telegraph joins the submarine line to Java.

Port Hamilton. This station of the British navy consists of three small islands situated about forty miles south of Corea (*q.v.*), commanding the straits of that name which lead from the China Seas to the Japanese Sea. The largest island, **Sodo**, is 3½ miles long by a mile broad, and towers to a height of 650 feet; **Sunhodo**, the next in size, has only half the area, the highest point being 780 feet; the third, **Observatory Island**, is still smaller. The three inclose a harbour two miles long by a mile broad, and from nine to twelve fathoms in depth. The population in all is about 2,000, who follow agricultural pursuits. Considering the fact that Corea, with its population of over 10,500,000, is closed to foreign commerce, except at the three ports of Fu-san, Gen-san, and Nin-sen, and that the group of islands in question both commands the straits and is available as a coaling station, the possession of Port Hamilton is considered to be of much importance. During the dispute with Russia in 1885 an ironclad was sent to the Port by England, which caused certain explanations; and it was suggested that the Government of the Czar desired if possible to annex the group, in view of Russian interests on the Siberian side of the empire. The dispute has since been settled. (See ed. '87, for course of dispute '86.)

Port Lazareff. A fine natural harbour, situated in Broughton Bay, on the east side of the neck which joins the peninsula of Corea to the mainland of Asia. It is in lat. 39° 19' N., and within the territory of Corea. The harbour has an area of eight square miles; a depth of seven to ten fathoms, and the entrance is two miles wide. Coal is said to exist in the neighbourhood. Port Lazareff is distant 480 miles from **Port Hamilton** (*q.v.*), 1,200 from Yokohama, 390 from the Russian port of Vladivostock, and 1,580 from Nicolaieff at the Amur mouth. It is free from ice in winter, which the last two ports are not.

Port Louis. Capital of Mauritius (*q.v.*), pop. 26,000.

Port of Spain. Capital and chief port of Trinidad (*q.v.*), pop. 32,000.

Porto Rico. See PUERTO RICO.

Port Royal. Chief port in Jamaica (*q.v.*). An important naval station.

Port Said. A town and seaport of Egypt, on

the Suez Canal, to which it owes its existence. Named after Said Pasha, patron of the enterprise. Pop. (in '82) 16,560. Essentially a coaling station for steamers, and dependent on the canal trade.

Port Victoria. Capital of the Seychelles Islands (*q.v.*).

Ports, Growth of some of our Chief (since 1870). See table, ed. '88.

Portugal. Kingdom in S.W. Europe, under Louis I. of the House of Braganza. Area (including the Azores and Madeira, which are regarded as an integral part of the kingdom), 34,038 sq. m.; pop., 4,768,178. Constitution of 1826 (amended in 1852) recognises four powers—the legislative, executive, judicial, and moderating—the last being vested in a hereditary king. Two legislative chambers, the Peers and the Deputies, collectively called the Cortes. The peers, unlimited in number, are nominated by the Crown for life. The deputies are directly elected for four years by all registered citizens, twenty-one years of age, who can read and write, and possess an annual income of £22. Madeira and the Azores are included politically in the mother country. The Cortes meet at specified periods, without intervention of the king, who has no veto on a law twice passed. State religion is Roman Catholic; all others tolerated. **Estimated revenue**, '87-8, £7,646,642; **expenditure**, £8,734,959; **debt**, £115,384,000; **imports**, '86, £8,302,600; **exports**, £5,628,200. In '87 the imports were £8,314,000, and the exports £4,719,132, showing a decrease in exports of about £900,000. The decrease was due to a falling off in the exportation of wine to France. In '88 a treaty with China was ratified at Tientsin (Feb. 28th); and the question of Portugal's rights over the **Zambesi** and sphere of influence in Southern Africa formed the subject of debate for several sittings in the Portuguese Parliament (May). The dispute with **Morocco** arising from the insult offered to the Portuguese flag was finally settled (Oct.). In connection with the blockading squadron on the Zanzibar coast, it was stated (*Times*, Dec. 8th) that the Portuguese had blockaded **Tunghi Bay**, and reinforced its African squadron with three gunboats. During the year the **illness of the King** caused much anxiety. In company with the Queen he visited some of the chief courts of Europe. The Queen, with the Duke of Oporto, has recently (Nov. 15th) visited the Queen-Regent of Spain. (For army, and navy see ARMIES and NAVIES FOREIGN; for history, 1870-88, and for Colonies, see COLONIES and DEPENDENCIES in our previous editions.)

Positivism. The philosophical and religious system of Auguste Comte (1798-1857). The chief principles of the former side of the system are: (1) The classification of the sciences in hierarchical order, proceeding from the simpler to the more complex, as follows: mathematics, astronomy, physics, chemistry, biology, sociology; and (2) The doctrine of the "three steps" through which the human mind has to pass in the investigation of phenomena—namely, the theological or personifying, the metaphysical or abstract, and the positive or scientific. The religious side of Positivism consists in the *cultus* of Humanity considered as a corporate being in its past, present, and future. The "positive philosophy" is its theoretical or doctrinal basis, corresponding to the theology of the supernatural religions; but besides this, it consists in a worship requiring for its full development an organised priesthood, temple,

etc. Under the "life" or *régime* of positive religion Comte would include the political and social side of his system. The former involves the establishment of an international republic, consisting of the five great nations of Western Europe, which is ultimately destined to lead the whole world; the latter the reorganisation of society on the basis of a double direction—that of the temporal or material authority, and that of the spiritual or educating body. Positivism as a religion has achieved some success since Comte's death. In Paris it possesses a periodical, the *Révue Occidentale*, and Comte's apartments are kept as a place of meeting. Other groups exist in other cities of France, of the Continent, of America, both North and South, and in five or six cities in England. In London the principal places of meeting are Newton Hall, Fetter Lane, Chapel Street, W.C., and Fonthill Road, North London, N.

Post Cards. The Post Office authorities have intimated that the erasure of the whole or a portion of the original address on a postcard, and the substitution of a fresh address, would render the card likely to be challenged, and such erasures should be avoided. A company has recently been established for the sale of half-penny postcards to the public at the price of one farthing. Private firms have for some time past been able to produce postcards at cheaper rates than the Post Office themselves, but the company in question expects to make its profit from advertisements, which will occupy a considerable portion of the cards.

Postal Congresses. See POSTAL UNION.

Postal Orders. See POST OFFICE (subsection).

Post Office. (For earlier history see ed. '88.) The late Sir R. Hill introduced penny postage in 1840. Since that date rates have been low and the progress of the service has been extraordinary. For the year ending March 31st, '88, 1,512,200,000 letters were delivered, an increase of 3'6, and an average of 41 letters per head for the population of the United Kingdom. Grouping letters, post cards, book packages, circulars and newspapers together, 2,242,800,000 deliveries were made, being an average of 60 to each person. The General Post Office, London, is in St. Martin's-le-Grand, but a new General Post Office is about to be built, which will occupy the ground from the present office west to King Edward Street, a site acquired at large cost to the nation, but an acquirement expected to prove economical, owing to the saving of rentals now paid for outlying premises. During the year ending March 31st, '88, £84,500 was expended upon purchase of sites for post offices, £35,200 being spent in London, and £49,200 in the provinces. Of the sum spent in London, £33,711 was spent in completing the purchase of the site for the new buildings of the General Post Office. The number of new post offices opened in the year was 396, and 973 letter-boxes have been added. The permanent staff of the Post Office is about 56,460, including 3,872 females employed as clerks, telegraphists, sorters, &c. In addition to these employees, 49,900 persons, of whom 16,000 are females, are employed by local postmasters. The gross revenue for the year, including savings bank business, was £11,064,745. The net revenue was £2,851,340, being an increase of £336,705. The Postmaster-General is the parliamentary head; the permanent chief is the Secretary, Sir Arthur Blackwood, K.C.B. There are also

a financial secretary and four under-secretaries. Inland letters, books, and parcels sent prepaid to any part of the United Kingdom, are charged as in the following table:—

Weight not exceeding	Letter Post.	Book Post.	Parcel Post.	
			Weight.	Charge.
lb. oz.	s. d.	s. d.	lb. s. d.	
0 1	0 1	0 0½	Not ex. 1	0 3
0 2	0 1½	0 0½	" 2	0 4½
0 4	0 2	0 1	" 3	0 6
0 6	0 2½	0 1½	" 4	0 7½
0 8	0 3	0 2	" 5	0 9
0 10	0 3½	0 2½	" 6	0 10½
0 12	0 4	0 3	" 7	1 0
One halfpenny for every additional two ounces.			" 8	1 1½
			" 9	1 3
			" 10	1 4½
			" 11	1 6

No letter may be more than 18 inches in length, 9 in width, or 6 in depth, unless sent to or from a Government office. The weight is unlimited. Double postage is charged on delivery if the postage of books, letters, or patterns be not paid in advance. If the postage be insufficient, double the deficiency will be charged. The postage must be prepaid by means of ordinary postage stamps, to be affixed by the sender. The words *Parcel Post* should be written or printed on the left-hand side of the parcel, immediately above the address. The greatest length allowed for an inland parcel is 3 ft. 6 in., while the length and girth combined may be as much as 6 ft. (Thus a parcel measuring 3 ft. 6 in. in length may measure as much as 2 ft. 6 in. in girth; or a shorter parcel may be thicker, for, if it measure no more than 3 ft., it may measure 3 ft. round the thickest part.) Parcels must not be posted in an ordinary letter-box, but must be handed over by the counter of a post-office to the proper officer, by whom the size, weight and postage of each parcel is tested before being accepted. Certain parcels are prohibited being sent: such as those bearing or containing writing or marks of an offensive or indecent character; or containing gunpowder, cartridges, lucifer matches, or other explosive or combustible material, live animals, or any substance likely to cause injury to other parcels or to the officers of the Post Office; while parcels containing such articles as eggs, fish, meat or other animal matter, or knives and other sharp instruments, can only be sent if so packed as to prevent all risk or injury to other parcels. Liquid matter must be contained in bottles, cases or cans, securely stopped; and bottles and other glass articles must be so packed as to be secure from breakage. On February 1st, '88, the new contract between the Post Office and the Peninsular and Oriental Steam Navigation Co. for the mail service between the United Kingdom and India and China came into operation. It insures an increased rate of speed, and a reduction of the total cost of the service by £107,000 per annum. The Canadian Post Office, it should be mentioned, have established a provisional mail service from Montreal to Japan and China, and advantage is taken of this fact to forward correspondence by this route. The question of sending correspondence to Australia by a long sea route at a cheaper

rate of postage than is required by the route *via* Brindisi, was not settled at the time of the latest reports. **Christmas work** at the Post Office is abnormally heavy. At Christmas '87, it is estimated, over 41,000,000 letters and parcels were dealt with at the London office alone, over and above the usual numbers.—**POST OFFICE SAVINGS BANKS.** The late Mr. George Chetwynd, C.B., devised and instituted the Post Office Savings Bank scheme, which came into operation in 1861. Deposits of one shilling and upwards are received, subject to the limits of £30 in one year and £150 in all, exclusive of interest at the rate of £2 10s. per annum. Pennies may be saved by the use of Mr. Chetwynd's postage stamp saving slips, which, when they bear twelve stamps, are accepted by the Post Office as a shilling deposit. This branch of the Post Office business showed considerable increase for the year ending Dec. 31st, '87 (latest return). The amount deposited was £16,535,932, an increase of £839,080 over the amount in '86. The sum credited to depositors for interest was £1,244,074, an increase of £74,484 for the previous year. The total amount standing to the credit of depositors at the end of '87 was £53,974,065, and increase of £3,099,727. This total is exclusive of the sum of £3,345,106 Government Stock held by depositors. Herr von Strephan, the Director-General of Post Offices in Germany, has introduced the plan of Post Office Savings Banks in Germany, and his example is being followed by other European countries. The scheme by which depositors can become holders of Government Stock was initiated by the late Mr. Fawcett, when Postmaster-General, and has proved highly beneficial to the thrifty. During the year ending Dec. 31st, '87, there was a large increase in Government Stock investment business by the Post Office. The amount invested was £915,047, as compared with £841,121 the previous year, and the sales amounted to £462,785 as against £389,965—an increase of £72,926 as regards the amount invested, and £72,820 as regards the amount sold. The total amount of stock held by depositors was £3,345,106, divided among 40,270 persons—an increase over the figures of the previous year of 4,965 in the number of stockholders, and £448,165 in the amount of stock held. The average amount of stock held by each person was £83 1s. 4d., as compared with £82 1s. 1d. in '86. (For explanation of how depositors can become stockholders see ed. '88.) During last year the **Savings Bank Act**, effecting minor alterations, came into operation.—**LIFE ASSURANCE AND ANNUITIES.** This system was first instituted in '65, and has not been taken advantage of by the public to the extent that was anticipated, though since the adoption by the late Mr. Fawcett of a scheme devised by Mr. James J. Cardin, an improvement has set in. The business for '87 showed a slight increase over that for '86, full particulars of which will be found in the Postmaster-General's report for '87-88. Insurers and purchasers of annuities become savings bank depositors, and premiums are payable through savings bank accounts, and are deducted therefrom without trouble to depositors. Persons of either sex may insure their lives with the Post Office for any amount not less than £5 or more than £100, the limits of age being 14 years as the minimum and 65 as the maximum, or 8 years as the minimum if the amount assured does not exceed £5.

Immediate or Deferred Annuities are granted to any person not under five years of age for any amount between £1 or £100. Deferred annuities are granted either with or without the return of the purchase money. **Husband and wife** may each be insured to the full amount of £100, or purchase an annuity of £100. Insurances for sums not exceeding £25 are granted without medical examination, but if the insurer die before the second premium becomes payable, only the amount of his first premium will be paid, and if he die before the third premium is payable, only half the sum insured becomes due to his representatives. (For fuller account of the system see ed. '88, or obtain papers from any post office savings bank.)—**POSTAL ORDERS.** First brought into operation in '81. The system was devised by the late Mr. George Chetwynd, C.B., and has proved highly successful. With postal orders no letter of advice is used, and the orders are sold to the public like postage stamps. They must be cashed within three months from the last day of the month of issue, and when crossed become payable only to a banker. If not presented within the period named they become liable to a deduction of an amount equal to the original poundage for each three-monthly period, or part thereof, of delay. Fourteen denominations of orders are issued, the poundage varying from 1d. for a 1s. order to 1/4d. for a 20s. order. Broken amounts can be made up by postage stamps (not exceeding fivepence) affixed to the face of the order. Postal orders are issued in most of the colonies, and in India, Gibraltar, Malta, and Constantinople. A large staff of lady clerks is employed at headquarters on postal order business. The postal order business for the year ending March 31st, '88, showed a large increase. The amount transmitted by means of orders was £14,696,000, or £1,737,000 more than in '86-7. The number of orders issued was upwards of 36,300,000. The denominations most used by the public are 1s., 2s., 6d., 5s., 10s., and 20s. The system is under the direction of the Receiver and Accountant-General of the Post Office.—**MONEY ORDERS.** The system of money orders was founded in 1792 by three post-office officials, somewhat in the nature of a private speculation. In 1838 the system was incorporated with the Post Office, and since that date has rapidly developed. It insures almost perfect immunity from risk by the means of a letter of advice. The rates charged were reduced in Sept. '87, and now are: 2d. for sums of £1 and under; 3d. for sums over £1 but not exceeding £2; 4d. for sums over £2 but not exceeding £4; 5d. for sums over £4 but not exceeding £7; and 6d. for sums over £7 and not exceeding £10, the largest sum for which an order is issued. Money orders should be presented within twelve months from the month of issue. **Foreign or Colonial money orders** are also issued, payable in India, the United States, Australia, Canada, the Cape of Good Hope, in almost all our colonies, and in the following foreign countries—viz., Austria, Hungary, Belgium, Denmark (including Danish West Indies), Dutch East Indian Possessions, Egypt, France, Germany, Hawaii (Sandwich Islands), Holland, Iceland, Italy, Japan, Norway, Portugal, Sweden, Switzerland, and the United States. The rates charged are: for sums not exceeding £2, 6d.; £5, 1s.; £7, 1s. 6d.; and £10, 2s. The total number of money orders of all descriptions issued

in the year ended March 31st, '88 (last return), showed a large increase on the number of the previous year. The number was upwards of 36,300,000, and the amount transmitted was £14,696,000, or £1,737,000 more than the year before. This increase is chiefly due to the modification of rates, which has done far more than arrest a falling off that became apparent after the introduction of postal orders. The chief Money Order Office is in Aldersgate Street, London, E.C. (For full explanation of the system see ed. '88.)

POSTAL TELEGRAPH DEPARTMENT. Since the Government took over in 1870 the wires of the various private companies there has been a marvellous development of the telegraphic system. The public and the newspaper press have benefited largely by the transfer. The rates for press messages are still 1s. for every 100 words transmitted between 6 p.m. and 9 a.m., and 1s. for every 75 words between 9 a.m. and 6 p.m. to a single address, with an additional charge of 2d. for every 100 words, or 75 words as the case may be, of the same telegraphic communication so transmitted to every additional address. The rate for ordinary messages was reduced in '85 to 1d. a word, including the addresses, with a minimum charge of 6d. for the first twelve words. The number of Postal Telegraph Offices throughout the country is now nearly 6,800, and most of these offices (except the large receiving offices in London and other centres) are open from 8 a.m. to 8 p.m. Postmasters may, however, accept telegrams after the usual hours, provided the terminal office be open, or its attention can be gained. The number of telegraphic messages forwarded during the year ended March 31st, '88, was 51,403,425, being an increase of 3,150,736 over the previous year. The London local messages showed an increase of 13·8 per cent., the number being 4,337,907. The new telegraph offices opened at post offices during the year numbered 257, and 39 new offices were opened at railway stations. A very large staff of telegraphists is employed—over 2,000 at the Central Office in St. Martin's-le-Grand alone. The instruments chiefly used are the Morse Sounder, Wheatstone automatic, and the Hughes' type printer. Submarine telegrams belong to private companies, but foreign messages are received at any postal telegraph station. The chief regulations for foreign telegrams are founded upon the International Telegraph Convention, according to which regulations foreign telegrams are divided into three classes—viz., ordinary, code, and cypher. European code telegrams may be sent in any of the languages in use in Europe; or Latin may be employed; but no such telegram may contain words of more than one language. Cypher telegrams must be composed exclusively of figures, or of letters. The length allowed for a single word is, in European telegrams fifteen letters, and in extra-European telegrams ten letters. Any person may register an abbreviated or arbitrary address, a privilege taken advantage of by nearly every large user of the wires, on payment of a fee of a guinea a year. The process of placing the wires underground wherever possible has been considerably extended during the year ending March last. Of the 1,745 lines of wire entering the Central Station in London, not one is now open.

POSTAL UNION. The. Established July 1st, 1875, the result of the Postal Congress held at Berne in 1874, at which a treaty was signed by all European States except France, and

by the United States of America, and by Egypt. A Postal Congress, to discuss points and to consider propositions affecting the Union, assembles once every five years, at which delegates from all the states concerned meet. The last Congress was held at Lisbon in the early part of 1885. The countries comprised within the General Postal Union are divided into two classes—namely, A and B—and will be found printed in the "Post Office Guide," as also in the new "Penny Post Office Handbook." Under class A the rates are—for letters 2½d. per half-ounce, for post-cards 1d., for newspaper³ or packets of printed paper 1d. per 2 oz., and for patterns 1d. per 4 oz. Under class B the rates for letters are—for countries not printed in *italics*, and for Hong Kong, Japan, and New Caledonia, *vid* San Francisco, 4d. per half-ounce; for post-cards 1½d., newspapers 1d. per 4 oz.; for printed matter 1d. per 2 oz. Commercial papers same as for printed matter, except that the lowest charge is for each packet 2½d. in all cases; patterns are the same as printed matter, 1d. per 2 oz. For countries under class B, printed in *italics*, the rates are—Letters, 5d. per ½ oz.; post-cards, 2d.; newspapers, 2½d. per 4 oz.; printed papers, 1½d. per 2 oz. The fee for registration under both classes is 2d. No letter for a colony or foreign country may exceed 2 feet in length or 1 foot in width or depth.

Powderly, Mr. See KNIGHTS OF LABOUR.

Poynter, Edward John, R.A., b. 1836, studied art both in England and on the Continent. Elected A.R.A. (1869). Appointed Slade Professor of Art at University College, London (1871), and subsequently became Director of Art, and Principal of the National Art Training School at South Kensington. Besides painting cartoons for mosaics and frescoes, Mr. Poynter has exhibited many of his works at the Academy and at the Dudley Gallery. His successful pictures include portraits of Lieut.-Gen. Sir Gerald Graham and the Marquis of Ripon, the latter for the Government House at Calcutta. Other of his well-known paintings are "Israel in Egypt," "Rhodope," "The Festival," "The Golden Age," "Atalanta's Race," "The Fortune Teller," "Zenobia," and "Diadumene." He published in '79 "Ten Lectures on Art." Elected R.A. '76.

Preceptors, College of. Established 1846, incorporated by Royal Charter '49, "for the purpose of promoting sound learning and of advancing the interests of education, especially among the middle classes, by affording facilities to the teacher for acquiring a knowledge of his profession, and by providing for the periodical session of a competent Board of Examiners to ascertain and give certificates of the acquirements and fitness for their office of persons engaged or desiring to be engaged in the education of youth." With this view the charter empowers the College to hold examinations of teachers and schools, and to grant

diplomas and certificates to such persons as pass these examinations satisfactorily. To effect these objects, two plans of examination have been established:—(1) That of teachers, to ascertain their qualifications and fitness to take part in the work of instruction; (2) that of pupils, to test their progress, and to afford at once to the teacher and to the public a satisfactory criterion of the value of the instruction they receive. The diplomas granted by the College to teachers are of three grades—Associate, Licentiate, and Fellow; and a distinctive feature of the examinations is, that in all cases the theory and practice of education is an obligatory subject for each grade. In '87 the number of candidates examined for certificates exceeded 15,000. About 4,000 schools, both public and private, are now brought under the influence of the College. Visiting examiners are also appointed by the College for the inspection and examination of public and private schools. A total number of 20,000 persons are at present examined annually by the College. In '73 the Council of the College instituted a Professorship (the first established in this country) of the Science and Art of Education, and a training course of lectures and lessons for teachers is now in full operation. The new buildings were opened by H.R.H. the Prince of Wales, March 30th, '87. The C. of P. has recently acceded to a request from the London Chamber of Commerce to conduct examinations on behalf of the Associated Chambers of Commerce according to a scheme of education for those destined for mercantile life. Offices: Bloomsbury Sq. Organ: *Educational Times*.

Pre-Raphaelite Brotherhood, The. A body of artists, poets, and literary men who combined together to advocate in theory and follow out in practice certain novel theories of art, the subsequent success and influence of which was largely owing to the support they received from the powerful pen of Mr. Ruskin. See ed. '88.

Presbyterianism is church government by presbyters, and by presbyters only. The session of a Presbyterian Church consists of the ordained ruling elders, and the pastor or teaching elder of the church, who always presides; and in case of a church being vacant the pastor of some other church within the bounds of the presbytery is chosen moderator to preside. The presbytery consists of the pastors of churches, and a ruling elder from each congregation, within prescribed boundaries. The Synod consists of presbyteries within a larger area; and the General Assembly, where the size of the church renders one necessary, takes in the whole church, and consists either of the pastors of all the churches, together with a ruling elder from each congregation (called a lay elder), or representatives chosen from amongst both pastors and ruling elders. The standards of the Presbyterian body are the Westminster Confession of Faith, with the Catechisms, Larger and Shorter. But the United Presbyterian body in Scotland, and some others, receive these with an explanation, especially in respect to Chapter XXIII., of the "Confession." The United Presbyterian Church has adopted a Declaratory Statement in regard to its relation to the "Confession." The Presbyterian Church of England has a similar document under consideration. The latter body has likewise drafted a briefer declaration, entitled "**Articles of the Faith**," which is at present under con-

sideration by the Presbyteries of the Church. It embraces twenty-three "articles" on subjects supposed to be of fundamental importance. That section called the **Reformed Presbyterian Church** recognises the (morally) binding obligations of the National Covenant of Scotland, and also of the Solemn League and Covenant. With these exceptions the several sections of the Presbyterian Church stand, in respect to the doctrine, worship, discipline, and government of the Church, on a common platform. The **General Presbyterian Alliance**, established in 1875, has brought the unity of Presbyterians in all parts of the world in essentials clearly to light. The **Fourth General Council** of this Alliance met in London in '88. It comprised 300 delegates, representing more than 50 separate Churches throughout the world, with an aggregate membership of over seven million communicants. Presbyterianism is represented by a steadily increasing body in England—the result of the union in 1876 of English congregations of the United Presbyterian Synod with those of the English Presbyterian Church, under the title of the Presbyterian Church of England. There are also a small number of churches connected with the Established Church of Scotland in England. The Calvinistic Methodists in Wales, who are substantially Presbyterian in their government, have in recent years adopted the name, and now stand in close relationship with the Presbyterian Church of England. In Scotland, in addition to the Establishment, there are the **Free Church of Scotland**, the **United Presbyterian Church**, and some smaller bodies. Certain evangelical Christian Churches who do not hold the doctrines of Presbyterianism conduct their ecclesiastical affairs presbyterially. Presbyterianism is represented in Ireland chiefly in the north by several Presbyterian Churches, the most important being the "Presbyterian Church in Ireland." In the United States of America, in Canada, Australia, New Zealand, and wherever Scotch and (Ulster) Irish people settle, Presbyterianism has also taken firm root. The body, as a whole, is growing in numbers. The tone of its pulpits is evangelical. For a very long period a Liturgy was unknown amongst Presbyterians; and until lately instrumental music was not allowed in Presbyterian churches. At present there is a slight movement in favour of a Liturgy; and organs have already found their way into most Presbyterian churches. The **Presbyterian Church of England** consists of 288 fully organised congregations and 9 preaching stations, providing accommodation for 15,645 persons, besides a large number of fully equipped mission stations in connection with town congregations, with an average attendance of about 12,000 persons. The number of settled ministers is 281 (some of the congregations being vacant), with 18 ordained and 9 medical missionaries in the foreign field, besides 2 missionary teachers and 14 lady missionaries. There are also 27 licentiates, and 17 theological students, preparing for the ministry. The property of the Church is estimated at £1,350,000, exclusive of sundry investments for the endowment of the College and scholarships, and for the Sustentation Fund and other schemes of the Church, of the College itself, and of buildings for mission work abroad. Of the existing places of worship 155 have been erected since 1851, their value being estimated at £751,999; 28 of the existing congregations

trace back their existence to the seventeenth century, 42 to the eighteenth century, while the remaining 216 have been established within the present century. The revival of Presbyterianism in England in the earlier portion of the present century was due to the influence on English Presbyterianism, on the one hand of the Evangelical movement in the Established Church of Scotland which led up to the disruption, and on the other of the consolidation of the dissenting Presbyterianism of Scotland which led up to the formation of the United Presbyterian Synod in 1846. The English section of that Synod united with the older Presbyterian body in England in 1876, so forming the Presbyterian Church of England. The total income of the Church in 1886 was £206,533 16s.—£37,186 of the amount being for missionary and other general objects. The backbone of the Church finance is the Sustentation Fund, which since 1878 has secured for the body of the ministers, excluding a limited number under special arrangements, a minimum income of £200. Under this scheme 98 congregations were ad-receiving in 1887 to the amount of £5,357 15s. 6d., as against 103 in 1878 to the amount of £6,443 7s. 6d., the average amount of aid required being at date £55 per congregation, as against £62 10s. in 1878. The Church is therefore steadily consolidating. The centenary of the establishment of the Presbyterian Assembly in America was celebrated in '88.

Preston New Station. In view of a daily average of 544 trains passing daily through Preston in both directions, of which 256 carry passengers, the completion of the new station there, about the beginning of '88, was a matter of more than ordinary interest. The station is about a quarter of a mile long, being approached by an easy incline with carriage way 80 ft. wide. The centre platform is 1,360 ft. long, and 70 ft. wide, containing three large blocks of buildings, two of 120 ft. and one of 170 ft. in length. The last named contains two refreshment rooms and a dining-room capable of accommodating 300 persons, as every day, except Sunday, all the mail trains from north or south stop for twenty minutes to allow for dining. The **East Lancashire** section is connected with the **L. & Y.** and the **L. & N.W.** sections by a subway across the whole station. On the west side is a platform for ordinary passenger traffic 725 feet long, and an excursion platform 150 yds. long. The station is covered in with an iron and glass roof.

Price of Gold. See MONEY MARKET.

Prime Minister is he who at the summons of the sovereign has succeeded in forming an administration, of which he is the head, and which may be named after him. It may be assumed that those who accept office under him agree with his policy in the main. Although each member of the Cabinet administers his own department independently of his colleagues, all important departmental matters are submitted to him, the most important being brought before the whole Cabinet, and no appointment of moment is made or recommended to the Crown without his knowledge and concurrence. His own **patronage** is very extensive. In forming an administration, he selects all those who are to fill the various offices, though the appointments are subject to the sovereign's approval. It is upon his advice that as vacancies occur the archbishops, bishops

and deans and the highest judges are appointed, and over one hundred **Crown livings** are filled; and upon his recommendation that the most envied **temporal titles and honourable distinctions**—peerages, baronetcies, and the garter, for example—are conferred, and such high appointments as the Lord Lieutenancy of Ireland, the Viceroyalty of India, the principal ambassadorships and colonial governorships, and the lord lieutenancies of counties are made by the Crown. He is the leader of the House of Parliament of which he is a member. Yet as Prime Minister he enjoys no legal precedence over his colleagues, his official existence being indeed not recognised by statute.

Primitive Methodists. The first church was formed in 1810, and was composed of ten members, not connected with any other section of the Church. The following statistics were given at the last conference, held at Derby June 87, and are the latest received:—Church members, 191,662; ministers, 1,935; lay preachers, 10,138; Sabbath-schools, 4,005; class teachers, 10,681; Sunday-school teachers, 60,671; Sunday-school scholars, 410,950; church accommodation for 909,113; value of church property, £2,922,887. They have home, colonial, and foreign missions. They publish seven monthly magazines, and one 2s. quarterly. They have also three weekly papers. Their doctrinal views are Arminian.

Primogeniture. This term ought to express the fact of a person being the eldest child of his or her parents, and does express a right which he enjoys in consequence of being an eldest child. As regards primogeniture in England, we must distinguish between the law and the custom of primogeniture. The only law of primogeniture in England is that which ordains that in the event of any person dying intestate as to his real estate, such real estate shall descend to his eldest son. There is no similar rule in the case of an eldest daughter—daughters, where there is no son, inheriting equally. The custom of primogeniture is the custom of settling all one's real property upon one's eldest son.

Primrose League. A league originated in 1883, in memory of the late Earl of Beaconsfield, and so called because on the anniversary of his death every member wears a bunch of primroses. The members, who include both sexes, are styled **Knights or Dames**, and their lodges are called "**Habitations**." The lady members of the **Primrose League** took an active part in the last electoral campaign, and exercised considerable influence in London and its neighbourhood in favour of the Conservative candidates. **Grand Master:** Marquis of Salisbury, K.G.; **Chairman of Grand Council:** Lord Harris. There are now (Oct. '88) 56,000 **Knights**, 44,000 **Dames**, 638,000 **Associates**, divided among 1,942 **Habitations**. There are 39,000 members in Scotland, giving a grand total of close on 740,000 members. **Habitations** have been established in India, Malta, Cyprus, Sydney, British Honduras, Mauritius, Hong Kong, etc. **Chancellor:** T. B. Cusack-Smith, 1, Prince's Mansions, S.W. **Official Organ:** *The Primrose League Gazette* (1d. weekly).

Prince Edward Island. A province of the Dominion of Canada. It lies in St. Lawrence Gulf, north of Nova Scotia and between New Brunswick and Cape Breton. Area 2,133 sq.

m.; pop. 108,891. Capital Charlottetown, pop. 11,485. Divided into three counties. The island is long and narrow, its coasts much indented. The surface is mostly level, the soil very fertile. Agriculture extensively prosecuted. Wheat, barley, oats, pease and beans, potatoes, turnips and other crops ripen well; apples, grapes, plums, and currants grown in small quantities. Most beautiful island in St. Lawrence estuary. Climate delightful, and, with the facilities for bathing and yachting, attracts a large number of visitors.—**Administered** by a Lieut.-Governor and Executive Council. The people elect a Legislative Council of thirteen members and a House of Assembly of thirty. The Province has four seats in the Dominion Senate and seven in the House of Commons. Education is State-aided, free, and compulsory.—**Industries** are agriculture and breeding of stud-stock. The fisheries are important. Enormous quantities of lobsters and oysters annually shipped off. Manufactures are progressive, and there is some shipbuilding. Communications good by road, rail, and steamer. A submarine railway tunnel to the mainland is in progress. (see **NORTHUMBERLAND STRAITS TUNNEL**). Farms sell at about £4 per acre.—During the eighteenth century the island, then called Isle St. Jean, was a French colony; it became British after the capture of Acadia (Nova Scotia), and received its present name in 1798. Entered Dominion 1873. See **CANADA**.

Prince of Wales Island. Official name of Penang, one of the **Straits Settlements** (*q.v.*).

Principe and St. Thomas. Two islands in the Gulf of Guinca belonging to Portugal. Area 454 sq. m., pop. 20,888. See **COLONIES OF EUROPEAN POWERS**.

Prinsep, Valentine C., A.R.A., b. 1838, and though intended originally for the Indian Civil Service, preferred the profession of an artist. His paintings, which are regularly exhibited at the Academy, are held in high reputation for their power and vigour of design, and the excellence of their colouring. He has published a work on Indian travels, entitled "**Imperial India**." Elected an A.R.A. (79).

Prisons constitute an important department in our home administration. The Chief Office is at the **Home Office**, where Sir Edmund Du Cane, K.C.B., B.E., is Chairman and Surveyor-General of Prisons. In the maintenance of prisons in England £466,000 a year is required; and in Scotland £109,000. There are four prisons in the Metropolis known as Her Majesty's Prisons, and the number of convict prisons throughout the country is fourteen, of which Millbank, Portland, Chatham, and Wormwood Scrubs are the best known; besides these, there is a large number of local prisons. According to the latest report, the population of the local prisons last year was the lowest of which there is any record during the last thirty-seven years. On March 31st, '87, the number was 74,966, as compared with 15,375 on March 31st, '86.

Pritt, Thomas Evan, angling editor of the *Yorkshire Post*, was b. 1848 at Preston. He is author of "**North Country Flies**" ('85; 2nd ed. '86), "**The Book of the Grayling**" ('88), "**Around Settle**," and writer of numerous articles on banking and other topics. Founded, '85, the **Yorkshire Anglers' Association**, of which he is the hon. sec.

Privateering. See ed. '88.

Privileges, Committee for. The petition of every claimant to a title of nobility is referred to the Committee for Privileges of the House of Lords, a body which is composed of the Lord Chancellor, the ex-Lord Chancellors, and the Lords of Appeal, or some of them, the President being the Chairman of Committees. Counsel and witnesses may be heard, and the case is decided by the majority of the members of the committee present.

Privy Council (see **MINISTRY**). A body of persons nominated by the sovereign without any patent or grant, and who, upon taking the oath of office, are at once qualified members. A privy councillor must be a natural-born British subject, and as he is created by the sovereign, so he can be removed from the list at her pleasure. It is customary to include in the body the royal princes and the archbishops; several of the principal officers of State and of the Household become privy councillors by virtue of their office; the principal secretaries of state are of course sworn of the Council before they can take part in the deliberations of the select number of the body which we know as the Cabinet Council; the Judge Advocate-General is always included; and the rank is bestowed upon ambassadors and the principal colonial governors, and frequently upon respected politicians, who may never have been in office, as an honorary distinction. Any privy councillor may act as a justice of the peace. The Lord President of the Council is appointed by letters patent under the great seal; his duty is to manage the debates in council, to propose matters from the sovereign at the council table, and to report to Her Majesty the resolutions taken thereon. It is only on rare occasions that the whole body of members assembles, one of those instances being at the demise of the Crown, when it is the duty of the Privy Council to meet and proclaim the new sovereign. For the ordinary business of the Council only those who are summoned attend, and the number thus called upon is usually very small, and consists generally of members of the party in power. Among other important functions of the Council are the establishment of quarantine when it may be necessary, the granting of charters of incorporation to public and private bodies, and the bringing into operation by means of orders in council of the provisions of many statutes which Parliament leaves to the executive to enforce, temporarily or permanently, at such time or times as it may deem necessary and desirable. Royal proclamations, summoning or proroguing or dissolving Parliament, and for many other purposes, are made by and with the advice of the P.C. before being issued. Several public departments have grown out of or are even now committees of the Council. The **Board of Trade** (*q.v.*), though now an entirely separate department, is still officially entitled the Committee of Council for Trade. The **Education and Agricultural Departments**, each presided over by its own vice-president, are Committees of Council, and there are besides a **Universities Committee**, which reviews the statutes made under the Oxford and Cambridge Act, and a **Judicial Committee** for appellate business. The **Privy Council in Ireland**, a much smaller body than that just referred to, advises the Lord-Lieutenant and exercises some of the powers possessed by the Council in Great Britain, but in relation to Irish affairs only.

Privy Council, Her Majesty's Most Honourable. As the Privy Council in Great Britain and the Privy Council in Ireland are distinct bodies, though it will be noticed that some persons are members of both, a separate list of each is set out, corrected to Dec. 8th, 1888. In the second column is given the date on which each Privy Councillor was sworn in. The word "Peer" is inserted in the third column to signify that some particulars regarding the public life of the noble lord referred to are given under the head of "Peerage"; and "M.P." is meant to refer the reader to our list of the House of Commons. In cases where the Privy Councillor is neither Peer nor M.P. some biographical facts are appended. All Privy Councillors should be addressed as "Right Honourable."

Privy Council in Great Britain.

Lord President—The Rt. Hon. Visct. Cranbrook, G.C.S.I.

Clerk of the Council—Sir William Kaye, C.B., LL.D., Q.C.

* For biographical facts relative to these right hon. gentlemen see Her Majesty's Privy Council above.

Privileged Communications. A privileged communication may mean either a communication which, although in itself containing all the characteristics of libel or slander, does not subject the person making it to the consequences of uttering a slander or publishing a libel; or a communication which the person to whom it is made cannot be called upon to disclose when giving evidence in a court of justice, although it be relevant to the matter in hand. The former kind of privileged communication can best be discussed under the head of Libel (*q.v.*) or Slander; the latter kind alone will be considered here. Privileged communications of this kind fall under one or other of the following heads: (1) **Official communications** between public officers on public affairs. But the head of the department concerned may permit such communications to be divulged. (2) **Communications made in either house of parliament.** But either house can permit them to be divulged. (3) **Communications as to the names of persons** who have given information concerning offences in whose prosecution the Government is directly interested. (4) **Communications made between jurors** in the performance of their duty. These are privileged, at all events when a juror is under examination. (5) **Communications made to a legal adviser** in the course of his employment. But these are not privileged if made in furtherance of crime. The privilege extends to the client as well as to the legal adviser. (6) **Communications made during marriage** by wife to husband or husband to wife. Communications made to clergymen or medical advisers are not privileged. Consult Sir James Stephen's "Digest of the Law of Evidence."

Privileges of Peers and Members of Parliament. Certain privileges of the peers are defined in standing orders, some of which date from the seventeenth century; while the Commons, through their Speaker, claim their privileges immediately after the first meeting of a new parliament; but the privileges thus defined and claimed have been greatly modified by Acts passed by the two houses themselves. At the present time a peer or peeress of Great Britain or of Scotland or Ireland, whether representative or not, and a peeress whether by birth, marriage, or creation—but not a peeress by marriage who has become widowed and has married a commoner—is still free at all times from arrest or imprisonment on civil process; but their servants have long since been deprived of the protection they formerly enjoyed. And by an Act of 1871 bankrupts are disqualified from sitting and voting in the House of Lords until the bankruptcy be determined either by being annulled or by the satisfaction of the creditors; and the seat of a representative peer for Scotland or Ireland is vacated unless his bankruptcy be determined within one year after the date of his becoming a bankrupt. Neither a peer nor a member has, nor did he have formerly, any privilege against being compelled by process of the courts to pay obedience to a writ of *habeas corpus* (*q.v.*) directed to him. When the Speaker's election has been approved and confirmed by Her Majesty, he lays claim by humble petition to the "ancient and undoubted rights and privileges" of the Commons, and especially "to freedom from arrest and molestation for their persons, servants, and estates, to freedom of speech in debate, to free access to Her Majesty

whenever occasion may require it, and to the most favourable construction being put on all their proceedings"; and the Queen through the Lord Chancellor confirms all the rights and privileges which have ever been granted to, or conferred upon, the Commons by Her Majesty or any of her royal predecessors. But in regard to the first part of this claim made by and allowed to the Commons, freedom from arrest, and that on strictly civil process only, is now confined to the member alone, and is enjoyed only during a period of forty days before the meeting of parliament, during the sittings of the House, during a period of forty days before and after any day to which parliament is prorogued, and until an uncertain or "reasonable" period after a dissolution. But members are brought under the bankruptcy laws, for if any one of them be adjudged a bankrupt he is unable to sit and vote for one year, unless the order of adjudication be annulled or his creditors be satisfied; and if at the expiration of one year the bankruptcy be not determined in either of these ways, the seat becomes vacant. Actions at law are maintainable against members of both Houses; they are subject to penalties, and may be arrested for indictable offences; and members of the House of Commons have been committed in certain instances for contempt of court without subsequent interference by the house. Peers and members are not compelled to obey a subpoena, though in practice they do answer a summons of the kind; and they are exempt by statute from serving on juries. Although no member may use unbecoming words in regard to another member without risking suspension if he decline to explain or retract, freedom of speech with reference to those who are not members is enjoyed to the very fullest extent, and statements may be freely made within the walls of parliament which, if uttered elsewhere, would be libellous and actionable. Free access to Her Majesty is the right of peers individually, as well as of the House of Lords as a body; but the other house only possesses the right collectively. By resolutions of the House of Commons no peer, except an Irish peer who has been elected an M.P., can vote or concern himself in a parliamentary election. Members of either house are protected against insult or threatening; and the offer of money to any member for promoting a parliamentary matter is a breach of privilege which may be severely punished. A committee appointed by the House has recently (Dec.) been investigating an alleged breach of privilege in the case of Mr. Sheehy, M.P., on whom a summons was attempted to be served in the precincts of the House. See IMPEACHMENTS AND TRIAL OF PEERS (ed. '88), and INTERVENTION OF PEERS IN PARLIAMENTARY ELECTIONS.

Prize Ring, '88. (For earlier history see ed. '88.) Finding it useless to attempt bringing off their much talked-of match for £1,000 in this country, John L. Sullivan, Champion of England, and Charles Mitchell, a native of Birmingham, journeyed to Amiens, and on March 17th, '88, a ring was pitched in a secluded spot on the training grounds of Baron Rothschild, at Apremont. At the commencement odds of 3 to 1 were freely laid on the American, but round by round the odds gradually lessened, until

towards the close even money was taken. After the encounter had lasted 3 hours and 11 minutes, during which time 39 rounds were decided, a draw was suggested, and this meeting with general acquiescence, the men shook hands and a draw was declared. On the return journey the party was surrounded by a body of mounted gendarmes, and those who endeavoured to escape were fired at, but fortunately without any injury being done. Sullivan and Mitchell were detained all night in cells, but the remainder of the company were liberated after some few hours' detention. The principals were subsequently admitted to bail, and failing to appear, forfeited the substantial sums they had lodged in the hands of the French authorities. Sullivan's age was given at 29 years, his height at 5 ft. 10 in., and his weight 14 st. 9 lb.; whilst Mitchell was said to be 26 years of age, his height being 5 ft. 8 in., and his weight 12 st. Both are now in America, where Sullivan and Kilrain are expected to fight for £1,000 a side early in '89.—**Tom King**, who defeated Heenan at Wadhurst, in Sussex, on Dec. 8th, '63, died at his residence, Clarence House, Clapham Park, of bronchitis, on Oct. 4th. He was a man of fine physique, and, like Gully, on leaving the prize ring devoted himself to turf pursuits with almost equal success, the value of his personal estate being declared on Nov. 13th at £54,472.

Probate, Legacy, and Succession Duties.

The law relating to these duties is intricate and bulky. Their general nature may be shortly explained. (1) **Probate Duty**.—Every will of personal property must be deposited in the Probate, Divorce, and Admiralty Division of the High Court, a copy thereof being given to the executor. This copy is called the probate, and formerly bore a graduated stamp. Hence the name of probate duty given to the stamp duty upon such personal property as passes by will or by intestacy, the stamp in the latter case having been affixed to the letters of administration. The stamp is now affixed to the affidavit required from the person applying for probate or letters of administration. The duty is levied on the following scale, debts and funeral expenses being deducted in every case:—

Estates not exceeding in value—

£100; no duty.

£500; duty at the rate of £1 for every £50 or fraction of £50.

£1000; duty at the rate of £1 5s. for every £50 or fraction of £50.

Estates exceeding in value

£1000; duty at the rate of £3 for every £100 or fraction of £100.

Where the gross value of the estate does not exceed £300 it is cleared of duty by depositing with the proper officer 5s. for fees of court and 30s. for stamp duty. (2) **Legacy Duty**.—Upon payment or delivery of any legacy, or of the share taken by any person in the event of an intestacy, the legatee or recipient of the share must give a stamped receipt. The stamp duty in these cases is known as legacy duty. It is not levied upon any legacy or share out of a personal estate of less than £100 in all, nor upon any legacy or share taken by the husband or wife of the deceased, or by any child, grandchild, etc., or any parent, grandparent, etc., of the deceased, or by any of the royal family. Where the legacy, etc., is taken by

a brother or sister of the deceased or by any of their descendants, the duty is at the rate of £3 per cent. Where the legacy, etc., is taken by an uncle or aunt or by any of their descendants, the duty is at the rate of £5 per cent. Where the legacy, etc., is taken by a grand-uncle or grand-aunt or by any of their descendants, the duty is at the rate of £6 per cent. And in all other cases the duty is at the rate of £10 per cent. (3) **Succession Duty**.—The probate duty can be levied only upon personal estate, because only such estate passes through the hands of executor or administrator. Legacy duty can be levied only upon fragments of the personal estate given by will or taken under an intestacy. But there are other modes in which personal property may devolve from the dead to the living, and real property so devolves as much as personal. By the Succession Duty Act of 1853, a duty graduated like legacy duty is imposed on every succession, whether to real or personal property, not covered by legacy duty. For the purpose of this Act real property upon devolution is taken to be of value equal to the value of an annuity for the life of the successor, and equal in amount to the annual value of the estate. The duty upon a succession to real property is paid in eight equal instalments, the first falling due twelve months after the successor becomes entitled, and the others at successive intervals of half a year.

Probation of First Offenders Act, '87, provides that in any case in which a person is convicted of any offence punishable with not more than two years' imprisonment, and no previous conviction is proved against him, the Court may, instead of sentencing him at once to punishment, direct that upon entering into a recognisance with or without sureties, he may be released upon probation of good conduct; and if he fail to observe the conditions of his recognisances he may be rearrested on warrant and brought up for judgment.

Proctor, Richard Anthony, B.A., b. at Chelsea 1837. Educated at King's College, London, and St. John's, Cambridge, graduating 23rd Wrangler ('60); F.R.A.S. ('66). Having analysed results collected by the Herschels, Struve, and others, and carried out a series of original researches, he was led to a new theory, established by subsequent discoveries, of the structure of the *stellar universe*. He also published many illustrative charts. In 1875 Mr. Proctor announced his secession from the Roman Catholic Church, with which he had been connected some years. Mr. Proctor has published numerous and important works on "The Sun," "The Moon," "Other Worlds than Ours," "Chance and Luck," "Other Suns than Ours," etc. Editor of *Knowledge* (q.v.). Died in September, whilst in Florida.

Protoplasma. See ed. '88.

Provident Medical Association, Metropolitan. Established for the purpose of securing the supply of medical attendance and medicine during sickness to the families of the wage-earning classes by the payment of a weekly sum, regulated by the number in each family. See W. G. Bunn, 5, Lamb's Conduit St., Bloomsbury, W.C.

Province Wellesley. Part of Straits Settlements (q.v.).

Provincial Colleges (non-Theological). The foundation of Owens College, Manchester, in 1851, led the way in a movement which, aided by the stimulus of "University Extension" (*q.v.*) has during the last twelve to fifteen years spread to many of the large non-university towns of Great Britain. The following is a list of such institutions, with date of foundation:—Durham University College of Physical Science, at Newcastle-on-Tyne, 1871; University College of Wales, Aberystwith, 1872; Yorkshire College, Leeds, 1874; University College, Bristol, 1876; Firth College, Sheffield, 1879; Mason College, Birmingham, 1880 (originally a "Science" college, but extended in 1881 so as to include a Faculty of Arts); University College, Nottingham, 1881; University College, Liverpool, 1882; University College, Dundee, 1883; University College of South Wales and Monmouthshire, Cardiff, 1883; University College of North Wales, Bangor, 1884. The scheme of most of these colleges is to provide a higher education after the type of University College, or King's College, London, and they all (except Newcastle) include chairs belonging to "Arts" subjects, though several of them began as pure "Science" colleges. The government is vested in a council and an academic board or senate, composed of the professors; most of them have a principal, and are open to both sexes without distinction. This, the first important experiment in mixed education in this country, has been an undisputable success; no difficulties have arisen, and the presence of lady students in the classes is generally pronounced to have a beneficial effect upon discipline. The curriculum may be generally divided under two heads: (1) regular or systematic instruction in the day classes, (2) popular instruction in the evening classes; but some colleges are taking steps to provide systematic evening instruction, especially for teachers in elementary and other schools who desire to widen their culture, and also, in co-operation with school boards, to provide a course of training for the government (teachers) certificate. The regular day students usually aspire to a degree at the University of London (or Oxford, which in 1884 opened most of its honour examinations to women without the condition of residence), or else are engaged in preparation for technical or industrial pursuits. The colleges are also largely attended by non-regular students (mostly ladies), who have no professional object in view, but welcome an opportunity of study under the direction of a professor. The average proportion of male and female students may be roughly stated as two-thirds males and one-third females. The colleges have for the most part secured as their professors men of the highest academical standing. The problem of the future is the development and grouping of these colleges as provincial universities—a matter intimately connected with the new movement for the creation of a teaching university of London. The history of Manchester, which obtained its charter for Victoria University in 1880, points to the establishment in course of time of a University of Wales and a University of the Midlands.

Prussia. See GERMANY; and for Ministry, etc., see DIPLOMATIC.

Pseudonyms. See NOMS DE PLUME.

Psychical Research, and the Society for. Founded 1882, under the presidency of Pro-

fessor H. Sidgwick, of Cambridge, "for the purpose of making an organised attempt to investigate that large group of debatable phenomena designated by such terms as mesmeric, psychical, and spiritualistic." The main work of the Society has hitherto been the examination of telepathy—viz., the affection of one mind by another otherwise than through the recognised organs of sense. Such communication may be established voluntarily for the purposes of experiment, and also appears to take place spontaneously between absent persons on occasions of special excitement, and particularly at the moment of death. Reports of a number of varied and careful experiments in induced telepathic communication are published in the "Proceedings," and a large collection of spontaneous cases has been published in a book entitled "Phantasms of the Living." The Society has also taken a prominent part in the recent investigations of hypnotism; and has done critical work in examining and exposing the alleged marvels of so-called theosophy. The Society has about 650 members and associates; and an allied society has recently been established in the United States (see further ed. '87). Hon. Secs., Messrs. F. W. H. Myers and F. Podmore. Offices and Library, 19, Buckingham St., Adelphi, W.C.

Public Accounts. Report of the Committee of the House of Commons on, in '87. See ed. '88.

Public Bill. See PARLIAMENTARY PROCEDURE.

Public-Houses, Hours of Closing (Scotland) Act, '87, enacts that after Jan. 1st, '88, the local licensing authority may fix an hour of closing not earlier than ten nor later than eleven p.m.; but does not apply to any town containing 50,000 inhabitants or upwards, and does not alter the existing law relating to travellers or persons requiring to lodge in an hotel.

Public Libraries Acts, '75-77. Under these Acts the town council of any borough, local board of any local board district, and vestry of any parish, may, and upon the request in writing of ten ratepayers shall, by means either of a public meeting, or by the issue and collection of voting papers, take the sense of the ratepayers on the establishment of a free library or museum. Should there be a majority of votes in the affirmative the town council or local board may establish and maintain such a library or museum; but a vestry must appoint for that purpose not less than three nor more than nine ratepayers to act as commissioners. The commissioners go out of office one-third at the end of each year, and are to meet once every month. The property of the library, etc., is vested in the commissioners, local board or town council, who may impose any rate not exceeding a penny in the pound, and raise loans where necessary. They cannot do this, however, without the consent of their vestry. No charge is to be made for admission to the library or museum. If the majority of ratepayers voting is adverse to doing anything, the question cannot again be put to the vote until one year has elapsed. A parish wishing to adopt the Acts may for that purpose unite with any other place which has adopted them if the local authority of that place consent. **Public Libraries Act Amendment Act, '87**, empowers the library authority to establish and maintain a lending library without providing any

separate building for containing the same. The power of adopting the principal Act is extended to district boards in the Metropolis, without depriving any vestry within such district where the Act is not in force of the power to set it in motion.

Public Prosecutions, Director of. See DIRECTOR.

Public Schools of England. Many of the great public schools are richly endowed, and since the report of the Royal Commission their condition has greatly improved, and in several new schemes have been adopted which have resulted in increased benefit flowing from the endowment. See under various alphabetical headings.

Public Works Loans Act. See FINANCE, NATIONAL.

Public Works Loans Commissioners are an unpaid body who regulate the conditions upon which loans may be granted by the National Debt Commissioners to local bodies for baths and washhouses, burial grounds, conservancy and improvement of rivers, main drainage, docks, harbours, piers, improvement of towns, labourers' dwellings, lighthouses, lunatic asylums, police stations in counties and boroughs, public libraries and museums, schoolhouses, water works, and other sanitary and local purposes. The report of this commission for 1887-8 was issued on Dec. 6th last. It shows that during the year the amount advanced to local authorities was £1,196,121, as against £1,059,963 in the previous year. The total included the following £73,700 for providing dwellings for the labouring classes chiefly in London; £76,975 for harbours and passing tolls; £500,682 for sanitary purposes in England and Wales; and £113,891 for similar purposes in Scotland; £287,216 to school boards in England and Wales; and £137,307 for school boards in Scotland; £1,100 to burial boards in England; and £4,450 to boards of guardians in England. The sum received in repayment of principal during the year was £1,652,992 18. 7d., an excess of £575,512 68. 3d. over the amount for the previous year, this increase being chiefly due to the large number of cases in which borrowers paid off their loans in whole or in part before they were due. The sum received for interest during the year was £1,032,607 28. 8d., representing £3 12s. per cent. on the total balance of loans outstanding, amounting to £28,678,666 98. 3d. **Office,** 3 Bank Buildings, E.C. **Chairman,** Herbert Barnard (unpaid); **Secretary** R. Philpot (£1,275); **Assistant Secretary,** A. C. Taylor (£632).

Public Worship Regulation Act, '74. See ed. 88.

Puerto Rico. The largest and most westerly island of the Leeward group of the Lesser Antilles. It is a dependency of Spain. **Area,** 3,550 sq. m., pop. 784,799. The small adjacent islands of Bieque and Culebra appertain to this colony. Capital, San Juan de Puerto Rico, pop. 39,000, with an excellent harbour. Other port towns are Ponce and Mayaguez.—The interior is elevated: highest point 3,678 feet. In general Puerto Rico may be described as extremely fertile, with delightful scenery, and the healthiest of all the Antilles. The higher grounds are well adapted to the cultivation of several kinds of European corn, and in the

lowland pastures large herds of excellent cattle are reared. The principal exports are sugar and molasses, coffee, tobacco, and rum. Gold, iron, copper, coal, and salt are found, but the last alone is worked. Statistics included with those of Cuba (*q.v.*). Government also similar, under a Captain-General.—Discovered by Columbus, 1493; attempt at independence, 1820; Spanish supremacy established, 1823; declared a province of Spain, 1870; last traces of slavery abolished, 1873. Consult Bates' "Central and South America and West Indies," Layard's "Through the West Indies," etc.

"Punch." The well-known illustrated satirical weekly (*3d.*) was founded July 17th, 1841. Its first editor was Mr. Mark Lemon, to whom succeeded Mr. Shirley Brooks, Mr. Tom Taylor, and Mr. F. C. Burnand (*q.v.*), its present editor. Among its many talented artist-contributors may be noticed the late Mr. John Leech, the late Mr. Richard Doyle, the late Mr. Charles H. Bennett, Mr. John Tenniel (*q.v.*), Mr. Harry Furniss, Mr. Du Maurier (*q.v.*). Among its past literary contributors, Jerrold, Thackeray, G. A. Beckett; and among its present Mr. Lucy ("Toby") (*q.v.*), late editor of the *Daily News*, and Mr. Anstey-Guthrie (*q.v.*), author of "Vice-Versa."

Punjaub. See INDIA; and for Ministry, etc., see DIPLOMATIC.

Purgatory. The idea of an intermediate state after death, in which the souls of the departed await the final judgment, is common to the Jewish and Christian Churches, though the English Church refrains from all dogma on the subject except so far as to repudiate decisively the Romish doctrine of Purgatory. That doctrine, or at least the germ of it, appeared as early as the third Christian century. The idea of a purgatorial fire in which the sins of the flesh are burnt away was favoured by the Gnostics, and all who held the inherent corruption of matter. The Romish doctrine is that the souls in Purgatory are secure of eventual salvation, and suffer during a longer or shorter time for their venial sins committed in the body. Also that they are assisted, and their term of purgation shortened, by the prayers of the faithful and the intercessions of saints. Beyond this the Council of Trent refuses to define, and deprecates too curious speculation. In the Western Church fire has been generally accepted as the purifying agency, but the Eastern leaves the question open. The open and scandalous sale of indulgences for the remission of the pains of purgatory was one of the chief occasions for the breaking out of the Reformation movement of the sixteenth century.

PYX (Lat. *pyxis*, a small box) has survived in two special senses. It is the small box in which Roman Catholic priests keep the consecrated wafer, and is often exceedingly valuable. (In this sense not to be confounded with "Pax," which is a little medal of trifling value kissed by priest and people in the Roman Church, as the medium of the "kiss of peace.") It is also the box in which were formerly kept the standard gold and silver coins of the realm in the Chapel of the Pyx at Westminster Abbey. The annual "trial of the Pyx"—the testing of the mint coinage for weight and fineness—is made under the provisions of the Coinage Act 1870.

Quarantine. The quarantine laws existing in the various countries of the world are wisely designed to prevent the importation of infectious diseases. By their operation all communication with persons, goods or ships arriving from places infected with contagious disease, or supposed to be peculiarly liable to such infection, is interdicted for a period—ranging from a few days up to forty, according to circumstances. When the quarantine regulations first came into operation the general belief was that a period of forty days should elapse between the time of a vessel leaving an infected port and her admission to any other place; and on this belief the term quarantine is founded, being derived from the Italian word *quaranta*, forty. The English quarantine regulations are embodied in the Act 6 Geo. IV., c. 78, and the Orders in Council issued under its authority. The publication in the *Gazette* of such Orders in Council is held to be sufficient notice to all concerned, and no excuse of ignorance can be pleaded should the regulations be infringed. The Orders specify what vessels are liable to perform quarantine, the places at which it is to be performed, and the various formalities to be observed. With a view to invalidating any plea of ignorance that might be raised, the Orders set forth that vessels clearing out for any place with respect to which there shall be at the time any Orders in Council subjecting vessels from it to quarantine are to be furnished with an abstract of the quarantine regulations, and their owners are to provide them with quarantine signal flags and lanterns, and with appliances for fumigating or otherwise disinfecting articles. The period for which a vessel is subjected to quarantine varies according to the state of her bill of health, a document bearing the signature of the consul or other competent authority of the port which the vessel last touched at.

Quarries Fencing Act, '87. See *ed.* '88.

Quarterly Review. Founded Feb. 1800, its first editor being William Gifford, the translator of "Juvenal." The *Quarterly* has long maintained a high reputation as the leading review of the day, its political articles and reviews being contributed by the first authorities, amongst whom have been, and are, the most distinguished names in literature. Editor, Dr. W. Smith (*q.v.*) (since 1867).

Quatuor Coronati Lodge [No. 2076] London.—Consecrated 12th Jan. '86. The whole of its members are possessed of a literary or artistic qualification, the lodge being practically composed of well-known Masonic historians and antiquaries; hence fellowship of it is deemed the "blue ribbon" of the Society by those who are the literates of the fraternity. This being a literary lodge, it occupies a position totally distinct from all other Masonic lodges. The following are its main objects:—(1) To provide a centre and bond of union for Masonic students. (2) To attract intelligent Masons to its meetings, in order to imbue them with a love for Masonic research. (3) To submit the discoveries or conclusions of students to the judgment and criticism of their fellows by means of papers read in the lodge. (4) To submit these communications and the discussion arising thereon to the general body of the craft

by publishing, at proper intervals, the transactions of the lodge in their entirety. (5) To tabulate concisely, in the printed transactions of the lodge, the progress of the craft throughout the world. (6) To make the English-speaking craft acquainted with the progress of Masonic study abroad, by translations (in whole or part) of foreign works. (7) To reprint scarce and valuable works on Freemasonry, and to publish manuscripts, &c. (8) To acquire permanent premises and form a Masonic library and museum. Sir Charles Warren, G.C.M.G., was its first Worshipful Master, followed by Robert Freke Gould (barrister-at-law), the well-known author of "The History of Freemasonry." The present master is Mr. Wm. Simpson (of the *Illustrated London News*.) In connection with the lodge is a correspondence circle (established Jan. '87). This is a Masonic Literary Society in close and intimate connection with the lodge, and composed of brethren who are unable, from various causes, to become members of the inner circle. It now numbers over four hundred members, who reside in every part of the world, and it includes many of the most distinguished members of the craft. The lodge and correspondence circle together issue to their members, at irregular intervals, a well-printed and most handsomely illustrated publication entitled "*Ars Quatuor Coronatorum*" (imp. 8vo), which contains a verbatim report of the papers read in lodge and the discussions thereon, also other papers, essays, reviews, &c., communicated to the secretary for publication. Four parts have now been issued. The first volume of "*Reprints*" is now in the press, and will shortly be issued. It will contain a facsimile reprint of several scarce Masonic pamphlets, &c., including a lithographic facsimile, in two colours, of the whole of the "*Masonic Poem*" (*circa* 1390), the earliest MS. in existence relating to Freemasonry in any tongue. Vol. II. will contain a coloured facsimile of the Cooke MS. (the second in point of age), together with an exact reproduction of Dr. Anderson's *Constitutions* of 1738, which has never yet been reprinted. In order to more thoroughly diffuse information concerning the correspondence circle, the lodge, in June '88, adopted a scheme in accordance with which a local secretary will, in course of time, be appointed for each province in the United Kingdom. Gen. Sec. and Editor, George William Speth, Streatham House, Margate.

Quebec, a province of the Dominion of Canada. It lies eastward of Ontario, occupying both banks of the St. Lawrence. Area 193,355 sq. m.; pop. 1,359,027; mostly descendants of original French colonists. Capital **Quebec**, pop. 65,000; a picturesque, impregnable fortress, with historic associations. **Montreal**, a splendid city, chief seaport, head of St. Lawrence navigation. Other towns are Three Rivers, Lévis, Sorel, St. Hyacinthe, Sherbrooke. — Divided into districts and 63 counties. — Principal rivers are the St. Lawrence, and its tributaries the Saguenay, St. Maurice, Richelieu, Chaudière, &c., which present magnificent scenery. Province more varied in character than Ontario, hilly in parts, with much pine forest abounding in furred and feathered game. Climate healthy; winter cold, with

heavy snow and ice, but clear and bracing; summer pleasant, warmer than in England, and admitting of a richer flora.—**Administered** by a Lieut.-Governor and responsible Ministry. A Legislative Council of 24 members appointed for life by the Lieut.-Governor. Legislative Assembly elected by 65 constituencies. Quebec has 24 seats in the Dominion Senate and 65 in the House of Commons. Religion chiefly Roman Catholic. Education superior, denominational. Primary education obligatory, not free, under local control.—**Industries** less forward than in Ontario. Much of the soil rich and loamy, and well suited for the growth of cereals, hay, and fruit crops. Farming extensively carried on in the eastern townships. Hay a leading crop, and exported to the United States. Beef and cattle exported to England. Lumbering extensively carried on. Fisheries of great importance, both those of the St. Lawrence and of inland waters. Gold, iron, and copper ores abound. Improved farms sell at £4 to £6 per acre, unimproved at 1s. 8d. to 2s. 6d. per acre, four-fifths deferred. Certain sections free grants in hundred-acre lots. Eastern townships on United States border, settled by royalists after War of Independence, are an excellent location for English emigrants.—Quebec was settled as a French colony in 1608. In 1759 it was captured by British troops under General Wolfe, and in 1763 ceded to England by Treaty of Paris. It became a province of the Dominion in 1867. See CANADA; and for Executive Council see DIPLOMATIC. Consult Faillon's "Histoire de la Colonie Française en Canada," Garneau's "Histoire du Canada," "The Canadian Almanac for 1888," Petherick's "Catalogue of York Gate Library," etc.

Queen Anne's Bounty. See ed. '88.

Queen's Counsel. The first King's Counsel was appointed in 1504, and was Francis Bacon; in 1668, Francis North received a similar appointment. They have superseded to a great extent the older rank of serjeant-at-law. Lord Eldon appointed several "batches," and his practice has been followed by succeeding Lord Chancellors.

Queen's Jubilee Presents. See ed. '88.

Queen's Speech. '88. See Session, sect. 2.

Queensland. The most recently organised of the Australian colonies. Comprises the N.E. section of the continent, immediately N. of New South Wales. On the W. it is divided from South Australia by 131st meridian of E. long. from New South Wales boundary to 26° S. lat., thence by 138th meridian to Gulf of Carpentaria. It is 1,300 miles N. to S., and 800 miles E. to W., including 668,497 sq. m. of area. Population, 342,614. The capital is Brisbane (pop. 73,000), situated on Moreton Bay, 500 miles N. from Sydney; and is a thriving city, rapidly increasing, and provided with various excellent institutions. Other leading towns are Cooktown, Gympie, Ipswich, Mackay, Maryborough, Rockhampton, Roma, Toowoomba, Townsville, Warwick, and Charters Towers, with a number of other rising municipalities and townships.—The colony is divided into 12 districts; a very small portion being subdivided into 37 counties. For other purposes there are 17 municipalities, 6 boroughs, 3 shires, and 88 divisions. The districts are: Moreton, coal, gold, sugar, metropolitan; Darling Downs, richest pastoral and agricultural; Burnett, pastoral and tropical agriculture; Port Curtis, gold, copper, marble,

agriculture; Leichardt, pastoral and mining; Maranoa, pastoral; Kennedy, richest sugar districts, gold; Warrego, pastoral; Burgh, Mitchell, Gregory, Cook, pastoral and mining.—The chief rivers are the Mitchell, Flinders, Leichardt, and Gregory, flowing into Gulf of Carpentaria; Burdekin, Fitzroy, Burnett, Brisbane, flowing east to the sea; Diamantina, Barcoo, etc., lost inland; and tributaries of Darling flowing south. The Coast Range and the Dividing Range are the main mountain chains. The Great Barrier Reef extends all down the eastern coast, at average 300 miles from the shore. The country is generally well-watered and fertile. Many rivers navigable, flowing through valleys clothed in luxuriant vegetation. Forests and jungles abound in exceedingly valuable timber and useful plants. Most productions of tropical and warm temperate zones can be raised. Climate warm, but healthy and favourable to Europeans. Besides great capabilities for industrial enterprise, Queensland has immense natural resources. Half of its area is stated to be forest, and little has been done to utilise it. The Government contemplates ('88) surrounding the colony with a fence 7,000 miles long, to keep out the rabbits, which have proved such a pest elsewhere, but have not yet established a footing here. Coal, gold, tin, copper, lead, silver, antimony, mercury, are found in quantity. Chief exports are wool, gold, tin, copper, arrowroot, pearl-shell, tortoise-shell, meat, bêche-de-mer, rum, sugar, timber, etc. Suitable climate for jute and other fibre-plants, grape, tobacco, etc. Pastoral regions probably the richest in the world.—Executive vested in Governor and responsible Ministry. Parliament consists of two houses: Legislative Council and Legislative Assembly. The former is composed of 36 members, nominated by Governor for life. Later elected quinquennially—electors being owners of £100 freehold, or £100 annual value or rent. 39 members, returned by 42 electorates. The colony is represented in the Federal Council of Australasia. There is no State Church. Chief sects are Church of England, Roman Catholic, and Presbyterian. Valuable land grants were formerly made to these bodies, which they now retain free from taxation. Education is free and secular, and is well provided for in every branch. It is under control of Minister for Education. There are primary schools and grammar schools. There is a volunteer force of more than 3,000 officers and men, including engineers and four batteries of artillery. Besides these there are 500 to 700 armed constabulary, and all males classed in "reserves." There are two or three gunboats and torpedo boats, and Brisbane is defended.—For latest financial statistics see BRITISH EMPIRE, etc. (table). Staple export wool, to value £1,413,908 in 1886, meat £154,406, tallow £334,434. 500,000 sq. miles leased as pastoral runs; 75,566 acres under crop for grain. Coal output 228,656 tons; gold output 341,551 oz.; tin 3,473 tons; copper 1,924 tons. There were 278,694 horses, 4,071,503 cattle, 9,690,445 sheep, 61,861 pigs. About 1,555 miles of railway open up the country, and more are constructing to connect with New South Wales and run north to Port Darwin. There are of telegraph lines 8,225 miles.—Very considerable immigration has been taking place for some years, the Government giving free passages to suitable persons. Small homesteads are given

free, on occupancy conditions; sugar land sold at £1 per acre; runs leased on very liberal terms.—There are in the colony about 11,000 Chinese, mostly gold diggers, and about 10,000 Polynesian coolies. The black aborigines, found in unsettled parts, are supposed to number 20,000. They are fiercer than those in other parts of the continent, and have caused some trouble. About 200 are employed as trackers and troopers by the police.—Queensland was originally a part of New South Wales. In 1825 a convict settlement was established on Brisbane River. In 1842, after cessation of transportation, proclaimed as **Moreton Bay District** of New South Wales. Explorations undertaken by Oxley, Leichardt, Mitchell, and many others since, revealed existence of immense tracts inland of rich fertile country, watered by numerous rivers. In 1859 Queensland separated from New South Wales, receiving a constitution of her own. In April 1883 Sir Phos. McIlwraith, the then Premier, took upon himself to annex New Guinea, which lies about 90 miles N. of Queensland coast. Annexation had long been urged on Imperial Government by various Australian governments. The Colonial Minister (Lord Derby) disallowed action of Queensland, but tardily consented to partial ratification, too late to save a large part of New Guinea from Germany.

Consequent excitement in Australia resulted in Intercolonial Conference at Sydney, and subsequently in the Federal Council Act of Australasia. The progress of the colony has been astonishing, and its present prosperity is unexampled, but the want of both capital and labour is still severely felt. During '88 considerable excitement was manifested in the Colony on the question of immigration, and the proposed appointment of Sir H. A. Blake as Governor (Nov.). Sir Henry Norman (q.v.) has since, on the withdrawal of Sir H. B., accepted the nomination to the post. A new ministry, of which Sir Thomas M'Ilwraith is premier, came into office in June. It was announced (Nov.) that Sir T. M'Ilwraith had retired from the office of Colonial Treasurer and Secretary, retaining only the Premiership. (For Ministry, etc., see DIPLOMATIC.) Consult Bonwick's "Resources of Queensland," Boyd's "Queensland," Pugh's "Queensland Almanac for 1889," Gordon and Gotch's "Australian Handbook for 1889," Nicol's "Wild Life in Australian Bush," Petherick's "Catalogue of York Gate Library," etc.

Quorum. (See ed. '88.) Business may be transacted in the House of Lords when not less than three peers are present. In the Commons it requires forty members, including the Speaker, to constitute a quorum.

R

Rabies in Dogs. For a Select Committee of the House of Lords on, '87, and report, see ed. '88.
Racquets (or **Rackets**). This tennis game was first played in England between the 13th and 14th centuries, with the naked hand, then with gloved hands, and later on thongs were bound round the right hand so as to make the ball rebound with greater force. The **Queen's Club**, West Kensington, is now the most popular resort of racquet players, and at that court in '88 the annual matches between Oxford and Cambridge Universities took place, the singles being won by Oxford by three games to love, while the four-handed match for the thirteenth successive year fell to Cambridge by four games to love. In the Public Schools competitions the Harrow boys have won thirteen of the twenty-one played, Eton being credited with six and Rugby and Charterhouse with one each, the latter proving successful against Harrow in the '88 contest by four games to two. For the Professional Racquets Championship, two matches were played in the year between Peter Latham (Queen's Club) and Walter Gray (Charterhouse), both resulting in favour of the former, who retains the title of champion racquet player.

Railway Accidents in '87-88. See RAILWAYS.

Railway and Canal Traffic Act. See Session '88, sect. 42.

Railway and Tramway Law in '88. Several decisions of importance to railway and tramway passengers have been pronounced by the courts of law during the year. In *Butler v. the Manchester, Sheffield, and Lincolnshire Railway Co.*, the plaintiff had lost the return half of an excursion ticket, and, declining to pay the full ordinary fare for his return journey, was forcibly removed from the train by the Com-

pany's servants, and detained until he paid the full fare. For this he recovered a verdict for £25, and obtained judgment in the Court of Appeal, Lord Esher laying it down clearly that, in the absence of any conditions expressly empowering the company to eject him, a passenger failing to produce his ticket can only be compelled to pay his fare again, and sued if he refuse to do so. Less fortunate was Mrs. Charleston in an action of a similar nature which she brought against the **London Tramways Company**. Having given a tramway conductor half a crown in payment of her fare, and received the change, she was charged by the man—quite unjustly, as it turned out—with giving a bad half-crown, and forcibly taken by him to a police-station. For this she recovered a verdict for £100, but the courts set it aside on appeal, holding that the conductor was acting beyond the scope of his employment, and consequently that he alone, and not the company, was liable to be sued. A sleepy railway traveller who was carried beyond his destination on the London, Chatham, and Dover Railway was summoned for refusing to pay the extra fare, but the magistrate held that he was not liable. Another magisterial decision is that a tramway company has no power to prevent passengers from leaping from the cars while in motion. The practice is prohibited by the companies' bye-laws, but there is no penalty to enforce it, as in the case of railway companies. A verdict of manslaughter returned by a coroner's jury against "the directors" of the Great Western Railway Co. has been quashed, on the ground that the persons charged were not "sufficiently described."

Railway Brakes. See ed. '88.

Railway Signalling. See ed. '88.

Railways in '88. Last August the Assistant

Secretaries to the Board of Trade issued their supplementary report as to British railways in '87. From this it appears that there were 19,578 miles, the double or more mileage being 10,592, an increase in the mileage over '86 of 246. The capital reached the enormous sum of £845,971,654, an increase of £17,627,400, the amount per mile open being £43,210, increase £362. The receipts for passengers were £30,573,287, increase £328,349; for goods, £37,341,299, increase £970,860; and miscellaneous, £23,028,790, increase £52,214. Total receipts, £90,943,376, increase £1,351,423. Working expenditure, £37,063,266, increase £545,019. Net earnings, increase £806,404. The receipts per train mile amounted to 57'63d., against 57'69d., but this decrease of 0'06d. was more than met by a decline in the expenditure which in '87 was 30'26d. per train mile, against 30'41d. in '86, the net earnings being 27'37d. against 27'28d. in '86, an increase of 0'09d. The percentages of net earnings on capital are given as 4 in '87, against 3'39 in '86, and dividends paid on ordinary capital at 4'08 against 3'94. The returns of accidents for '87, published in a Blue Book earlier in the year, show that a grand total of 977 persons, including railway servants, were killed, and 7,747 injured from various causes, and in many respects the year compared unfavourably with its predecessor.—Turning to the year '88, speaking generally, and in the absence of anything approaching complete statistics, it may perhaps be taken for granted that the final figures will come out well as to goods traffic, though the wet summer must be held responsible for a checking, if not an absolute decrease, in the passenger receipts. Some idea of the traffic of the first half of '88 may be gathered from a Blue Book published by the Board of Trade on the subject of Continuous Brakes. From this it appears that on June 30th last 31 per cent., an advance of 3'5 per cent. since the previous return, of engines and tenders had been fitted with these brakes, while the proportion of carriages so fitted was 76 per cent., an advance of 5 per cent.. The number of miles run by these trains in the six months was 66,053,727 miles, or 89 per cent. of the whole. The brakes chiefly used were the automatic vacuum, and the Westinghouse types. From another source we learn that on the Brighton Company's system the Westinghouse automatic air brake was on two days put into operation 19,222 and 21,712 times respectively. As to accidents in '88, a Board of Trade return for the first three months gave a total of 209 persons killed on railways and 934 injured, against 229 killed and 843 injured in the first quarter of '87. Other accidents were reported in which the movement of vehicles used exclusively on railways was not concerned, bringing up the total to 223 killed and 2,141 injured. On July 14th a collision occurred at Hyde Junction, near Manchester, involving five deaths, and injury to thirteen other persons, caused by the fracture of the axle of a four-wheeled third-class carriage. A serious collision occurred on Aug. 7th at Hampton Wick, a light engine dashing along the wrong line into a passenger train, causing the loss of four lives and injury to sixteen other persons. On Oct. 8th a singular fatality took place on the line of railway being constructed along the Firth of Forth, and near Inverkeithing. A range of huts, in which 111 men were sleeping, took fire, and were totally destroyed, three of the inmates

being burnt to death. In Parliament the Railway and Canal Traffic Bill (see Session, sect. 42), which was introduced in the Lords, and then passed the Commons, received the Royal Assent on Aug. 10th. Under its provisions the Railway Commission will be a permanent tribunal presided over by a judge of the High Court, having power to sit anywhere in the United Kingdom; preferential rates are specially aimed at in the new Act. In the Lords, on April 27th, Lord De La Warr asked if a periodical return could be made of exceptional cases of overtime employment on railways, but accepted a suggestion of Lord Onslow to confer with him on the matter. In the Commons, on May 4th, Mr. Watt moved a resolution in favour of the State Purchase of Railways, which, after a discussion, was negatived without a division.—Miscellaneous. During the year certain disputes, negotiations, and arbitrations occurred between the parties to what is known as the Tripartite agreement, the Brighton, South-Eastern, and Chatham lines, but they are too complicated for any description to be attempted here. Early in the year the Hull and Barnsley shareholders declined an offer to be taken over by the Midland, on the ground of sundry provisions insisted on by the North-Eastern. At the beginning of March a *Lardigue* (or single rail, camel back) line, worked by steam, was opened in North Kerry. What was known as the *Railway Race to Edinburgh*, the Great Northern and the North-Western vying with each other to do the distance in eight hours by their rival routes, took place in August, with varying success. At the end of that month racing ceased, and it was agreed to fix the time at 8½ hours. On Dec. 6th Col. Myles Fenton, of the Engineer and Railway Staff Corps, and manager of the South-Eastern Railway, lectured to a large number of military officers at Aldershot on "The British Railways and their capabilities for Home Defence," the subject being dealt with in an exhaustive manner. At the end of November it was calculated that in India the State lines worked by companies have a mileage of 4,762 miles, and a capital expenditure of £62,415,925. The lines worked by the Government have a mileage of 4,059 miles, and a capital expenditure of £49,820,165. The lines worked by guaranteed companies have 4,144 miles open, and a capital expenditure of £62,712,358. The lines worked by assisted companies have a mileage of 543 miles, and a capital expenditure of £3,722,515. The lines owned by native states have a mileage of 791 miles, and a capital expenditure of £5,208,300. During the first days of December the return of accounts for the past nine months of the year was published, the grand total of killed being 696, and 6,086 injured.

Railways, Chronology of. The *Annales Industrielles* gives in chronological order, with dates, the first railways opened in various countries:—England, Sept. 27, '25; Austria, Sept. 30, '28; France, Oct. 1, '28; United States, Dec. 28, '29; Belgium, May 3, '35; Germany, Dec. 7, '35; Cuba, '37; Russia, April 4, '38; Italy, Sept. 39; Switzerland, July 15, 44; Jamaica, Nov. 21, 45; Spain, Oct. 24, '48; Canada, May, '50; Mexico and Peru, '50; Sweden, '51; Chili, Jan. '52; India, April 18, '53; Norway, July, '53; Portugal, '54; Brazil, April 21, '54; Victoria (Australia), Sept. 14, '54; Columbia, Jan. 20, '55; New South Wales, Sept. 25, '55; Egypt, Jan. '56; Natal, June 26, '60; and Turkey, Oct. 4, '60.

Ramadhan. See MOHAMMEDANISM.

Ramie. See RHEA.

Ranavaloa Manjaka III. The present Queen of Madagascar (*q.v.*).

Range Finder. See WATKIN RANGE FINDER.

Rarotonga. An island of volcanic origin, rising to a height of about 3,000 feet, one of the Cook group in Polynesia. It has recently been taken under British protection.

Rassam, Hormuzd, is a native of Mesopotamia, who in '45 rendered valuable assistance to Mr. Layard in his Assyrian explorations, and succeeded him as Commissioner in Assyria of the Trustees of the British Museum, to which institution he has from time to time contributed valuable relics of the past ages. He has been despatched on various missions of importance both by the Indian and Home Governments, and when Consul Cameron and his companions were imprisoned by King Theodore of Abyssinia ('64) Mr. R., with Lieut. Prideaux and Dr. Blaine, was sent to negotiate for their release. Their mission, however, failed, for though the envoys were at first received with courtesy, the king subsequently ordered them to be put in chains and kept close prisoners. This led to the Abyssinian War. Mr. R. is the author of an interesting account of his mission to Abyssinia. During the last Turko-Russian War, Mr. R. was despatched by the British Govt. to Asia Minor, to inquire into the condition of the Christian population of that region.

Ravenscourt Park. This new park, which is situated at Hammersmith, contains a beautiful avenue of trees, and comprises 32 acres of land; has been purchased by the Metropolitan Board of Works for £58,000, the Vestry of Hammersmith bearing a portion of the expense. It is situated in the western portion of the parish, with an entrance to the main road. There is also a mansion in the grounds, which is to be let by the Board to the Public Library Commissioners. Recently appointed, for the purposes of a public library and museum. The park was opened in May '88.

Rawlinson, Sir Henry, K.C.B., F.R.S., is a brother of the Rev. Canon Rawlinson, in conjunction with whom, and Sir G. Wilkinson, the famous edition of the works of the "father of history," known as "Rawlinson's Herodotus," was produced. He was b. at Chadlington, Oxon., 1810. Educated at Ealing School. Entered the service of the old East India Company in '27, and served with distinction on various special missions, especially in Persia ('33) and Afghanistan ('43), and rendered distinguished service during that eventful period, for which he was frequently mentioned in despatches. He held Kandahar against all external and internal enemies. He was subsequently appointed Consul of Bagdad '50, and Consul-General in Turkey '51. He was created K.C.B. in '56, and in the same year appointed a director of the East India Company. On the transference of the Govt. of India to the Crown, Sir H. was appointed one of the Members of the Indian Council. In '59 he was special envoy to the Shah of Persia. Sir H. is as distinguished for his Oriental scholarship as for his diplomatic, military, and administrative ability, and, in addition to the great work already mentioned, has contributed largely to the literature of Eastern antiquities, and has rendered invaluable service in aiding the interpretation of cuneiform inscriptions. Hon. D.C.L.

Oxford, LL.D. Camb., F.R.S., and a corresponding member of the Institute of France.

Rayleigh, Lord John Wm. Strutt, D.C.L., LL.D., F.R.S., 3rd Baron; b. 1842. Educated at Trinity College, Cambridge; B.A.; Senior Wrangler and 1st Smith's Prizeman ('65); Hon. D.C.L. Oxford, and McGill Univ. Montreal. He is a Cambridge Commissioner under the Oxford and Cambridge Universities Act '77; formerly Professor of Experimental Physics at Cambridge. Succeeded Professor Tyndall in the professorship of Natural Philosophy at the Royal Institution. He is one of the secretaries of the Royal Society.

Real Presence, The. In both Eastern and Western Churches from the earliest times the words of Jesus Christ in the institution of the Lord's Supper—"Take, eat, this is My body," and similar words regarding the cup—have been interpreted to mean that the presence and communication of the Body and Blood in that Sacrament are real, though not perceptible by the senses. For many centuries it sufficed to hold the truth, without inquiry as to the mode of the Presence. On this point Erasmus says: "Diu satis erat credere, sive sub pane consecrato sive quocunque modo adesse verum corpus Christi" ('It long sufficed to believe that the true body of Christ was present, whether under the consecrated bread or in some other way'). And Durandus: "Verbum audimus, motum sentimus, motum nescimus, præsentiam credimus" ('We hear the word, we perceive the motion, we know not the manner, we believe the presence'). Gradually in the Roman Church and Western Christendom generally the doctrine known as transubstantiation grew up and took definite shape. This doctrine is that, upon consecration, the whole substance of the bread and wine become changed into the whole substance of the body and blood of Christ, so that no part of the former remains, except the appearance and attributes perceptible by the senses, and no part of the latter is lacking. But before the Lateran Council ('515) the mode of the Presence was not defined. So Gouthbert Tonstal, Bishop of Duresme, writes: "De modo quo id fieret satis erat curiosum quemque relinquere suæ conjecturæ, sicut liberum sit fuit ante concilium Lateranum." ('Concerning the mode in which this is done it were better to leave every inquirer to his own opinion, as it was free to do before the Lateran Council'). St. Bernard also advises "indubitatum retinere fidem, et non querere quo pacto" ('to keep the belief without wavering, and not to inquire as to the manner'). By the Council of Trent transubstantiation was finally adopted as the Roman doctrine, with the sanction of an anathema affixed. Meanwhile, in the German Reformation under Luther, a modified form of the doctrine had been adopted, called consubstantiation. In this it is held that the substance of the elements remains, as well as their outward attributes, but that with and under these are the true Body and Blood of Christ. Going beyond this, some Protestant bodies, both in England and on the Continent, have denied that there is any real presence in the Sacrament, but assert that the latter is a simple commemorative rite to which a promise of grace is attached. The doctrine of the Reformed Church of England claims to be a reversion to that which we have described above as the ancient belief. It holds the fact of the Presence, but makes no attempt to inquire into the manner, though the Roman dogma is decisively repudiated. Without

going too closely into the question, we may briefly describe the English Church doctrine. It includes the purely receptionist view, which is as follows:—Just as water in Baptism is sanctified by prayer to the mystical washing away of sins in those faithfully using it, so, in the greater sacrament, the bread and wine are consecrated by prayer to be, to those who use them according to the ordinance, the communication of the Body and Blood of Christ, which are, by such, "verily and indeed taken and received." This doctrine is thus summed up by **Jeremy Taylor**: "The result of which doctrine is this: It is bread, and it is Christ's body. It is bread in substance, Christ in the sacrament; and Christ is as really given to all that are truly disposed as the symbols are; each as they can; Christ as Christ can be given; the bread and wine as they can; and to the same real purposes, to which they are designed; and Christ does as really nourish and sanctify the soul as the elements do the body." Something rather beyond this seems also intimated in the Church formularies, which seem to admit a representative sacrifice, and speak of the guilt of unfaithful recipients. See **RITUALISM**.

Realschulen ("real-schools") originated in a movement belonging to the early and middle part of the present century, and were intended to provide an education of an industrial or technical character. The R. corresponds in large measure to the English "modern side." See ed., '86.

Réaumur (from **Réné Antoine Ferchault de Réaumur**, b. at La Rochelle, 1683, d. 1757). The name of one of the three scales used in thermometers. The freezing-point of water is on the Réaumur scale marked 0° ; the boiling-point is marked 80° . The space between the freezing- and the boiling-point is divided into 80 equal parts, each of which is called a degree. Réaumur's reason for using the number 80 was the ease with which it broke up into aliquot parts. His thermometer is still used in Germany, but not by scientific workers. To turn the Réaumur record into the corresponding Centigrade record, the number on the former scale is multiplied by 5 and divided by: $c.g., 80^{\circ} R. = \text{equivalent to } 80 \times 5 \div 4 = 100^{\circ} C.$ To turn Réaumur to Fahrenheit multiply by 9, divide by 4, and add 32: $c.g., 80^{\circ} R. = \text{equivalent to } 80 \times 9 \div 4 = 180 + 32 = 212^{\circ} F.$

Redgrave, Richard, R.A. (retired), b. 1804. A successful painter of landscapes and figure-pieces. He prepared, as head-master of the Government School of Design, the system and course of instruction now carried out by the Department of Science and Art. In conjunction with Sir Henry Cole he formed a museum of art, which, ultimately developed into the present museum at South Kensington. For over twenty years Mr. Redgrave was **Keeper of the Royal Pictures**, and he only severed his connection with the Department of Science and Art in 1880.

Rede Lectures. The Rede Lectureship is the result, existing, and perpetuated since '59, of the consolidation of three several public lectures in the University of Cambridge, in philosophy, logic, and rhetoric, which owed their establishment to Sir Robert Rede, who died Jan. 8th, 1510, and whose endowment appears to have accrued to the University in 1524. These lectures, together with a **Mathematical Lecture**, founded at a very early period in the

history of the University, were known as **Barnaby Lectures**, from the circumstance of the lecturers being annually chosen for their respective preferences on St. Barnabas' Day (June 11th). Sir Robert Rede, the founder of the lectures, called after his name, was a distinguished student of the University of Cambridge, and held the office of **Lord Chief Justice** of the Court of Common Pleas in the reigns successively of Henry VII. and Henry VIII. The statute consolidating the Rede lectures was approved by Her Majesty in council, in April '58; and in the following year they were replaced by an annual lecture to be delivered in Term time every year, on the appointment of the Vice-Chancellor, who exercises his power of election during the Lent Term in every year, and who determines the day on which the lecture, which must be given in the Senate House, shall be delivered. The Rede Lecture is naturally extremely comprehensive and versatile, embracing the exposition of the latest results of research and speculation in various branches of science, ethics, history, philology, art, and archaeology. Thus the roll of the reconstructed Rede lectureship is a record of great names, the first being that of Dr. (now Sir Richard) Owen, F.R.S., D.C.L., who, in '59, took for his subject the **Classification and Geographical Distribution of the Mammalia**. From '60 to '68 the names follow in the order of their mention of Professor Phillips, M.A., F.R.S., of Oxford; Professor Willis, M.A., F.R.S., of Cambridge; Major-General Sabine, R.A., P.R.S.; David Thomas Ansted, M.A., F.R.S.; Sir George Biddell Airy, LL.D., F.R.S.; John Tyndall, F.R.S.; Professor William Thomson, M.A., of Glasgow; John Ruskin, LL.D.; and F. Max Müller, M.A., each of whom expounded some subject about which he was specially and pre-eminently conversant. In '75 Sir Henry Maine, LL.D., discoursed on the "Effects of Observation of India upon Modern European Thought"; and Samuel Birch, LL.D., in '76, on "The Monumental History of Ancient Egypt." In '77 Professor Sir Charles Wyvill Thomson, of Edinburgh, described "Some of the Results of the Expedition of H.M.S. *Challenger*"; and in '79 the Rev. William Dallinger, F.R.S., lectured on the "Origin of Life, illustrated by the Life Histories of the least and lowest Organisms in Nature." Sir William Muir, K.C.S.I., LL.D., treated of the "Early Caliphate" in '81; and in the two following years Matthew Arnold, M.A., and Thomas Henry Huxley, M.D., LL.D., discussed respectively "Literature and Science," and the "Origin of the Existing Forms of Animal Life: Construction or Evolution?" The later lecturers have been Francis Galton, M.A., F.R.S., '84; George John Romanes, M.A., F.R.S., '85; Sir John Lubbock, M.P., LL.D., F.R.S., '86; Professor John P. Seeley, M.A., of Cambridge, '87, when his subject was "Greater Britain in the Georgian and in the Victorian Era"; and lastly, in '88, Sir Frederick A. Abel, C.B., D.C.L., F.R.S., who took for his subject the "Application of Science to the Protection of Human Life."

Red Cross Society of Germany. The Dowager Empress Augusta supports under her auspices the **Augusta Hospital**, managed by ladies of the Red Cross. This institution is open to three classes:—(1) the poor, (2) paying patients of the second class, and (3) those who can afford to pay the largest sum, who are

first-class patients. The wards for the poor are bright, airy, and scrupulously clean. The rooms provided for the second-class patients are sufficiently comfortable for sufferers of any position in life. Children are admitted, and every arrangement made not only for their treatment in illness, but for their amusement. The building for the first and second class patients is detached from that for the non-paying sick. In summer tents are provided in the garden, where those for whom it is considered desirable can sleep so as to secure for them the greatest possible amount of fresh air. The waiting and sitting rooms and the corridors are very harmoniously arranged, and there is also a little chapel and a garden. The Augustastift, an educational institution connected with the R.C., secures a first-rate education to the daughters of officers killed or wounded in battle. A certain number of pupils who pay are received, and also a few foreign young ladies.

Red Cross, The Royal (English), was instituted for the purpose of rewarding the services of those who devote themselves to the work of nursing the sick and wounded in war. It is not confined to English subjects, and has in numerous cases been bestowed upon foreign ladies either lay or belonging to nursing sisterhoods. Among the present members are the Princess of Wales, the Empress Frederick of Germany, Lady Wantage, and Miss Nightingale. The decoration consists of a red Maltese cross, bearing the words "Faith, Hope, and Charity," and "1833," the date at which it was instituted.

Red Sea Littoral. Various points in the Red Sea and the Gulf of Aden claim attention as coming within the range of recent European politics. See various heads, SUEZ CANAL, ADEN, PERIM, MASSOWAH, TAJURAH, etc.

Reeves, John Sims, was b. at Shooter's Hill, near London, 1821. Was early trained to music by his father, and at the age of fourteen became organist of North Cray Church. He also became a proficient violinist, and sometimes undertook the duty of orchestral leader. He studied harmony and counterpoint under Mr. H. Calcott. In his eighteenth year he made his *début* at Newcastle-on-Tyne theatre as the gipsy boy in "Guy Mannering" "for the benefit of the late tenor, George Barker." He subsequently obtained an engagement at the Grecian Theatre, London, where he sang under the name of Mr. Johnson; but in 1847, in "The Bride of Lammermoor," at Drury Lane, then under the management of Macready, he first showed his full powers. Although very successful, he soon left the stage for the concert-room, and in oratorio and ballad singing has achieved the highest distinction. In '43 he studied in Paris and afterwards at Milan, where he sang at La Scala. After his return to London he soon established his reputation as the first of modern tenors. In Sept. '88 Mr. S. R. published his autobiography.

Regina. A young prairie town, the capital of Assiniboia, and of the North-West Territories of Canada. Pop. 1,000.

Registration of Marriages, Jews. See JEWS.

Registration, Parliamentary. The statute law upon this subject is contained in many Acts, the longest and most important being those of 1843, 1865, 1868, 1878, and 1885. These must be referred to for accurate information.

Here only an outline of the law can be given. In order to be entitled to vote in the election of a member for parliament, one must be upon the register of the borough or county. In a parliamentary borough, if it is at the same time a municipal borough, the town clerk, and elsewhere the clerk of the peace, issues every year his precept to the overseers of the poor in every parish or township, requiring them to make out a list of those who claim to vote. Thereupon the overseers give notice requiring all persons intending to vote to send in their names by a given day. The overseers make out an alphabetical list of all claimants, and have power to object to the names of those whom they believe to be dead or not entitled to vote. Any person on the register may object to any person on the list, but must give notice of his intention so to do. The overseers are to publish a list of claimants and a list of persons objected to, and are to keep copies thereof for themselves, and to deliver copies thereof to the town clerk, or clerk of the peace, as the case may be. The town clerk or clerk of the peace is to transmit abstracts of the above lists to the revising barrister. A sufficient number of revising barristers are to be appointed every year, for London and Middlesex by the Lord Chief Justice, and for other places by the senior judge of assize. The barrister so appointed makes a circuit and holds open court for the revision of the list in each borough and at every polling place in the county. The clerk of the peace, or town clerk, and the overseers must attend. The revising barrister has power to examine witnesses on oath, to hear claims and objections, and to insert or omit names as he finds just. An appeal lies from his decision to the Queen's Bench Division of the High Court, but no further appeal is possible without its express sanction. The list of voters as settled and signed by the revising barrister is sent, in the case of a county to the clerk of the peace, who must have it printed in a book and delivered to the sheriff; in the case of a borough to the town clerk, who must have it printed in a book and delivered to the returning officer. The clerk of the peace or town clerk must keep printed copies of the register for sale at a fixed price. The register is conclusive evidence that the persons therein named have the qualifications annexed to their respective names.

Registration of Teachers. See TEACHERS' GUILD.

Reichspartei, German. See GERMAN POLITICAL PARTIES.

Reichsrath. See AUSTRIAN POLITICAL PARTIES, and AUSTRIA-HUNGARY.

Reichstag. See GERMANY, and GERMAN POLITICAL PARTIES.

Reid, Robert Threshie, O.C., M.P., was b. 1846. Educated at Cheltenham and Balliol Coll., Oxford, where he graduated B.A. '68. Called to the bar of the Inner Temple '73, and appointed Q.C. '82. Entered Parliament as Liberal member for Hereford City '80, which he represented till '85, when he unsuccessfully contested Dumfries-shire. Re-entered the House as member for Dumfries district. Mr. R. is engaged in the *Parnell Commission* (q.v.) on behalf of Mr. Dillon, and other Irish members. On the occasion of the fining for contempt of court of Mr. E. Harrington, M.P., Mr. R.

was the subject of some flattering remarks from the President.

Reid, T. Wemyss, author and journalist, born at Newcastle-on-Tyne 1842. Beginning journalistic life at the early age of fourteen, in '64 he became editor of the *Preston Guardian*, and ('70 to '86) editor of the *Leeds Mercury*, which he conducted with so much ability that it speedily ranked as one of the most influential provincial newspapers. Mr. Reid has written several highly successful books. His monograph on "*Charlotte Brontë*" admirably supplements Mrs. Gaskell's "*Life*." His novels "*Gladys Fane*" and "*Mauleverer's Millions*" commanded a very wide circulation. "*Cabinet Portraits*" and "*Politicians of To-day*" are telling sketches of leading statesmen. While France was engaged in military operations in Tunis, Mr. R. visited the country, and gave an account of his experiences in "*The Land of the Bey*." In addition to these larger works Mr. Reid has contributed extensively to the fugitive literature of the period. In '87 he accepted the position of general manager to Messrs. Cassell and Company (Limited). Mr. R.'s latest production is "*The Life of the Right Hon. W. E. Forster*," published July '88. It is one of the most important contributions to the history of modern politics.

Religious Statistics of London. See ed. '88. **Religious Tract Society**, The (instituted 1799), has for its object the circulation of religious books and treatises throughout the British dominions and foreign countries. The business of the Society is conducted by a committee chosen annually in London, and consists of four ministers and eight laymen, and of six trustees, half the number being members of the Church of England, and the other half Nonconformists. The Society has in its catalogue some 4,000 separate tracts and handbills, books, etc., for adults, besides books and tracts for children. The well-known *Leisure Hour* and almost equally well-known *Sunday at Home* are published by this Society. Circulation of the Society's publications for 1887-88 76,061,050. Income for 1887-88, from subscriptions, donations, etc., £29,168 8s. 5d. Grants in money, paper, publications, etc., £41,708 7s. 3d. Secs., Revs. L. B. White, D.D., and S. G. Green, D.D. **Association Secs., England**, Rev. Cyril Williams, Rev. Wm. Williams, Richard Butcher. **Wales**, Rev. Thomas Levi. **Scotland**, Rev. Dr. Cathcart. **Ireland**, Rev. William Irwin, D.D. **Continent**, Rev. J. Craig, D.D., Corresponding, D. J. Legg. **Offices**, 56, Paternoster Row, E.C.

Renan, Ernest. French orientalist, philosopher and author, b. Feb. 27th, 1823, at Tréguier, Department of the Côtes-du-Nord, in Brittany. He was intended for the Church, and studied in the Seminary of Saint Sulpice, at Paris, which he left to devote himself to the study of oriental languages. He won the Volney prize with his work, "*Histoire Générale et Systèmes Comparés des Langues Sémitiques*." He was sent ('49) on a scientific mission to Italy, and ('51) was appointed to a post in the Manuscript Department of the Bibliothèque Nationale. He became ('56) a member of the Academy of Inscriptions. In '60 he was appointed to a mission to Palestine and Syria, which led him to investigations into the origin of Christianity. On his return he was appointed Professor of Oriental Languages in the College of France. He delivered his first

lecture in February '62, and met with stormy manifestations from the Catholic students, which caused him to discontinue his professional work. In '63 he published his famous work "*The Life of Jesus*," which roused the active hostility of the clerical party and led to the deprivation of his professorship. The Imperial Government offered him a good appointment in the Imperial Library, which he declined. In '70 he again became Professor of Oriental Languages in the College of France, and was elected a member of the French Academy ('78). In '80 he received the Cross of the Legion of Honour; **Grand Officer** (May '85). In '84 M. Renan delivered the **Hibbert Lecture**. He wrote in '85 "*Le Prêtre du Nemi*," and on March 1st, '86, published the first part of a new work, "*The Origin of the Bible*," and in '86 "*L'Abbesse Jouarre*." His latest works are the "*History of the People of Israel till the time of King David*" ('88), and "*Drames Philosophiques*," a series of essays in psychology in a dramatic form.

Renshaw, E. See LAWN-TENNIS. **Report on City Companies**. See CITY GUILDS.

Representation of the People Act, '85. The principal provisions of this Act are as follows. (1) It established alike in boroughs and in counties throughout the United Kingdom a uniform household franchise and a uniform lodger franchise as defined by the Representation of the People Act 1867. By that Act any man of full age, and not under a special legal incapacity, who on the 31st of July in any year, and during the preceding twelve months, has been an inhabitant-occupier of any dwelling-house, and has in respect thereof been rated to the relief of the poor, has a household franchise; and any man of full age, and not under a special legal incapacity, who during a like period has resided in the same lodgings of the annual value, unfurnished, of £10, has a lodger franchise. (2) It establishes alike in boroughs and in counties throughout the United Kingdom an occupation franchise wherever the land or tenement occupied is of £10 clear yearly value. (3) It provides that where a man inhabits any dwelling house by virtue of any office or service, and the dwelling-house is not inhabited by his employer, he shall be deemed an inhabitant-occupier for the purposes of the Act. This provision creates the service franchise. (4) It provides against the multiplication of votes by creating rent-charges, joint tenancies or tenancies in common. The Act does not abolish the 40s. freehold franchise, or the ancient franchises of the boroughs. It is supposed to have enlarged the constituencies by nearly 2,000,000 electors, 1,300,000 in England, 200,000 in Scotland, and 400,000 in Ireland. The greatest proportional increase in the number of electors is in Ireland. The present total number of electors exceeds 5,000,000, nearly one-third of the male inhabitants of the United Kingdom.

Repton School, Derbyshire. Founded 1559; re-organised 1874. Pupils, 280. **Head Master**, W. M. Furneaux, M.A.

Reredos, St. Paul's. Until Jan. 25th, '88, St. Paul's was unique among cathedrals in not possessing a reredos. On that day (being the annual dedication festival) a structure was unveiled which has given rise to much controversy. It cost £37,000, and took eighteen months to

erect. Raised on a plateau of many-coloured marbles, by a flight of ten steps above the level of the base, it sweeps in a graceful curve from wall to wall behind the "reed" or rood table. From the base spring on either side groups of Corinthian pillars forming the wings of the reredos. The last column on each side is surmounted by a statuette of the Angel Gabriel and the *Virgin Mother*. The central feature, however, is the structure that rises and towers to a height of sixty feet between the wings. Mounting in rhythmical gradation of marbles, a central point is reached, on which, in high relief, there appears a sculptured crucifixion. St. John, the Virgin Mary, and a Roman Soldier stand at the foot of the cross. This central panel is surrounded by four twisted pillars of grey Breccia marble, wreathed with gilt bronze, and of the exact type of the convoluted pillar, that support the great baldachino in St. Peter's, Rome. A classic canopy, akin to a baldachino surmounts the pillars, and over it is graven in gold the phrase: "*Sic Deus dilexit mundum.*" Above this again, on the ever-narrowing structure, is a group of the *Virgin and Child*; and the whole is surmounted by a statue of the *ascended Christ*. To the right and left of the central panel there are reliefs of the Nativity and the Resurrection; and beneath the panel a study of the Entombment. Representations having been made in objection to certain features of the reredos, the *Bishop*, acting under the power vested in him by the Public Worship Regulation Act, '74, vetoed a prosecution; but the case was carried on appeal to the Court of Queen's Bench, and judgment had not been delivered up to Dec. 5th. The objectionable details affirmed are: (1) The Crucifixion in the centre panel; (2) the statuette of the Virgin Mother; and (3) the group of Virgin and Child.

Reunion. Formerly called *Bourbon*. A volcanic island of the Indian Ocean, adjacent to Mauritius and Madagascar, and a French colony. Area 966 sq. m., pop. 170,734. Capital *St. Denis*. Other large towns, *St. Pierre* and *St. Paul*. It is tropical, fertile, rich in products similar to those of *Mauritius*, and is one of the few French colonies which really pay. It was settled in 1649, but has several times been held by England.

Reuter, Baron Paul Julius, the founder of the well-known Reuter's news agency, was b. at Cassel in 1818. When the telegraph was first opened (49) between Aix-la-Chapelle and Berlin, Herr Reuter conceived the idea of the system of collecting and distributing news from all parts placed in communication with the new method of telegraphic transmission. As the telegraphs extended, his system developed, and agencies in connection with it have now been established all over the world. When England was placed in telegraphic communication with the Continent by means of the submarine cable between Dover and Calais, laid in '51, Herr Reuter permanently established himself in London, which became the centre of his system. The newspaper press, the Stock Exchange, and Foreign Bourses, and great banking, shipping, and trading companies became dependent in a great measure upon Reuter's Agency for the latest information. The agency was made into a company in '65. Rival companies have since been started. Herr R. was created a *Baron* by the Duke of Coburg-Gotha in '71. In '72 he obtained a concession from the *Shah of Persia* for constructing

railways and telegraphs, and working the mines and otherwise developing the resources of that kingdom. He retired from the management of Reuter's Telegram Company in '78.

Revenue, British. There are three large and independent Government organisations at work upon the collection of revenue. The *Customs* are administered by a Board of Commissioners with a *Central Department* at *Thames Street, E.C.*, and with ramifications at every port and almost every creek in the United Kingdom. The *Excise* and the collection of general *Stamp Duty, Property and Income Taxes, Land Tax and House Duty*, are administered by the *Commissioners of Inland Revenue*, whose headquarters are at *Somerset House*. The revenue from the *Post Office (q.v.)* and *Postal Telegraph Office (q.v.)* is, as is well known, derived mainly from the sale of stamps. The work of administering the *Post Office* is vested in a *Postmaster-General*, with a central department at *St. Martin's-le-Grand*. This department is one which conducts one huge, or rather several huge Government businesses, which have turned out to be profitable concerns, adding considerably to the total of the revenue returns. Although the *Post Office* is classified in the estimates as a Revenue Department, the two Revenue Departments proper are the *Customs* and *Inland Revenue*. The *Customs* are the duties levied on certain goods or merchandise upon importation. Formerly almost every article imported, whether manufactured or raw material, was in the *Tariff*, as the list of dutiable goods is called. In 1842 the *Customs Tariff* numbered no fewer than 1,200 articles. Now it contains less than a score. "*Prisage*," or the right exercised by the early Plantagenet kings to take a cask, or two casks according to size, from the wine-ships on their arrival at a port, formed the basis of *Customs Duties*. In 1302 the king commuted his prisage on wine for a fixed charge of two shillings for every ton, called "*bullage*." This received statute sanction in 1353, and must be regarded as the foundation of the *Tariff*. In mediæval times the *Customs* furnished the principal share of the king's revenue. At the *Restoration* it produced about £1,000,000 out of a total revenue from all sources of about £1,800,000. Almost two-thirds of the amount received at the English ports comes from the *Port of London*. *Customs drawback*, or allowances upon exportation, may be paid upon the following goods: beer (foreign), coffee (for ships' stores), manufactured tobacco (including cigars and snuff); and *Excise drawback* upon beer and British spirits. A comparatively small portion of the *Customs duties* is levied immediately on importation, or, as it is technically termed, "*ex-ship*," the bulk being derived from goods taken from the bonded warehouses, which have been established for the convenience of the merchants. The business of seeing that the goods which enter the bonded warehouses be not released without the payment of duty is intrusted to a large staff of officials in what is known as the *warehousing branch of the Out-door Department of the Customs*. The officials who test and assess the wet goods, and conduct operations with reference to the goods in bond, are the *gaugers*. Formerly the *Customs* and the *Excise* had two different warehousing systems, but these have been assimilated quite recently. The *water-guard branch of the Out-door Department* is intrusted with the many and important

duties in connection with importation and exportation. The "duty" is paid by the merchants into the "long-room" of the various Customs Houses. The *Inland Revenue* service comprises three distinct departments—*Excise, Stamps, and Taxes*. The *Excise Duties* are collected by Inland Revenue officials; the *Stamp Dues* by the Inland Revenue and Post Office officials, aided by authorised persons holding licences to deal in stamps. The collection of the *Land and House Duty and Income Tax* is undertaken mainly by local officials; but four attempts have been made by as many Chancellors of the Exchequer to hand over the collection of these duties to Government officials. The *Excise* was first imposed in the time of the *Commonwealth*. It was at first a most unpopular form of taxation, and had to be forced on the people at the point of the sword. At the Restoration, when it yielded about £600,000 per annum to the Revenue, the *Excise* was continued by an Act of Parliament, which remains outstanding on the Statute Book at the present day. The *Stamp Duties* are governed by the *Stamp Acts, 1870* (33 and 34 Vict., c. 97, 98), which came into operation on January 1st, 1871. The *Table of Duties* is a most elaborate one, the items being too many to enumerate in our limits. It is interesting to note that the stamp duty on receipts for amounts of £2 and upwards dates from the war with our American Colonies which resulted in American Independence. Stamp Duties on legal documents are of old date, and can be clearly traced to 1604. In 1881 Mr. Gladstone enacted that penny adhesive stamps might be used for postal and inland revenue purposes indiscriminately. The *Probate, Legacy, and Succession Duties* yield the largest revenue in stamps. The *Land Tax and House Duty* (the latter of which does not operate in Ireland) are, in some form or other, of very ancient origin, and are the developments of the very oldest modes of taxation in the country. About a century ago (1798) Pitt imposed an *Income Tax*, at times as high as 10 per cent., as a war tax. This was repealed in better times. Sir Robert Peel re-imposed the *Income Tax* in 1842 "for three years," as a temporary measure. The tax, however, has never been repealed. (A table showing the rate of *Income Tax* charged in each year from 1842 to 1888 will be found under its proper heading.) The yield per penny amounts in round numbers to £1,990,000. See *FINANCE, NATIONAL*.

Reversion. When a person who has an interest in lands or houses grants to another person a lesser interest in the same, he creates for himself what is called a reversion. Thus when the tenant in fee or tenant in tail of property grants to another person a life estate in the same property, he creates for himself a reversionary estate in fee or in tail respectively. So likewise a reversion is created when the owner of a house or farm lets it on lease, or when the holder of a lease for a longer term, say ninety-nine years, sublets the leasehold for a shorter term, say seven or twenty-one years. Thus the landlord is the reversioner of the tenant, and the reversion is generally accompanied by a right to receive rent.

Revised Bible, issued '85. For detailed account of R.B., with list of living members of the Old and New Testament Revision Companies in England, see ed. '86. At the present date (Nov. '88) the work of revising the Bible

in *Germany* is slowly progressing. It has been found expedient that a commission of scholars well acquainted with the language of Luther, and the requirements of the present age should be appointed to decide on various questions affecting the diction of the sample Bible which is being prepared, and the Minister of Public Worship has agreed to defray all incidental expenses.

"Revue des Deux Mondes." A French journal first published 1831, and appearing twice a month. Amongst the writers are the most eminent scholars in France.

Rhea Fibre. One of the industrial problems which for many years past has occupied the attention of those interested in textile manufactures has been how properly to utilise for commercial purposes the raw fibre of the rhea plant, or *ramie*—the former being the Indian and the latter the Malayan name of the plant. The fibre at present has a very limited use, and although both the *Indian and French Governments* have offered inducements for the production of machines capable of reducing the fibre to a condition suitable for use, but few practical results have been obtained. The latter Government recently offered prizes of the value of 6,000 francs for any process or apparatus applicable to the commercial preparation of rhea, and a competition of machines took place at *Paris* in Sept. '88. The chief difficulty is in connection with the gummy matter surrounding the fibre, which it is necessary should be removed so as to leave the fibres clean and ready for the spinner. Mr. John Orr Wallace, of Belfast, has turned his attention to this question from a mechanical point of view, and at the *Irish Exhibition (q.v.)* of '88 he exhibited a machine with which he ultimately hopes to effect a solution of the difficulty. It was not made specially for rhea trials, but for flax experiments; these were attended with success, and stems of rhea being treated in the same machine were found to give satisfactory results. It is intended to send apparatus to India specially constructed for the preparation of rhea. Mr. Wallace is now engaged upon the whole question, and the outcome of his experiments will be awaited with much interest. Consult *Kew Gardens "Bulletin," '88*.

Rhine Falls Utilisation. See ed. '88.

Rhodes, Cecil. South African statesman, is a son of the late Rev. Canon Rhodes a Lincolnshire clergyman, and was born about 1850. Educated at Oxford where he graduated. While a very young man he settled at the Cape, where he realised an immense fortune at the *diamond fields*, and at the *Johannsburg gold fields*. When General Gordon was in South Africa, he became greatly impressed with Mr. R., and asked him to become his private secretary, on his appointment to the Sudan. This appointment, however, Mr. R. could not accept, as he had only a few days previously been appointed *Treasurer-General of Cape Colony*. He was subsequently appointed *Commissioner for Bechuanaland*. He is an enthusiastic Home Ruler and Federationist, and in '88 sent Mr. Parnell £10,000 for the furtherance of the former movement.

Ray Pasha, K.C.M.G., Egyptian statesman, b. about 1830, of Jewish origin, but Moslem. Appointed Minister of Public Instruction by Ismail, '73. Minister of Interior in European Ministry of Nubar, '78. Named by

Ismail Vice-President of the Commission of Enquiry, '78. Dismissed from office by *coup d'état*, '78. On accession of Thewfik, '79, called upon to form ministry, acted under, and cordially with, the Dual Control until his resignation demanded by military at *émeute* February, '82. Retired to Switzerland, returned after Tefel Kebir. Became Minister of Interior in Cherif's Ministry, '82. Resigned, '83, owing to quarrel with Lord Dufferin as to Arabi trial. On dismissal of Nubar, '88, formed Ministry. Riaz Pasha is honest, has intimate knowledge of the country, is excessively hardworking, but of very narrow ideas. His ideal of government is a benevolent despotism, he being the despot, and benevolence synonymous with stern but fairly just severity.

Ribble Navigation. At the beginning of '85 Mr. Walker of Westminster entered into a contract with the Corporation of Preston to carry out their design of diverting the channel of the river Ribble, and constructing a 40-acre dock at Preston, for £450,000. The intention, of course, is to improve the town as a seaport, and great things are expected when the enterprise is completed. But this large sum does not by any means represent the cost of the whole work. The Corporation, in their Act of '82, obtained borrowing powers amounting to £650,000, but it was stated at the beginning of '86 that they were already committed to an expenditure of nearly £700,000. Dredging the river channel from the dock to the sea, a distance of some twelve miles, is being done by the Corporation of Preston, and not by contract. There are 6,000,000 cubic yards to be moved, and it is stated that they only commenced operations about the end of October '86. These dredging operations were continued in '87, till it became apparent that they would prove to be far more irksome and expensive than at first estimated on paper. A special meeting of the Preston Town Council was held on Sept. 15th to consider a report of the Ribble Committee, recommending that application be made next session to borrow an additional sum of £50,000 for the purposes of the Navigation and Dock Act and the extension of the borough boundary. It was then stated that the Parliamentary estimate for the works, land, etc., was originally £558,149, and to increase the size of the new dock from 30 to 40 acres and for other purposes, borrowing powers to the extent of £662,244 had been obtained. The engineer now reported that to carry out the work as it now stood, the borrowing powers would have to be increased to £1,171,105, nearly every item in the Parliamentary estimate having been exceeded. The Council adopted the report by 25 votes to 15. Towards the end of October, however, another special meeting was held in the Guildhall; and such opposition was shown to the action of the Council that the latter, on meeting the following day, agreed to call in an expert for an opinion on the scheme, and meanwhile to make no attempt to raise any more money. The matter was under the consideration of the Town Council at the close of '87. On March 24th, '88, the chairman of the Ribble Committee of the Corporation of Preston formally opened the new cut, over a mile long, excavated for the diversion of the river. On the line of the cut is the new quay, and some distance beyond, the new 40-acre dock works. It was reported at the time that powers were being sought to borrow another £50,000 to complete the

scheme, the new bill, however, being petitioned against by the local Ratepayers' Association. On June 8th a special meeting of the Town Council was held, when the independent report of Mr. Abernethy, M.I.C.E., of London, was presented. He regarded the extension of the dock from 30 to 40 acres as unnecessary, but approved of the additional depth of 2 ft. 6 in. on the dock sill. He suggested alterations in the plans at a cost of £20,000, thought that the estimates for dredging up to Lytham were sufficient, but beyond that he recommended the construction of a channel in the North Channel—considering the gut in the direction of which the present works extend to be impracticable—at a cost of £30,000. On Nov. 24th the Preston Corporation issued an analysis of the voting when the poll of owners and ratepayers was taken as to whether the Corporation should promote a bill in the next session of Parliament to authorise them to borrow an additional £50,000 for the Ribble works. There were 12,569 votes in favour, and 4,835 against.

Richard, Henry, M.P., b. 1812, died Aug. '88; educated at Highbury Congregational College. After having held the charge of an Independent Church in Southwark, he became connected with the Peace Society as Secretary,—a society with which Mr. R.'s name will ever be honourably associated. Mr. Richard filled the post of Chairman of the Congregational Union for England and Wales,—a distinction conferred on few laymen in that body. He first entered Parliament in '68, as Member in the Liberal interest for Merthyr Tydvil, which he continued to represent till his death, although it was stated that towards the end of his life he had sent in his resignation, which was not, however, accepted. He was regarded with much respect in the House, being frequently referred to as "the Member for Wales." Mr. R. was an active member of the Royal Commission on Education, which in '88 concluded its sitting. It is proposed to erect a statue to Mr. R.'s memory in Tregaron, Cardiganshire, where he was born.

Richardson, Benjamin Ward, M.D., F.R.S., b. 1828, at Somerby, Leicestershire. Graduated in medicine at the University of St. Andrews ('54), Fellow of the College of Physicians ('61). In '65 he conducted an experimental research which resulted in the detection of a special poisonous product in connection with the spreading of contagious diseases, to which he gave the name of *sepsine*. Discovered ('66) the application of ether spray for the local abolition of pain in surgical operations. Dr. Richardson's numerous contributions to medical and scientific literature have been directed to the advancement of medical practice by the experimental method. In '68 he was publicly presented with a testimonial, consisting of a microscope by Ross and 1,000 guineas. His writings on hygienic matters have attracted a great deal of attention, as also have his researches in alcohol in relation to its action on man, and on the diseases incident to modern civilisation. Dr. Richardson is a noted cyclist and President of the Society of Cyclists. Author of the *Asclepiad* (quarterly, 2s. 6d.). In '88 Dr. R. published a novel, entitled "*The Son of a Star*."

Richter, Eugen, German lawyer, publicist, and politician, was b. at Düsseldorf, July 30th, 1838. In July '64 Herr Richter was elected burgomaster of Neuwied, but the Government

voted the appointment. Was elected to the Constituent North German Diet, became a member of the Prussian Diet ('69), and of the Imperial German Diet ('71). In both Houses he leads the **Progressist Liberals**. Is an eminent authority upon finance.

Richter, Hans, b. at Raab, in Hungary, 1843. After receiving a musical education, he became conductor at the National Theatre, Munich ('68), at the Pesh Theatre ('71), and at the Court Opera Theatre in Vienna ('75). He conducted the famous **Wagner Festival** at **Bayreuth** in '76, when a shower of orders descended on him from the gratified German princes. In '80 he conducted his first **concerts** in London, and created much astonishment by leading the greatest works entirely **memoriter**. His control over an orchestra is phenomenal. His concerts have been annually continued. He has also conducted fine performances of German operas in London. In '85 he was chosen **director of the Birmingham Festival**.

Right, The. See FRENCH POLITICAL PARTIES.

Rights of Way, Law in '88. Decisions of the courts with reference to public rights of way, have been numerous during the year. In the **Highlands** a question was raised as to the right of way over a mountain path leading from Braemar to Clova, in the county of Forfar, in the neighbourhood of Balmoral. The appeal of the landowner was dismissed with costs by the House of Lords, the evidence showing that there had been a right of way over the path from time immemorial. The **Latrigg case**, which tested the right of the public to walk over the hill known as Latrigg, in Cumberland, or the road or paths thereon, involved a good deal of litigation. The interests of the public were defended by the Keswick Footpath Preservation Society, and after a good deal of litigation, a compromise, which practically admitted most of the rights of way sought to be maintained, was effected. The case of the **Grand Junction Canal Co. v. Petty** (Court of Appeal, June), raised a question whether a towing-path by the side of the Aylesbury branch had been dedicated to the public. It was admitted that the Company had placed prohibitory notices telling people that they must not "trespass"; but, on the other hand, it was shown that, as a matter of fact, the public had used the path for years, and that the trespassing notice was intended only to scare away "loiterers and people intending to fish in the canal." The Court held that the Company, by permitting people to use it for years, had dedicated the path to the public, and refused to find they had no power to do so, as the user by the public was not incompatible with the purposes for which the Company existed. See also TRAFALGAR SQUARE, and OBSTRUCTION.

Riot, Law on, '88. The riot at the Lillie Bridge running ground in August '87, when the pavilion was set on fire, and dressing-rooms and refreshment bar were wrecked, was the subject of the first claim for compensation under the Riot (Damages) Act, 1886. The competitors left the ground without running, in what appeared to be a preconcerted manner; and the crowd, failing to get back their money, became angry and did the damage complained of. The judge, though putting aside the defendant's contention that as the riot took place in a private place the Act did not apply, held that as the plaintiff's agents made no attempt to

explain to the crowd why the race would not be run, the claim must fail.

Riots in Belfast, Royal Commission on the. See ed. '88.

Ripon, Right Rev. William Boyd Carpenter, D.D., Bishop of, b. 1841. Educated at Cambridge, where he graduated Senior Optime ('64); Vicar of St. James', Holloway ('70), Christ's Church, Paddington ('79); Canon of Windsor ('82); Bishop of Ripon ('85). Bishop Carpenter is a popular preacher of the Evangelical Party. Has written, among other works, "A Commentary on the Book of Revelation," "Foot-prints of the Saviour" (new ed.), etc.

Ristich, John, Servian statesman, was b. in 1831 in Servia. He was educated in Germany, and afterwards in France. He began his official career in the Ministry of the Interior, under Prince Karageorgewitch, and soon rose to a leading position in that department. In '58 he was made secretary to the embassy sent to Constantinople by Obrenovitch III., and became afterwards Servian Envoy at the Porte. In '67 he was appointed Servian Minister of Foreign Affairs, and when Obrenovitch was assassinated he was the Envoy sent from the Provisional Government at Belgrade to bring home Prince Milan from Paris. From '68 to '72, during the minority of Prince Milan, M. Ristich was member of the Council of Regency. When Prince Milan became King M. Ristich became his Minister for Foreign affairs, and subsequently President of the Servian Council of State (see SERVIAN POLITICAL PARTIES). In '88 M. R. resigned, and was succeeded by M. Christich. He played a very prominent part in the events that led to the Russo-Turkish war of '77-'78, and has exerted considerable influence in connection with the events which have transpired between Servia, Bulgaria, and the Powers.

Ritchie, Right Hon. Charles Thomson, M.P., was b. at Dundee, 1838. He settled in the East of London some years ago, and engaged successfully in the sugar refining business. At the general election of '74 he contested the **Tower Hamlets**, which had previously been a Radical constituency, and was returned in the Conservative interest. He was again returned in '80. Since '85, when the borough was split up by the Redistribution Bill, he has sat for **St. George's Division**. He first brought himself into public notice by the active part he took in the **Anti-Sugar Bounties Agitation** (see SUGAR BOUNTIES). He also greatly interested himself in local affairs in the **East End**, and obtained the respect not only of his own constituents, but also of both parties in the House of Commons, for his good sense and intelligent acquaintance with practical politics. On the accession of Lord Salisbury to power after the resignation of Mr. Gladstone in '85, Mr. R.'s services were rewarded with the **Secretaryship to the Admiralty**. In Lord Salisbury's second administration, Mr. Ritchie was appointed **President of the Local Government Board**, a post which he at first held without a seat in the Cabinet, but was subsequently promoted to **Cabinet rank**. During last session he added greatly to his reputation for administrative ability by the success with which he carried through the **Local Government Bill**, one of the most important measures ever adopted by the legislature (see PARLIAMENTARY SESSION '88, sect. 26). In October '88 Mr. R. paid a visit to his native town of Dundee, where he was

presented with the freedom of the borough, and met with an enthusiastic reception.

Ritualism. The Ritualists in the Church of England may be best defined as those who advocate and adopt an abundant symbolism in public worship, in opposition to the Puritan idea which dispenses as far as possible with all outward signs or ceremonies. The Ritualist maintains that these things assist the worshipper, and render public worship more orderly and reverential. The Puritans hold that they tend to degrade the worship and distract the worshipper; substituting the form for the spirit. Strictly speaking, therefore, Ritualism is compatible with all forms of doctrine, and independent of all. But, as a matter of fact, in the Church of England an extreme Ritual is almost exclusively associated with extreme views on the Real Presence (*q.v.*); and the points of Ritual about which there has been the most violent contention are those which involve the adoration of Christ as present on the Altar under the forms of bread and wine. (See more fully ed. '87).—**Proceedings** have been commenced against the **Bishop of Lincoln** (*q.v.*), in the Court of the Archbishop of Canterbury, requiring him to cite the Bishop before his court for the following practices:—“(1) The use of lighted candles when not required for the purpose of giving light; (2) Adopting the Eastward Position (*q.v.*) during the ante-Communion office; (3) Mixing water with the Sacramental wine used in the Holy Communion; (4) Administering water and wine so mixed to the communicants; (5) Standing in such a position during the Prayer of Consecration as to hide the manual acts (see **EASTWARD POSITION**); (6) Permitting the singing of the *Agnus Dei* immediately after the Prayer of Consecration; (7) Making the sign of the cross over the people; (8) Rinsing the paten and chalice and drinking the ablutions.” Each of these allegations describes, in set terms, a practice which has been condemned at some time or other, by one or other of the ecclesiastical courts. The decisions have, however, been somewhat contradictory, and in the result nothing has been done to check their rapid extension in the Church of England.

Rivière, Briton, R.A., animal painter, b. 1840. He studied art under his father, Mr. W. Rivière, at Oxford, where he also graduated. He has exhibited regularly at the Royal Academy since '64, and many of his works have been engraved on steel while others have been etched. Elected A.R.A. ('78), R.A. ('81). He exhibited “*Requiescat*” at the Academy, and “*Adonis's Farewell*” at the Grosvenor Gallery in '88.

Roadtown, Capital of the British Virgin Islands; in *Tortola*.

“**Robert Elsmere**” (*Smith, Elder*). Beyond all question Mrs. Humphry Ward's masterly novel was the book, *par excellence*, of 1888. Dealing as it does with the weighty things of Faith, it possesses for the intelligent reader an absorbing interest that leaves the merely sensational tale hopelessly in the rear. The idea of treating in direct historical form, under the guise of a novel, of an honest truth-seeker's soul-searching travail was almost an intuition of genius. At all events Mrs. Ward realises for every one the terrible passion and the gains of victory. It must not be supposed that “*Robert Elsmere*” is deficient in the elements of the more ordinary novel. On the contrary, it

displays extraordinary powers of observation, and the episode of Rose and Mr. Langham is wonderfully finely rendered. Thanks to Mr. Gladstone's article in the *Nineteenth Century*, the book acquired great popularity, and its circulation was much stimulated.

Roberts, Sir Frederick, G.C.B., V.C., son of Sir Abraham Roberts, G.C.B., was b. 1832. Appointed lieutenant in the Bengal Artillery ('57); captain ('60); served with distinction in the Indian mutiny, and received the *Victoria Cross*. Took part in the *Abyssinian war* ('68), as Assistant Quartermaster-General, and obtained the brevet rank of Lieut.-Colonel. In '72 he was made C.B. for his services in the *Looshaj Expeditionary Force*. In the *Afghan war* of '78 Major-General Roberts commanded the column sent to operate through the Koorum Valley, and surmounting the difficulties of the Peiwar Pass, gained a brilliant victory at Charasiab and entered Cabul. On the investiture of Candahar by Ayoub Khan he rapidly performed the march from Cabul to Candahar (one of the most brilliant military feats of modern times), and utterly defeated the Pretender. For these services he was created ('81) a baronet, G.C.B., and C.I.E. General Roberts was sent ('81) to take command of the forces against the *Boers* in South Africa, but was recalled on his arrival at Cape Town in consequence of peace being made. He succeeded Sir Donald Stewart in the command of the *Indian Army*.

Robes, Mistress of the, has charge of the royal state robes, and superintends the robing of the Queen at state ceremonies; walks next before H.M. in processions, or rides in the same carriage as H.M. with the Master of the Horse. See **MINISTRY**.

Robinson, John R., editor and manager of the *Daily News* (*q.v.*), is the son of the Rev. R. Robinson, and was b. at Witham, Essex. He has been associated with this newspaper since '55, being for some length of time editor of the evening paper published by the proprietors of the *Daily News*, under the name of *The Express*. For many years Mr. R. was a constant contributor to the columns of the *American press*, especially to the *Boston Advertiser* and the *Chicago Tribune*. Appointed the sole manager of the *Daily News* '68, and became editor '87. In Nov. '88 Mr. R. delivered a greatly appreciated lecture at Toynbee Hall, on “*The Newspaper, Day and Night*.”

Rochester, Bk. Rev. Anthony Wilson Thorold, Lord Bishop of. The see was founded in '64, and has an income of £3,100. His lordship, the 68th bishop in succession, is the second son of the late Rev. Edward Thorold, rector of Hougham-cum-Marston, Lincolnshire, and grandson of Sir John Thorold, ninth Baronet of Marston. Was b. June 13th, 1825; educated at Queen's College, Oxford, where he graduated B.A. '47), D.D. by diploma ('77). Ordained deacon ('49), priest ('50), by the Bishop of Manchester, and consecrated Lord Bishop of Rochester ('77). His lordship was rector of St. Giles-in-the-Fields ('57-68), minister of Curzon Chapel, Mayfair ('68), vicar and rural dean of St. Pancras ('69-77), Canon of York and Examining Chaplain to the Archbishop of York ('74-77), Select Preacher at Oxford ('78-80). Member of the School Enquiry Commission ('64), member of the first School Board for London ('70). Besides numerous sermons and pamphlets, he has written “*A Commentary on the Epistles to the Ephesians, Philippians, Colossians, Thessa-*

Ionians, and Philemon, and Epistles of SS. John, Peter, and Jude"; vol. ii. of "The New Testament, with a Brief Commentary by Various Writers" ('79); "The Preparation of a Sermon," one of the Homiletical and Pastoral Lectures edited by the Bishop of Gloucester and Bristol ('79). During the past year ('88) his lordship has preached and delivered addresses on **Socialism** in its relation to the Church.

Rockhampton. Second city of Queensland, on Fitzroy river, 420 miles north-west of Brisbane, pop. 12,422. Outlet for a large portion of central Queensland.

Rocky Mountains Tunnel. See ed. '88.

Rodriguez. An island in the Indian Ocean, 344 miles east of Mauritius, of which British colony it is a dependency. Area about 200 sq. m., pop. 1,463. On all sides surrounded by a coral reef. A central ridge traverses the island from east to west, and deep-cut river valleys run down in all directions to the sea. On the south-west is a large plain of coralline limestone, remarkable for its caves. Comparatively arid, but very fertile. Climate healthy, but subject to hurricanes. Two passages in the reef available for large vessels. **Administration** is provided for by a Civil Commissioner appointed by the Governor of Mauritius. Rodriguez was annexed in 1814. When the island was in French possession many settlers cultivated large estates; but with the liberation of the slaves the area of cultivation rapidly decreased, and it is now very small. Capitalists from the Mauritius are again turning attention to the natural advantages of the island.

Rogers, the Rev. William, Reminiscences of (Kegan Paul). One of the raciest books published in '88 was the volume of the Reminiscences of the Rev. William Rogers, rector of St. Botolph, in Bishopsgate. Mr. Rogers is a veteran worker in the cause of popular education, and is also a famous *raconteur*. In the latter capacity he has a varied assortment of choice stories to tell, and told they are with wonderful aptness and unction. As a tried educationist his chapters on this important subject well deserve the attention of all who are interested in the questions of free education and in the Board School system generally.

Roll of Solicitors. Every solicitor of the Supreme Court is entered on the roll of solicitors (now a book), kept by the clerk of the petty bag (see ROLLS, MASTER OF). He is "**struck off the rolls**" either at his own request, *e.g.*, on retirement from practice, or for misconduct. Several solicitors have of late years been struck off the rolls for the misuse of clients' moneys, and the decisions in this respect are very stringent.

Rolls, Master of, the, is the chief keeper of the records preserved at the Public Record Office (*q.v.*). It is an office of great antiquity (first mention A.D. 1256), and position. Originally he was merely the custodian of chancery rolls; later he acquired judicial authority in the Court of Chancery; and in recent times he shares with the vice-chancellors the hearing in the first instance of any suit; and by the Judicature Act, 1873, he was made a member of the High Court of Justice and of the Court of Appeal. He is likewise head of the petty bag office (formerly the common law side of the Court of Chancery, now an office in the High Court of Justice), and admits solicitors of the Supreme Court.

Rolls Series. The abbreviated title of the important series of publications issuing from

the Record Office (*q.v.*). Lord Romilly, the Master of the Rolls, in 1857 proposed to the Government that the vast body of important historical material lying in the form of MSS. at the Record Office should be edited by competent writers; and the suggestion (first made in 1822 by the House of Commons to George IV.) was adopted. The series now comprises most of the principal English chronicles, and many other documents of the highest subsidiary importance to the historian, since they throw contemporary and often unbiassed light upon early events that it has hitherto been impossible to fully interpret.

Roman Catholic Church. The name of that community of Christians who profess the same faith, partake of the same sacraments and sacrifice, and are united under one head, the Pope or Bishop of Rome and successor of St. Peter, and under the bishops subject to him. Its essential parts are the Pope, bishops, pastors—so far as they are priests—and laity. The Catholic's rule of faith is the whole word of God, written and unwritten; and this as taught and explained by the Church, or by the infallible utterances of the Roman Pontiff speaking *ex cathedra*—viz., when, as "pastor and teacher of all Christians," he "defines a doctrine, regarding faith or morals, to be held by the universal Church." The distinctive characteristic of the Romish Church is the supremacy of the Papacy. Its doctrines, like that of the rest of Christendom, are to be found, in the first instance, in the Nicene Creed; but to this, after the Council of Trent, were added, by Pope Pius IV., the article on transubstantiation, invocation of saints, and others which chiefly distinguish the Roman from other Christian communities. The Immaculate Conception of the Virgin Mary and Papal Infallibility have been made articles of faith in 1854 and 1870 respectively. One great and central object of faith and worship is the Mass, which is the mystical sacrifice of the body and blood of Christ, instituted by Himself at the Last Supper, and is essentially the same as the Sacrifice of the Cross. Scripture and tradition are appealed to in support of this and other doctrines—as the Seven Sacraments, the honour due to the Blessed Virgin, Purgatory, Invocation of Angels and Saints, etc. There is quite a distinction between what is of doctrine and what of discipline; the former belonging to the deposit of faith taught by Christ and the Apostles, which is invariable, whilst the latter, founded on the decisions and canons of councils and the decrees of popes, is the Church's external policy as to government, and may vary according to times and circumstances. The Roman Catholic Church abounds in a variety of religious orders for men and women, with constitutions suited to all tastes, times, and countries, yet practising in common, poverty, chastity, and obedience, called the "evangelical counsels"; in charitable and educational institutions, as asylums, hospitals, orphanages, schools, colleges, universities; nor does she forget the divine commission to teach all nations, for her missionaries penetrate to every corner of the world. The **Sacred College of Cardinals**—70 in number, after the 70 disciples—are the supreme council or senate of the Church and the advisers of the sovereign pontiff, and at the death of a pope they elect his successor. They preside over the 19 Roman congregations or departments for ecclesiastical

affairs, and thus represent the Pope in the regular exercise of his pontifical authority. The total number of Catholics over the world, ruled by about 1,100 archbishops and bishops, is estimated at 220,000,000; of which there are in **Great Britain and Ireland** about 5,650,000 (*i.e.*, nearly 4,000,000 in Ireland, and about 1,680,000 in Great Britain); and in the rest of Europe more than 100,000,000. Ireland is divided into four metropolitan provinces, subdivided into dioceses, each ruled by a bishop, of whom there are 27, including the four archbishops. The number of priests amounts to 3,412, who serve 2,382 churches and chapels, situated in 1,015 parishes. The 21 archbishops and bishops of **Great Britain** consist of: 1st, for England and Wales, 1 archbishop (of Westminster), with 14 suffragans (besides 2 bishops-auxiliary); 2ndly, for Scotland, 2 archbishops (one of St. Andrew's and Edinburgh and one of Glasgow), with 4 suffragans. The total number of priests of England and Wales is 2,374, serving 1,312 churches and chapels; of Scotland 334, serving 327 churches and chapels. The **United States** has about 7,500,000 Catholics, 79 archbishops and bishops, 7,596 priests, 3,000 churches and chapels, and 500,000 pupils in parish schools. In the **British possessions of North America** there are about 2,200,000 Catholics, 34 archbishops and bishops, about 2,400 priests, 2,200 churches and chapels and stations, 223 academies, and 3,823 parish schools. From statistics like these, which can be approximated to in all the other parts of the world by the bishops presiding over the different dioceses or vicariates, and are published occasionally, may be inferred how complete is the organisation of the Church, and how vigorously she exercises the forces at her command for the extension of the Catholic faith. Consult "The Catholic Directory, Ecclesiastical Register and Almanac '89." For Papal Ministry see DIPLOMACY.

Roman Era. The date of the foundation of Rome (April 21st, 754 B.C.) was used as the Roman Era; expressed by the letters A. U. C. (*Ab urbe conditor*).

Rosa, Carl, b. at Hamburg (1842). Made his debut as a violinist at eight, afterwards became a pupil in the Conservatoire of Leipzig. After his marriage with Madame Parepa—a talented singer, with whose assistance he conducted a successful English Opera season in the United States ('71-'72), he returned to England, and after a series of successful performances in the leading provincial towns, commenced in '75 an English opera season at the Princess's. In '76 he took the Lyceum, and subsequently the Adelphi and Her Majesty's Theatre, for the same purpose. He has produced some of the masterpieces of Wagner with English text, and has put on the boards the works of several new composers. In 1883 he was appointed a member of the Council of the Royal College of Music.

Roscoe, Sir Henry Enfield, M.P., F.R.S., LL.D., grandson of Roscoe the historian, was b. in Liverpool, 1833, educated at Univ. Coll., London, and Heidelberg. Sir H., who was Professor of Chemistry at Owens College, '58 to '86, is chiefly distinguished for his investigations and discoveries relative to the chemical action of light, and on the metal vanadium. In conjunction with Prof. Schorlemer he published the well-known "Treatise on Chemistry" (6 vols.). Sir H. R. is also the author of "Lessons

in Elementary Chemistry," which has been translated into many languages, and of "Lectures on Spectrum Analysis." He is an Hon. D.C.L. of Oxford, an LL.D. of Cambridge, Dublin, and Montreal, an hon. M.D. of Heidelberg, member of various learned societies, and served on the recent Royal Commission on Technical Instruction, also on the Commission of Inquiry into the Pasteur method for the treatment of hydrophobia, and was, '88, appointed consulting chemist to the Metropolitan Board of Works with a view to the deodorisation of sewage at the Barking outfalls. He sits for South Manchester as an advanced Liberal.

Roseau. Capital of Dominica (*q.v.*).

Rosebery Archibald Philip Primrose, P.C., 5th Earl of (creat. 1703); Baron Rosebery (1828), by which title he sits in the House of Lords; b. in London, '47; educated at Eton and Christ Church, Oxford; m. ('78) Hannah, dau. of the late Baron Mayer de Rothschild, M.P.; succeeded his grandfather in '68. Appointed a commissioner to inquire into endowments in Scotland ('72); Under-Secretary of State, Home Office ('81-'83); elected Rector of the University of Edinburgh ('80); was Lord Privy Seal, and First Commissioner of Works ('85). On the accession to power of Mr. Gladstone in the beginning of '86, Lord Rosebery attained the distinguished post of Secretary for Foreign Affairs. He held the portfolio for only six months, until the fall of Mr. Gladstone's Government in June. Lord Rosebery has cast in his fortunes fully with Mr. Gladstone, and entirely agrees with his Home Rule policy. His lordship is a strong Radical, and though a peer, moved in '84 for a select committee to inquire into the best means of improving the efficiency of the House of Peers. As a speaker Lord Rosebery is ready and humorous, and Mr. Gladstone has publicly recognised him as one of the younger Liberals who is destined to play a great part in the history of the country. Lord Rosebery is a strong advocate of Imperial Federation (*q.v.*). He takes a great interest in movements for the improvement of the social condition of the masses, and has recently presented a magnificent swimming bath to the People's Palace (*q.v.*), in the East End of London. In the summer of '88 Lord R. was the recipient of the degree of LL.D. from the University of Cambridge, together with many other distinguished personages, including H.R.H. Prince Albert Victor and Lord Salisbury. He has recently delivered important speeches in the provinces.

Ross, Wallace. See AGATICS.

Rossall School, Lancashire. Founded 1844. Three exhibitions of £50 for three years, and three of £30 at Oxford or Cambridge offered every year. Pupils, 320. Head Master, Rev. C. C. Tancock, M.A.

Roumania. Formerly the autonomous provinces of the Ottoman empire, Moldavia and Wallachia; now a kingdom under Charles I. of Hohenzollern-Sigmaringen, in whom resides the executive power. The legislature is composed of a Senate of 120 members, elected for eight years, and a Chamber elected for four years by all male citizens paying taxes. Education is free and compulsory, but still in a backward condition. Area 48,307 square miles, with a population estimated at about 5,500,000. Estimated revenue and expenditure for 1887-8, £5,546,133; debt in 1887, £39,356,745; imports in 1887, £11,860,000; exports, £10,222,000. (For army, see ARMIES, FOREIGN.) Navy about 20

small vessels, chiefly for purposes of Danube police. In 1874 Austria, Germany, and Russia, in spite of the objection of the Porte, claimed the right to make separate treaties with Roumania. In 1877 the country, in alliance with Russia, took part in a war with Turkey. At the close of the war Roumania was declared independent, received the Dobrudscha, and gave up Roumanian Bessarabia to Russia, from whom it had been obtained in 1856. In March 1881, Roumania was proclaimed a kingdom, and as such recognised by the Powers. In March 1883 the powers of the European Danubian Commission were by treaty extended to Ibrail and the Kilia arm, and prolonged in time, Roumania protesting against the presidency of Austria in the commission. —In February '88 some difficulty occurred with Russia on the subject of the rumour circulated by the Ministerial party, that the votes obtained by the Opposition had been bought by money which the Russian Legation had furnished. The party spirit between the followers of M. Bratiano (Liberal), and the partisans of the Opposition (Conservative) found expression at Bucharest, when (March 26th) the Parliament House was invaded by a crowd headed by several Opposition members, the usher of the Chamber shot dead, and the sentries wounded. The troops were called out to suppress the riot, and two deputies, MM. Fleva and Philippesco, were arrested. The unpopularity of M. Bratiano led to his resignation, and M. Rosetti succeeded as Prime Minister (April 3rd). A revolt, attributed to Russian agency, assumed dangerous dimensions among some of the Silistrian peasantry; conflicts with the troops occurred. Later in the year (October) a general election took place, resulting in a great defeat for the party of M. Bratiano, who himself lost his seat. (See ROUMANIAN POLITICAL PARTIES.) The Conservative party are stated (Dec. 7th) to be agitating for the impeachment of M. Bratiano and his colleagues in the late Liberal Cabinet, to which course, however, the King and the Cabinet are opposed. It is probable a Cabinet crisis may arise on this question. Three important government bills are under present consideration, one for the reorganisation of the National Bank of Roumania, and establishing gold as the standard of currency; another for judicature reform; the third to facilitate the sale of allotments of State lands to the peasantry. This last is opposed by the Conservatives in the Roumanian Lower House. Consult Laveleye's "The Balkan Peninsula"; J. Samuelson's "Roumania Past and Present"; *The Statesman's Year Book*; the *Almanach de Gotha*, etc. and for ministry, etc., see DIPLOMACY.

Roumanian Political Parties. Party politics in Roumania are in a more or less constant state of transition. The legislative power of the country is vested in an elected Senate of 120 members, and a Chamber of Deputies containing 183 members, and elected for four years by three so-called electoral colleges or classes of voters. Those three colleges consist of (1) electors possessed of property insuring an annual income of not less than £50; (2) those paying direct taxes of not less than 20 francs annually; and (3) all Roumanian subjects of full age. The present chamber was elected in October '88, the previous one, which only had an existence of some five months, having been dissolved by the king. Up to the end of '87 M. John Bratiano, who had held office since '75,

and his following of Liberals, had been all-powerful, the Conservative opposition having, practically ceased to take an active part in the affairs of the nation. In the election of Feb. '88, however, the Opposition improved its position, and in the following month the Bratiano ministry resigned, and gave place to one presided over by M. Rosetti, a prominent member of the "Junimists," or young Conservatives. The result of the general election that took place in October last was to still further increase the strength of the ministry, which also counts among its supporters the Liberal Conservatives and the Independent Liberals. In each of the electoral colleges the Government obtained a very considerable majority, with the result that they probably command the support of four-fifths of the Chamber. The Bratiano party, which comprises the National and Dissident Liberals, is therefore an insignificant majority. It builds, its hopes, however, of again obtaining the ascendancy upon a split between the Ministerial Liberals and Conservatives,—a by no means improbable contingency, the two governmental parties being in almost hopeless conflict upon many important questions of policy.

Round Table Conference, '87. See ed. '88.
Royal Academy, The, at Burlington House, Piccadilly, was founded in 1768 by George III., who gave it rooms in Somerset House. Thence it was removed to Trafalgar Square (1834), and to its present abode, which it occupies rent-free (1869). The principal objects of the Royal Academy are (1) the establishment of a well-regulated school or academy of design for the gratuitous instruction of students, and (2) the holding of an annual exhibition open to artists of distinguished merit, where they may offer their performances to public inspection, and acquire that degree of reputation and encouragement which they may be deemed to deserve. The Royal Academy is "a private society," supporting a school from its own resources without any grant of public money. The members are under the superintendence and control of the Sovereign, who confirms all appointments and bye-laws; and the society itself consists of 42 Royal Academicians, at least 20 Associates, and two Associate Engravers. The first president was Sir Joshua Reynolds, and the present occupant of the office is Sir Frederick Leighton (q.v.). There is a council of 13 members, elected annually in December. Appended is a list of the Royal Academicians, Jan. '89:—

1879 Alma-Tadema, L.	1876 Leslie, G. D.
1872 Armitage, F.	1881 Long, E.
1879 Armstrong, H. H.	1879 Marks, H. S.
1881 Barlow, T. O.	1862 Marshall, W. C.
1882 Boehm, J. E.	1864 Millais, Sir J. E., Bart.
1888 Burgess, J. B.	1877 Orchardson, W. Q.
1867 Calderon, P. H. (keeper)	1881 Quiless, W. W.
1880 Cole, Vicat.	1880 Pearson, J. L.
1867 Cooper, T. S.	1871 Pettie, J.
1877 Davis, H. W. B.	1857 Pickersgill, F. R.
1871 Dolson, W. C. T.	1876 Poynter, E. J.
1864 Faed, T.	1881 Riviere, B.
1867 Fildes, S. Luke.	1869 Sant, J.
1853 Frith, W. P.	1877 Shaw, R. N.
1876 Gilbert, Sir J.	1871 Stocks, L.
1863 Goodall, F.	1887 Stone, M.
1882 Graham, P.	1886 Waterhouse, A.
1879 Hodgson, J. E.	1867 Watts, G. F.
1860 Hook, J. C.	1870 Wells, H. T.
1864 Horsley, J. C.	1874 Woolner, T.
1868 Leighton, Sir F., Bart.	1878 Yeames, W. F.

The premises of the Royal Academy at Burlington House comprise a grand gallery or range of

thirteen halls, besides a central octagon for sculpture, a theatre, and a large room in which the annual banquet is held—the latter always an event of much interest to the artistic world. The basement is devoted to schools of art for male and female students. The total cost of the buildings was nearly £120,000. The Royal Academy derives the whole of its funds from the holding of its annual exhibition of the pictures of living artists, which opens on the first Monday in May and continues until the first Monday in August. No works which have previously been exhibited are accepted, and the Council has the right to reject any picture it may please. The proceedings of the "Hanging Committee," as may be supposed, do not always give satisfaction; and on the whole it may be said that very considerable irritation exists at the way in which the summer exhibition is managed. In 1886 this has shown itself in a very marked manner. In spite of an energetic appeal of Sir Frederick Leighton and several other members, the majority pleaded vested interests, and refused to limit the Academicians' right to wall space. In the future, as in the past, each member of that essentially private body is to be entitled to hang eight pictures at the annual exhibition.—At the end of January 1887, a meeting was held which enlarged the constitution of the Academy, and will greatly popularise that body. The Winter Exhibition of art treasures in connection with the Royal Academy was established in 1869, paintings being liberally lent by private individuals. The result is that a really admirable collection of masterpieces is usually brought together. The exhibition remains open from the first Monday in January for a period of nine weeks. The fine library and books of prints belonging to the Academy are open to students and the general public at certain hours. The Diploma and Gibson Galleries, reached by a staircase to the right of the entrance hall, contain the works presented by each member as a specimen of his ability on his election as a Royal Academician; the works of J. Gibson, R.A., bequeathed by him; several interesting pictures of old masters, and some fine pieces of sculpture. At the end of Nov. '88 a National Art Congress was inaugurated at Liverpool, and addresses were delivered by the President of the R.A. and many other distinguished artists. It is reported that a principal feature of the next winter exhibition at Burlington House will consist of a representative selection of the works of the late Mr. Frank Holl, R.A. See ART.

Royal Academy of Music. Established in 1822, chiefly owing to the exertions of Lord Burghersh, afterwards Earl of Westmorland, the R. A. M. was incorporated by charter in 1830. Students of all branches of music are catered for, and find ample stimulus to exertion in the large number of scholarships and prizes which are offered for competition. The chief scholarships are, the Westmorland, open to ladies between the ages of eighteen and twenty-four; the Fottier, open to ladies and gentlemen; the Standaie Bennett; the Parepa Rosa; the Sir John Goss; the Thalberg; for pianoforte students; the Henry Smart; the Sainton Dolby; the Liest; the Mine Gift; and the Macfarren, founded by Mr. Carl Rosa, for ladies who have not previously been students at the Academy, the successful candidate being entitled to two years' free musical education. Associates pass

a qualifying examination, and are entitled to the use of the initials A.R.A.M. Fellows (the number is limited to 100) are elected after leaving the Academy by the Directors. They are solely entitled to use the initials R.A.M. Honorary members are entitled to the initials R.A.M. with the prefix Honorary. Principal, Dr. A. C. Mackenzie. Sec., Mr. John Gill. The Academy is situated in Tenterden Street, Hanover Square, W.

Royal Agricultural Society of England. This, the premier agricultural society of the United Kingdom (though not the oldest established) will celebrate its Jubilee in the forthcoming year, having been founded by Royal Charter on the 26th March, 1840. The Charter gives a long list of the national objects which the Society was intended to promote, and which have been well embodied in its motto, "*Practice with Science.*" The results of the Society's efforts for what the royal warrant calls "*the general advancement of English agriculture*" have been great and striking. It would be impossible in this brief record even to enumerate all the improvements in the different breeds of live stock, and in agricultural machinery, which have arisen from the annual competitions in the Society's showyards, or the advances in scientific knowledge as to the cultivation of the soil, which the Society's experiments and grants to investigators have brought about. It has two sides to its work: (1) The practical, the chief feature of which is its annual shows, to which the best pedigree animals are brought to compete for the valuable prizes offered by the Society, and still more for the honour of being "Royal" prize-winners, and at which also the newest inventions in agricultural implements and labour-saving appliances are exhibited; (2) The scientific, for which purposes it has equipped and maintains a complete chemical laboratory for the analysis of feeding stuffs, manures, soils, &c., and retains the services of Chemical, Botanical, Entomological, and Veterinary experts in order that its members may have at low rates the best scientific advice obtainable. It controls, moreover, an experimental farm at Woburn, at which elaborate investigations into crops, soils, feeding stuffs, and other matters connected with agriculture are carried on. Its *Journal* has from the first taken high rank amongst scientific publications, and contains in each number articles by leading authorities on the most important agricultural questions of the day. The R. A. S. gives prizes of Scholarships for competition by agricultural students and pupils at county and middle-class schools, and seeks in many other ways to foster the study of agriculture. In fact it possesses many of the functions and attributes of a Government Office. Her Majesty the Queen has recently become its fiftieth president. The list of past presidents contains the names of some of the most influential landowners and most prominent agriculturists in the country, including the late Prince Consort, the Prince of Wales, two Dukes of Richmond, Mr. Philip Pusey, Mr. C. Holland (the founder of the Royal Agricultural College), and many others whose names are household words in the annals of English agriculture. The governing body of the Society consists of a president (elected annually), twelve trustees, twelve vice-presidents, and fifty members of council, half of whom go out of office each year. The

Council meets once a month at the Society's house, 12, Hanover Square, and the business is divided amongst a large number of committees. **Three general meetings of members** are held in each year: one on the 22nd of May (the anniversary meeting); one in the Society's showyard in the summer; and one in December, usually on the Thursday of the Fat Cattle Show week. **Members** number about 9,500, a large accession having recently taken place in view of the **Jubilee year of the Society**. **Membership** of the Society entitles to the use of a large and well-stocked library of standard books on agricultural subjects, and a **reading-room**, at which the principal agricultural newspapers and other periodicals can be consulted by members. **Provincial veterinary surgeons** have been appointed by the Society in each county, for the purpose of enabling members to engage skilled veterinary advice at fixed rates of charge, in cases of disease amongst cattle, sheep, or pigs. Members can also consult the professors of the Royal Veterinary College at fixed rates, and have the privilege of sending cattle, sheep, and pigs to the College infirmary. The Society makes annually a considerable grant from its general funds in order that members may obtain at low rates analyses of feeding stuffs, artificial manures, soils, &c., by the Society's consulting chemist (Dr. J. Augustus Voelcker). Members may also consult Dr. Voelcker either personally or by letter at a small fee. Reports can be obtained by members from the Society's consulting botanist (Mr. W. Carruthers, F.R.S.), on the purity of seeds, and on diseases or weeds affecting farm crops, at a fee of one shilling in each case. The determination of the species of any insect, worm, or other animal which, in any stage of its life, injuriously affects farm crops, with a report on its habits and suggestions as to the methods of prevention or remedy, is made for members by the Society's consulting entomologist (Miss Eleanor A. Ormerod) at a fee of half a crown. The **fiftieth annual show** of live stock, implements, and farm produce will be held in the week commencing June 24th, '89, on a portion of Windsor Great Park, the use of which for the purpose has received the special sanction of Her Majesty. It is intended that, as far as possible, it shall be completely representative of the whole art of agriculture as practised in this country, and with that view prizes will not only be offered for every established breed of horses, asses, cattle, sheep, goats, pigs, and poultry known in this country, but for butter and cheese, wool, hops, cider and perry, hives of honey, seed corn, jams, preserved fruits, and other produce. It is, indeed, expected that it will be the greatest agricultural exhibition which has ever been held.

Royal Assent. See PARLIAMENT and PARLIAMENTARY PROCEDURE.

Royal College of Music. See ed. '88.

Royal Colonial Institute. The growth of the R. C. I. (founded '68) since its incorporation by royal charter in '82 has been very rapid. In '78 it numbered 800 fellows, with an annual income of £1,331. In '88 the number exceeded 3,100, with an annual income of nearly £7,000 exclusive of the building fund. The fact that the Prince of Wales is President of the Institute has given it much additional prestige, more especially as His Royal Highness has shown much interest in its progress. The Duke of

Manchester is Chairman of the Council. Amongst the Vice-Presidents are numbered the Dukes of Argyll, Buckingham, and Sutherland, Lord Granville, Lord Rosebery, and others. The Council is composed of gentlemen well known in connection with the Colonies; and Capt. M. F. Ommanney, the senior Crown Agent for the Colonies, is Treasurer. The objects of the R. C. I. are thus officially set forth:—"To provide a place of meeting for all gentlemen connected with the Colonies and British India and others taking an interest in Colonial and Indian affairs; to establish a reading-room and library, in which recent and authentic intelligence upon Colonial and Indian subjects may be constantly available, and a museum for the collection and exhibition of Colonial and Indian productions; to facilitate interchange of experiences amongst persons representing all the Dependencies of Great Britain; to afford opportunities for the reading of papers and for holding discussions upon Colonial and Indian subjects generally; and to undertake scientific, literary, and statistical investigations in connection with the British Empire. But no paper shall be read, nor any discussion be permitted to take place, tending to give the Institute a party character." The new premises in Northumberland Avenue are commodious, well furnished, and fully supplied with Colonial and other newspapers, books, and statistical information; and in the discussion of questions of Colonial interest the Institute is taking an increasingly prominent part. Amongst the matters which engaged the special attention of the Council in '88, were the Investment of Trust Moneys in Colonial Government Stocks, the Effect upon Colonists of the English Legacy and Succession Duty Acts, and the Exploration of the Antarctic Regions. The papers read during '88 included "The Tea Industry of Ceylon," by Mr. J. Loudoun Shand; "Recent Impressions in Australia," by Lord Brassey; "The Postal and Telegraphic Communication of the Empire," by Mr. J. Henniker Heaton, M.P.; "South Africa," by Sir Donald Currie, K.C.M.G., M.P.; "The New Industrial Era in India," by Sir William Wilson Hunter, K.C.S.I.; "Wine-growing in British Colonies," by Mr. Hubert de Castella,—which are published in the "Proceedings" of the Institute, and are of a very interesting description. The charter and rules of the Institute provide that there shall be three descriptions of fellows—resident, non-resident, and honorary. The admission of gentlemen as fellows is by proposal and recommendation, according to a printed form, these forms being subscribed by at least two fellows and exhibited for a week in the Institute prior to the election. The resident fellows pay an entrance fee of £3 and an annual subscription of £2; the non-resident fellows pay an entrance fee of £1 1s. and an annual subscription of £1 1s. (increased to £2 when visiting the United Kingdom); and these fees can be compounded by resident fellows paying £20 and non-resident £10. On the 31st Dec. 1887 there were 1,198 resident and 1,927 non-resident fellows. The Library contains some 7,000 vols. and nearly 2,000 pamphlets, and is made readily accessible by the publication of a printed catalogue. Whether the Imperial Institute (*q.v.*) will eventually absorb the R. C. I. is a question for future consideration. They will in part run upon the same lines; but as the Imperial Institute is probably some years from completion, the matter does not immediately press.

The Royal Family.	Born.	Died.	Married.	Date.	Annuities.
HER MAJESTY THE QUEEN, Succ. her uncle, WILLIAM IV., 1837	1819	.	Duke of Saxony, Prince of Coburg and Gotha (d. '61)	1840	£385,000.*
Family:					
1. VICTORIA ADELAIDE, PRINCESS ROYAL.	1840	.	Crown Pr. of Prussia (succ. as German Emp., Mar. '88; d. June '88.)	1858	£8,000.
a. Frederick William V.A. (succ. as German Emp. June '88). <i>Issue</i>	1859	.	Pr. Augusta of Holstein.	1881	
5 sons, youngest b. July '88.					
b. V. E. A. Charlotte. (<i>Issue</i> 1 dau.)	1860	.	Pr. of Saxe-Meiningen.	1878	
c. A. W. Hendrich	1862	.

f. J. F. E. Waldemar	1868	1879			
g. Sophia Dorothea U. A.	1870				
h. Margaret B. F.	1872				
2. ALBERT EDWARD, PRINCE OF WALES	1841	.	Alexandra of Denmark.	1863	£40,000 (and £10,000 to wife. Duchy of Cornwall revenues according to last statement issued, about £60,563 a year).
a. Albert Victor C. E.	1864				
b. George Frederick E. A.	1865				
c. Louise Victoria A. D.	1867				
d. Victoria Alex. O. M.	1868				
e. Maude Charlotte M. V.	1869				
f. Alexander J. C. A.	1871	1871			
3. ALICE MAUDE MARY	1843	1878	Pt. F. W. Ludwig of Hesse Darmstadt.	1862	
a. Victoria Alberta E. M. M. (<i>Issue</i> , 1 dau.)	1863	.	Pr. Louis of Battenburg.	1884	
b. Elizabeth Alex. L. A.	1864	.	Duke Sergius of Russia.	1884	
c. Irene Marie L. A.	1866				
d. Ernest Louis C. A. W.	1868				
e. Frederick William	1870	1873			
f. Victoria Alice	1872				
g. Mary Victoria	1874	1878			
4. ALFRED E. A., DUKE OF EDINBURGH	1844	.	Duch. Alex., sister Emp. Russia.	1874	£25,000.
a. Alfred Alex. W. E. A.	1874				
b. Marie Alex. Victoria	1875				
c. Victoria Melita	1876				
d. Alex. Louise O. V.	1878				
e. Beatrice	1884				
5. HELENA, PRINCESS CHRISTIAN	1846	.	Pr. Fred. Christian of Schles.-Holst.	1866	£6,000.
a. Christian Victor A. L. E. A.	1867				
b. Albert John C. F. A. G.	1869				
c. Victoria Louise S. A. A. H.	1870				
d. F. J. Louise Augusta M. C.	1872				
e. Harold	1876	1876			
6. LOUISE C. A., MARCHIONESS OF LORNE.	1848	.	Marq. of Lorne	1871	£6,000.
7. ARTHUR W. P. A., DUKE OF CON- NAUGHT.	1850	.	Pr. Louise, dau. of Pr. Fred. Chas. of Prussia.	1879	£25,000.
a. Margaret V. A. Ch. Norah	1882				
b. Arthur F. Patrick A.	1883				
c. Victoria Patricia H. E.	1886				
8. LEOPOLD G. D. A., DUKE OF ALBANY	1853	1884	Pt. Helena of Waldeck.	1882	£6,000. (to Duchess).
a. Alice Mary V. A. P.	1883				
b. Leop. C. E. G. A. (<i>posth.</i>)	1884				
9. BEATRICE M. V. F.	1857	.	Pr. Henry of Battenberg.	1885	£6,000.
a. Albert Alexander	1886				
b. Victoria Eugénie J. E.	1887				
1. DUKE OF CUMBERLAND (cousin to the Queen). <i>Issue</i> 6 children.	1845	.	Pr. Thyra of Denmark.	1878	
2. DUCHESS OF CAMBRIDGE	1797	.	Dke. of Cambridge	1818	£6,000.
a. Geo. W. F. C., Duke of Cambridge	1819	.	Morganatic		£12,000.
b. Augusta C., Dch. of Mecklenburg-Strelitz (son and grandchildren)	1822	.	Fred. Dke. of Mecklenb.	1843	£3,000.
c. Mary Adelaide, Duchess of Teck . (One dau. and three sons.)	1833	.	Francis, Duke of Teck.	1866	£5,000.

* i.e., Privy Purse, £60,000; household salaries, £31,260; household expenses, £172,500. Royal bounty, £12,000; Unappropriated £8,000. £35,000. This does not represent Her Majesty's entire income and expenditure, which are considerably supplemented by the Duchy of Lancaster revenues (according to the last statement issued about £45,000), cost of certain of the Royal palaces (those wholly and partly occupied by the Queen, and those by pensioners), Royal yachts, escorts, freedom from taxes, etc., etc. There was also granted during 1887-8 the sum of £27,470 for Civil List Pensions (see CIVIL LIST AND FINANCE NATIONAL).

Royal Commission on City Companies. See CITY GUILDS.

Royal Commission on Crofters. See CROFTERS.

Royal Dublin Society. This scientific society was founded in 1731, and incorporated by royal charter in 1749. It has, as associated bodies, the Royal Geological Society of Ireland and the Dublin Scientific Club. It issues "Transactions" and "Proceedings," and meetings are held monthly during the session. President, Earl of Rosse, F.R.S.

Royal Indian Engineering College, The, Coopers Hill. is primarily maintained under the orders of the Secretary of State for India in Council, to educate candidates for Government service in the Indian Public Works, Telegraph and Forest Departments; candidates for the last-named department are selected under special arrangements. Nominations to the Indian Telegraph Department are made from among the engineer students at the College at the end of their first year of study. About 50 engineer students are admitted yearly to the College. Candidates for admission must be between the ages of 17 and 21 years on the 1st day of July of the year of admission, and of good moral character; they must have received a good general education, and have attained to a sufficient degree of proficiency in elementary mathematics to enable them to follow the College course with advantage. The collegiate year usually begins at the end of September. Applications for admission as engineer students can be made at any time, but not later than the 15th day of June of the year named for admission, except with the special permission of the President. Candidates whose applications are found satisfactory as to age and character undergo an examination, the subjects of which, with all other information, may be obtained at the College, Coopers Hill. Staines. See, J. G. Whiffin, R.N. The College course in Engineering extends over three years, that in Forestry over about 26 months, and that in Telegraphy over two years. The appointments to the Indian services offered by the Secretary of State for India are awarded on the completion of each course to duly qualified successful candidates, subject to the conditions as to physical fitness. The Secretary of State for India usually offers fifteen appointments to the Indian Public Works Department, and two in the Indian Telegraph Department, to students entering the College each year.

Royal Household. The principal officers of H.M. Household change with each administration. A list of them is given under that heading, while an outline of the duties of each will be found alphabetically arranged throughout the work.

Royal Institute of Painters in Water Colours. This Society was founded in 1821, and formerly held its exhibitions in Pall Mall, but in the spring of '83 moved to more commodious galleries at 280, Piccadilly. There is an annual exhibition of water colours every year, commencing at the end of April. The walls are open to artists whose works are approved, and members are elected according to the merit which their productions display. President, Sir James D. Linton; Vice-President, H. G. Hine; Sec., W. T. Blackmore. Office, *supra*.

Royal Institution of Great Britain, The. Founded 1790, and incorporated 1800, "for the diffusing knowledge and facilitating the general

introduction of useful mechanical inventions and improvements, and for teaching, by courses of philosophical lectures and experiments, the application of science to the common purposes of life." The Institution was enlarged in 1870. The library contains about 50,000 volumes. Amongst the lecturers have been Dr. Garnett, Dr. Thomas Young, Mr. [Sir] Humphrey Davy, Dr. W. T. Brande, Michael Faraday, and John Tyndall. The first president was Sir Joseph Banks. There is a fund for the promotion of experimental researches. Admission obtained by ballot; £5 5s. entrance; £5 5s. subscription. House: Albemarle Street, Piccadilly.

Royal Irish Academy. A celebrated scientific and literary society, meeting in Dublin, incorporated by royal charter of Geo. III., A.D. 1786, and having upwards of 400 members. The Academy publishes "Transactions" and "Proceedings," containing papers on Science, and Polite Literature and Antiquities—and supervised by committees of 11 and 10 members respectively. The publications will in future appear together and not in separate sections. President, Rev. S. Haughton, M.D., F.R.S.

Royal Masonic Benevolent Institutions and Funds. See FREEMASONRY.

Royal Society, Burlington House. A society formed for the pursuit and spread of science (incorporated in 1662 by Charles II.), now famous throughout Europe. Meetings for reading and discussing scientific papers are held weekly on Thursday afternoons from November to June. Candidates for fellowship must be recommended by a certificate, supported by the written names of six Fellows. Fifteen of the candidates are annually elected in June by ballot. The Society awards the Copley, Royal, Rumford, and Davy medals, each annually, with the exception of the Rumford, which is given in alternate years. The Copley is the most highly prized, and may be awarded to Englishmen or foreigners, and only goes to distinguished savants. Among the recipients have been Chevreul, Helmholtz, Darwin, Hooker, and (last year) Huxley. Among the presidents have been Lord Chancellor Somers, Samuel Pepys, Sir Isaac Newton, Sir J. Pringle, Sir J. Banks, Sir Hans Sloane, Martin Folkes, and Sir Humphrey Davy; Professor G. Gabriel Stokes, M.A., M.P. (*q.v.*), is the present president. There are now upwards of 450 English Fellows and 50 Foreign Members. The rooms of the Society are enriched with busts and paintings, while the library contains 50,000 volumes, and there is a unique collection of relics, many of which relate to Sir Isaac Newton. Secs., Prof. M. Foster, M.D., and Lord Raleigh, D.C.L., Burlington House, Piccadilly, W. Consult "Encyclopædia Britannica," 9th ed.

Royal Society of Painters in Water Colours. The older of the two Water Colour Societies was founded in 1804, and has held exhibitions annually since that date. The Summer Exhibition is opened to the public towards the end of April, and the Winter Exhibition, which chiefly comprises sketches and studies, opens on the 3rd of December. Sir John Gilbert, R.A., R.W.S., is the President, and the number of members is forty, while the number of associated exhibitors is unlimited. The exhibitions of the Society, which are held at their galleries, 5A, Pall Mall East, S.W., are confined to the works of members and associates. Deputy-

Pres., A. W. Hunt, F.R.G.S., R.W.S.; **Sec.**, Alfred D. Frupp, R.W.S.; **Assist. Sec.**, George E. Ridge. Attached to the Society is an "E.W.S. Art Club," established 1884, for the purpose of holding a series of *Conversazioni*, to which members are invited to send works of art for exhibition. **Pres.**, Sir John Gilbert, R.A.; **Vice-Pres.**, A. W. Hunt, R.W.S.; **Sec.**, Aubrey Stewart, 71, Mornington Rd., N.W. **Office**, 5A, Pall Mall East.

Royalties are payments which the lessee or producer agrees to make to the patentee, author, artist, or owner of a patent, copyright, mine, &c., in consideration of the right of working the same to his own advantage. In the case of copyrights and patents, the "property" in the right frequently passes to the lessee thereof, notably in questions of copyright (*q.v.*).

Royalty Deceased (Jan. 1st to Dec. 6th, '88). See OBITUARY.

Royal Yacht Squadron. See YACHTING.

* **Rose-Mapleson, Mrs. Marie**, b. 1850; first appeared in public at Paris ('65), where she became a great public favourite. She sang at many of the *Imperial concerts*, including the last given at the Tuileries by the Emperor. Remained in Paris during the siege by the Germans, and frequently enlivened the beleaguered citizens by singing patriotic songs during the bombardment. At the termination of hostilities she was presented by M. Thiers and Marshal MacMahon with a gold medal, for distinguished bravery. After a brilliant tour in Belgium she was engaged by Col. Mapleson, of Her Majesty's Opera, and from that time she has been one of the most popular artistes on the English operatic stage. She concluded her engagement with Mr. Carl Rosa in the summer of '88, and after visiting America and Australia intends to settle in her native city of Paris. Married Henry, eldest son of Col. Mapleson ('77).

Rubinstein, Anton Gregor, was b. near Jassy, 1829. His parents were Russian Jews. At the age of twelve he played in London, which he visited again in '57, and on later occasions. As a composer Rubinstein is very prolific; his "*Ocean Symphony*" is the best of several such works for full orchestra; and for the stage he has composed many operas, the most popular being the "*Demon*," "*Dimitri Donskoi*," and "*Nero*." He founded the Conservative at St. Petersburg in '62. The late Tzar ennobled him in '69.

Rudimentary Organs. See ORIGIN OF SPECIES, ed. '88.

Rudler, Frederick William, b. in London 1840. Appointed Curator of the Museum of Practical Geology in '79, and Professor of Natural Science in the University College of Wales from '76 to '79. President of the Anthropological Department of the British Association at Swansea '80. Director of the Anthropological Institute, and editor of its Journal. Joint editor of Ure's "Dictionary" (3 vols., 1875), and of Stanford's "Europe" ('85). President of the Geologists' Association '89.

Rugby School. Founded by Lawrence Sheriff, a native of Rugby (1567), and originally intrusted to two trustees, in place of which twelve gentlemen of Warwickshire were appointed by Commissioners under the Great Seal in 1614. The boys are divided into *foundations* and *non-foundations*. Has, every July, 7 exhibitions tenable for 4 years, 3 of £60 and 4 of £30 annual value. Pupils, 440; admission at the age of 12.

Head Master, Rev. Canon John Percival, LL.D. Motto—*Nihil sine laborando*. Some distinguished alumni—Sir Ralph Abercrombie; Cave, Dr. Johnson's friend, and originator of *The Gentleman's Magazine*; Macready, the celebrated actor; Dr. S. Butler, afterwards Master of Shrewsbury School; Landor; Tom Hughes; Lord Derby; Lord Selborne. Consult *Rugby School Register*.

Rules of Procedure. See PARLIAMENTARY PROCEDURE.

Rural Dean. See DEANS.

Ruskin, John, M.A., LL.D., b. in London 1819. Educated at Christ Church, Oxford, where he gained the Newdigate prize ('39). Having early developed a taste for art, he studied with great success under Copley Fielding and Harding, and having become enamoured of Turner's paintings, then but little appreciated, he commenced a letter in defence of Turner, in response to an attack made on him in *Blackwood's Magazine*. This developed into the celebrated work "*Modern Painters*," vol. i. (1843), which obtained a great success, though it evoked some sharp criticism on the part of those who dissented from his views. He resided for some time in Italy, and subsequently published the remaining volumes of "*Modern Painters*," making five (issued all in '46-60). These contained valuable illustrations by himself, and the books are now rare, though a new edition is now (Dec '88) in course of re-issue. He had previously ('49) written "*The Seven Lamps of Architecture*" and "*The Stones of Venice*" ('51-53); both books have been re-printed—the former in '80, and the latter in April '86. He has also written extensively on economic and other questions, and recently has been engaged upon his *autobiography*, which he is bringing out under the title of "*Præterita*," the third volume of which was published Oct. '88. In '87 he published "*Eortus Incultus Letters from Mr. Ruskin to the Ladies of the Thwaite*." For fuller particulars see ed. '87.

Ruskin Reading Guild, The, was formed in '87 (1) to diffuse a knowledge of the writings of Mr. R. and of the authors on whom he looks as his masters, and (2) to promote by the method of association, careful and thoughtful reading and study of good literature. There are various branches in Great Britain. **Organ**, the *Ruskin Reading Guild Journal*. **Editor and Gen. Sec.**, W. Marwick, Hillside House, Arrowthorpe, N.B.

Russell, Dr. W. H., b. at Lily Vale, co. Dublin, 1821. Entered Trin. Coll., Dublin, and while there commenced his connection with the *Times*. Called to the English bar ('50). Correspondent of the *Times* in the Crimea ('54-55) and was engaged in similar capacity during the progress of the Indian mutiny ('57-58), and its suppression, which afterwards was fully described in "*My Diary in India*." In '61-62 he was in the United States as correspondent of the *Times* during the civil war of Secession. In 1866 he corresponded with the *Times* from the Austrian headquarters during the Prusso-Austrian war. In the Franco-German war ('70-71) he was correspondent at the headquarters of the Crown Prince. In '58 he established the *Army and Navy Gazette*, of which he is still editor and proprietor. He published amongst other works "*My Diary in India*," "*My Diary North and South*," "*Memorials of the Marriage of the Prince of Wales*," "*Diary in the East—Tour*

of the Prince and Princess of Wales," "My Diary during the Last Great War" (70-71), along with minor works extracted from his contributions to periodicals.

Russell, Sir Charles, Q.C., M.P., was b. 1833. Educated at Trin. Coll., Dublin. Commenced his career as a newspaper reporter in the gallery of the House of Commons. Called to the bar at Lincoln's Inn (1859); appointed Q.C. and elected Benchers of Lincoln's Inn (1872). Returned in the Liberal interest as member for Dundalk (1880-85); South Hackney (1885 and 1886). **Attorney-General** in the late Gladstone administration (Feb. 1886), when he received the honour of knighthood. As a sound lawyer, acute cross-examiner, and persuasive advocate, Sir Charles Russell is without a rival at the English bar. He takes a lively interest in sporting matters; and when the dispute arose about Bend Or, he was offered a brief both for the plaintiff and defendant. Sir Charles was leading counsel for Mr. Parnell at the Inquiry by the Parnell Commission.

Russia. One of the largest of the military powers of Europe. Has a European area of 2,095,504 sq. miles, or, with Asiatic possessions, 8,644,100 sq. miles. The total population (87, latest return) is 107,787,235 people. The fifty governments of European Russia contain 81,725,185 people, the Vistula Province (Poland) 7,960,304, Finland 2,176,421, the Caucasus 7,284,547, Siberia 4,313,680, and Central Asian possessions (Turkistan and Transcaspia) 5,327,098. The Slavs constitute more than two-thirds of the population (nearly 70,000,000), of whom 5,000,000 are Poles; the rest of the population being made up of Lithuanians, Finns, Germans, Tartars, Jews, Armenians, and a variety of Asiatic peoples. The state religion is Greek Church. The orthodox number 60,000,000, Russo-Greek dissenters 15,000,000, Roman Catholics 9,000,000, Protestants 5,000,000, Jews 3,000,000, Mahometans 3,000,000, and Buddhists, etc., the remainder. The Government is an Autocracy, the Tzar, Alexander III., being the supreme ruler and legislator, and the only source of power in the body politic. The administration is divided into eleven departments, with a minister at the head of each, nominated by the Tzar, each being separate and independent in its respective branch. The State Council, a permanent body composed of a number of high officers nominated by the Emperor, and presided over by a member of the imperial family (now by the Tzar's uncle, Grand Duke Michael Nicolaevitch), institutes and elaborates all laws. The State Council has only a consultative voice, its opinions being presented for the decision of the Emperor, who agrees either with the majority or the minority. The State Council has no right of proposing any new law or measure *motu proprio*, the right of initiative belonging to the respective ministers acting under the direct supervision of the Emperor. The Senate of the empire, which formerly united the attributes of the State Council and the present Ministry of Control, is now only a superior court of appeal. Ecclesiastical concerns are administered by the Synod, a body of high church dignitaries, controlled and directed by the "Procurator of the Holy Synod"—a civil or military general representing the civil power, to whom the Synod is completely subjected. The Government does not interfere with the doctrinal questions of the orthodox Greek

Church (*q.v.*), nor is the Tzar the Pope of the Russian Church, as is sometimes erroneously affirmed. Local administration emanates from the central governing body. Russia is divided into sixty-three provinces, fourteen regions—having each at its head a governor, and possessing representatives of juridical and ecclesiastical power. The Grand Duchy of Finland is the only country in the Tzar's dominions possessing a species of home rule. The four orders send their deputies for a short legislative session every five years. Though dependent on the will of the Tzar in its general functions, the Finnish representative body and the Senate possess important immunities in the right of nominating, directing, and controlling the local administration. After the emancipation of the serfs (1861) the popular element was, in a limited degree, introduced in some branches of public function in Russia Proper. The jury was introduced for common crimes (1864), after the French pattern, the grand jury being suppressed, the power for the detention of criminals belonging absolutely to a number of agents of the Government. In the same epoch some eight provinces of Russia Proper received a kind of local self-government—"Zemstvo" (1864), extended gradually to thirty-four provinces. The three orders—landlords, citizens of the towns, and peasants—united in separate assemblies, return their respective deputies to the District Zemstvos, each of which sends a delegation forming the Provincial Zemstvo. The sessions of both the District and Provincial Zemstvos are shortened to fourteen days; but every three years they nominate the "Ouprava," a permanent responsible commission, administering affairs in obedience to the Assembly's instructions. The influence of the Zemstvos are very contracted, and they are dependent upon the governor of the province and their presidents nominated by the ministry. The towns, though sending their deputies to the Zemstvos, have a municipal self-government of their own, granted by the law of 1870. The right of voting belongs to the freeholders and tradesmen inscribed in the guilds. The town electors are divided into three parts, so that the amount of taxes paid by each shall be about one-third of the total amount of taxes paid by the town. Each of these three classes of electors, though differing greatly in number, send an equal number of deputies to the municipal assembly, called "Douma," which nominates for four years an executive committee, "Ouprava," and the mayor, "Golova," which must be approved by the Government; and is then no more revocable by the Douma, and possesses the right of suspending its resolutions, being responsible only to the governor of the province. The rural population, set free by the Act of Emancipation of 1861, is endowed with a small piece of land, for which they have to pay mortgage tax for forty-nine years. The bulk of the Russian peasantry hold their land as common property, subdividing it by families after certain periods, according to the number of working people in each family. The rural population is constituted in "volost" (parishes), subdivided into village communities, "mir," "gromada," having their own self-governing assembly, and electing their executive headmen, "Starshinas" and "Starosta," who are, however, dependent on the inferior police agents, who have the right of dismissing and

punishing them. (For army and navy, see **ARMIES, FOREIGN, and NAVIES, FOREIGN.**) Russian finances are derived chiefly from the taxation of the lower classes, the peasants paying about 8½ per cent. of the taxes. The revenue in '87 (latest return) was 829,661,000 roubles (the rouble is now commonly reckoned at 2s.), the expenditure 835,850,000, the deficit being 6,189,000. A much heavier deficit was anticipated for '88, but the expansion of trade increased the revenue so much that (Nov.) it is expected to be smaller than any year since 1755. The national debt, which in 1870 was but 703,488,160 roubles, in 1884 reached 5,234,000,000 roubles. The interest for the national debt increased from 85,000,000 roubles in 1871 to 259,645,165 in 1886, which is due partly to the increase of the debt, partly to the depreciation of Russian roubles. In 1871 100 roubles were equal to £15.88, in 1886 £9.83. Russian commerce with foreign countries is represented by a total of about 600,000,000 roubles exports, and about the same amount of imports, the latter exceeding the former less than 1 per cent. for the five years '78-82. From Jan. 1st to July 1st, '86, the exports amounted to 172,535,000 roubles, a diminution compared with '85 of 68,231,000 roubles, or about 28½ per cent. The imports also fell from 187,018,000 roubles to 174,658,000 roubles. The exports are almost exclusively raw and agricultural produce, three-fourths of which are sent from the Baltic and southern seaports, chiefly to England and France. On the Asiatic frontier, however, Russian exports consist of manufactured wares; and here commerce is constantly and steadily increasing. From 1879 to 1883 the exports were augmented from 627,768,000 to 640,295,000 roubles, and the imports from 537,257,000 to 587,713,000 roubles. In '83, to promote the export of corn, a scheme was promulgated authorising railway companies to make advances on all cereals brought to them for transportation to outposts, and government grants were given to various southern lines to increase the rolling stock. It is hoped that these measures will revive permanently the waning corn trade of Russia. In '67 Russia furnished 33 per cent. of the corn required by England; in '76, 14 per cent.; in '80, only 8 per cent. With France ('75-80) the Russian supply has diminished from 27 per cent. to 22 per cent.; with Germany from 15½ per cent. to 40 per cent. In regard to the progress of culture and the industrial development, there has been a very quick progress contrasting forcibly with the general depression manifested in the agricultural districts. From '70 to '83 the town population of the empire increased in the whole from 9,000,000 to 12,000,000. In 1870 the number of towns having more than 10,000 inhabitants was 185; in 1882 it was 305. In 1870 Russia numbered only six large towns consisting of more than 100,000 inhabitants; this number is now doubled. **National Industry** is making considerable progress, though lately with less rapidity. While the agricultural interest remains almost stationary, the manufacturing industries from 1865 to 1881 have augmented five times in value, being about 300,000,000 roubles yearly, or about one-sixth of the value of agricultural products, reckoned at about 1,800,000,000 roubles. **Education**, notwithstanding the many obstacles to it, is making rapid progress. From 1871 to 1883 the number of students in

the eight universities increased from about 6,200 to 12,600. The gymnasia, having in 1870 36,470 pupils, in 1881 numbered 60,240. Primary education is imparted in 28,400 schools, with 1,539,975 pupils, being about one pupil for every 83 inhabitants. The political history of Russia for the last fifteen years is signalled by intense internal conflict between the autocracy and the aspirations of the Russian people for political freedom, due to the quick intellectual enlightenment, as well as to industrial and commercial development (see **NIHILISM**). The same period was very rich in various external events. (For history '71-87 see previous editions.) The year '86 commenced with a financial crisis, caused partly by the report that the minister of finance intended to introduce a gold currency, calculated to depreciate still further the value of the paper rouble, and by the wholesale attempt of Germans to get rid of Russian bonds, in the belief of an imminent war. Several banks at St. Petersburg failed during the panic, and the exchange value of the rouble fell to 1s. 7d., the lowest level yet reached (its value before the Russo-Turkish war of '76 was 2s. 9d.). The depression lasted some weeks, and was only slightly relieved by the disavowal by the Government of the alleged currency project, and the political calm succeeding the death of the Kaiser Wilhelm of Germany. In the summer a great export of corn took place, and the harvest being everywhere abundant in Russia, while mostly bad or indifferent elsewhere, the foreign demand for cereals caused a rapid improvement in trade, and the exchange value of the rouble rose to 2s. 1d. (Nov.). The celebration of the 100th anniversary of the introduction of Christianity into Russia was observed (July 27) with much éclat, as a solemn Church *fête*, in which the Tsar took a prominent part. At the end of July fears of immediate war died away with the visit of the German Kaiser to Cronstadt, escorted by eight ironclads. The meeting at Peterhoff was very cordial, and removed much of the tension between Russia and Germany. The Tsar afterwards proceeded to Finland for a short visit, and then commenced his journey to the Caucasus. While travelling south he spent a short time in Poland and the Crimea, and then proceeded in succession to Vladikavkaz, the new port of Novorossiisk, Batoum, Tiflis, and Baku. In proceeding to he Batoum he was accompanied by Russia's first squadron in the Black Sea, since the Crimean war, comprising two new heavy ironclads, the *Catherine the Second* and *Tchesma*, and four new corvettes (see **NAVIES, FOREIGN**). He laid the foundation stone of an Orthodox cathedral both at Baku and Batoum. On the return journey a fatal accident occurred to the Tsar's train near Borki on the Kharkoff railway, 40 miles from Sebastopol, the second locomotive running off the rails while the train was travelling at 42 miles an hour, and most of the carriages being smashed. The Imperial family had a marvellous escape, a lacquey, who was handing a plate to the Tsar, and a favourite dog at the Tsar's feet, being both killed; twenty-one attendants and officials were killed, and thirty-seven injured. Despite rumours of Nihilist plots, the accident proved to be due to the high speed of the train travelling over rotten sleepers. A thanksgiving service throughout the empire was ordered for the Tsar's escape. In general, home politics in Russia were quiet during the year, there being little Nihilist

(see **NIHILISM**) activity, and the sudden revival of trade stilling discontent. In foreign affairs Russia took no active steps against Bulgaria, contenting herself with completing the massing of troops on the Austro-German frontier. The completion of the Samara-Ufa railway and the commencement of the Ufa-Zlatoustra line inaugurated the **Great Siberian railway** (*q.v.*), while the opening of the **Transcaspien railway** (*q.v.*) to Samarcand joined Turkestan to the European system of steam communications; but neither on the Siberian confines of China nor in Afghanistan did Russia manifest any fresh activity. The policy of Russifying the **Baltic provinces** was vigorously enforced during the year, and the opposition of the **Lutheran ministers** led to the imprisonment of thirty-seven and the deportation of eight to Archangel and Astrakhan. **German subjects** were also forbidden to hold land in West Russia, and this and other similar laws caused 35,000 Germans and Austrians settled in Poland to become Russian subjects. A concession was granted to

the **Phoenix Company of Adventurers** (Captain Wiggins) to trade with the Siberian rivers for a term of five years, but under restrictions leaving little hope of a large trade. An attempt to send a first vessel, the *Labrador*, failed, owing to the ice in the Kara Sea. A **Russian loan** for 50,000,000 fr. (£20,000,000) has recently been concluded with the Banque de Paris et des Pays Bas, and other banks.

Rustchuk. A town of 26,163 inhabitants on the right bank of the Danube, in Bulgaria, 245 miles north-west of Constantinople. Its position on the river frontier long made it a place of strategic importance; and Rustchuk, Silistria, Shumla and Varna formed a famous quadrilateral. Town and military works nearly destroyed in the war of 77-8. Since dismantled in terms of treaty of Berlin. The present Tsar of Russia commanded the Rustchuk column during the last Turkish war.

Ruthenians, Legislation. See **AUSTRIAN REICHSRATH**, etc.

Rydal, Mount. See **LAKE SCHOOL**, ed. '88.

S

Saba. A Dutch West Indian island in the Leeward group. Area 5 sq. m.; pop. 2,421. Consists of a single volcano cone, furrowed by deep wooded valleys. Sugar, cotton, and indigo are grown. It is a dependency of **Curaçao** (*q.v.*).

Saccharine. An artificial sugar prepared from coal-tar. It was discovered by Dr. Constantin Fahlberg, and introduced as an article of commerce in '87. It is 250 times sweeter than sugar. It may now be purchased of chemists and grocers in small quantities, and cheaply. Sir Henry Roscoe says of it, "I do not believe that saccharine is ever likely to become an article of common use, like sugar. It is not a food, whilst sugar is. I think that this artificial sweetening agent will, however, become useful in cases where sugar cannot be employed, as in diabetes and other diseases." He also thinks the cane-sugar industry will not be materially affected through its introduction.

Sackville, Lionel Sackville West, K.C.M.G., 2nd Baron (created 1876), was b. 1827. He has held the following diplomatic appointments:—Attaché at Lisbon '47, Berlin '53; Secretary of Legation, Turin, '58; Chargé d'Affaires at the same city '59; Secretary of Legation at Madrid '63-67, when he was appointed Secretary to the Embassy at Berlin. In '68-69 he acted as Ambassador at Paris during the temporary absence of Lord Lyons, and during the last three months of '71, and from August to November '72, he again acted in that capacity. In '72 he was sent as ambassador to the Argentine Republic, in '78 was transferred to Madrid, and in '81 to Washington. Lord S. conducted the affairs at the Embassy in Washington with great success, till, in October '86, during the heat of the Presidential election, he was trapped by a newspaper reporter into writing a letter in favour of the candidature of Mr. Cleveland. The reporter described himself as a British resident, and asked the Ambassador's advice as to how he should vote. Lord Sackville replied in a letter marked "private," advising him to vote for Mr. Cleveland. His lordship's letter created

much indignation amongst the Democrats (Mr. Cleveland's party), but on the other hand made the Republicans jubilant, as they had bid for the Irish vote by representing Mr. Cleveland as "John Bull's candidate." This incident led to the retirement of Lord S. from his post (see **UNITED STATES**). Lord Sackville succeeded to the peerage on the death of his brother last year.

Sacraments. See ed. '88.

Sagasta, Señor Praxedes Mateo. Spanish ex-prime minister and statesman; b. in 1837 at Torrejilla de Cameros. He was educated, as an engineer in the School of Engineers at Madrid. From 1854 to 1856 he represented the town of Zamora in the Constituent Cortes. In 1856 he was compelled to seek shelter on French territory, having engaged in the revolutionary movement. He returned to his country and profession on an amnesty being proclaimed. He again conspired in 1866, and was again compelled to fly. He became Minister of State (1870-74), and in 1874 he was successively Minister for Foreign Affairs, Minister of the Interior, President of the Council, and Prime Minister (1881-83). His ministry was succeeded (October 11th, 1883) by one from the Dynastic Left, under the premiership of Señor José Posada Herrera. Señor Sagasta, on the resignation of the Canovas ministry at the death of King Alphonso (Nov. 23rd, 1885) resumed office as the head of a new Liberal ministry. On Dec. 9th, '88, the resignation of the Cabinet caused a crisis, and Señor S. will probably re-form his Cabinet.

Sahara Coast. In 1887 Spain acquired, and annexed on the north-west coast of Africa the seaboard between Morocco and French Senegal, extending from Cape Bojador in 26° N. lat. to Cape Blanco in 20° 45' N. lat. This gives about 500 miles of coast. Inland Spanish territory is to extend 150 miles, and by treaty with sheikhs of Adeter, still farther. The whole area is computed to be about 75,000 sq. m.; pop. scanty; consisting of nomad tribes. There is only one shallow harbour on the coast, Rio de Oro, where Spain has established

a factory. The new possession has been placed under a Governor, subordinate to the Captain-General of the Canary Islands.

Salgon. Formerly native capital of Lower Cochinchina, and now capital of French Cochinchina. Present city dates from '67, and is one of the most attractive in the East—boulevards, squares, governor's palace or citadel, cathedral, botanical gardens, arsenal, floating dock, etc. Pop. in '81 was 13,348, of whom, exclusive of the troops, 965 were Europeans (913 French).

St. Albans, Rt. Rev. Thomas Leigh Claughton, Lord Bishop of. This see was founded in 1877 by a readjustment of the dioceses of Rochester and Winchester. His lordship, the 1st bishop, was b. 1808, is a son of Thomas Claughton, Esq., of Haydock Lodge, Lancaster. He was educated at Rugby, and Trinity Coll., Oxford, of which he became a Fellow. He graduated B.A. in '31, being 1st class in Classics, and gaining the following prizes: Latin Verse, and Newdigate, 1829, and the Latin Essay, 1832. He proceeded D.D., and *ad eund.* D.D. at Durham, 1867; was ordained deacon 1834, priest 1836, by the Bishop of Oxford. Formerly his lordship was Public Examiner at Oxford, 1835-36; vicar of Kidderminster, 1841-67; Hon. Canon of Worcester, 1835-67; **Professor of Poetry at Oxford, 1852-62**; was consecrated Lord Bishop of Rochester, 1867; and translated to St. Alban's 1877. As an author his lordship is known by numerous sermons published at various times, and the charges to his clergy delivered as Bishop of Rochester in 1869 and 1873, and as Bishop of St. Alban's, 1876. The work of this diocese is shared by a suffragan, the Lord Bishop of Colchester—the Rt. Rev. Alfred Blomfield.

St. Andrews University, founded 1411, is thus the most ancient of the Universities of Scotland. It included three separate colleges and corporations: (1) **St. Salvator's** (1455), (2) **St. Leonard's** (1512), and (3) **St. Mary** (1537). In 1747 the two first-named were united and took the faculties of arts and medicine; **St. Mary** being devoted to theology. Chancellor, the Duke of Argyll; Principal, J. Donaldson, M.A., LL.D. Jointly with Edinburgh University it returns a representative to Parliament—the present member is Mr. M. T. Stormonth Darling. —Degrees. **M.A.** (hood black silk, with red silk lining); **D.D.** (h. violet purple silk or cloth, with white satin lining, to represent the old cimine lining); **LL.D.** (h. scarlet silk or cloth with white satin lining); **M.D.** (h. crimson silk or cloth with white satin lining); **D. Sc.** (h. amaranth silk or cloth with white satin lining). The Bachelors in the several faculties—divinity, arts, medicine, and science—have the hoods of their faculties with the gown and cap of M.A. A degree of LL.A. is also granted to women; local examinations held. **Distinguished alumni** include Dr. Chalmers and Sir Lyon Playfair, M.P.

St. Asaph, Rt. Rev. Joshua Hughes, Lord Bishop of. The see was founded in 1143; income £4,200. His lordship, the 66th bishop, is the son of C. Hughes, Esq., of Newport, Pembrokeshire, and was born 1807. Educated at Cardigan and Ystradmenhir schools, he proceeded to St. David's College, Lampeter. He passed his final examination, first class B.D., 1865, and in 1870 had conferred upon him the degree of D.D. by the Archbishop of Canterbury. His lordship was ordained

deacon by the Bishop of Bristol, and priest by the Bishop of Bangor (1831), and was successively minister of St. David's Church, Carmarthen, vicar of Abergwille, Carmarthenshire, 1837; vicar of Llandovery, Carmarthenshire, 1846; Rural Dean, Surrogate and Proctor in Convocation for the diocese of St. David's, and was consecrated Bishop of St. Asaph in 1870.

St. Bartholomew. A French West Indian island, a dependency of Guadeloupe. Area 25 sq. m., pop. 9,000. Capital **Guastavia**. Exports—bananas, cassia, tamarinds, sassafras. Occupied by the French, 1648; ceded to Sweden, 1784; restored to France, '77.

St. Christopher, or St. Kitts. A British West Indian island, forming with Nevis and Anguilla a Presidency of the federal colony of the **Leeward Islands**. Area 68 sq. m., pop. 41,000. Capital, **Basseterre**, on seaboard, the outlet of a fertile plain which contains the cultivated land.—There is no good harbour. The island is long and narrow, much of it is mountainous, and there are extinct craters. About half is fit for cultivation, and will yield good crops for any tropical product. Climate said to be healthy.—The local government is that of a Crown colony, though representatives sit in the Federal Council of the Leeward Islands. A President is the chief official. For financial statistics see **BRITISH EMPIRE**, etc. (table).

St. David, Rt. Rev. William Basil Tickell Jones, Lord Bishop of. This see was founded at an early date, being in the first place archiepiscopal, which powers were lost in 1175. Present income of the see £4,500. His lordship, the 17th bishop, was b. Jan. 2nd, 1822, and is son and heir of William Tisley Jones, Esq., of Gwynfryn, Cardigan. He was educated at Shrewsbury School, and Trin. Coll., Oxford, graduating in honours, 1844. Was Scholar of his college and Ireland Scholar 1842. Proceeded M.A. at Oxford and D.D. 1874. Ordained by the Bishop of Oxford deacon 1848, priest 1853. Consecrated Lord Bishop of St. David's 1874. **Archdeacon of York, 1867-74**; Canon Residentiary in York, 1873-74, besides other offices held at various times. As an author his lordship is well known by his sermons, and charges to the clergy of the diocese. Has written jointly with Mr. Edward Freeman, "The History and Antiquities of St. David's," and contributed to Dr. Smith's "Dictionary of the Bible" and the "Speaker's Commentary."

St. Eustatius. A Dutch West Indian island, in the Leeward group. Area 7 sq. m., pop. 2,312. Consists of two volcanic cones and an intervening valley. Exports, yams and sweet potatoes. It is a dependency of **Curacao (q.v.)**.

St. George. Capital of the Windward Islands, and of the island of **Grenada (q.v.)**.

St. George's Guild. (1) Its legal status is that of a limited liability company duly registered under the Companies Acts of 1862 and 1867, but it dispenses in its style with the word "limited" by the special license of the Board of Trade under section 23 of the latter Act. Members incur no liability, except in event of the Guild being wound up during, or within a year after, their membership, in which case they are liable to the extent of £5. The Guild is dissoluble at the vote of three-fourths of its members. (2) Its Constitution. It consists of a master and members; the first and hitherto only master being **John Buxton**. The qualifications for membership are the signing of a "creed" and certain promises,

and the payment of £5 annually. This last is a reduction from £20, itself a reduction from a tithe of income, originally demanded by the Guild. (3) *Its objects* cannot well be fully stated without making from Mr. Ruskin's "*Fors Clavigera*" "a collation of parts of a design involving many disputed moral and political principles." "It was," says its founder, "instituted with a view of showing, in practice, the rational organisation of country life, independent of that in cities"; or again, "to reclaim barren or neglected land," and "benefit the poor by buying land in healthy districts and putting them on it"; or, to quote its memorandum of association, where its different aims are, perhaps, most succinctly stated, "to determine and follow wholesome laws of laborious (especially agricultural) life, acquire land, erect museums and acquire things for them, etc." The aims of the Guild are, it will thus be seen, both large and various,—economical in seeking to reclaim and cultivate land, educational in seeking to guide the life of the peasant, "restoring in him the feeling of loyalty to his lord," and "putting wholesome thoughts into his head" quite as much as wholesome food into his stomach; historical, artistic, and geological, in collecting (as it has done) objects of interest, records of perishing monuments, rare books, pictures, and minerals for the museum of the Guild. (4) *Its history and accomplished work.* Towards the end of 1871 Mr. Ruskin placed £7,000 to the credit of a St. George's Fund, and asked subscriptions from the public to further the work. Since then the property of the Society has definitely, if slowly, increased. Of its property the portion best known to the public is the St. George's Museum, near Sheffield, the land for which was bought by the Society in '76, since when the Museum has more and more become a treasure-house of art and natural history. From time to time the Guild has, through its master, employed salaried artists to make records of buildings not likely long to escape the ruin of restoration, and many of these records are to be seen in the museum gallery. The agricultural work of the Guild finds at present somewhat limited field in an estate (the gift of Mr. George Baker) of twenty-six acres at Bewdley in Worcestershire; a small tract of land at Cloughton, in Yorkshire; another at Barmouth, Merioneth; and yet another, of thirteen acres, known as Abbeydale, near Mickley in Derbyshire, where it is intended to establish a garden combining the interests of botany with the practical value of market produce. Meanwhile, at Laxey, in the Isle of Man, Mr. Egbert Rydings and Mr. Thomson have set up the St. George's woollen mill, worked by water-power only, where homespun cloth, blankets, and other woollen goods of exceptional quality, and not, we believe, exceptional prices, are woven of the spinings of the islanders from the wool of the island sheep. For this establishment the Master of the Guild asks "not charity, but custom." Consult Ruskin's "*Fors Clavigera*," and "Reports and Accounts of St. George's Guild."

St. Gothard Tunnel. In Feb. '88 it was reported that this tunnel was to be "double-tracked" at a cost of over £500,000, the work to be done by degrees and completed in '96. The tunnel was laid out for two tracks, and the amount of freight traffic had exceeded expectations.

St. Helena. Discovered by the Portuguese,

on St. Helena's Day, 1501. Is an island belonging to Great Britain in the South Atlantic, 1,140 miles from the African coast. Area 47 sq. m., pop. 5,039. The port and capital is Jamestown, which is strongly protected. The island, which is a very ancient volcano, rises as a wall of rock, but the interior contains fertile, well-watered valleys, with much wood and luxuriant vegetation. Climate humid, very healthy, and equable. Administered as a Crown colony by a Governor and Executive. For financial statistics see BRITISH EMPIRE, etc. (table.) There is little industry beyond supplying the wants of passing ships, and those of Anglo-Indians and Africans using the island as a sanatorium. It passed from the Dutch to the East India Company in 1673; in 1815 till 1821 was the place of exile of Napoleon, and in 1834 came finally under the Crown. Before the opening of the Red Sea route to India, St. Helena was of much more importance than is now the case, both from a naval and commercial point of view.

St. Heller. Capital of Jersey. See CHANNEL ISLANDS.

"St. James's Gazette." An evening review and record of news; founded in 1880; is a Constitutional and independent Conservative organ. While opposed to the revolutionary tendencies of the time, it is in sympathy with moderate and progressive reform. In addition to articles on the political questions of the day, it contains interesting papers and sketches on social, literary, and other topics, an epitome of the news of the morning, and the latest sporting, financial, and general intelligence of the afternoon. Editor, Mr. Sidney Low. Office, Dorset Street, Whitefriars, E.C. "**St. James's Budget**" (6d.), a weekly edition of the above, circulates widely in the provinces and in the Colonies and India.

St. John. A Danish West Indian island, one of the Virgin group. Area 21 sq. m., pop. 944. Is high and rocky, but in parts productive. See SANTA CRUZ.

St. John. Chief commercial town and port of New Brunswick (*q.v.*), pop. 26,127.

St. John's, Antigua, capital of the Leeward Islands (*q.v.*).

St. John's. Capital of Newfoundland (*q.v.*); pop. 28,610; on Avalon peninsula.

St. Kitts. Otherwise **St. Christopher** (*q.v.*).

St. Leger Stakes. See TURF.

St. Lucia. A British West Indian island forming part of the Crown colony of the Windward Islands. Area 243 sq. m., pop. 41,791. Capital, Castries, on a fine harbour which is now being deepened and fortified. Castries is to be made a principal naval and military station for the West Indies.—St. Lucia is remarkable for wild and picturesque scenery, which consists of mountains, valley, and forest. Two cone-shaped rocks rise to a height of 3,000 ft. and near them are craters of extinct volcanoes and a solfatara. The climate is moist and unhealthy. Sugar, catao, and tobacco are the principal crops, and logwood is cut.—An Administrator presides over local affairs. The whites are mostly French Creoles; the dominant religion Roman Catholic, and education chiefly so; the law is based on old French codes. For financial statistics see BRITISH EMPIRE, etc. (table.) The island has been alternately held by English and French since 1639, but finally passed to the former in 1803. Consult Layard's "Through the West Indies."

St. Marie, or Nossi Burra. An island belonging to France since 1843, on the E. coast of Madagascar, S. of Tamatave.

St. Martin. One of the Leeward group of the Lesser Antilles. Area 38 sq. m., pop. 7,083. Is divided between Holland and France, the latter owning about 20 sq. m., which are annexed to the colony of Guadeloupe. The Dutch portion is a dependency of Curaçao. Comparatively small cultivable area. Great salt-pans. Exports—salt, sugar, and live-stock. Chief settlement and port in French section, Marigot; in the Dutch, Philipsburg. Was divided between the French and Dutch in 1648.

St. Michael and St. George, the most Distinguished Order of, was instituted in 1818, and enlarged in '68, '77, and '87, and is the order to which subjects of Her Majesty who have taken a distinguished part in colonial and foreign affairs are generally admitted. It consists of the Sovereign, a Grand Master (the Duke of Cambridge), and three classes of members:—

G.C.M.G. . . . Knight Grand Cross.
K.C.M.G. . . . Knight Commander.
C.M.G. . . . Companion.

Members of the first two classes, being Knights, are entitled to the prefix "Sir." The first class is to consist of 65 members, exclusive of honorary members and princes of the blood, the second of 150, and the third of 260 members. The motto of the Order is "*Auspicum melioris avi*" ("A pledge of better times"). See KNIGHTHOODS CONFERRED DURING '88.

St. Patrick, Most Illustrious Order of. Established in 1783 by George III., and is to consist of the Sovereign, a Grand Master, who is the Lord Lieutenant of Ireland for the time being, and twenty-two Knights. Its abbreviation is K.P.; its badge a sky-blue ribbon, with motto *Qui se separabit?* ("Who shall separate?"). There are, at present, twenty-eight K.P.s, including the sovereign and princes of the blood, and the Lord Lieutenant of Ireland, and subjoined is a list of them:—

The Sovereign.

Lord Lieutenant of Ireland.	
Prince of Wales.	Duke of Connaught.
Duke of Edinburgh.	Duke of Cambridge.
Prince Albert	Victor of Wales.
Earl of Dartrey.	Earl of Listowel.
Earl of Granard.	Earl of Dunraven.
Earl of Cork.	Earl of Carysfort.
Marquis of Dufferin and Ava.	Duke of Manchester.
Earl of Charlemont.	Earl of Portarlington.
Marquis of Drogheda.	Lord Carlingford.
Marquis of Waterford.	Earl of Howth.
Earl of Gosford.	Lord Monteaigue.
Viscount Powerscourt.	Viscount Wolsely.
Earl of Kenmare.	Marquis of Headfort.
	Marquis of Ormonde.

Chancellor of the Order, the Chief Secretary for Ireland; Registrar, the Dean of St. Patrick's; Secretary, G. Francis W. Lambart; Usher of the Black Rod, Col. J. Caulfield; Ulster King of Arms, Sir J. Bernard Burke, C.B.; Herald, Sheffield Bethan.

St. Pancras New Goods Station. This new two-storied goods station of the Midland Ry. Co., said to be the most extensive in existence, was opened in the spring of '88, having been in course of completion for at least three years. It is situated in Euston Rd., to the west of the passenger station and the Grand Hotel, the upper story being on the level of the main line, and the lower on a level with the street;

is supplied with miles of sidings and is lighted by day through holes in the iron flooring above, and at night by 1,880 gas lights. The space covered is 14 acres. The potato and vegetable stores form a feature, there are 23 of them let off to merchants, each forming a small railway station. Ample space is provided at the north end for coal, and a large covered depot is on the upper level of the new station for milk and fish traffic. Large and smaller warehouses are also used.

St. Paul's School, London. Founded A.D. 1509 by John Colet, D.D., Dean of St. Paul's. Is now governed under the provisions of a scheme of the Charity Commissioners, dated July 4th, '79. The school consists of 153 foundation scholars, elected by competitive examination, and of so many capitation scholars as the governors may from time to time decide. The capitation scholars pay a tuition fee of £24 9s. a year. The foundation scholars are exempt from fees. There are now 580 boys in the school, and 30 masters. The governors give annually seven exhibitions, varying in value from £80 to £40, to the scholars proceeding to Oxford and Cambridge. Among the alumni of St. Paul's were Milton, Marlborough, etc. Head Master, F. W. Walker, M.A.

St. Pierre. Capital of Guernsey. See CHANNEL ISLANDS.

St. Pierre. A French island off Newfoundland, near Miquelon (q.v.).

St. Thomas. A Danish West Indian island, one of the Virgin group. Area 23 sq. m.; pop. 14,389. Capital Charlotte Amalie, popularly known as St. Thomas. It is the seat of government for the Danish possessions. St. Thomas was at one time a place of great importance, and previous to '48 was covered with sugar plantations. The abolition of slavery in that year, and the removal of the mail packets to Barbadoes in '85, have greatly affected its prosperity. The seat of government for the Danish West Indies was removed from Santa Cruz to St. Thomas in '71.

St. Thomas or Thomé. A Portuguese island in the Gulf of Guinea. Pop. 18,266. See PRINCIPLE.

St. Vincent. A British West Indian island forming part of the Crown colony of the Windward Islands. Area 140 sq. m., pop. 40,548. Capital Kingstown, pop. 5,593.—A volcanic ridge traverses the island, intersected by fertile and beautiful valleys, and in the north-west is the Soufriere, a volcanic mountain, 3,500 ft. high, with crater 3 miles in circumference, and 500 ft. deep. Climate humid but healthy. Chief products, sugar, molasses, rum, and arrowroot. The fisheries are abundantly productive.—An Administrator presides over the local government. For financial statistics see BRITISH EMPIRE, etc. (table). There are 40,000 acres of Crown lands disposable at an upset price of £1 per acre. The people are industrious and quiet, and include a few Caribs. Wages are low. The resources of the island are capable of great development. St. Vincent has changed owners many times. It became finally British in 1783. Consult Layard's "Through the West Indies."

St. Vincent Gulf. In South Australia (q.v.).

Sala, George A., was b. in London in 1828. His father was an Italian, and his mother, a popular singer, was of West Indian origin. Mr. Sala began his literary career in *Household Words* under the auspices of the late Charles

Dickens. He was one of the founders of *Temple Bar* magazine, of which he was for some time editor. To this and other periodicals he contributed "The Seven Sons of Mammon," "Captain Dangerous," "Twice Round the Clock," and many other tales and sketches. For about 25 years Mr. Sala has been a leader writer and special correspondent of the *Daily Telegraph*, with which he is still connected.

Salic Law. That law of the French monarchy which disqualified a female from being sovereign. A similar law exists in some other kingdoms. The name is derived from that of the Salian Franks.

Salisbury, John Wordsworth, D.D. Lord Bishop of (founded 1042), son of the late Bishop of Lincoln, and grand-nephew of the poet Wordsworth; was b. at Harrow 1843, and educated at Ipswich, Winchester, and New Coll., Oxford, where he graduated in 1865. He took the Craven scholarship. Ordained deacon in 1867 and priest in 1869, it is remarkable that Dr. Wordsworth has never held any actual parochial office, though he did good work in various parishes; the whole time having been passed in Academical and Cathedral appointments. He was Fellow and college tutor of Brasenose, proctor, Grinfield lecturer, select preacher, **Bampton Lecturer**, Examiner in the Theological Schools, and Examining Chaplain to his father. In 1883 he was appointed Canon of Rochester and **Oriel Professor of Interpretation of Scripture**, and Bishop of Salisbury 1885. Dr. Wordsworth is a very popular moderate High Churchman, and is the author of several theological and classical works, the best known of which are the *Bampton Lectures* (q.v.) for 1881. He married the daughter of Mr. Henry Cox, of the Bodleian Library.

Salisbury, Robert Arthur Talbot Gascoyne Cecil, K.G., 3rd Marquis of (creat. 1789), was b. at Hatfield in 1830. Educated at Eton and Christ Church College, Oxford, and—as Lord Robert Cecil—was elected for the family borough of Stamford in '53. He received a place in Lord Derby's ministry of '66 as **Secretary of State for India** ('66-67), under the title of Lord Cranborne, which he assumed on the death of his elder brother. Owing to certain divergencies of opinion on the question of the extension of the franchise, to which he was opposed, Lord Cranborne separated himself for a time from his political associates; but on taking his place in the House of Lords at his father's death in '67, as Lord Salisbury, he returned to his old party associations, and soon took rank as the foremost debater of the Upper House. In '64 he was elected **Chancellor of the University of Oxford**. He gradually assumed a high position of authority on Indian and foreign affairs; and when Mr. Disraeli resumed office as Premier in '74, Lord Salisbury became **Secretary for India** ('74-78). He was despatched to Constantinople in '76 to take part in the Conference which was expected to settle the matters in dispute between Russia and Turkey. The Conference failed to attain this result, and the war broke out which ended by the treaty of San Stefano. Lord Salisbury accompanied Lord Beaconsfield to the *Berlin Congress*, which assembled for the purpose of modifying the provisions of that Treaty. The action of the British plenipotentiaries at this Congress principally conduced to effect such modifications as were favourable to Turkey. He was **Secretary for Foreign Affairs**

('78-80). Upon Lord Beaconsfield's death, in '80, Lord Salisbury became the recognised leader of the Conservative party; and when the Gladstone Ministry resigned office in June '85, Her Majesty summoned Lord Salisbury to Balmoral, to form a new ministry, of which he became **Premier**, as well as **Secretary for Foreign Affairs**. The new administration, though no one predicted a long life for it, fell sooner than was expected. The general election in Nov. of the same year did not result favourably to the Government, and Mr. Jesse Collings, immediately after Parliament met, moved a resolution asking the Government to take the allotments question in hand. This was opposed by the Conservative party; but on a division the resolution was carried, and the Government resigned. Mr. Gladstone succeeded Lord Salisbury, but he, too, had a short lease of power. His Home Rule and Irish Land Bills led to the disruption of the Liberal party; and when the division on the second reading of the Home Rule Bill was taken, on the 8th of June, the Ministers were defeated by a majority of thirty. The general election which took place in the following month was fatal to Mr. Gladstone's Government; the Premier and his colleagues resigned, and Lord Salisbury was sent for by the Queen. His lordship was desirous of associating Lord Hartington with him in the Government, and was prepared to waive his claims to the Premiership in favour of the leader of the Liberal Unionists. Lord Hartington, however, declined, but promised the general support of himself and his friends to the Government. A short session of Parliament followed; and in the recess a speech by the Marquis of Salisbury on the **Bulgarian question** attracted much attention, from the countenance it appeared to give to the resistance by Austria of Russia's pretensions to interfere in the Balkan Peninsula. Rumour, indeed, credited his lordship with having entered into some kind of arrangement with Austria-Hungary, by which, in the event of war, England would take the field against Russia. The resignation of Lord Randolph Churchill on December 23rd again induced Lord Salisbury to offer office and power to the Marquis of Hartington, who once more declined. The Premier then turned to Mr. Goschen, and offered him the Chancellorship of the Exchequer, which he accepted. Lord Salisbury's tenure of office during the Jubilee year of the Queen's reign will be memorable in his lordship's family for the honour which **Her Majesty** paid him by going in person to visit him at **Hatfield**. Lord S., on the occasion of the celebration of the Pope's Jubilee, '88, despatched the Duke of Norfolk to offer His Holiness the Queen's congratulations, with presents, and secured, it was supposed, the support of the Vatican in the policy of coercion so far as it related to the suppression of boycotting and the Plan of Campaign, which were condemned in a papal decree. In May last Lord S. introduced a bill into the House of Lords for the reform of that Assembly and the creation of life peers. In the same month his lordship appeared as a witness in the action for libel brought by Mr. Peters against Mr. Bradlaugh. Lord Salisbury was an occasional contributor in his younger days to the *Quarterly Review*, but he now seeks relaxation from the cares of office in scientific rather than in literary pursuits, experimental physics being his favourite study. He spends much of his

time in his laboratory at Hatfield, and has recently interested himself in the application of electricity to practical purposes on his estates. In his speech at the *Mansion House*, in November last, Lord S. defended his foreign policy; and on the 14th his lordship, together with Lord Hartington, was entertained at a banquet at Westminster, by a number of Irish Nonconformists, on which occasion he replied to Mr. Gladstone's previous speeches in Birmingham. Lord S. visited Edinburgh, and was warmly received on the occasion of his delivery of two important speeches (Nov. 20th).

Salonica, or Saloniki (ancient Thessalonica), at the head of a gulf of the same name, on the *Ægean Sea*; second scaport of Turkey, and chief town of the Turkish "vilayet" (government) of the same name, forming the chief commercial outlet of the western part of the Balkan Peninsula, as Constantinople is that of the eastern.

Salt. Chloride of sodium or common salt is a combination of two simple bodies—namely, chlorine 60·4 parts, and sodium 39·6 parts. Salt is obtained in three forms, the processes through which it is put varying according to its source. (1) **Rock salt**, found among stratified rocks and formed from water, mainly by evaporation; (2) **salt obtained from the sea**, and (3) **salt found scattered over the surface of the earth** in such quantities as to render collection of it profitable. The most extensive deposits in the world are in Europe, extending for over 500 miles along the Carpathians—the mines of Upper Austria, Hungary, Tyrol, Transylvania, Wallachia, and others, being situate in this range. In Spain there are also some extensive salt mines, while in England there is a vast bed of salt under the valley of Cheshire, stretching from Malpas to Congleton. The largest mines in the world are the *Vieliczka*, in Poland, which have been worked since 1251. The English workings date back to 1670, when a mine was opened at Northwich. Salt, however, was obtained in England from brine long before these beds of rock salt were disclosed, for mention is made of *salt-houses* in the time of Edward the Confessor. In Cheshire there are constant brine springs in working as well as *rock salt mining*. The brine is pumped up through a series of iron tubes screwed together, called *trees*, and emptied into a large reservoir. From this the brine is carried through pipes into evaporating pans. As soon as the brine begins to boil the salt rises to the surface in a kind of scum, and after a short time sinks slowly to the bottom, when it is taken out and placed in little wooden tubs and put in the drying-room, and after a certain exposure becomes thoroughly solid, and is removed in oblong blocks known as *lump salt*. The production of the different kinds of salt is determined by the degree of heat to which the brine is exposed, and the time allowed for the process of detachment from other salts and for crystallisation. A temperature of 120° will produce *bay salt*, whereas a temperature of 225° is required to produce the finest table salt. **Patent butter salt**—the finest of all—is made in circular pans completely covered. **Common salt** is produced in pans which are never heated to boiling point. **Rough salt** is made from brine just warmed through, the salt being very coarse in the grain; while **fishery salt** is coarser still, the grains sometimes being as much as half an inch long. The estimated quantity of salt produced in Cheshire

in 1675 was 27,000 tons per annum, and although the output steadily increased it was not until 1825, after the abolition of the salt tax, that a powerful impetus was given to the trade. The next great development of the trade occurred in '44, when the *East India market* was thrown open to English salt. The result is marked by the record of shipments amounting to 607,000 tons in '50. In '85 the total shipments reached 921,869 tons, but the exports in '87 were only 819,318 tons, of which 323,703 went to India. The falling off recently has been in exports to the United States. Of the Indian imports 67·5 per cent. are from England, 12·17 per cent. from Italy, and the remainder from Eastern countries. The total production of *rock salt* in England and Ireland in '87 was 180,422 tons; and *white salt* 2,026,529 tons. Of this latter total 1,619,452 tons were produced in Cheshire, and 252,000 in Worcestershire. The highest price of common salt during the last ten years was 7s. per ton at the works, the lowest 2s. 3d. For *East Indian salt* the highest price was 13s., lowest 6s. 3d. In '72 the price of common salt touched 20s. per ton, and it did not fall to 7s. per ton till '76, and the average price during the four years was over 11s. per ton. Reckless competition amongst the salt proprietors led to the formation last year of a salt union, with a capital of £3,000,000, with the avowed object of consolidating the undertakings of the salt proprietors; and thus put an end to the competition which occasioned salt to be sold under the actual cost of production. Over sixty leading firms joined the Union.

Salvation Army. A home and foreign missionary society with a quasi-military organisation, having for its object the salvation of the more degraded classes both at home and abroad, which it seeks to reach by special means, including out-door processions accompanied with banners and music, and by addresses in halls, theatres, and other public buildings. Originated in the year 1865 by William Booth (q.v.), then a Methodist minister, on a visit to London, the movement was called the Christian Mission until, in 1878, the present name was adopted. The Army is now established in thirty countries and colonies, and has 2,518 corps, with 6,663 officers (or evangelists), and has some 150,000 members. The revenue of the Army (home district) for '87 amounted to £21,266, independently of the receipts for the colonies and the Continent, which amount to £47,176. Large sums are also received on account of the building funds and then trading departments. The doctrinal views professed by the "Army," chiefly Arminian, are set forth in detail in the "Doctrines of the Salvation Army," prepared by "General" Booth. In connection with the Army there exists a *juvenile branch*, the "Young Soldiers' Corps," consisting of 719 corps. The training home, Congress Hall, Clapton, E., for the preparation of officers for the Army, has sent out since its formation 3,000 cadets. There are also homes for fallen women and for rescued convicts of both sexes, as well as a small orphanage for children. A night shelter and cheap food depot was established in Limehouse in '88. During the year Miss Stirling, a "colonel" in the Army, was imprisoned in Switzerland. The headquarters of the Army are situated at 101, Queen Victoria St., E.C. Organs: weekly, *War Cry* and *Young Soldier*; monthly, *All the World*. **Salvini, Signor**, a distinguished Italian actor, b. at Milan 1829. He came into the front dra-

matic ranks in the *fêtes* in Florence on the occasion of the sixth centenary of Dante ('65). He visited London in '75, making his appearance at Drury Lane in three of his greatest characters—*Hamlet*, *Othello*, and Soumet's "*Gladiator*." His *Othello* is universally allowed to be the finest impersonation of that character within living memory. In Edinburgh, during the succeeding year, he produced *Macbeth*. Signor S. revisited this country, and gave a series of performances (1884).

Samarcand. The old capital of Timur, and in all probability the future capital of Russian Turkestan. Situated on the Zarafshan, 130 m. E. of Bokhara. The irrigation works of the Russians have partially restored its ancient prosperity, and within the last fifty years its population has increased from 8,000 to 36,000. The *Transcaspien Railway* (*q.v.*) extends to Samarcand.

Sambas. A state and Dutch settlement in Borneo (*q.v.*).

Samoa Islands. This group, in the western Pacific, consists of ten inhabited and two uninhabited islands, with an aggregate population of 35,000 souls; it lies north-east of the Fiji group (*q.v.*). The largest is *Savaiia*, and is described as being twice the size of the Isle of Wight. Some interest was aroused in London, on January 11th, 1886, by the announcement, cabled from San Francisco, that the Germans had annexed the group, and that anarchy was only prevented by the British and American consuls—who, however, protested energetically against the annexation. (For detailed account of the rise of German influence in these islands, see eds. '87 and '88.) Matters were brought to a crisis in August '87 by the deposition of King Malietoa, and Tamasese was declared king. Malietoa fled, but subsequently gave himself up. On Dec. 22nd, at Washington, the Senate adopted a resolution requesting Mr. Bayard to present to Congress the correspondence and records of the State Department relating to the German occupation of the Samoan Islands and Apia. In March '88 Sir J. Fergusson, replying to questions in the House of Commons, said no fresh arrangement had been arrived at with Germany and the United States as to the affairs of Samoa, and the Government did not know where King Malietoa was. A telegram dated Philadelphia, April 3rd, stated that the President had submitted to Congress the correspondence with Germany on the Samoan question. Mr. Secretary Bayard, in his final letter of the previous January, stated that he could not approve of the action of the German Government. In the House of Representatives at Washington, April 23rd, a joint resolution was introduced to the effect that the United States Government should assist the Samoans in securing a settlement of their difficulties and an independent native government. In the House of Commons, May 3rd, Sir J. Fergusson said that Germany had announced her withdrawal from the last convention made between that country, Samoa, Great Britain, and the United States, and that the British Government had assented to the district of Apia being replaced under the control of the Samoan Government, subject to the rights of the treaty powers. On May 7th he added that the British Government had seen no cause to interfere between Malietoa and the German Emperor, and that as Tamasese was now king *de facto*, he would be recognised as such. Replying to a further

string of questions on May 14th, Sir James said that the Conference which sat at Washington for the consideration of Western Pacific had not concluded its proceedings; the Government had no doubt that Malietoa (who was at the Cameroons) was properly treated. On May 22nd and 24th, the *Times* published two articles on the history of Samoa and "The case for Malietoa." A telegram dated Berlin, Aug. 29th, stated that King Malietoa had arrived at Hamburg as a state prisoner, but this was followed by another telegram, Sept. 7th, to the effect that the King and the two chiefs accompanying him had been released and were to return to Apia. News from Auckland (Sept. 15th) stated that a serious rebellion had broken out in Samoa, owing to Herr Branders requiring the natives to confer the name of Malietoa upon the new king Tamasese, and also on account of excessive taxation. A fight had taken place in the bush, in which the Branders party suffered most. Tamasese, whose effective was 1,400 men, was opposed by 3,000 who were faithful to Malietoa. Further news (Auckland, Sept. 27th) was to the effect that Tamasese had been routed, and Malietoa's people had proclaimed Mataafa as king. A telegram dated Nov. 22nd said that further heavy fighting had taken place. The adherents of Mataafa had attacked a Tamasese stronghold at Atua and carried some of the minor defences, but with heavy loss.

Sandakan. Capital of British N. Borneo (*q.v.*).
San Domingo. Capital of Dominican Republic; pop. 15,000. See HAVTI.

Sandown Race Meeting. See TURF.

San Francisco (the "Golden City," and the "Naples of America, popularly called "Frisco"). A city of the United States of America, in the State of California, situated upon the Pacific Ocean, near the mouth of the river Sacramento, at the extremity of a peninsula which forms one of the most admirable harbours in the world. It has derived its great commercial importance not only from its admirable position, but also principally from the discovery of gold in California. The entrance to the vast bay on which it stands, and which extends fifty miles inland, is called the "Golden Gate." The peninsula was first settled by the Spaniards in 1776. After 1848, when it was ceded to the United States by Mexico, gold was discovered in California, and San Francisco from that time increased in size and commerce with unprecedented rapidity. The principal exports, besides gold and silver, are wheat, barley, flour, wines, quacksilver, and wool. Manufactures of different kinds are carried on, employing a large number of hands; the wealth of the city being estimated to amount to \$500,000,000. Viticulture and wine-making is rapidly becoming a very large and important industry in California. The Great Central Pacific Railroad terminates near the city, at Oakland, on the east side of the bay of San Francisco. The climate is generally healthy, neither excessive heat nor cold existing. Lines of steamers run to Japan, Australia, Panama, Mexico, etc. It is estimated that the grain-fleet, leaving San Francisco annually, exports 1,000,000 tons of wheat. The population, which in 1870 was 149,473, had in 1880 (the last decennial return), increased to 233,956. It may be at present estimated as over 300,000.

Sanitation. Under this title is comprised a multitude of diverse topics—water supply, the disposal of sewage, of the dead, and of garbage;

ventilation, wholesome food—everything, in fact, which relates to the health of the individual or of the community. In proportion to our progress during recent years in the sciences and arts has the attention of the public been directed to the question of sanitation. See ed., '86.

San Juan. Capital of **Puerto Rico** (*q.v.*); pop. 30,000.

San Juan River. See **NICARAGUA SHIP CANAL**.

San Salvador. See **CENTRAL AMERICA**; and for **Ministry**, etc., see **DIPLOMATIC**.

Sant, James, R.A., b. 1820. He first exhibited "fancy subjects," generally of single figures, and frequently children; and these, being engraved, made him widely known. As examples may be mentioned the "Infant Samuel," the "Infant Timothy," "Little Red Riding Hood," and "Dick Whittington." Mr. Sant's later years have been almost entirely devoted to portrait painting, his style being thoroughly graceful and refined. He excels particularly in his pictures of children. Appointed **Principal Painter in Ordinary to Her Majesty**. Elected **R.A.** ('70).

Santa Cruz, or Ste. Croix. A West Indian island, the largest of the Virgin group. Area 74 sq. m.; pop. 18,430. Capital **Christianstadt**.—The greater part of the island is flat, but low hills extend along the north coast. One-third of the area is devoted to sugar growing, and one-sixth to pasture land. Of late years there has been a comparative failure of the sugar crops, and the population has decreased. Inhabitants are chiefly free negroes. It is governed, in connection with **St. Thomas** and **St. John**, by an officer appointed by the Danish Crown. The exports from these islands to the United Kingdom were £24,660 in 1887; the imports to them from the United Kingdom were £102,621 in 1887. Intrusted by France to the Knights of Malta, 1657; purchased by Denmark, 1733; slavery abolished, 1848; coolies employed, 1863.

Santley, Charles. Born at Liverpool in 1834. He studied in Italy, and on his appearance in London as a finished singer in 1857 at once took high rank, his first great success being achieved at Covent Garden in '60, when he took the part of Rhineberg in *Lurline*. He is a favourite **baritone** on the operatic stage of almost every European capital.

Sarakhs. An important strategical point, 200 miles north-west of Herat. **New Sarakhs**, the Persian fortress on the right bank of the river, is an extensive structure, but armed only with a few guns. **Old Sarakhs**, on the left bank, a few miles distant in the direction of Merv, is a Russian intrenched camp with a garrison ranging from 1,000 soldiers upward. A telegraph exists between it and **St. Petersburg**. The **Sarakhs** district is fertile, and now that the Turcoman raids have ceased, will, doubtless, rapidly develop. Merv lies about 100 miles on one side of it, and Meshed the same distance on the other. The river **Hari Rud**, or **Tejend**, as the Turcomans call it, on which **Sarakhs** is situated, washes Herat.

Sarawak. A state in the island of Borneo, which has recently ('88) come under the virtual protectorate of Great Britain. Area about 40,000 sq. m., pop. 280,000. Capital **Kuching**. Sea-board extends 380 miles. There are fine navigable rivers—the **Rejang**, **Sarawak**, **Batang Lupar**, and others. Sarawak is largely covered with

forest and jungle, but there are immense tracts of fertile alluvial land, suitable for the growth of tropical products. Chief exports—sago, quicksilver, antimony, gambier, gutta-percha, and rattan canes. Sarawak is said to furnish more than half the sago produce of the world. (See **BORNEO**.) Revenue (1884) £55,253, expenditure £57,858; imports £344,044, exports £322,887. The government was intrusted to Sir James Brooke in 1841, who ruled as rajah till 1868, when he was succeeded by his nephew, Charles Brooke, the present rajah. Under the just and equitable rule of the Brookes, Sarawak has been reclaimed from barbarism, and the Malays, Dyaks, and other savage tribes, have been changed from lawless head-hunters and pirates into comparatively peaceful agriculturists.

Sardinia. An island of the Mediterranean and a department of Italy, separated from Corsica by the Strait of Bonifacio. Area (including the small adjacent islands), 9,294 sq. m.; pop. 717,740. Capital, **Cagliari**; pop. 35,588. Other towns: Sassari, Tempio, Alghero, Iglesias, and Oristano. In the east a range of mountains stretches from north to south, culminating in Monte Gennargentu, 6,250 ft. high. Climate unhealthy, owing to the prevalence of malaria. Though in ancient times Sardinia was one of the granaries of Rome, agriculture is now in a backward state, owing partly to the minute subdivision of the land, as in Corsica. The natural pastures beside the rivers are numerous and rich; the tending of horses and live stock is one of the principal occupations of the people, and animals rank after minerals among the exports of the island. In mineral wealth Sardinia is the richest province of Italy: lead, silver, zinc, iron, building stones, alabaster, salt. The mines of Sardinia were worked by the Carthaginians and Romans. In 1886-7 the mines had an output of 137,076 tons of ore, of the value of £593,346. The tunny fisheries give very valuable results. The coral fisheries are yearly decreasing, owing to the exhaustion of the old coral banks without any new ones being discovered. The imports in '87 were £317,037; exports, £578,227. Chief exports, besides minerals and animals, charcoal, wines, skins, cheese, almonds. Roads began to be constructed in '28, and railways were introduced in '70.

Sardou, Victorien, French dramatist, b. at Paris Sept. 7th, 1831. He first studied medicine, but afterwards became a litterateur. His first dramatic production, "*La Taverne des Etudiants*," was a failure, but his next works, "*Monsieur Garat*" and "*Les Prés-Saint-Gervais*," which he wrote for Dejazet in 1860, were successes. In 1861 his comedy "*Les Fattes de Mouches*" brought him prominently before the public. He also wrote for Madame Bernhardt (*q.v.*) "*Fédora*" and "*Theodora*," and, latest of all, "*La Tosca*," which was brought out at the Port Sainte Martin Theatre in '87. M. Sardou was elected a member of the French Academy in 1877. He is at present preparing a drama for the centenary of the revolution of 1789.

Sark. One of the Channel Islands (*q.v.*).

Sarum, Use of. See ed. '88.

Saskatchewan. Named after the Saskatchewan river. A district of the **North-West Territories** and a future province of the Dominion of Canada. Lies north of Assiniboia.

Area 114,000 sq. m. Capital **Prince Albert**. River navigable from Lake Winnipeg.

"Saturday Review, The" (weekly 6d.), founded Nov. 1855, has long maintained a leading position for its fearless criticisms on subjects of political, literary, and social interest; treating these from an independent standpoint. Its reviews are also distinguished by the same characteristics. Editor, **Mr. W. H. Pollock**, *q.v.* (1883). Office, 38, Southampton Street, Strand, W.C.

Savage Island (or **Nieué**), situated midway between Panama and Brisbane, and virtually a part of the Tongan group. The circumference of the island is 36 miles, and its height 2,000 ft. Practically a huge coral reef, broken here and there, forming convenient inlets. It has recently received the **protectorate** of Great Britain in response to the request of the natives.

Savala. See **SAMOA ISLANDS**.

Saving Life at Sea. A Select Committee of the House of Commons was appointed in May '87 to consider this subject. For concise summary of its report see ed. '88, and Merchant Shipping (Life Saving Appliances) Act, under heading Session '88, sect. 32.

Saxe Coburg, Duke of. See **FERDINAND, PRINCE**.

Saxony. For Ministry, etc., see **DIPLOMATIC**.

Sayce, Rev. Archibald Henry, the distinguished comparative philologist and orientalist, b. at Shurhampton 1846. Educated at Queen's Coll., Oxford; elected a Fellow '69. He subsequently became Senior Tutor. He was a member of the **Old Testament Revision Company**, and, in addition to his works on comparative philology, he has written many books, embodying the results of his researches in the languages and literature of Assyria, Babylonia, and Chaldea. **Hibbert lecturer** (*q.v.*) '87.

Scale (Music). See ed. '87.

Scarborough. Capital of **Tobago** (*q.v.*).

Scheldt River, The. See **ANTWERP QUAYS**.

Schliemann, Dr. Heinrich. A celebrated German archaeologist and author, born in 1822, at Nembukow, in Mecklenburg. In 1859 he travelled over the Continent, Syria, and Egypt. In 1870 he started excavations in the hill **Hissarlik**, in Asia Minor, where he made wonderful discoveries. For the archaeological treasures he excavated belonging to Turkish territory he was compelled to pay £2,000 to the Ottoman Government. He subsequently exhibited them in the South Kensington Museum, and in '81 presented them to the German nation. His researches have brought to light splendid specimens, especially from **Mycenæ** and **Tiryns**. He unearthed a Cyclopean city in **Ithaca**, followed on at **Troy**, and obtained valuable relics of **Boeotian Orchomenos**. He has written important works in several languages on his archaeological discoveries.

Schnadhorst, F., b. at Birmingham 1840. Educated at King Edward VI.'s Grammar School. In 1873 he became secretary to the Birmingham Liberal Association. The great organising powers of Mr. Schnadhorst, which were advantageously and successfully displayed in the principal elections throughout the country, were specially recognised by the

Liberal party with a purse of £1,000, and an address, which were presented by Mr. J. Chamberlain, M.P., April 9th, 1877. Under Mr. Schnadhorst's organisation was formed (1877) the **National Liberal Federation** (*q.v.*), of which he was appointed secretary. In the early part of 1884 Mr. Schnadhorst resigned the office of secretary of the Birmingham Liberal Association, and was appointed chairman. In 1885 he received unanimous invitations from two of the new Birmingham divisions, South and East Birmingham, to stand as parliamentary candidate, which he declined. The Liberals of Birmingham, however, showed their confidence in him by unanimously electing him **President** of the "**Two Thousand**," in succession to Mr. George Dixon, M.P. Early in '87 Mr. S. removed to London to superintend the newly organised National Liberal Federation, and was subsequently (March 9th, '87) entertained at a banquet, and presented by the party with a testimonial of 10,000 guineas and an address. Mr. S. is also hon. sec. of the Liberal Central Association.

Schnitzler, Edward. See **EMIN PASHA**.

School Attendance Committees, The. Lord Sandon's Education Act of 1876 prescribed that every district in England and Wales which had not a school board should have a school attendance committee, chosen in boroughs and townships by town councils and urban sanitary authorities, and in all other places by boards of guardians. Thus every inch of the area of England and Wales is covered either by a school board or by a school attendance committee. The chief difference of function between the two bodies is that the attendance committee cannot build or carry on schools; it can only compel attendance in the voluntary school, and there must be enough voluntary school accommodation for all the children in the district. A large proportion of the rural area is under attendance committees, and there are a few important towns in the same position, including Accrington, Birkenhead, Bury, Cambridge, Cheltenham, Chester, Colchester, Dover, Lincoln, Preston, Southport, St. Helens, and York.

School Board for London. The Elementary Education Act of 1870 specially provided that a school board should be formed for London. The usual preliminary inquiry directed to be made in all other places (whether boroughs or districts) was dispensed with in the case of the Metropolis, because the educational destitution was notorious, and would brook no delay. The first board was accordingly elected only a few months after the passing of the Act, and included such men as Lord Lawrence, who became its chairman; Lord Sandon (now Earl Harrowby), the late Mr. Samuel Morley, Mr. W. H. Smith, Professor Huxley, the late Sir Charles Reed, Rev. A. W. Thorold (now Bishop of Rochester), etc.—**School Accommodation and Attendance**. The task before this Board was of the most difficult nature, since its first report to the Education Department showed that, on the most moderate calculation, there existed a deficiency of more than 100,000 school places, and proposed forthwith to meet this enormous deficiency. Then, too, there was the ever-growing increase of population to be dealt with, itself calling for an annual supply of twelve schools, each for 1,000 children. Its educational progress since

1870 will be seen by the following table, and also the "rate" at the end of each triennial period:—

	Rate at end of each triennial period, 1886-87.	School places provided.	No. on the Roll.	Average attendance.
1870	—	—	—	—
1873	'89	58,581	59,606	40,481
1876	3'0	146,074	146,031	114,380
1879	5'15	219,291	233,480	185,518
1882	6'15	280,275	295,833	238,205
1885	8'0	357,298	364,140	290,099
1886	8'64	378,464	384,346	303,715
1887	8'86	397,117	408,357	319,443
1888	8'36	407,636	420,914	328,578

The following table shows the position of the **Voluntary Schools** during the same period:—

	School places provided.	No. on the Roll.	Average attendance.
1870	261,158	221,401	173,406
1873	282,936	259,543	195,662
1876	287,116	259,436	199,605
1879	271,314	235,084	182,728
1882	263,617	223,297	174,723
1885	262,175	211,711	168,712
1886	260,158	207,219	163,477
1887	260,270	208,986	165,099
1888	262,022	207,887	162,349

Taking into account the fact that voluntary schools, accommodating 47,000 children, have been transferred to the Board, the above tables show that the work of the Board has been accomplished without any serious detriment to the attendance at the voluntary schools, notwithstanding the fact that the number of children now on the rolls of board schools alone is considerably greater than the total number of children on the rolls of voluntary schools in '70. With regard to the **rate**, it should be stated that although, until '88, it had constantly been increasing, the average cost per child shows but a slight fluctuation. The chief cause of the increase of cost must be looked for in the ever-growing number of children, for whom the Board are compelled to make provision. The London Board labours under peculiar difficulties, owing to the exceedingly high price of land, and the larger salaries paid in London, as compared with provincial towns. The **buildings** of the Board are well and substantially built, and improvements have from time to time been made as experience has proved their need. The health of the children has been carefully studied in such matters as lighting, warming and ventilating, under the hope that the care shown in all sanitary matters will have a great influence upon the health of the working classes of London. Outside the school building the Board have shown the same care of the children attending its schools. Extensive **playgrounds** have in most cases been provided, and wherever there is room, gymnastic apparatus also.—**Curriculum** (as prescribed by the New Code, 1888): reading, writing, and arithmetic (and needlework for girls), of course take precedence over all other subjects. The class subjects last year were English, geography, elementary science, history; and

needlework for girls. Of these two are compulsory. Besides these there are specific subjects which are only taken by individual children in the upper classes of the school. With regard to the three Rs, it is satisfactory to note the progress which has been sustained for many years. The following table shows the results of the **examinations** at the end of each triennial period since 1873, and 1886, 1887, and 1888:—

	1876.	1879.	1882.	1885.	1886.	1887.	1888.
Reading	87'1	88'2	92'1	95'1	94'7	95'7	96'0
Writing	83'7	84'7	90'0	89'2	89'1	90'6	91'1
Arithmetic	77'9	80'0	85'4	87'4	85'9	87'3	89'0

The **fees** charged by the Board (and sanctioned by the Education Department) range from 1d. to 6d. per week, with the exception of two schools, where the fee is 9d. (The average fee for boys, girls, and infants is 2'1d.) They are uniform in each department, and are, in each case, determined after regard has been had to the position of the parents. The number of **teachers** employed at Lady Day, 1888, was 6,566: 2,207 male and 4,359 female. There were also about 1,744 pupil teachers.—**Compulsory Attendance at School.** The bye-laws of the School Board for London, made under section 74 of the Education Act of 1870, provide that children must attend a certified efficient school, or receive instruction in some other efficient manner. In order to enforce these bye-laws, and the additional regulations relating to education and employment contained in the Education Acts of 1876 and 1880, the Board have a staff of visitors (attendance officers) in each division of the Metropolis, whose duty it is to co-operate with the teachers of *all efficient schools* in securing the attendance of children. Prosecutions are only ordered after all other means have failed to secure a child's attendance. The visitors also make inquiries in special cases of non-payment or inability to pay school fees, and also in cases of application for labour certificates, etc. The number of visitors at Lady Day, '88, employed in the Metropolis (including ten superintendents) was 272.—**Industrial Schools.** The School Board for London have availed themselves of the provisions of the Industrial Schools Acts and the Education Acts, relating to children wandering or not under proper control, or begging or not under proper guardianship, or persistently truanting from school, or charged with felony, etc., with a view to such cases being sent to industrial schools (a) under voluntary management, or (b) under the management of the Board. There are about fifty of the former schools with which the Board have agreements. There are also three of the latter schools: (1) a training-school ship on the Thames, (2) an industrial school at Brentwood, chiefly for cases not suitable for other industrial schools, and (3) a truant school for boys at Homerton. In the ordinary course children are committed until they attain the age of sixteen years, with power to the managers to license out to employment at an earlier age, if desirable. In the case of **truant schools** the children are licensed out, after a short detention, on condition that they attend an ordinary day school. The discipline while under detention has such a deterrent effect that, in the majority of cases, the boys attend

school afterwards, but in case of failure the license is revoked and the boy taken back to the school for further treatment. Up to Lady Day, '88, 12,540 cases had been sent to industrial and truant schools, and of these 9,984 had been discharged to friends, employment, etc., leaving at that time 2,556 children still in the schools. Wherever possible the parents are called upon by the agents of the Home Office to contribute towards the maintenance of their children in these schools.—**Evening Classes** have now been established in every part of the Metropolis, and the last report of the Evening Classes Committee states that the results of the session '87-88 are extremely satisfactory. The total number of pupils enrolled during the session was 16,320; average number on rolls, 9,077; and average attendance, 5,805. The Board formerly consisted of 49 members, but the number is now fixed at 55. The election of the seventh Board took place on Nov. 26th, '88. **Constitution of the Board:** City of London—Miss Davenport-Hill, Albert O. Rutson, Esq., J.P. Rev. William Martin, Sir Richard Temple, Bart., M.P. Chelsea—Rev. George W. Gent, M.A., John H. Chapman, Esq., M.A., F.S.A., Rev. Prebendary Eyton, M.A., Professor Gladstone, F.R.S. (*Vice-Chairman*), George Wite, Esq., B.A., LL.B. **Finabury**—Benjamin Lucraft, Esq., Alfred George Cook, Esq., Rev. John H. Rose, M.A., W. School Boards, The. There were ('88) 2,250 School Boards in England and Wales, covering a population of 16,344,000, leaving a population of about 9,600,000 under school attendance committees. Wherever there is not enough efficient public elementary school accommodation in a district for all the children a School Board must be formed, whose first duty it is to make good the deficiency of accommodation by opening board schools. Districts without a deficiency of accommodation may have a School Board by passing a vote to that effect by a majority of the town council in boroughs, or of ratepayers in districts which are not boroughs. Thus it happens that there are School Boards in some districts without board schools. It is one of the chief duties of the School Board to compel the attendance of all the children of school age at an efficient public elementary school, whether a board school or a voluntary school. School age is from 5 to 14, with exemptions from compulsory attendance for children who have passed certain standards of proficiency. There must be accommodation also for as many children as present themselves under the age of 5 and over the age of 14. There are school boards in most of the large boroughs of England and Wales, but a few remain under school attendance committees. In boroughs with a population of 100,000 and upwards the School Board consists of 15 members; from 75,000 to 100,000, 13 members; from 40,000 to 75,000, 11 members; from 20,000 to 40,000, 9 members; from 5,000 to 20,000, 7 members; under 5,000, 5 members. Any man or woman twenty-one years of age, without any restriction as to qualification or residence, may be elected a member of a school board. The board may not interfere with the management of a voluntary school, but may demand from those schools returns of the attendance of children. The board may take compulsory possession of a site for a board school. It borrows money for building board schools, paying back the whole amount, interest and principal, in fifty years. All other expenses must be met year by year, the deficiency being made up by a school rate. School boards which fail in their duty are declared "in default," and may be superseded by a school board appointed by the Committee of the Privy Council on Education, at the cost of the ratepayers. **School Boards in Scotland** are under a separate Act of Parliament, under which the whole area of that country is under school boards, and the school attendance committee is unknown. See LONDON SCHOOL BOARD and SCHOOL ATTENDANCE COMMITTEES.

Science and Art Department of the Committee of the Council on Education is a separate branch of the Education Department. Under it are the Normal School of Science and Royal School of Mines, S. Kensington and Jermyn Street, the National Art Training School, S. Kensington, numerous schools of science and art which receive payments on results, grants in aid, etc., the S. Kensington, Bethnal Green, and Indian Museums, the Science and Art Libraries, the Geological Museum, Museums of Edinburgh and Dublin, and the Geological Survey of the United Kingdom. It spends sums in circulating science and art objects to country institutions, promotes local effort by conditional aid, and it has its own staff of examiners and inspectors. See, and permanent head of the Department Major-Gen. Donnelly, C.B. (late R.E.), S. Kensington.

Scientific Dressmaking. See ed. '88.

Scientific Men and Doctors Deceased (Jan. to Dec. 6th). See OBITUARY.

Scientific Progress in 1888. See under their various alphabetical headings, e.g., ANTHROPOLOGY, GEOLOGY, etc.

Scotch Lowland, A Dictionary of (*Whitaker*) Dr. Charles Mackay's long literary career has been crowned by the production of a dictionary, which is not only useful, as a dictionary ought to be, but also most readable—which a dictionary very seldom is. The volume is prefaced by a genial and patriotic essay upon the Scottish language and its literary history; and it likewise contains a chapter on lost Scottish and English preterites, besides Allan Ramsay's collection of Scottish proverbs. Readers—not natives of the Land of Cakes—of Burns and Scott, of Christopher North and the Border poetry, will find Dr. Mackay's dictionary of invaluable assistance, while thousands of Caledonians cannot fail to discover something new and profitable in this work.

Scotland Secretary for. By an Act of '85 this old office was revived, but not as a principal secretaryship, and there were transferred to it, so far as Scotland was concerned, the powers and duties of the Secretary of State under Acts concerning the Poor Law, labourers' dwellings, lunacy (except criminal lunatics and insane prisoners), police, prisons, public health, roads and bridges, salmon fisheries, wild birds protection, fishery board, rivers pollution, and Scotch universities. The Scotch Secretary is also Vice-President of the Scotch Education Department, which is a committee of the Privy Council appointed by Her Majesty, and Keeper of the Great Seal. All the rights of the Lord Advocate (*q.v.*) were reserved by the statute. By the **Secretary for Scotland Act '87** all the other powers and duties of the Home Secretary, so far as they relate to Scotland, were, with the following exceptions, transferred to and vested in the Scotch Secretary: Factory and Workshop Act '78, Coal Mines Regulation Act '72, Metalliferous Mines Regulation Act '72, Explosives Act '75, Cruelty to Animals Act '76, Reformatory and Industrial Schools Act '66-79. See SECRETARY OF STATE, MINISTRY.

Scottish Peers. See PEERAGE.

"Scribner's Magazine" (monthly 1s.). Started January 1887, reviving the title which was formerly held by the present *Century Magazine*. It offers several attractive features for the current year, including a new serial story by Robert Louis Stevenson, entitled "The Master of Ballantrae." Published in

New York by Charles Scribner's Sons, and simultaneously in England by Warne & Co.

Scrutin d'Arrondissement. Single ballot system, whereby each *arrondissement* (district, parish, or ward) returns its own member for Parliament. See SECRETARY OF STATE, MINISTRY.

Scrutin de Liste. Multiple ballot system, whereby all the members who offer themselves for parliamentary election are put on the same list for the whole of the *département* (county) and returned at the same election.

Sculling Championship of the World. See AQUATICS.

Secretary of State. As early as 1253 there was a secretary to the sovereign, but the office was not nearly so important as it afterwards became, and it is doubtful whether before Henry VIII.'s days the holder was a privy councillor. From the time of Elizabeth until the union with Scotland there were two principal secretaries of state, and Anne added a third for Scotch affairs, but this office was abolished some years later. While there were two principal secretaries they divided home affairs between them, and one was at the head of the northern department, which included Denmark, Germany, Russia, and other countries, and the other was at the head of the southern department, which included France, Italy, Spain, etc.—to the elder of the two ministers being also committed Irish and Colonial affairs. A secretary for America or Colonial affairs was added in the reign of George III., but this office was abolished in 1782; the terms northern and southern were discontinued, and the duties divided into *Home and Foreign*, the affairs of Ireland and the Colonies being included in the former department. Another principal secretary who was intrusted with Colonial and War Office business was appointed in 1794, and in 1854 a secretary for War was appointed, who in the following year took over the duties of *Secretary-at-War*—a financial office in connection with military business which had existed for many years previously, and which was in 1863 formally and finally abolished. In 1858 a fifth principal secretary of state was appointed for India, so that there are now five principal secretaries of state. They are appointed without patent, by mere delivery to them of the seals of office by the sovereign; each is capable of performing the duties of the other, and in successive statutes new administrative duties are cast, not upon any one of the five individually, but upon the "Secretary of State," or "one of H.M. Secretaries of State." Each Principal Secretary is assisted by a *Parliamentary Under Secretary* and by a *Permanent Under Secretary*. The five *Permanent Under Secretaries* are: *Home Office*, Mr. Godfrey Lushington, C.B., salary £2,000; *Foreign Office*, Sir Julian Pauncefote, G.C.M.G., £2,000; *Colonial*, Sir Robert G. W. Herbert, C.B., £2,000; *War*, Sir Ralph W. Thompson, K.C.B., £2,000; *India*, Mr. John A. Godley, C.B., £2,000. The office of *Secretary for Scotland*, re-created in '85, is not a principal secretaryship, so that although the holder exercises in Scotland many of the powers and duties of the Home Secretary, he is not by virtue of his office a Cabinet Minister. The *Permanent Under Secretary* for Scotland is Mr. Cochran-Patrick, £1,500. See MINISTRY, SCOTLAND, IRELAND (GOVERNMENT OF), HOME OFFICE, FOREIGN OFFICE, etc.

Seduction, Action for. See ed. '87.

Sealey, John Robert, M.A., Professor of Modern History at Cambridge, is a son of the late Mr. Sealey, the head of a well-known firm of London publishers, and was b. 1834. Educated at the City of London School, and at Christ's College, Cambridge. He graduated Senior Classic and Chancellor's Medallist, and was elected a fellow of his college ('58). He subsequently became assistant classical master at the City of London School, and ('63) was appointed **Professor of Latin in University College, London**, where he remained till '69, when he was elected to the chair which he now occupies. Professor Sealey is the author of "Classical Studies as an Introduction to the Moral Sciences," "Lectures and Essays," "Livy with Introduction, Historical Examination, and Notes," "Life and Times of Stein," and "The Expansion of England." Professor Sealey has also always been regarded as the author of "*Ecce Homo*," a work which created a profound sensation at the time of its appearance ('65). "Natural Religion," by the author of "*Ecce Homo*," did not, however, attract so much attention.

Seismology. See EARTHQUAKES.

Seismometers. Instruments for analysing and recording the motions set up by earthquakes (*q.v.*). Prof. Ewing, F.R.S., has devised a set of apparatus for this purpose, which was shown in illustration of a lecture on the measurement of earthquakes delivered by him at the Royal Institution last year. A **seismograph** records both the **horizontal and vertical movements** of an earthquake by means of an index, smoked glass being used, upon which a record is traced. Apparatus has been devised for comparing the results with those obtained in imitation earthquakes. Prof. Sekiya, of Tokio, has had seismometers, or seismographs, in use in Japan for some time, and records of earthquakes that have happened there have been taken by Prof. E.'s instruments. **Seismographic measurements** have also been made here on the new **Tay Bridge** (*q.v.*), to demonstrate the shaking caused by trains passing over it; and it has been shown that, when a train came on at the Dundee end of the bridge, the index began to oscillate, although more than a mile from the disturbance. Consult "Encyclopædia Britannica," 9th ed.

Selangor. A Malay state under British protection. See STRAITS SETTLEMENTS.

Selborne, Roundell Palmer, P.C. 1st Earl of (creat. 1872), was b. 1812. Is a member of the family of Palmer of Wanlip in Leicestershire; was called to the bar at Lincoln's Inn ('37); became Solicitor-General (July '61); Attorney-General (Sept. '63); resigned (July '66) on account of his disapproval of the disendowment of the Irish Church; acted as counsel for the British Government in the decision of claims under the Washington Treaty ('71); was M.P. for Plymouth (July '47 to July '52, also June '53 to March '57), and for Richmond (July '61 to Oct. '72, when he was created a peer); was **Lord Chancellor of Great Britain** (Oct. '72 to Feb. '74, and May '80 to June '85). On the formation of Mr. Gladstone's last Government, in '86, Lord Selborne refused to join the Cabinet, owing to his disapproval of the Prime Minister's Irish policy. He has since acted with the Liberal Unionists, and in the columns of the *Times* has trenchantly exposed what he believes to be the fallacies of Home Rule. Lord Selborne has

published one or two books upon Church matters, including "**The Case against Disestablishment**" ('86), and "**Churches and Tithes**" ('87). He was elected **Lord Rector of St. Andrews University** '77. He is also the editor of "**The Book of Praise from the Best English Hymn-writers.**"

Selborne Society, The. Has for its objects: (1) To preserve from unnecessary destruction such wild birds, animals, and plants as are harmless, beautiful, or rare; (2) To discourage the wearing and use for ornament of birds and their plumage, except when the birds are killed for food or reared for their plumage; (3) To protect places and objects of interest or natural beauty from ill-treatment or destruction; (4) To promote the study of natural history. It was incorporated at the beginning of the year '88 by the passing of rules and the election of a Council, and was the outcome of the **Plumage** and the **Selborne Leagues**, started in '85 for the discouragement of the use of bird-skins as ornaments for ladies' dresses and household decoration. It has several branches established in various parts of the country, and it issues publications to promote its objects. The progress of the Society is recorded in the *Selborne Magazine* (monthly). **Patroness**, H.R.H. Princess Christian; **President**, The Lord Tennyson; **Sec.**, E. D. Price, F.G.S.; **Office**, 9, Adam Street, Strand, W.

Selden Society. Inaugurated in '87 "to encourage the study and advance the knowledge of the history of English law. Local societies exist in the Colonies and the United States. The Society has issued its first volume, "**Select Pleas of the Crown, A.D. 1200-1225**," edited, from the *Coram Rege* and *Assize Rolls* preserved in the Public Record Office, by Professor F. W. Maitland, of Cambridge, and has in preparation its second and third volumes: "**Selections from Manorial Rolls of the 13th Century**," edited by Professor F. W. Maitland; and "**Select Civil Cases of the 13th Century**," edited from the *Plea Rolls* preserved in the Public Record Office, by Mr. W. Paley Baildon, of Lincoln's Inn. The S. S. consists of a **Council** comprising names most eminent in legal circles. **President**, H. M. the Queen; **Vice-President**, H.R.H. the Prince of Wales. **Hon. Sec. and Treasurer**, P. Edward Dove, Lincoln's Inn.

Select Committees. See PARLIAMENTARY PROCEDURE.

Self-Help Emigration Society, for the under-paid and unemployed in Great Britain, assists applicants whose character and fitness are assured to emigrate to **Canada**. The Society supplements the funds of the **intending emigrant**, and assists him to obtain his passage. **Introductions** are furnished to the Society's correspondents, who are men of position, forty-one in number, resident in various centres of Canada, and **work is provided** for the emigrant on his arrival out. The cost to the Society averages £2 10s. per head, and during the past year some 900 persons have been thus located, at a cost of about £4,500, £3,000 of which was contributed by the emigrants and their friends. Employment was found for all who were willing to work. **Office**: 50, Fleet Lane, Farringdon Street. Application from intending emigrants should be made by letter to the **Sec.**, Rev. R. Mackay.

Semaphore Signal. See RAILWAY SIGNALING.

Senegal, or French Senegambia. A French colony of Western Africa, on the Senegal and

the Gambia rivers. Area (including protectorates on the Upper Senegal and Upper Gambia), 96,154 m. pop. 183,237. Capital **St. Louis**. Islands of Goree and Dakar part of the colony. Great part is fertile and rich in produce. Senegal navigable 750 miles up. Thence road now made to Bamako on Niger, and railway constructing. A steamer has been placed on the Upper Niger, and trade is being rapidly developed.

Senegambia. A country in the west of equatorial Africa, comprising the regions watered by the Senegal and Gambia, and bounded north by the Sahara, south by Sierra Leone, east by the Joliba or Upper Niger, and west by the Atlantic. This vast region is estimated to contain an area of 400,000 sq. m., and a population of from 10,000,000 to 12,000,000 Berbers, Negroes, and Europeans. It is divided into French Senegambia (**Senegal**), and the territories placed under French protection, British Senegambia (**Gambia**, etc.), Portuguese Senegambia (**Bissao**, **Casamanza**, etc.), and independent Senegambia, comprising the native states not under the protection of a European power.

Separation Agreements, Law on, '88. The case of *M. Gregor v. M. Gregor* (Court of Appeal, August) was an action by a wife against her husband to recover arrears of maintenance under a private agreement for separation. In June '86 cross-summonses for assault were taken out by the husband and wife, which were withdrawn by mutual consent, the parties agreeing to live separate, the husband to allow his wife a weekly sum. It was this agreement that the wife now sued on. For the defence it was urged that the agreement was bad: firstly, because there was no trustee, and a wife cannot contract with her husband; secondly, because the agreement should have been in writing under sect. 4 of the Statute of Frauds. The Court decided both points in the wife's favour. The consideration was the withdrawing the summons and the abandoning her right of action for separation. This was sufficient consideration to make the contract binding, and therefore a trustee was not needed to supply the want of consideration between husband and wife. As to the second objection—namely, that the contract might extend over a greater space of time than one year, and should therefore have been in writing—it was decided in *Linch v. Shawbridge* (2 C. B. 815) that the statute only applied where the parties clearly intended that the contract should extend over a longer period. Where the whole contract might be concluded within the year, as in this case, the statute did not apply. A magistrate, by the decision in *Regina v. Fordam* (November), has no power to make an order for the maintenance of a wife where the husband is willing to receive her back.

Sepoys. See ed. '88.

Serjeant-at-Arms. The holder of this office carries the mace when the Speaker enters and leaves the House, places it on the table when the Speaker takes the chair, and under the table when the House goes into committee. He, by the messengers, notifies committees when the House is going to prayers, and sees that strangers withdraw from beneath the galleries when a division is to be taken. He or his deputy sits within the House, near to the door, and executes any directions of

the Speaker for the maintenance of order, even should they extend to the removal of a member who has been ordered to withdraw and has refused to obey the ruling of the chair. Certain of the galleries, corridors, etc., are under his charge. The Serjeant-at-Arms of the House of Lords attends the Lord Chancellor with the mace; but the duty of maintaining order in certain parts of the chamber is one of the functions of Black Rod (*q.v.*). Both Serjeants-at-Arms are appointed by the Crown. Mr. H. D. Erskine is **Serjeant-at-Arms** of the House of Commons, and the corresponding office in the Lords is filled by Lieut.-Col. Hon. Wellington P. M. C. Talbot.

Serjeants-at-Law. See ed. '88.

Servia. Formerly an autonomous province of Turkey, now a kingdom under Milan I. of the House of Obrenovitch. The executive power is, by the constitution, vested in the king, and the legislative in the king jointly with the Skuptschina or National Assembly. There is also a Senate or Council of State always in session, which examines and elaborates projects of laws, etc. The Skuptschina of 178 members is elected three-fourths by the nation and one-fourth by the king, and is renewed every three years. Besides this there is a Great Assembly of 538 members, none being royal nominees, called when required to decide vital and constitutional questions. All tax-paying citizens are electors. State religion is Greek Orthodox, but others are tolerated. Education is backward but progressing. In '87 there were 671 normal schools, with 50,860 pupils of both sexes, being one school to 3,010 inhabitants, and one pupil to 39 inhabitants. Of the entire population 19.3 per cent. can read and write. Area, 18,750 sq. m., pop. 1,965,000. Estimated revenue and expenditure for '87-8, £1,778,400. Imports over £2,000,000; exports about £1,750,000. National debt about £8,000,000. (For army see **ARMIES, FOREIGN**.) In July 1876 war was declared against Turkey, at the close of which Servia was declared independent, and received an accession of territory—though by no means proportionate to her wishes.—Early in '88 (March) the election to the Skuptschina resulted in a victory for **M. Gruitch**, the **Ristich party** (see **SERVIAN POLITICAL PARTIES**) sustaining a most severe defeat. The reckless proceedings of the Extreme Left led to the resignation of the premier, who was succeeded by **M. Christich**. The unhappy dispute between King Milan (*q.v.*) and Queen **Nathalie** resulted in the application of the King to the **Servian Synod** (which has the authority to pronounce divorces on the ground of incompatibility of temper, also held by the civil law of Servia to constitute a valid claim) for a divorce on the ground of "irreconcilable mutual antipathy" (July). The Queen issued a refutation to the principal charge made against her. Proposals for a compromise having failed, King Milan induced Theodosius, the Metropolitan of Servia, to pronounce him divorced. This conjugal *coup d'état* was carried into effect (Oct.), and Bishops Demetrius and Nicator, who opposed the scheme, were suspended by the King on the charge of contumacy. The divorce proceedings caused great political and social excitement. Queen Nathalie, who is to receive back her marriage portion, left Bucharest (Nov.) for St. Petersburg, where she is to be the guest of the Tzar and Tzarina. The preliminary elections

for the Great Skupstchina, held during November, indicated in their result a large Radical majority. On the ground that the freedom of the electors had been interfered with by rioters, seventy of whom were arrested by the Government, and others, the King annulled the elections and authorised them to be held afresh. The *New Servian Constitution*, drawn up by a commission, consisting of eighty-five members selected from all the Parliamentary groups, held its first sitting Nov. 3rd, and is continuing its labours, the first twenty-one articles being agreed to on Dec. 8th. The Constitution is divided into sixteen chapters, and contains 204 articles, relating to the form of government, constitutional rights, popular representation, religion, education, justice and other particulars. Consult Laveleye's "The Balkan Peninsula." The *Statesman's Year Book, Almanach de Gotha*, etc.

Servian Political Parties. The political life of Servia centres in the *Narodna-Skupstchina* or National Assembly, the members of which may be divided into Liberals or pro-Russians, Radicals or pro-Austrians, and Progressists, who also lean to the side of Austria, while, in common with the Radicals, they aim at the continued independence of the kingdom. There is also the *Greater Skupstchina*, which is four times as large as the National Assembly, and is only convened when it is necessary to take a decision upon vital and constitutional questions. It is elected entirely, however, by the people, every tax-paying Servian having the right to vote. The present (*Lesser*) *Skupstchina* was elected in Mar. '88, up to which time a ministry under Colonel Grouich had been in office since the beginning of the year, in succession to one headed by M. Ristich, the Liberal leader. The result of the March elections, however, was to place the Liberals in a decided minority, the Radicals and Progressists being returned 130 strong, the remaining 20 or so seats being divided among the Liberals and other members of the present Opposition. Nevertheless, Col. Grouich resigned, not caring to carry on the Government under the conditions imposed by the large Radical-Progressist majority. He was succeeded by M. Christich, the present premier. Quite recently, however, party politics were thrown into still greater confusion by the divorce proceedings which King Milan instituted against Queen Nathalie. In December last a general election took place to the *Greater Skupstchina*, for the purpose of considering the new constitutions with which King Milan proposes to endow his kingdom. The result of the elections was to place the Radicals in a very strong majority.

Session, Parliamentary, of 1888. [1] The following article gives an outline of the principal business and legislative results of the Session up to the adjournment in August, appended being a brief narrative of the proceedings at the autumnal sitting. As in last year's ANNUAL, *Military and Naval Affairs* are dealt with mainly under the headings of ARMY and NAVY (but see also sect. 20); particulars as to the *Civil Service Estimates*, the *Budget*, and the *Conversion Scheme*, will be found included in the article on FINANCE, NATIONAL (but see also sect. 57); and affairs in Ireland, bye-elections, changes in the *personnel* of the two Houses, and procedure, though to some extent referred to below, are dealt with more specially under

appropriate headings. For convenience of reference the article is broken up into numbered sections and is divided into three parts, the first containing the text of the Queen's speech and a number of miscellaneous matters of importance, the second and third being devoted to Acts and Bills, and the reports of committees. Of the proceedings of the Session generally it may be said that they present a very agreeable contrast to those of the Session of 1887. The scenes, wrangles and recriminations which were of almost nightly occurrence twelve months before were conspicuous by their absence in 1888. Mr. Conyngham was the only member to incur the penalty of suspension, and obstructive tactics were only rarely resorted to. So large an amount of business was transacted, much of it being, too, of first-class importance, that even if the Session had ended in August it would take a prominent place in legislative annals, while the manner in which the work was done restored public confidence in the elected branch of the Legislature. The House of Commons reformed not only its manners but its hours, and the plan of ceasing opposed business at midnight, and subject to certain exceptions, of absolutely closing the sitting at 1 a.m., was such a conspicuous success that members are not very likely to revert to the old system. The new rules generally were a great change for the better, and worked in the interest of none more than the private members, for without some such change as was made in their favour, and by which, after Whitsuntide, priority is given to the most advanced of their bills, it would have been almost hopeless to expect that such measures as the Oaths Bill and Libel Law Amendment Bill would ever reach the House of Lords. Such changes as have taken place in the relative strength of parties have been slightly in favour of the opposition, but the Unionist alliance remains unshaken. Early in the session Sir H. Holland went up to the House of Lords, retaining the Colonial Secretaryship; and on Lord Stanley of Preston being appointed Governor-General of Canada, Sir M. Hicks-Beach, who had quite recovered his health, was appointed to succeed him at the Board of Trade.—[2] The third Session of the twelfth Parliament of Her Majesty, and of the twenty-fourth Parliament of the United Kingdom of Great Britain and Ireland, was opened by Royal Commission on February 9th, the Lord Chancellor delivering the Queen's Speech as follows:—"MY LORDS AND GENTLEMEN,—I continue to receive from all other Powers cordial assurances of their friendly sentiments, as well as of their earnest desire to maintain the peace of the world. My officers, in conjunction with those of the Emperor of Russia, have completed the demarcation of the Afghan boundary in conformity with the terms of the Convention of last year. I trust that the work which has thus been brought to a conclusion may tend to remove the possibility of misunderstanding between the two Powers in regard to their Asiatic possessions. Animated by a desire to prevent the effusion of blood, I despatched a Mission to the King of Abyssinia, with the hope of dissuading him from engaging in a war with Italy. I deeply regret that my efforts have not been successful. The deliberations of the Conference assembled at Washington to adjust questions which have arisen between the Dominion of Canada and the United States are still in progress. The

negotiations which were commenced in 1887 with respect to the regulation of the *Suez Canal* have been brought to a conclusion so far as points of difference between myself and the French Republic are concerned. I have also entered into an agreement with the French Republic for the protection of life and property in the group of the *New Hebrides* by a Joint Naval Commission. A Conference of Delegates from the Powers interested in the *sugar industry* was summoned in London in the autumn to consider the possibility of putting an end to the injurious system of bounties, and they have made considerable progress towards the conclusion of a satisfactory arrangement. **GENTLEMEN OF THE HOUSE OF COMMONS.**—The *Estimates* for the services of this year, which will be laid before you, have been framed with due regard to economy. You will be asked to make provision for the improvements in the *defence of the ports and coaling stations* of my Empire, which have been rendered urgently necessary by the advance of military science. You will also be asked to sanction an arrangement for providing a *special squadron* for the protection of *Australasian commerce*, the cost of which will be partially borne by the Colonies themselves. **MY LORDS AND GENTLEMEN.**—The measures which, at the cost of great labour, you passed during the last Session for the benefit of *Ireland* have been carefully carried into effect during the period which has since elapsed. The result of this legislation, so far as it has been tested by a short experience, has been satisfactory. Agrarian crime has diminished, and the power of coercive conspiracies has sensibly abated. Measures tending to develop the resources of *Ireland*, and to facilitate an increase in the number of the proprietors of the soil, will be laid before you. You attention will be invited to the subject of *Local Government in England*; and measures will be submitted to you for dealing with it, in combination with proposals for adjusting the relations between Local and Imperial finance, and for mitigating the burdens at present imposed upon the ratepayers. The prospects of commerce are more hopeful than any to which I have been able to point for many years past. I deeply regret that no corresponding improvement is observable in the condition of *agriculture*. I commend the interests of that great industry to your attentive care, in the hope that means may be discovered for enabling it to meet more effectively the difficulties under which it labours. You will be invited to consider legislative proposals for cheapening the *transfer of land*; for modifying the procedure by which the *rent charge* is collected; for the promotion of *technical education*; for preventing undue preferences in the rates charged by railway companies on foreign and domestic produce; for remedying abuses in the formation of companies under limited liability; and for amending the law as to the liability of employers in case of accidents. Measures for improving the position of the *Scottish Universities*, and for regulating the *Borough Police in Scotland*, will be laid before you; and proposals will be submitted to you for diminishing the cost of private bill legislation. In these and all other efforts that you may make to promote the well-being of my people, I pray that you may be guided by the hand of Almighty God."—The Address in reply to the Queen's Speech was moved and seconded by the Earl of Crawford and Lord

Armstrong in the Lords, and by Mr. Wharton and the late Colonel Duncan in the Commons. Mr. Farnell moved an amendment condemning the administration of the *Crimes Act* and much of the action of the Irish executive; but this, after several nights' debate, in course of which Mr. Gladstone made sympathetic references to Mr. W. O'Brien and others who had been convicted under the Act, was rejected by 317 to 229. At this and other periods of the session the Speaker read letters received from resident magistrates notifying the conviction of quite a number of *Farnellites*, and it was decided that the question of these convictions, and of the antecedent arrests, two of which were effected in the vicinity of the House itself, could not be debated as a question of privilege; though the wrongful arrest of Mr. P. O'Brien, through a mistake of a police officer, was held not to come within this ruling, and was discussed accordingly. The debate on the Address occupied the greater part of eleven sittings. At its conclusion the draft procedure rules were taken up, and dealt with in such a practical spirit that the whole question was very speedily disposed of. One of the modifications made by these new rules (for the full text of which see heading PARLIAMENTARY PROCEDURE) was a reduction of the majority necessary to enforce the closure rule, when the minority numbers forty or more, from 201 to 100. The Conversion Scheme, the Budget and the Local Government Bill were all submitted to the country before Easter, but some time necessarily elapsed before the consideration of the clauses of the last could be commenced in committee, and when the Bill was reported so much other business remained unfinished that the Government had to choose between sacrificing a part of it, and so discrediting the revived system of *Grand Committees* (see heading, and also sec. 69), which had worked admirably, or unduly prolonging the session, or postponing supply and the final stages of several important bills until the autumn. The last course was the one adopted, and Parliament was accordingly adjourned from August 13th to November 6th.—[3] MISCELLANEOUS.—Mr. J. Morley (June 23th), immediately after the imprisonment of Mr. Dillon, moved that the operation of the *Crimes Act* and the manner of its administration undermine respect for law, estrange the minds of the people of *Ireland*, and are deeply injurious to the interests of the United Kingdom. This was (June 26th) rejected by 365 to 273. A resolution of Dr. Cameron, affirming the expediency of *disestablishing and disendowing the Church of Scotland*, was (June 22nd) negatived by 260 to 208.—On May 8th a resolution of Mr. Firth, setting forth that it was necessary, without delay, to place the *Corporation of London* under similar statutory restrictions to those to which other corporations in the kingdom were subject, was rejected by 156 to 133.—A resolution moved by Mr. McLaren, for repeal of the *Contagious Diseases and Cantonment Acts in India*, was (June 5th) agreed to.—A resolution by Mr. S. Smith, affirming that the law against obscene publications and indecent pictures, and prints should be vigorously enforced, and if necessary strengthened, was (May 8th) agreed to *non con.* [4] The question of the *constitution of the House of Lords* was discussed in both Houses. In the Commons Mr. Labouchere moved (Mar. 9th) a resolution in favour of putting an end to the

hereditary principle in the upper chamber, and this was supported by Sir W. Harcourt, but opposed by the Government, and rejected by 223 to 162.—In the Lords the Earl of Rosebery (Mar. 19th) called attention to the constitution of the House, and moved for the appointment of a committee on the subject, but this was defeated by 97 to 50 (see also sect. 19). Mr. Fenwick moved (July 6th) that it well deserved the consideration of the Government whether and under what circumstances it would be expedient to revert to the ancient custom of paying members for their services in Parliament. The motion was negatived by 192 to 135.—[5] A resolution of Mr. Bradlaugh, setting forth that steps should be forthwith taken to give effect to the report of the committee on *Perpetual Pensions*, and that it was desirable to adopt measures for the thorough revision of the entire pension system, was moved (Mar. 23rd), and agreed to in a modified form, which set forth the expediency of steps being forthwith taken to determine hereditary pensions and allowances, with due regard to any just claims of the respective recipients and to economy in the public expenditure; and that, considering the large and increasing annual charge upon the country for general pensions and non-effective services, it was desirable to adopt measures for the entire revision of the pension system. Mr. Jennings (June 12th) moved that the reorganisations in the *Accountant-General's and Secretary's Department of the Admiralty* had been injurious to the public interests, and that in any further reorganisations officials who were still able and willing to render service for the public money should be provided with employment in other departments instead of being forced to become useless burdens upon the country. An amendment proposed to this by Lord G. Hamilton was defeated by 113 to 94, and the original motion agreed to.—In reference to the question of public meetings in Trafalgar Square and other parts of the Metropolis, Sir C. Russell (Mar. 18th) moved for an inquiry by a select committee into the conditions subject to which such open-air public meetings might be held, and the limits of the right of interference therewith by the executive government. This was opposed by the Government and negatived by 316 to 224.—[6] **ACTS AND BILLS.** The following is a List of the *Public General Acts* passed prior to the adjournment, 13th August, 1888. Consolidated Fund (No. 1.) (Ch. 1), National Debt (Conversion) (Ch. 2), Statute Law Revision (Ch. 3), Army Annual (Ch. 4), Oude and Rohilkund Railway Purchase Act (Ch. 5), Metropolitan Board Commission (Ch. 6), Isle of Man (Customs) (Ch. 7), Customs and Inland Revenue (Ch. 8), Roads and Bridges (Scotland) Act (1878) Amendment (Ch. 9), County Electors (Ch. 10), Westminster Abbey (Ch. 11), Electric Lighting (Ch. 12), Land Law (Ireland) (Ch. 13), Customs (Wine Duty) (Ch. 14), National Debt (Supplemental) (Ch. 15), Consolidated Fund (No. 11.) (Ch. 16), Copyright (Musical Composition) (Ch. 17), North Sea Fisheries (Ch. 18), Inebriates Act (Ch. 19), Glebe Lands (Ch. 20), Law of Distress Amendment (Ch. 21), Factory and Workshop Amendment (Scotland) (Ch. 22), Recorders, Magistrates, and Clerks of the Peace (Ch. 23), Merchant Shipping (Life Saving Appliances) (Ch. 24), Railway and Canal Traffic (Ch. 25) Consolidated Fund (No. 11.) (Ch. 26), Supreme Court of Judicature (Ireland) (Ch. 27), Marriages Validation (Ch. 28), Lloyd's Signal Stations

(Ch. 29), Fishery (Ireland) (Ch. 30), National Defence (Ch. 31), Imperial Defence (Ch. 32), Hawkers (Ch. 33), Municipal Local Bills (Ireland) (Ch. 34), Special Commission (Ch. 35), Rail (Scotland) (Ch. 36), Timber (Ireland) (Ch. 37), Expiring Laws Continuance (Ch. 38), Public Works Loans (Ch. 39), Metropolitan Board of Works (Money) (Ch. 40), Local Government (Ch. 41), Mortmain and Charitable Uses (Ch. 42), County Courts (Ch. 43).—*Subjoined is a summary of the provisions of the more important of these Acts, with some account of the proceedings upon them while they were yet bills, and of the provisions of some other bills introduced during the session. Government measures have an * prefixed to them.*—[7] Mr. Cozens Hardy's bill to amend the law relating to accumulations was read a second time (June 12th), and withdrawn (July 25th). Mr. Blane (April 11th) moved second reading of the *Agricultural Tenants (Ireland) Relief Bill*, the main objects of which were to confer on perpetuity leaseholders the right given by the Act of last year to ordinary leaseholders to make application to the Court to have a fair rent fixed, and to give the Land Court a discretionary power of compounding arrears similar to that possessed by the Crofters' Commission in Scotland. The Solicitor-General for Ireland opposed the bill. Among its supporters were Mr. T. W. Russell and Mr. J. Morley, and it was rejected by 241 to 190.—The *Architects Registration Bill*, introduced by Colonel Duncan, was discussed on second reading (April 17th) and withdrawn.—**Army Annual Bill* (see heading Mutiny Act) was read the third time in the Commons March 23rd, and received royal assent April 27th.—**Augmentation of Benefices Act Amendment Bill* to amend an Act for the augmentation of certain benefices, the right of presentation to which is vested in the Lord Chancellor, passed the Lords, and was set down for second reading in the Commons in Nov.—**Bail (Scotland) Bill*, to amend the law of bail in Scotland, considered by Grand Committee on Law received royal assent (Aug. 12th).—[8] Mr. A. Balfour (July 2nd) introduced the **Bann Drainage*, **Barrow Drainage*, and **Shannon Drainage* Bills, which were for the improvement of the drainage of lands and for the prevention of inundations within the catchment areas of Lough Neagh and the Lower Bann, of the river Barrow and of the river Shannon; and the right hon. gentleman stated that these were a first instalment of the general policy which the Government had announced as endeavouring by legislative measures to promote the material wellbeing of Ireland, and that he hoped next session to bring in bills in reference to harbours and railways. It was proposed to refer the bills, only the first of which passed second reading before the adjournment, to a committee.—[9] **Board of Agriculture Bill*, for establishing a Board of Agriculture for Great Britain. The Board was to consist of the Lord President of the Council, Her Majesty's Principal Secretaries of State, the First Commissioner of the Treasury, the Chancellor of the Exchequer, the Chancellor of the Duchy of Lancaster, and the Secretary for Scotland. Her Majesty might appoint any member of the Privy Council to be President of the Board during her pleasure, and if he was not one of the above officers of state he was to be a member of the Board. The Board was to be deemed to be established on the appointment of the

President thereof, who, if not one of the above-mentioned officers of state, was to receive a salary of £2,000 per annum, and was not to be incapable of sitting in Parliament. There were to be transferred to the Board the powers and duties of the Privy Council under the Destructive Insects Act '77, '84, and '86; the powers and duties of the Land Commissioners for England under the Tithe Rent-charge Acts '36-'86, the Copyhold Acts, Inclosure of Commons and Allotments Acts, Metropolitan Commons Acts, Drainage and Improvement of Lands Acts, or under any other Act; and all powers and duties vested in the Commissioners of Works under the Survey Act '70. The Board was also to undertake the collection and preparation of statistics relating to agriculture, the inspection of and reporting on any schools which are not public elementary schools, and in which technical instruction, practical or scientific, is given in any matter connected with agriculture, and in aiding any school which admits such inspection and in the judgment of the Board is qualified to receive such aid; and the Board might also make or aid in making such inquiries and experiments, as they might think important for the purpose of promoting the advancement of agriculture. Power was also given by order in Council to transfer to the board such statutory powers and duties of any Government department as related to agriculture and appeared to be of an administrative character, the draft order to be laid before Parliament and to be withdrawn if either House presented an address against it. The measure was introduced by Mr. W. H. Smith (August 11th). [10] **Bribery (Public Bodies) Prevention Bill**, "for the more effectual prevention and punishment of bribery and corruption of and by members, officers, or servants of corporations, councils, boards, commissions, or other public bodies," was brought in by Lord R. Churchill (July 16th), but withdrawn July 19th. [11] **Burgh Police and Health (Scotland) Bill**, "for regulating the police and sanitary administration of towns and populous places, and for facilitating the union of police and municipal administration in burghs in Scotland," was a very lengthy and important measure, which passed a select committee of the Commons and was ordered for consideration by a committee of the whole House in November (see sec. 62). [12] **Channel Tunnel Bill** (see heading).—**Clergy Discipline Bill**, introduced by the Archbishop of Canterbury, passed the Lords after considerable amendment, and was set down for consideration in Commons in Nov. [13] **Companies Bill**, introduced by the Lord Chancellor (June 14th), the object of the measure being to prevent the machinery of the state from being used for fraudulent purposes. It provided, among other things, that there should be a guarantee that new companies have a solid foundation, and that promoters have a substantial interest in them; and the production of a satisfactory balance-sheet was compulsory. Ordered for consideration, as amended, in Nov. [14] **Consolidated Fund (Nos. 1, 2, and 3) Acts** are the usual money Acts to apply certain sums out of the Consolidated Fund to the services of the years '87-8 and '88-9. (See FINANCE, NATIONAL, for Civil Service Estimates, and also ARMY and NAVY.) [15] **Copyright (Musical Compositions) Bill** (royal assent July 5th), now the Copyright (Musical Compositions) Act '88, "an Act to amend the

law relating to the recovery of penalties for the unauthorised performance of copyright musical compositions." Section 1 provides that, notwithstanding the provisions of the Act of 3 and 4 Will. IV. ch. 15, to amend the laws relating to dramatic literary property, or any other Act in which those provisions are incorporated, the penalty or damages to be awarded upon any action or proceedings in respect of each and every unauthorised representation or performance of any musical composition, whether published before or after the passing of this Act, shall be such a sum or sums as shall, in the discretion of the court or judge before whom such action or proceedings shall be tried, be reasonable, and the court or judge may award a less sum than forty shillings in respect of each and every such unauthorised representation or performance as aforesaid, or a nominal penalty or nominal damages as the justice of the case may require. Costs are to be in the discretion of the judge. A proprietor not wilfully permitting an unauthorised performance is to be exempt from penalty or damages in respect thereof. The Act is not to apply to proceedings in respect of a representation or performance of any opera or play in any place of public entertainment duly licensed in that respect. [16] **County Courts Consolidation Bill**, "to consolidate the County Courts Acts," passed the Lords, was considered and amended by the Grand Committee on Law, title altered to County Courts Consolidation and Amendment Bill, received royal assent Aug. 13th, and is now the County Courts Act, 51 and 52 Vict. ch. 43 (see heading COUNTY COURTS). [17] **County Electors Act** '88 (51 Vict. ch. 20). "An Act to provide for the qualification and registration of electors for the purposes of Local Government in England and Wales." This measure extends the Burgess qualification—that is, the qualification enacted by sect. 9 of the Municipal Corporations Act '82—to county electors not within the limits of a borough. Occupation of land to the value of £20 within the meaning of the provisions of the Registration Act '75, is also to qualify. There are also provisions in the Act for registration of county electors, for revision of electoral lists, etc. Section 77 of the Local Government Act provides that a person entitled to be registered as a county elector in respect of any qualification in the administrative county of London in all respects, except that of residence, and who is resident beyond seven but within fifteen miles of the county, shall be entitled to be registered as a county elector. The franchise given by the Act in effect enables all rated householders who have occupied during the qualifying period, and also peers and ratepaying women, to vote at elections for county councillors, but does not include lodgers, nor those who have the service franchise, nor those who are on the Parliamentary register in respect of a freehold or other property qualification. (See also LOCAL GOVERNMENT ACT, *post*.) [18] **County Government Ireland Bill**. Second reading was (April 25th) moved by Mr. Carew, who maintained that reform of local government in Ireland was much more urgent than in England. Mr. Smith-Barry proposed, as an amendment, that the House while preparing at the proper time to take into consideration any well-matured scheme for reforms of local government in Ireland, was of opinion that at present it was not expedient to

introduce large constitutional changes in that country. After a debate, in which Mr. Gladstone supported the principle of the Bill, Lord R. Churchill remarked that in '86 the Unionists had pledged themselves at the very earliest opportunity to extend to Ireland the same amount of local liberty which they extended to England, and that was the only platform on which they could resist repeal. He could not however, support the present measure. On a party division, the amendment, which was supported by the Government and the Liberal Unionists, was carried by 282 to 195.—On second reading of the ***Criminal Evidence Bill** [13], the object of which was to make a prisoner and the wife or husband of a prisoner competent but not compellable witnesses, Mr. T. M. Healy (Mar. 22nd) moved an amendment in favour of excluding Ireland from its operation, but this was rejected by 173 to 119. Second reading was carried by 231 to 92. In committee an amendment to apply the Bill to England and Scotland only was carried by 278 to 52. The Bill was ordered for further consideration in committee in Nov.—Mr. Anderson's **Crofters Bill** was discussed Feb. 22nd, the second reading being negatived by 190 to 102; Dr. Clark's Bill on the same subject was (April 17th) rejected by 126 to 90.—The **Cruelty to Children (Prevention) Bill**, introduced by Mr. Mundella (Aug. 10th), was ordered for second reading in Nov.—[14] ***Customs and Inland Revenue Act** (see heading FINANCE, NATIONAL). On second reading of this measure, which embodied the Budget proposals, an amendment of Mr. Gladstone, proposing that after Parliament should have made the appropriations it might deem just in relief of local rates, the duties accruing upon deaths should be so fixed as to equalise the charge upon real and personal property respectively, was (April 23rd) rejected by 310 to 217. The original proposals relative to the duties on imported bottled wines are contained in this Act, and were subsequently modified by the ***Customs (Wine Duty) Act**.—[15] Sir John Lubbock (May 2nd) moved second reading of the **Early Closing Bill**, which proposed that, with the exception of public-houses, refreshment houses, tobacconists, and news-vendors, all shops should be closed at eight o'clock on five nights of the week and at ten o'clock on Saturdays. Power was given to the local authority, at the request of two-thirds of the shopkeepers, to extend the hours and to establish a weekly half-holiday. The measure was rejected by 278 to 95.—**East India (Purchase and Construction of Railways) Bill** (royal assent April 27th) is now the ***Oude and Rohilkund Railway Purchase Act** '88 (51 Vict. ch. 5), and empowers the Secretary for India to raise money in the United Kingdom for the purchase of this railway, and for the construction, extension, and equipment of railways in India, through the agency of companies, and for other purposes relating thereto. The sum empowered to be raised for the purchase of the Oude and Rohilkund Railway is £10,336,048 16s. 8d.; and the sum which may be raised for constructing, etc., railways in India is £10,000,000.—[15a] **Electric Lighting Act**, '88 (51 & 52 Vict. ch. 12) amends the Act of '82 and received royal assent June 28th. It provides that the consent of a local authority to a provisional order for the supply of electricity shall be required, though the Board of Trade is empowered, if such consent is refused, to dispense with it. It

also repeals sect. 27 of the original Act, and enacts in lieu thereof that where any undertakers are authorised by a provisional order or special Act to supply electricity within any area, the local authority may within six months after the expiration of forty-two years, or such shorter period as is specified in the provisional order or special Act, from the date of the passing of the same, and within six months after the expiration of every subsequent period of ten years, or such shorter period as is specified in the Act, purchase the undertaking upon terms of paying the then value of the lands, buildings, works, materials, and plant, at their fair market value.—[16] ***Employers' Liability for Injuries to Workmen Bill**, to amend and consolidate the law, was introduced by the Home Secretary Feb. 27th, and proposed that principal managers and agents to whom the employer expressly delegates his authority should be excluded from the definition of common employment; and that both workmen and employers might contract themselves out of the Act in cases where a system of insurance against all accidents was established to which the employer would contribute. Second reading was (May 18th) agreed to, the Bill was considered by the Grand Committee on Law, and was ordered for further consideration in Nov.—***Excise Duties (Local Purposes) Bill** contains the ministerial proposals for placing excise duties on trade carts and horses for local purposes, and was ordered for second reading in Nov. (see Local Government Bill, *post*).—***Expiring Laws Continuance Act** (51 & 52 Vict. ch. 38)—royal assent Aug. 13th.—**Factory and Workshops Amendment (Scotland) Act** '88 (51 & 52 Vict. ch. 22) amends the Act of '78 in regard to holidays.—***Glebe Lands Act** [17], introduced by Mr. Stanhope Mar. 7th, royal assent Aug. 7th (51 & 52 Vict. ch. 20), is to facilitate the sale of glebe lands, and enables the incumbent to apply to the Land Commissioners, after notice to the bishop and patron, and the Commissioners, if they think fit, and if certain conditions be complied with, to approve of the sale, receive the proceeds thereof and apply them in the purchase of securities to be made and held in the name of the Ecclesiastical Commissioners, or in the redemption of land tax, chief rent, or quit rent charged on any part of the glebe which is not sold, so that the same may merge in the glebe; or in the purchase of any land adjacent to the parsonage house the possession of which in the judgment of the Commissioners would be for the benefit of the benefice and for the convenient enjoyment of such house.—[18] **Habitual Drunkards Act** ('78) Amendment (No. 2) Bill was brought in by Dr. Cameron, received the royal assent July 24th, is now the **Inebriates Act** (51 and 52 Vict. ch. 19), and makes the original Act permanent. It provides that, subject to the approval of the local authority granting a licence for a retreat, the licensee of any retreat may appoint a deputy to act for him during his temporary absence, who may not, however, act for the licensee during any period or periods exceeding in all six weeks in any one year; and that the attestation of an application for admission of an habitual drunkard to a retreat may be that of any two justices of the peace.—***Hawkers Act** (51 and 52 Vict. ch. 33) consolidates the law relating to excise licences for hawkers (royal assent Aug. 13th).—[19] **House of Lords (Constitution) Reform Bill**, to amend the consti

tution of the House, was presented by the Earl of Dunraven (Mar. 23rd) and withdrawn after a discussion on the second reading (April 20th). * **House of Lords (Discontinuance of Writs) Bill**, introduced by the Marquis of Salisbury, June 18th, provided that on an Address to the Crown the issue of a writ of summons to peers who had been guilty of misconduct should be discontinued, which would practically amount to their exclusion from Parliament. Withdrawn July 10th. * **House of Lords (Life Peers) Bill**, introduced by the Marquis of Salisbury, June 18th, provided for the creation of three life peers a year, who must be persons who had attained high rank in the army or navy, or an ambassador extraordinary, or a civil servant who had been appointed a privy councillor, or a colonial governor; and not more than two more life peers, who might be selected for their eminence in particular walks of life. The total number of life peers in existence at any time must not exceed fifty. Discussed on the second reading and withdrawn July 10th. (See also sects. 56 and 68, and heading PEEAGE.)—[20] * **Imperial Defence Bill** provides for defraying the expenses of carrying into effect an agreement for naval defence with the Australasian colonies, and for the defence of certain ports and coaling stations. The sum of £850,000 is to be issued out of the Consolidated Fund for building, arming, and completing vessels to be added to the Australian squadron; and £2,600,000 for ports and coaling stations is to be issued from the Consolidated Fund, interest on which latter sum is to be paid out of the Army Estimates until 1894, when an increased dividend of about £570,000 will accrue from the Suez Canal Shares, and will be applied to pay off the loan, which it will do in four or five years. As the Imperial Defence Act (51 and 52 Vict. ch. 32), received royal assent Aug. 13th (see heading ARMY).—[21] **Intoxicating Liquors (Ireland) Bill** (see sect. 70), ordered for recommitment in November. **Intoxicating Liquors (New Licences) Bill**, introduced by Sir W. Houldsworth to suspend the grant of new licences, ordered for second reading in Nov.—[22] **Land Law (Ireland) Acts (Amendment) Bill** was Mr. Parnell's measure to amend the Land Acts. Second reading was moved Mar. 21st, but an amendment of Mr. Powell Williams, to the effect that no bill providing for a composition in arrears of rent in Ireland would be satisfactory to the House, and effectual for the relief of the tenants, which did not at the same time deal with their debts to other creditors besides the landlords, was supported by the Government and the bulk of the Unionists, and carried by 320 to 230.—Mr. T. W. Russell's bill to amend section 1 of the Land Act, '87, in regard to leaseholders, so as to provide that certain assignments made without consent in writing should be valid, received royal assent June 28th, as the **Land Law (Ireland) Act '88** (51 and 52 Vict. ch. 13). The * **Land Law (Ireland) Land Commission Bill**, to make provision for the better disposal of the business under the Land Acts, and for other purposes relating thereto, was opposed by the Parnellites, and ordered for Committee at the autumn sitting, the powers of the Land Commission having been continued by the Expiring Laws Act. * **Land Transfer Bill**, which is to simplify titles and facilitate the transfer of land in England, introduced by the Lord Chancellor

Feb. 23rd, was referred to a select committee.—[23] **Law of Distress Amendment Bill** was introduced in the Lords by Lord Herschell; Mr. Broadhurst had charge of it in the Commons, and it received royal assent Aug. 7th. It is now the Law of Distress Amendment Act '88 (51 & 52 Vict. ch. 21); and from and after its passing, the wearing apparel and bedding of the tenant or his family, and the tools and implements of his trade to the value of £5, are protected from seizure in all distrainers for rent; but the protection does not extend to any case where the lease, term or interest of the tenant has expired, and where possession of the premises in respect of which the rent is claimed has been demanded, and where the distress is made not earlier than seven days after such demand. The landlord need not appraise the goods unless the tenant or owner of the goods by writing requires such appraisal; the tenant may in writing require the goods to be removed to a public auction-room, or some other fit and proper place, to be sold; but the expenses of appraisal or removal, when either or both is or are required by the tenant, are to be paid by the tenant. If the tenant makes application, the five days' notice during which a replevy can be at present made is extended to fourteen days before a sale can legally take place; but the tenant must give security for any additional cost that may be occasioned by such delay. After Oct. 31st no person shall act as bailiff to levy any distress for rent unless he is authorised to act as bailiff by a certificate from a County Court judge or registrar. After the passing of the Act the Lord Chancellor may make rules for regulating the security to be required for bailiffs and the fees charged by bailiffs. Liability of Trustees Bill amends the law relating to the duties and liability of trustees; introduced by Lord Herschell, considered by a select committee of the Lords and the Grand Committee on Law, and ordered for consideration at the autumn sitting.—[24] **Libel Law Amendment Bill**, introduced by Sir A. Borthwick, gave rise to considerable discussion, and was greatly amended, not only in the Commons but when it reached the Lords, whose amendments were set down for consideration by the Commons in Nov. As returned from the Lords the bill provided that fair and accurate newspaper reports of proceedings publicly heard before any court exercising judicial authority should, if published contemporaneously with such proceedings, be privileged; but nothing in the section is to authorise the publication of any blasphemous or indecent matter. A fair and accurate newspaper report of the proceedings of a public meeting, or (except where neither the public nor any newspaper reporter is admitted) of any meeting of a vestry, town council, school board, board of guardians, board or local authority formed or constituted under the provisions of any Act of Parliament, or of any committee appointed by any of the above-mentioned bodies, or of any meeting of any commissioners authorised to act by letters patent, Act of Parliament, warrant under the Royal Sign Manual, or other lawful warrant or authority, select committees of either House of Parliament, justices of the peace in quarter sessions assembled for administrative or deliberative purposes, and the publication at the request of any Government office or department, officer of state

commissioner of police, or chief constable, of any notice or report issued by them for the information of the public, shall be privileged, unless it shall be proved that such report or publication was published or made maliciously: **Provided** that nothing in this section is to authorise the publication of any blasphemous or indecent matter: **Provided** also, that the protection intended to be afforded by this section is not to be available as a defence in any proceedings if it shall be proved that the defendant has been requested to insert in the newspaper in which the report or other publication complained of appeared, a reasonable letter or statement by way of contradiction or explanation of such report or other publication, and has refused or neglected to insert the same: **Provided** further, that nothing in this section contained shall be deemed or construed to limit or abridge any privilege now by law existing, or to protect the publication of any matter not of public concern. For the purposes of this section "**public meeting**" is to mean any meeting *bona fide* and lawfully held for a lawful purpose, and for the furtherance or discussion of any matter of public concern, whether the admission thereto be general or restricted. Where any person makes a **speech** to a meeting, and a report containing **libellous words**, purporting to be a report of such speech, is published in any newspaper, then, on proof that the words so published, or words of like import, were uttered by the person making such speech, that person shall, in the event of any civil proceedings being instituted against him for libel in respect of such words, be deemed for the purposes of such proceedings to have himself written and published the libellous words attributed to him. The **proceedings, if taken**, are to be in substitution for and not in addition to any proceedings, whether civil or criminal, that may be instituted against him. It shall be competent for a judge to make an order for the consolidation of two or more actions, brought in respect to substantially the same libel by one and the same person; the jury are to assess the whole amount of **damages**, if any, in one sum, but are to apportion the amount between the various defendants. **Sect. 3 of the 44th & 45th Vict. c. 60 is repealed**, but instead thereof it is enacted that no criminal prosecution shall be commenced against a newspaper for libel without either the written fiat of the Attorney-General, or the order of a judge at chambers; and every person charged with a criminal libel, and the husband or wife of such person, shall be competent but not compellable witnesses at every stage of such charge. **Lloyd's Signal Stations Bill**, now Lloyd's Signal Stations Act (51 & 52 Vict. ch. 29)—royal assent Aug. 13th—confers powers on Lloyd's to take land for signal stations and for other purposes.—[25] **Local Government (England and Wales) Bill**. This measure was introduced by Mr. Ritchie, President of the Local Government Board, on Mar. 18th, in an elaborate statement, of which, as the substance of the Act is set forth below, it is only necessary to give a few words. The bill proposed to establish a council for each county, three-fourths of the members of which would be elected, while the other fourth would be selected, to which councils were to be transferred the administrative power and financial business of the county justices, whose judicial functions would, however, be left untouched. The raising and management of the

police in counties was to be placed in the hands of a joint committee of the county council and quarter sessions, but the appointment, control, and dismissal of chief constables was reserved to the latter. It was proposed to create district councils in the county, to take the place of local boards and rural and urban sanitary authorities. There was, however, to be no alteration as to the areas of poor-law unions or the election of guardians. There were special provisions as to the Metropolis, but these were not put forward as a complete settlement of the great problem of the government of the Metropolis; and the Government had, Mr. Ritchie stated, their own proposals to make at some future time, on the line, not of creating separate municipalities throughout London, but of amalgamating throughout the different areas the existing local authorities, and of constituting the county council in connection with large and important district councils, possessing large and important administrative functions. In regard to the question of licensing, the authority to inquire into complaints against licensed houses was to remain with the justices, but that duty would be simply ministerial, and under direct instructions from the county council; each county was to be divided into licensing divisions, with a licensing committee for each, which would be empowered to refuse renewals and to require the closing of licensed houses on Sundays, Good Fridays, and Christmas Days. In cases where renewals were refused compensation was to be given, based on the difference in value between the house with and without a licence, this compensation to be in the first instance payable out of the county fund, but to be paid ultimately, unless in special cases the council should otherwise direct, by the licensing division in which the premises were situate. On the other hand, the councils were to be empowered to increase the licence duties by 20 per cent., which it was estimated would produce £300,000 a year. **Second reading** of the bill was agreed to on April 20th, after a debate in which Mr. Stansfeld remarked that the great blot on the Bill was the entire exclusion of the poor-law system, and the Government replied that the inclusion of so difficult and complicated a subject would have so overloaded the measure as to enormously increase the difficulties of passing it. An instruction, moved by Mr. F. Stevenson on the committee stage, for the insertion of provisions for the reform of parish vestries, was negatived by 229 to 183. In committee an amendment of Mr. Stansfeld, proposing that all councillors should be elective, and that there should be no aldermen, was opposed by the Government, and negatived by 250 to 214. The words "county alderman" were substituted for the expression "selected councillor." Mr. Ritchie assented to a considerable extension of the list of boroughs dealt with as separate counties. On June 12th the right hon. gentleman announced that, having regard to the opposition with which the licensing clauses were threatened, and to the fact that there remained only about two months before the ordinary date for bringing the session to a close, the Government had decided not to ask the House to proceed with them. The proposals in reference to district councils were also withdrawn. An amendment of Mr. Heneage, vesting the control of the police in the county councils, was rejected by 264 to 218. Sir W. Barttelot proposed that the entire control of the police should remain, as heretofore,

in the hands of the county magistrates, and this being opposed by the Government, was rejected by 360 to 77. Mr. John Morley then moved to omit the words which left the appointment, control, and dismissal of chief constables in the hands of quarter sessions, and his motion was carried against the Government by 246 to 216. A promise that facilities should be afforded for the discussion of Mr. Stevenson's Sunday Closing Bill satisfied certain Liberal Unionists who had objected to the withdrawal of the Sunday Closing clause, and the committee decided to omit the clause by a majority of 275 to 213. Subsequently the clause empowering the councils to impose an extra licence duty of 20 per cent. was struck out by a majority of 199 to 137. An amendment by Mr. J. Rowlands, to the effect that there should be no selected councillors in the county of London, was rejected by 102 to 148. An amendment of Mr. J. Stuart, giving the London county council the same powers, duties, and liabilities with respect to the police as are vested in the watch committee of a borough under the Municipal Corporations Act 1882, was opposed by the Government, and rejected by 220 to 150. An amendment of Mr. Pickersgill, depriving the Courts of Aldermen and Common Council of their judicial patronage, was supported from all quarters of the House, and acquiesced in by the Government. A proposed new clause by Mr. Channing, providing that any rates made under the Act by the county council might be divided between the owner and occupier, was objected to by the Government (who pointed out that if it were adopted the reconstruction of the Bill would become necessary, but promised to consider how they could in future best deal with the question), and rejected by 259 to 174. When the Bill reached the Lords it was read a second time without a division after some rather hostile criticisms from the Earl of Carnarvon; several changes were made in the clauses, among them being the insertion of a provision permitting the Recorder of London to be appointed by the Court of Aldermen, subject to the condition that he should not exercise judicial powers unless he were appointed by the Crown to exercise them. On the Bill being returned to the Commons this was agreed to by 119 to 26. [Royal assent, Aug. 13th.] [26] **Local Government (England and Wales) Act '88** (51 & 52 Vict. ch. 41), provides that a council shall be established in every administrative county as defined by this Act, and be entrusted with the management of the administrative and financial business of the county, and shall consist of the chairman, aldermen, and councillors. Three-fourths of the members of the council (the councillors) are to be elected by the burgesses and electors throughout the county, the other fourth (the county aldermen) are to be selected by the councillors. The county council is to be constituted and elected and is to conduct its proceedings in like manner, and be in the like position in all respects, as the council of a borough divided into wards. Clerks in holy orders and other ministers of religion are disqualified for being elected and being aldermen or councillors; and a person is qualified who, though not qualified in manner provided by the Municipal Corporations Act '82, as applied by this Act, is a peer owning property in the county, or is registered as a parliamentary voter in respect of the ownership of property situate in the county. The county councillors are to be elected for a

term of three years, and are then to retire together. The county is to be divided into electoral divisions, each returning one councillor. The electors of the county councillors are to be, in a borough, the burgesses enrolled in pursuance of the Municipal Corporations Acts, and elsewhere the persons registered as county electors under the County Electors Act '88 (see sect. 12). The chairman of the council (who is not to be called mayor) is to be appointed by the council from amongst their number, and is by virtue of his office to be a justice of the peace for the county. There is to be transferred to the county council all business done by the quarter sessions in respect of the following matters:—The making, assessing, and levying of a county, police, hundred, and all rates, and the application and expenditure thereof, and the making of orders for the payment of sums payable out of any such rate or out of the county stock or county fund, and the preparation and revision of the basis or standard for the county rate; the borrowing of money; the passing of the accounts of and the discharge of the county treasurer; shire halls, county halls, assize courts, judges' lodgings, lock-up houses, court houses, justices' rooms, police stations, and county buildings, works, and property, subject, as to the use of buildings by the quarter sessions and the justices, to the provisions of this Act respecting the joint committee of quarter sessions and the county council; the licensing under any general Act of houses and other places for music or for dancing, and the granting of licences under the Race-courses Licensing Act '79; the provision, enlargement, maintenance, management, and visitation of and other dealing with asylums for pauper lunatics; the establishment and maintenance of and the contribution to reformatory and industrial schools; bridges and roads repairable with bridges, and any powers vested by the Highways and Locomotives (Amendment) Act '78 in the county authority; the tables of fees to be taken by and the costs to be allowed to any inspector, analyst, or person holding any office in the county, other than the clerk of the peace and the clerks of the justices; the appointment, removal, and determination of salaries of the county treasurer, the county surveyor, the public analysts, any officer under the Explosives Act '75, and any officers whose remuneration is paid out of the county rate, other than the clerk of the peace and the clerks of the justices; the salary of any coroner whose salary is payable out of the county rate, the fees, allowances, and disbursements allowed to be paid by any such coroner, and the division of the county into coroners' districts, and the assignment of such districts; the division of the county into polling districts for the purposes of parliamentary elections, the appointment of places of election, the places of holding courts for the revision of the lists of voters, and the costs of and other matters to be done for the registration of parliamentary voters; the execution as local authority of the Acts relating to contagious diseases of animals, to destructive insects, to fish conservancy, to wild birds, to weights and measures, and to gas meters, and of the Local Stamp Act '69; any matters arising under the Riot (Damages) Act '66; the registration of rules of scientific societies; the registration of charitable gifts under 52 Geo. II., ch. 102; the certifying and recording of places of religious worship under 52 Geo. III., ch. 155;

the confirmation and record of the rules of loan societies under 3 & 4 Vict. ch. 110; and any other business transferred by this Act. On any vacancy occurring in the office of coroner for a county, the county council is in future to appoint a fit person, but a person holding this office may not be an alderman or councillor for the county for which he is coroner. The county councils are to have power to purchase or take over existing bridges not being at present county bridges, and to erect new bridges; and there is to be transferred to them the business of the justices of the county out of sessions in respect of the licensing of houses or places for the public performance of stage plays, and of the execution as local authority of the Explosives Act '75. There is reserved to quarter sessions business in relation to appeals against the basis or standard for the county rate, or against that or any other rate, and all business not transferred by the Act. The powers of quarter sessions with respect to the county police are to be exercised through a standing joint committee of the quarter sessions and county council, but nothing is to affect the powers, duties and liabilities of the justices as conservators of the peace, or the obligation of the police to obey their lawful orders given in that behalf. The Local Government Board is empowered to make from time to time a provisional order (which is subject to confirmation by Parliament) for transferring to county councils certain powers of the Privy Council, the Secretary of State, the Board of Trade, the Local Government Board, the Education Department, or any other Government department, conferred by or in pursuance of any statute and appearing to relate to matters arising within the county, and to be of an administrative character. The entire maintenance of main roads is vested in the councils, though an urban authority may claim to retain the powers and duties of maintaining and repairing a main road within its district, and the council is to make an annual payment towards the cost of the same; the council and any district council may contract for the undertaking by the latter of the maintenance, repair, and other dealing with any main road, and the county council is empowered to contribute to the cost of maintenance, repair and improvement of any highway or public footpath in the county, although the same is not a main road. The county council is to have power, in addition to any other authority, to enforce the provisions of the Rivers Pollution Prevention Act '76 in relation to so much of any stream as is situated within any part of their county; to oppose bills in Parliament, to make bye-laws, and to appoint a medical officer of health.—[27] The proceeds of the duties on local taxation licences are, after the financial year ending on the 31st day of March, '89, to be paid by the Commissioners of Inland Revenue into the Bank of England to the local taxation account, and the amount ascertained to be the proceeds of the duties collected in each administrative county is to be paid to the council of each county. The licence duties referred to are those for the sale of intoxicating liquors by retail, to deal in game, for beer dealers, spirit dealers, sweets dealers, wine dealers, refreshment house keepers, dogs, killing game, guns, appraisers, auctioneers, tobacco dealers, carriages, trade carts, locomotives, horses and mules, horse dealers, armorial bearings, male servants, hawkers, house

agents, pawnbrokers, and plate dealers. The county councils are also to receive four-fifths of one-half of the probate duties. The probate duty grant is to be distributed in proportion to the share received by each county during the financial year '89-90 out of the grants heretofore made in aid of local rates, which will cease to be granted after the passing of this Act. (See FINANCE, NATIONAL.) All sums received by a county council in respect of licence duties or the probate duty grant are to be applied in paying the costs incurred in respect thereof, or otherwise chargeable thereon; in payment of the sums required to be paid in substitution for local grants, and of the grants required to be made in respect of costs of union officers; and in repaying to the general county account of the county fund the costs on account of general county purposes for which the whole of the area of the county is liable to be assessed to county contributions; provision is also made for the application of the surplus, if any. The sums to be paid by the county councils in substitution for local grants are, towards the remuneration of teachers in poor law schools; to public vaccinators, school fees for pauper children sent to a public elementary school outside the workhouse, to every local authority by whom a medical officer of health or inspector of nuisances is paid one-half of the salary of such officer; towards the remuneration of registrars of births and deaths; four shillings per week towards the maintenance of each pauper lunatic; for compensation payable to certain county officers; and one-half of the costs of the pay and clothing of the police—in the case of the Metropolitan Police the various county councils concerned having to pay to the receiver of police in each year a sum bearing such proportion to the sum actually raised in the same year by rates from the parishes in that county for the said purpose as the Secretary of State certifies to be the proportion which would have been contributed out of the Exchequer under the arrangement in force during the financial year next before the passing of the Act. [27a] Each of the following boroughs is for the purposes of the Act to be an administrative County of itself: i.e.,—Barrow, Bath, Birkenhead, Birmingham, Blackburn, Bolton, Bootle cum Linacre, Bradford, Brighton, Bristol, Burnley, Bury, Canterbury, Cardiff, Chester, Coventry, Croydon, Derby, Devonport, Dudley, Exeter, Gateshead, Gloucester, Great Yarmouth, Halifax, Hanley, Hastings, Huddersfield, Ipswich, Kingston-upon-Hull, Leeds, Leicester, Lincoln, Liverpool, Manchester, Middlesbrough, Newcastle-upon-Tyne, Northampton, Norwich, Nottingham, Oldham, Plymouth, Portsmouth, Preston, Reading, Rochdale, Saint Helen's, Salford, Sheffield, Southampton, South Shields, Stockport, Sunderland, Swansea, Walsall, West Bromwich, West Ham, Wigan, Wolverhampton, Worcester, York. The mayor, aldermen, and burgesses of each county borough are, subject to certain modifications, to have all the powers of a county council under the Act in so far as they are not already in possession of or subject to the same, but they will still be governed in many respects by the Municipal Corporations Act; and the provisions of the Local Government Act with respect to the constitution, election, proceedings, or position of the county council or the chairman thereof, the county treasurer and other county officers, the

standing joint committee of the justices and the council, coroners, gas meters, the transfer to the council of powers relating to county and other rates, and the preparation or revision of the basis or standard for the county rate, are not to apply to county boroughs. Nor is Part IV. of the Act, relating to finance, to apply, save so far as is expressly provided. Provision is made for an equitable adjustment of the financial relations between the counties and county boroughs by agreement, or by the Commissioners (the Earl of Derby, Mr. Shaw Lefevre, Mr. J. L. Wharton, Mr. F. Mowatt, C.B., and Mr. J. S. Henley) appointed under the Act. A quarter-sessions borough not being a county borough, but containing a population of 10,000 or upwards, is to retain its powers as local authority under any Act (save as in this Act expressly mentioned) and under the Municipal Corporations Act, but, subject to these provisions and to other savings, the borough is to form part of the county for the purposes of the Act. In the case of quarter-sessions boroughs of a population of less than 10,000, or in the case of a borough of a population of under 10,000, provision is made for transferring to the county council several of the powers and duties those boroughs at present enjoy. [28] The Metropolis, as defined by the Local Management Acts, is to be an administrative county of itself, by the name of the administrative county of London. The area in question forms part of the counties of Middlesex, Surrey, and Kent, which part is now to be severed from those counties, and is to have a Lord-Lieutenant, a Sheriff, a commission of the peace, and a court of quarter sessions of its own, though for the purpose of the jurisdiction of the justices under such commission and of such county, as well as for other non-administrative purposes, the City of London may continue a separate county, with its own sheriffs, who are, however, no longer to be jointly Sheriff of Middlesex. The number of county councillors for the administrative county of London is to be 118, or double the number of members (59) returned by the parliamentary boroughs in the Metropolis; each borough or each division thereof being an electoral division for the purposes of the Act; the number of county aldermen in the county of London is not to exceed one-sixth of the whole number of the county councillors; the powers, duties and liabilities of the Metropolitan Board of Works are to be transferred to the London County Council, and the Board is to cease to exist. The Metropolitan Police remain under the control of the Home Secretary, the city is placed in the position of a quarter-sessions borough, and retains control of its own police; the common council, and in any other part of the Metropolis the district board, may claim to retain the power of maintaining and repairing the main road. The Sheriffs of the City of London are not to have any authority except in the City, and a sheriff is to be appointed by the Crown for that part of Middlesex which is outside the county of London. The London County Council may petition Her Majesty to appoint a barrister of not less than ten years' standing to be paid chairman or deputy chairman, or one of the paid deputy chairmen, as the case may be, of the quarter sessions for the county of London. The rights claimed by the court of common council to appoint to the offices of common sergeant and judge of the City of London court are to cease, and in any future vacancy in each of the said offices, the Queen is

to appoint a duly qualified barrister to be such common sergeant or judge; and from and after the next vacancy no recorder is to exercise any judicial functions unless he is appointed by Her Majesty to exercise such functions. The London County Council is to pay to each poor law union within its limits such sums as the Local Government Board may certify to be due from time to time in substitution for local grants towards the remuneration of poor law medical officers, and towards the cost of drugs and medical appliances, and is also to grant to such unions 4d. per head per day for every indoor pauper. The London County Council may from time to time appoint any fit person to be deputy chairman, and to hold office during the term of office of the chairman, and may pay to such deputy chairman such remuneration as they may from time to time think fit. Part IV. of the Act enables a county council, with the consent of the Local Government Board, to borrow, for purchasing any land, or building any building authorised by any Act, for any permanent work which they are authorised to execute or do, for making advances in aid of the emigration, or colonisation, of inhabitants of the county, with a guarantee for a repayment of such advances from any local authority in the county, or the Government of any colony; and for any purpose for which quarter sessions or the county council are authorised to borrow; but where the total debt of the county council exceeds, or if the proposed loan is borrowed will exceed, the amount of one-tenth of the annual rateable value of the property in the county, the amount shall not be borrowed except in pursuance of a provisional order made by the Local Government Board, to be confirmed by Parliament. Loans under this section are to be repaid within a period not exceeding thirty years; an annual budget is to be submitted to each county council. The supplemental provisions of the Act include certain regulations for bicycles, &c. The first election of county councillors is to be held in January '89, and the county councillors elected at the first election are to retire on the ordinary day of election in November in the third year after the passing of the Act; and of the first county aldermen one half, to be determined by ballot, are to retire in November in the third year after the passing of the Act, and the remaining half are to retire in November in the sixth year. The members of the county council first elected are not to enter on their ordinary duties until the 1st day of April, but are to meet on the second Thursday after the election and other subsequent days, and act as a provisional council to bring the Act into operation, to select the county aldermen, and to choose a chairman. [29] London Coal and Wine Duties Continuance Bill was re-introduced by Sir R. Fowler, Feb. 13th, but withdrawn July and. Lunacy Acts Amendment Bill passed the Lords, and was withdrawn in the Commons July 12th. [30] Marriage with a Deceased Wife's Sister Bill was introduced by Mr. Hennessy Feb. 10th, an amendment for its rejection was moved on second reading by Mr. Salt, and negatived by 239 to 182, and Bill read second time April 18th. Later in the session it was dropped. [31] Members of Parliament (Charges and Allegations) Bill was introduced by the Government after they had refused either to grant a committee to inquire into the charges made against Mr. Parnell during the hearing of Mr. O'Donnell's action against the

Times—the ministerial view being that the House was unsuited to deal with the allegations in question—or to give facilities for the discussion of a motion placed on the paper by Mr. Parnell for a select committee to inquire into the authenticity of the letters attributed to him. The Bill was read a second time without a division, but proceedings in committee were of the most animated character, and were only brought to a close on the fourth night by a special resolution similar to that passed in the case of the Crimes Bill of '87. The **Special Commission Act** (51 & 52 Vict. ch. 35), as the Bill when passed was entitled, received royal assent August 13th, and constituted a special commission consisting of Sir J. Hannen, Sir J. Day, and Sir A. L. Smith, judges of the High Court, to inquire into the charges and allegations made against certain members of Parliament and other persons by the defendants in the trial of an action entitled *O'Donnell v. Walter* and another; and gives the Commissioners all the powers vested in the High Court on the occasion of any action, including the enforcing the attendance of witnesses and examining them on oath, the compelling the production of documents, the punishing persons guilty of contempt, and the issue of a commission or request to examine witnesses abroad. The parties may appear by counsel, and witnesses making a full and true disclosure may be awarded a certificate of indemnity.—[31c] ***Marriages Validation Act** (51 & 52 Vict. ch. 28) is to remove doubts as to the validity of certain marriages solemnised by a person falsely pretending to be an ordained clergyman of the Church of England, and received royal assent August 13th.—[32] ***Merchant Shipping (Life Saving Appliances) Act**, '88 (51 & 52 Vict. ch. 24)—royal assent August 10th. Enacts that it shall be the duty of the owner and master of every British merchant ship to see that his ship is provided, in accordance with rules under the Act, with such boats, life jackets, and other appliances for saving life at sea, as, having regard to the nature of the service on which the ship is employed, and the avoidance of undue encumbrance of the ship's deck, are best adapted for securing the safety of her crew and passengers. For the purpose of preparing and advising on rules to be made under the Act, the President of the Board of Trade may appoint a consultative committee, constituted of shipowners, shipbuilders, persons practically acquainted with the navigation of vessels, and selected by shipmasters' societies, able-bodied seamen, and persons representing Lloyd's and the Institute of London Underwriters.—[33] The ***Metropolitan Board (Commission) Act**, '88 (51 Vict. ch. 6) conferred upon the Commissioners (Lord Herschell, Mr. Bosanquet, Q.C., and Mr. H. R. Grenfell) all such powers, rights and privileges as are vested in the judges of the High Court on the occasion of any action in respect of the enforcing the attendance of witnesses and examining them on oath, the compelling the production of documents, the punishing persons guilty of contempt, and empowers the Commissioners to give a certificate of indemnity to witnesses making a full and true disclosure.—[34] ***Metropolitan Board of Works (Money) Act**, '88 (51 & 52 Vict. ch. 40) gives new borrowing powers to the amount of £1,492,777, of which £852,331 is for the Board, and £640,446 for loans.—[34] ***Mortmain and**

Charitable Uses Act (51 & 52 Vict. ch. 42) consolidates and amends the law relating to mortmain and to the disposition of land for charitable uses.—For effect of the ***National Debt (Conversion) Act**, '88 (51 Vict. ch. 2), "an Act for reducing the rate of interest on the National Debt," and ***National Debt (Supplemental) Act**, see **FINANCE, NATIONAL**.—[35] ***National Defence Act** (51 & 52 Vict. ch. 31) facilitates the mobilisation of the volunteers in case of emergency, see headings **ARMY and VOLUNTEERS**.—[36] ***North Sea Fisheries Act** (51 & 52 Vict. ch. 18) is to carry into effect an international convention respecting the liquor traffic in the North Sea, or in other words it provides for the suppression of "coopering".—[37] **Oaths Bill**, introduced by Mr. Bradlaugh, Feb. 10th. On second reading (March 14th) Mr. Stanley Leighton moved an amendment against altering the law until the whole subject had been investigated by a Royal Commission; but this was negatived by 247 to 137, and second reading was carried by 250 to 150. Several amendments were made in the Bill to meet objections of the Solicitor-General, and it was read a third time by 147 to 60 on Aug. 6th, and sent to the Lords, who set it down for consideration in Nov. As it reached the Lords the first clause provided that "every person upon objecting to being sworn, and stating, as the ground of such objection, either that he has no religious belief, or that the taking of an oath is contrary to his religious belief, shall be permitted to make his solemn affirmation instead of taking an oath in all places and for all purposes where an oath is or shall be required by law, which affirmation shall be of the same force and effect as if he had taken the oath; and if any person making such affirmation shall wilfully, falsely, and corruptly affirm any matter or thing which, if deposed on oath, would have amounted to wilful and corrupt perjury, he shall be liable to prosecution, indictment, sentence, and punishment in all respects as if he had committed wilful and corrupt perjury."—[38] ***Official Secrets Bill**, to prevent the disclosure of documents and information by means either of spies or breaches of official trust, was introduced by the Attorney-General May 10th; withdrawn July 12th.—[39] ***Parliamentary Under-Secretary to the Lord-Lieutenant of Ireland Bill**, was introduced by Mr. W. H. Smith April 9th, and was to regulate the office in question, and to provide the holder thereof with a salary. The measure was strongly opposed by the Parnellites, several of whom, on various occasions when it was before the House, bitterly attacked Colonel King-Harman, who, since April '87 had filled the office unpaid. He died in June, and the Bill was withdrawn July 16th.—[40] ***Patents, Designs, and Trade Marks Bill**, introduced in the Lords by the Earl of Onslow, June 29th, extends the system of trade marks to the Channel Islands, and provides for a roll of patent agents. Set down for committee in the Commons Nov. 15th.—[41] **Public Houses (Ireland) Saturday Closing Bill**, proposed to close public houses on Saturdays at nine o'clock in all towns of 10,000 inhabitants; second reading carried (May 6th) by 178 to 102 (see sect. 70).—[42] **Public Works Loans Act** (51 & 52 Vict. ch. 39) (see **FINANCE NATIONAL**).—[42] ***Railway and Canal Traffic Act** (51 & 52 Vict. ch. 25) was considered by the Grand Committee on Trade, and received royal assent

August 10th. It provides for the establishment of a new **Railway and Canal Commission**, consisting of two appointed and three *ex-officio* commissioners, one of the former to be of experience in railway business, and both of them to receive a salary not exceeding £3000 a year. The three *ex-officio* commissioners are to be an English, an Irish, and a Scotch judge; one of these is always to sit with the two appointed commissioners, and to preside; and the sittings may be held in any part of the United Kingdom which may be most convenient for the determination of the proceedings. An additional judge may be appointed under the Act on an address being presented by both Houses. Local authorities, trading associations, chambers of commerce, etc., are to have a *locus standi* before the commissioners. There is no appeal from the commissioners on a question of fact, or *locus standi*. Part II. of the Act provides that every railway company shall submit to the Board of Trade a revised classification of merchandise traffic and schedule of rates, and shall fully state the nature and amounts of all terminal charges proposed to be authorised in respect of each class of traffic, and the circumstances under which such terminal charges are to be made. In the determination of the terminal charges regard is to be had only to the expenditure reasonably necessary to provide the accommodation, irrespective of the outlay which may have been incurred in providing it. The Board is to consider the classification and schedule, and any objections thereto which may be lodged with them; and if an agreement with the company be arrived at, the agreed classification is to be embodied in a provisional order to be confirmed by Parliament. If no agreement be arrived at, the Board is to determine the classification and schedule and embody them in a provisional order bill, against which the railway company may be heard in committee. There are provisions as to through traffic, and the commissioners are given powers as to through rates. The following is the full text of the section regarding undue preference:—“(1) Whenever it is shown that any railway company charge one trader or class of traders, or the traders in any district, lower tolls, rates or charges for the same or similar merchandise, or lower tolls, rates or charges for the same or similar services, than they charge to other traders or classes of traders, or to the traders in another district, or make any difference in treatment in respect of any such trader or traders, the burden of proving that such lower charge or difference in treatment does not amount to an undue preference shall lie on the railway company. (2) In deciding whether a lower charge or difference in treatment does or does not amount to an undue preference, the court having jurisdiction in the matter, or the commissioners, as the case may be, may, so far as they think reasonable, in addition to any other considerations affecting the case, take into consideration whether such lower charge or difference in treatment is necessary for the purpose of securing in the interests of the public the traffic in respect of which it is made, and whether the inequality cannot be removed without unduly reducing the rates charged to the complainant. Provided that no railway company shall make, nor shall the court or the commissioners sanction, any difference in the tolls, rates or charges made for, or any difference in the treatment of, home and foreign

merchandise, in respect of the same or similar services. (3) The court or the commissioners shall have power to direct that no higher charge shall be made to any person for services in respect of merchandise carried over a less distance than is made to any other person for similar services in respect of the like description and quantity of merchandise carried over a greater distance on the same line of railway.” All enactments as to undue preference are extended to goods carried by sea. Dock companies and harbour boards may complain of undue preference; any person may complain to the Board of Trade of unreasonable charges by railway companies; the classification table may be inspected free at every station where merchandise is received for conveyance, and is to be sold at the principal office of the company at a price not exceeding one shilling. Part II. extends to canal companies, as to which there are numerous important provisions. The Act comes into operation on Jan. 1st, '89.—**Railway Companies (Carriage of Fish) Bill**, introduced by Sir E. Birkbeck, set down for second reading Nov. 6th.—**Recorders, Magistrates, and Clerks of the Peace Act** (51 and 52 Vict., ch. 23)—royal assent Aug. 10th—is to make better provision as to the appointment of deputies for recorders, stipendiary magistrates, and clerks of the peace.—**Sale of Intoxicating Liquors on Sunday (Ireland) Act** (1878) Amendment Bill (see sect. 70).—**Sale of Intoxicating Liquors on Sunday Bill** (see sect. 25) and **School Board for London (Pensions) Bill**, set down for second reading Nov. 6th.—**[43] Small Holdings Bill**, introduced by Mr. Jesse Collings, discussed on second reading May 16th, closure motion negatived by 194 to 135, and subsequently dropped (see sect. 67).—**[44] Solicitors Bill**, introduced by Lord Esher (July 2nd), and provides for the custody of the roll of solicitors of the Supreme Court of England by the Incorporated Law Society, and otherwise amends the law as to solicitors. Passed the Lords, and set down for committee in the Commons Nov. 15th.—**[45] Statute Law Revision Act** (51 Vict. ch. 3)—royal assent Mar. 27th—is an Act for further promoting the revision of the statute law by repealing superfluous expressions of enactment and enactments which have ceased to be in force or have become unnecessary.—**[46] Technical Instruction Bill**, introduced by Sir W. Dyke May 17th, withdrawn July 16th.—**[47] Tithe-Rent Charge Bill** and **Tithe-Rent Charge Recovery and Variation Bill**, were introduced by the Marquis of Salisbury (Mar. 23rd), who explained that the first of these placed title in the same position as income tax under Schedule A, with the object of preventing the landlord from contracting himself out of the obligation to pay it. The charge would therefore be in the first instance payable by the tenant, who would have a legal right to deduct the amount from the rent due to the landlord. By the second Bill arrangements were made for the appointment of receivers, who would have power to attach the land in cases where the title was not forthcoming. It was proposed to introduce a third bill, which would have reference to tithe redemption. The first two bills passed the Lords, and were set down for second reading in the Commons Nov. 8th.—**[48] Universities (Scotland) Bill**, which is for the better administration and endowment of those institutions, passed the Lords, and was set down for second reading in the Commons Nov. 8th.—**[49]**

***Westminster Abbey Act '88** (51 and 52 Vict., ch. 11) makes further provision for the restoration and repair of the fabric, and provides for the transfer of certain property to the Ecclesiastical Commissioners. — [50] Among the private Acts which received the Royal assent in course of the session were, **Birmingham and Hemley-in-Arden Railway**, **Brighton Marine Palace and Pier, Okeham, Boxmoor and Hemel Hempstead Steam Tramways**, **City of London (Fire Inquests)**, **Collingbourne and Aven Valley Railway**, **Didcot, Newbury and Southampton Railway**, **Eastern and Midland Railways (Extensions)**, **Spilling Church, Great Western and Great Northern Junction Railway**, **Greenwich and Millwall Subway, Hampstead Heath Enlargement (Amendment)**, **Harrow and Stanmore Railway**, **Horse Guards Avenue, Kensington Square Improvements**, **Lloyds London and St. Katharine and East and West India Docks, London, Brighton and South Coast Railway (Various Powers)**, **London Sea Water Supply, Manchester Ship Canal (Additional Lands)**, **Manchester Ship Canal (Alteration of Works)**, **Metropolitan Board of Works (Various Powers)**, **Metropolitan Outer Circle Railway**, **Oxford and Aylesbury Tramroad, Raleigh Park (Brixton)**, **Scarborough, Bridlington and West Riding Junction Railways**, **St. Botolph Without Aldgate Tithe Rate (changed from "London City Tithes [St. Botolph Without Aldgate]")**, **Thames Tunnel (Blackwall)**, **Tottenham Local Board (Division of District)**, **Uxbridge and Rickmansworth Railway (Abandonment)**, **Vauxhall Park, West Ham Corporation (Improvements) and West Ham Corporation (Loans, etc.)**. — **COMMITTEES**.—The number of Commons committees was again unusually large; several Lords committees sat and reported, and there were two joint Committees of the two Houses. — [51] **Admission of Strangers**.—A Commons committee was (March 15th) appointed to inquire into the rules and regulations under which strangers are admitted to the House and its precincts, and to report whether any alterations in the same are expedient. The committee held several sittings, and reported in April, making certain detailed recommendations as to the admission of strangers, which were so far acted upon in course of the session that the benches of the Speaker's gallery, which the Speaker had offered to give up to the House, were thrown into the ordinary strangers' gallery, access to the whole space being now gained from the Central Hall. — [52] **Corn Average**.—A Commons Committee was (June 12) appointed to inquire into the present system of ascertaining the official average price of corn in the United Kingdom, and to report what alterations, if any, are expedient. It was arranged that the inquiry should be continued at the autumn sitting. — [53] **Debates and Proceedings in Parliament**.—A joint committee of the two Houses was appointed to inquire and report as to the cost and method of the publication of the debates and proceedings in Parliament. The committee took evidence and reported in July. They did not recommend the provision of an official report of the proceedings, but were of opinion that what they described as an improved and amplified *Hansard* would meet the requirements of the public service. They recommended that public tenders should be invited for such a report, that special seats for the reporters to be engaged in the work should be provided in each House; that the contractor should be

allowed to exercise his own discretion as to the fullness of the reports given, subject only to the conditions that no speech be reported at less than one-third of its length as delivered, and that debates in committee and on private bills be reported with the same fullness as debates on public questions. Two days should be allowed for correction by members of their speeches, and the corrected edition should be published not later than one week after the occurrence of the debate. The contract should, they considered, be made in the first instance for a period not exceeding three years, and that power should be reserved to determine it earlier, should it be desirable to do so, by notice given not less than one month before the end of any session. [Tenders for a contract for printing and publishing a report of the proceedings of Parliament were subsequently invited by the Controller of the Stationery.] — [54] **East India (Hyderabad Decan Mining Company)**.—A select committee of the House of Commons was in May appointed to inquire into the formation and promotion of the Hyderabad Decan Mining Company (*q.v.*), Limited, the circumstances under which the concession held by that Company was obtained from the Government of Hyderabad, and the subsequent operations on the London Stock Exchange by persons interested in the Company. — [55] **Elections (Intervention of Peers, etc.)**.—A Lords committee was (June) appointed to deliberate upon the report of the select committee of the House of Commons appointed to consider the Sessional Order with reference to the intervention of peers and prelates in Parliamentary elections (see heading). The Lords Committee took evidence, and resolved, "That inasmuch as a resolution of one House of Parliament cannot affect the law, it is unnecessary to take any action upon the report of the House of Commons as to the continuance of the Sessional Order with reference to the intervention of peers or prelates in Parliamentary elections." — [56] **Emigration and Immigration**.—On the motion of Captain Colomb a Commons committee was (Feb. 13th) appointed to inquire into the law existing in the United States and elsewhere on the subject of the immigration of destitute aliens, and as to the extent and effect of such immigration into the United Kingdom, and to report whether it is desirable to impose any, and if so what, restrictions on such emigration. The inquiry was not concluded at the adjournment, and the committee recommended their reappointment next session. — [57] **Estimates Procedure (Grants of Supply)**. A Commons committee was appointed to consider the procedure by which the House annually grants the supplies to Her Majesty, and having taken evidence, the committee reported (July) that they had confined their attention principally to the procedure in the granting of supplies included in the Civil Service Estimates, and suggested that, as the experiment was being tried of intrusting the examination of the details of measures of minor importance, or of a less contentious character, to standing committees, a similar experiment might be made by constituting a third standing committee to which, on the motion of the Government and by the vote of the House, certain classes of the estimates or certain votes might be referred. This standing committee was, in respect of such classes or votes, to

take the place of the committee of the whole House. Its procedure would resemble that of the committee for supply, and the discussion would include questions both of policy and of finance. The experiment was to be wholly of a tentative character, and it would depend on the confidence felt by the House in the standing committee, and on the duration and character of the subsequent debates in the House on the resolutions of the committee, whether the experiment should be extended, reduced, or abandoned. Some convenience, and probably some economy of time, would, the committee thought result from the adoption of a system of grouping together, in certain cases, two or more votes which are now separately submitted to the committee of supply and to the House, and they recommended that such a scheme for grouping should receive the attention of the Treasury, and be submitted for the consideration of the House.—[58] **Friendly Societies.** A Commons committee was (July 5th) appointed "to inquire into the report upon the operation of sect. 30 of the Friendly Societies Act '75, as amended by subsequent Acts, and into the organisation or general condition of societies and companies to which the said section applies, and to suggest what amendment of the law (if any) is required to insure the better management of such societies and companies and the more complete protection of the interests of their members." The inquiry was not completed at the August adjournment.—[59] **Kitchen and Refreshment Rooms.** This committee, which controls the kitchen and refreshment rooms of the House of Commons, reported that during the session up to Aug. 8th, 8,251 luncheons and 13,151 dinners had been served in the dining room; 1,070 luncheons and 1,318 dinners in the strangers' dining room; and 2,178 luncheons and 6,058 dinners in the reporters' gallery dining-room.—**Navy Estimates,** committee on (see NAVY).—[60] The select committee of the House of Lords on the office of the Clerk of the Parliaments and office of the Gentleman Usher of the Black Rod, in one of their reports, recommended that leave should be given to photograph the MS. **Common Prayer Book**, originally attached to the Act of Uniformity, upon condition that one facsimile only, and that of the same size as the original book, be taken; and they framed certain rules with the object of preserving the book from being in any way tampered with or damaged.—[61] **Pilotage.** A Commons committee was (Mar. 2nd) appointed to consider the position of the pilotage system of the United Kingdom. After taking a great deal of evidence the committee presented a report containing numerous important recommendations. On the question of the continuance or the abolition of the principle of **compulsory pilotage** they did not feel justified in recommending that there should be any interference with the system as it now stands, but they would leave to local pilotage authorities full and ample powers to adopt such systems and to frame such regulations, subject to the sanction of Parliament, as may be most conducive to the interests of the trade and shipping of the particular port over which their jurisdiction extends. They were strongly of opinion that the time had arrived when the exemption of the owner from liability for damage done by his ship, when the ship is placed in charge of a pilot by compulsion of law, should cease to exist. The master of a

vessel, even while a pilot was on board, should continue to be responsible for the conduct and navigation of his vessel. Evidence was given as to the prevalence of a practice on the part of masters of employing the services of unlicensed instead of licensed pilots, with a view to escape the payment of full pilotage dues; and the committee recommended that such a change of the law be made as would best meet the difficulty experienced in bringing the offenders to justice, and enable the law to be duly enforced. The committee were in favour of maintaining the system of granting pilotage certificates to masters and mates; and were also of opinion that the granting and renewal of certificates to alien: should be continued, but they suggested that no favourable opportunity should be lost by the Government to obtain for this country full reciprocity from other powers in regard to advantages which we may from time to time confer upon them. Recommendations are also made on the subject of pilots' pension funds. The committee think that there should be a direct representation of pilots on all pilotage boards, and recommend also that there should be an appeal from the decision of the pilotage authority to the county court judge or stipendiary magistrate, sitting with a nautical assessor, having jurisdiction within the district in which such pilotage authority is situated.—[62] **Police and Sanitary Regulations.** In a special report by the select committee to whom were referred all private bills promoted by municipal and other local authorities by which it was proposed to create powers relating to police and sanitary regulations which deviate from, or are in extension of, or are repugnant to, the general law, the committee particularly desired to record that in every one of the measures referred to them the model clauses relating to the notification of infectious disease had been inserted by the promoters. The committee passed these clauses with such amendments as brought them into conformity with the model clauses relating to notification. This legislation, which was, in the opinion of the committee, highly beneficial to the health of the people, was now in force among several millions of our population. The committee were so impressed with the value of notification that they caused to be prepared a bill to extend the legislation, at the option of local authorities, to the whole of the United Kingdom. The opinion of the House was not obtained on this measure, as the pressure of public business prevented its discussion on the second reading, but the committee requested their chairman to again introduce the Bill at the commencement of the next session of Parliament. Meanwhile the committee observed with satisfaction that clauses relating to notification of infectious disease were included in the Scotch Burgh and Police Bill.—[63] **Poor Law Relief.** A select committee of the House of Lords was, on the motion of the Earl of Aberdeen, appointed to inquire as to the various powers now in possession of the poor law guardians, and their adequacy to cope with distress that may from time to time exist in the Metropolis and other populous places; and also as to the expediency of concerted action between the poor law authorities and voluntary agencies for the relief of distress. In July the committee reported that they had met and taken evidence on the subject referred to them, but they had found it

impossible to complete their inquiry, except so far as regarded the Metropolis. In course of a detailed report upon this branch of their investigation, the committee say it was shown by the evidence that the powers in possession of poor law guardians in the Metropolis are adequate for the relief of destitution, that during the last thirty years there had been a marked decrease of pauperism in the Metropolis, and that this decrease must to a great extent be ascribed to the more strict and efficient administration of the law by boards of guardians, and especially to the restriction of out-door relief. It would be therefore unsafe to infer that there had been a corresponding diminution of poverty, although it might reasonably be concluded that so great a fall in the number of paupers was partly due to the improved condition of the working classes generally. The committee dwell on the disastrous results which they consider would be certain to follow from out-door relief, if not very carefully administered and kept within narrow limits; and in referring to temporary and exceptional destitution from sickness or want of work, express regret that there is not more advantage taken of benefit clubs and provident dispensaries, by which provision is made for support and medical treatment during sickness. They recommend that labour yards should cease to form part of the regular authorised system of relief, and should only be opened in cases where, on account of exceptional distress, the ordinary workhouse accommodation is insufficient to meet an emergency. They think that test houses, similar to those established at Birmingham for able-bodied men, might with advantage be established in the Metropolis; they deprecate relief works, except occasionally as a temporary expedient to meet a special and pressing emergency; and they think that the influx of agricultural labourers to London has been considerably exaggerated—although, doubtless, owing to the depressed condition of agriculture, more labourers than usual have migrated to the Metropolis from the country. They were unable to agree with the opinion expressed by several experienced witnesses that it would be desirable to abolish the casual wards. The committee give some interesting information and make some valuable recommendations regarding the bringing up and education of children; they fully concur in the “expediency of concerted action between the guardians and voluntary agencies for the relief of distress.” The evidence shows, they say, “how effectively this co-operation is secured in St. George’s-in-the-East, Stepney, and Whitechapel, and the excellent results, which are obtained there, both in diminishing the number of persons relieved from the rates, and in providing for assistance to the deserving poor without inflicting upon them the stigma of pauperism. It is much to be desired that such co-operation should be organised elsewhere. . . . The evils which arise from indiscriminate charity were strikingly shown by the effects of the distribution of the Mansion House Fund, and of tickets to vagrants in Trafalgar Square.” The rapid growth of the population in some parts of the Metropolis seems to require that the areas of poor law administration should be readjusted. Lastly, the committee notice a suggestion that guardians should have the same power to attach a pension received by a pauper from a

private source, and legally due to him, as they have of attaching an army or a navy pension.—[64] **Private Bill Legislation.** A joint committee of the two Houses was appointed to “examine into the present system of private bill legislation, and to report how far and in what manner, without prejudice to public interests, that system may be modified, with a view to the interests of suitors, the economy of the time of Parliament, and the reduction of costs and charges” (for a detailed account of the procedure on private bills see BILL, PARLIAMENTARY, Ed. ‘87). The committee, who took evidence, state in their report that broadly three proposals were put before them. The first of these was for the establishment of commissioners intrusted with the functions of private bill committees, who should hold central or local inquiries according to the character of the scheme and the interests of suitors, the ultimate decision being always in some form reserved to Parliament. Among the various proposals for a commission was one by Mr. Stanhope (Secretary for War), who formerly practised at the Parliamentary bar. The other proposals put before the committee were for joint committees, and an extension of the system of provisional orders. The committee were, they say, brought to the conclusion “that, although a commission must necessarily be an experiment, it presents the best hope of an adequate solution of the difficulties of the situation.”—[65] **Revenue Departments Estimates.** A select committee of the House of Commons was in March appointed to examine into the Estimates for the Revenue Departments, and to report their observations to the House. The committee examined into and took evidence upon the Customs, Inland Revenue, Post Office, Post Office Packet Service, and Post Office Telegraph Estimates for the current year; and the most interesting portions of their report (presented in July) had reference to the three latter estimates and to the administration of the department (see POST OFFICE).—[66] **Sheriffs.** In March a Lords Committee was appointed to inquire into the mode of appointment, the duties and the obligations of the high sheriffs of counties. In their report, presented in July, the committee point out that at the present day the high sheriff must necessarily incur very considerable expense. In Oxfordshire the average cost is £350; in Essex, £300; in Norfolk, £800; in Yorkshire, about £1,000, exclusive of the sheriff’s own expenses; in Lancashire, £1,400, exclusive of sheriff’s personal expenditure; and in Montgomeryshire, £500. The committee continue: “We are of opinion that a county official, representing the county, and bearing the title of high sheriff, should receive the judges when on circuit, nominate the grand jury, and discharge the other honorary duties as at present. We recommend that the high sheriff be appointed in the same manner as hitherto, but we are of opinion that all the necessary expenses of the office should be paid by the county and the Treasury conjointly, including one well-appointed carriage, with a pair of horses, to convey the judge on his official duties; and we recommend that trumpeters, javelin men, and all other unnecessary expenses be discontinued.”—[67] **Small Holdings** (see also sect. 43). A Commons committee was (July 23rd) appointed to inquire into the facilities which exist for the

creation of small holdings in land in Great Britain; whether, either in connection with an improved system of local government or otherwise, those facilities may be extended; whether, in recent years, there has been any diminution in the number of small owners and cultivators of land; and whether there is any evidence to show that such diminution is due to legislation. The committee met Aug. 10th, Mr. Chamberlain being called to the chair; and agreed to a report which was presented on the same day, stating that, having been unable at that period of the session to inquire into the subject referred to them, they had agreed to recommend that a committee on the same subject should be appointed in the next session of Parliament.—[68] **Standing Orders of the House of Lords.** A Lords committee was appointed to examine and report upon those standing orders of this House which relate to the conduct of public business. The committee met, examined the said standing orders, and agreed on certain omissions, amendments and additions, which they in July proposed for the adoption of the House. A new standing order was agreed to by the committee, to the effect that if on a division on a bill it should appear that thirty lords were not present, the Lord Speaker should declare the question not decided, but the debate thereon should be adjourned to the next sitting of the House. It was further resolved that at the commencement of each session, standing committees should be appointed, to one or other of which, unless the House should otherwise order, every bill should be committed, instead of to a committee of the whole House; the standing committees were not to exceed four in number, and should be appointed for such classes of bills as the House should determine, the lords who are to serve on such committees to be nominated by the committee of selection; each committee to consist of not more than fifty nor less than twenty lords; power to add not more than fifteen lords in respect of any bill; the committee of selection also to nominate a chairman's panel. (See headings PARLIAMENTARY PROCEDURE, PLEAS, and GRAND COMMITTEES.) Consideration of the report was set down for an early day of the autumn sitting (see also sect. 19).—[69] **Standing Committee on Law, etc.** (see also headings PARLIAMENTARY PROCEDURE and GRAND COMMITTEES.) The following Bills were considered by this committee prior to the adjournment in August: Bail (Scotland), Mortmain and Charitable Uses, Employers' Liability, Liability of Trustees, and County Courts Consolidation. The **Standing Committee on Trade, etc.** had referred to them the Railway and Canal Traffic Bill, Railway and Canal Companies' Charges Bill, Sea Fisheries Regulation Bill, and Merchant Shipping (Life Saving Appliances) Bill.—[70] A Commons committee was in February appointed to inquire into the operation of the **Sunday Closing Acts (Ireland).** In May the **Public Houses (Ireland) Saturday Closing Bill** (see sect. 41) was referred to the committee. In June the committee obtained power to consolidate the Sale of Liquors on Sunday (Ireland) Act ('78) Amendment Bill and that measure into one bill, and a motion for the consolidation of the bills was agreed to in committee, the consolidated bill being entitled the Intoxicating Liquors (Ireland) Bill (see sect. 21). In their report presented in July the committee

state that, having inquired into the working of the Act passed in '78 for a period of four years, and which had been since annually renewed, they found that the overwhelming weight of evidence was in favour of making this Act perpetual as regards the districts to which it applies. They recommended: "(1) That the Act of '78 should be made perpetual, and extended to the five cities now exempted from the full operation of the Act; (2) That the qualifying distance under the *bona-fide* provision should be extended to six miles; (3) That all houses for the sale of intoxicating liquors in Ireland should be closed at 9 p.m. on Saturdays."—[71] **Sweating System.** On the motion of the Earl of Dunraven a Lords committee was appointed to inquire into the sweating system at the East End of London, and to report thereon to the House from time to time. The committee took much interesting evidence, and on July 30th reported as follows:—"The committee have examined witnesses in the boot and shoe, tailoring, cabinet and upholstering, and other trades, and agree that the evidence, although unfinished, may be reported, and the inquiry adjourned. The committee desire to make the following remarks: (1) In the opinion of your committee, the evidence already taken sufficiently indicates the existence of grave evils in connection with what is known as the Sweating System, in the localities to which their investigations have been confined. They have reason to believe that the same or similar evils prevail in other parts of the Metropolis, as well as in other towns and cities, and affect various industries not yet examined. Their views in this respect are strengthened by many resolutions and applications received from societies and individuals praying for an extension of the inquiry. It also appears that many persons engaged in the trades under consideration carry on business in various districts in London and in the country also. (2) For these reasons an exhaustive inquiry is impossible under a reference limiting the area of investigation to the East End of London; and your committee recommend such an extension of their reference as will enable them to prosecute their inquiries throughout the Metropolis and in such cities and towns or rural districts in the United Kingdom as they may select." On the motion of the Earl of Dunraven the reference was (Aug. 3rd) so amended as to enable the committee to inquire into the sweating system in the United Kingdom generally.—[72] **Town Holdings.** The Commons committee on this question was reappointed in Feb., and shortly before the adjournment reported that they had taken additional evidence on the matters referred to them, but at that period of the session it would not be in their power to conclude the whole of their inquiry, or to report on the several subjects comprised in the order of reference. The committee hoped that it might not be necessary for them to call further witnesses as to the terms of occupation and the compensation for improvements possessed by the occupiers of town houses and holdings in Great Britain and Ireland, or as to the expediency of giving to leaseholders facilities for the purchase of the fee simple of their property, but they desired to take further evidence upon the question of imposing a direct assessment on the owners of ground rents, and on the owners of increased values imparted to land

by building operations or other improvements. They accordingly recommended that the committee be re-appointed next session for the purpose of receiving such additional evidence as they may think necessary, and also of reporting upon the several branches of the inquiry.—[78]

Trustee Savings Banks. On the motion of the Chancellor of the Exchequer a Commons Committee was (June 18th) appointed to inquire into and report on (1) the administration of trustee savings banks under the Trustee Savings Banks Act '63; (2) the powers, duties, and liabilities of the trustees, managers, and officers of trustee savings banks; (3) the relations of trustee savings banks to the National Debt Commissioners, the Registrar of Friendly Societies, and other offices or departments of the Government, so far as these relations affect the internal management of the affairs of the said banks; and (4) the alleged assumption of certain trustee savings banks of designations calculated to mislead depositors. The inquiry was not concluded at the August adjournment of Parliament.

ADDENDUM.—AUTUMN SESSION. In the previous article an attempt was made to give an outline of the principal business transacted between Feb. 6th and August 13th; and we now carry on the narrative from the commencement of the autumn sitting until Dec. 5th, when much still remained to be done before the two Houses could be prorogued. **Parliament reassembled on Nov. 6th**, and the Commons at once proceeded with the voting of supplies. This business was continued on Nov. 7th, 8th, 9th, 12th, 13th, 14th, 15th, and 16th, the progress made being slow. On Nov. 18th the Solicitor-General for Ireland moved for leave to introduce the **Land Purchase (Ireland) Bill**, which was to provide for an advance of a second sum of £5,000,000 in extension of Lord Ashbourne's Land Purchase Act of 1885, and Mr. Gladstone proposed by way of amendment that in lieu of proceeding again to vote the sum of £5,000,000, so as to place the State in the direct relation of landlord to the Irish occupier, it was expedient, especially in view of the lamentable sufferings caused by recent evictions, to extend the provisions of the Irish Land Act of '87, so as to empower the Land Court to reduce or cancel the arrears of rents found to be excessive, as well as to deal with the rents themselves, after the example of the legislation recently and beneficially applied to the crofters' holdings in Scotland. The division was taken on Nov. 20th, when the amendment was rejected by 330 to 246, majority 84, the measure being then read a first time. One or two Gladstonians voted for the bill. Second reading was carried by 299 to 224, after a debate on Nov. 21st and 22nd, in the course of which Mr. Parnell said he would accept the bill if the danger connected with it were removed by the insertion of a provision dealing with arrears; and the Chancellor of the Exchequer stated that the present proposal was made simply as a limited and temporary experiment, and not in redemption of the ministerial pledge to deal with the land purchase question generally. On Nov. 23rd Mr. Parnell moved an instruction empowering the committee on the bill to provide that the Land Commission might take an account of the amount of arrears of rent due from tenants desirous of purchasing their holdings, who had made, or should make, application to have

judicial rents fixed, and might decide whether the whole, or any, or what part of such arrears ought to be paid, and whether in one payment, or by instalments, and at what date the same should be paid. This was rejected by 188 to 148. Committee on the Bill was taken in the evening, and also on Nov. 26th and 27th. Several amendments of the Opposition being accepted by the Government, the report stage was disposed of on Nov. 28th, and on the following day the third reading was carried by 202 to 141.—The voting of supplies for the Civil Services was resumed on Nov. 30th, when Mr. H. H. Fowler raised a discussion on the pension system, which continued on Saturday, Dec. 1st, when Mr. John Morley called attention to the employment of British troops at Suakim. In reference to the latter question, Mr. Secretary Stanhope stated that there was no intention of attempting the reconquest of the Soudan, or of undertaking any large operations. On Tuesday, Dec. 4th, Lord R. Churchill raised the same question on a motion for adjournment, and stated that in deciding to send one British battalion to Suakim the Government had acted against the advice of responsible and high military authorities at home. Mr. Stanhope said the force was, in the opinion of the military authorities in Egypt, perfectly adequate. The motion for adjournment, which was supported by the Opposition, was rejected by 231 to 185. The Irish estimates were taken on Dec. 3rd, 4th, and 5th, and under a special arrangement Irish members under summons to appear in Ireland were enabled to be present.—Mr. W. H. Smith announced on Nov. 15th that the period at which they had arrived, and the slow progress made with the voting of supplies, deprived the Government of the hope of passing a number of measures, and there were withdrawn, either then or later in the sittings, the three Irish Drainage Bills, Board of Agriculture Bill, Burgh Police and Health (Scotland) Bill, Criminal Evidence Bill, Land Law Ireland (Land Commission) Bill, Tithe Bills, and Weights and Measures Bill; and also the Excise Duties (Local Purposes) Bill, commonly known as the Van and Wheel Tax Bill, which embodied the proposals of the Government to tax vans and carts, pleasure-horses, and race-horses (see FINANCE, NATIONAL). The Intoxicating Liquors New Licences Bill of Sir W. Houldsworth was dropped. On Dec. 5th the following measures introduced by the Government or private members stood for consideration on a future day: *Augmentation of Benefices, Clergy Discipline, Cruelty to Children, *Employers' Liability (Dec. 7th), Intoxicating Liquors (Ireland), Liability of Trustees, Libel Law Amendment, *Patent Designs and Trade Marks, Railway Companies (Carriage of Fish), Sale of Intoxicating Liquors on Sunday (Dec. 14th), Sand Grouse Protection, School Board for London (Pensions), Solicitors, and Universities (Scotland). The House of Lords read the Land Purchase (Ireland) Bill a second time without a division on Dec. 4th, and ordered it for committee on Dec. 6th. The Oaths Bill passed all its stages in the House without amendment, a new clause proposed by the Lord Chancellor giving the Crown and the prisoner, and the parties in civil proceedings, the right to challenge a juror who had taken advantage of the Act, being rejected by 54 to 14. The Companies Bill on Dec. 5th awaited consideration as amended, and the Land Transfer

Bill had just been reported from a select committee. It was notified to their lordships on Nov. 6th that England had agreed to take naval action, in conjunction with Germany, on the east coast of Africa, to prevent the importation of arms and the export of slaves, but military action was not contemplated. The announcement that Sir H. Blake had been appointed Governor of Queensland led to a correspondence between the Home Government and that of Queensland, an intimation being at length made by the Colonial Secretary to the House of Lords that after what had passed Sir Henry felt it would be extremely unpleasant for him to undertake the governorship of that colony, and that he had requested to be relieved of the appointment. Lord Knutsford, at the same time pointed out how extremely well fitted Sir Henry was for the governorship, and could not but think that the opposition which had been raised to the appointment had proceeded from a misapprehension of the position and a want of knowledge of Sir Henry's eminent qualifications and services. On Nov. 30th it was notified that the governorship had been offered to and accepted by Sir H. Norman, Governor of Jamaica. The resignation by Sir G. Warren of the Chief Commissionership of the Metropolitan Police, and the appointment of Mr. Munro to the vacant post, were also notified to Parliament. Mr. Cunningham Graham on Dec. 1st used the expression "dishonourable trick," and, refusing to retract, was ordered to withdraw himself during the remainder of that day's sitting. On Nov. 26th, during committee on the Land Purchase Bill, attention was called as a matter of privilege to the attempted service of a summons upon Mr. Sheehy in the outer lobby of the House, and a committee was forthwith appointed to consider the matter. To this committee, which on Dec. 5th had not reported, was also referred, on Dec. 1st, a letter sent to Mr. Sheehy by a sessional Crown solicitor in Ireland. The Commons committee on corn averages, and the Lords committee on the sweating system, took further evidence. Earl Cadogan postponed until the session of '89 any action upon the report of the committee on the Standing Orders of the House of Lords; and the Commons committees on Friendly Societies, Emigration and Immigration, and Trustee Savings Banks reported in favour of their reappointment next session.

Settled Estates Act. See LAND QUESTION.
Settled Land Act, The, '82. The object of this Act is to enlarge the powers enjoyed by limited owners of real property, especially by life-tenants. But the powers which it confers upon the limited owner are to be exercised by him as trustee for all persons interested under the settlement which creates his limited ownership. See in detail ed. '87.

Settlement, Marriage. See ed. '87.

Severn Tunnel. (For the earlier history of this work see eds. '87 and '88.) This tunnel is 7,664 yards long; the entrance on the English side is a cutting a mile long and as much as 60 feet deep at the lower end; and the approach from the Welsh side is about the same length and a similar depth. It was necessary to make large sea banks to keep out the high tides, as the approaches lie through marshlands. The tunnel is lined with brickwork from 2 ft. 3 in. to 3 ft. thick, imbedded in mortar of Portland cement. Sir John Hawkshaw was the engineer-in-chief, and the first coal train

from South Wales was timed to run through in January 1886. This was successfully done on the 6th of that month, a train consisting of fourteen trucks, two vans, and one engine, and carrying 150 tons of steam coal, leaving Aberdare at 9.50 a.m. and arriving at Southampton in about eleven hours. The passage through the tunnel occupied about nineteen minutes. The tunnel was opened for passenger traffic on Dec. 1st, without ceremony, somewhat surprising circumstance, considering that this great work, with its approaches, has cost something like £2,000,000. It should be added that the Severn tunnel is ventilated by means of a Guibal fan, which can discharge 240,000 feet of air per minute. A further development of the use of the tunnel took place in '86. The G.W. and L. & N.W. Railways concluded arrangements for the establishment of a direct service of fast trains between Bristol, Liverpool, Manchester, and other important towns in the North of England and Scotland. At Bristol these trains form a connection with the up and down trains for the west. The journey by the Severn tunnel between Bristol and the North is an hour shorter than by any other route. A complete history of this great engineering scheme was published by Bentley during the year, in the shape of a handsome volume entitled "The Severn Tunnel, its Construction and Difficulties," by Thomas A. Walker.

Sewage. See ed. '86.

Sexual Selection. The second of the two great evolutionary hypotheses with which the name of Darwin is connected, the first being Natural Selection. See ed. '86.

Seychelles Islands, or Mahé Archipelago, are situated in the Indian Ocean, about 600 miles north of Mauritius, of which British colony they are politically part. Total area, 79 sq. m.; pop. 14,081. The chief and largest island is Mahé, upon which is Port Victoria, the capital, harbour, and headquarters of H.M. East African squadron. The only small tropical oceanic islands of granitic structure, they are covered with luxuriant tropical vegetation, among which is the *coco-de-mer*, a noted fibre-tree. Government is administered by a Chief Civil Commissioner and a Board subordinate to the Governor of Mauritius. For financial statistics see BRITISH EMPIRE, etc. (table). Exports consist of coconut, cocoa-nut oil, sperm, vanilla, coffee, and cloves; but since the abolition of slavery in '34 these plantations have been in a declining state. The majority of the people are from India. There are twelve Roman Catholic primary schools and eight English Episcopal. The group was annexed in 1794.

Shakespeare-Bacon Controversy. See GREAT CRYPTOGRAM, The.

Shaw, Captain Eyre Massey, C.B., Chief of the Metropolitan Fire Brigade, to which he succeeded on the death of Mr. Braidwood, who was killed at the great fire in Tooley Street in 1861, was born at Monkstown, co. Cork, '30. Educated at Trinity Coll., Dublin, where he graduated. After serving a short time in the army he was appointed Superintendent of the Belfast Constabulary, which office he held until he received his present appointment. C.B. '79.

Shaw-Lefevre, The Hon. George J., P.C., son of the late Sir G. Shaw-Lefevre, Clerk of Parliaments, was b. 1832. Educated at Eton and Trin. Coll., Camb. Benchers Inner Temple. He was Chief Secretary to the Admiralty (71-74),

and **Chief Commissioner of Works** ('80-84). He has also served as chairman of the Royal Commission on the Loss of Life at Sea ('86). Unsuccessfully contested Winchester ('59), sat for Reading ('64-85), Bradford (April 21st, '86), re-elected (July '86). He is a warm supporter of Mr. Gladstone's Irish policy, and in the spring of last year visited Ireland to investigate the condition of that country. He wrote an important letter to the *Times* respecting his inquiries on the Clanricarde estate. Mr. Shaw-Lefevre, during his tenure of office as Chief Commissioner of Works, originated the Hyde Park Corner and other Metropolitan improvements.

Sheffield and Goole Ship Canal. For some time past a scheme has been on foot to connect that busy steel, iron and coal centre, Sheffield, with the port of Goole by means of a navigable waterway, especially for the heavy traffic, which in these days of competition is found to be so expensive by rail. On October 4th, '88, the leading promoters of the idea met the engineers at Goole, and viewed the Aire and Calder Canal system between that port and Ferrybridge; next day they went on to Goole by the Ouse and Trent, and afterwards along the Goole and Stamford Canal to Doncaster, whence on the following day they went along the canal to Sheffield. It is said that the results of this careful survey proved very encouraging from both the practical and the financial points of view. About the time of the examination of the proposed line of route, it was stated that the preliminary expenses fund amounted to £1,725, although the Sheffield Town Council found themselves unable, as a corporate body, to subscribe to it. At the end of November it was announced that a company had been registered to establish the new waterway. It was proposed to acquire the following undertakings with the docks, harbours, and works, and the rights connected therewith: (1) The navigation of the river Don, from Tinsley, in the parish of Sheffield, to Wilsich House, in the parish of Barnby-on-Don; (2) The Dearne and Dove Canal, commencing in the parish of Wath-upon-Deerne, and terminating at or near Barnsley, by a junction with the Barnsley Canal; (3) The Stanforth and Keadby Canal, commencing from the river Don, to the river Trent; (4) The Sheffield Canal from Sheffield parish to a junction with the Don at Tinsley. The initial capital is £30,000, and the first directors include the Mayors of Sheffield and Barnsley and the president of the Sheffield Chamber of Commerce.

Sherborne School, Dorsetshire. Refounded by Edward VI., 1550, re-organised 1870. Annual income £1,200. An Exhibition to either Univ. of £40 for four years falls vacant every year; pupils may also compete for **Huish Exhibitions** of £50 for four years; this privilege is allowed to three other schools only. Pupils, 340. **Head Master**, Rev. E. M. Young, M.A.

Sheriff. On the "morrow of St. Martin" (Nov. 12th) the Lord Chancellor, the Lord High Treasurer, or if there be none the Chancellor of the Exchequer, the Lord President and others of the Privy Council, and the Lord Chief Justice or any two or more of these great officers, with some of the judges of the High Court, meet at the Royal Courts of Justice, when the judges propose three persons from each county (with certain exceptions) for the office of sheriff; and the first of the three is in each instance nominated unless the

person in question request to be relieved from serving on ground of ill health, want of sufficient means, or some other reason, and his excuse is accepted, when the next person on the list is nominated. The list, as revised in Council, is submitted to Her Majesty, who with a gold bodkin picks the names of those whom she selects to serve, and which are generally the names now appearing first. Only one sheriff is appointed for the two counties of Cambridge and Huntingdon. The sheriff of Lancashire is nominated by the Queen as Duchess of Lancaster, and the sheriff of Cornwall by the Prince of Wales as Duke of Cornwall. The liverymen of London (*q.v.*) on Midsummer Day elect two sheriffs who are, but will shortly no longer be, jointly sheriff of Middlesex. (For the change made in this regard by the Local Government Act, see Session '88, sec. 28.) A sheriff holds office for one year. The custody of the county is committed to him, and in case of need he may call upon all the inhabitants to aid him in defending it or in arresting a felon, and the body of persons so assembled is termed the *posse comitatus*. He accompanies the judge through the county, and sits beside him at criminal trials; he presides at the election of coroners, and has certain duties to fulfil in connection with parliamentary elections. He, or rather the under-sheriff, sits, aided by a jury, to assess damages in actions for tort in the superior courts where judgment has gone by default, and in certain cases to settle the amount of compensation under the Land Clauses Consolidation Acts (*q.v.*). Assisted by an under-sheriff and by other officers, he summons jurors, serves writs, gathers fines, and executes the judgments of the courts, including the judgment of death; he is liable for wrongfully imprisoning any person, but not for the escape of a prisoner from gaol. The sheriffs of London, in addition to their other duties, attend the Lord Mayor on state occasions, and at every court of aldermen; and they present petitions from the court of aldermen or common council to the House of Commons at the bar of the House. (See Session '88, secs. 28 and 66.)

Shi'ahs. See **MOHAMMEDANISM**, ed. '88.

Shipping and Shipbuilding. The marked movement in these trades, noticed in our last edition ('88), was more than maintained during the year just closing, and prospects continue bright in both branches. The demand for **oversea freights**—another symptom of the all-round improvement of trade—seemed to come almost too suddenly on the builders, who, before '87, had for years been compelled to restrict production; consequently carrying rates went up and were maintained, while in the meantime the yards became busier. A correspondent of the *Times*, Oct. 3rd, supplies the following suggestive list of the differences of average freight rates even between '88 and '87, although it will be remembered that a distinct improvement had occurred during the latter year:—Carriage of ore from Bilbao to the Tyne over 7s. against 5s. 5d.; grain from New York 5s. against 3s.; from Nicholasief 27s. against 18s. 3d.; the Danube rate 5s. 6d. against 3s. 5d. Timber freights showed a rise of 50 per cent.; coal from the Tyne to London 4s. 3d. against 3s. 6d.; Tyne to Hamburg 50 per cent. higher; to Cronstadt 5s. 9d. against 4s. The work of construction may be gauged by an estimate that at the end of June there were in British yards in course

of building no less than 377 vessels, of which 300 were steamers, of an aggregate tonnage of about 608,118, or 190,000 tons more than at the corresponding period of '87. From a statement published in the autumn, it appears that the vessels delivered yielded, as a rule, good prices on sale for the contractors, who generally gave new orders, the market had been practically cleared of second-hand vessels, those left being generally 30 per cent. higher than in '87, while the builders had a better outlook than they had had at any time during the previous five years. Taking the Clyde as a typical port, there were launched in October no fewer than 14 new vessels, with a total tonnage of 40,685, by far the largest output in the month for ten years. For the ten months of the year the **total Clyde launches** were 173, with an aggregate of 223,900 tons, as compared with 136 vessels and 166,906 tons for the same period in '87. According to the returns compiled by Lloyd's Register of Shipping, there were at the close of the quarter ending Sept. 30th no less than 400 steam and sailing vessels of 698,995 tons under construction in the United Kingdom, as compared with 249 of 394,340 tons at the same date in '87. These figures again show that as the year went on there was no falling off, as is further evidenced on a comparison with the quarter ending June 30th, there being an increase of no less than 90,877 tons. Preparations were being made at the end of the September quarter for the construction of 167 vessels of 351,281 tons, against 82 vessels of 179,581 tons at the end of the previous quarter. Of the vessels under construction in September, 336 of 614,174 tons were being built under the supervision of Lloyd's surveyors with a view to classification. In the autumn was issued a Blue Book giving a return of the taxes and other charges on shipping in foreign countries. The contents are the circular from the Foreign Office, and replies from the Argentine Republic, Austria-Hungary, Belgium, Brazil, Colombia, Ecuador, Egypt, France, Germany, Greece, Italy, Japan, Mexico, Montenegro, Netherlands, Peru, Portugal, Roumania, Russia, Siam, Spain, Sweden and Norway, Turkey, United States, Uruguay, and Zanzibar. As to **Wrecks**, the Wreck Register for the year ending June 30th, '86, was published in July '88. From this it appears that in the year named 3,590 vessels met with accidents on the coasts of the United Kingdom, being less than the previous year by 108 cases; 390 lives were lost, against 178. The most terrible sea disaster of '88 was the collision off Sable Island, and about 200 miles out from Halifax, N.S. The *Genet*, of the Thingvalla Line from New York to Copenhagen, with 136 persons on board collided with the *Thingvalla* of the same line for New York, and sank, 105 lives being lost. During the year the shipping interest was well represented by several deputations which waited upon Ministers to discuss a variety of questions. On Nov. 15th the committee appointed under the provisions of the "Merchant Shipping (Life Saving Appliances) Act '88" (see Session, sect. 38), held their first sitting, and appointed Mr. T. H. Ismay chairman, and Mr. J. G. S. Anderson, vice-chairman. It will be interesting to add here that the Leviathan steamship the *Great Eastern*, which had been brought to the Mersey for the purpose of breaking up, was sold by auction in detail for £58,000.

Shoa. A province of Abyssinia (*q.v.*), really

a semi-independent kingdom, whose ruler is a feudatory of the Negus Johannes.

Shop Hours Regulation Act, '86. This Act provides for the protection of persons under the age of eighteen years employed in or about shops. Such persons are not to be employed for a longer time than seventy-four hours, including meal-times, in any one week. If previously on the same day employed in any factory or workshop as defined by the Factory and Workshop Act 1878, for the number of hours permitted by that Act, they must not be employed in a shop at all, or if previously employed for fewer hours, they may be employed in a shop only for so many hours as will complete that number. In every shop in which young persons are employed the employer must exhibit in a conspicuous place a notice referring to the provisions of the Act, and stating the number of hours in the week during which young persons may lawfully be employed. An employer is liable to a fine of £1 for every violation of the Act; but if he can show that some other person is the actual offender, such person shall be convicted instead of the employer. The procedure under the Act is the same as under the Factory and Workshop Act 1878. The term "shop," as used in the Act, includes public-houses and refreshment-houses. This Act does not apply to persons employed in shops who are members of the employer's family.

Shorthand. Abbreviation and employment of arbitrary marks to indicate letters and sounds. Shorthand was known to the Greeks and the Romans in a limited degree. From the decline of the Roman Empire till 1588, when Bright published the first system of shorthand in England, little progress was made. Bales' "Brachygraphy" followed next (1590). These two systems were merely collections of arbitrary marks for certain words. The first shorthand alphabet was published by John Willis, anonymously, in 1602. In 1837 Phonography (writing by sound) was invented by Isaac Pitman, of Bath, and marks a new era in the history of shorthand, since by it the sounds of the English language are fully represented each by one stroke or motion of the hand; and are so arranged as to show, as far as possible, their mutual relations. (For a more detailed explanation of the system see Mr. Pitman's works.) Phonography is the only system that has produced a literature. All its publications would constitute a small library. The following facts show its great and increasing popularity. The *Phonetic Journal*, a periodical published by Mr. Pitman (11, Amen Corner, Paternoster Row, E.C.), partly in shorthand, has a weekly circulation of 23,000. In addition, there are one weekly and eight monthly magazines, lithographed entirely in Phonography. The *Phonetic Society*, instituted in 1843, receives a yearly addition of over 2,000 members. Each important town now possesses its Shorthand Writers' Association, and there are eighty such associations in existence, the largest having a membership of over 400. The growing desire to economise time and the advantages resulting from the principal of a business being able, by the aid of a shorthand clerk, to personally attend to all, or at least to the most important, of his letters, has resulted in a large increase in the number of shorthand clerks and a steady demand for their services. In all large offices the letters are opened and read by the principal and his answers rapidly dictated to his short-

hand clerk, who then transcribes them and leaves them to be signed. The principal has the advantage of knowing that his ideas are expressed in his exact words, a matter of importance in legal correspondence, while the mere mechanical part of taking down and transcription has been entirely saved, leaving him free to turn his attention to other matters. Since the introduction of the **type-writer**, in many offices the transcription is done on one of these machines with a better result as to clearness, and a saving of time. The writing of shorthand and type-writing are so eminently suited for women that they have gone far to solve the problem of the employment of women. For some time past men of business have regretted that the study of shorthand was not, as a rule, undertaken till a boy had left school, but this is being rapidly remedied. Since its introduction into the **Oxford and Cambridge Commercial Certificate** and the **Oxford Local Examination Scheme**, schoolmasters have not been slow to introduce it into their curriculum. It is now taught in such well-known schools as Rugby, King's College, and the City of London School; and the number of colleges, institutions, etc., in which it is a subject for study number about a thousand. Recently the head master of the Bristol Grammar School, with a view to turning out boys with a useful commercial knowledge, sent out circulars to 500 business men asking their opinion as to the value of several subjects, among them being French, German, book-keeping and shorthand. A considerable number of replies were received and shorthand headed the list. Several systems of shorthand claiming to have great advantages over Phonography have appeared, but they have in every instance failed to sustain these claims. Some fear was expressed when the recently improved Phonograph came out that it would supersede or supplant the shorthand writer, but in practice these fears have proved to be groundless, and the machine will rather supplement and increase his work. There are also numerous other systems in vogue, including Gurney's Sloan-Duployan, Pocknell, the Oxford Shorthand, etc.

Shrewsbury School. Founded by King Edward VI. in 1551, augmented by Queen Elizabeth in 1571. One of the seven schools reorganised by the Public Schools Act in '68. **Distinguished alumni**, Sir Philip Sidney, Lord Brook, Marquis of Halifax, and, in the present century, Charles Darwin, James Fraser (late Bishop of Manchester), Professor B. H. Kenned, the present Archbishop of York, the new Bishop of Wakefield, Sir D. Lysons, Lord Thring, Sir C. I. Newton, Viscount Cranbrook, H. A. J. Munro (the editor of "Lucretius"), F. A. Paley, the present Bishop of St. David's, Professor J. E. B. Mayor (the editor of "Juvenal"), the late Sir Cecil Beadon, the late Mr. R. Shilleto, the eminent scholar, Right Hon. J. T. Hibbert, Right Hon. H. C. Raikes, Right Hon. G. Osborne Morgan, and many others. The school was moved to a new site (of 26 acres) in '82. Between '82 and '88 its numbers have increased from 170 to 254. **Head Master**, Rev. H. Whitehead Moss, M.A. **Motto**, "*Intus sit recte, ne labora.*"

Siam. A kingdom embracing the greater part of the Indo-Chinese and part of the Malay peninsula. Boundaries ill-defined. Area, about 250,000 sq. m.; pop. estimated at about 6,000,000, including Siamese and Laotians, 2,000,000 each,

and Chinese and Malays, 1,000,000 each. Capital, **Bangkok** (pop. about 500,000), situated on the delta of the river Mee-nam, the great natural and economical centre of the kingdom. The royal dignity nominally hereditary, but each sovereign appoints his own successor. **Legislative power** exercised by the king in conjunction with a Council of Ministers, who have charge of the departments of war and marine, finance, foreign affairs, justice, agriculture, and the royal house. The Council of State consists of the Ministers, 10 to 20 members appointed by the king, and 9 princes of the royal house. There are forty-one provinces, each administered by a governor. People kept in a state of serfdom by the feudal owners of the soil. Domestic slavery in process of abolition. Foreign trade centres at **Bangkok**, and is almost wholly in the hands of foreigners. **Chief exports**, rice to Hong Kong, Singapore, and Lower Burmah, teak-wood to Great Britain. King's revenue raised by customs, dues, and taxes on land, fruit trees, spirits, opium, gambling, tin mines, edible birds' nests, and fisheries, and amounts to about £2,000,000 a year. **Expenditure** within income. No public debt. Small standing army, and general enrolment of males as militia. **Navy** consists of 4 steam corvettes and 12 gun-boats, on the model of that of Great Britain. Prevailing religion, Buddhism. Western ideas of civilisation spreading to some extent, and a few of the Siamese youths sent to Europe for their education.

Siberia. A Russian province, larger than Europe, which is only separated from the rest of the empire by the low-lying Ural hills, a slender barrier which is now being broken down by the extension of the Russian railway system into Siberia, and by incorporating the West Siberian government with the European Russian administrative system. See ed. '86.

Siberian Railways. The extensions in this far eastern portion of Russian territory consist of three lines between **Tomsk and Vladivostok**—from **Tomsk to Irkutsk**, to **Stretinsk** (on the Shieka, an affluent of the Amoor), and from **Lake Khanka**, or **Han-koi**, on to **Vladivostok**. Early in '88 it was reported that decisive steps were being taken to construct the Obi railway (Western Siberia), intended to run from the mouth of the river Vojkar to the bay of Il'yopodera, the length being 240 miles, at an estimated cost of £2,500,000. Reckoning 180 days only for the running of trains, the estimated profit was 7.2 per cent. Under date St. Petersburg, May 10th, it was stated that the new line had been finally mapped out, and would run from **Tomsk** in the west to **Vladivostok** on the Pacific coast, making connections with a number of large and important towns, including **Irkutsk**, on the way. Under date Aug. 31st, it was reported from Brussels that part of the Siberian line, from **Samara to Ufa**, 485 kilometres in length, was to be opened the following month, the continuation from **Ufa to Statutsk** being under consideration. A further report, St. Petersburg, Sept. 6th, was to the effect that the preliminary surveys had been completed as far as **Irkutsk**. It was further proposed to make a branch line to the Trans-Baikal province, between **Lake Baikal** and the **Chinese frontier**. At the opening of the above line, on Sept. 22nd, Admiral Possiet, the Minister of Ways and Communications, promised to do all in his power to continue the work to **Irkutsk**. Some

further details of Russian railway projects in this country appeared in the *Times* of Oct. 24th and Nov. 9th.

Sierra Leone. A British colony on West African coast, including also the Isles de Los, Sherbro, and Mannah. Area, in occupation 468 sq. m., of entire settlement 3,000 sq. m.; pop. 60,546, chiefly blacks. Capital **Freetown**, pop. 22,000. Climate inimical to Europeans: Sierra Leone called the "white man's grave." Little production, but large trade with interior in palm-oil, palm kernels, bennie-seed, ground-nuts, cola-nuts, cocoanuts, ginger, indiarubber, opal, hides, wax, a little ivory, teak, and gold-dust. It is a Crown colony under the Governor of West Africa Settlements, but four people's representatives are called to the Legislative Council. Naval station and headquarters of a West Indian regiment. Religious institutions flourish. Education provided for. Fourah Bay College affiliated to Durham University. For financial statistics see **BRITISH EMPIRE**, etc. (table). Originally used as a refuge for rescued slaves. Progress unsatisfactory. First acquisition, 1787. Expeditions against the Yum and other troublesome tribes in '87. Their strongholds were captured after fighting. Consult K. Johnston's "Africa," and "Her Majesty's Colonies."

Signalling. See **RAILWAY SIGNALLING**, ed. '88.

Silver, English. See **MINING**.

Simplon Railway Tunnel. A scheme for continuing the railway from Geneva to Martigny and Brice through the Simplon mountain to Domo d'Ossola, and thence to the Lago Maggiore. The estimated length is 12½ miles, and the cost about 100,000,000 francs (see ed. '88).

Sims, G. R., was b. in London 1847. He entered the literary profession as a contributor to the *Weekly Dispatch* and *Fun*. He was one of the projectors of the *Referee*, in which were first published his well-known "**Dagonet Ballads**." He still contributes "Mustard and Cress" to that journal. Mr. S. came into prominence as a dramatist when his "**Crutch and Toothpick**" was produced at the Royalty Theatre, April '79. "**Lights of London**" (Princess's, '81) stamped his success as a graphic melodramatic play-writer. In collaboration with Mr. Henry Pettitt he wrote "**Harbour Lights**," produced with great success at the Adelphi in '86. Another of Mr. S.'s popular plays is "**The Romany Rye**," which was being played at the time of the terrible disaster at the Exeter Theatre in '87. Mr. S. has taken great interest in the work of improving the social condition of the poor, and in his "**How the Poor Live**," originally contributed to the *Pictorial World*, he has drawn graphic pictures of the terrible sufferings endured by the humbler class of toilers in the over-crowded districts of London. Published '88 "**Mary Jane Married**."

Singapore. Capital of the **Straits Settlements** (q.v.), and great emporium of British trade in the East.

Sion College. Founded in 1630 by the Rev. Dr. White, who appropriated the sum of £3,000 for the purchase of a site in the City of London for the College and the almshouse attached to it, and directed his executors to provide out of his estates in the country an annual revenue of £160, of which £120 was to be secured to the hospital and £40 to the College for ever. Out of this latter sum payments were to be made to preachers of quarterly Latin *sermones ad clerum*, and the cost of the banquet upon the

anniversary and the other appointed days, which was to reward those who listened to the sermons, was to be defrayed. The new building, which was designed by Mr. A. W. Blomfield, the architect, cost £25,000, and was opened by the Prince and Princess of Wales on Dec. 15th, 1886. The College possesses at the present time about 65,000 volumes, of which 36,000 are on the shelves of the library, the remainder being kept for the present in the extensive book-rooms at the back of the building. See more fully ed. '87.

Sixpence, The New. See **COINAGE**, THE JUBILEE, ed. 88.

Skeleton Army. Organised by the rough element of the population as a counter agitation to the Salvation Army. See ed. '87.

Slander. Slander is defamation by word of mouth, as distinguished from libel, which is defamation by writing, etc. As a rule abusive language, however coarse, is no ground of action, unless special damage can be shown to have ensued to its object. Thus calling a man swindler or a woman a prostitute does not in itself give ground for an action. But words imputing to any person misconduct in his business or profession, words charging any person with having committed an indictable offence, and words to the effect that any person is suffering from contagious disease, are all actionable without proof of special damage. In other respects the law of slander closely resembles the law of libel. Thus, in both the definitions of malice, of publication, and of privileged communications are the same. The same liability attaches to those who repeat what they have heard or read. The truth of the charge made is a good defence in slander as well as in libel. The civil remedies for slander are the same as for libel. But slander, unlike libel, can never be made the subject of a criminal prosecution. See **LIBEL**, and for the details of the law of slander consult "Addison on Torts," chapter 6.

Slave Coast. The Guinea Coast, between Gold Coast and Lagos. Behind it are large lagoons. Here are Popo, Whydah, the Dahoman port, German **Togoland**, French Porto Novo Portuguese Ajuda, English Badagry, etc.

Slavery in Africa. In '88 Cardinal Lavigerie Archbishop of Algiers and Tunis, and Primate of Africa, moved by the reports of his missionaries, persuaded his Holiness the Pope to bless a **crusade against slavery**, and set himself the task of preaching the crusade in all the capitals of Europe. In furtherance of this design the Cardinal came to London, and on the 31st of July at **Prince's Hall** delivered an oration under the auspices of the anti-slavery society, where peers, Quakers, bishops, cardinals, sailors, soldiers, in fact, members of all classes of society, were present. (For report see *Anti-Slavery Reporter*, July, August.) As the result of inquiries into the question of slavery, it is found that from the point where British influence ceases in the south to the north slavery is rampant throughout Africa, save only in **Egypt**, where, owing to the presence of English officials, the traffic in human flesh has ceased, and any slave, by application to the nearest Mudir, can obtain his or her freedom. In **Algiers**, owing to the presence of civilised Europeans of all nations, slavery is kept in the background, but in the regions where tourists do not penetrate, on the southern slopes of the Atlas, there slavery is still, if not permitted

openly, existing notwithstanding the laws of the Republic. The French are great offenders in this way, for, notwithstanding their assumption of the Protectorates of **Tunisia** and **Madagascar**, they have done nothing whatever to abolish or mitigate the evils of slavery in either the Turkish Pashalik or the African island. On the east coast of Africa the French flag (as France denies to our cruisers the right of search) is used to enable slavers to run their cargoes free from the interference of British men-of-war. Under the disguise of the system of "free emigrants" slavery is also permitted in **Reunion** and **Bourbon**, and from **Madagascar**, the southern parts of the **Zanzibar** coast, and the province of **Mozambique**, a slave trade in all but name is carried on to provide for the fancied wants of the French creoles, whose barbarous treatment of Indian coolies has led our Government to forbid their emigration to the French possessions in the Indian Ocean for the purpose of working in plantations. The regulations made on their behalf were ignored, and the right of British officials to look to their welfare denied. Of other Christian nations, **Portugal** is the worst offender. She maintains a shadowy claim to vast tracts of the interior, over which she possesses neither the power nor the will to exercise any influence, while even on some parts of the sea coast in the **Mozambique** channel she has to pay tribute to the natives in order to be permitted to exercise the phantom of sovereignty. Several years ago, it must be admitted, slavery was nominally abolished in her African possessions, but the system of "libertos" which succeeded it, like that of the French "*émigrés libres*," and almost all other forms of apprenticeship of negroes or other indigenous races, possesses all of the disadvantages and none of the advantages of slavery. In order to assert her obsolete claims to the upper reaches of the **Zambesi**, she has lately been occupying herself with the descendants of **Gaetano Pereira**, who was a trader of **Tete** in the end of last century, and one of whom, after baptism, has been made an official of the **King of Portugal** and the **Algarves**. But it is not the doings of the **Pereiras** nor yet the existence of "libertos" in **Angola** and **Mozambique** which form the gravest indictment against **Portugal**; it is that within reach of the coast there are many trading stations, managed by men in close correspondence with, and often in the direct employment of, merchants living in the coast towns which depend for the profits of their trade on the traffic in human flesh which is carried on by the caravans which make them their points of departure for the interior. **Livingstone**, **Cameron**, **Montagu**, **Kerr**, and other travellers have described the doings of these caravans, and from them we may gather some idea of the barbarities they perpetrate and the cruelties they inflict, which only fail to rival those of their compeers, the traders from **Zanzibar**, from lack of power and not from lack of will and desire. **Livingstone** tells us how even the servants of Government officials were engaged in this abominable business. Christians or nominal Christians are not, however, the worst offenders. **Mohammedanism** in Africa means slavery and the slave trade, and the **Sultan of Turkey**, in respect of **Tripoli** still in some sense an African potentate, is an encourager of the most debasing form of slavery—viz., that of eunuchs (for this

trade and how it is carried on see **Mr. Wyde** of **Souakin's** book of his experiences there and in **Abyssinia**); His Imperial Majesty does not use his power and influence to carry out the agreements and treaties he and his predecessors have entered into with regard to slavery, but permits them to be violated with impunity, more or less openly, in all parts of his dominions, European, Asiatic, and African. In **Tripoli** in Africa, now that the importation of slaves in Egypt has ceased to be profitable, those that can survive the horrors of the passage of the **Sahara on foot** are openly sold, and their price pays for the arms and ammunition which by that open gate are poured into Africa to arm the fanatical followers of the **Kalif Abdulla**, the successor of the so-called **Mahdi**, the murderer of **Gordon**. Another Moslem potentate, **Muley Hassan** of **Morocco**, surrounds himself and his wives with eunuchs, while in every town of his dominions slaves are openly bought and sold. Ministers, consuls, missionaries, all are alike powerless to abate the evil or alleviate the sufferings of the victims. The people who supply the African countries bordering on the Mediterranean with slaves are the **Mohammedan Negroids**, who stretch across Africa north of the belt of tropical rains and jungle, and who prey on their negro neighbours inhabiting the districts to the south of them. These people, the **Touaregs**, the **Haussas**, the inhabitants of **Sokoto**, **Bambara**, **Songhay**, **Tombo**, **Mosi**, **Bergu**, **Bornu**, **Dairu**, **Baghumi**, **Adamawa**, **Wada**, and **Kordofan**, and the nomad or **Seminomad** tribes of the **Sahara**, were in a great measure Semitised in prehistoric ages, and would, if it were not for the constant infusion of fresh negro blood into their veins caused by the slave trade, have doubtless long ere this become purely Semitic in type, and have attained a much higher state of civilisation than they now possess. Unfortunately for them and for their negro victims slave trading has existed and has been the parent of further evil. This deterioration has led to their slave-hunting expeditions being conducted with more brutality than used to be the case, and besides the testimony of **Cardinal Lavigne** that this is so, we have also that of German explorers from the **Cameroun** district, who are not wont to be over tender-hearted towards native races. In the valley of the **Nile** the slave trade in its present intense form first began when the Egyptians passed the barrier of the "Sud" on floating vegetation on the Nile in '39, and went on growing in extent and in cruelty until the time of **Sir Samuel Baker** and of **Gordon**, by whom, and especially by the latter, it was checked and limited. How far **Gordon's** efforts were tending towards success may be judged by the fact that **Gessi**, one of his lieutenants, in '87 had 41,000 freed slaves under his care in the neighbourhood of **Wadai**. Unfortunately the course of events in the Egyptian **Soudan** has shattered the fabric of freedom, of which **Gordon** laid the foundation, and only one fragment remains—viz., the province which we trust is still under the control of the patient and gallant **Emin Pasha**. The **Dervishes** control the provinces erst under the government of **Lupton** and **Slatin**, and how the slave trade is carried on by them is proved by the numbers of slaves sold in **Tripoli**, and the glut of negroes in the market of **Jeddah**. Comparatively a few years

ago this latter offset of the slave trade had ceased practically to exist, but in spite of all the efforts of British men-of-war scarcely a day now passes without cargoes of human misery being carried across the Red Sea and landed on the Arabian coast, the Turkish officials not stirring a finger to prevent the illegal traffic.—There now remains for consideration the trade carried on on the east coast of Africa and in the interior by the subjects of their highnesses the Imam of Muscat and the Sultan of Zanzibar, and Arabs who own no sovereign save their own immediate chief, and also by the tribes living on and immediately behind the East African coast, whether known as Wamerima or by any other local name, but who, with the foregoing, are generally classed as Arabs by Englishmen who are ignorant of all the shades of difference which exist between the pure-blooded white Arab and his distant relation, from whom almost all traces of Arab descent have been removed by constant intermarriages with negroes and by climatic influences. In the following remarks this general classification of these people as Arabs will, for the sake of convenience, be retained. It must be remembered that the Portuguese from the time they first visited the east coast of Africa till about one hundred and twelve years ago exercised a shadowy sovereignty over the whole coast from Delagoa Bay northwards to Magadoxo (Makdishu), and all along this vast extent, as well on the islands as on the mainland, remains of the buildings erected by them still remain. Except, however, the presence of a few words of Portuguese in Kiswahili, the trade language of the coast and of much of the interior, and these ruins, no sign now remains of their former power and influence north of Tingo Pass just to the south of Cape Delgado. The Arabs, when they resumed the position from which they had been driven three centuries before, for a long time did not push their trading enterprises any distance into the interior, but contented themselves with dealing for slaves, ivory, copal, etc., with the Semitised tribes of the coast line, who acted as middlemen between them and the negroes of the interior. The Arabs, however, found that in trade pure and simple they were no match for the natives of India, Hindis, Banyans, Khojas, and others, who, attracted by the comparative freedom of trade under the new masters of the Zanzibar coast, a freedom partly allowed from policy and partly enforced by the weakness of their rule, flocked in yearly increasing numbers to the island and coast of Zanzibar. The Arabs being of a more masculine and adventurous turn than their competitors, commenced to push their way inland, and now they are the great traders and travellers of the interior, while the Indians, who were formerly their rivals, are now their bankers and agents, and from the enormous interest which they charge for advances made to the men who lead caravans into the interior, they obtain the greater share of the profits of the trade. For some time the men who left the coast were content with the slaves that they could obtain from the neighbouring regions, and with the ivory brought down by the Wanyamwesi from the interior; but some fifty years ago the pioneers of the movement towards the interior ventured to cross Ugogo, and established themselves in Unyamwebe. Twelve years later they reached Tanganyika, and after some

further delay ventured to the westward of that great lake, and while some spread into the country of the Kazembe, others, following a more northern route established themselves at Nyangwe on the Lualaba, which was afterwards proved to be the main stream of the Congo. These travels of traders from Zanzibar were in the first place mainly in search of ivory and slave-hunting and buying were only subsidiary to this great object. Hence we hear comparatively little from Burton, Speke, and Grant of slavery or slave caravans; and ever during the time Cameron was among the Arab traders on and to the west of Tanganyika slavery, or rather slave-trading, was in great measure in abeyance. This arose, in a great measure, from two causes over which the traders had no control: native wars waged by Mirambo and others had blocked the roads and rendered it dangerous for caravans to pass; and in Manyema and other comparatively new countries the people were too numerous and warlike for the Arab traders with the forces then at their command to dare to carry on slave raids in the manner they are now doing. Cameron nevertheless brought home such descriptions of the evil that was then commencing that the King of the Belgians was confirmed in his beneficent designs for the good of Africa, and when Mr. Stanley returned to Europe after his adventurous descent of the Congo, he entrusted him with those labours which have resulted in the foundation of the Congo Free State (*q.v.*), while at the same time a flood of missionary and philanthropic effort was poured forth into Africa which has resulted both in the conversion of many to Christianity and in the establishment of the African Lakes Company on Lake Nyassa. Unfortunately, however, while Europe, and especially England, was labouring to do good to Africa, the number of new-comers into the interior, whose purpose was evil, was far greater than that of those whose purpose was good. Excited by tales of a tusk worth perhaps a hundred or more dollars being bought for a copper bracelet, or a handful of cowries, of slaves of all ages and both sexes being easily obtainable, adventurers of the vilest and lowest class of the so-called Arabs hurried from the coast and spread themselves like locusts over the face of the land. The countries east of the Tanganyika and Nyassa have nearly yielded up all the population that can be drained from them without becoming absolutely desert. Of course from this statement must be excepted those territories where the people have allied themselves with the new-comers, and have helped them to prey on their neighbours. Many of the coast people have settled themselves in this portion of Eastern Africa, which has now, as regards the slave trade, become a consuming rather than a producing district. Those of the Arabs who have crossed the great lakes have been accompanied by numbers of Wanyamwesi, and other peoples of Eastern Africa attracted by the same stories of the cheapness of ivory and the plenty of slaves. With the aid of these allies the slave dealers have now depopulated large tracts of country—Manyema, part of Ubia, part of Urua, a district to the west of the Lomami, Katanga, the country round the south end of the Tanganyika, and a large tract of country on both sides of the Congo from Nyangwe to the Aruwimi, (*v. Prof. Drummond's "Tropical Africa," ch. iv.,*

"The Heart Disease of Africa," and accompanying map). Within recent times at least five millions of people must have been destroyed in countries which were comparatively free from the curse of the slave trade. A large portion of the countries which have been rendered desert within the last three or four years lie within the borders of the Congo state, which although founded in order to bring freedom and peace to the natives of Africa, has not carried out its original intention. The extracts from the letters of Mr. Ward and others which have appeared in the *Illustrated London News* and other papers allege that the associates of Tippoo-Tib have not in any way ceased from their evil work since his agreement with Mr. Stanley, and the whole of the Congo above the Aruwimi is delivered over into their power. The alliance with the Arab slave dealer seems to have had two objects—one to aid Mr. Stanley in his effort to reach Emin Pasha, and the other to get the ivory which formerly had been sent to Zanzibar exported by the Congo route. How the slave trade is carried on we learn from *Lieutenant Wissmann* (v. Proc. Roy. Geog. Soc. for August '88), who tells us that cannibalism and cold-blooded murder are of constant occurrence; and that nothing more horrible or barbarous has ever before been inscribed on the page of history. The chartered British and German Companies on the east coast are both bound by their charters to discountenance slavery, but while the first has scarcely entered upon its task, the second has received such a check from the coast population that its existence is imperilled, and it is therefore impossible to say what results their foundation may have upon this vexed question. On Lakes Nyassa and Tanganyika the operations of missionaries, planters, and traders are hindered by the hostility, latent or open, of the slave dealers, and on the former the African Lakes Company is making a gallant fight against their enemy, but their leaders have been wounded, and it seems doubtful if with the forces at their command they will be able to maintain their position. A movement is now on foot to raise funds to establish anti-slavery stations on and between the two lakes; it is an arduous undertaking, but it deserves to succeed, for by it the slave-hunters of the Zanzibar coast, who are wasting the country to the west of the lakes, are cut off both from the markets for their human prey and their supplies of arms and ammunition. At the present time (Dec. 6th) a blockade of the Zanzibar Coast is in progress by the allied vessels of England, Germany, Italy, and Portugal. It was also stated that the French have sent a vessel to join the squadron.

Sliding Scale System. See MINING.

Sloyd (also spelt *Slojd*) is the English form of the Swedish *Slojd*, which etymologically is akin to sleight in the phrase "sleight of hand." It is the name given in Sweden to any useful handicraft (such as carpentry, metal work, basket work, fretwork, bookbinding, cardboard work, or saddlery), which does not form the sloyd's exclusive or main occupation. This is the wider meaning; but there is an educational meaning of the word which is supplanting the other, and promises to become world-wide in its acceptance. In this sense sloyd means wood-

sloyd, and is a school subject taught not so much for its own sake as for the means it gives of training the eye and the hand and the physical powers generally, and also of developing habits of independence, order, exactness, and industry. In addition to the ordinary carpenter's tools, the knife is much used, especially in shaping the objects that come early in a pupil's course. The pupil thus acquires a sense of solid form such as lessons in modelling are calculated to give. The whole system has been so carefully thought out and so nicely graduated as to form a cunningly devised instrument ready for the schoolmaster's hand, and just as capable (if taught properly) of promoting the mental development as any of the ordinary school subjects. And as of course it provides an admirable relief to the confinement of ordinary lessons, it helps to make school a brighter and a happier place. The headquarters of Sloyd is Naäs, an estate on the Lake Säfvelongen, 20 miles from Gothenburg, and on the main line to Stockholm. Here four times every year teachers of all nations (who are not specialists but teachers of ordinary form subjects) are heartily welcomed. The courses in '89 (in wood-sloyd only) begin Jan. 6th, May 20th, July 31st, Nov. 6th; and last six weeks. There is no fee for instruction, and the charge for board and lodging is extremely small. Further particulars may be obtained either of Director Salomon himself (Naäs, Floda, Sweden), or of the secretary of the Sloyd Union, Miss M. Waro, Girls' High School, Ipswich. There is no full treatment of sloyd in English; but the reader may be referred to "Sloyd" by Miss Chapman, to "Slojd" by Miss Lord; to the monographs and leaflets of the Industrial Education Association, 9, University Place, New York City, U.S.A.; and to a lecture by Miss Hughes in the *Educational Times* for January '89. Sloyd teaching to boys and girls, conducted by Naäs-trained teachers, may be seen in actual operation at the Sydenham College for Ladies, at Miss Lord's Kindergarten at Notting Hill, and at Victoria Park School for Boys, Manchester; it is just beginning to be introduced into recreative evening classes. The German Sloyd, as taught at the training school at Leipzig by Dr. W. Götz, is a modification of the Naäs Sloyd. Wood-sloyd, cardboard work, wood-carving, and metal work are the subjects of instruction. There is a four weeks' course for teachers beginning July 1st, and another beginning Aug. 1st; in '89 there will be one at Easter also. The annual meeting of the Sloyd Association was held December 5th at the School Board for London Offices, with the President, the Earl of Meath, in the chair.

Small Holdings, Committee on. See SESSION '88, sect. 67.

Small Tithes. See TITHES.

Smith, Sir Archibald Levin, a judge of the Queen's Bench Division of the High Court of Justice, was b. in 1836. Called to the bar in 1860, he served his time as Junior Counsel of the Treasury (1863-68), and again (1879-83), when he was elevated to the bench. During his career Mr. Justice A. L. Smith, who never took silk, was engaged in many important commercial cases and election petitions. Was appointed one of the judges of the *Parnell Commission* '88.

Smith, Rev. Edward, b. at Bolton. Educated at the Theological College, Didsbury; entered the Wesleyan ministry at Cheadle, 71.

Subsequently he became minister of the Central London Wesleyan Mission at St. John's Square, Clerkenwell, '86. Mr. S., who represents modern Wesleyan-Methodism, has been very successful in his evangelistic efforts.

Smith, Goldwin, LL.D., was b. at Reading, Berks, 1823. Educated at Eton and Oxford, where he graduated first class in classics '47; Fellow of Univ. Coll. Oxford '47. He was Assistant-Sec. of the Royal Commission of Inquiry into the condition of the Univ. of Oxford '50, and Secretary to a subsequent Commission, under which important University reforms were introduced. **Regius Professor of History** ('58 to '68) at Oxford, and was brought prominently into notice by his lectures, which were characterised by great vigour and originality and a strong leaning toward democratic doctrines. He was amongst the few Englishmen of "light and leading" who championed the cause of the North in the American Civil War. At the conclusion of the war he visited the United States on a lecturing tour, which was brilliantly successful. In '68 he accepted the Professorship of History at Cornell Univ., New York, which he resigned in '71 when he was appointed a member of the Senate of the Univ. of Toronto, where he has since resided. He is the author of numerous works on English and American historical subjects and of many political pamphlets. He has distinguished himself by his vigorous articles in the leading reviews in condemnation of Mr. Gladstone's Irish policy.

Smith, Rt. Hon. Sir Montagu E., b. 1809. Called to the bar at the Middle Temple (1835), Q.C. (1852). Represented Tynon as a Liberal-Conservative (1859-65), when he was appointed a judge of the Court of Common Pleas. Member of the Judicial Committee of the Privy Council (1871), and a member of the Universities Committee of the same body (1877).

Smith, Rt. Hon. Wm. Henry, M.P., was b. 1825. Member of the London School Board (1870-74); of the Council of King's Coll., London; created D.C.L. of Oxford (1879). He has held the following official appointments: Financial Secretary to the Treasury (1874-77); First Lord of the Admiralty (1877-80); Secretary for War (1885). Returned in the Conservative interest as member for Westminster (1868-85); Strand Div. 1885 and 1886. On the resignation of Lord Randolph Churchill, Mr. Smith vacated the War Office and assumed the leadership of the House of Commons as **First Lord of the Treasury**. Mr. Smith has always been distinguished for laborious attention to his duties, which have been rendered particularly trying, especially during the session of '87, owing to the attacks made upon him by members of the Irish party, on account of his connection with the firm of W. H. Smith & Sons, who conspicuously advertised on their railway book-stalls the well known pamphlet "Parnellism and Crime." Mr. S. increased his reputation for conducting the business of the House last session. Under the will of the late Lord Idlesleigh Mr. S. was appointed literary executor to that nobleman.

Smith, William, LL.D., Hon. D.C.L. Oxon., classical scholar, and editor of the *Quarterly Review* (q.v.) since 1867; b. in London, May 20th, 1813. Educated at the University of London, was intended for the bar, and kept the usual terms at Gray's Inn; but abandoned the profession of the law for classical literature. He is the editor of the *Classical and Biblical Dictio-*

aries, the author of many educational works, and was for several years Classical Examiner in the University of London, and Professor of Classics in New College, London.

Social Democrats, German. See GERMAN POLITICAL PARTIES.

Socialism. Primarily and broadly, the name given to the doctrine which proclaims the equal right of all to the material conditions of existence—that is, to the enjoyment of the necessities, comforts, and luxuries of life—and at the same time the equal duty of all to labour in relatively equal proportion (so far as may be needful) for the maintenance of those material conditions. Socialism is thus, in its first intention, an economic doctrine. But by most schools of Socialists this has been, and is, regarded as the necessary foundation of a reconstruction of human life generally—i.e., of a complete readjustment of political, religious, and domestic relations, involving the abolition of their present forms. (See ed. '88.) **Names and Addresses of English Socialist bodies** as under:—**Social Democratic Federation:** offices, Bridge Street, Blackfriars, Sec. W. F. Lee, weekly organ *Justice*; **Socialist League:** offices, 13, Farringdon Road, Sec. F. Charles, weekly organ *Commonweal*; **Fabian Society** (for propaganda among the educated classes). Consult Karl Marx's "Capital," Hyndman's "Historical Basis of Socialism in England," Bax's "Religion of Socialism," etc.

Society for Promoting Christian Knowledge. The. Founded in 1668, "to promote and encourage the erection of charity schools in all parts of England and Wales." By the year 1741 nearly 2,000 charity schools had been established, chiefly through the instrumentality of the S.P.C.K. In 1811 the National Society was established, mainly to relieve the parent Society of some of its heavy labours. Of late years the Society has devoted much attention to the publication of cheap, good books, principally of a religious or educational nature. The expenditure by way of free grants of money and books for the year ending March 31st, '88, was £35,675. It has recently spent £32,000 on the building and establishment of a training college for one hundred schoolmistresses, at Tottenham. The Society has voted the sum of £14,550 for the establishment and development of **Medical Missions in India and other parts of the world.** Sec., Rev. W. H. Grove, M.A. Office, Northumberland Avenue, London, W.C.

Society for Promoting Industrial Villages, and for reviving or establishing village industries side by side with agriculture. This society was founded in 1883, and has already exerted its influence in many quarters with success. The work is being carried on by a staff of lecturers on various industries, and their gratuitous services are at the disposal of any local Society. Office, 30, Craven St., Charing Cross, W.C. Hon. Sec., George J. Knight.

Socotra. A large island lying 150 miles off Cape Guardafui, at the entrance of the Gulf of Aden. Its area is 3,000 sq. m.; pop. 4,000. From 1876 it was under British protection, a subsidy being paid to the Arabian Sultan of Keshin, he undertaking not to cede the island

to any Power but England. In 1886 it was formally **annexed** by England, and is now provisionally ruled by the Resident of Aden. The people of the uplands are nomads. The capital, **Tamarida**, is on the north-east coast. The interior rises into high peaks, and much of the high land is rocky and arid. There are fruitful valleys and lower slopes, with plementous pasturage supporting large flocks and herds. **Scotora** is famed for its aloes, and also exports dragon's blood (a dye resin), dates, figs, etc. Its possession may prove of importance to us, now that a rival colonising Power (Germany) is established on the neighbouring Somali mainland.

Sodo. See **PORT HAMILTON**.

Sodor and Man, Rt. Rev. John Waring Bardsley, Lord Bishop of, was educated at Trinity Coll., Dublin, where he graduated M.A., and was ordained deacon '59. He was for some time Archdeacon of Warrington, and subsequently Chaplain to the Bishop of Liverpool. He was appointed Incumbent of St. Saviour's in that city in '71, and was elevated to the episcopal bench as Bishop of Sodor and Man in '87. The bishopric is worth £2,000 a year.

Solicitor. This is the name given to the lower branch of the legal profession. It was formerly used by those whose practice was in the Chancery Courts, while **attorney** was used in the Common Law Courts. By the Judicature Act of 1873 all attorneys, solicitors, and proctors shall be called solicitors of the Supreme Court. They are obliged to take out annually a certificate, and are considered officers of the court, and are under the control of the judges who may, on motion made to them, strike any offender off the rolls. They are enabled to sue for their costs, and may be sued by their client for negligence. Their interests are protected by the society named the **Incorporated Law Society** (*q.v.*), Chancery Lane.

Solicitor and Client, Law on, '88. The case of **Dooley v. Watson**, in the Chancery Division (June '88), was of considerable importance to solicitors and their clients. The plaintiff, Mrs. Dooley, employed a solicitor to sell an estate for her, and to invest part of the proceeds in a mortgage. The mortgagee having become bankrupt, the mortgaged property turned out to be insufficient security. The plaintiff therefore sued the executors of her solicitor to recover the difference; but Mr. Justice Kekewich decided that there was no fraud, and that if Mrs. Dooley had been too confiding there was, at the most, only a case of negligence, upon which she could not rely owing to the operation of the Statute of Limitation. In another case, heard before Mr. Justice Kay, a solicitor, who held a sum of over £4,000 on behalf of a lady client, was held responsible for the amount after it had been stolen by his clerk by means of forgeries. In the action of **Harper v. Lumaye**, the plaintiff had intrusted to a solicitor for reinvestment a sum of money previously placed out on mortgage. Shortly afterwards the solicitor became insolvent, and the plaintiff, being unable to get his mortgage money, brought an action to obtain the reconveyance of the mortgage and the setting aside of the payments. Mr. Justice Kay held that there was no reason why the mortgagor, who had paid off the mortgage, should be made to suffer, and that the solicitor had acted as the plaintiff's agent in such a way as to discharge the mortgagor from liability.

Solicitor-General, The. One of the chief counsel to the Crown (see **QUEEN'S COUNSEL**), and assistant to the Attorney-General. He is in nearly all cases a member of parliament, and has political as well as legal duties. Present Solicitor-General, **Sir Edward Clarke, Q.C., M.P.**

Solicitors Bill. See Session '88, sect. 44.

Somaliland. The country occupying the eastern horn or promontory of Africa. **Zeilah** and **Berbera** are the chief ports on the Gulf of Aden, and are now British, having been declared so in 1885. In February 1886 the German Government declared a Protectorate over the whole promontory; taking the coast beyond the British territory (Berbera) on the north, and as far south as Warsheikh, where British protectorate (1887) again begins. Treaties have been effected with the various native rulers of the Somali coasts and country. The interior of the country appears to be an elevated plateau, with vast tracts of stony, waterless desert, but also with some fertile regions. About the centre of the promontory lies the country of **OGADAYA**. South of it is the rich valley of the **Webbe Shebeyir** ("Leopard river"). **Burton**, in 1856, visited **Harar**, which lies about 175 miles south from Zeilah; a walled town of 35,000 inhabitants, surrounded by fields and orchards. It was the capital of **Hadiye**, one of the seven provinces of the Arab empire of Zeilah, founded in the seventh century. In 1875 it was occupied by Egyptian troops. In 1886 a party of British subjects (Indian) and others, were killed near Harar by the natives. The trade is in the hands of Indian Camians settled at various points on the coast. The exports are frankincense and myrrh, hides and horns, ostrich feathers, coffee of a very fine quality, indigo, and salt. These go to Egypt, Arabia, and India, through the ports of Zeilah and Berbera. The Somalis are mainly Mohammedans, divided into tribes, and many of their chiefs affect the name of Sultans. Off Cape Guardafui lies the British island of **SOOCOTRA** (*q.v.*). The Somali are a Hamitic race, nearly akin to the ancient Egyptians, and are closely related to the Gallas, who dwell south of Abyssinia—with whom, however, they are in perpetual feud. The Somali are a pastoral people, carrying arms and ever ready to use them. See **BERBERA**, **ZEILA**, **COLONIES OF EUROPEAN POWERS**, etc. Consult a paper by F. L. James, in "Proceedings of Royal Geographical Society," Oct. 1885.

Somers Islands. An obsolete name of the **Bermuda Islands** (*q.v.*).

Soudan. That section of Africa lying immediately south of the Sahara. Its limits are variously defined. It may be said to be bounded by the Sahara on the N., by the Abyssinian highlands on the E., by the lands draining to the Congo basin on the S., and by Senegambia on the W. Within these limits it has an area of 2,000,000 sq. m. and a pop. estimated at from 80 to 90 millions. Living mainly between 5° and 18° N. lat., it is entirely within the tropics. Soudan (Bilades-Sudan), the "Country of the Blacks," is the home of the *true Negro race*, but in many places the aboriginal element is intermingled with foreign intruders from the north and east—Fulahs, Tibus, Berbers, and Arabs. The **Arabs** especially have imposed their religion and civilisation upon the natives, and given rulers to many of the negro states. **Western and Central Soudan** are divided into eight independent and semi-independent states

viz. (from west to east), Bambarra, Moassina, Gando, Sokoto, Adamawa, Bornu, Baghimmi, and Wadai. **Eastern Soudan** comprises Darfur, Kordofan, Sennar, Taka, the Equatorial Province (the scene of Emin Pasha's labours), and the Bahr-Gazal Province. The district of **Sennar**, the eastern limit, has been under Egyptian rule till recently, and has been brought into notice through our campaign against the **Mahdi**. For detailed account see cd. '86. A great battle between the followers of the Mahdi and the Sultan of Wadai's people was fought in Nov. '88, the Madhists being victorious. Consult Keith Johnston's "Africa," and works of Sir S. Baker, Rohls, Nachtigal, Gordon, and other travellers.

South African Republic. Official name of the **TRANSVAAL** (*q.v.*).

South America. Under this head are comprised the Argentine Republic, the Empire of Brazil, and the Republics of Bolivia, Chili, Ecuador, Paraguay, Peru, Uruguay, and Venezuela, each of which will be separately treated.

South Australia. A colony comprising the central section of Australia. The older portion, South Australia proper, lies between 129° and 141° E. long., and from the sea to 26° S. lat. To this was added in 1863 the **Northern Territory**, lying between 129° and 138° E. long., and north of 26° S. lat. The whole colony, thus constituted, contains 903,690 sq. m. (South Australia 380,070 sq. m., Northern Territory 523,555 sq. m.), extending 1,850 m. N. to S. and 650 m. W. to E.; pop. 319,516. Capital **Adelaide**, pop. 45,333; or, with surrounding suburbs, 128,000. It is a beautiful and well-built city, with many fine buildings and institutions. **Towns**, not suburban, are mostly small centres: Gawler, Kapunda, Kooringa, Moolta, Naracoorte, Port Victor, Wallaroo, the largest; **Palmerston** and others in Northern Territory. Settled part of colony divided into 37 counties, hundreds (agricultural blocks), 21 municipalities, and 112 District Councils—the last of most importance. Also four pastoral districts.—**Chief rivers** are portions of lower Murray, Wakefield, Gawler, Torrens, in south, and the large and navigable Roper, Adelaide, Victoria, Daly, etc., in the Northern Territory. Country around **St. Vincent Gulf** very rich and fertile. Extensive pastoral regions farther back. About 200 miles north of Adelaide begins a dry region separating the fertile south from the farther north, which is subject to tropical rains. Three considerable "contain chains traverse this part. Interior not entirely sterile. Very many salt lakes. Much fair pasture-land. But the soil and climate of the south are chiefly adapted for the growth of wheat, which has already made the colony the "granary of Australasia," and for vine and olive, both of which are now extensively planted. The mulberry thrives, but viticulture has yet to be introduced. Climate of the south one of the most agreeable and healthy in Australia. See **NORTHERN TERRITORY**.—**Executive** the Governor and responsible Ministry. **Parliament** consists of Legislative Council and House of Assembly. Council consists of twenty-four members—eight retire triennially—elected by colonists of three years' residence, owning £50 freehold or £20 annual leasehold, or paying £25 annual rent; whole colony voting in four constituencies. Assembly elected triennially on manhood suffrage: fifty-two members. Colony is represented in the Federal Council of Australasia.

Northern Territory ruled by a Resident and staff. Religion and education are well provided for. Volunteers and reserve number about 2,000 of all arms. The colony possesses a modern efficient ironclad and torpedo-boats. **South** essentially pastoral and agricultural; 2,785,490 acres cultivated, of which 1,942,453 are under wheat, yielding 14,621,755 bushels, or 7½ bushels per acre; 7,264 acres are under oats, producing 88,639 bushels, or 12 bushels per acre; 15,697 acres are under barley, producing 211,207 bushels, or 13½ bushels per acre; 45,000,000 lb. of wool exported, and 84,591 tons of bread-stuffs; minerals, chiefly copper, value £338,132; 4,590 acres of vineyard produced 473,535 gallons of wine and 4,000 gallons of brandy; horses numbered 168,000; cattle 390,000; sheep 6,700,000. There are 1,211 miles of railway, 3,650 miles of good main road, and 9,778 miles telegraph. For financial statistics see **BRITISH EMPIRE**, etc. (table). Gold produced in 1886 was 8,825 oz., value £32,585. The undeveloped resources of the colony are considerable. In the Northern Territory land suitable for sugar, tea, cinchona, etc., can be had in blocks of two square miles, at 6d. per acre rent or 75. 6d. purchase; pastoral leases for twenty-five to three hundred square miles at 6d. rising to 2s. 6d. per mile, for twenty-five years, and stock conditions.

Colony founded in 1836, under auspices of South Australian Colonization Association; government vested in Governor appointed and commissioners approved by the Crown. Lands to be sold not less than £1 per acre, and funds devoted to emigration from England. Early difficulties: large debt to Imperial Government incurred. Recovery began 1844, when 30,000 acres under cultivation much stock, exports value £82,000. Rich copper mines discovered, proving great source of wealth. Representative government introduced, and, in 1852, local government of districts. In 1850 the constitution was given and proclaimed. Responsible government from that date. Northern Territory annexed in 1864. Overland telegraph from Port Darwin opened in 1872. During '88 the question of **Chinese Immigration** occupied much attention, and a conference on the subject was held at Sydney (June) to take joint action in the matter; South Australia sending delegates to represent her interests. The financial statement made by the Rt. Hon. T. Playford, Premier (Aug. 16th) in the House of Assembly estimated the revenue for '89 at £2,400,000, and expenditure at £2,280,000. Consult Boothby's "Statistical Sketch of South Australia," Harcus' "South Australia," Gordon and Gotch's "Australian Handbook for 1887," Petherick's "Catalogue of York Gate Library," *The Torch*, etc.; and **DIPLOMATIC**.

Southend New Pier. In Sept. '88 the Local Board of Southend-on-Sea, Essex, signed a contract with Messrs. ARNOLD, Bros., of Glasgow, for the construction of a new pier instead of the present wooden one, already said to be longest in England. The contract was for the £43,384, but the whole scheme, with its superstructures, tramway, etc., cost some £60,000. The contract is divided into three distinct divisions. The first of these is a double-decked pier of about 200 yards in length, extending from the present massive pier approach up to, and including a spacious concert room which is estimated to cost £2,000. Seating accommodation will be provided for 1,000. The second section consists of a combined promenade and

tramway pier about a mile in length—viz., from the concert-room to the head of the present pier. This portion of the structure will be 20 feet wide, 12 feet being reserved for promenading purposes and the remainder for the tramway. The third section consists of a large and handsome pierhead, which will be erected just outside the present one. It was originally intended to extend the new pier 80 yards further seaward, but this idea has been abandoned. The time allowed for the construction of the pier is as follows:—Section No. 1, seven months; section No. 2, twelve months; section No. 3, fifteen months. These periods run consecutively. **Engineers**, Brunlees & M'Kerrow, of London. Work has been commenced.

Southern Bulgaria. Name now usually given to Eastern Roumelia (*q.v.*).

South Georgia. A barren, snow-covered island in the South Atlantic, lying 800 miles E.S.E. of the Falklands, to which colony it has been annexed. Area 1,570 sq. m.

Southwell, Rt. Rev. George Ridding, Lord Bishop of, b. 1828; educated at St. Mary's Coll., Winchester, and Balliol Coll., Oxford, where he graduated M.A. ('53), and D.D. ('69). Was Head Master of Winchester College '67-84. Consecrated first Bishop of Southwell in May '84.

Spain. A monarchy lately under Alfonso XII. of the House of Bourbon, now under a regency. By constitution of 1876, Spain is declared a constitutional monarchy, with executive power vested in the king, and the legislative power in the Cortes with the king. Cortes composed of senate and congress equal in authority. Senate in three classes—1st, senators in their own right; 2nd, 100 Crown nominees (the two first classes not to exceed 180); 3rd, 180 elected by communes, church, universities, and largest taxpayers, half to retire every five years. Congress composed of 431 deputies, elected by citizens of twenty-five years of age paying taxes. Islands of Cuba and Porto Rico represented in Cortes. Each province has its own parliament for municipal and provincial administration. Religion, Roman Catholic. Public worship of any other creed forbidden. Area, including the Balearic and Canary Isles, each considered a province, 197,667 sq. m.; estimated pop. ('85) 17,226,254; estimated revenue for '87, £34,023,870; expenditure, £34,256,760; debt, £240,000,000. Imports for '86, £34,208,276; exports, £20,094,992. The most striking commercial feature of '88, and one which has an important bearing upon the future prosperity of the provinces of Cadiz, Seville, and Malaga, is the manufacture of Spanish cognac, which, taken from the pure rich grape of those districts, has proved far superior to the French. (For army and navy see **ARMIES**, **FOREIGN**, and **NAVIES**, **FOREIGN**.) The past year ('88) has been barren of incidents of the first magnitude. More important was the scheme of the Government to strengthen the navy by building some new ironclads. For this purpose £9,000,000 was voted, to be spread over nine years. Among the chief political events of the year are to be noted the approval by the Senate, by 122 to 52 votes, of a bill establishing trial by jury (Feb.); Spain's action in respect of Morocco, the proposed conference relative to its affairs having been abandoned in consequence of the Sultan's refusal to grant the concessions required to foreign trade; the question of the **Sugar Bounties** (*q.v.*); the

augmentation of the fleet (see **NAVIES FOREIGN**); the question of **army reform**; and the affirmation by the Ministry of a **Universal Suffrage Bill** (Nov. 29th), which grants electoral rights to all Spaniards over twenty-five years of age, with two years' residence in the same place, the only exceptions being officers of the army and soldiers on active service, paupers, and criminals. In June the **Sagasta Ministry** resigned, and Señor Sagasta returned to office with a new Cabinet. During the latter part of the year party feeling manifested itself by a hostile demonstration against Señor Canovas del Castillo, the ex-premier, at Saragossa (Oct.), and repeated by the students of Valladolid and Barcelona (Nov.). Owing to the constantly recurring rivalries of the different sections of the Liberal party, the opposition of Señor Gamazo, leader of the Agrarian party (see **SPANISH POLITICAL PARTIES**), and resignation of General Ryan, Minister of War, and other ministers, a Cabinet crisis ensued, and ended in the resignation of its members (Dec. 9th). Of social and general events the more important have been the trial and acquittal of Dr. Middleton for shooting a gipsy who attacked him in the tower of Cordova Cathedral (April); the demonstration of fifty ironclads of the International fleet; the opening by the Queen-Regent (May 20th) of the **Barcelona Exhibition** (*q.v.*); the visit of the Duke and Duchess of Edinburgh (June) to Madrid, when the order of Maria Louisa was conferred on the Duchess; the inauguration (Sept. 21st) of the **Bilbao Harbour Works**; and the visit of the Queen of Portugal and the Duke of Oporto to Madrid (Nov.). Consult Webster's "Spain"; Reclus (Elisee) "Geographie Universelle," Vol. I.; *The Statesman's Year Book*; *Almanach de Gotha*, &c.

Spanish Colonies. See **COLONIES AND DEPENDENCIES OF EUROPEAN POWERS**.

Spanish Exhibition, '89. In April next it is proposed to hold an exhibition, of which the industrial section will include all the various manufactures of Spain and her colonies. Paintings and sculpture by Spanish artists, and representative collections of articles produced at the chief centres of Spanish industry, will be included. An interesting feature of the exhibition will be the Spanish streets, villages, and shops, peopled by men and women in the picturesque costume of the various districts. The president of the exhibition, which will be held on the site of the late Italian Exhibition (*q.v.*), is the Duke of Wellington.

Spanish Political Parties and the Cortes. The Cortes or parliament of Spain consists of two bodies, a Senate and a Congress. The Senate is composed of three classes: those who sit by right of birth or official position, of 100 members nominated by the Crown, and of 180 elected by the largest taxpayers of the kingdom and certain corporate bodies. In the present Senate the Government has on most questions a large majority, the Opposition numbering 108, and being thus divided: **Conservatives**, 90; **Republicans**, 6; **Democrats**, led by General Lopez Leominquez, a nephew of Marshal Serran, 6; **Liberal Reformers**, led by Señor Romero y Robledo, 5; and 1 **Cuban Autonomist**. Among the majority, however, are 40 agrarian members, who usually oppose the Government on economic questions, and 12 followers of Marshal Martinez Campos, whose support is also variable. The present Congress, which was also elected in April '86, contains 430 members, who are

elected (in the proportion of 1 to every 50,000 souls of the population) by limited suffrage under the constitution of March 27th, 1876, which, after the accession of the late King Alfonso, replaced the more liberal constitution of 1869. The political divisions of the present Congress are very numerous, although for ordinary voting purposes they may be classed as **Ministerialists**, 320; **Opposition**, 170. Each of these two divisions, however, contains several groups, the Opposition particularly being made up of the most conflicting fractions, from Radical Republicans to Conservatives of the most reactionary type. Chief among the latter are the followers of **Señor Canovas del Castillo**, ex-prime minister, who constitute more than a half of the whole Opposition. They are for the most part men of high position and exceptional talent, very many of the number being ex-ministers. The followers of **Señor Canovas**, however, are only opposed to the Sagasta ministry on political grounds, as they are devotedly attached to the monarchy, which steadily continues to increase its hold on the country. The next most numerous group among the Opposition is that of the **Radical Republicans**, who number 18; the remaining fractions are: **Democrats**, 6; **Moderate Republicans**, or **Posibilists**, to which **Señor Castelar** belongs, 5; **Liberal Reformers**, 4; **Cuban Autonomists**, 4; and 1 **Carlist**. The **Ministerialists** are less divided. The chief strength of the Ministry is obtained from the personal following of **Señor Sagasta**, numbering some 230, whose political creed may be described as moderate Liberalism. There are also comprised within the majority 30 **Democrats**, who follow **Señor Martos**, the President or "Speaker" of the Congress; 20 **Centralists**, who represent the Conservative wing of the majority; some 40 **Dissidents** and **Agrarian members**, led by **Señor Gamazo**, an ex-minister, who succeeded to the leadership when the former chief of the group, the Marquis de la Vega de Armijo, entered the Sagasta cabinet as Minister for Foreign Affairs. **Señor Gamazo's** followers, however, usually support the ministry on all but agrarian and economic questions, on which they are pronounced protectionists, while the Sagasta cabinet inclines to free trade. **Señor Sagasta's** programme is a thoroughly Liberal one, and is as well calculated as anything is likely to be to cope with the Clerical and Carlist parties and to hold in check the revolutionary aspirations of **Señores Pi y Maigall** and **Ruiz Zorrilla**. The **Cabinet crisis** and resignation of its members (Dec. 9th) may cause some changes in the relation of the parties.

Spanish Town. In Jamaica (*q.v.*).

Speaker. The title of the presiding officer of a legislative assembly. On the first day of the meeting of a new Parliament members of the House of Commons are summoned from their own chamber to the House of Peers, where Her Majesty's pleasure is signified by the Lords Commissioners that they shall proceed to the choice of some proper person to be their Speaker. On their return the Commons proceed to the election accordingly, the Clerk acting the while as chairman. On the following day the Speaker elect, with the House, is summoned to the House of Peers, and one of the Lords Commissioners signifies Her Majesty's approval of the choice made by the Commons. The Speaker then, in the name and on behalf of the Commons, lays claim to their

ancient and undoubted rights and privileges, which being confirmed, he and his fellow-members return to their own chamber, and the ceremony of taking the oath is proceeded with, he being the first to go through it. (See **COMMONS**, **HOUSE OF**, and **PARLIAMENTARY PROCEDURE**.) The Speaker may hold office until a dissolution. Should the office become vacant during a session, the new Speaker then elected is presented for the Royal approbation, but does not claim the privileges of the House. This great officer has a residence in the Palace of Westminster, and receives a salary of £5,000 per annum; he ranks as first Commoner, and is usually awarded upon retirement a pension of £4,000 and a peerage. There has been no contested election for Speaker since 1830. The following have filled the office since the meeting of the first reformed Parliament:—**Sir C. Manners-Sutton** (first elected 1817), 1833-5; **Mr. J. Abercromby**, 1835-9; **Mr. C. Shaw-Lefevre** (the present Viscount Eversley), 1839-57; **Mr. J. E. Denison** (afterwards Viscount Ossington, and since deceased), 1857-72; **Sir H. Brand** (the present Viscount Hampden), 1872-84, when **Mr. Peel** was elected. The Speaker of the House of Lords is the Lord Chancellor for the time being. The Chairman of Committees and several other peers are authorised by commission to act as deputy Speaker in the absence of the Lord Chancellor; and should none of these be present any lord may be chosen to act. See also **CHAIRMAN OF WAYS AND MEANS**.

Speaker's Claim of Privileges. See **PRIVILEGES OF PEERS AND MEMBERS**.

"Speaker's Commentary The." A commentary on the Bible, contributed by Anglican bishops and clergy; edited by the Rev. Canon Cook, of Exeter; and published by Mr. John Murray, in ten volumes, 1871-81. The plan of the undertaking originated with Mr. J. E. Denison, Speaker of the House of Commons, which accounts for its title.

Special Correspondents. See ed. '88.

Special Licence. The law requires that before the celebration of a marriage according to the rites of the Church of England the banns be thrice published previously in the church where the marriage is to be solemnised. But a licence may be had to dispense with this ceremony. An ordinary licence is issued by the Ordinary or by his surrogate. A special licence is issued by the Archbishop of Canterbury, and empowers the parties to be married at any time, not only in any church or chapel, but in any other meet and convenient place. A special licence is issued from the Faculty Office, Doctor's Commons, and bears a £5 stamp. A special licence and the Ordinary's licence are obtained in the same way, but a special licence is supposed to be obtainable only by persons of rank.

"Specie Point." See **FOREIGN EXCHANGES**.

Species. See ed. '88.

"Spectator The." (*6d.* weekly), founded July 5th, 1828. Originally started as a Liberal review, under the editorship of **Mr. Rintoul**. In 1862 the department of news was altered in form, and reduced to paragraph articles. *The Spectator* is entirely opposed to the concession of Home Rule to Ireland. **Office**, 1, Wellington St., Strand, W.C.

Spectrum Analysis. See ed. '88.

Spencer, Herbert. English philosopher, b. at Derby, 1820. Educated by his father, a teacher of mathematics at Derby, and by his

uncle, a clergyman. At the age of seventeen he became a civil engineer, a profession he gave up some seven or eight years later. During this period Mr. Spencer contributed to various journals, and was for some time sub-editor of the *Economist*. At the house of Dr. John Chapman, editor of the *Westminster*, Mr. Spencer met, and became the life-long friend of **George Eliot** and **George Henry Lewes**. His first work of importance, "Social Statics, or the Conditions essential to Human Happiness specified, and the first developed," appeared in 1851. In 1855 appeared the "**Principles of Psychology**," and in 1861 "Education—Intellectual, Moral, and Physical," which has run through sixteen editions. Mr. Spencer has always contributed largely to various periodicals, and these articles have, for the most part, been reprinted in pamphlet or book form. In 1882 Mr. Spencer visited America, where he gave several lectures, among others one on "American Nervousness." Mr. Spencer is said to be an evolutionist and agnostic, and in his various works has especially attempted to apply the principles generally known as "Darwinian," and the yet larger ideas of which these are only a part, to the phenomena of mind and of society. In his "First Principles" he deals with biological problems generally. Among his many important works are "The Principles of Psychology," and "Political Institutions" (being Part V. of "Principles of Sociology"—1882). Of Mr. Spencer's many recent review articles, a series from the *Contemporary* has been reprinted as "**The Man versus The State**" (1884; 7th thousand, 1886), which contains the articles on "The New Toryism" and "The Coming Slavery," an attack on Socialism; "Ecclesiastical Institutions" (being Part VI. of "Principles of Sociology"—1885).

"**S. P. G.** (Society for Propagation of the Gospel in Foreign Parts). The oldest Missionary Society connected with the Church of England, being incorporated by Royal Charter in 1701. Office, 10, Delahay St., Westminster. See, Rev. H. W. Tucker, M.A. Income for 1886-7, £109,765.

Sphairistike. See LAWN TENNIS.

Spurgeon, Rev. Charles Haddon, b. 1834. On relinquishing the Pædobaptist views of his family he became associated with the church at Cambridge of which the celebrated Robert Hall had been pastor; and as a member of the preachers' association of this congregation Mr. Spurgeon first began to hold services in surrounding villages. Pastor at Waterbeach (1851), preached for the first time in London (1853). Pastor, New Park Street (1854); but in consequence of the great crowds attracted services were held at Exeter Hall, and at the Great Hall, Royal Surrey Gardens, where on one occasion a terrible disaster occurred through some one raising a false alarm of fire whilst Mr. S. was preaching. Pastor of the **Metropolitan Tabernacle**, erected at a cost of £32,000 (1861). Mr. Spurgeon's sermons, of which about 25,000 of each issue are sold, have been published since the first week of 1855, and are translated into various foreign languages. As an author he has produced numerous works, the chief being the *Treasury of David*, 7 vols. 8vo.; he also edits the well-known magazine, *The Sword and Trowel*. Mr. Spurgeon is the founder of the **Stockwell Orphanage** (1867), the **Pastors' College**, the **Colportage Association**; the **Book Fund**, and the

Supplementary Pastors' Aid Fund. Minor institutions are also attached to the Metropolitan Tabernacle. Mr. Spurgeon's letter on the Irish Question exerted an important influence in Non-conformist circles at the time of the last election. Mr. S. in 1887 severed his connection with the **Baptist Union** on the ground that many of its members held views more in harmony with the teachings of Matthew Arnold and Herbert Spencer than with those of St. Paul and the Christian Fathers—a step which has led to a long controversy in the papers under the title of the "**Down Grade Question**." In '88 Mr. S. was entertained by his supporters at a meeting convened to welcome him on his return from Mentone, and to celebrate the issue of his 2000th sermon. He is at present (Dec. 6th) staying at Mentone for the recovery of his health.

Stainer, Sir John, Mus. Doc., **Inspector of Music** to the **Education Department**; b. 1840, and at seven years of age became a chorister of St. Paul's; at sixteen organist of St. Michael's Coll., Tenbury, and three years later organist of Magdalen Coll., Oxford. He subsequently graduated both in Arts and in Music, and in '60 was appointed organist of Univ. Church. In '72 he succeeded the late Sir John Gosse as organist of St. Paul's, and held that appointment until last year, when he retired. Dr. Stainer has composed many anthems and Church services, the Cantatas "**The Daughter of Jairus**," "**St. Mary Magdalene**," "**The Crucifixion**," and, in addition to his well-known "**Treatise on Harmony**" and **Musical Primers**, has written "**The Music of the Bible**." Knighted '88. "**Standard, The**." First published in 1827.

Its present price is a penny, and it is in the front rank of the political journals that rose into importance almost immediately after the abolition of the Paper Duty (61). Its present circulation is close on a quarter of a million daily. The political principles of *The Standard* are conservative, but it reserves, and on occasion exercises, the right of sharply criticising the action of the Conservative party. During the American Civil War, the letters of its correspondent "Manhattan" were marvellously popular, and the services of its war correspondents—notably Mr. G. A. Henty, and Mr. Cameron, the latter of whom was killed in the Bayouda desert—have always been prompt and efficient. The present editor, under whom the prosperity of the paper has steadily advanced for the past decade, is **Mr. W. H. Mudford**. *The Evening Standard* (1857) is an evening edition of the morning paper.

Standing Committee. See GRAND COMMITTEE and PARLIAMENTARY PROCEDURE.

Standing Orders. This term was originally applied to certain Orders made by either house of parliament to regulate its own procedure. Orders made by either house may in respect of their time for remaining in force be classified under three heads. (1) Standing Orders, which are permanent regulations, although liable to be suspended upon extraordinary occasions—e.g., in order to the rapid passing of bills of a pressing nature. (2) Sessional Orders, which continue in force only during the session in which they were made, although they may be renewed from year to year. (3) Orders indefinite in their duration. Of these three classes the Standing Orders are the most important for purposes of procedure. The **Roll of Standing Orders of the House of Lords**

has been regularly published at intervals. But until 1854 the Standing Orders of the House of Commons, with the exception of those relating to private bills, had never been published by authority. See **PARLIAMENTARY PROCEDURE**, and **SESSION '88**, sect. 68.

Stanford, Charles Villiers, who has done so much for the cause of music at the University of Cambridge, is the son of an accomplished amateur musician. He was born at Dublin in 1852, went to Cambridge as Choral Scholar of Queen's, became Organist of Trinity in '73, and soon afterwards Conductor of the Cambridge Musical Society. His university career was also distinguished. His operas are "The Veiled Prophet" (not yet heard in England), "Savonarola" (played at Covent Garden), and "The Canterbury Pilgrims" (written for Mr. Carl Rosa at Drury Lane). His oratorio "The Three Holy Children," written for the Birmingham Festival of '85, his "Irish Symphony," and his choral ode "The Revenge" (Leeds Festival, '86), are well worthy of his reputation. He is Professor of Composition at the Royal College of Music, and one of the leaders of advanced musical thought. In '87 he was appointed **Professor of Music at Cambridge** in succession to the late Sir George Macfarren.

Stanley. Capital of Falkland Islands (*q.v.*). Pop. 700.

Stanley, Henry M., b. at Denbigh 1841, and passed his childhood in the workhouse at St. Asaph. He subsequently sailed as cabin boy to New Orleans, where he was adopted by a Mr. Stanley, whose name he took, but whose death without making provision for him again compelled him to start the world on his own account. After a series of adventures he became a journalist during the American civil war, being attached as reporter to the staff of the *New York Herald*. In '68 he was sent to accompany the British expedition into Abyssinia, as war correspondent for that paper. Subsequent to this he made a tour to the Black Sea, and thence through Persia into India. In '69 Livingstone in Africa, had not been heard of for a long time. Mr. Gordon Bennett, proprietor of the *New York Herald*, ordered Stanley "to go and find him." Early in '71 Stanley left Zanzibar and plunged into the unknown continent. Before the end of that year he had found Livingstone. In '74 he accompanied the British expedition into Ashanti, up to Kumassi, as a war correspondent again. In '76 the *New York Herald* and the London *Daily Telegraph* conjointly sent him to Central Africa, to take up the thread of Livingstone's discoveries. He left Zanzibar in that year, and in '77 emerged on the west coast, having circumnavigated Victoria Nyanza, and forced his way in spite of terrible obstacles down the whole course of the hitherto unknown Congo. In '79 the King of the Belgians gave Stanley the command of an expedition formed by the International African Association for the purpose of exploring the Congo. Stanley succeeded in planting stations and securing steam-navigation upon the upper river, and may be said to have made what is now the Congo Free State (*q.v.*). He remained at work from '79 till '85, with the exception of a short absence in '82. In Jan. '87 Mr. Stanley started on an expedition for the relief of Emin Bey (*q.v.*). Previous to his departure he was entertained at a banquet at the Mansion House, and presented with the freedom of the City of London. A few months after

the expedition had proceeded on its perilous journey, much uneasiness was caused by the publication of a report that Mr. Stanley had been murdered, though this was generally discredited. An expedition under Major Barttelot, son of Sir W. B. Barttelot, M.P., was subsequently sent in search of him, but its gallant leader was murdered by some of the natives who accompanied him. News of the fate of Stanley and Emin is anxiously awaited, a report (Oct. '88) having reached Europe that Stanley had been killed. See **EMIN BEY**.

Staple Inn (Henry V.). Originally a hostelry for wool merchants, became an Inn of Chancery in the time of Henry V., and a dependency of Gray's Inn after Henry VIII. In this quiet spot Dr. Johnson resided on leaving Gough Square, and here he wrote "Rasselas." The Hall was built in 1631, and the other buildings are old. It was sold in Nov. 1886 to the Prudential Life Office, and has now become the home of the Institute of Actuaries.

"Star, The." (Price 1d.) A new Radical evening paper, devoted to the interests of the Home Rule movement. It made its first appearance on Jan. 17th, '88. During the year this paper has attracted attention by its promptness in obtaining information. One of its most popular features is the column entitled "Mainly about People." Editor, Mr. T. F. O'Connor, M.P. (*q.v.*) Office, Stonecutter St., E.C.

Starvation, Death from. See **CORONERS' INQUESTS**.

Stationery Office Publications. The vast number of papers issued to the public under the superintendence of Her Majesty's Stationery Office (*q.v.*) renders it impossible to enter much into detail; but they comprise books affecting the military, naval, and civil services, reports of the scientific results of the voyage of H.M.S. *Challenge*, calendars of State Papers, chronicles and memorials, and publications of the Record Commissioners, rules under the various Acts of Parliament, papers issued by, or affecting, the Board of Trade, the Education, and Science and Art Departments, and the Local Government Board, Explosive and Factory Books and Forms, Survey publications, and numerous miscellaneous books. The most important among this vast collection is **Vol. I.** of "**State Trials**" (1820-21) [10s.], which contains many reports—for the most part hitherto unpublished—of cases relating to the right of public meeting. There are also some extracts from unpublished documents, giving many details as to the history of "**Peterloo**." Besides the account of **Queen Caroline's claim** to be crowned, we have also the celebrated trial of the **King v. Sir Francis Burdett**. The complete set, it is anticipated, will occupy about 8 or 10 vols. The "**Challenger**" volumes have been issued from time to time, but are now drawing to a close, and the publishers note that complete sets will probably soon become scarce. **Military and naval**, and indeed books issuing from all departments, have been constantly appearing. The **Board of Trade Journal** (*q.v.*) [monthly 6d.] contains useful information for merchants and others, while the **Kew Bulletin** (monthly 2d.) ought to interest a large circle, containing as it does such valuable notes on **Economic Produce and Plants**. Of the **Chronicles and Memorials** we have **Historians of the Church of York and its Archbishops, Vol. II.**, **Chronicle of Stephen, Henry II., and Richard I., Vol. III.**, **Reginald de Wodevour, Vol. I.**; besides many

others. The publishers are Messrs. Eyre and Spottiswoode, East Harding Street, London, E.C. Messrs. A. and C. Black, North Bridge, Edinburgh, and Messrs. Hodges, Figgis & Co., 104, Grafton Street, Dublin. The Hydrographic Publications are obtainable only from Mr. J. D. Potter, 31, Poultry. The Geological and Ordnance Survey Maps are published by Mr. E. Stanford, 55, Charing Cross, London, S.W., Messrs. A. and C. Black, North Street, Edinburgh, and Messrs. Hodges, Figgis, & Co., 104, Grafton Street, Dublin. Patent Specifications are only to be obtained at the Patent Sale Office, Curator Street, Chancery Lane, London, E.C.

Stations, British Coaling. To a country like Britain the importance of having various convenient points throughout the world at which both her navy and her mercantile marine may obtain supplies of coal cannot be over-estimated, especially in the event of hostilities breaking out. As steam navigation has advanced, the Government have organised in our own possessions coaling stations, where it has been conceived that they would be most useful; but the great majority of those places have been allowed to remain in a comparatively defenceless state. Operations are now in progress, however, which will remove this reproach. A Royal Commission appointed to inquire into the defence of British possessions and commerce abroad tendered its report to the Government July '84, and the Inspector-General of Fortifications was instructed to draw up a scheme based on the report. A scheme based on the recommendations of this Commission was first laid before Parliament in '84. Since then, however, a fuller knowledge of the requirements of each place to be defended and of the defences now thought essential have largely added to

the estimates of the necessary expenditure. In addition to the list of stations drawn up in '84, is that of **Table Bay**; armament is also to be provided for **King George's Sound** and **Thursday Island**, as asked for by the colonial representatives at the recent Colonial Conference. During '88 the Imperial Defence Bill was passed, which provides for the issue out of the Consolidated Fund of the sum of £850,000 to carry out the agreement for naval defence entered into between the Imperial Government and the colonies respecting the provision of a special squadron of men of war. A further sum of £2,600,000 will be raised for the defence of the military ports and coaling stations, and for making further provisions for Imperial defence. These sums are to be raised by loan, principal and interest to be provided for by appropriation of dividends received on account of the Suez Canal shares. A very large portion of the memorandum issued with the **Army Estimates** by the Secretary of State for War dealt with the defences of the ports and coaling stations of the Empire; in addition to which there was published an exhaustive report on the same subject, made by a committee, of which the naval and military representatives were Admiral Sir W. M. Dorrell and Lieut.-Gen. Sir G. B. Hawley. The committee recommended that between £850,000 and £950,000 was requisite to put the coaling station defence in a proper state of readiness so far as works and armaments, barracks, submarine mines and stores are concerned, it was further recognised that a mobile defence was needed, and that for the provision of this the Admiralty must be responsible. An idea of the expenditure already incurred and the money remaining to be expended will be given by the following table:—

Coaling Stations.	WORKS.				ARMAMENTS.		
	Estimated amount agreed to by Treasury and Colonial Governments.		Expended to 31st March, '88.	Remaining to be expended.	Estimated amount agreed to by the Treasury.	Expended to 31st March, '88.	Remaining to be expended by Imperial Government.
	To be paid by Colonial Government.	To be paid by Imperial Government.					
Aden	£ 64,500	£ 64,500	£ 42,300	£ 22,200	£ 79,950	£ 51,200	£ 28,750

(a) Paid or payable by Indian Government. (b) Paid or payable to Colonial Governments. (c) Same amount to be paid by Indian Government. (d) Amount not yet reported. (e) Esquimaux, Port Elizabeth, etc.

In addition to the £493,495 remaining to be expended, and the contribution to be paid by some of the colonies, a further sum of £350,000 was required for barracks and works, and £66,451 for submarine mines, stores, etc., the total amount being £909,946. With this sum the Secretary of State for War hoped to be able to complete the military defences of the coaling stations in '88-'89. It is, however, unlikely that this will be accomplished, as, owing to the failure of some of the guns to stand the tests required, the heavy ordnance for Singapore and other places was not in November ready for shipment. As to the naval defence, the *Penelope*, an old ironclad, has been rearmed, and will replace the *Flora* receiving ship at Simon's Bay, Cape of Good Hope. Gun and torpedo boats have also been despatched to the same place. This is the first real attempt at providing mobile defence at the coaling stations of nature rendered necessary by the advance in material of naval warfare. The *Orion* ironclad has also been stationed at Singapore as a temporary measure; and at Hong-Kong, Halifax, Esquimaux and one or two other ports, torpedo boats have been detailed for the protection of the stations. Early in '86 Lord Brassey, having returned from a tour of inspection of the coaling stations and other strategic points in the British possessions, called attention to the subject in various letters to the *Times*. He has also delivered several addresses on the same subject at the principal towns in the United Kingdom. Briefly his suggestions are as follows: Bombay needs additional monitors; King George's Sound, Thursday Island and Port Darwin, attainments of sufficient force to deny the harbour and coal supply to depredatory cruisers; The batteries at Table Bay more beachbatteries; Colombo, Singapore, Mauritius, St. Helena, and Sierra Leone, local corps of volunteer naval and militia artillery. Some of these suggestions have been accepted by the Government, and are in course of being carried out. Lord Brassey also called attention to the insufficient docking accommodation on several stations for the wants of the navy in war-time. At Bombay especially a first-class dock is needed, and another in the West Indies, where it has been suggested one should be provided at Castries Bay, St. Lucia, now being fortified as a coaling station in lieu of Barbadoes. This matter also the Government promised should be attended to. In the ports east of the Mediterranean are eleven docks capable of taking in a first-class armoured battleship. Four are in the hands of foreigners—one at Saigon, two in Japan, and one at San Francisco. The remaining seven are in British Colonies: one is at Hong-Kong, the others at the Cape, Melbourne, Sydney, Auckland and Esquimaux. At the military station of Halifax a dock is in course of construction, and at Bombay arrangements are in progress for increasing the size of a dock now being built, so that it shall be capable of accommodating a first-class ironclad.

Stationery Office (Princes St., Westminster) provides the public offices and Parliament with books, stationery, etc., and arranges for the greater part of the printing required by them. In Oct. '69 the Controller of the Stationery Office was appointed by Letters Patent, under the Great Seal, to exercise all rights and privileges in connection with copyright the property

of H.M. Controller, T. D. Pigott (£1,500); Assistant Controller, H. G. Reid (£800).

Stead, William Thomas, editor of the *Pall Mall Gazette* (q.v.), and son of Rev. W. Stead, Congregationalist, Howdon-on-Tyne, was b. July 5th, 1849; married '73; educated privately and at Silcockes; apprenticed ('63) to commercial house at Newcastle Quay. Appointed editor of the *Northern Echo* ('71); appointed assistant-editor ('80) to Mr. John Morley (then editor of the *Pall Mall Gazette*); succeeded him as editor-in-chief ('83); interviewed Gordon at Southampton (Jan. '84); wrote "The Truth about the Navy" (Oct. '84); "The Maiden Tribute of Modern Babylon" (July '85); "No Reduction no Rent," a record of a visit to Ireland in the autumn of '86; "The Langworthy Case" ('87), and "Truth about Russia," written after a visit to Russia in May and June '88.

Stephen, Sir J. F., son of the late Rt. Hon. Sir James Stephen, was b. 1829. Called to the bar ('54), Q.C. ('68). For about two years and a half ('71-'72) he was legal member of the Council of the Governor-General of India, and by his codification of the criminal law of that country conferred lasting advantage upon its inhabitants. He was Professor of Common Law to the Inns of Court ('75-'79). Appointed a judge ('79). Mr. Justice Stephen, who never succeeded in getting into Parliament, is a high authority on criminal law. He is the author of "General View of the Criminal Law of England," "Digest of the Law of England," "Digest of the Criminal Law," and other legal works, as well as "Liberty, Equality, Fraternity," and "Essays by a Barrister." Mr. Justice Stephen's attempts to secure the codification of our criminal law have not yet met with success, although the project has from time to time been under consideration.

Stephen, Leslie, b. at Kensington 1832. Educated at Eton, King's Coll., London, and Trinity Hall, Camb., where he graduated '54; and subsequently became Fellow and Tutor of that college. Mr. S. was for some time editor of the *Cornhill Magazine*, and in '83 accepted the Clark Lectureship in English Literature at Cambridge, but resigned it twelve months later. His best known books are "The Playground of Europe," "Essays on Free-thinking and Plain Speaking," "History of English Thought in the 18th Century," "The Science of Ethics," and the several series of "Hours in a Library." He is also editor of the "Dictionary of National Biography" (q.v.), now in course of publication. Mr. S. is a son of the late Sir James Stephen, and brother of the present Sir James FitzJames Stephen. He married a daughter of the late W. M. Thackeray.

Stephenson, Lieut.-Gen. Sir Frederick Charles Arthur, K.C.B., b. 1821. Served in the Crimean war ('54-'55), as Military Secretary to the Commander-in-Chief. He also served in China. Commanded the Home District ('76-'79), and in '83 was appointed to the command of the forces in Egypt.

Sterling, Madame Antoinette, eminent vocalist, was b. 1850, in the State of New York. Her musical education was conducted by Abella, Marchesi, and Pauline Viardot. In London her training was continued by Manuel Garcia. Her debut in England took place in '73, at one of the Promenade Concerts, Covent Garden Theatre. Since that time Madame S. has become one of

the most popular singers of **ballads** and **Scotch songs**, notably her rendering of "The Lost Chord" and "The Better Land." She married, in '75, Mr. John MacKinlay.

Stevenson, Robert Louis, author and critic; was b. at Edinburgh, 1845, and educated at the University of that city, where he graduated M.A. He started a magazine while a student; but the venture was not a success, though some of his own contributions to it gave promise of the distinction he has now attained. One of Mr. Stevenson's earliest works was an account of his travels in California, but the book which established his reputation as a writer of the first rank was "**Treasure Island**." Amongst the most popular of his other works are "**Dr. Jekyll and Mr. Hyde**," recently dramatised and played at the Lyceum theatre; "**Story of the Rebellion of '45**," the "**Dynamitards**" (written in conjunction with his wife), "**An Inland Voyage**," "**Travels with a Donkey**," "**New Arabian Nights**," "**The Silverado Squatters**," "**Prince Otto**," "**The Blackheath**," "**The Master of Ballantrae**" ('88), and his numerous essays. He has also written a life of his father, the celebrated lighthouse engineer. His most recent work is "Edinburgh: Picturesque Notes."

Steward of England, Lord High, was viceroy, or prime officer under the king. The office was established prior to the reign of the Confessor, and was annexed to the lordship of Hincley; but since the rebellion of Simon de Montfort it has only been revived *pro hac vice* for a coronation, or a trial by impeachment, or the trial of a peer; and in the two latter cases the Lord Chancellor has been generally commissioned to act. At a coronation the L.H.S. walks before the sovereign carrying St. Edward's crown; and in the case of William IV. and Victoria this function was performed by the Duke of Hamilton. See **PRIVILEGE**.

Steward of the Household, Lord (see **MINISTRY**) receives his charge from the Queen in person by the delivery of a **white wand**, which is his symbol of office, and which he bears on state occasions, breaking it over the royal coffin at the funeral of the sovereign. He is always a privy councillor. He has the direction of the Queen's palaces, the accounts of the Household come under his review, and he has the control and selection of all subordinate officers and servants except those connected with the chapels, chambers, and stables. This office must not be confounded with that of Lord High Steward (*q.v.*).

Stirling, Sir James, b. 1836. Educated at Trinity College, Cambridge. Called to the bar ('62), Junior Counsel to the Treasury ('81), Member of the Bar Committee ('83). Formerly he reported for the Incorporated Law Society. Created a Judge of the Chancery Division of the High Court of Justice.

Stock Exchange. (For history of this, and official list, see ed. '87.) For the purposes of business the S. E. is regulated by a committee of thirty members, including the chairman and deputy chairman, called the "**Committee for General Purposes**." This committee is appointed by a ballot of the members, and holds office for twelve months from the 25th March in each year. The S. E. contains upwards of 2,500 members, who are either **Jobbers** or **Brokers**. The former are dealers who buy and sell at the market prices, while the latter deal with the jobbers on behalf of the public, and are remunerated by commission for transacting the

business. The S. E. recognises no transactions with any other parties than its own members, and all must be in accordance with the usages of the "house." The transactions are liquidated twice a month, the settlement extending over three days. The dates are fixed by the committee every month, some accounts being longer than others. In the case of **Consols**, however, it is different, the settlement in **English government securities** taking place but once, at the commencement of each month. **S. E. holidays**—January 1st; Easter Monday; May 1st; Whit Monday; the first Monday in August; November 1st; December 26th; unless specially ordered otherwise by the committee.

—**Terms.** **Scrp** is an abbreviation of the term subscription, and is applied to the certificates of payment of deposits and calls prior to the issue of the definitive certificates or bonds. **Time Bargains** are transactions entered into by speculators who have no intention of either paying for the stock or shares they have bought, or delivering those they may have sold. If at the time appointed the stock they have bought stands above the price named the seller pays the difference. If below he receives it. A **Bull** buys with the view to a rise in price before a settlement at a future date. A **Bear** sells with the view of buying back at a future date at a lower price. **Contango** is a sum paid by the speculator for the rise, per share or per cent., for the privilege of deferring payment till the next settlement. **Backwardation** is a sum paid by the speculator for the fall, to postpone delivery of stock or shares till the following settlement. **Continuation rates** embrace both contango and backwardation. **Options** are transactions by which a speculator can limit his loss by paying a fixed sum when the bargain is made. They may be either a "put and call," a "put," or a "call." A **put and call** enables an operator to sell or purchase at a fixed price on a certain day. A **put** is a transaction by which a speculator has the option of selling stock at a fixed price at a future time, for which he pays an agreed rate. A **call** is a transaction by which stock can be claimed on a settled day for a certain consideration. **Carrying over** signifies the postponement of payment or delivery of stock or shares till the next settlement day. **Hammering** is the declaration of a defaulting member, which is announced by the "head waiter" striking three blows with a mallet. **Cornering** is an operation by which a scarcity of stock is created, thus producing a fictitious market and preventing a dealer from obtaining what he has previously sold except at greatly enhanced prices. For example, if A sells B a number of shares or stock for delivery on a certain day, and finds he is unable to deliver them, B can have the securities publicly bought in by the secretary to the committee, or by the clerks of the "house." The sellers of such securities under the circumstances necessarily raise the prices severely against A, who has to pay the abnormally enhanced price. A is then said to be cornered. **Arbitrage** is an operation whereby identical securities are bought in one market and sold in another. **Long and Short** are American terms synonymous with **Bull and Bear**. **Spread** is also an American term for the option to either **Put or Call** stock. **Straddle** is the same option at one price whether stock is "put" or "called." Amongst the abbreviations used in the Stock Exchange the following

are the principal:—**Brums**, a name given to London & North-Western Railway stock; **Serwick** stands for North-Eastern stock; **York "A,"** Great Northern "A" stock; **Dinabs**, Edinburgh and Glasgow; **Haddocks**, Great North of Scotland; **Saras**, Sheffield Deferred; **Potts**, North Staffordshire; **Caley**, Caledonian; **Claras**, Caledonians Deferred; **Bertha**, Brighton Deferred; **Dover "A" or Doras**, South-Eastern Deferred. **Ayrshire**, ordinary stock of the Glasgow and South Western Railway; **Chinas**, Eastern Extension Telegraph shares; **Noras**, Great Northern Deferred Ordinary stock; **Knackers**, Harrison, Barber & Co.'s shares; **Vestas**, the Deferred stock of the Railway Investment Co.; **Virgins**, Virginia New Funded. —**Paris Bourse**. On the Paris Bourse there are sixty recognised official brokers (*Agents de Change*), known as the **Parquet**. There are also non-official dealers under the name of **Coullisse**; which include many high-class firms and arbitrage houses. The **settlements** are arranged each fortnight in Foreign Government and Miscellaneous Securities, and Monthly in Rentes, and occupy five or six days. The monthly liquidation really commences on the last day of each month, as **Options** are declared on that day. **Rente** "continued," 1st of month; **Other securities** "continued," on the 2nd, **Accounts** made up, 3rd; **Clients pay** brokers and deliver securities, 4th; **Brokers pay** clients, 5th, and **Brokers deliver** securities to clients, 6th. The fortnightly settlement commences on the 15th of the month and finishes on the 20th, and is conducted after the manner already described, omitting the Rente day. Consult Burdett's "Official Intelligence," '89.

Stock Exchange, Law in '88. A decision of importance to stock exchange speculators was given by Baron Huddleston (November). The plaintiff had instructed an **outside broker** in London to purchase certain shares on which he paid a "cover" deposit of £50, the arrangement being the usual one in such cases, that the broker should have the right to close the account, without notice, if the price fell and exhausted the cover. On July 6th the price did so fall, but the account was not closed until the 7th, when the price had recovered, and showed a profit of £60 on the transaction. The Court held that the broker had the option of closing the account when the price had exhausted the cover, but as he did not exercise his option he was not at liberty to do so when the price had recovered. An order was therefore made for the payment of the £60 profit to the client.

Stokes, George Gabriel, LL.D., F.R.S., b. 1819, at Skreen, co. Sligo. Educated at Pembroke Coll., Cambridge, where he graduated B.A. (1841) as senior wrangler, and was elected to a fellowship. Appointed Lucasian Professor of Mathematics (1849). Awarded the Rumford medal by the Royal Society, in recognition of his services to the cause of science by his discovery of the change in the refrangibility of light (1852). Dr. Stokes, who was chosen one of the secretaries to the Royal Society (1854), was president of the British Association at Exeter (1869), and is **President of the Royal Society**, has contributed to the Transactions of several learned societies, and has delivered professional lectures at Cambridge, and at the Museum of Practical Geology in London. Prof. Stokes is Hon. LL.D. and D.Sc. Cambridge,

D.C.L. Oxford, and LL.D. Edinburgh, Dublin, and Aberdeen, and hon. corresponding member of various scientific societies. He was elected Conservative M.P. for the University of Cambridge last year, in the place of Mr. Beresford-Hope, deceased.

Stone, Marcus, Mr., R.A., is the son of the late Frank Stone, A.R.A. Born in 1840, he illustrated various books and magazines, and achieved his earliest success in 1863 with his "**From Waterloo to Paris**," a picture representing Napoleon in a peasant's cottage. Several of his subsequent domestic pictures have been engraved, and one or two of them purchased by the Royal Academy under the Chantrey bequest. Mr. Stone, who has occasionally painted landscapes and water-colour pictures, was made an A.R.A. (77), R.A. (87).

Storthing. See SWEDEN.

Stoughton, Rev. John, D.D., author and nonconformist divine, was b. 1807. Educated at Highbury Coll., and Upper. Coll., London. After holding successive churches at Windsor (1832) and Kensington (1843), he became (1875) Professor of Historical Theology in New Coll., London; D.D. Edinburgh (1869). Dr. Stoughton is the author of numerous works, among which are the "**Ecclesiastical History of England**" (6 vols.), "**Agas of Christendom**," "**Progress of Divine Revelation**," "**Golden Legends**" (1886), &c.

Straits Settlements. A British Crown colony in the Malay Peninsula. It derives its name from the straits which separate the Malay peninsula from Sumatra, and which form the great trade route between India and China. It consists of the island of Singapore, the town and province of Malacca, the territory and islands of the Dindings, the island of Penang, and Wellesley. The native states of Perak, Selangor, and Sungai Ujong, are controlled by the Colonial Government. The Cocos or Keeling Islands are a distant dependency. The whole area of the actual colony is about 1,472 sq. m., pop. 423,384. The capital of the colony and seat of government is Singapore.—**Singapore** is an island at the southern extremity of the Malay Peninsula, area 206 sq. m., pop. 139,208. It is hilly and forested, fertile, and not unhealthy for Europeans. Chief local products are pepper and gambier. The varied fauna includes tigers. The city of Singapore is a great commercial centre for the East. It has a commodious harbour, now being strongly fortified. It is the headquarters of H.M. military and naval forces in these regions. The usual garrison consists of a battalion of infantry and two batteries of artillery.—**Penang, or Prince of Wales Island**, lies 360 miles north of Singapore, and about two miles off the coast of Province Wellesley. Its area is 107 sq. m., pop. 90,951. The port and capital is called **Georgetown**, a well-built city. The island is partly level and fertile, partly hilly. There is a famous waterfall in it, and the scenery is charming. Sugar-cane, rice, and coconut are the chief crops. The harbour is a good one, and there is large commerce. The Governor of the colony appoints a Resident Councillor to control administration.—**Province Wellesley** is politically one with Penang. It stretches 45 miles along the coast of the mainland. Area 270 sq. m., pop. 97,324. It is level, well watered, fertile, and highly cultivated. Sugar-cane, rice, and tapioca are the staple productions.—**Malacca** is a town and territory 240 miles south of

Penang. Its coast, rocky and barren, extends 42 miles. The area is 659 sq. m., pop. 93,579. The town is one of the oldest European settlements in the East, having been acquired by the Portuguese in 1511. The Dutch captured it from them in 1641. It was taken by England in 1795, afterwards restored, and in 1824 ceded by the Dutch in exchange for English settlements in Sumatra. Its trade and importance are now slight. The interior is mountainous and picturesque, with fertile valleys. Tapioca is the chief local product. It is ruled by a Resident Councillor, subject to the Governor of the colony.—**The Dindings** consist of the island of Pulo Pangkor and a small strip of territory on the mainland, about 80 miles south of Penang, and politically annexed, recently, to that settlement.—**Cocos Islands or Keeling Islands** are a small coral group lying some 700 miles south-west of Java. Area 9 sq. m., pop. 2,322. They produce coconuts, and are inhabited by an English family and Malay labourers. They are now included in the government of the Straits Settlements.—**Perak, Selangor, and Sungei Ujong**, the protected states, are practically dependencies of the colony. They lie along the coast between Penang and Malacca, stretching inland to the mountain backbone of the Peninsula. Since the war of 1876 each of them has been controlled by a Resident, appointed by the Governor of the Straits. English officials hold many posts under the native governments, and English officers control the native military police. These countries are flourishing and progressive. Roads and railways are constructed or being made, and the rich resources of mountain, valley, and lowland, well watered and splendidly wooded, are being developed. Tin is produced in large quantities, while tapioca, pepper, rice, sugar, coffee, cacao and cinchona are being successfully cultivated. Perak has an area of 7,949 sq. m., pop. 118,000; a revenue of £238,749, and has liquidated all debts. Its port is Port Weld, and capital Kinta. Selangor has an area of 3,000 sq. m., pop. 50,000, revenue £75,110. Its capital is Kuala Lumpur. Sungei Ujong has an area of 500 sq. m., pop. 14,000, revenue £20,196. Other native states in the Peninsula are more or less under British influence.—**The Straits Settlements** form a Crown colony. The Governor is assisted by Executive and Legislative Councils. For financial statistics see **BRITISH EMPIRE**, etc. (table). The last consists of products already mentioned, together with tin, spices, sago, hides and horns, rattans, gutta-percha, caoutchouc, gums, oils, drugs, and dye-stuffs. All the ports are free. The currency is the dollar (3s. 4d.) and cents of it. Malays and Chinese are the most numerous of the population, Klings come next, then Indians and Europeans.—The history of the colony has been similar to that of the Indian Empire. Penang was our first settlement (1795), Malacca finally ours in 1825, and Singapore in 1844. Gradual enlargement of British territory has followed, while the native states are passing into the same position as those of the Indian Empire. The colony is well ordered, extremely valuable, and its development proceeding rapidly. Consult Miss Bird's "Golden Chersonese," Cameron's "Our Tropical Possessions," Keane's "Asia," McNair's "Sarong and Kris," etc.

"Strike off the Rolls." See **ROLL OF SOLICITORS**.

Structures, Apparently Useless. See **ORIGIN OF SPECIES**.

Sub-Feudarii. See **LAND QUESTION**, ed. '88.

Subpœna—literally under penalty (Lat. *sub pœna*), the name of a writ requiring something to be done under a penalty for neglect. Subpœnas are of two kinds: the *subpœna ad testificandum*, compelling a witness to give evidence in an action, and the *subpœna duces tecum*, compelling a person who has in his possession documents relevant to the issue of an action to appear and produce them in court. The penalty named in the writ is one of £100.

Suez Canal. The deepening and widening of this valuable waterway, or rather the construction of a parallel waterway, was decided upon in July 1883, after considerable commotion had been caused by an agitation amongst the English shipowners, who find three-quarters of the traffic, in favour of a development of some kind. Mr. Childers, then Chancellor of the Exchequer, gave details of the agreement entered into by Her Majesty's Government with M. de Lesseps in the House of Commons on July 11th, 1883, whereby the former were to find £8,000,000 capital, at 3½ per cent., and to use their good offices with the Egyptian Government. Nothing, however, was then done. Early in January '87 M. C. de Lesseps and Sir J. Stokes left Egypt, having obtained the necessary concession from the Egyptian Government of land along the canal, and also at Port Said, Ismailia, and Suez, for improving and deepening the canal. For further details of the work of '87, see ed. '88. During the latter portion of the year much diplomatic attention was paid to the neutralisation of the canal, and a draft convention (which also referred to the New Hebrides question) presented by England to France, was published in the *Times* of Oct. 26th. Up to the end of the year the great Powers had not come to an understanding on the matter of neutrality. In Feb. '88, a *Parliamentary Paper* (Egypt No. 1) was published, containing voluminous correspondence on the International convention. An elaborate series of regulations for the lighting of the canal, and of the ships using it by night, were published in the *Times* of Mar. 30th, followed by an explanatory letter from Sir John Coode on April 4th. The Company's dividend for the year, declared on May 15th, was 73 fr. 50 c., and the report, read at Paris by M. de Lesseps, stated that the receipts for '87 amounted to 60,510,328 fr., and the expenditure to 39,521,833 fr.; 3,137 ships had passed through, and of passengers 126,998. Navigation at night, by aid of the electric light had been begun on Mar. 1st, '87, added the report, and 395 vessels had taken advantage of it; the canal was in a good condition, and the deepening to a depth of 8 metres 50 c. would be finished by the end of '88. The *Imperial Iradé*, sanctioning the Suez Canal Convention, was promulgated at Constantinople on May 18th. The negotiations as to the new Suez Canal Convention, arising out of the British occupation of Egypt, proved of a most protracted character, the difficulty being intensified by the peculiar position held by Italy in regard to Massowah in the Red Sea. From Constantinople under date Oct. 25th, however, it was reported that the *Imperial Iradé*, sanctioning the convention with the latest modifications, had been issued on that day. On Oct. 29th the convention was signed by the representatives of the contracting powers and the Ottoman

Government; the document comprises seventeen articles.

Sugar Bounties, International Conference on. In consequence of the urgent representations of persons interested in the sugar trade, which has for many years been suffering from severe depression, supposed to be largely aggravated by the prevalent system of bounties, Lord Salisbury took steps to assemble representatives of the great trading countries to consider the bases of an understanding for the suppression of bounties on the exportation of sugar. The Conference met at the Foreign Office in London on 24th Nov. '87, under the presidency of Baron Henry De Worms, the Parliamentary Secretary to the Board of Trade. Besides Great Britain there were also represented Germany, Austria-Hungary, Belgium, Denmark, Spain, France, Italy, The Netherlands, Russia, and Sweden. After many sittings, a protocol was signed towards the close of '87, condemning the system of bounties, the delegates of the Powers recommending their respective Governments to take steps for their abolition. A draft Convention was drawn up by the President, and annexed to the protocol, embodying the views of the Conference. This convention was signed on May 12th, '88, by the representatives of all the Powers, and then submitted to the Governments, with the result that the Conference met for the last time on Aug. 30th, and definitely signed the convention. All the Powers (except the United States, which was not represented at the Conference, though Mr. White, of the American Legation, attended to watch the proceedings) agreed, as has been said, in condemning the bounty-fed system; and England, Germany, Belgium, Italy, Russia, and Spain agreed to "boycott" bounty-fed sugar wherever it came from. Austria, by a declaration appended to the convention, withheld her final adherence till all European sugar-producing and sugar-consuming countries gave in theirs. France made a similar stipulation; Brazil reserved her entire freedom; so did Sweden. Denmark declined to boycott, on the ground that such action would be a breach of treaties. There are thus only six Powers fully united as enemies of the bounty-fed sugar, and they propose to carry out the terms of the convention by means of a Commission which will sit in London, whose business it will be to report what sugar in any country is bounty-fed, and to what extent. Upon the reports furnished by the Commission, a majority of the signatories to the convention will decide, and their decision will of course regulate the action of all the Governments. From this it would appear that Russia, Germany, Holland, Spain, Italy, and Belgium—Germany, Russia, Holland, and Belgium being large sugar producers, and competitors in English markets for their own sugars—are to determine whether England is to buy sugar from the United States or Sweden, which hold aloof from the convention, or from France, Austria, and Brazil, which meanwhile reserve their adherence to it. The terms of the convention have given rise to a considerable amount of controversy. Sir Thomas H. Farrer and the Board of Trade maintaining that the essential principle of such a compact is disguised Protection. "We virtually promise," says Sir Thomas, "both for ourselves and all our colonies, that we and they will not, under any circumstances, show any favour to the sugars of our West Indian and other colonies

or possessions over that shown to the beet sugars of their rivals in Europe." Sir Thomas further declares that the convention throws upon us the obligation not only of examining and supervising the management of all sugar factories and refineries in countries parties to the convention, but also of forming a judgment on the operations of manufacture in countries not parties to it. He declares the Treaty will not put an end to bounties, but will make sugar dearer to ourselves and cheaper to non-boycotting nations. It will entangle us in embarrassing commercial and financial restrictions, and perhaps involve us in breaches of valuable commercial treaties. It may help other countries to improve their foolish systems of taxation, but it will restrict the freedom of England, and embarrass and injure us. All this is traversed by the advocates of the convention, who declare that any artificial cheapening of sugar caused by foreign bounties "involves a divergence of the current of production, which must end in the loss or great reduction of the natural sources and the consequent dependence of the consumer on artificial sources of supply." If Free Trade is to be maintained in this country, say the advocates of the Convention, it is necessary that bounties should be neutralised or abolished. It is our wish to bring back the production and manufacture of sugar into natural channels, and we believe that under natural conditions sugar will be produced in sufficient quantities to supply the wants of the world, and at a low price as well. Such are the conflicting views on this important question, the value of which will not be practically ascertained for some time, since the convention will not be finally ratified till August, '90. [The full text of the Protocol and of the Annexes thereto, containing the Project de Convention, was published in the *Times* of Dec. 20th, '87.]

Sugar, Electrically Refined. In '84 a company was formed in the United States for working a process for refining sugar by means of electricity. The inventor was Prof. Friend, of New York, who succeeded at that time in producing samples of refined sugar from the raw material, and some of it was exhibited in this country. The method of working was a secret rigidly kept by Prof. Friend, who had his machinery, in fact, made at different places and by different makers, the whole being put together by himself. Premises were subsequently erected at Brooklyn, at a large outlay, and designed to turn out about 200 tons of sugar per day. Before, however, all the machinery was completed the inventor died. This was in March, '88, but it appears that he had previously committed the details to writing, and the process therefore will be brought forward on a commercial scale.

Suicide. See CORONERS' INQUESTS.

Sullivan, Sir Arthur Seymour, B. in London, 1842. His father was a military band-master. Sullivan, who was a choir-boy at the Chapel Royal, gained the "Mendelssohn Scholarship" at the Royal Academy of Music, in 1856, and there completed his musical education. He went to Leipzig from 1858 to 1861. His music to Shakespeare's "Tempest" at once attracted public favour on his return in 1862. Constantly writing cantatas ("Kenilworth," 1864, etc.), oratorios ("Prodigal Son," 1869; "Light of the World," 1873), anthems, songs, etc., he yet

remained without any specially extensive popularity, till he hit upon a vein of burlesque *opérette*, which he produced in conjunction with W. S. Gilbert, who wrote the librettos. They are uproariously funny, yet elegantly written, and are as yet unique. The first was "Trial by Jury" (1875), followed by "The Sorcerer" (1877), running for 175 nights; "H.M.S. Pinafore" (1878), for 700 consecutive nights, and having probably the greatest success in England and in the United States of any work of the kind—revived at the Savoy '87-'88; "Pirates of Penzance" (1880); "Patience" (1881); "Iolanthe" (1882); "Princess Ida" (1884); "Mikado" (1885), revived in '88; "Ruddigore" (1887); and "The Yeomen of the Guard" (1888). For the Leeds Festival, in Oct. 1886, he set to music an arrangement, by Mr. J. Bennett, of Longfellow's "Golden Legend," which must rank among his finest compositions. Sir A. Sullivan received the honour of knighthood (1883), and the Legion of Honour (1878). He is D.C.L. (Oxon. 1876), LL.D. (Camb. 1879), and is one of the Council of the Royal College of Music.

Sulu. An independent native state in Borneo (*q.v.*).

Sulu Islands. A group of the Malay Archipelago, area 950 sq. m., pop. 75,000. Officially a Spanish possession, in reality under various native rulers, who are much given to piracy. The Sulu Islands produce tortoise-shell, tiapang, edible birds' nests, pearls, and pearl-shells.

Sumatra. A large island of the Asiatic Archipelago. Area about 170,744 sq. m.; pop. (of Dutch possessions) about 2,750,000. The Dutch supremacy is now effectual all round the coast, but much of the interior still remains practically unpossessed. Aceh (Atch) was made a Dutch government in 1878. Chief Dutch ports are Padang and Benkulen. See JAVA, BORNEO, etc.

Sunday Closing Acts. Acts of this name have been enacted at different times for Ireland and Wales. They provide for the total closing on Sunday of houses for the retail of intoxicating liquor. Such liquor, however, may be retailed to persons living in the house or to *bona-fide* travellers. The law in Wales is permanent, but in Ireland is renewed from year to year. In Ireland the Dublin Police District, Belfast, Cork, Limerick, and Waterford are excepted from the operation of the Act. But in these places houses for the retail of intoxicating liquor may remain open on Sunday only from 2 p.m. to 7 p.m. Bills to apply the principle of Sunday Closing to single English counties have been introduced, but none have become law. The Scotch law of Licensing contains provisions to the same effect as those of the Sunday Closing Acts so called. See SESSION '88, sects. 25, 41, 70.

"Sunday Magazine, The" (*6d.* monthly, illustrated). Founded Oct. '64. First editor, Dr. Guthrie, whose aim was to provide bright, cheerful, and inspiring reading for "the best of days." Assisted by an excellent staff of contributors, the *S.M.* attained great popularity. Under its present editor (the Rev. B. Waugh) it is continued successfully on the same lines, a new and very attractive feature being its regular "Sunday Evenings with the Children." Another feature of the *S.M.* is its illustrations.

Sunday Postal Labour. A Select Committee of the House of Commons on. For concise report see ed. '88.

Sungei Ujong. A Malay state under British protection. See STRAITS SETTLEMENTS.

Supply. The sums necessary to defray the charges for the Army, Navy, Civil Services, Customs, Post Office, etc., are voted annually by the House of Commons in Committee of Supply. The sums required are granted for the financial year ending on March 31st; and although votes on account are sometimes granted early in the session for parts of the year, the whole sum voted during the session for any service is for the exact period of twelve months. The Estimates, framed by the respective departments and approved by the Treasury, are laid upon the table soon after the commencement of each session, and any items which may be subsequently found insufficient, or any unforeseen charges, are provided by the Supplementary Estimates. **Votes of credit** for military and naval expenditure of an urgent character are also voted in Committee of Supply. The **Army and Navy Estimates** were each made the subject of an annual explanatory statement until '87, when, at the suggestion of Lord R. Churchill, printed memoranda, prepared by the Secretary for War and the First Lord of the Admiralty, were circulated instead thereof, with a view of giving the Committee of Supply time to make themselves fully acquainted with the nature of the ministerial proposals before they were moved in Committee. On the resolution embodying the vote for the number of men for the army is founded the Army (Annual) Bill, which provides, during twelve months and no more, for the discipline and regulations of that force. The system of granting supplies for only twelve months involves a meeting of Parliament every year, and provides at once a safeguard against the permanence of the military establishment and a means of continuing it periodically in such strength as the House itself may deem to be necessary. For the Civil Service for '88-9, see FINANCE, NATIONAL, and SESSION 88, sect. 57.

Supreme Court of Judicature. The Supreme Court was formed by the consolidation of all the superior courts of the kingdom of England, excepting only the House of Lords and the Judicial Committee of the Privy Council. It replaces (a) the Courts of Common Law; the Queen's Bench, Exchequer and Common Pleas, together with the Court of Appeal known as the Court of Exchequer Chamber; (b) the Court of Chancery and the Court of Appeal in Chancery; (c) the Court of Admiralty; (d) the Court of Probate and Court for Divorce and Matrimonial Causes, which replaced the old ecclesiastical courts dealing with similar matters; (e) the London Court of Bankruptcy; (f) the Court of Common Pleas at Lancaster and the Court of Pleas at Durham. The Supreme Court replaces all these by a single court of first instance known as Her Majesty's High Court of Justice, and a single court of appeal known as Her Majesty's Court of Appeal. The High Court of Justice, again, is organised in three divisions—(a) the Queen's Bench Division, in which have been merged the Courts of Queen's Bench, Exchequer, and Common Pleas. It consists of the Lord Chief Justice of England, who is the president, and fifteen puisne judges; (b) the Chancery Division,

under the presidency of the Lord Chancellor of England, and having five puisne judges; (c) the **Probate, Divorce, and Admiralty** Division, consisting of two judges, the senior acting as president, and the junior ranking as a puisne judge. All puisne judges appointed since the foundation of the Supreme Court bear the same title and receive the same salary. Her Majesty's Court of Appeal consists of the Lord Chancellor as president, the Lord Chief Justice, president of the Probate Division and Master of the Rolls, who are members *ex officio*, and of five ordinary members, known as the Lords Justices. As the three dignitaries first named are usually engaged elsewhere, the working Court of Appeal commonly consists of the Master of the Rolls and the five Lords Justices. The distribution of business between the several divisions of the High Court rests on the general principle that any action may be brought in any one of them. But this rule is modified by law and practice as follows:—

(a) The criminal jurisdiction of the Court is exercised solely by the judges of the Queen's Bench Division. (b) Jurisdiction over causes of the following classes is exercised solely by judges of the Chancery Division: (i.) actions for the administration of the estates of deceased persons; (ii.) actions for the dissolution of partnerships; (iii.) actions for redemption or foreclosure of mortgages; (iv.) actions for the raising of portions or other charges upon land, or the sale of land subject to any charge; (v.) actions to enforce execution of trusts; (vi.) actions for the rectification, setting aside or cancelling of written instruments; (vii.) actions to enforce specific performance of contracts; (viii.) actions for the partition or sale of real estates; (ix.) actions concerning infants and their estates. (c) Jurisdiction over all such causes as would have come before the old Courts of Admiralty, Probate, and Divorce is exclusively exercised by the judges of the Probate Division. To the above general rule there are other exceptions of less importance. The procedure of the High Court has been formed by a process of selection and improvement out of the different forms of procedure observed by the old Courts which have been merged in it. The only differences of procedure now to be observed in the different divisions are such as have a practical value in the despatch of their different business. In all divisions every cause is as far as possible dealt with by a single judge, in whom are vested all the ordinary powers of the Court. The same forms of pleading are prescribed by the rules, although not adopted in practice by all the divisions alike. In all the divisions evidence is given by word of mouth or by affidavits, as may be most expedient. Trial by jury is becoming infrequent in all civil causes, although still most infrequent in the Chancery Division. The Court of Appeal is the same for all causes, and observes an absolutely uniform procedure, although for the more rapid despatch of business it is divided into two courts, each commonly consisting of three members. The procedure of the High Court and Court of Appeal is set out at large in the **Rules of 1883**. These, although irregular in form and incomplete in substance, constitute our nearest approach to a code of civil procedure. In the year preceding, the various branches of the Supreme Court were for the first time housed in a single building.

Suram Pass Tunnel. It was reported in July '87 that the piercing of the tunnel on the line of the Poti-Tiflis railway, to "replace" the Suram Pass, had just commenced. To obviate all possible delays, financial and otherwise, it was decided at the outset for the Ministry of Communications to appoint a commission to remain on the spot, and deal with the claims of the contractors, etc. The tunnel will be nearly 2½ miles long, is to be finished in '90, and is estimated to cost £1,000,000 sterling. In November it was reported that, notwithstanding a slight landslip the operations at the tunnel had made such progress that a distance of more than 900 yards (2,800 feet) had been pierced, and the work would soon begin at the other end.

Surinam. A Dutch colony in Guiana (*q.v.*), South America. Area 46,060 sq. m., pop. 74,132. Capital **Paramaribo**, on the Surinam River. Separated from **British Guiana** by the Corentyne, and from **Cayenne** by the Maroni. Principal settlements in the lower valley of the Surinam. Chief products, sugar, cocoa, coffee, and cotton. The gold diggings are beginning to attract attention. Ruled by a Governor-general and officials. Trade and industry somewhat backward. Bulk of population negroes, freed from slavery 1863; capitation grant £25. Dutch first settled in Guiana in 1580. Administration separated from that of the West Indies in 1845.

Sussex Fortnight, The. See TURF.

Suva. Capital of Fiji (*q.v.*)

Swaziland. A small native state in South Africa, lying between the Transvaal, Zululand, and Amatonga. Area 9,000 sq. m.; pop. 50,000. It is a mountainous tract, stretching along the Libombo range, with richly fertile valleys, and its mineral wealth is great, valuable fields of gold and coal being included in it. The Swazi are a section of the warlike Zulu race, and, during our campaign in the Transvaal against Sikukuni, and afterwards in Zululand, were our firm allies. At the conclusion of the war with the Transvaal Boers, their boundary was carefully delimited, and the independence of Swaziland agreed to. But with their customary contempt for treaties and disregard of native rights, the Boers (1885-6) largely encroached on Swaziland. Umbandine, king of the Swazi, has petitioned for British assistance, and the appointment of a British Resident as his adviser.—'87. Boers threaten to absorb the country. Gold discovered. Negotiations now pending. Affairs connected with those of **Natal, Transvaal, Delagoa Bay, Amatongaland, Zululand** (*q.v.*).

Sweating System. A report to the Board of Trade on the Sweating System at the East End of London, prepared by **Mr. John Burnett**, the labour correspondent of the Board, was issued in December '87. The report defines the system as one under which sub-contractors undertake to do tailoring work in their own houses or small workshops, and employ others to do it, making a profit for themselves by the difference between the contract prices and the wages they pay their assistants. An informal census, taken by officers of the **Amalgamated Society of Tailors** five years ago, gave the total of London tailors as 20,000, of whom 15,000 were employed under the sweating system. The object of the sweater being his own gain, the tendency of the system

is grind the workers down to the lowest possible limit; and Mr. B. declares that the people employed under such a system "may be said to exist, but cannot by any possibility enjoy life." A feature of the sweating system of late years has been the payment of premiums to sweating masters by foreign immigrants, for the most part Jews, in order that they may be taught some branch of the trade. Mr. B. furnishes an illustration of this from the evidence given at an inquest held a short time ago at the Mile End Workhouse on the body of the child of a Russian Jew. This man had come to London with his wife and six children. He was almost destitute, knew no trade, and could not speak a word of English. His only way into the tailoring trade would have been by the payment of a premium and giving several weeks' work without pay. Some of Mr. B.'s statements, however, as to the grinding tyranny of the system and the wretched condition of its victims, were challenged in a letter addressed at the close of '87 to some of the London daily papers by the secretaries to two of the Jewish labour organisations of the East End.

Sweating System, Committee on. See SESSION '88, sec. 71.

Sweden. A kingdom under Oscar II., of the house of Bernadotte, by charter of 1815 indissolubly united with the kingdom of Norway without prejudice to separate constitution, government, and the laws of either. If throne become vacant, the Diets of both kingdoms elect, and in default of agreement an equal number of Swede and Norse deputies make an absolute nomination. Affairs common to both kingdoms are administered by council of state, on which both nations are represented. Under the Swedish Constitution of 1809 the executive power is lodged in king, who also possesses legislative power in matters of political administration; in other respects such power is exercised jointly by the Diet, which possesses a veto on all legislation, and the sole right of taxation. Diet consists of two chambers, the first of 139 members (elected by provinces and municipalities for nine years), the second of 216 members (1 to every 10,000 of population, elected directly for three years). The State religion is Lutheran; all others, except the Jesuits, are tolerated. — **Sweden.** Area, 170,979 sq. m.; estimated pop. in '86, 4,717,189; estimated revenue and expenditure, '88, £4,705,388; debt, £13,656,012; imports ('85), £4,879,000; exports, £13,670,000. (For army and navy, see ARMIES, FOREIGN, and NAVIES, FOREIGN.) The King has right of veto; but if a law be thrice passed by three Storthings separately elected, his veto is over-ridden. The Norse Constitution of 1814, which vests the legislative power in the Storthing, is elected indirectly, the people choosing delegates who elect the Storthing. For business purposes it is divided into the Odelsting, composed of one-fourth of the members, and the Lagthing, consisting of the remainder; all new bills originate in the former. If the two divisions do not agree, the combined house deliberate, and the measure must be passed by a two-third majority. — **Norway.** Area, 123,205 sq. m.; estimated pop. in '86, 1,954,000; estimated revenue and expenditure, for year ending June '88, £2,439,427; debt ('86), £5,786,883; imports ('86), £7,599,000; exports, £5,714,000. The course of events during '88 pursued an even tenor, the only noticeable occurrences

being the marriage of H.R.H. Prince Oscar to Miss Ebba Munck at Bournemouth (March), and the visit paid by the King of Sweden to England. For army and navy, see ARMIES, FOREIGN, and NAVIES, FOREIGN; and for Council, etc., see DIPLOMATIC.

Swimming '88. The Half-mile Amateur Championship, at Hendon, was won by H. Bowden (Dolphin S.C.), time 14 m. 25½ sec. F. J. Standing (Zephyr S.C.) was victorious in the One Mile Amateur Championship, beating A. E. France (long distance champion) by nearly 30 yards, in 34 m. 1½ sec. The Quarter-mile Race for the Salt Water Amateur Championship, at Ipswich, was taken by J. Nuttall, Stalybridge, in the good time of 6 min. 16½ sec., beating the amateur record by over 3 sec. At Great Yarmouth Regatta, in August, Nuttall was successful in the contest for the "Ulph" Challenge Cup; and James Finney, professional champion, secured the gold medal in the Open Scratch Race. In the 100 Yards Amateur Championship competition, on Sept. 24th, Nuttall won easily by three yards, in 1 min. 6½ sec. (best amateur record); he is also the 500 yards champion. In the Long Distance Amateur Championship, decided in August in the Thames, from Putney to Charing Cross (about 5½ miles), A. E. France (Neptune S.C.) proved successful; time 1 hr. 17 min. 7 sec. James Finney (champion) defeated George Kistler over one mile in the open sea at Mounts' Bay, time 29 min. 29 sec. The Professional Association Captaincy Race (880 yards) was won by E. J. Kirk, in 17 min. 27 sec. A. H. Riddell is the 500 yards amateur champion of Scotland. The Five Miles American Championship is held by T. Riley. Professor Gules Gautier swam from Westminster to London Bridge, and on to Cherry Pier, a distance of over 3½ miles, with both hands and feet tied. The 220 Yards Amateur Championship, decided in the Lambeth Baths on Oct. 8th, resulted in favour of Nuttall, the holder of the title; and G. A. Blake (Levensham S.C.) retained the Plunging Championship, and a few days later at the same baths he beat all previous records with a plunge of 75 ft. 7 in. Mr. E. J. Tackley is the Hon. Sec. of the Amateur Swimming Association, and there is also a Professional Association.

Swinburne, Mr. Algernon Charles, son of Admiral Swinburne and Lady J. Henrietta, daughter of Earl of Ashburnham, was b. in London 1837. Educated at Balliol College, Oxford (1857). Visited Florence, and passed some time "Queen Mother" and "Rosamond," (1861). These were followed by two tragedies, "Atalanta in Calydon" and "Chastelard," and "Poems and Ballads," which met with severe criticism, and led to a species of literary warfare. His later works are "A Song of Italy," "William Blake, a critical essay," "Siena, a Poem," "Ode on the Proclamation of the French Republic in 1870," "Songs before Sunrise" (1871), in which he glorifies Pantheism and Republicanism; "Studies in Song" (1881); "Notes on Charlotte Brontë"; "Poems and Ballads" (2nd series); "Tristram of Lyonesse" (1882); "A Century of Rondels" (1883); "Life of Victor Hugo" (1886). He has entered with great warmth into the cause of European freedom, and evinced his warm sympathy with all national movements in this direction, as in his "Song of Italy," in which he apostrophises Garibaldi and Mazzini, etc.

He in '88 published a poem on "**The Armada**" in the August number of the *Fortnightly Review*.
Swiney Lectures. These lectures bear the name of their founder, the late **George Swiney**, M.D., formerly of Exeter, and afterwards of London, who by his will, dated May 27th, 1831, the provisions of which were modified by subsequent codicils, the last of which was made April 25th, 1843, bequeathed the sum of £5,000 to the trustees of the British Museum and their successors duly elected and appointed for ever, in trust, for the purpose of establishing a lectureship of geology and astronomy alternately. The first course of the Swiney lectures, which were piously conceived as a contribution to the "interests of religion and goodness," was delivered by the late **Dr. W. B. Carpenter** at the Royal Institution, and, except on two or three occasions upon which the lectures have been given at Edinburgh, they have ever since been delivered at different places in London, including the Museum of Practical Geology, the Royal School of Mines, University College, and the British Museum (Natural History), Cromwell Road, South Kensington. From the "conditions of appointment," in which, however, the trustees of the British Museum "reserve to themselves the power of making any alterations which they may think fit," it appears that the last-named institution is henceforth designated as the place of the habitual delivery of the Swiney lectures. The "conditions of appointment" referred to set forth that "candidates must have taken the degree of Doctor of Medicine at the University of Edinburgh. The stipend of the lecturer is £150 a year. The appointment will be for a term of three years. All charges incurred for the delivery of the lectures are to be defrayed by the lecturer. The number of lectures is not to be less than twelve in each year, nor more than three in the same week, to be delivered between the 1st of November and the end of July following, at the British Museum (Natural History), Cromwell Road, South Kensington, and illustrated, when practicable, from specimens in that museum. The public to be admitted to the lectures without fee. No lecture must be repeated. The lecturer will be required at the termination of each course, and previously to receiving his annual stipend, to deposit a copy or full digest of the lectures with the Director of the British Museum (Natural History)."

Switzerland. A republic composed formerly of several independent allied states, but since 1848 a united confederacy. Area 15,892 sq. miles; estimated pop. in '86, 2,940,602. **New census** taken 1st Dec., '88. The constitution of 1874 vests supreme legislative and executive authority in two chambers—viz. (1) a State Council of 44 members, chosen two for each canton for three years by the twenty-two cantons of the Confederation; and (2) a National Council of 145 delegates of the Swiss people, chosen also for three years, directly, one deputy for every 20,000 of the population. The united chambers form the Federal Assembly, to which is confided the supreme government. The executive authority is deputed to a Federal Council of seven members, elected for three years by the Assembly, the president and vice-president of which are the first magistrates of the republic. A supreme tribunal, independent of, although elected for six years by the Assembly, adjudicates upon disputes between the federal government and the cantons, the

individual cantons, and all appeals civil and criminal. Each canton is sovereign subject to the federal constitution, possessing its local government, varied in detail, but based on the absolute sovereignty of the people; in some of the smaller cantons the whole male population in assembly make their laws and appoint their officials. In the larger cantons the people by universal suffrage appoint representatives. One unique characteristic of the republic and its cantons is the direct influence exercised by the people, to the consequent exclusion of the representative principle. It is shown in the smaller cantons by the direct popular legislation of the assembled male inhabitants, and in the federation and larger cantons by the almost universal adoption and frequent exercise of the so-called referendum, which may be shortly described as follows: When a law has been passed, the minority (exceeding a certain fixed minimum) is entitled to demand that the law in question shall be submitted to and confirmed by the direct vote of the citizens: e.g., although the constitution abolished capital punishment it was decided by a popular vote taken in 1879 that each canton should be at liberty to re-enact the infliction of such penalty. There is no state religion, but complete religious liberty. The cantons maintain order among the various religious bodies, and no bishopric can be established without the approbation of the republic. Education is free and compulsory. **Budget '88:** revenue, 60,700,000 fr.; **expenditure**, 61,758,000 fr. (fr. = 94d.). **Public debt** of the republic, £1,466,824; property of the republic, £2,200,000. The various cantons have their own budgets of revenue and expenditure, and their own debts, the latter always covered by cantonal property, chiefly in land. The aggregate cantonal debts amount to about £12,000,000. **Special imports** in '87, 837,034,916 fr.; **special exports**, 671,092,638 fr. No standing army permitted by law, but all citizens are liable to serve, and in turn undergo annual military training. The State maintains a highly trained staff and colleges, and in addition military training forms part of the curriculum of every school. The reputation of the Swiss as a warlike nation is deservedly high, and the scientific eminence of the officers is well known. It is estimated that in case of war the confederation could put 250,000 men in the field (see **ARMIES, FOREIGN**). In '88 negotiations were carried on between the Republic and the Vatican on the question of the bishopric of Ticino (Feb.). and **M. Schill**, the author of a derisive pamphlet against Germany, was indicted by the Swiss Federal Court (May), the German Government having laid a complaint on the subject before it. **Socialists** were expelled from Zurich in April. Two avalanches fell upon the famous hospice of **St. Bernard** (March 5th); **floods** in the Engadine took place (Sept.), **St. Moritz** being under water. The **International Law Congress** at Lausanne was held Sept. 3rd. An incident in connection with the **Salvation Army** was the sentence of imprisonment on Miss Stirling for a hundred days, upon the ground of her having made proselytes under the legal age. By the intervention of the British Government Miss S. was released. The death of **M. Hertenstein**, President of the Swiss Confederation, occurred on Nov. 27th, from the effects of a surgical operation. The new commercial treaty between Switzerland and Germany (Dec. 3rd) received the assent of the Federal Council. Negotiations have also com-

menced for the conclusion of a new treaty of commerce between Italy and Switzerland. (Dec. 7th). For Council, see DIPLOMATIC. Consult *The Statesman's Year Book, Almanach de Gotha*, etc.

Sydney. Capital of New South Wales (q.v.); pop. 332,709; on Port Jackson.

Syndicates, Trusts, Unions, etc. These terms are now frequently applied to combinations of capitalists for the purpose of restricting production and raising prices. Combinations among capitalists for promoting their own interests at the expense of the consumer date back to time immemorial; but the idea has assumed peculiar developments in modern times, and more especially within the last fifteen years, when complaints of over-competition and over-production have become almost universal. The rise of these syndicates marks the reaction against over-competition—it is, in fact, the return swing of the pendulum from the one extreme of commercial folly to the other. The way in which a modern Syndicate or Trust is worked differs from its earlier prototype in many respects. The more primitive idea was that capitalists should come to some agreement among themselves as to how much each should produce, and what common price should be charged to the public, each producer, however, still retaining absolute control over his own business. It was soon found that this arrangement was faulty, for some members broke faith, even in cases where heavy fines were imposed for secretly breaking away from the combination. To remedy this defect, the Americans hit upon the scheme of forming a Trust—that is, a company having absolute control over the operations of all the consenting parties. A trust starts with a large capital and buys up the works of all who propose to enter the ring, paying some in cash, and others in shares of the trust. These shares nearly always go to a premium, for heavy dividends are promised, and frequently earned, as a direct consequence of the artificial advance in prices brought about by the combination. The public are but too often eager buyers of the shares of these trusts, and it is easy to see that whilst things are in a flourishing condition, those inside the ring can readily dispose of their holdings at a good profit. Before the formation of the trust, their properties were probably divididendless, and almost unsaleable; but with the trust once formed a magical change is brought about, and beggared producers swiftly recoup the losses of years. Sooner or later the trust, and the monopoly it has created, break down; but producers are none the worse for that. They have sold their shares, and are out of the business. It is the public that has to bear the brunt. The principles on which these combinations are formed are unsound from whatever point they are viewed. As we have indicated, they are the outcome of over-competition. The natural law dictates that the only healthy remedy for over-production is that the weakest should go to the wall. But the trust steps in and treats weak and strong alike, and by artificially bolstering

up prices affords a means of escape, at the hands of the public, for those greedy capitalists who should have been punished for their own folly. It does still worse, for so long as the combination lasts the public is mulcted, whilst numerous other branches of trade are thrown into a condition of disorganisation. In the end, high prices stimulate fresh competition, a competition which the Syndicate is bound to stifle by taking into the ring the new-comers, who, having started with everything in their favour, can claim their own price. A process of this sort cannot, of course, be kept up for ever, and after a time the whole combination is brought to the ground as if by its own weight. And it need not be pointed out that the suffering entailed by this colossal collapse must be far more serious than if the few weak capitalists, who had originally disorganised the trade, had been allowed to go to the wall in the first instance. Trusts are now in operation on a very extensive scale in the United States. They seem, in fact, to have been introduced into all the leading branches of trade. The largest and best known is the Standard Oil Trust which controls the petroleum trade; and among others which have attracted attention may be named the Sugar, Milk, Rubber, Cotton Seed Oil, Envelopes, Elevators, Oil Cloth, Oil, Meat, Glass, and Furniture Trusts. The operations of these Syndicates have been recently investigated by a Committee of the State Senate of New York, and the report issued by that body is well worth perusing. They state that all these combinations conduce to the aggregation of capital, the power of controlling the manufacture of various necessary commodities, and the acquisition or destruction of competitive properties, thus enabling the combinations to fix the price at which they would purchase the raw material from the producer, and at which they would sell the refined product to the consumer. "In any event," say the Committee, "the public at each end of the industry, the producer on the one side and the consumer on the other are, and are intended to be, in a certain sense, at the mercy of the syndicate, combination, or trust." The formation of trusts has been a matter of more recent date on the Continent, but there too, and especially in Germany, they are to be found in almost every department of trade. For instance, associations have been formed in Germany for controlling the production of hemp, twine, rope, iron tools, gas coal, jute, Westphalian chains, pig iron, sulphuric acid, soda, strawboard, straw paper, and recently salt. In England, trusts are only beginning to make their appearance; but the misfortune is that they promise to become quite as general, if not so powerful, as elsewhere. The first combination was the copper syndicate, which started in the autumn of 87, and, although under French direction, has had large support from the copper companies in England. Following this we have had the dynamite trust, and quite recently the great Salt Union of Cheshire. How many more may follow is uncertain; but rumour speaks of many, including trusts in even the coal and iron trades.

T

Taafe, Count Edward Francis Joseph, in the Austrian peerage, and Viscount Taafe of Corren, and Baron of Ballymote, Sligo, in the Irish peerage, was b. at Prague Feb. 24th, 1823, and was brought up as a youth along with the present Emperor Francis Joseph. Count Taafe is a descendant of the powerful nobleman of the same name who proceeded from Ireland, and made a great name in the Germanic Empire. The present Count was appointed Governor of Salzburg in '63. In '67 he became Austrian Minister of the Interior and Vice-President of the Cisleithan Ministry. At the latter end of '69 he served as **Minister President**. In '71 he accepted the office of Governor of the Tyrol and Vorarlberg. In '80 he was summoned to form a new cabinet, over which he still presides. The distinguishing feature of Count Taafe's Clerical and Federalistic administration has been to give greater weight to the Slav nationalities, especially the Czechs and the Poles, as well as to the Clericals, in the public affairs of the Empire; and to conciliate the divergent nationalities comprising the kingdom.

Tahiti (Society Islands). A Polynesian island belonging to France. Area 453 sq. m., pop. 10,639. Hilly, volcanic, richly fertile, beautiful, with good harbour. Produce pearl-shell, sugar, coconut, arrowroot, beche-de-mer, perfume and dye-woods, etc. Exports about £100,000. The greatest quantity is sent to Great Britain, which takes chiefly baled cotton, coprah, and pearl-shell. Natives very cheerful, sociable, civilised. Consult "South Sea Bubbles," Wallace's, "Australasia," Norman's "Colonial France," etc.

Taine, M., French author, philosopher and critic, b. at Vouziers, April 21st, 1828. He received his education at Collège Bourbon, and at the Ecole Normale, in Paris. His first work, "Essai sur l'Unité Live" ('54), was crowned by the Academy. M. Taine's "Histoire de la Littérature Anglaise," published in 1864, excited a great sensation among the orthodox and Catholic party in France. By the influence of the Emperor Napoleon III. he was appointed Professor of Art and Aesthetics in the Ecole des Beaux Arts, at Paris. He also wrote "Notes sur l'Angleterre." Translated into English, it has been much read. M. Taine became a member of the Academy in '80. On the occasion of the unveiling of the Shakespeare statue in Paris, '88, Mr. Taine wrote a eulogium on the poet's works in a Paris journal.

Tait, Peter Guthrie, b. at Dalkeith, 1831. Educated at the University of Edinburgh, and Peterhouse, Cambridge, where he graduated Senior Wrangler. One of the authors of "Thomson and Tait's Natural Philosophy." Professor of Natural Philosophy in the University of Edinburgh. He was awarded, on November 30th, '86, a **Royal Medal** by the Royal Society, London, for his various Mathematical and Physical Researches. He is joint author with the late Prof. Balfour Stewart of "The Unseen Universe," and amongst his other works are "Recent Discoveries in Natural Philosophy," "Dynamics of a Particle," and "Quaternions."

Tajurah. A bay on the African coast of the Gulf of Aden, now belonging to France. Great Britain had claims here, including the islands

of **Musha** and **Efat**, but ceded them to France in 1887. On the north side of the bay is **Obock**, or **Hobok**, acquired by France in 1862, and since enlarged. This territory now comprises sixty-two miles of coast, with a depth of twenty-four miles. Since 1882 strenuous attempts have been made to develop it; and, on the retirement of the Egyptian garrisons, the French flag was hoisted at Taurah, Sagallo, and elsewhere in the bay. Treaties have also been made with the King of Shoa. But, though Obock is the outlet of trade from Shoa, it lies off the direct commercial route, and has other disadvantages. Its harbour needs very extensive improvements. England and France have agreed to a line of demarcation, beyond which each agrees not to extend its authority.

Talmud. See ed. '86.

Tamatave. Port on east of **Madagascar** (q.v.).

Taoism. See ed. '86.

Tarawera Eruption. See ed. '87.

Tasmania. An island south of Australia, separated from it by Bass Strait, 120 miles across. Formerly called **Van Diemen's Land**. Extends 170 miles north to south, and 160 miles west to east, containing 26,215 sq. m., with a population of 137,211. Capital, Hobart, pop. 20,000, in the south. Second city, Launceston. Other towns Georgetown, Longford, New Norfolk, Mount Bischoff, Lefroy, and Beaconsfield. Tasmania is divided into eighteen counties, within which are electoral districts, parishes, and municipalities. Well watered and wooded throughout. Chief rivers, the Derwent, Huon, and Tamar. Coast bold, rocky, with numerous harbours and islands. The centre is a mass of hills, generally covered with forest and large lakes nearly 4,000 ft. above the sea. Much dense heavy forest, containing splendid timber, notably the "Huon pine." Flora very rich, chiefly of Australasian type, brilliant with beauty. Fruit attains marvellous perfection of quality and surprising abundance. Fauna includes the "devil," "tiger," wombat, opossum, wallaby, platypus, 150 species of birds, etc. Rabbits a nuisance. Colony famous through Australasia for stud-sheep (Merino) and cattle (Devons). Chief minerals exported—gold, tin, and coal. Aborigines extinct. The lake and mountain scenery very fine. Climate very healthy. Wealthy Australians visit Tasmania as a sanatorium. Ruled by a Governor and responsible Ministry. Two elective Houses of Parliament, Legislative Council of 18 members, House of Assembly of 36. Colony represented in the Federal Council of Australasia. There are volunteer corps, about 1,000 of all arms, for defence. Batteries defend the Derwent and Tamar estuaries, and there are two torpedo boats. Church of England the dominant religious sect. Education compulsory and secular. Exports chiefly wool, tin, grain, fruit and preserves, hides, gold, etc. For financial statistics see **BRITISH EMPIRE**, etc. (table). Railways through island 303 miles, 138 being added; coach roads and tramways in settled parts. Telegraphs 2,353 miles. Chief industries, sheep rearing, farming, fruit growing, mining, and timber cutting. Whaling recently revived. Not a large area fit for cultivation. There were, March 31st, '87, 446,391 acres of land under cultivation; of this wheat occupied 35,322 acres, producing 17½ bushels per

acre; oats occupied 21,607 acres, producing 26 bushels per acre. Most of the remaining cultivated land was fruit orchards and gardens. There are some 2,000,000 acres of pasturage, supporting 30,000 horses, 148,665 cattle, 1,600,000 sheep, and 73,110 swine. There are not many immigrants into the colony, though the advantages offered are very good. There is much rich land yet unoccupied, and obtainable at cheap rates on deferred payments. Manufactures growing into importance. Settled as penal colony in 1803. Severed from Government of New South Wales in 1825. Convict system abolished 1853, and representative government introduced in 1856. Received a constitution and responsible government in 1871. For Ministry, etc., see DIPLOMATIC. Consult the official "Progress of the Colony of Tasmania" (Hobart, 1882); also Just's "Tasmaniana," and Pethebrick's "Catalogue of York Gate Library," the publications of the Emigrants' Information Office, etc.

Tattersall's. See ed. '86.

Taxation of Costs. This is the scrutiny by an officer of the Court of the bill of costs of a solicitor. Its object is to prevent excessive charges for legal service. It may take place either in the course of some judicial proceeding, or under the Attorneys and Solicitors Act, 1843. See further ed. '88.

Taxes. See FINANCE, NATIONAL.

Tay Bridge. The great bridge which spanned the Tay fell on Dec. 28th, 1879; but soon afterwards the work of rebuilding was commenced. The new bridge is about two miles long, and contains 85 piers, the site being only 60 feet farther up the river than that of the old erection. Four piers on the south end are within tidal range, the next 23 continue the structure to the south side of the navigable channel, which is spanned by 14 great piers. From the north end of the navigable channel to the Dundee side of the river, 36 piers are erected. Seven piers on land connect the bridge railway with the North British system running into Dundee. The trains are run on the lower portion of the big spans, and the upper boom of the others; the bridge is built with double lines on a steel floor. The height above high-water mark averages about 77 ft. clear under four of the spans in the navigable channel, that of the remaining great spans being 75 to 58 ft. on the north side, gradually growing less; and for some distance on the south side the height is from 63 ft. to 65 ft. (For further description see ed. '88.) The bridge being reported complete, the directors of the North British Railway visited the work on June 10th, '87. This was followed by the official inspection, which took place on the three days ending June 18th, when Gen. Hutchinson and Col. Rich declared themselves in every way satisfied, and the bridge was declared open for traffic almost immediately. Early in the session of '88 the North British Railway Company obtained the sanction of the Lords Committee to a Bill, the principal object of which was to relieve them of the section of the Act of '85 requiring them to remove certain debris of the old bridge from the bed of the river. It was stated that the piers in question were five in number, to the east of, and adjacent to, the four spans of the new viaduct, and for the promoters it was argued that they formed a protection to the new cylinders. The Committee made the proviso that the piers should be built up above

high-water mark, and be properly lighted. At the meeting of the Institution of Civil Engineers, on May 8th, '88, a paper on "The Tay Viaduct, Dundee," was contributed by Mr. Peter Crawford Barlow, and another on "The Construction of the Tay Viaduct" by Mr. W. Inglis. On June 27th, the contractor, Mr. Arrol, formally handed over the bridge to the Company in the terms of his agreement, by which he undertook all responsibility in connection with it for a year after it was opened. It was at that time stated that 100 trains pass over it daily.

Taylor, E. C. See CYCLING.

Taylor, Rev. Isaac, D.Lit., LL.D., Canon of York, was b. at Stamford Rivers in 1829. Educated at Trin. Coll., Camb., where he graduated as a Wrangler in '53. He has held several curacies, both in London and country parishes, and from '65 to '69 undertook the charge of one of the poorest districts in Bethnal Green. He subsequently removed to Twickenham, and in '75 accepted the rectory of Settrington, Yorks. Canon Taylor is the author of many learned works, of which the best known are "Words and Places," "The Liturgy and the Dissenters," and "The Alphabet," "Etruscan Researches," and "Greeks and Goths: a Study on the Runes." He is one of the founders of the Alpine Club. During '87 much controversy took place consequent on the reading of a paper by Canon T. at the Church Congress, on "A Comparison between the Christian and Mohammedan Religions." He contributed to the *Fortnightly Review* in September last an article on "The Failure of Christian Missions," which has provoked much comment.

Tcherniaieff, General Michael Gregorovitsch, Russian general, and Commander-in-chief of the Servian army; b. October 24th, 1828. He entered the army in '47, and was made general during the Crimean war, in which he took an active part. He led afterwards a very active life in the East, where he extended the possessions of the Czar. In '59 he led the expedition against the Khivans, and in '64, in spite of immense difficulties, he crossed the desert of Turkestan, and succeeded in joining the force coming from Siberia. He captured Tschemkend ('64), and Taschkend ('65). The Emperor of Russia recognised his services by the gift of a sword of honour; but through pressure from the Western powers he retired. In '64 he became editor of a Slavist organ, the *Russki Mir*. He resumed active life in raising Herzegovina in revolt against the Turkish rule, and in consequence of his successful efforts, was appointed Commander-in-chief of the Servian army. Though beaten in '76, his revolutionary propaganda led to the Russo-Turkish war, concluded in March '78, when Prince Milan was created King of Servia.

Tea. (For earlier particulars see ed. '88.) In '70 the average price of good sound Congou in bond was 1s. per lb., while in '82-83 it fell to 43d. In those years the total imports into this country amounted to 222,006,000 lb. and 215,212,000 lb. respectively, and the home consumption rose to 170,873,000 lb. Thirty years ago we used about 63,000,000 lb. of tea, the amount consumed being a trifle over 2½ lb. per head, while the duty was about 1s. 6d. per lb., and the average price of the imports about 1s. 3d. per lb. At the present time we are using about 183,600,000 lb., or 5 lb. per head, the duty being 6d. per lb. Of the teas that are imported into the United Kingdom 90 per cent. come to

London to be sold. The tea season commences in the middle of the summer, when the new teas picked in China in April and May arrive in the Thames. Indian teas come later, and are in full supply during August and September. As the teas arrive they are conveyed to a warehouse, where the various consignments have to be classified and catalogued, preparatory to being sold. At the opening of the season the distribution is sometimes very rapid. The tea is catalogued as fast as possible, and is often in the hands of retail dealers within a fortnight from the time the cargo arrives in dock. The total import of tea into this country during the calendar year '87 was 222,763,287 lb., of which 119,739,116 lb. came from China, and 97,830,117 from the East Indies. One of the features of '88 was the increasing demand for Ceylon and Indian descriptions, especially for the former, the deliveries of which amounted to 17,144,400 lb. up to the end of November, against 9,199,750 lb. in the same period of '87. The imports of Indian teas during the eleven months reached 78,927,900 lb., against 32,120,750 lb. in the corresponding period of '87. The arrivals from Ceylon amounted to 18,309,250 lb., against 10,132,000 lb. '87 and 6,344,550 in '86. The China imports show a further declension, the total being 95,119,550 lb. for the eleven months, as against 106,112,150 lb. in '87 and 130,579,850 lb. in '86.

Teachers' Guild, The, was established as a Registered Society in '85, its objects being— (1) To form a body which shall be thoroughly representative of all grades of teachers, and shall be able to speak with knowledge and authority on all matters of education. (2) To obtain for the whole body of teachers the status and authority of a learned profession. (3) To enable teachers by union and co-operation to make a better provision for sickness and old age; and, by the same means, to do all such other lawful things as may conduce to their own welfare and the benefit of the public. It is composed of a Central Guild, and branch or local guilds affiliated to the former. There are 16 branches at present. The members of the Guild now (Nov. '88) number 2,800. The first General Conference of the Guild was held in Jan. '88. The next will meet at Sheffield in '89. It is proposed that a conference should be held yearly in London or at one of the branch centres. The Education Society was incorporated with the Teachers' Guild at the end of '86, and the Guild has undertaken to continue the work of that Society. The Guild puts in a prominent place among its objects the improvement of teachers and teaching, through the formation of sound judgments on educational matters. The library in connection with the Guild contains over 1,400 volumes. Sec., H. B. Garrud, M.A.; Registrar of Women Teachers, Miss L. Blough; Office, 17, Buckingham Street, Adelphi, W.C.

Teaching by Correspondence came into existence about ten years ago. Previous to that time it had become customary to publish in book form University and Civil Service examination papers, the answers to which intending candidates for examination worked out. They would then write to some tutor and ask him to go over their work in consideration of a fee, making notes and suggestions. In this way tuition by correspondence originated. The system has spread widely over this country, and in it are engaged tutors

of the highest standing. One agency alone has as many as 600 pupils; it receives an average of 300 letters a day, employs more than a dozen tutors, has a printing staff, a library, and numerous clerks. From another agency emanates a weekly paper, *The Civil Service Competitor*, which keeps students informed of forthcoming examinations and kindred matters. Pupils are coached from these centres all over the world,—Newfoundland, Gibraltar, Madeira, Lagos (West Africa), Germany, Austria, Barbadoes, and even as far away as Australia, and pay fees ranging from 35s. to 15 guineas a quarter.

Tea Duties. See ed. '86.

Tea Room Party. See ed. '86.

Technical Education may be said to have largely taken the place of the old system of apprenticeship. The principle of the arts and industries of modern communities being based on principles of science, could scarcely be taught in the workshop without interfering with the progress of business, and all that the apprentice could learn would be the way to handle his tools and the raw material. To make an intelligent workman of him, however, he requires to know something more than this,—to know the "why" and the "wherefore" of the various processes through which the material upon which he is operating passes; and it is the acquisition of this additional knowledge, together with familiarity in the use of instruments and tools, that comprises a course of technical education. Previous to '77 no organised attempt had been made in this country to provide this special kind of education. Technical classes existed, but they were few, scattered, and poorly equipped. The initial step was taken by the **Livery Companies of London**, and in the year mentioned a committee was formed to prepare a scheme for a national system of technical education. Having drafted their scheme, the committee began to give practical effect to their views, and classes were started in '79 in the **Cowper Street Schools**. These proving successful, the **Drapers' Company** offered £10,000 for the erection of suitable buildings in which to continue and develop them; and in '80 the **City and Guilds of London Institute**, for the advancement of technical education, was registered under the Companies' Acts. This Institute consists of a Board of Governors, a Council, and an Executive Committee. Its President is H.R.H. the Prince of Wales; the Chairman of the Council the Right Hon. the Earl of Selborne; the Chairman of the Executive Committee, Sir Frederick Bramwell. Returning to the scheme already noticed as having been drafted by the committee appointed in '77, we find that it proposed the foundation in London of a **Central Institution** for higher technical instruction, the establishing or assisting of trade schools, the conducting of technological examinations, and the subsidising of institutions designed for technical education in London and the provinces. All of these objects are now more or less attained. 1. The **Central Institute**, at South Kensington, was opened in '84, having been built and fitted up at a cost of £100,000. Here the students, who last session numbered 638, are qualified to become technical teachers, mechanical, civil, and electrical engineers; architects, builders,

and decorative artists: principals, superintendents and managers of chemical and other manufacturing works. **II. The City and Guilds Technical College, Finsbury,** is of a lower grade than the preceding, and prepares persons of both sexes for intermediate posts in factories. It "fulfils the functions of a finishing technical school for those entering industrial life at a comparatively early age; of a supplementary school for those already engaged in the factory or workshop; and of a preparatory school for the Central Institution." It was built and fitted up at a cost of about £40,000; and in '83, when it was opened, the provisional classes started in the Cowper Street Schools, already mentioned, and the **Artisans' Institute** (founded '74) in St. Martin's Lane, migrated thither. Last session the **day students** numbered 157, and the **evening students** 916. For day students the fee is £9, for evening from 6s. to £1 10s.—apprentices admitted at half fee. **III. The South London School of Technical Art, Kensington Park Road,** numbers over 150 students. The subjects taught are modelling, design, wood engraving, china painting, life classes (drawing and painting), house decoration, and upholstery cutting. **IV. The Technological Classes** in different towns connected with the Institute are nearly 500, with upwards of 10,000 students. These students, on passing the technological examinations, are granted prizes and certificates, which are regarded as diplomas of proficiency. These examinations led to the formation of technical classes at the **Polytechnic, Regent Street,** and at the **People's Palace (q.v.),** in the East End. The Institute has also promoted instruction in the use of wood working tools amongst the boys of the **London Board School,** and already about 600 boys are having lessons once a week at the bench. The **teaching staff** comprises two instructors and two artisan assistants. Other subsidies granted by the Institute are to King's College, London, British Horological Institute, Society for Promoting Employment of Women. Of the **provincial towns** in connection with these classes mention may be made of Nottingham, Sheffield, Manchester, Middlesbrough, and Chester. Up to the end of '87 the amount contributed and expended by these wealthy **City Guilds (q.v.)** for the advancement of technical education exceeded a quarter of a million. Further developments are in progress. On Oct. 9th, '88, the **Times** published a letter in which the secretary of the **Goldsmiths' Company** announced the gift from that Company of the **Royal Naval School at New Cross,** with seven acres of land and £35,000, to advance the cause of Technical Education in South London. Previous to this the **Charity Commissioners** had offered £150,000 for the same cause, on condition that another £150,000 was raised from other sources. With the £300,000 it is intended to start and endow three institutions, where practical and industrial training will be combined with social and recreative facilities.

Technical Schools (Scotland) Act, '87. See ed. '88.

Teetotalism. For concise history see ed. '87; and consult "The Dawn and Spread of Teetotalism" (*Lwesley's*, Preston); "The Temperance Movement," etc. See **TEMPERANCE ORGANISATIONS.**

Tehuantepec Ship Railway. This is a scheme for crossing the isthmus between North and South America by constructing a novel line

in Mexican territory with appliances for conveying ships bodily from the Atlantic to the Pacific Oceans. Mr. (or Captain) Eads suggested the project in the first instance; and in contradistinction to the Panama Canal (*q.v.*), the idea met with, and still retains, considerable favour in the United States. (For earlier details see ed. '87 and '88.) A bill, as amended, passed the Senate on Feb. 17th, '87, by 46 votes to 7. This authorised the incorporation of James B. Eads and 80 other persons, as the Atlantic and Pacific Ship Railroad Co., the capital stock not to exceed 100,000,000 dollars. When 10 per cent. was subscribed and 10 per cent. paid in the directors were to be elected, the stock subscribed for not to be assignable until the paid-in capital amounted to 5,000,000 dollars. The charter is to expire if these requirements are not complied with in two years. On March 8th Capt. J. B. Eads died at Nassau, New Providence. A meeting of the Company was held on July 26th, at Pittsburgh, Pa., when various methods were discussed, and one of the 80 shareholders elected as a director in the room of the late Capt. Eads. According to the originator of the scheme the work could be completed in three or four years, and all the plans, profiles, and designs were completed during his lifetime. Early in July '88 it was reported in this country that the company had let the contract for the making of the line to the **Atlantic and Pacific Construction Co.,** one of the terms being that the work must be begun in 18 months, and finished in 5 years from commencement. The road it was calculated would be 135 miles long, and the cost 60,000,000 dollars, and some "grading" had already been done. The company, of course, own all the rights, privileges, land grants, etc., obtained from the Mexican Government, and it was added that they were chiefly identified with Pittsburgh.

Tel-el-Amarna Tablets. See **EGYPTOLOGY.**

Telautograph, Gray's. A new writing telegraph, the invention of Professor Elisha Gray, who was the inventor of harmonic multiple telegraphy. The instrument, which carries out a new system of transmission, gives a facsimile reproduction of the handwriting of any person sending a telegraphic message. Writing telegraphs, of course, are not absolutely new inventions. Several have been introduced, and are still before the public, for example, there is Robertson's writing telegraph; but quite a novel feature is introduced into Prof. Gray's instrument. It allows the pen to be lifted from the paper so that corrections of various kinds can be made in the despatch. In short, the movements are similar to those of ordinary handwriting, and the transcribing instrument records a facsimile. Note-paper or foolscap can be used with it, and the whole apparatus is of most delicate and ingenious mechanism. For a full description of this invention see the *Electrician*, August 24th, '88.

Telegraphs. During '88 important improvements in the police telegraph system of the Metropolis have been effected. This resulted from the disturbances at Trafalgar Square and the vicinity, as attention was drawn to the existing defectiveness. The London area is now intersected by a network of wires for police use, with connections to various government offices, official residences, and fire-stations. Messages handed in by the police at postal

telegraph offices in case of emergency now take precedence of any others.

Telegraphs, Recent Growth of. For table of miles of wire in 1875 and 1885, see ed. '88.

Telephone. An instrument by means of which any utterance of the human voice can be transmitted to a distance. Preece has divided these apparatus into two categories—those used for the transmission of music, "tone" telephones; and those employed for conversation. See ed. '86.

Telephoning Long Distances. The longest distance in which audible and "commercial" speaking has been accomplished by the telephone is between New York and Chicago. Recently an experiment was made between these places, which are a little more than a thousand miles apart by the telephonic route, and the trial was very successful, as the speaking from both centres was as loud as that for comparatively short distances. These cities have now for some time been in telephonic communication.

The next longest line is that between Paris and Marseilles, opened in May '88, extending to 1 miks. Further long distance telephonic communication on the Continent exists between Paris and Avre, Paris and Brussels, Paris and Amsterdam, Paris and Rouen, Hamburg and Berlin, Vienna and Brünn, and a line is to be made between Stockholm and Gottenburg. In England the longest telephone line for commercial purposes is between Bath and Ilmately which traverses the trunk line of the Western Counties and South Wales Telephone Company. Long distance speaking can also be done between Lancashire, Yorkshire, and Cheshire cities and towns by the wire system of the National Telephone Company. London to Brighton is the longest distance in which telephonic communication exists in the South of England, which is by a line belonging to the United and Telephone Company.

Four important lines radiating from Birmingham are now being constructed, and will be completed early this year. Three of such lines will connect Birmingham with the "terries," with the Lancashire and Cheshire, and with the Yorkshire system of telephones, while the fourth is the line to London. On the completion of these extensions the Metropolis will be within speaking distance, *via* Birmingham, of all the important commercial centres of the midland and northern and north-western districts. It is only at present possible, according to the *Bulletin de la Société Internationale des Electriciens*, to talk over about twenty nautical miles on submarine cables. For further information consult the *Electrician* for '88, and article in *Leisure Hour* for Oct. '88.

Telephorage. A system for the automatic transport of goods by means of electricity. See ed. '86.

Tembuland. In Transkeian Territories (*q.v.*). **Temperance.** See ed. '86.

Temperance Hospital, London. Originated in 1873, at 112, Gower Street. In 1881 a spacious building in the Hampstead Road, for the reception of 54 in-patients, was opened; since which time another section has been opened by the Bishop of London (Oct. 1885), so that the hospital can now accommodate at once upwards of 120 patients; but only about 70 beds are in use, the income being insufficient to open a larger number at present. There is also an out-patients' department, where more than 3,000 new patients are treated annually. This hospital

exists for the treatment of medical and surgical cases without alcohol; and though alcohol may be given in "exceptional cases," under strict conditions, only six cases of the kind have occurred. President, The Duke of Westminster; Chairman, Mr. T. Cash; Sec., Mr. T. Mundy.

Temperance Organisations. British Temperance League (see *TEETOTALISM*, ed. '87), 1835; annual income, £2,000; organ, *Advocate*; offices, 29, Union Street, Sheffield. United Kingdom Alliance (*q.v.*). National Temperance League, formed 1856, of National Temperance Society, started 1842, and London Temperance League; income, with National Temperance Tract Depot, £11,230; organ, *Record*; offices, 337, Strand, London, W.C. United Kingdom Band of Hope Union, 1855, has affiliated, with its county, district, or town Unions, 11,400 societies, having 1,414,900 members; income, £5,350; organ, *Chronicle*; offices, 4, Ludgate Hill, London, E.C. Midland Temperance League, 1857; income, £500. North of England Temperance League, 1858. Western Temperance League; income, £1,700; organ, *Herald*; offices, Redlands, Bristol. Independent Order of Rechabites, Sons of Temperance, and two Sons of Phoenix Orders are temperance sick benefit societies. The first, established 1855, has a membership of 95,000; capital, £350,000; organ, *Rechabite Magazine*; offices, Lancaster Avenue, Manchester. The members of the Sons number 50,000; capital, £62,660; organ, *Son of Temperance*; offices, 29, Pitt Terrace, Miles Platting. Good Templary (*q.v.*) Sunday Closing Association, 1866; income, £3,000; organ, *Reporter*; offices, 14, Brown Street, Manchester. In Scotland—in addition to Highland Temperance League—the Scottish Temperance League, 1842; income £6,668, *League Journal*, offices, 108, Hope St., Glasgow; Scottish Permissive Bill Association, income £3,183, *Reformer*, offices, 112, Bath St., Glasgow; the Irish Temperance League, income £270, *Irish League Journal*, offices, 18, Lombard St., Belfast; Irish Temperance Association, *Banner*, Eustace Buildings, Dublin. The Church of England Temperance Society; income £9,500, offices, 9, Palace Chambers, Westminster; London, S.W. organ *Chronicle*, heads the list of denominational societies, among which are the Congregational and Baptist Associations; Wesleyan, Methodist New Connexion, Bible Christian, Swedenborgian, and Friends Societies; and Free Methodist, Primitive Methodist, and Roman Catholic Leagues, some of which have official organs.—**Undenominational:** The Medical Temperance Society, British Women's Temperance Association, Blue Ribbon Gospel Temperance Mission (*q.v.*), and Young Abstinents' Union, have each papers of their own. To these may be added the National Deaf and Dumb, Travellers', Police, Cab-drivers', Soldiers', and English and Scotch Railway Temperance Societies. The Society for the Study and Cure of Inebriety, and the National Temperance Federation Offices, 29, Union Street, Sheffield, have been recently formed, twenty-five national societies being affiliated with the latter, which has been chiefly engaged in parliamentary work. In London, the Temperance Permanent Building Society has probably advanced over £3,000,000 since 1854; and the Artisans' and General Dwelling Company, now in its twenty-first year, has built over 4,000 houses on its estates in the suburbs, where no licences are allowed. During the past few years several

Inebriates' Homes have been opened in different parts of the country. Consult the organs and Annual Reports of the various Organisations.

"Temple Bar" Magazine (monthly, 1s.). Founded in 1860 (and since incorporated with *Bentley's Miscellany*). Originally edited by Mr. George Augustus Sala, and published in Fleet Street (whence its name). Mr. S. was succeeded in the editorship by Mr. Edmund Yates, and in '66 the publishing office was transferred to New Burlington St. The name of the third (and present) editor is not attached to the cover of the magazine, but it is an open secret that for the last twenty years the editorial chair has been occupied by Mr. George Bentley, the head of the Queen's Publishing House. Generally avoiding politics and science, the pages of this magazine are more usually devoted to biographical sketches, fiction by the principal writers of the day, essays on general literature, and occasional short poems. Office, 8, New Burlington St., W.

Tempter, Major. See BALLOONING.

Tenant-right. A right of property in his farm given to the agricultural tenant by the custom of the country. This right may be resolved into two elements: (1) the right to improvements executed by the tenant and his predecessors; (2) a right not to be disturbed in the holding is so long as the rent is paid. Where tenant right exists, it sold by an outgoing, and bought by an in-coming, tenant. The landlord may, indeed, refuse to accept the purchaser as his new tenant, but only on some reasonable ground, such as a want of capital or skill. See further ed. '88.

Tenants, Various Kinds of. See LAND QUESTION, ed. '88, also LANDLORD and TENANT.

Tenniel, John, artist, was born in 1820. Showing an early taste for art, he may be said to have been entirely self-taught. He was a successful candidate in one of the cartoon competitions in Westminster Hall ('45), and painted a fresco in the Palace at Westminster; but has only produced a few pictures since, and those chiefly for private collections. In '51 Mr. Tenniel joined the staff of *Punch*, and has since been a valued contributor to that periodical, besides illustrating a great many books. Mr. T.'s most noticeable cartoon ('88) was that in which Mr. Ritchie figured as an aeronaut descending à la Baldwin, safely to the ground with the Local Government Act. To *Punch's Almanack* for '89 Mr. T. contributed a "large historical-allegorical-almaniacal" design, entitled "New London."

Tennyson, Alfred Tennyson, 1st Baron (creat. 1884); son of the late Rev. George Clayton Tennyson, rector of Somersby, Lincolnshire; b. at Somersby, Aug. 6th, 1809. Educated at Trin. Coll., Cambridge, where he gained the Chancellor's medal with his poem in blank verse, "Timbuctoo"; married Emily, daughter of Henry Selwood, of Peasmore, Berks, and niece of Sir John Franklin; Hon. D.C.L. Oxon ('55); has been **Poet Laureate** (q.v.) since '50. Lord Tennyson, as the chief of English lyric poets, has acquired a wide reputation not only in England, but also in other countries. He published in '30 his first volume, "Poems chiefly Lyric," followed by "Poems," in 2 vols. ('42), and his well-known works—"The Princess" ('47), "May Queen," and "Locksley Hall," "In Memoriam"—a tribute to the memory of Arthur Hallam, son of the historian ('50); his

other chief works being "Maud" ('55), "Idylls of the King" ('58), "Enoch Arden" ('64), "The Holy Grail" ('69), "The Window, or the Song of the Wren" ('70), "Gareth and Lynette" ('72), "Queen Mary" ('75), "Harold" ('76), "The Cup" ('81), "The Promise of May" ('82), "The Cup and the Falcon" ('84), "Becket" and "Tiresias" ('85), "Locksley Hall: Sixty Years After" ('86), **Jubilee Ode** ('87). Lord T. has for many years resided at Freshwater, in the Isle of Wight. In the autumn of '88 Lord T.'s illness excited much sympathy.

Terry, Edward, originally made his mark in Shakespearian parts at the Prince's Theatre, Manchester, under the late Charles Calvert, his greatest success being the **Clown** in "Antony and Cleopatra." Mr. T.'s first appearance at a West End theatre, the Lyceum, was in the character of the Gravedigger, in *Hamlet*. Since then, besides playing in numerous burlesques, he has created parts in comedies by Byron, Burnand, Reece, A. W. Rivers, etc., etc. He is now the **Lessee and Manager of Terry's Theatre, Strand**. He is at present playing in A. W. Pinero's drama, "Sweet Lavender."

Terry, Miss Ellen, b. at Coventry, Feb. 27th, 1848; made her first appearance on the stage during Charles Kean's Shakespearian revivals in '58, playing the parts of Pamillius in "The Winter's Tale," and Prince Arthur in "King John." When only fourteen she was a member of Mr. Chute's Bristol company, which included Mrs. Kendal, Mrs. Labouchere, Kate Bishop, and several other now prominent members of the profession. She made her *début* in London, March '63, as Gertrude in "The Little Treasure," and until Jan. '64, played Hero in "Much Ado about Nothing," Mary Meredith in "Our American Cousin," and other secondary parts. In that year she married and left the stage, but reappeared again in Oct. '67, in "The Double Marriage" at the New Queen's Theatre, London; and in the December following played Katherine in "Taming of the Shrew," on which occasion she first acted with Mr. Irving. In Jan. 1868 she again retired from the stage, and did not reappear until '74, when she took the character of Philippa Chester in Charles Reade's "Wandering Heir." She afterwards joined Mr. and Mrs. Bancroft at the Prince of Wales's Theatre, where she acted the part of Portia; and from thence she went to the Court Theatre, where, amongst other characters, she represented Lilian Vavasour in "New Men and Old Acres," and Olivia in W. G. Wills' play of that name. On Dec. 30th, '78, she made her first appearance at the Lyceum, and has since, in conjunction with Mr. Irving, played in the longest runs ever known of "Hamlet," "The Merchant of Venice," "Romeo and Juliet," and "Much Ado about Nothing." She has also appeared as Viola in "Twelfth Night," Henrietta Maria in "Charles I.," Camma in Tennyson's tragedy of "The Cup," Ruth Meadows in "Eugene Aram." On May 27th, '85, "Olivia" was revived by Mr. Irving, with Miss Terry in her original character; whilst one of her greatest successes was that of Marguerite in W. G. Wills' play of "Faust." Miss Terry has been twice married, and is now a widow, her second husband dying in '85. Miss T. accompanied Mr. Irving on his American tour in '87, and afterwards reappeared at the Lyceum in "Faust." After a successful provincial tour she returned with the company to that theatre in the autumn of '88.

Tewfik. Mohammed Tewfik Pasha, Khedive of Egypt, eldest son of Ismail Pasha, grandson of Ibrahim Pasha, great-grandson of Mohammed Aly; b. '52; married '69. Elmina Hanem, daughter of El Hani Pasha. Made **President of Council** by his father upon dismissal of Nuber, '78, and worked for a few weeks loyally with his colleagues, Sir Rivers Wilson and M. de Blignieres. Resigned rather than be party to coup d'état. On deposition of Ismail, proclaimed Khedive by Sultan's firman, June '79, gave loyal support to **Dual Control** ('79-82). Was unable to resist **rebellion of Arabi** ('82), but refused to take refuge in British ships. After bombardment of Alexandria entered into negotiations with English and proclaimed amnesty to all who would return to obedience. This being ineffectual, the **Egyptian campaign** of '82 followed, and after Tel-el-Kebir, Tewfik returned to Cairo and attended march past of British troops. Behaved with great courage during the outbreak of cholera ('83) visiting the sick in spite of the remonstrances of ministers, but accompanied by his wife. Since '84, when the English Government assumed more direct interference in Egyptian affairs, Tewfik, though of vacillating disposition, has behaved well, acting under the influence of Sir E. Barrington.

Thames and New Haven Ship Canal. In September '87 attention was called to a project suggested by a Mr. H. W. Grylls to construct a ship canal between the Thames and New Haven, the opening into the former river being near Woolwich and the Albert Docks. It is stated that the country to be passed through offers no great difficulties, and that the scheme would not be a costly one. Nothing definite seems to have been done in the matter so far, but the idea, it is said, has been received with favour in some quarters, although sharply criticised in others.

Thee-Baw Meng, the last King of Burmah, ascended the throne by proclamation, September 19th, 1879, at the age of eighteen. He is the son of the late King **Meng-Dun-Meng.** At the conclusion of the British expedition up the Irrawaddy (1885) and on the occupation of Mandalay, Colonel Sladen, the political agent and the other officers proceeded to arrest Thee-Baw. He was removed with the chief queen and queen-mother, and interned at Arcot, Madras. He was subsequently removed to Rutnagerry, in the Bombay Presidency.

Thelstic Church. See ed. '86.

Thibet. A country occupying the tableland north of the central and eastern portion of the Himalayas, computed to have an area of 700,000 sq. miles, and a pop. of 6,000,000. It has been more or less dependent upon China at all times; but the final conquest of the country by the Chinese was effected only in 1720, and the present system of government was then established. Two imperial delegates from Peking direct the foreign and military administration, leaving the civil and religious administration in the hands of the Tibetans. In matters of civil government the supreme authority belongs to the Dalai Lama, who resides at Lhasa on the Sanpou, or Sangpo; while another Lama, called the Teshu, exercises a powerful spiritual influence in the southern part of the country. His capital is Shigatze. The real ruler of the country is, however, generally supposed to be the Chinese Amban, who is in direct communication with the Emperor at Peking. (For some account of the history and

explorations attempted or otherwise, see ed. '88.) Taking up the thread of our record of affairs in this country, which concluded in the last volume (OCCURRENCES DURING PRINTING) with the ordering of the 32nd Bengal Regiment to **Sikhim**, it will be simplest to give the political events in their chronological order, for they tell their own tale of the beginning, continuance, and end of the war with the Indian Government, and the apparent utter failure of Chinese intervention. From Calcutta, Feb. 5th, '88, it was reported that the Tibetans still remained at Lingtu in Sikhim, in spite of the advice said to have been offered at Lhasa by China, and further that the **Rajah of Sikhim** during the communications had asked for the resumption of the payment of his stipend by India, which had been stopped when he absented himself from his own country some time before. Every consideration seems to have been extended to this potentate, for later in the same month, in reply to an invitation, **Mr. Paul**, Deputy Commissioner at Darjeeling, with **Sir Charles Bernard**, arranged to leave at once for Tumloong for a **Conference**. Moreover, it was reported from Calcutta, Feb. 14th, that the Viceroy himself addressed the great Llama of Thibet in a personal communication, stating that India wished to be friendly with that country. Mr. Paul's mission, however, was reported (Feb. 23rd) to have been practically unsuccessful, the Rajah being apparently indifferent to his counsel. This was followed by prompt action, and the Governor-General in Council ordered the advance of a military force to drive the Tibetans from Lingtu, and out of Sikhim, if they were still there about the middle of March. At the same time (Mar. 4th) it was announced that the Viceroy had gone to Darjeeling to arrange a **personal interview** with the Rajah, thus affording the latter a final chance of conciliation. But again was a deliberate slight inflicted upon the British, for on Mar. 9th the Viceroy returned to Calcutta, the Rajah having declined to meet him. Whether the Chinese suzerain power were impressed with the obvious folly of all this insolence does not appear, but a telegram, dated from Tientsin, Mar. 12th, stated that the **Chinese resident, or Amban at Lhasa** had been dismissed, and degraded for lukewarmness and incompetency. Two Manchus of high rank were sent (Tientsin, Mar. 15th) post haste to Lhasa as Imperial Commissioners, with stringent instructions in favour of the withdrawal of the Tibetans from Sikhim. Meanwhile the **advance of the troops from India** had been made through a most difficult country, and in bad weather, and on Mar. 23rd the Viceroy announced that the Lingtu fort had been "rushed" and taken without firing, the capture being effected in a fog. Offers to mediate followed after this from both Nepal and Bhootan, but were courteously declined, the Thibetan troops still remaining within the Sikhim territory. On May 23rd, the **British** being encamped at **Gnatong**, the Tibetans, who had been assembling in large numbers, and had been erecting stone walls and a fort in the Jeplea Pass, leading into Thibet, made a bold movement. They attacked Gnatong in force, between 2,000 and 3,000, but although they handled their matchlocks and rifles well, they were badly beaten, and must have lost 200 killed and wounded. Our loss was three men killed, and eight wounded. 'Such was the

moral effect of this defeat, that for a time it appeared that it would not be worth while to maintain the whole of our force at Gnatong, and orders were given in June to withdraw certain portions. A rumour that another attack was to be delivered, however, stopped the movement towards the end of the month. A Calcutta telegram (July 15th) reported that the **Thibetan works in the Jelep-la Pass** had been **strengthened**, and that the enemy had applied to China for assistance, stating they had beaten the British three times. The reply was characteristic, being to the effect that, with such convincing proofs of military superiority, aid from China would appear to be entirely superfluous. Besides one or two skirmishes and the reinforcements of both sides nothing of an important nature was done at the front till Sept. 21st, when the British made a **reconnaissance in force**, when the enemy showed that they possessed twelve cannon. This was followed up on the 24th by an **attack** upon the Thibetan position, which was of a decisive character, for the enemy's camp was captured, about 1,000 killed and wounded, whilst the rest fled precipitately. On our side, Colonel Bromhead lost an arm, and one man was killed, and eight wounded. **Colonel Graham**, in charge of the forces, then **marched to Chumbi** in Thibetan territory, and found the Sikhim Rajah's mother at the **palace** there, and seized some papers. Of course, the next step to take was to negotiate, and matters were simplified by the arrival of the Rajah (Calcutta, Oct. 7th) at Gnatong, and his further journey to Gantok. The Rance, his mother, also announced her intention to leave Chumbi for Gantok. About this time, the Chinese Amban was very active to secure peace, and the arrogance of the Thibetans appeared to be quite crushed, as out of an army of 11,000 men only 3,000 or 4,000 rallied at Phari and Galing. According to a telegram from Calcutta (Nov. 18th), it was stated that it had been determined to garrison Chumbi with 1,000 men, and Gantok with 500, but a week later (Nov. 25th) it was reported that the Indian Government had issued orders for the breaking up of the Sikhim field force, but Gnatong and Gantok would be garrisoned until peace was definitely settled on a stable basis.—**Exploration**—The most interesting work from the British point of view, which came to light during the year, was the task accomplished by K. P., a native of Sikhim, and a trained employé of the Indian Survey Department, who, following the Saugpo or great river of Thibet from the Thibetan side further down its course than any previous explorer, confirmed the opinion that it is identical with the Brahmapootra (see *Times*, May 26th, also as to explorations in Bhootan). Considerable interest, political and otherwise, was aroused in August when it became known that the Russian explorer Przhevalsky had announced his intention of starting for Thibet, with the avowed purpose of reaching Lhasa. He was reported (St. Petersburg, Aug. 31st) to have started on Aug. 30th, but his death was announced at the beginning of November, as having occurred on Oct. 20th, from typhus fever, between Tashkend and Veronye, where he was going to equip his dangerous winter expedition.

Thistle, The most ancient and most noble Order of the. Originally established in 1540, and remodelled in 1687, and again in Queen Anne's reign (1703). It was by the

statute of '27 declared that this Order should consist of the Sovereign and 10 knights. Its abbreviation is K.T.; its badge a green ribbon, with motto "*Nemo me impune lacessit*" ("None annoys me with impunity"). There are at present twenty-one K.T.s, including the Sovereign and princes of the blood, the subjoined being a list of them:—

The Sovereign.

Prince of Wales.	D. of Connaught.
D. of Edinburgh.	Duke of Cambridge.
E. of Mansfield.	L. Colville of Culhoss.
D. of Argyll.	M. of Bute.
L. Napier and Ettrick.	D. of Buccleuch.
E. of Stair.	D. of Hamilton.
D. of Athole.	M. of Lothian.
E. of Southesk.	D. of Montrose.
E. of Minto.	E. of Fife.
M. of Lorne.	E. of Galloway.

Dean of the Order, Very Rev. James Cameron Lees, D.D.; Secretary, Major Sir J. T. Stewart-Richardson, Bart.; Gentleman Usher of the Green Rod, Sir Duncan Alexander Campbell, Bart.

Thomas, William L., was b. 1830. In early life studied engraving in Paris and Rome, under his brother, the late Mr. G. H. Thomas. Visited America, and started there the first illustrated American paper. On returning to England entered into business as a wood-engraver. In 1809 the *Graphic* (q.v.) was launched under Mr. Thomas's direction, of which he is still managing director and art editor. Mr. Thomas is a member of the Royal Institute of Painters in Water Colours.

Thompson, Edward Maunde, F.S.A., Hon. LL.D. St. Andrews, eldest son of the Edward Thompson, of Jamaica, and was born in that island, 1840. Educated at Rugby. Appointed an assistant in the British Museum, to the manuscript department. Afterwards permanently attached to the principal librarian's office. Called to the bar Inner Temple, '67. Associated in the establishment of the Palæographical Society, with Mr. Bond, as hon. secretary. Has edited a number of important archaeological works, under the auspices of the Palæographical and Camden Societies, and the Royal Society of Literature. He is one of the vice-presidents and a member of the library committee of the Society for the Promotion of Hellenic Studies, on behalf of which he was engaged, conjointly with Professor Jebb, of Glasgow, in the production of a facsimile of the *Laurentian Sophocles*, '85. In addition to the above, Mr. T. has prepared several works in connection with his office as a librarian to the British Museum. Contributed, '86, in connection with the Library Association, a paper of great technical value, "On the Arrangement and Preservation of MSS." In '71, Mr. T. was promoted assistant keeper of the MSS. in the British Museum, and keeper '78, and on the retirement of Mr. Bond, to the principal librarianship, '88.

Thomson, Sir William, F.R.S., LL.D., D.C.L., b. at Belfast, 1824. Educated at Glasgow University, whither his father had removed, and Cambridge, where he graduated ('45) as second wrangler, and was elected to a fellowship. Appointed Professor of Natural Philosophy in the University of Glasgow ('46). Editor of the *Cambridge and Dublin Mathematical Journal* ('46), to which he contributed valuable additions to the mathematical theory

of electricity. Among the most important of his contributions to the advancement of electrical science are the construction of several beautiful instruments, and their application to the study of atmospheric electricity. His quadrant and portable electrometers have been of the greatest service. It is, however, in connection with **submarine telegraphy** that Sir W. Thomson's labours in electrical science are best known. He has also made important additions to the science of magnetism. His mathematical insight is seen to the greatest advantage in his investigation of the nature of **heat**. Sir William has received many honours and acknowledgments of his scientific skill. Was President of the British Association at Edinburgh ('71), and President of the section of mathematical and physical science at York ('87), where he delivered a remarkable address on the sources of energy in nature available to man for the production of mechanical effect. Knighted in '66. He is joint author with Professor Tait of the well-known treatise on "**Natural Philosophy**."

Thorough Bass. Seced '86.

Thought-Reading. See ed. '86.

"Time," a monthly magazine (i.s.). Contains a serial novel, with articles on subjects of social, political, and general interest, a new feature being its series of "**Work and Workers**" articles by experts on their occupations or interests. In addition, a summary of the political events for the month is given, with reviews of current literature, and a classified bibliography of the best new books published each month (New series, 1885.) Editor, **Mr. Walter Sichel.** Office, 6, White Hart St., Paternoster Square, E.C.

"Time," "Standard." See UNIVERSAL PRIME MERIDIAN, also ed. '86.

"Times, The," is the representative English political daily paper. It was first published under the title of *The Daily Universal Register*, on January 1st, 1785, at 2d., which name was changed to *The Times* on January 1st, 1788. Editors have been:—Dr. Stoddart, Thomas Barnes, J. T. Deane, Professor Thomas Chenevix, **G. E. Buckle** (present Editor), 1884. Besides containing political and general information from the best and most reliable sources, its columns treat of every topic of social, literary, and artistic interest. The **Centenary of *The Times*** occurred on Jan. '88. Letters of congratulation were sent from all parts of the world to the proprietors. The series of contributions under the title of "**Parnellism and Crime**," which appeared in '87, led in '88 to legal action. The **Parnell Commission** (*q.v.*) was the outcome of much discussion in Parliament, and commenced its sittings in October. "**The Mail**," published three times each week, furnishes a summary of the contents of *The Times*. In connection with *The Times* are issued, in a convenient form, the parliamentary debates, law reports, and occasional summaries of subjects of special public interest. **Palmer's "Index to The Times"** provides a convenient means of identifying any particular subject or event.

Timor. An island of the Malay Archipelago, Area 11,000 sq. m.; pop. 500,000. Politically it is divided between Holland and Portugal, but the nations are still mainly independent of their nominal Dutch and Portuguese rulers. The Dutch claim the western section—capital **Kupang**; and the Portuguese the eastern sec-

tion—capital **Deli**. **Kupang** has a Dutch Resident. See COLONIES OF EUROPEAN POWERS.

Tirard, M., late **Prime Minister of France** under President Carnot, who having failed to obtain a premier in the ranks of what may be called professional statesmen, turned in his difficulties to M. Tirard, who is a man of pretensions, and, as he says himself, "not a politician by profession, but a man of business." M. Tirard was b. at Geneva of French parents in '27. He is a jeweller by trade, and was an ardent, though almost unknown, Republican. He was elected a deputy in '71, was one of the representatives of Paris '76 to '84, when he passed to the Senate. In '79 he was Minister of Agriculture and Commerce, and subsequently Minister of Finance. His ministry was only short-lived, and in March '88 he resigned, being succeeded by M. Floquet.

Tisza von Borosjenő, Koloman, Hungarian Premier, was b. at Geszt, Dec. 16th, 1830. He was elected to the Imperial Diet in '61, and speedily became the leader of the Left Centre party. As a Protestant he had previously declared himself an opponent of the policy of the Government. In the Reichstag he opposed the "Ausgleich," and on the dissolution of the Deak party he founded the new Liberal party, which was a fusion of Moderate Liberals and followers of Deak. As head of this party he became, in '75, **Minister of the Interior and Premier**. While nominally supporting the foreign policy of the Crown, Herr von Tisza has frequently succeeded in moulding it in accordance with Hungarian views. He has gained important concessions for Hungary, and has been largely instrumental in excluding Austria from Russian influence. Herr Tisza created some sensation by his speech delivered in the Hungarian Diet on May 26th, '88, in which he strongly supported the action of the Imperial Government, in its refusal to be officially represented at the Exhibition to be held in Paris next June in commemoration of the Revolution of 1789.

Tithe Agitation, '88. The movement against the payment of tithe rent-charge, which was begun early in the year '87, extended very rapidly throughout the principality of **Wales**, and was in a measure reproduced in several of the principal agricultural counties of England. Messrs. Peterson & Stevens, the agents of the Clergy Defence Association, undertook to raise the tithe by actively requisitioning the power of distraint. The matter came before the **Home Office** in Jan. 10th, '88, and shortly afterwards a new and startling phase of the agitation was opened by the despatch of a troop of the **13th Hussars** to a disturbed part of **Flintshire**, near the market town of **Holywell**. In addition to the active measures thus inaugurated, threats were published on behalf of the **tithe-owners** that all who opposed the officers would be punished for conspiracy under the "Conspiracy and Protection of Property Act, 38 & 39 Vict., c. 86." **Distraints** to a very large number were thus carried out in Flintshire, Cardigan, and Denbigh. In some cases the arrears were great. The principal **tithe-owners**, whose estates have been the centre of disturbance, are the Ecclesiastical Commissioners and the Dean and Chaplain of Christ Church, Oxford, neither of which corporations would grant the abatements of 10 per cent. demanded. For the redress of grievances two bills were before Parliament—viz., "**The Tithe**

Rent-charge Bill and the **"Tithe Rent-charge Recovery and Variation Bill."** These bills proposed to adopt triennial for septennial valuations, and to make the rent-charge payable by the landowner. The result of the one averages for the seven years to Christmas '87, published in the *London Gazette* of Jan. 3rd, is as follows:—Wheat, 4s. 8¹/₂d., barley, 3s. 8¹/₂d., and oats 2s. 6¹/₂d. per imperial bushel. This gives the tithe rent-charge for the year '88 as 284 2s. 8¹/₂d., or about 3¹/₁₂ per cent. less than the previous year. The average value of £100 tithe rent-charge for the fifty-two years elapsed since the passing of the Tithe Commutation Act is £101 18s. 10¹/₂d. For further particulars concerning tithes, see ed. '88. Consult also Dean Frideaux's "Original Right of Tithes;" "Ancient Facts and Fictions" concerning Churches and Tithes," by Lord Selborne; "The Present Claims of the Principle of Tithes," by Bishop Hamilton, of Salisbury; "Tithes: their History, Use, and Future," by Robert Lacey Everett.

Tobacco Cultivation in the United Kingdom. The depressed state of agriculture in this country during recent years has given rise to a variety of suggestions for remedying this condition of affairs. One of the proposals made was that our farmers should undertake the cultivation of tobacco, to supply a portion, at least, of the large home consumption of that article. The author of this proposal was Mr. De Laune, who having observed the results of tobacco cultivation abroad, urged that the famous "weed" should be added to the list of crops in this country, and pointed out how such a course would result in providing employment for large numbers of women and children. Mr. De Laune succeeded in interesting his neighbour, Lord Harris, in his suggestion, and his lordship brought the matter under the notice of Parliament, and in the course of a little time its feasibility was a subject of general discussion among agricultural bodies. In April '86 the Government announced their readiness to allow experiments in the cultivation of tobacco to be made, under the superintendence of the **Royal Agricultural Society** (q.v.). The Council of the Society, however, came to the conclusion that it would be too late that year to begin operations, but they expressed their willingness to take up the matter in '87. This decision disappointed many persons, and the executive of the **Enslage Society** came upon the scene. In answer to an application which they made to the **Board of Inland Revenue**, they were informed that the Board would be happy to grant permission to certain agriculturists, to be named by the Society to make experiments in the growth of tobacco, provided that certain necessary regulations were complied with. On this fact becoming known, many applications were received from persons in various parts of the country who had resolved to make experiments in tobacco growing. The experimental cultivation of tobacco in England and Ireland seems to be losing ground. From the particulars obtained through the Inland Revenue Department it appears that only 5 a. 1 r. were planted last year, against 18 a. 1 r. 46 p. in '87, while in Ireland only 1 r. was planted.

Tobago. A British West Indian island belonging to the Crown colony of the Windward

Islands. Area 114 sq. m., pop. 18,051. Capital Scarborough. The island is divided into seven parishes. Formation volcanic; irregular and picturesque. Several fine harbours. Only the low ground cultivated, and production not increasing. Products—sugar, molasses, rum, fruits. Population principally of African race. An Administrator presides over local councils, but all ordinances must be approved by general government and Governor of the Windward Islands. For financial statistics see BRITISH EMPIRE, etc. (table). The price of land is high. The police is semi-military, and there are two companies of Volunteers. British flag planted on Tobago in 1530. The island passed to French and Dutch, but has remained British since 1814. Consult Lazard's "Through the West Indies," and "Her Majesty's Colonies."

Tobogganing. This winter pastime is very popular in Canada, and was rendered familiar to Englishmen by the gallery arranged at the American Exhibition at Earl's Court in '87. The toboggan is a wooden car or plank, about five feet in length and eighteen inches in width, and is curled up at the lower extremity, or prow, so as to constitute a seat capable of holding two or more persons. As indulged in at the toboggan galleries of the Dominion, the car is hauled up to a great height, and the occupants having seated themselves the frail vehicle is launched with great velocity down the steep, which stretches downward at a precipitous angle. The rapidity with which these cars travel may be gathered from the recorded fact of one having descended 700 yards in 20 seconds.

Togoland. A German colony on the Slave Coast, Guinea. Area about 400 sq. m., pop. 40,000. Togoland consists of a "beach," about 22 miles long, on which are the port-villages of Lomé, or Be, Bagida, Porto Seguro, and Gum Koffi. Behind the beach is a lagoon, and then the "mainland," which extends inland about ten miles, lying round the Avon, or Hakkio lagoon. The country is very populous, and is an outlet for considerable trade in palm oil and other produce. It is low, but fertile, growing pepper, indigo, cotton, and native fruits and vegetables. Togo, Gbomé, and Wo, are inland villages and markets. Acquired 1885. Some exploration inland has since been attempted by Germans. Consult "Proceedings of the Royal Geographical Society," June 1885.

Tolstol, Count Lyof Nikolavitch, usually called Count Leon Tolstoy; most eminent living Russian novelist: b. August 28th, 1828, at Yasnaya Poliana, in the Government of Toula, where he still lives. Entered the army when 19, served in the Caucasus and at Sebastopol. First made literary reputation by his vivid sketches from Sebastopol. Leaving the army soon after the close of the Crimean war, he devoted himself to literature. His "War and Peace" a tale of the invasion of Russia by Napoleon in 1812, is regarded by Russians as his masterpiece; but his "Anna Karenina," which appeared in 1876, is better appreciated abroad. Matthew Arnold reviewed it enthusiastically a few months before his death; and George Meredith says that Anna the beautiful but unfaithful wife, who ends her guilty passion by suicide, is the most perfectly depicted female character in all fiction. "The Cossacks" is his only other novel. He wrote much on education, and published many short tales and reminis-

cences of childhood and youth. The last six years of his life he has devoted to religious teaching. He makes "*Return not evil*" the keystone of the Christian faith, and insists that the liberal interpretation of the Sermon on the Mount is the only rule of the Christian life. His religious views are set forth in "*Christ's Christianity*." Walter Scott is publishing a complete edition of his works. Count Tolstoi married in '61, and has 9 children living.

Tonbridge. Sir Andrew Judd's School, founded 1553; reorganised '80. Governors: the Worshipful Company of Skinners. Four exhibitions from £50 to £60 for four years fall vacant annually, and are tenable at any place of higher education that the Governors may approve of; four others tenable only at Oxford or Cambridge. Pupils, 205. Head Master, Rev. T. B. Rowe, M.A.

Tongoland. An English newspaper corruption of *Amatongaland* (q.v.).

Tonic Sol-Fa Method. For history of, and outline of system, see ed. '88.

Tonquin. A country of Indo-China, formerly a province of Annam, made a French colony in 1884. Area 60,000 sq. m., pop. 12,000,000. Capital Hanoi, on the Hanoi or Song-koi River. Principal port and chief seat of trade, Hai-phong. Exports—rice, raw silk and silk piece goods, tin, lacquer oil. Country mountainous in the north, rich and fertile, but climate of lowlands unhealthy for Europeans. People hard-working fishers and agriculturists. Gold, silver, copper, and tin are among the minerals. Military operations have been suspended, though the country is still in an unsettled condition towards the Chinese border. See ANNAM.

Toole, John Lawrence, was b. in London 1833. Educated at City of London School. After being for some time in a mercantile office, he joined the City Histrionic Club, and made his first appearance on the stage at the Haymarket Theatre (52). Engaged under Mr. Dillon at Queen's Theatre, Dublin, and met with great success. Played at Belfast, Edinburgh, and Glasgow, and (54) was engaged at St. James's Theatre, London, where he played in various characters of low comedy. Engaged afterwards at the Lyceum; and on the opening of New Adelphi Theatre became principal comedian. Makes a professional tour in the provinces every year, and visited the United States, America (1874), where he appeared at Wallack's Theatre, New York. On his return to England appeared at Gaiety Theatre (1875). At close of 1880 he commenced the management of the Folly Theatre, which he has had reconstructed and named after himself, "*Toole's Theatre*." His acting is distinguished by its faithful attachment to nature in all the parts he assumes. He achieved great success in "*The Don*" last year. Mr. T. has recently paid a visit to the Channel Islands and the provinces. In '88 he published his "*Reminiscences*," and in November sustained the loss of his gifted daughter, Miss Florence Toole.

"**Tooting Case.**" See TRUST DEEDS.

Torch and Colonial Book Circular, The, is a guide for book buyers, including classified lists of new publications—English, American, and Colonial—in all departments of literature, science, and art; the special feature being lists of publications issued in or relating to the Colonies, comprehending books, pamphlets, parliamentary papers, and articles in reviews and magazines. Editor, Edward A. Petherick.

Office, Colonial Booksellers' Agency, 33, Paternoster Row, London, E.C.

Toronto, Capital of the province of Ontario (q.v.), and second city in the Dominion of Canada; pop. 140,000. Situated on the northern shore of Lake Ontario. Noteworthy for its university and for its fine harbour.

Torrensfeld Barley. See ed. '86.

Tortola. A West Indian island of the Virgin group, and chief of the Presidency of the Virgin Islands, in the British federal colony of the Leeward Islands. Area 26 sq. m.; capital *Roadtown*. The island is a rocky mass, rising to 1,600 feet. Suffers from hurricanes. A little sugar and cotton grown; fisheries productive; cattle and poultry reared. First settled by pirates, expelled by English colonists in 1666.

Tortuga. Island off north coast of Hayti.—Island in the Caribbean Sea, off the coast of, and belonging to, Venezuela.—A group of ten small keys or islands off the south coast of Florida are called the Tortugas.

Tourist Agencies. See ed. '88.

Tower Bridge (London). On June 21st, '86, the Prince of Wales, on behalf of the Queen, laid the foundation stone of the new bridge which is to cross the river Thames immediately below the Tower of London. The necessary Act received the royal assent on August 14th, '85. The new "*Bascule*" bridge will be carried by two Gothic towers, the centre span, of 200 feet, being cut in halves, to be raised and brought flush with the towers by machinery concealed within the latter. There will also be an upper footway, for use by foot passengers when the central span is open, access to which may be obtained by staircases or lifts within the towers. When the bridge is closed there will be sufficient height at high water for the ordinary river traffic. The approach roads and footway will be 60 feet wide, the land spans, which will be on the suspension principle, 60 feet, and the central span 50 feet. As to the materials, the lower portion of the piers up to the parapet line will be of grey granite, and the towers in laid red brick. The ironwork is to be of English make. The opening, passage of a vessel, and closing, will occupy four or five minutes. Mr. Horace Jones was appointed architect, and Mr. John Wolfe Barry engineer. The work was expected to last four years, and the cost £750,000. During the autumn Mr. Jones received the honour of knighthood. Sir Horace Jones expired during May '87, being succeeded by Mr. Barry, who has as his assistant Mr. A. Peebles, elected by the Court of Common Council on Dec. 15th. Some idea may be formed of the progress of work at the bridge in the earlier part of the year by the statement of Mr. Loveridge, chairman of the Bridge House Estates Committee, at the Court of Common Council on May 10th, '88. He said that there were then 408 men employed, for the foundations 43,000 yards or 50,000 loads had been excavated, they had used 4,700,000 bricks, 2,500 tons of granite, and 6,300 tons of cement. The foundations had been carried 27 feet below the bed of the river, and one of the towers was in course of completion. Owing to complaints that the works in connection with the piers of the bridge were causing obstruction in the river and continual changes in the bed of the channel, *The Daily Chronicle* of May 21st arrived at the following facts, after interviews with the Secretary and the engineer of the Thames Conservancy, and also with the

harbour master:—"There is a little silting up east of the northern pier works, but it is very slight; there is no variation in the channel, which still gives 11 to 12 feet at low water, and the difficulty comes through a given body of water having to make its way through a smaller channel than formerly. But this will be abated as soon as the staging is removed, for while the staging is about 140 feet wide, the pier will be only 70 feet. It is probable that the result of the erection of the bridge will be to somewhat deepen the river, owing to the rather increased scour at this particular point." A party from the **Society of Engineers** visited the works on June 26th, when they found the north pier practically completed to the level of high water mark, and the south pier about as far advanced as it could be till the scaffolding was removed from the former one, in order to preserve the fairway. Elaborate caisson work was resorted to to lay the foundations, and each pier is hollow to admit of the counter-balanced ends of the opening leaves of the central span. At their visit the northern abutment was nearly finished, and the northern approach extending to the Minories well forward. The southern abutment excavations were going on behind a cofferdam. Next session application will be made to Parliament for an **Act to amend the Tower Bridge Act of '85**. Powers will be asked to alter the line and levels of certain parts of Tooley Street and adjoining streets, and to acquire, by compulsion or agreement, certain property required for the purposes of the Act. Clauses will be sought for extending the time limited for completing and opening the bridge.

Trade in '88. It is exceedingly difficult to form anything like a correct opinion as to the probable ultimate results, of the trade of the year until the middle of the following January, when the complete statistics are compiled by the Board of Trade. So far, however, as we can form an estimate before the year has actually closed, we should say that the year '88 would be marked as one of abundant prosperity in almost every department of trade. If, for instance, we take the returns of our foreign trade (*q.v.*), we find that in October they show a considerable increase as compared with the returns of the corresponding month of '87 although in that month there was a decided expansion of business. It is true that in October there was one more working day last year than in '87; but the returns for September, on the other hand, were of course diminished by the opposite fact. Bearing these two circumstances in mind, it is interesting to institute a comparison between the two years '87 and '88 by taking the two months together. Following this course, we find that there was last year an increase in imports of £5,995,000, in exports of home productions of £1,927,000, and in re-exports of £633,000. We therefore have a gain of $\frac{7}{8}$ per cent. in the value of these two months of foreign

trade. In October there was an increase in imports of £4,472,000, or about 14 $\frac{1}{2}$ per cent., which was largely due to our augmented purchases of cereals, especially of wheat from Russia. Taking the two months as a whole, there is a gain of £18,682,000, or of $\frac{6}{8}$ per cent. In articles imported for manufacture during the month of October—the month with which we are dealing as an index to all the others, because it reflects very fairly the course of business during the year—there was a considerable increase in copper received, the quantity being 1,902 tons, as against 485 tons in '87. More tin has come to hand; for although the supply from Australia has been small, that from the Straits shows a considerable increase. Owing to the delay in marketing the American crop, the receipts of cotton have continued small, but the arrivals of flax, hemp, jute, wool, and silk have been upon a larger scale. A welcome feature, and one which we note with pleasure, is the increased importation of wool, as to which while we go to press there is a considerable controversy going on—which, however, does not refer so much to the article itself as to the mode of selling it in Coleman Street. It has long been felt that some change ought to be made as regards a procedure which is to all intents and purposes one of the worst description. Another very striking circumstance in our trade just now is the magnitude of our imports of wheat from Russia. In October the amount received was 3,095,000 cwt., as against only 540,000 cwt. in '87, making a total in ten months of 16,457,000 cwt., valued at £6,097,000, as compared with 2,664,000 cwt., valued at £383,000, in the first ten months of '87. There was a larger supply from India during October, while that from the United States again fell off. Larger quantities of other cereals were also imported, especially barley and oats from Russia. Cattle continue to be imported in considerable quantities from the United States, and for the first ten months of the past year the value exceeds that of '87 by £1,000,000. There was a falling off in October in the imports of sugar, in consequence of a diminution in the receipts of refined beet from France, and raw beet from Germany. Another significant circumstance is that the receipts of tea from China during the period under consideration have been less than they were in '87. It is clear that India is rapidly supplanting China in this trade. When we turn to our export trade, it is pleasant to find a very large increase in the month's shipments of cotton piece goods to India. There was an increase also in several other directions, and the exports of cotton yarn have also been upon a large scale for China and Japan. There was a falling off, however, in the demand for yarn and piece goods; but in jute piece goods trade has been brisker than ever. It is difficult to form a judgment as to the condition of the woollen trade. On the whole, the results seem to show a slight increase in value, but the exports of certain classes of piece goods show a rather heavy shrinkage last year as regards '87. The cotton "corner" keeps down the export of that commodity to the East. There is but little change in regard to iron and steel (*q.v.*), although there is a gain of $\frac{9}{10}$ per cent., due chiefly to the fact that a larger proportion of the exports consisted of manufactured iron. There was a decided improvement in October in the demand

from abroad for **machinery and metal work**, particularly in the United States. There, however, is no great reason for congratulating ourselves upon this score, since the cotton mills which we fit up with our choicest machinery will, before long, be engaged in actively competing with us.

Trade, Board of, is constituted of numerous distinguished personages *ex officio*, the real work of the Department being done by a **President** (Lord Stanley of Preston), a **Parliamentary Secretary** (Baron H. De Worms, M.P.), a **Permanent Secretary** (Mr. Henry George Calcraft, salary £1,800), **six assistant secretaries**, in connection with as many departments relating to **harbours, mercantile marine, finance, commerce and corn returns, railways, and fisheries**, and a large staff of inspectors, surveyors, clerks, etc. Two separate Councils, for Trade and Foreign Plantations, were first established in 1660, and were consolidated into one Department in 1672, but this lasted for three years only. It was, however, revived in 1695. The present Department owes its origin to an Order in Council of 1790; but its work has enormously increased since then, and every year sees some new administrative burdens thrown upon its shoulders. Perhaps the most important additions of recent years were made in '83. The **New Patent Office** was established under an Act passed in that year for granting and registering patents, registering designs and registering trademarks; was placed under the immediate control of an officer who acts under the superintendence and direction of the Board, and was opened for business on Jan. 1st, '84. The other new branch of departmental work which was added by the legislation of '83 was in regard to **Bankruptcy**; but the powers of the Board under both these Acts are explained and summarised under other headings. At the commencement of each session the Department reports to Parliament upon all **railway, canal, tramway, subway, gas and water bills** which have been deposited by promoters, and upon applications made to it for provisional orders for tramways, electric lighting, etc. (see BILL, PRIVATE). When the construction of a railway has been sanctioned by Parliament, the line cannot be opened until an inspector of the Board has certified as to its fitness. Railway bye-laws must be approved by the Board, and its inspectors inquire into and report upon all railway accidents. New tramways are also subject to its inspection, and the use of electric, steam, or any mechanical power upon them is subject to its consent or supervision. The rights of the Crown to foreshores are vested in it, and it has statutory powers in regard to pilotage, lighthouses (see TRINITY HOUSE), the inspection of British salmon and fresh-water fisheries, and under the Sea Fisheries Act in regard to oyster, mussel, crab, lobster, and other fisheries. It is the guardian of the coasts, tidal waters, navigable rivers, harbour works, and tidal lands when any works affecting any of them are projected by local authorities, or railway or other companies. Certain important harbours, like Holyhead, are directly under it, and the President is a commissioner of the Mersey Conservancy. The Board supervises all matters relating to the **mercantile marine**. Its officers may board vessels, inspect documents and muster crews, inquire into the cause of any accident or damage to vessels, see whether ships are in good condition, and take action for their detention if they be overladen or unseaworthy.

It manages the **Mercantile Marine Fund**, which is derived from various sources, including light dues; and is applied to the maintenance of lighthouses and beacons, the expenses connected with local marine boards and officers, engagement of seamen, etc. The subordinate department of the **General Register and Record Office of Shipping and Seamen, London**, is under the Board, and exists mainly for the purposes of the Merchant Shipping Acts in their relation to the title of ships and to the registration of seamen; also for the purposes of the Naval Reserve Act. It has the custody of records and returns relating to ships and seamen, and the registration and tabulation of particulars abstracted from these records and returns; and it is the duty of the Department to see that those documents which they receive give the particulars which they ought to give, and to call for explanations of any apparent breach of Acts of Parliament or instructions of the Board which an examination of them may disclose. The Registrar issues certificates to masters, mates, and others who have complied with the required conditions as to service and the necessary technical knowledge. The Naval Reserve is, as regards enrolment and the fulfilment of conditions as to service, under the Registrar. The Standard Department was transferred to the Board from the Exchequer in 1866, and in 1877 the Permanent Secretary of the Board was appointed warden of the standards, without salary. It has the custody of the primary standards of length and weight, and its principal duty is the verification of local standards. The Department subscribes to the International Metric Bureau, at Paris, but the adhesion of this country to the Metric Convention is explicitly guarded by declaration that they have no intention of adopting or proposing the adoption of the metric system in this country. The inspection of the returns furnished weekly of purchases of British corn, which information has since '36 served as the basis of the tithe rent-charge, is performed by another Department of the Board. Under the Companies Act '62 the Board may in certain cases, on the requisition of a sufficient proportion of shareholders, appoint an inspector to examine into the affairs of a company. Applications for charters of incorporation are generally referred to the Board by the Privy Council. When commercial treaties are in course of negotiation, it is generally consulted by the Foreign Office. It verifies the apparatus used under the Petroleum Act to test the flashing point of inflammable mineral oils. Under the Metropolitan Gas Acts detailed accounts are laid before it by the companies, and in connection with the Department there are officials and referees to act in regard to the examination of the purity of gas. The Board has its own legal branch for the transaction of business in connection with inquiries into railway accidents, detention of unseaworthy ships, cases before the Railway Commissioners, etc. It publishes monthly returns regarding trade and navigation, in addition to a mass of statistical information as to the commerce, taxation, population, and progress of the United Kingdom, the colonies, and many foreign countries; there is in connection with it a bureau which collects and disseminates information as to the state of the labour market at home and abroad; it also publishes a journal of its own, containing much that is interesting to commercial men. See BOARD OF TRADE JOURNAL, LOAD LINE, etc.

Trade Combinations, Law ON, '88. The case of the *Mogul Steamship Company v. M'Gregor, Gow, & Co.* and others (Queen's Bench Division, Aug. '88), raised an important question as to the limits within which commercial combinations may be conducted. The plaintiffs had a line of steamers calling at various Chinese ports on their passage between England and Australia, and the defendants were several firms whose steamships traded between China and England, and had a virtual monopoly of the tea trade. The plaintiffs, by lowering their usual rates, succeeded in obtaining some of this business, whereupon the defendants retaliated by forming a "ring," and offering merchants certain advantages if they dealt exclusively with them. This union was so successful that the plaintiffs, who lost their trade, brought an action for damages resulting from what was alleged to be an unlawful combination and conspiracy. In the result Lord Coleridge found that the acts of bribery and coercion alleged against the defendants were not proved, and that there was nothing illegal in a combination which sought to monopolise trade by offering special inducements as a reward for exclusive dealing. See SYNDICATES.

Trade, Foreign, '88. In the month of January the United States Consul at Colombo, writing on the trade of Ceylon, said that although France, next to Great Britain, was sending the largest number of ships to that island, yet that Germany would probably run France pretty close in that respect in the near future, the North German Lloyd having perfected a service of at least five new steamers, of 3,000 tons burden each, to the far east and Australia, calling at Colombo *en route* regularly. German merchants were firmly established in Ceylon, where the most extensive cocoanut oil mill and general products factory in the country was, though owned by England, yet under German management and control. The principal shippers of coffee were Germans, as also of cinchona. The local market was beginning to abound in German goods, especially tools, which were sold at marvellously low prices. In Chili motor machinery and apparatus for the State railways were reported in the German official *Handels-Archiv* to be supplied partly by Great Britain and partly by the United States; but foreign trade was decreasing in this branch, consequent upon the Government giving its orders to native manufacturers. Cranked engine axles made by Krupp were used on the State railways, but engine fittings were chiefly of British and American origin, those of German manufacture not being used. The report, while affirming that there was small chance of German locomotives ever being used in Chili, spoke, in very hopeful terms as to ordinary boilers from the Fatherland, which could compete, it was added, in price and quality with those made by Great Britain. Steam engines of more than twenty horsepower are hardly ever used in Chili, but there was a considerable demand for those of about that power for mining purposes. Great Britain supplied the largest portion of these, but the same authority adds that many German ones are now imported. In regard to China the United States Consul at Shanghai says that although Chinese tools and implements are of a more or less crude description, there is no reason why such things should not be supplied

from abroad provided they are fashioned after the models of the native articles. When a Chinaman sees anything he can use with profit, even though it be strange to his experience, he adopts it. The ploughs are especially rude, and consist chiefly of a crooked beam and wooden share. The writer hints that a light plough of a somewhat similar fashion might become popular there; and this remark applies with great force to spades, shovels, rakes, and hoes. Hoes in China are very extensively used, but those made there are much heavier than British or American productions. There is, however, no use in attempting to force tools and implements upon the Chinese without first studying their tastes. Pumps, saws, and some other edged tools, introduced from America, have proved to be very popular with them. The Belgian Consul at Lucca, in Italy, speaking of agricultural appliances there, says that mechanical construction is rapidly developing, and that there is a marked decrease in the imports of such goods. At Malta, in the same month, according to the U.S. Consul, an improvement is required in Maltese ploughs, wooden implements at present being the only ones in use. Carts and wagons are of home manufacture, but carriage-makers' tools and iron of foreign origin would, it is believed, find a ready market. The corresponding official at Beyrout, in Syria, observed that very few modern agricultural implements have been introduced into that country, and those in general use are of an "antediluvian" character. This is owing to the poverty of the farmers, and not to any prejudice in favour of old fashions. Improved farming implements, if not too expensive or complicated, would find a limited market at first, and eventually a very remunerative one to exporters. As regards cotton goods, the U.S. Minister in Oorea, writing in January '88, said that grey shirtings showed an increase in the previous year as compared with the year '84 of 20½ per cent. A regular market can be obtained by foreign articles of only the best qualities. The ratio which the price of good native cloth, equal in quality to a piece of 20½-lb. shirting bears to that of foreign origin, is 20 to 13. Cotton of superior staple is produced in the country and consumed there, but native merchants affirm that there must be a considerable margin of export. At Cuba the heat of the climate renders linen and cotton clothing necessary, and all persons, negroes included, dress in white drill or brown holland. The colours in greatest favour are white, grey, brown, and blue. In Italy there were in '77 hardly 880,000 spindles and consuming 66 lb. per spindle of cotton linen hemp, while at the beginning of this year there were more than 1,100,000 at work, although during the two preceding years there had been some diminution in production. Water power is chiefly used. Great Britain and Belgium have had to submit to diminished trade because of the establishing of new Russian and German factories. At Porto Rico the importations of cotton goods showed a large increase, British goods taking first place. The jute, hemp, and flax had increased. In Sicily there was a slight general decrease in imports of textile goods. The competition of Italian and German goods was driving British textures out of the market. As regards woollen goods, in Italy spinning and weaving were in a stationary condition, owing chiefly to want of knowledge

and capital. In Turkey a great part of the home-grown wool was consumed in the country. Blankets of a cheap, warm, and heavy quality, in the Corea were slowly but steadily advancing in favour. In the same place there was a slight decline in the imports of matches. The paper industry was in a very prosperous state as regarded home manufacture, but all importation had stopped, and even exportation had commenced. Great Britain continued to supply Egypt with most of its paper. The better qualities of this article imported in Japan were from England, and the inferior from Germany, the importation increasing continually. Italian manufacturers of silk were fairly active, although the trade was bad. The work was being done by hand, women being chiefly employed. Most of the silk used in Syria was imported from Lyons. There were seventeen large establishments in Tuscany where steel, iron wire and bar, sheet and rolled iron, and rails were produced. Labour increased, but profits were trifling owing to price of fuel and the existence of foreign competition. Coal and briquettes came chiefly from Great Britain. Iron and lead piping went chiefly from Great Britain into Mexico, these being duty free, but the United States have also a share of this branch of trade. At Porto Rico coal is virtually a British monopoly. The sulphur trade in Sicily was in a very unsatisfactory state, prices being very low owing to excessive production. As regards mining machinery and appliances, a U.S. official wrote, in February, that the bulk of the mining machinery of Australia was imported from Great Britain; considerable quantities are, however, of Colonial production, and perhaps more still of American origin. One firm in San Francisco had sent in the previous twelve months £16,000 worth. The estimated cost of all such machinery and appliances in use in Australia is £3,947,480.—In March it was reported by the British Consul and Patras that tobacco-growing was increasing in Greece, but none was yet shipped to Great Britain, as it was considered too light in colour. Egypt was expected to be the chief field for its consumption. In Turkey the quality was good, but the quantity small. In the supply of glass ware Belgium is maintaining its ground in India, in spite of Austrian and Bohemian competition. Bottles come from Great Britain as well as from Belgium and Germany.—In April the U.S. Consul-General reported that in the Argentine Republic the sugar industry was in only a partially developed state, and the largest portion consumed is imported from abroad. According to the French Consul at San José the import trade of Great Britain exceeds that of any other country, although Germany and America are now serious rivals in the cotton trade. Germany has obtained the lead in calicoes, but as regards madapolans, ticking, etc., Great Britain is still first.—In May the Swiss Consul at Ancona wrote that February had been unfavourable for vineyard proprietors, as exportation was stopped. Prices therefore declined.—In June the Swiss Consul at Algiers reported that there was a good opening for printed handkerchiefs, but complained that the Swiss allowed themselves to be forestalled by the British. The corresponding official at Bahia complains similarly as regards cotton goods in Brazil. He also says that Great Britain, Portugal, and France, in spite of native pro-

duction, import large quantities of boots and shoes, and that straw hats of British and French origin are in great demand. The British Consul at Fozzhow reported a slight decrease there in cotton goods all round, which was chiefly noticeable in T-cloths, which fell from 285,730 pieces to 273,361 pieces. Both British and American drills showed a decline, while Turkey reds, velvets, velvetens, and chintzes showed a considerable increase. The greatest decrease was in unclassified cotton sundries. The British Consul at San José wrote stating that engineers brought to Costa Rica to examine mines had reported that valuable mines existed in several parts of the country, and only required capital to work them profitably. The Trinidad gold mine was then being fitted up with all the best and newest machinery, and a mill was being erected capable of working 100 tons per day, while the negotiation of another mine, "La Union," was pending in the sum of £120,000. The export trade of Cuba with Great Britain was reported by the British Consul-General at Havana to be very meagre, and no increase likely to follow so long as sugar products had to contend in the home market with the bounty system of beet-producing countries. At St. Iago it was officially stated that cotton goods could be procured more cheaply in Great Britain than elsewhere, but owing to the differential duties in favour of Spanish products, certain cotton fabrics could, in spite of higher freights, be placed at a lower price from Barcelona than from Great Britain. In Mexico Great Britain was reported during this month as enjoying 63 per cent. of the cotton goods importation. To the same country, however, she was supplying only 18 per cent. of metal goods, whereas France and Germany, owing to greater efforts, and not because of difference in price, were each supplying 30 per cent. Of machinery Great Britain was supplying 50 per cent., and America 30 per cent. In the total importation of cotton goods to Portugal there was a slight decrease, while there was a corresponding increase in the total exports of the same material. The British Vice-Consul at Bortiansk expressed the opinion that British manufacturers were making some efforts to increase their trade with Russia, and that their letters and circulars were being placed before the interested parties; but the chances of success were small, owing to the frequent visits of the travellers of German and Polish firms. British imports into Spain were said by the British Vice-Consul at Gijon to be continually declining, both in bulk and value, while Germany was coming quickly to the front. In woollen and cotton goods imported in Asiatic Turkey, Great Britain, according to the German *Handels-Archiv*, dominated the market.—The same organ in the month of July stated that the supplying of iron and steel plates to Cuba had fallen away from Germany, and was now almost exclusively in British hands; while Great Britain, Germany, and Belgium were supplying the steel rails. There was great competition among British, French, German, and American makers as regarded the importation of machinery, chiefly for the sugar trade. In the supplying of cotton goods Great Britain held the first place as regards Italy. The latter was, however, about to extend her silk manufacture. At Rabat, Morocco, an impetus was officially reported as having been given to trade by the running of the branch steamer by

the Mersey Steamship Company, by which all London cargo was being brought direct over the bar into the river after transhipment at Gibraltar. In Persia signs of improvement were setting in as regarded cotton goods importation. A decline was visible in the imports of loaf sugar. The attempt to force up the price of copper in the same country to the European level by a London syndicate had failed, and the article was even being transhipped to Bombay and London. Coal in Peru was being supplied almost exclusively from Great Britain. In Turkey the importation of cotton goods was being chiefly carried on by Great Britain, Belgium, Germany, and Switzerland, while as to silk goods the Lyons makers had obtained an uncontested superiority at Salonica.—In August the Swiss Consul reported that the Italian market for Swiss watches was not flourishing, as the country was inundated with them. This trade in Cuba was monopolised by the Swiss, whilst clocks and alarums came from Germany. Astonishing perfection has been arrived at in Geneva in the manufacture of watches, but although the exports of these articles have increased generally, those to Great Britain have decreased. As regards cotton goods in Tunis, Great Britain was said to hold the first place, but with decreased pre-eminence. A good business had sprung up in prayer-carpets used by Mussulmans, chiefly of Manchester manufacture.—In September official reports from Alexandria, in Egypt, represented trade there generally as being in a very unfavourable condition, and small chance of reward to exist for commercial enterprise. In Holland the new Merchandise Marks Act in England was now noticed to have interfered with the exportation of cigars and tobacco to Great Britain; but gin and liqueurs were in good demand at buying prices, while the same remark applied to Dutch cocoa and chocolate. The diamond-cutting trade was rather unhealthy. In South Australia the state of trade was in this month very unsatisfactory, owing to the failure of two banks, involving a loss of £750,000, and to other causes. In the exportation of cotton goods to Sicily Great Britain was reported as still holding her own and supplying by far the greater portion of the demand, and under her own flag too. At Salonica a growing demand for bedsteads of British origin was officially reported to exist; but there was a decrease in that for sacks, cotton manufactures, and rice. There was, however, an increased demand for British chemicals and floorcloth. That for coals was below the average. Austria was doing a steady business in nails, glassware, and metals, as also supplying a considerable quantity of iron girders, which are now coming into favour there, even with native builders.—In October the Swiss Consul at Algiers complained that his countrymen allowed themselves to be outdone by the British in the handkerchief trade of Algiers, although in regard to watches and clocks of precision the supply came from Switzerland. In Japan it was feared that excessive supplies would glut the market, owing to the decided revival of the import trade at Yokohama, consequent on the general feeling of prosperity there. Railway extension was still being effected, with consequent demand for metals and rails. The exportation to Roumania of cotton goods from Great Britain and Germany was increasing, while that of Austria-Hungary was diminishing. In Singa-

pore cotton goods came chiefly from Great Britain. The same state of affairs prevailed with regard to Tripoli, while as regards iron plates and bars British goods had almost the monopoly there.—In November according to the French Vice-Consul at Varna, cotton goods of all sorts were principally imported from Great Britain into Bulgaria, Austria holding the second and Germany the third place in that trade. The imports of soap from all ports were diminishing, owing to the increase of home manufacture. Woollen goods came chiefly from Austria, as also sugar, the latter exclusively. Although the importation of British cotton yarn into Japan increased, yet that of the Bombay product had a larger increase still. The exportation of corks from Spain to Great Britain has increased, as also that to Europe generally, and also to America; and there is great improvement in the trade. In Tripoli (Barbary), Great Britain, according to the Belgian Consul there, is mistress of the iron market as well as that of candles. The economic condition of the country, according to the *Handels-Archiv*, is, however, not in a satisfactory condition. The price of ostrich feathers has declined, and that in turn has injured the caravan trade. As to cotton goods imports, all the importing countries have lost ground, but in iron and steel goods Germany obtained an increase of 22 per cent. At Malta beer comes entirely from Great Britain, as do also most of the cotton goods. The trade with Serbia is not great. Bricks and tiles, crockery and earthenware, water-pipes, etc. are sent chiefly from Austria-Hungary, while porcelain stoves go from Austria and Germany. Glass and glassware are almost exclusively of Austrian origin.

Trade Marks. It has long been the practice of individuals and firms producing articles of trade to impress thereon marks whereby they may be identified as the makers. The marks are in one sense pledges of good faith, and once a man has acquired a reputation for turning out articles of superior quality, purchasers know what to expect when they see his mark. In this way a mark becomes a valuable thing, and a wise man will take care that whatever he attaches it to shall be worthy of the reputation he has achieved. So long as the law afforded no protection in the matter it was found that, as a mark became more valuable to its owner, it was the more likely to be copied on inferior articles by unprincipled rivals. Prior to the year 1862 the law in this country was so unsatisfactory on this point that the marks of the more celebrated firms in various departments of trade were pirated in the most audacious manner, both at home and abroad. The *Merchandise Marks Act*, passed in 1862, made it a misdemeanour to forge or counterfeit any trade mark or falsely to use any such trade mark with intent to defraud, whether applied to a cask, bottle, stopper, vessel, case, cover, wrapper, band, reel, ticket, label, or any other thing, in or with which any commodity is sold or intended to be sold. It was made an offence to sell or expose, either for sale or for any purpose of trade or manufacture, articles with forged or false trade marks under a penalty of a sum equal to the value of such articles, and a sum besides not less than 10s. and not exceeding £5. Additions to, or alterations and imitations of, any trade mark made with intent to defraud are held to be forgeries, and are punishable as such. Persons found dealing in goods bearing false

marks are bound to give information as to where they procured the articles on demand for such information being made to them in writing. To afford further protection and also to give facilities for avoiding the adoption of marks or symbols already appropriated an Act for the establishment of a Register of Trade Marks was passed in 1876 and amended in 1878. Registration has practically been made compulsory, for no one can take steps to prevent infringement of a trade mark unless such mark has been entered in the Register, which is under the superintendence of the Commissioner of Patents. To mark on any piece of goods a false indication of the quantity is a misdemeanour, punishable either by fine or imprisonment. Another important provision is, that the vendor of an article bearing a trade mark is deemed to warrant or contract with the purchaser that the mark is genuine, unless otherwise vouched for in writing. A bill further amending the Act of 1882 was introduced into Parliament in the year '86, but had to be dropped, as there was no opportunity of proceeding with it. It was, however, reintroduced during the past session. The measure had its origin in some revelations made in connection with the Sheffield trade. In consequence of a statement made in a local newspaper as to the prevalence of false marking, an inquiry was held by a special committee of the Town Council, and a majority of this committee reported that the evil practices complained of existed to a considerable extent, and that immediate legislative action was desirable. The Outlets Company also took up the matter, and the Bill referred to was prepared at their suggestion.

Trafalgar Square Meetings. See SESSION '88, sect. 8.

Trafalgar Square, Law on, '88. The right of the public to meet in Trafalgar Square has been vigorously contested during the year. As a result of a number of prosecutions which were instituted at Bow Street, the magistrate ultimately consented to state a case for the consideration of the High Court of Justice, and in respect of this Justices Wills and Grantham delivered an important judgment. They held that not only was there no right of public meeting in the Square, but that the facts went far to establish the contention that the Commissioner of Works had a right to say whether or not it should be so used. They added that there were no grounds for charging the Home Secretary or the Chief Commissioner of Police with conspiracy, or with criminal misconduct of any kind. Since this decision, no attempt has been made to hold meetings in Trafalgar Square, but the question must scarcely be taken as definitely settled. The erection of the Gordon monument, in the middle of the Square, tends to render this open space still more unsuited for the purposes of public meeting.

Transcaspia. See CENTRAL ASIA.

Transcaspiian Railway. In July '86 this great line, by means of which Russia is transforming, politically and commercially, the very heart of Asia, was opened as far as Merv. There were then 60 or 65 stations, from Michailovsk, on the Caspian, in the direction of Samarcand, at intervals, through desert and oasis, of from 15 to 33 versts, the whole distance when completed to Samarcand being 1,335 versts. (For earlier history of the line see ed.

'88.) On June 25th the appointment of General Annenkoff (q.v.) as superintendent of the Samarcand section was gazetted at the Russian capital. The work was vigorously pushed on to the end of the season, and it is said that General Annenkoff was able to ride over the unfinished bridge on Oct. 19th. In '88 (Feb. 2nd) the Russian railway authorities commenced to lay the rails on the section from the Amu Darya to Samarcand by a new American system which was adopted for its rapidity. The first train reached Bokhara on March 9th, and on April 6th the *Times* published a summary of an elaborate paper about the railway, read by Dr. Wiedemann before the Gesellschaft für Erdkunde of Berlin. It was reported from St. Petersburg, on May 13th, that the Tzar purposed visiting Samarcand in Sept. '89; the line to the ancient capital of Tamarlane was formally opened on May 27th, the anniversary of the coronation of the Emperor Alexander III. The first train, bringing Gen. Annenkoff, his staff, members of the press and others, arrived at the appointed time, notwithstanding the floods between Kizil Arvat and Askabad and a rising of the Amu Darya. Gen. Rosenbach, governor of the Turkestan territory, the Embassy from the Emir of Bokhara and many others, awaited the arrival, and the train drew up close to the famous Tomb of Tamarlane. Festivities of various kinds followed. Telegraphic communication with Europe was opened the same day. The *Novoe Vremya* of May 27th published an eulogistic article on the line, which it stated was nearly 1,000 miles long, and so far had only cost 43,000,000 roubles. The bridge spanning the Oxus was described as of four parts, in all two miles in length, of which 972 fathoms were of wood, the whole being on piles and arches. Gen. Annenkoff was formally received by the Tzar at Peterhoff on June 17th. The following month the Russian *Official Messenger* published a reply to certain criticisms on the new railway, which had been put forward, especially by the *St. Petersburg Gazette*, pointing out that the line did not cost more than 40,000,000 roubles, instead of 60,000,000, as had been stated. The *Times* in August commenced to publish a series of admirable letters, descriptive of the line, written by the St. Petersburg correspondent of the journal, who visited Samarcand and Bokhara. The letters, nine in number, appeared on the following days: Aug. 14th, 22nd, 27th, 28th, Sept. 18th, 26th, Oct. 2nd, 4th, 9th. On Aug. 24th a special committee of the Russian headquarters staff, intrusted with the selection of a terminus (western end) of this railway, decided unanimously in favour of its transfer from Uzun Ada to Krosnovodsk. Towards the end of September it was stated that whilst by no means abandoning the further Eastern extension of the line, the Government were devoting some attention to the improvement of the connections westward, and that the work of the construction of one line had already been begun in that direction, while a considerable amount was to be spent on the western terminus itself.

Transkeian Territories. A region of eastern South Africa, sometimes called Kaffraria, divided from Cape Colony by the Kei River, from Natal by the Umfolozi and Umzimkulu Rivers, and from Basutoland by the Quathlamba Mountains. Area about 15,573 square miles; pop. 40,331. Consists of a number of small Kafir tribal territories which, since 1876, have

been, bit by bit, annexed to **Cape Colony**, or brought under control. These territories are now grouped into three chief magistracies—**Grigoland East**, comprising Noman's Land, the Gatsberg, and St. John's River territory, with eight subordinate magistrates; **Tembuland**, comprising Tembuland Proper, Emigrant Tambukiland, and Bomvanaland, with ten magistrates; **Transkei**, comprising Fingoland, Idutywa Reserve, and Galekaland, with six magistrates. There is besides one Protectorate, **Pondoland** (*q.v.*), ruled by its own chiefs, without magistrates. The Transkeian territories are well watered and wooded, with magnificent scenery, a fertile soil, and an excellent climate. The coast is rocky and dangerous, only the St. John's River mouth being available for ships. There is much good pasture and agricultural land, while coffee, sugar, and cotton may be raised near the coast. Among minerals are coal and copper. The condition of the tribes varies from tolerably advanced civilisation to savagery. Some possess vast flocks and herds, while others are skillful agriculturists. Missionaries are established among them, and substantial improvement, material as well as moral, is in progress. The revenue of the Territories for 1884-5 was £63,411, expenditure £46,019. Since the great war of 1876-7, when Krel and his Galekals invaded Cape Colony, there have been occasional outbreaks and disturbances, principally intertribal. In 1886 the Pondos raided upon the Xesibes, which has led to recent alterations in the status of independent Pondoland.

Transvaal. An independent Dutch state, officially styled the **South African Republic**. It lies N. of the Vaal river and S. of the Limpopo river. It is bounded W. by Bechuanaland; E. by Portuguese territory; S. by Swaziland, Zululand, Natal, and Orange Free State. Boundaries defined by Convention of London, 1884. Area 114,360 sq. m.; pop. about 800,000, of whom some 50,000 only are whites. Country divided into fifteen districts; capital, Pretoria. Other towns are Potchefstroom, Leydenberg, Wesselsdroom, and Heidelberg. The country is generally elevated, in some parts very rugged. The **Hooge Veldt**, a lofty plateau extending along the S. and S.E., is the principal seat of industry. **Bosch Veldt**, or forest country, is found chiefly in the N.E. Climate extremely fine, in spite of latitude; the elevation rendering it healthy and agreeable. The Transvaal is rich in minerals: there are immense fields of coal, with surface outcrops. Gold, both alluvial and in quartz, is worked in the eastern districts: output, 78,290 oz. in 1879, a larger amount in subsequent years. Lead, silver, copper, iron, and cobalt, are also found in considerable quantities, and tin, platinum, and plumbago have been discovered. The Transvaal is ruled by a President (Mr. Kruger) elected for five years, with a Council of four members. Legislation is effected by a Volksraad of forty-four members, one-half retiring every two years. To exercise the franchise, burghers must reside five years, take the oath, and pay £25. There is no force to maintain order or enforce collection of taxes, but every burgher may be called out in time of war. Revenue (1886-7) £250,984; expenditure, £245,592; debt, £380,750. The State is, however, practically bankrupt. Exports of wool, cattle, hides, grain, ostrich feathers, ivory, butter, gold, etc., £600,000; imports (1885-6), £524,966, and more smuggled. Industries are farming,

mostly pastoral, some mining and hunting. The Dutch Reformed Church is the dominant religion. From 1836 began the "trekking" of Dutch Boers out of **Cape Colony** (*q.v.*). On the 17th January, 1852, the **Sand River Convention** was signed, by which the Transvaal was recognised as an independent State. In 1858 the three original commonwealths in the country united to form a republic, and in 1873 elected the **Rev. T. Burgers** their President, who first conceived the idea of a railway to **Delagoa Bay** (*q.v.*). But native troubles arose: **Sikukuni**, a Bechuana chief, inflicted crushing defeats on the Boer forces, and threatened the capital. Other tribes became excited by the oppressions and cruelties of the Boers. It became necessary for **Great Britain** to interfere, and on April 12th, 1877, the Transvaal was annexed. For a time English money and English enterprise worked wonders: markets were created for produce, and land rose in value. In December 1880, however, a majority of the Boers took up arms against the British Government. They invested towns held by Imperial troops, and surprised a detachment on the march. **Sir G. P. Colley** was defeated by the Boers at **Laing's Nek**, and shortly afterwards at **Majuba Hill**, where he was killed. After this the British Government entered into a treaty with the Boer leaders (**Joubert and Kruger**), which was more liberally renewed in 1884, and by which the Transvaal became again independent, its external relations being subject to the approval of Her Majesty, as suzerain. The results of this "act of magnanimity" have not been happy. Property has lost value, and the stipulations of the convention have been ignored. Aggressions into Bechuanaland and Zululand (*q.v.*) have obliged interference. Swaziland and **Amatongaland** are threatened with annexation by the Boers, who are striving to obtain possession of some outlet to the sea. The opening of rich gold-fields in eastern Transvaal and Swaziland, and the congregation on them of hundreds of English diggers indisposed to submit to Boer domination, is likely to still further create causes of quarrel. For President, etc., of Republic, see **DIPLOMATIC**. Consult Aylward's "Dutch South Africa," Clark's "Transvaal and Bechuanaland," Norris-Newman's "With the Boers," Petherick's "Catalogue of York Gate Library," Mackenzie's "Austral Africa," Theal's "History of the Boers," Jeppe's "Transvaal Book and Almanack" (Pretoria, annually), etc.

Treasure Trove. A hoard of the precious metals in any form hidden in the earth, or in any private place. See ed. '86.

Treasurer of the Household (see **MINISTRY**) is a deputy to the Lord Steward of the Household (*q.v.*), and is always a privy councillor.

Treasury. The Lord High Treasurer, who when existing is the third great officer of State (*q.v.*), had of old the appointment of all officers employed in collecting the revenues of the Crown, the nomination of all escheaters, and the disposal of all plans and ways relating to the revenue; and power to let leases of Crown lands. This definition of his powers and duties still holds good, to a great extent, in regard to the Treasury Board; although the management of the Crown lands (*q.v.*) has long since passed into the hands of the Commissioners of Woods and Forests. The Treasury has control over the management, collection, and expenditure of the public revenue (see **EXCHEQUER** and **FINANCE**),

and exercises a general supervision and control over all the public departments, and no increase of salaries or additions to or material changes in the civil establishments can be made without its authority. All exceptional cases in matters of revenue are referred to it, and it settles all questions regarding the amount of compensations, allowances, and pensions to be awarded in exceptional cases. It audits the civil list, and is the accounting department to the House of Commons for a number of civil service votes, including those for rates on Government property, secret service, criminal prosecutions, revising barristers, learned societies, suppression of the slave trade, subsidies to telegraph companies, and for temporary commissions. All money bills of the Metropolitan Board of Works are submitted to it, and if approved are introduced by one or other of its representatives in the House of Commons. Since the days of George I., the powers and duties of the office of L. H. T. have been invariably executed by commissioners, consisting of the First Lord of the Treasury, the Chancellor of the Exchequer, and three Lords Commissioners, who are usually designated Junior Lords. The First Lord, if he fill that office only, has no share in the management of the department; but some minor duties, such as recommending for Civil List Pensions, appertain to his position, and he is an *ex-officio* trustee of the National Gallery and British Museum. For nearly eighty years prior to 1885 the office of First Lord was invariably held by the Prime Minister of the day. The departmental duties of the three junior lords are almost nominal. The Patronage Secretary to the Treasury is principal Government whip (see COMMONS), but he does little more in the department than nominate a few postmasters. The commissioners forming the Treasury Board seldom if ever meet; and in fact the real work of the department is performed by the Chancellor of the Exchequer, who is its effective head, aided in matters of detail by the Financial Secretary and the Permanent Secretary (Sir R. Welby, K.C.B. salary £2,000). The Chancellor of the Exchequer sees that the estimates sent in by the spending departments are framed in due regard to economy, is made acquainted with the views of the revenue departments regarding probable receipts, and upon the figures before him he prepares and introduces his budget; appointments in the National Debt Office are in his gift, and not only questions affecting public revenue and expenditure, but the National Debt, and the best methods of reducing it, and the advances made by the National Debt Commissioners for local loans are all matters within his special cognisance (see FINANCE). He is master of the Mint, and he presides at the nomination of sheriffs (*q.v.*). Like the First Lord of the Treasury he is provided with an official residence at Downing Street. In connection with the Treasury there is a Parliamentary counsel who drafts Government bills, and a solicitor who acts for the Government in certain legal prosecutions, and is the Crown's nominee when Her Majesty becomes entitled to the personal estate of an intestate, and administration is granted by the court; and who is also Queen's Proctor for Divorce Interventions (see DIVORCE), and Director of Public Prosecutions (*q.v.*).

Trebelli, Madame, the eminent singer, was b. 1838, in Paris, of German parents named Gilbert. In '49 she appeared in Madrid under

the name of Trebelli. Connected for some time with Merelli's Italian Opera Company. Her marriage with Bettini was subsequently dissolved. Her most successful parts are *Rosina* and *Azuena*. She is especially famed for her brilliant trilling. Her first appearance in London was made in '62, when she appeared as *Madda Orsini* in "*Lucrezia Borgia*"—a part she resumed with success in '88.

Tree Planting Societies. A movement for planting trees in towns, in imitation of *Arbor Day* (*q.v.*) in the United States, inaugurated at Newcastle-on-Tyne, June 11th, the mayor assuming the presidency of an influential society. Avowed objects, to plant new and protect old trees in Newcastle and its vicinity, furnish information and aid to would-be tree planters, to educate builders, to avoid the useless destruction of trees, to prosecute persons maliciously injuring the trees of the town, to seek to establish an Arbor Day, and to promote the preservation and cultivation of trees elsewhere in the United Kingdom. Several public meetings were subsequently held to push the movement, and in the autumn a large number of trees were given by local supporters, and planted about the town.

Trent (Ital. *Trento*), an old city of the Austrian Empire, capital of Italian Tyrol, on the Adige, 51 miles north-east of Verona, by rail. A Roman dukedom, and the seat of Gothic and Lombard dukes and Frankish counts. It passed in 1027 under the rule of its bishops. Now the seat of a prince-archbishop. Cathedral begun 1212. Church of St. Maria Maggiore, meeting-place of the Council of Trent, 1545-63. Industries: Silk-spinning and weaving, tanning, sugar-refining, glass-blowing. Trade in wine, grain, fruit, and marble from the quarries in the neighbourhood. Divice received Nov. 20th ('88) state that the Pope has decided, in the event of hostilities between France and Italy, to take refuge either at Trent or at Monaco. Pop. ('80), 19,385.

Trespass, Law of. The term "trespass" has a wider signification in law-books than in common parlance. What is ordinarily known as trespass is the injury described in law Latin as trespass "quare clausum fregit" which consists in breaking a man's close, in other words, intruding upon his land without lawful authority. The trespass is equally committed whether such land be fenced or open, and the trespasser is liable to an action for damages for any injury which he may have done in trespassing. Only a person in actual possession can maintain this action, so that it cannot be brought by any person whose interest in the land is merely reversionary. Trespass is committed by any person who allows his cattle to stray on to another person's land; and in this case the injured party may either bring his action for damages or he may detain upon the offending cattle. But trespass is not a criminal offence, so that the well-known warning, "Trespassers will be prosecuted according to law" is really a mere bugbear. All that can be done to a trespasser who has committed no injury is to order him off the land, and, if he refuses obedience, to use just so much bodily force as is necessary to remove him. Extremely insolent behaviour on the part of the trespasser will, however, aggravate damages for injury done by him. There are cases in which entry upon another man's land is lawful, as when the land is subject to rights of way or rights

of common; or when a person enters in order to pay or demand the payment of money there payable; or to execute a legal process; or when he enters an inn or tavern, the landlord of which is assumed to have given a general licence to all men to enter. Misbehaviour in a place of public entertainment operates, however, to make the original entry a trespass. Trespass may be committed, not only by entering upon another man's land but also by interference with it: by driving nails into a wall built upon it, or by taking minerals from underneath it. Trespass may be of a continuing nature, as where a man builds a house on his own, with a balcony which projects over his neighbour's land. The Scotch law of trespass differs considerably from the English.

Trichina. A nematoid worm found in the muscles of the human body, induced by eating diseased pork. See ed. '86.

Trincomalee. A port of Ceylon (*q.v.*), and the principal naval station in the Indian seas. Its fortifications have lately been strengthened. Pop. 10,180.

Trinidad ("Trinity"). The largest of the Lesser Antilles, is separated from the Venezuelan coast by the Gulf of Paria. Is a British colony. Area 1,754 sq. m.; pop. 153,128. Capital **Port of Spain**, pop. 34,000; other towns San Fernando and Macarape.—Three chains of hills traverse the island, but it is generally level. The climate is healthy, and the soil very fertile. The woods contain an inexhaustible supply of timber. Chief exports—sugar, cocoa, coffee, coconuts, asphalt, bitters, and liquors. A feature of the country is the Pitch Lake, from which bitumen is obtained for export. Coal is also found. There are two mineral springs. Resources are not fully developed. Fully half the area is still available. The colony is ruled by a Governor and Councils as a Crown colony. Trade is considerable, a large number of vessels visiting the island. For financial statistics see **BRITISH EMPIRE**, etc. (table). There are 51 miles of railway open. Religion and education are well provided for. From 1496 Trinidad belonged to Spain, from which Power it was captured by a British force in 1797, and has since remained a British colony. Consult Bates' "South and Central America and West Indies," Layard's "Through the West Indies," etc.

Trinidad and Martin Vas. Two small Atlantic islands some 700 miles from the coast of Brazil. England took possession of them in 1815. There are supposed to be a few inhabitants. Area about 10 sq. m. Seldom visited.

Trinity House, designed by Samuel Wyatt, was built on Tower Hill 1794, succeeding the House in Water Lane, burnt first in the Great Fire and again in 1714. Becoming in 1792 very dilapidated, the present estate was purchased. The history of Trinity House properly begins with the original charter of Henry VIII., but a higher antiquity is claimed for it than that date. The Trinity Almshouses at Deptford were erected some hundred years previously, and other evidence makes it clear that a practical corporation existed long before. The charter of Henry VIII. was confirmed by succeeding monarchs until the reign of James II., whose charter has remained in force unchanged until within recent years, when a supplemental charter, affording better facilities for the transaction of business under modern conditions, was granted by Queen Victoria. Its title is "The

Master, the Wardens and Assistants of the Guild of the Fraternity or Brotherhood of the Most Glorious and Undivided Trinity, and of St. Clement in the Parish of Deptford in the County of Kent." About the year 1590 the Admiralty and Navy Boards were first formed, the suggestion of which is attributed to Henry VII. The establishment of dockyards and arsenals following thereupon, the Deptford building-yard was confided to the direction of the Trinity House, together with the supervision of all navy stores and provisions. The first Master under the charter was Sir Thomas Spert, sometime Controller of the Navy. The earliest duties of the Trinity House related to pilotage and the regulation of pilots in the port of London and various other ports in England, and as kindred services buoyage and beaconage of the coast came gradually under the supervision of the Elder Brethren. This duty was formally imposed upon them by the Act 8th Elizabeth. Their almshouses at Deptford, where the corporation was originally established, were pulled down a few years ago, on becoming dilapidated, and annuities granted to the occupants and their successors. The establishment at Mile End still remains. The houses number about ninety. There are many other charitable bequests and trusts, all applicable to poor mariners, their widows and orphans. The Trinity House itself contains many valuable pictures of former masters and others associated with the corporation's history, and its collection of ancient manuscripts has furnished material for an interesting chapter in the records of historical manuscripts recently published. In 1886 an Order in Council was issued fixing the establishment of Trinity House, and the salaries to be paid to the officers out of the Mercantile Marine Fund, and making various alterations in the official arrangement. The Elder Brethren are elected for life, and as a vacancy occurs they elect a successor. They meet every day for routine work, and twice a week for committees. Master: Vice-Admiral H.R.H. the Duke of Edinburgh, K.G., etc. Deputy Master: Capt. John Sydney Webb. See also ed. '88.

Tripoli. The easternmost of the Barbary States of North Africa, and a vilayet of the Turkish Empire. Conjoined and subject to it are Fezzan, to the south, a chain of verdant oases in the desert—capital Mourzouk; and Barca, between Tripoli and Egypt, mostly desert, but occupying the site of the gardens of the Hesperides—capital Bengazi. The whole area is officially stated to be 398,873 sq. m., pop. 1,000,000. Capital Tripoli (pop. 25,000), the only good port. Whole coast low and sandy; permanent rivers few and inconsiderable, but water easily obtained by sinking wells. Ruled by a vali, or governor, appointed by the Sultan of Turkey. A small Turkish garrison maintains a semblance of order. Since the French occupation of Tunis there has been an inclination to proceed into Tripoli on the part of that power, despite the Turkish claims. But this has been met with similar designs on the part of Italy, which has interests in Tripoli. The country therefore still remains a Turkish province. Of Fezzan almost nothing is known, since Europeans are prevented from travelling in it by the fanatical Mohammedan population. The principal products of the country are corn, barley, olives,

saffron, figs, and dates. Tripoli has succeeded Tunis as the centre of the caravan trade of North Africa. A large proportion of the commerce is in the hands of British merchants, who send cloth, cutlery, and cotton fabrics south to the Sahara and the Soudan in return for *esparto* fibre, ostrich feathers, and ivory. For Governor-General, etc., see DIPLOMATIC.

Tristan D'Acunha. A group of three small volcanic islands in the South Atlantic, situated nearly midway between the Cape of Good Hope and the coast of South America. Tristan, Inaccessible Island, and Nightingale Island. 45 sq. m. Tristan, the largest, is nearly circular, with a volcanic cone (7,640 ft.), the crater of which is said to be filled with a fresh water lake which never freezes. Precipitous cliffs, 1,000 to 2,000 ft. in height, rise sheer from the sea on every side but the north-west. There are about one hundred inhabitants, English, who govern and maintain themselves in patriarchal and simple fashion. They call their village Edinburgh. They have cattle, sheep, and geese. The islands were discovered and named by the Portuguese in 1506, and were taken possession of by Great Britain in 1816. Communications irregular: one of H.M. vessels now visit the island annually.

Tristram, Rev. Henry Baker, D.D., LL.D., F.R.S., Canon of Durham (74), has distinguished himself as an explorer in the Holy Land, and a popular contributor to the literature of the antiquities and natural history of the Bible. A native of Northumberland, he was b. 1822. Educated at Lincoln Coll., Oxford, where he graduated '44. He was curate of Morchard-Bishop, Devon, '45, chaplain to Admiral Sir Charles Elliot, governor of Bermuda, '46, rector of Castle Eden, Durham, '49-55, when he proceeded to North Africa. An interesting account of his explorations in that region is given in his well-known book "The Great Sahara." In '58 he paid his first visit to Palestine, and '60-73 was vicar of Greatham, Durham. He has made several journeys into Palestine, and in '79 was offered the bishopric of Jerusalem, but declined it. Amongst the best known of Canon Tristram's books are "The Land of Israel," "The Daughters of Syria," "The Seven Golden Candlesticks," "Bible Places," "The Land of Moab," "Pathways of Palestine," "Incidents in Bible History chiselled on Ancient Monuments," etc.

"Tropical Africa" (Hodder & Stoughton). Professor Henry Drummond's charming work is one of the few books which redeemed the literature of '88 from being absolutely commonplace. It is brilliantly written and as fascinating as a novel, but infinitely more valuable. It is the outcome of a journey to the heart of Africa from the mouth of the Zambesi, by way of the river Shire and Lake Nyassa. The volume is not so much a record of travel, as a discussion of various questions—scientific, political, and moral—which the journey suggested. The chapters on the white ants and the mimicry of insects could not be better, while the exposure of the hellish slave trade deserves the immediate attention of every civilised Government. There are five really useful maps in the book, the map of the slave trade being quite gruesome, with its blotches of blood showing the districts which have become depopulated.

Truant Schools. See SCHOOL BOARDS FOR LONDON.

Truro, Rt. Rev. George Howard Wilkin-son, Lord Bishop of. See founded 1877, with an income of £3,000. His lordship, the 2nd bishop, is the son of George Wilkinson, Esq., of Oswald House, Durham, and was b. at Durham May 12th, 1833. Was educated at Oriel Coll., Oxford; graduated B.A. and class Lit. Hum. 1855, and proceeded M.A. 1859, and D.D. by diploma 1883; was ordained deacon 1857, and priest 1858 by the Bishop of London, and consecrated to the see 1883. For two years was curate of Kensington, and appointed 1859 incumbent of Seaham Harbour, and transferred in 1863 to Auckland, Durham, and in 1867 to St. Peter's, Great Windmill Street, Westminster; here he remained until 1870, when he was appointed to the vicarage of St. Peter's, Eaton Square. He was Select Preacher at Oxford 1879-81, Hon. Canon of St. Petrock in Truro Cathedral 1878-83, and Proctor for the diocese of London 1880-83. As an author his lordship is known by his many devotional works.

Trust Deeds. Law in '88. An important point concerning the trust deeds of dissenting places of worship was raised in the case of the *Attorney-General v. Anderson* (Chancery Division, March, '88). The defendant was chosen as the Independent minister of a Congregational Chapel at Footing, said to have been founded in 1666 by Daniel Defoe. He had since joined the Presbyterian Church of England, and argued that that Church was the legitimate successor of the Presbyterians, who existed when the trust deeds of this particular chapel were executed. Mr. Justice Kekewich found for the plaintiff, holding that many of the rules of the Presbyterian Church of England were in direct conflict with those of the Independent denomination, for which the endowment was intended.

Trustee Savings Banks Act, '87. See ed. '88.

Trustees. A trustee must be a person capable of taking and holding legal estate and possessed of sufficient capacity and ability to execute the trust. Since the *Naturalisation Act 1870* an alien (*q.v.*) is apparently as capable as a native-born person of acting as a trustee. A trustee who has accepted a trust cannot afterwards renounce it, except under very exceptional circumstances; nor can he delegate his office, the position being one of personal responsibility. Where, however, there is a moral necessity for it, delegation is permitted. A trustee is bound to take the same care of trust property as a man of ordinary caution would take of his own. Trustees, executors and administrators receive no allowance for their care and trouble, on the ground that a trustee should not profit by his trust. They may, however, contract with their *cestui que trust*—that is, the person beneficially interested in the property—to receive some compensation for the performance of the duties of their trust. No trustee must use his *fiduciary* position to obtain any profit or advantage which he would not otherwise receive. He must not enjoy the shooting over the trust estate, charge more than he gave for the purchase of things, or take trade profits, paying interest instead. He cannot renew a lease in his own name, or purchase the trust estate, unless under exceptional circumstances. A *constructive trustee* is not liable to the same extent as an *express trustee*. As a general rule, one trustee is liable for the acts of his co-trustees, though co-executors

are generally answerable only for their own actions. The two primary duties of a trustee are to carry out the directions of the person creating the trust, and to place the property in a state of security. In the absence of express powers, investments were formerly confined to mortgages of real estate in England, Government securities, or consolidated bank annuities. By Lord St. Leonards' Act, however, trustees, where not expressly forbidden by the terms of the trust, are authorised to invest trust funds in real securities in any part of the United Kingdom or in the stock of the Banks of England or Ireland, or in East India stock. By Lord Cranworth's Act, and by later statutes, the range of investments is still further widened. Trustees may invest in any of the Parliamentary stocks or public funds, or in Government securities, or in the debenture stock of any company. In the event of the duties of a trustee being improperly carried out, the *cestui que trust* has ample remedies, and as a rule interest is payable, generally at 4 per cent., for the period of the trustee's *laches*. The powers of trustees have been largely affected by the Conveyancing Acts of 1881 and '82, the Settled Land Act of '82, and the Married Women's Property Act of the same year. The effect of the latter statute is that a married woman can accept the office of executrix without the concurrence of her husband, and deal with the trust property as if she were a *feme sole*. Consult "Lewin on Trusts."

Trustees, Liability of, Law on, '88. The case of *Billing v. Brogden* (Court of Appeal, May '88) was an important decision as regards persons holding the position of trustees. The trustee in question was bound, at the expiration of a specified time, to obtain payment of certain trust moneys; but, owing to a want of due diligence on his part, this was not done, and a considerable proportion of the trust fund was ultimately not forthcoming. The Court held the trustee liable, notwithstanding that they believed him to have acted honestly and in good faith. In *Webb v. Jonas* (Chancery Division, May '88) it was laid down that a trustee was not entitled to invest money in a contributory mortgage, and that he was responsible for loss arising from its proving an insufficient security. On the other hand, in *Tudball v. Medliott* (Chancery Division, July '88), the Court declined to hold that a trustee was bound to bring an action at his own expense to recover trust property, especially when it was not certain that any loss had occurred. A trustee who sells trust property with the intention of making a repurchase for himself when convenient, can't retain possession of the property according to the ruling in *Postlethwaite v. Rickman* (Chancery Division, May '88).

Trusts. See SYNDICATES.

Tseng, The Marquis. Now member of the Tsungli Yamen, and President of the Board of Admiralty, late Envoy Extraordinary and Minister Plenipotentiary from the Court of Peking to the Court of St. James's, b. 1837. His father was the Marquis Tseng-Kwo-fan. He was appointed ('78) the representative of China in Paris and London. Russia was also included in his embassy at the time of the dispute with reference to Kulda. In the negotiations with France on the Tonquin question the Marquis Tseng was uncompromising and unyielding; nor did the ministry of M. Ferry display a conciliatory temper. The Marquis Tseng is regarded as an astute diplo-

mat. But his resolute opposition to French aggression in the Indo-Chinese peninsula has caused him to be regarded with disfavour by that government. It is expected that he will play a prominent part in Chinese affairs, and his policy is defined by himself in the *Asiatic Quarterly Review* for Jan. '87, entitled "China—the Sleep and the Awakening."

Tuamotu Archipelago. A broad belt of 70 coral islands, covering 1,500 miles of the Pacific, and now under the protection of France. Called also Paumotu, Dangerous Archipelago, Low Islands, and Pearl Islands. Include Disappointment Islands, King George's Islands, Gambier Islands, etc. The natives, once very numerous, have decreased to less than a thousand. Food consists almost exclusively of cocoa-nuts, pandanus fruit, and fish. Pearl-fishing the chief industry.

Tubual, Austral Islands. A small easterly Polynesian group belonging to France. Area 80 sq. m., pop. 665.

Tunis. One of the Barbary States of Northern Africa, lying east of Algeria, and comprising 45,384 sq. m.; pop. 1,500,000. Capital, Tunis, pop. 150,000—many Christians, Jews, Maltese, and Europeans. Manufactures, silk and woollen goods, shawls, carpets, mantles, fezzes, burnouses, otto of roses, oil of jessamine. Site of ancient Carthage. Till 1881 under rule of a Bey, who was nominally a vassal of the Sultan of Turkey. In that year incursions of Kabyle tribes within the borders of Algeria caused the French to invade Tunis, with the result (1882-2), that it became a French Protectorate. The Bey's functions are now limited to distributing orders among French troops, who garrison the country. Government is carried on by a French Resident, with various French officials under him. The force of occupation is nominally 15,000 men, but in reality double that number. Estimated revenue and expenditure for '87-8, £863,625; imports, in '86, £1,208,631; exports, £776,659. In Tunis is the city of Kairwan, one of the holy places of Islam. In production and manufacture, and in degree of civilisation, Tunis may be said to be the most advanced of the Barbary States, next to Algeria. Consult Broadley's and Hesse-Wartegg's "Tunis." For Prime Minister, etc., see DIPLOMATIC.

Turf, The. Though not so general in the classical ages as chariot racing, horse racing, as usually understood formed an important part of the Grecian games, and Gibbon writes of the Scythians as being "consummate masters of the equestrian art." The Romans were also much attached to the sport, and the place where they ran or coursed their horses was termed hippodromus, or hippodrome. Authorities differ somewhat as to whether the horse was indigenous to Britain, and the probability is that it was first brought over to our shores from France. Races between full-aged horses (six years) are believed to have been encouraged by the Anglo-Saxons; and King John is said to have much favoured the pastime. Edward III. and Henry VIII. also devoted much attention to the subject, and the fame of the English thoroughbred gradually extended over the world. James I. made many efforts to improve the breed of running horses, and His Majesty purchased the first Arab sire ever imported into this country. This was the "Markham" Arabian, a small bay horse, described by an historian of that day as

the "equine father of the turf," and which realised £154, in those days a very considerable sum. Beyond all doubt the English racer is now the fleetest of all horses; and so extensively have foreign agents been draining our markets of recent years, that a Royal Commission was appointed in November '87 to inquire and report as to the best means of expending the annual Government grant of £5,000 in order to improve the breed of horses, more especially with a view to meeting the demand for cavalry remounts. As a result of their labours the Commissioners recommended the distribution of the grant mentioned into premiums to selected sires conditionally on their travelling over specified districts at stated fees.

The rules governing flat racing are framed by the Jockey Club, a body formed some time between the years 1750 and 1760, the present stewards of which are the Hon. H. W. Fitzwilliam, the Right Hon. James Lowther, and the Earl of March. The remaining members number ninety, and include the Prince of Wales, the Duke of Cambridge, Lord Alington, Earl Cadogan, Lord Calthorpe, the Right Hon. H. Chaplin, Mr. W. G. Craven, Sir George Chetwynd, the Earl of Durham, Viscount Falmouth, Earl Granville, the Marquis of Hartington, the Marquis of Londonderry, the Duke of Richmond and Gordon, the Earl of Rosebery, Mr. Leopold de Rothschild, the Duke of St. Albans, Prince Soltykoff, the Duke of Westminster, General Owen Williams, and the Earl of Zetland; whilst amongst the honorary members are the Emperor of Russia and the Presidents of the French and American Jockey Clubs. All steeple-chasing and hurdle-racing events are governed by the Grand National Hunt Committee, and the rules of betting come under the direct supervision of the Committee of Tattersall's Subscription Rooms.—After the *Allesbury scandal*, comment upon the questionable riding of some of the leading jockeys became frequent; and subsequent to the memorable denunciations of jockey-gambling by Lord Durham at the annual dinner of the old-fashioned Gimcrack Club, in '87, pointed allusions were made as to the in-and-out running of some of the horses entrusted to the guidance of Charles Wood. The *Licensed Victuallers' Gazette*, of which Mr. Cox is the proprietor, roundly charged the then foremost jockey of the day with dishonestly riding General Owen Williams' Success, and it became imperative to institute proceedings. These were not pushed on with sufficient promptitude to please the Jockey Club Stewards, and they refused Wood a renewal of his licence, thus depriving him of following his calling, by which it was estimated he was earning fully £10,000 a year. Then the action was hurried on, and after a protracted trial it was brought to a close on June 26th, '88, a special jury finding in favour of the plaintiff with one farthing damages. Lord Chief Justice Coleridge at first declined to deal with the question of costs, but eventually refused Wood any of his expenses.—The dispute between Lord Durham and Sir George Chetwynd, which also arose out of the Gimcrack Club speeches, has been a prominent topic of conversation in racing circles throughout the year, and it may be remembered that Lord Durham, on the occasion alluded to, passed some severe strictures on the in-and-out running of animals located in a certain powerful stable. No name was mentioned, but the re-

marks were of so pointed a character that it was very generally understood who was alluded to. Hence no racing man was surprised to learn that Sir George Chetwynd challenged his lordship to prove his assertions, or give him "that satisfaction which every gentleman was entitled to when insulted." Lord Durham refused to do either, and admitted that his speech did refer to one of Sir George Chetwynd's horses. He declined to make any specific charge, or to confine himself to the case of Fullerton, which had already been inquired into by the Jockey Club. His lordship, however, expressed himself as quite willing to abide the decision of any inquiry conducted "with all the formalities and safeguards of a public tribunal." Correspondence ensued between the parties interested and the Jockey Club, the latter body being requested by Sir G. Chetwynd to undertake an inquiry, but they declined to do so until a reasonable time had been afforded him to bring an action-at-law. Nothing decisive being arrived at, a largely-attended meeting of the members of the Turf senate was held at Lord Hastings' town residence on Feb. 7th, when Sir George Chetwynd explained that he had consulted eminent counsel, who were of opinion that there was no ground of action, no distinct allegations having been made by Lord Durham. The latter gentleman thereupon expressed his willingness to lay before the Club a letter in which he would state positively and clearly that the substance of his Gimcrack Club speech was that the horses in Sherrard's stable had shown constant and unexplicable changes of form, and that Wood, the jockey of that stable, had been in the habit of pulling them. Further, that Sir George Chetwynd had connived at serious malpractices which were contrary to the rules of racing. Upon the suggestion of the Duke of Richmond, it was then agreed that Sir George should bring an action for libel against Lord Durham, in order that the inquiry should be guided by the formalities of a court of law, and that having gone through certain initial stages the case should be referred to arbitration. It was definitely agreed in November that Earl Cadogan, the Earl of Cork and Orrery, and the Earl of March should act as arbitrators in the Chetwynd v. Lord Durham suit.

The *Two Thousand Guineas* (worth in reality £3,550), the first of the classic events of the year '88, and run for on May 2nd over the Rowley Mile at Newmarket, fell to the Duke of Portland's colt *Ayrshire*, by Hampton—*Atalanta*, which started second favourite at 8 to 1 against in a field of six runners. Odds of 3 to 1 were laid on Friar's Balsam, the joint property of Lord Alington and Sir F. Johnstone; but owing to abscesses in his jaws bursting in the course of the race the favourite was unplaced, second and third honours being accorded to Johnny Morgan and Orbit—the former being the property of the Duke of Portland, who thus ran first and second, whilst the Duke of Westminster owned the third. The sister race of *One Thousand Guineas* (worth £3,500), run for over the same course two days later, was credited to Mr. Douglas Baird's *Briar-root*, by Springfield—*Eglentyne*, who started at 100 to 9 against in a field of fourteen; Lord Calthorpe's *Seabreeze* being second, and Mr. C. Perkins's *Belle Mahone* third. The *Derby*, the great race of the year, and which invariably attracts over half a million visitors to Epsom Downs, a fine stretch

of galloping ground, was established in 1780, the first winner being a chestnut colt named Diomed, belonging to Sir Charles Bunbury. The weights then carried were 8 st. by colts and 7 st. 11 lb. by fillies, and the distance was one mile; the imposts are now fixed at 9 st. for colts and 8 st. 9 lb. for fillies, the last change taking place in '84, whilst the course is half a mile longer; the net value of the stake in Diomed's year was £850, whereas on the last anniversary, which was celebrated on May 30th, it amounted to £3,675. From this it will be seen that the conditions of the race have been materially changed since its institution by the Earl of Derby. Ayrshire was supported at 6 to 5 on, and F. Barrett had a comfortable ride, the favourite winning very easily from Mr. Vyner's Crowberry and Mr. C. D. Rose's Van Diemen's Land. The remaining competitors finished in the following order: Galore, Orbit, Chillington, Netheravon, Simon Pure, and Gauthy. The list of Oaks winners is headed by *Briget*, a filly which carried the colours of the same Earl of Derby who instituted the Derby Stakes a year later, and the only differences between the races are that the Oaks is restricted to fillies, which are apportioned 1 lb. more than in the Derby, and that whereas the latter is run on the Wednesday the former is decided on the Friday of the Epsom Summer Meeting. The heroine of the last Ladies' Day was *Seabreeze*, a daughter of Isonomy—St. Marguerite, who started at 7 to 4 against, and won by two lengths from Lord Palmouth's Rada and Belle Mahone, the other runners being Briar-root, Polydore, and Her Majesty. The value of the stakes credited to Lord Calthorpe by this victory was £2,950; and Ayrshire and Seabreeze became favourites for the St. Leger, a race which in 1778 was named in honour of Lieut.-Gen. Anthony St. Leger, of Park Hill, although, as a matter of fact, the race had been instituted two years earlier. As in the Derby, the conditions regulating the contest so dear to the Yorkshireman's heart have varied, and it is now run over a distance of 1 m. 6 fur. 132 yds on Doncaster Town Moor, and as a rule on the second Wednesday in September. There were 16 competitors for the latest anniversary, and whereas Seabreeze won easily from Lord Bradford's Chillington and Mr. Milner's Zanzibar, Ayrshire failed to stay, and only succeeded in getting sixth, Apollo being fourth and Merry Andrew fifth, the remaining runners being Benburb, Estafette, White Flag, Arrandale, Stronvar, Belle Mahone, Love-in-Idleness, Netheravon, Orbit, and Ossory. The value of the stakes was £4,350. With regard to the performances of the leading two-year-olds, those of the Duke of Portland's Donovan, a bay colt by Galopin—Mowerina, Mr. Perkins's Chitabop, a chestnut colt by Robert the Devil—Jenny Howlet, and Mr. Douglas Baird's El Dorado, a bay son of Sterling and Palmfleur, stand out prominently; and the first-named of the trio has won the largest sum ever credited to a two-year-old. The first important handicap of the season was the Lincolnshire, which was run over the Carlholme on March 21st, or two days after the opening of the flat-racing season; and in this Mr. W. J. Legh's Veracity, a 50 to 1 chance, beat Mr. Younger's Tyrone, Mr. Spence's Lobster, and 22 others. Of the other important flat-races of the year, taken in the order of their decision, the *Molyneux Plate* was won by Mr. J. H. Houldsworth's Gazelle

(100 to 7 against), the *Liverpool Spring Cup* by Sir George Chetwynd's Plantagenet, the *Wokingham Spring Handicap* by Veracity, the *Althorp Park Stakes* by Mr. Leopold de Rothschild's Eros, the *Earl Spencer Plate* by General Owen Williams's Shimmer, the *Great Northamptonshire Stakes* by Sir W. Throckmorton's Oliver Twist, the *Leicestershire Spring Handicap* by the Duke of Portland's Johnny Morgan, and the same nobleman was credited with the *Portland Stakes* of £6,000 (the richest two-year-old stake ever run for) by the aid of Donovan (100 to 12). At the *Epsom Spring Meeting* Mr. Benholm's Bartizan secured the *Great Surrey Stakes*, Mr. P. Peck's Sigbert took the *Westminster Stakes*, Mr. Barclay's Tissaphernes won the *Great Metropolitan Stakes*, Lord Londonderry's filly by Springfield—Griselda was successful in the *Hyde Park Plate*, and Sir George Chetwynd's Fullerton (8 to 1) defeated 13 opponents in the *City and Suburban*, Sir W. Throckmorton's Oliver Twist being second, and Mr. C. J. Merry's Abu Klea third, whilst amongst the unplaced horses was Merry Hampton, the Derby winner of '87. The *Crawford Plate* (Newmarket) was won by the Duke of Montrose's Dazzle, the *Babraham Plate* by Mr. J. Lowther's King Monmouth, the *Craven Stakes* by the Duke of Westminster's Orbit, the *Welbeck Cup* (Derby) by Sir G. Arthur's Rose Window, the *Doveridge Cup* by Mr. Renfrew's Lisbon, the *Chester Cup* by Mr. Homfray's Kinsky, the *Great Cheshire Handicap* by Mr. Sassoon's Theodore, the *Kempton Park Grand Prize* by Mr. Vyner's Crowberry; and in the *Great Jubilee Stakes*, at the last-mentioned gathering, Mr. Vyner's Minting defeated 18 opponents, notwithstanding that the peerless son of Lord Lyon and Mint Sauce had the crushing burden of 10 st. to carry. The *Payne Stakes* fell to Mr. Warblington's Galore, the *Somerville Stakes* to Lord Rodney's Bonnie Moin, the *Newmarket Handicap* to Theodore, the *Somersetshire Stakes* to General Pearson's Ruddiger, the *Beaufort Handicap* to Col. Forester's Ice, the *Salford Handicap* to Mr. J. O'Neil's The Rejected, the *Epsom Grand Prize* to Lord Bradford's Merry Andrew, the *Woodcote Stakes* to Prince Soltyskoff's Gold, the *Great Northern Handicap* (York) to Mr. Brydges-Willyams's Banter, the *Lewes Spring Handicap* to Mr. Eaton's Breda, and the *Doncaster Spring Handicap* to Lord Alington's Kingfisher. Owing to the serious illness of the Emperor Frederick of Germany, the *Ascot Meeting* was shorn of much of its customary splendour by the abandonment of the semi-state procession. The *Prince of Wales Stakes* were awarded to the Duke of Westminster's Ossory, the *Ascot Stakes* to Mr. Jameson's Dancer, the *Ascot Derby Stakes* to Prince Soltyskoff's Sheen, the *Fern Hill Stakes* to Lord Londonderry's Hazlethatch, the *Gold Vase* to Mr. Blake's Exmoor, the *Coronation Stakes* to Lord Calthorpe's Seabreeze, the *Bous Memorial Stakes* to Mr. H. T. Fenwick's Phil, the *Gold Cup* and *Alexandra Plate* to Mr. H. M'Calmont's Timothy, the *New Stakes* to Donovan, the *Wokingham Stakes* to Sir W. Throckmorton's Annamite (10 to 1), the *Hardwicke Stakes* to Minting, and in the *Royal Hunt Cup* Captain Macchell's Shillelagh (11 to 2) beat Mr. Victor's Atilla, Mr. Legh's Veracity, and 19 others, whilst Ossory and Mr. N. Fenwick's Galore ran a dead heat in the *St. James's Palace Stakes*. Mr. C. Perkins carried all before him at the *Newcastle and Gosforth Park June Meeting*, Belle

Mahone winning the North Derby, Matin Bell the Northumberland Plate, Chitabob the Seaton Delaval Plate, and Bonaparte the Newcastle Handicap. The Stookbridge Cup was won by Fullerton, the Foal Stakes by Prince Soltykoff's Pantomime, the Hurstbourne Stakes by Donovan, the Robert de Witville Plate (Sandown Park) by Mr. A. Cooper's Bismarck, the Electric Stakes by Mr. R. Peck's Bullion, the British Dominion Two-year-old Stakes by El Dorado, the Cumberland Plate by Lord Hastings's Queen's Counsel, the Newmarket July Stakes by Donovan, the July Cup by Fullerton, the Zetland Plate by Sheen, the Chesterfield Stakes by Gold, the July Handicap by Mr. Benholm's Braw Lass, and the Midsummer Plate by Lord Londonderry's Hazlebatch. Lord Calthorpe's Satety carried 8 st. 7 lb. to victory in the Liverpool Summer Cup, Mr. Leopold de Rothschild's Gagul won the Royal Plate at Windsor, Galore beat eight opponents in the Hamilton Park Stakes, Mr. Blake's Exmoor was successful in the Kempton Park July Handicap, Mr. Houldsworth's Arrandale was credited with the Midland Derby Stakes, King Monmouth secured the Leicestershire Summer Handicap, and the Duke of Westminster's Orbit (9 to 4) and Ossory ran first and second in the Sandown Park Eclipse Stakes, value £10,000, Mr. Douglas's Martley being third. "Glorious Goodwood" followed, and at this dual meeting the Ham Stakes fell to Donovan, the Stewards' Cup to 11b (100 to 6), the Richmond Stakes to Mr. Rose's Gulliver, the Gratwicke Stakes to Lord Ellesmere's Estafette, the Sussex and Findon Stakes to Mr. Milner's Zanzibar, the Chesterfield Cup to Sir F. Johnstone's Candelmas, the Lavant Stakes to Baron Rothschild's Crémère, the Prince of Wales Stakes to El Dorado, the Goodwood Cup to Rada, the Rous Memorial Stakes to Sir K. Jardine's Sweetbriar, and the Goodwood Stakes to Mr. Alec Taylor's Stourhead (4 to 1). Lord Bradford's Fretwork won the Brighton Stakes, Mr. Abington's Althorp took the Lewes Handicap, Lord Calthorpe's Seashell secured the Astley Stakes, Lobster was successful in the Great East Riding Handicap at the revived meeting near Hull, Mr. Sanderson's Nappa (20 to 1) was first in the Great Ebor, Lord Cadogan's Astrologer defeated 16 competitors in the Foveril of the Peak Plate, Rada won the Breeders' St. Leger Stakes at Derby, Mr. C. Archer's Eulalia was victorious in the Devonshire Nursery at the same meeting, and Sir R. Jardine's Hawthorn took the Hartington Plate. The Great Yorkshire Handicap at Doncaster was won by the Duke of Beaufort's Button Park, the Champagne Stakes by Chitabob, the Portland Plate by Mr. Laybourne's Goldseeker, and the Park Hill Stakes by Belle Mahone. The Ayrshire Handicap fell to Mr. Melville's Horton, and Seabreeze (5 to 2), by winning the Lancashire Plate over seven furlongs, credited Lord Calthorpe with the richest stake of the year. For this event there were 24 runners, and after an exciting race the Oaks and St. Leger heroine won by three-quarters of a length from Ayrshire, whilst third honours were secured by Baron Schickler's Le Nancy. In the following week Ayrshire won the Tenth Great Foal Stakes at Newmarket, the Great Eastern Railway and Newmarket Handicaps were awarded to Sir R. Jardine's Wise Man, the Champion Nursery Handicap at Kempton Park fell to the Duke of Westminster's Fleur-de-Lys, and of the 23 competitors for the Cesarewitch stakes Tené-

breeze, a French filly belonging to M. P. Aumont, and which started at 30 to 1, came in first, three-parts of a length in advance of Mr. Lambert's Mill Stream, Mr. Warren de la Rue's Trayles being third. Donovan defeated 13 opponents in the Middle Park Plate, Friar's Balsam, 3 yrs., 8 st 5 lb., beat Minting, 4 yrs., 9 st., and four others in the Champion Stakes, and Lord Calthorpe's Sandal won the Great Challenge Stakes, which brought the Newmarket Second October meeting to a close. The Northumberland Autumn Handicap was won by Lord Durham's Drizzle, and Mr. Legh's Veracity (20 to 1) defeated 18 opponents in the Cambridgeshire Stakes, Mr. Boyd's Cactus being second, and Mr. A. Cooper's Bismarck third. The Dewhurst Plate was credited to Donovan, and the season terminated at Newmarket with the victory of the Duke of Beaufort's Réve d'Or in the Jockey Club Cup. Mr. Younger's Tyrone compensated in a measure for many earlier defeats by winning the Great Tom Stakes at Lincoln, Count Lehdorff's Ilsestein was successful in the Leeds Autumn Handicap, Mr. Winn's Lady Rosbery (100 to 8) beat Mr. Meek's Bismarck, Mr. Howett's Aureoline and nine others in the Liverpool Autumn Cup, and Lord Calthorpe's Toscano was victorious in the Liverpool St. Leger. Eulalia won the Chesterfield Nursery at Del by 19 opponents, Hawthorn credited Sir R. Jardine with the Derby Handicap, the Midland Counties' Handicap was secured by Lord E. Somerset's Stour and Avon, the De Trafford Welter Plate fell to Mr. Whipp's Yarm, the Lancashire Stakes to Tommy Tittlemouse, the property of the same gentleman, and the Manchester Handicap to Lord Howc's Claymore (20 to 1 agst.), Mr. Fenwick's Phil being second, and Mr. Vynce's Fallow Chat third. F. Barrett heads the list of winning jockeys, with 108 wins out of 542 mounts, J. Watts being second with 105 wins and 458 losses; but the best average is that of T. Cannon's, his wins numbering 51 and his mounts 173. The Duke of Portland is credited with having won £26,811 in stakes, Lord Calthorpe trading close upon this total with £26,640, whilst the Duke of Westminster comes third with £18,345, this bringing the flat-racing season to a close on Nov. 22nd. As considerable interest is always shown by English sportsmen in the Grand Prix de Paris, the Prix du Jockey Club (the French Derby), and the Prix de Diane (the French Oaks), it may be added that the two first-mentioned events were credited to M. Donon by the aid of Stuart, and that the Prix de Diane was won by M. Joubert's Solange. The Grand National Steeplechase, the chief event of the cross-country season, is run for over a course of about 4 miles 1,000 yards, at Aintree, a short distance from Liverpool, and on the last anniversary Mr. E. W. Baird's Playfair, a 40 to 1 chance, won by 10 lengths from Frigate, Ballot Box being third, well in advance of 17 others. The Mammoth Hunters' Steeplechase of £2,000, run for at Sandown Park in the second week of April, was the richest stake of its kind ever decided, and after an exciting contest the prize was gained by Mr. J. G. Muir's Coronet, Mr. Rutherford's M.P. being second, and Lord Rodney's The Sinner third. The Grand Sefton Steeplechase was awarded to the Prince of Wales's Magic, and his Royal Highness was also credited with the Prince of Wales Steeplechase at Derby by the aid of the same animal.—In London there are two sporting daily papers: the *Sportsman*, Editor, Mr. A. Ory;

and the *Sporting Life* (with which is now incorporated *Bell's Life*), Editor, Mr. C. Blake; ("Aurur"), whilst the article signed "Vigilant" in the former journal is written by Mr. H. Smurthwaite. The *Sporting Chronicle* is published daily at Manchester; and the leading weekly journal devoted to sport is the *Field*, Editor, Mr. F. Toms.

Turkestan. From Central Asia, or what was formerly known as Independent Tartary, Russia has formed two provinces—Turkestan and Transcaspiæ. The former comprises the khanates and deserts annexed by Generals Tchernayeff and Kaufmann between '60 and '75. Area about 400,000 sq. miles, with 3,177,584 inhabitants. The principal town is Tashkent (pop. 100,000); present Governor-General, General Rosenbach. Bokhara and Khiva are under the control of this official. On a peace footing the army is composed of 26,743 infantry, 7,618 cavalry, and 76 guns; but can be raised on a declaration of war to 80,000. The old military road from Oienburg to Tashkent is now abandoned, reinforcements and stores being sent to Turkestan from the Caspian to Samarcand by railway. —**Turkestan, Afghan.** The scene of a rebellion against the Ameer in '88. Is an Afghan province north of the Hindoo Koosh, consisting of 70,000 sq. m., and a population, mostly non-Afghan (Uzbeg), of nearly 1,000,000. Principal town, Mazar-i-Sherif (pop. 25,000), near the ruins of ancient Balkh. In the summer of '88 Isaak Khan, a cousin of the Ameer, who had ruled the province since the accession of Abdurrahman Khan, raised a revolt with 7,000 men. After several slight engagements the troops sent from Cabul completely routed Isaak Khan at Tashkurgan in October, and the pretender fled to Bokhara. The latest reports state that the Ameer will winter in Afghan Turkestan, which is now quite pacified. Political importance attaches to the province from the fact that Russia aims at including it in her territories. This would push back the Afghan frontier to the Hindoo Koosh. —**Turkestan, Eastern.** China's westernmost province, formerly known also as Kashgaria, a state established by the rebel Mussulmans under Yakoob Beg, the Atalik Ghazi. Includes the towns of Yarkand, Kashgar, and Khoten. Is now quite pacified, but impoverished, and transacts a slight trade with Russia and India. With the cessation of Russian attempts to occupy the country, frequent before the Chinese reconquest, the country has lost political interest.

Turkey. An empire possessing extensive territories in Europe, Asia and Africa, governed by Sultan Abdul Hamid II. The commands of the Sultan are absolute, unless opposed to the express direction of the Koran, a legal and theological code upon which the fundamental laws of the empire are based. The legislative and executive authority is exercised by the Grand Vizier and the Sheik-ul-Islam, who are appointed by the Sultan, the latter with the nominal concurrence of the Ulama or general body of lawyers and theologians. The area of Turkey is estimated at about 1,263,500 sq. m.; and its total population at about 33,265,000. Estimated revenue for '88-9, £16,650,000; expenditure, £19,260,000. National external debt about £223,000,000 in 1874. By Berlin Treaty, 1878, Bulgaria, Montenegro, Servia, and Greece were to assume a portion of the external debt; and by arrangement in December 1881 the external debt was to be reduced to about £106,000,000,

and certain revenues handed over to a European commission of liquidation. In addition, there is an internal debt of £20,000,000, and an indemnity of £32,000,000 due to Russia. The consolidation of the various loans (excepting the railway bonds, over £14,000,000) was effected between the years '84 and '88. Imports for '86-7, £18,632,907, of which nearly £6,000,000 came from the United Kingdom; exports, £11,436,565, of which over £4,000,000 went to United Kingdom. Chief exports to Great Britain, corn, wool and goat's hair, valonia (dye-stuff), opium, raisins; chief imports from Great Britain, cotton goods and woollens. (For army and navy, see ARMIES and NAVIES, FOREIGN.) The administration is extremely corrupt and inefficient. The outlying territories have asserted their independence, or been gradually annexed by its more powerful neighbours, and the fall of the Ottoman dominion is apparently only a question of a few years.—**Political.** During '88 the relations of Turkey with other foreign Powers have generally been amicable (see BULGARIA for the Porte's relation to Bulgaria). The Suez Canal Convention, for which an Imperial irade was promulgated (May 18th), was sanctioned by Turkey (October 25th), and signed in conjunction with the other Powers. Some uneasiness was caused (June) by the presence of a French naval squadron in Tunisian waters and movements of Algerian troops by France, lest a *coup de main* should be contemplated against Tripoli. A difficulty arose between Greece and Turkey, arising from the case of M. Panurias, Consul at Monastir (June); Masowah was the occasion of a circular note (August) protesting against Signor Crispi's assumption of the supposed renunciation of the sovereignty of the Porte over the western shore of the Red Sea, Turkey endeavouring unsuccessfully to obtain (Sept.) a modification of Article 10 of the Suez Convention. The immigration of Kurdish tribes into Turkish territory from Persia was the subject of a communication between those Powers. In October it was rumoured that a *rapprochement* between Russia and Turkey was likely to take place, the cordial reception by the Porte of the Grand Dukes Sergius and Paul at Constantinople (Sept.) having occasioned a more friendly feeling between the two Powers. The financial position of Turkey caused much embarrassment; urgent claims by foreign creditors, officials (whose pay was much in arrears), the Russian war indemnity, and overdue accounts demanding serious attention. A finance commission was appointed by the Sultan, and protracted negotiations with the Ottoman Bank for a loan of £11,500,000 were carried on during the latter part of the year. Negotiations for a Russo-German commercial treaty were in November brought to a successful close. An intention of the part of the Porte to take the Haidar Pashaismid section of the Asia Minor railway out of the hands of the British and Austrian lines led (Nov.) to protests from the representatives of those Powers.—**Social and General.** Among the events of the past year have been the visits of the Duke of Edinburgh with the Mediterranean squadron to Constantinople (Sept.), of the Grand Dukes Sergius and Paul (*v. supra*), and the Queen of Greece on her return from Russia; the brilliant wedding (July) of Miss White, daughter of Sir W. White (*v. supra*) the English ambassador; the death of Lord Richard Grosvenor (June); and the promotion

to the rank of **Vizier** of Artin Effendi Dadian, the Christian Under-Secretary for Foreign Affairs (Oct.). During Bairaism a serious riot (June) broke out between an Arab and an Albanian regiment, in which other regiments joined. The first through train on the new international railway reached Stamboul station Aug. 14th. It has recently been decided by the Porte to establish an arsenal and dockyard with labour works at Jeddah, and to station a flotilla there for service in the Red Sea. For history 1871-86 see our edition of 1887; and for Ministry, etc., see **DIPLOMATIC (Ottoman Empire)**. Consult Sir F. Creasy's "History of the Ottoman Turks" (new ed.), *The Statesman's Year-Book*, *Almanach de Gotha*, etc.

Turkish Convention. See ed.

Turkmenia or **Turcomania**. The country of the Turcoman tribes, lying east of the Caspian. The appellation has now been changed by the Russians to Transcaspiya, or the Transcaspiian territory, by which it will be in future known. Sometimes English writers confuse Turkmenia and Turkestan, fancying that the two mean the same country—the "land of the Turks or Turcomans" of Central Asia; but the two have always been kept clearly distinct by the Russians—Turkmenia being restricted to the territory east of the Caspian, actually peopled by the Turcoman tribes, and Turkestan being the title bestowed on the Russian province created out of the Kirghiz deserts and the khanates of Khokand, Bokhara, and Khiva.

Turk's Island. A small island of the Bahama group, annexed to government of Jamaica (*q.v.*).

Tushratta. See **ASSYRIOLOGY**.

Two Thousand Guineaes. See **TURF**.

Tyndall, Professor John, Ph.D., LL.D., D.C.L., F.R.S., b. August 21st, 1820, at Leighlin Bridge, County Carlow, Ireland. Educated first under a national school teacher. In '39 he left school to join the Irish Ordnance Survey. The knowledge he there gained afterwards proved useful in his later glacier explorations. In 1844 he became a railway engineer; later he received an appointment at Queenswood College, Hampshire, a new institution devoted to the preliminary technical education of agriculturists and engineers. In '51 Tyndall went to Berlin, and continued his researches under Professor Magnus. He soon returned to England, and was elected F.R.S. in '52. In '53 he was invited to give a Friday evening discourse at the Royal Institution. This led to his appointment to the Professorship of Natural Philosophy in the same year, which office he held until last year, when he retired. It was in '49 that Tyndall first visited the Alps, purely for the sake of recreation. The result of these visits and his investigations are contained in the "Philosophical Transactions" for '51, also in his "Glaciers of the Alps" (London, '60), etc. In '63 his work "Heat considered as a Mode of Motion" was published, and this at once put him in the forefront as a physicist. In '66 he relieved Professor Faraday at Trinity House, and on the latter's death succeeded him as superintendent of the Royal Institution. In '74 he delivered the famous Belfast address as president of the annual meeting of the British Association. He has won reputation both as an experimental and philosophical physicist. In the autumn of '88 Prof. T. addressed a letter

to the *Times* respecting the wanton destruction of evergreens for Christmas decorations.

Tylor, Edward Burnett, D.C.L., F.R.S., President of the Anthropological Society, and Keeper of the Oxford University Museum; b. at Camberwell, 1832. Educated at the school of the Society of Friends, Tottenham. He has greatly distinguished himself by his researches in the history of man and civilisation. His best known works are his *Handbook on Anthropology*, and "*Primitive Culture: Researches into the Development of Mythology, Philosophy, Religion, Art, and Custom*."

Types. The letters, marks, and signs cast in metal (the larger sizes cut in wood) with which printing is executed. Such types are rectangular in shape, having on their surface (*face*, "face") the letter of the alphabet or such other design which, when inked, is intended to be imprinted on paper or other substance. The date of the invention of the art of printing is coincident with the discovery of **movable types**. Printing in its simple sense—*i.e.*, the transferring of designs in wood or other material to paper to form books—existed long before, but the introduction of movable types was the mainspring of the movement which disseminated light to succeeding ages, and assisted in spreading civilisation throughout the habitable globe. No handicraft receives so much **observation** as printing; but the observation of the ordinary reader, however attentive it may be, is usually superficial and imperfect. Types are seen, but not regarded: it is only the information conveyed by types that is considered. Few general readers know one type or style from another, and fewer still can identify the types under differing circumstances, or speak of them by their technical names; yet, to the publisher and author especially, such knowledge is of the highest importance, and even to the general student is not without interest. Types are of all sizes—from the immense **poster** types which decorate our hoardings, down to that which can scarcely be read except by the aid of a magnifying glass. It would be foreign to our purpose to describe or even to give a list of the whole of the types in general use; we, therefore, shall confine our observations to those which are more especially used for the purpose of book printing. They are as follows (premising, however, that those marked with an asterisk are not so frequently used):—

- | | |
|------------------|----------------|
| 1. Great Primer. | 8. Minion. |
| 2. English. | 9. Emerald.* |
| 3. Pica. | 10. Nonpareil. |
| 4. Small Pica. | 11. Euby.* |
| 5. Long Primer. | 12. Pearl.* |
| 6. Bourgeois. | 13. Diamond. |
| 7. Brevier. | 14. Minikin. |

The following scheme will not only show the proportions which the book types in general use bear to one another, but will, by showing the extra amount of letters that may be got into the same space, be a useful guide to an author in casting off a MS. with a view of ascertaining (by assessing the average number of words in each line of his MS., and how many lines in a folio) how much it will make in a certain size of type. The vertical lines at the top and bottom divide the line into three equal spaces of 6 ems and one of 3 ems—that is, 3½ inches.

INCHES	1	2	3	3½

The complete set of types in any quantity is called a **fount**. Pica is universally recognised as the **standard type**, and by this the printer makes all his measurements. Six pica ems, laid sideways thus, , are equal to an **inch**—72 of them making a foot. It is often a subject of great perplexity to an author or publisher to know in **what type** he shall print a certain work. Although the choice is arbitrary, and depends upon many surrounding circumstances, such as the nature of the

work or the intended bulk of the book, custom has relegated certain sizes of type to a certain **size of page**. The following table will therefore be found useful, giving, as it does, the technical names of the paper and its sections when folded into recognised sizes; as also the generally accepted widths and lengths of the type of pages suitable for such sizes of type, and suggestions for the particular sizes of type which may be used, and which are usually adopted:—

NAMES OF PAPERS AND THEIR DIVISIONS FOR BOOK-PRINTING.	Size of Paper of Page in inches.	Size of Page of Type in Pica ems.		Size of Type most suitable.
		Length.	Width.

With the aid of the above table, and by bearing in mind that a pica em is the sixth of an inch, any person, with an ordinary measuring rule, can fix the length and width of his page—which, notwithstanding the measurements given above, is within certain limits quite arbitrary—as is also, indeed, the size of the type which may be used. For instance, the size of the paper for this page is what is technically

termed crown octavo (5 × 7½), and on reference to the last column of the above table, the reader will see that we have suggested that the types Nos. 4, 5 and 6 may be used (that is, Small Pica, Long Primer, or Bourgeois), and this would be correct for all ordinary purposes. But it is in the nature of a *Cyclopædia* that a great deal of information should be compressed into a small compass: the type, therefore, to

TYPOGRAPHICAL MARKS EXEMPLIFIED.

sance; very noble in its simplicity, in its proportions, and in its masonry. Note especially the grand way in which the oblique archstones rest on the butments of the bridge, safe, palpably both to the sense and eye: note also the sculpture of the Annunciation on the southern side of it; how beautifully arranged, so as to give more lightness and grace to the arch—the dove, flying towards the Madonna, forming the keystone,—and thus the whole action of the figures being parallel to the curve of the arch, while all the masonry is at right angles to it. Note, finally, one circumstance which gives peculiar firmness to the figure of the angel, and associates itself with the general expressions of strength in the whole building; namely, that the sole of the advanced foot is set perfectly level, as if placed on the ground, instead of being in most modern figures of this kind. The sculptures themselves are not good; but these pieces of feeling in them are very admirable. The two figures on the other side, St. Mark and St. Theodore, are inferior, though all by the same sculptor, Ciriaco Campagna. The bridge was built by Antonio da Ponte in 1588. It was anciently of wood, with a drawbridge in the centre, a representation of

Explanations.—1. The letter "t" is upside down. 2. The sentence "1" is omitted. 3. Subjunctive "1" is omitted. 4. The word "and" is omitted. 5. Space standing up, showing black mark between words. 6. Reader has crossed out word accidentally, leaving it re-arranged. 7. "Set" left it standing, does at the same time placing dots under the word. 8. 16. 17. means transcribe the two words as they stand, and add a letter or word indicate that it should be in capitals, and one mean small capitals, and one the italics for if already in italics. 9. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100.

PAGE AFTER MAKING CORRECTIONS MARKED. sance; very noble in its simplicity, in its proportions, and in its masonry. Note especially the grand way in which the oblique archstones rest on the butments of the bridge, safe, palpably both to the sense and eye: note also the sculpture of the Annunciation on the southern side of it; how beautifully arranged, so as to give more lightness and grace to the arch—the dove, flying towards the Madonna, forming the keystone,—and thus the whole action of the figures being parallel to the curve of the arch, while all the masonry is at right angles to it. Note, finally, one circumstance which gives peculiar firmness to the figure of the angel, and associates itself with the general expression of strength in the whole building; namely, that the sole of the advanced foot is set perfectly level, as if placed on the ground, instead of being thrown back behind like a heron's, as in most modern figures of this kind.

The sculptures themselves are not good; but these pieces of feeling in them are very admirable. The two figures on the other side, St. Mark and St. Theodore, are inferior, though all by the same sculptor, Ciriaco Campagna.

The bridge was built by Antonio da Ponte, in 1588. It was anciently of wood, with a drawbridge in the centre, a representation of

be used must be chosen accordingly. The type selected is No. 10 (Nonpareil), which is just one-half the size of Pica, and of which 12 ems go to the inch, or 144 ems (or lines) to the foot. It should be noted that, as a rule, **extract matter** occurring in the text should be set one size smaller than the body, and **foot-notes** two sizes smaller. Thus, if the body of the work should be composed in Small Pica, the extract matter (which should at all times be clearly indicated) should be set or composed in Long Primer, whilst the foot-notes should be set in Bourgeois. **Side or cut-in notes** are set several sizes smaller—such as Minion, Nonpareil, or even Pearl. In connection with the question of types, it may not be out of place to give the author a hint as to the preparation of “copy” and the correction of proofs. All “copy” for the printer should be clearly and legibly written on one side of the paper, all extract or foot-note matter being indicated, all contractions avoided as far as possible, and where this is not the case, the same to be written on a systematic basis. By writing on the right-hand side of each sheet of

paper, the left, which has been left blank, may be used for **interpolations or emendations or notes**, which should be clearly marked as such. A little care in the preparation of “copy” will often save the author from what he considers “vexatious charges” under the head of corrections. These chiefly arise from **deviations** from the “copy” which the author makes in the proofs, or from causes connected with the preparation of the “copy,” and are charged to the author. Such charges are always considered unsatisfactory, on both sides; for whilst, upon the one hand, the printer has to take a deal of time and trouble to alter his type, on the other the author apparently sees nothing for the heavy charge made. As a guide to an author how to mark a proof, we refer him to the previous page, which, we think, will embrace every variety of correction, accompanied by an explanation which will make the symbols clear. The corrected page is also added as a guide.

U

Ultramarine. This blue colouring matter, so extensively used in commerce, has long been manufactured, as is well-known, by a chemical process. Its production has hitherto been confined to French and German operatives, but **English enterprise** has somewhat tardily stepped in, and it is now being manufactured at Poole, where large quantities are exported. The “white clay,” so abundant in Dorset, has for many years been shipped abroad for use in making ultramarine, but the important works now established, and the facilities for manufacture, will doubtless considerably influence the exportation of the blue. Ultramarine, although occurring in a natural state, has to be produced by chemical synthesis to satisfy the great commercial demand. It sells at about £35 per ton.

Ultramontane German Party. See GERMAN POLITICAL PARTIES.

Unions. See SYNDICATES.

Unemployed Classes. See ed. '88.

Unitarian. The name commonly given to Christians who do not accept the doctrine of the Trinity, or the deity of Christ. The old belief in the uni-personality of God became almost extinct in the Christian Church; but was revived by Lælius and Faustus Socinus, uncle and nephew (sixteenth century), to whom may be traced, chiefly through Polish influences, the Unitarianism of Transylvania. The name Socinian is often incorrectly applied to English Unitarians, whose theology is rather a native growth differing in many important points from that of the Socini. In Transylvania there is a strong Unitarian Church, with an elected bishop at its head, but substantially Presbyterian in its mode of government, the general consistory holding its meeting once a year. It has several schools, but the chief college is at Klausenburg. The Unitarians of Hungary, as this body is now designated, date their origin from Francis David, their first bishop, 1568. In Great Britain many of the Presbyterian and other Protestant dissenting congregations, founded after the passing of the Act of Uniformity by those who

were expelled by that Act from the National Church, have passed from Trinitarianism through various forms of what may be called Arian belief to Unitarianism. To these have been added many others founded more recently and holding Unitarian opinions from the first. The whole now form a group of non-subscribing congregations in which Unitarian theology prevails. They are in friendly communication with each other, and co-operate for many purposes, but are very tenacious of their congregational liberty. With very few exceptions all these, especially the oldest and the most recent, have open trust deeds—i.e., free from all doctrinal conditions—and refuse to organise themselves, or associate with one another, on any dogmatic basis. These are commonly known as the Unitarian Christian churches, but their main principle is simply that of individual religious liberty. Church membership is not therefore necessarily limited to Unitarians. Ministers are elected whose theology is in general agreement with that of the congregations; but no subscription or declaration of faith is required of them. Congregations number about 250 in England, beside 20 mission stations, 32 in Wales, 7 in Scotland, 40 in Ireland. For list of these and of ministers, and of various societies, etc., which are Unitarian in constitution or promote Unitarianism, see “**Unitarian Almanack**” (an unofficial publication by Jas. Black, 20, Cannon Street, Manchester). The **British and Foreign Unitarian Association** is not representative, but consists of independent subscribers desirous of promoting “the principles of Unitarian Christianity.” It refuses to affiliate congregations with itself, or to enrol any member as representing a congregation, lest the freedom of the churches should be compromised; and for the same reason it will not build or endow any property with a Unitarian trust. At the annual meeting in 1866 a motion to “define Unitarianism, with the view of establishing a test of membership,” was rejected by a very large majority. **Essex Hall**, in Essex Street, is not the property of the Association, but is held on an

open trust for the use of the Unitarian Association, the Sunday School Association, and other societies. The Association claims no authority over churches or ministers. The only technically Unitarian College is that of the **Unitarian Home Missionary Board in Manchester**, which educates for the ministry students who are not able to enter **Manchester New College** (*q.v.*), where most of the leading Unitarian ministers are trained. There is a triennial Conference of non-subscribing congregations, which consists almost entirely of Unitarians (last held at Leeds, April 1886). Unitarian theology prevails extensively among the "liberal" theologians and clergy of Germany, Holland, and the Protestant cantons of Switzerland. It is also the theology of the liberal section of the Reformed Church in France. The professedly Unitarian congregations of the **United States** number 350; of these 232 are in New England, many of them being old Puritan foundations. The Universalists of America, as also the body called Christians and a very large proportion of the Friends, are of non-Trinitarian belief. Unitarian theology, with its freedom of Scriptural criticism, is to be found here and there in almost every section of the Christian Church. **Offices of the British and Foreign Unitarian Association**, Essex Hall, Essex St., Strand.

"United Ireland." This well-known Nationalist newspaper was established in 1881. **Mr. W. O'Brien, M.P.**, was invited to preside over its fortunes, and the newspaper has since become well known throughout the three kingdoms for the active part it has taken in the Irish controversy. During the struggle between the Land League and Mr. Forster, the Executive found it necessary to suppress *U. I.*, and after various attempts to issue it at different places, sometimes in England and sometimes in France, the Nationalist journal for a time ceased to appear.

United Kingdom, The. The United Kingdom of Great Britain and Ireland is under the rule of Victoria, of the House of Hanover, the oldest royal family in Europe. She holds the crown by inheritance and election, the right of election admittedly belonging to parliament, but being in practice always exercised in favour of some member of the royal house, with the exception of Henry VII. (whose title was tainted by illegitimacy) and Cromwell, the nominee of the army. The executive power, nominally vested in the sovereign, is in practice confided to ministers nominated by the majority of the House of Commons. The legislative authority belongs to the Queen and Parliament, consisting of the **House of Lords** and the House of Commons. The former is composed (1) of hereditary peers of the United Kingdom nominated by the Crown, (2) of English bishops, who sit *ex officio*, (3) of Irish hereditary peers, elected for life, (4) of Scotch peers, elected for the duration of parliament. There are at present 476 peers of the United Kingdom, 24 bishops, 28 Irish and 16 Scotch peers. The House of Lords is also the highest judicial court, but in practice exercises its authority through a committee of experts. The **House of Commons** is composed of 670 members—viz., 495 for England and Wales, 103 for Ireland, and 72 for Scotland—elected by secret ballot in boroughs and counties, by electors possessing household or lodger or service franchise, or occupying freehold of 40s., etc. The universities are also repre-

sented. Members must be twenty-one years of age. Ministers of the Churches of England, Scotland, and Rome, English and Scotch peers, government contractors, sheriffs, and returning officers of the districts for which they act, are disqualified from serving as members. Irish peers not in the House of Lords are eligible. The powers of parliament extend to the United Kingdom, its colonies and dependencies, and to all matters, ecclesiastical and temporal. It is also the highest court of law.—The state religion in England and Wales is Episcopal Protestant, the fundamental doctrine and practice of which is embodied in the Thirty-nine Articles and Prayer-book, and confirmed by parliament. All other religions are tolerated, and no civil disabilities attach to any British subject. There are 2 archbishops and 33 bishops; each of the former is assisted in the government of his "province" by a "convocation," consisting of bishops, archdeacons, and deans in person, and representatives of the inferior clergy. The sanction of the Crown is required for their meeting and deliberation, and to give binding effects to their resolutions. About half the population belongs to the Establishment, the remainder to the Roman Catholic Church and to various other denominations (about 180 in number), the most important of which are the Wesleyan and other Methodists, Congregationalists or Independents, Baptists, Presbyterians, Unitarians, Society of Friends, Jews, etc. (for each of which see under its respective heading). In Scotland the state religion is Presbyterian, all others being tolerated. All the clergy are equal. A Kirk session of "elders," under the presidency of the minister, manages the spiritual affairs of each parish; and a "general assembly" of clerical and lay representatives meet annually as the supreme court of the Church. The orthodox dissenters have similar organisations. There are also other denominations, as in England. In Ireland there is no state religion. Of the inhabitants about four-fifths are Roman Catholics; of the remainder about half belong to the Episcopal and the remainder to other denominations, chiefly Presbyterian.—Of late years great attention has been paid to elementary education in the United Kingdom. It is compulsory, and is afforded by local and voluntary schools under state control, supported by local funds, voluntary subscriptions, and state grants. Middle-class education is left to private enterprise and higher education to the universities and to teaching and examining bodies approved by the state. (See EDUCATION, SCHOOL BOARDS, LONDON SCHOOL BOARD, etc. For area and other particulars, see BRITISH EMPIRE.) The colonies and dependencies include the Empire of India, the Dominion of Canada, Australasia, South Africa, numerous Colonies in the West Indies, West Africa, Guiana, Mauritius, Hong Kong, Gibraltar, Malta, etc. (For National Finance, Army and Navy, etc., see respective articles.)—The imports in '88 were £349,864,472; the exports £268,667,017; excess of imports retained over exports of British produce, £140,327,060. (For history 74-88 see previous eds.) The principal events which have taken place during the past year ('88) in the United Kingdom will be found under their respective alphabetical and sectional headings. The proceedings in Parliament are narrated in the article SESSION, PARLIAMENTARY, '88; and in the ADDENDUM, which

gives the various incidents occurring in the **Autumn Session**. The nation's progress is shown in the articles **AGRICULTURE, COAL, FINANCE NATIONAL, INSURANCE, IRON AND STEEL, MINING, TRADE '88, TRADE FOREIGN '88, etc.** The position of our forces will be found in the articles **ARMY, ARTILLERY, NAVY, and VOLUNTEERS**, as well as in the articles on the **NAVAL MANŒUVRES, and STATIONS, BRITISH COALING, etc.** The social aspect of national life is represented by the articles on **ANGLING, AQUATICS, ART, CRICKET, CYCLING, DRAMA, LITERATURE, MUSIC, and the TURF**. **Scientific subjects** appear under the titles **ASSYRIOLOGY, ASTRONOMY, BIBLICAL ARCHAEOLOGY, EGYPTOLOGY, ELECTRICITY, GEOLOGY, GEOGRAPHICAL PROGRESS, PHOTOGRAPHY, etc.**, and the series of **endowed Lectures** will be found under their respective headings. Topics of general interest include short reviews of popular books, particulars of the leading religious denominations and societies, notices of the many **Exhibitions**, both past and prospective, and other subjects, which have held a place in public attention. **Biographies** of most of the famous personages who have attracted notice in the past year also appear, together with a list of some of the principal notable **births and marriages**, as well as **deaths**, which have occurred in '88. A new feature, in the shape of the various **points of law** exemplified during the year, may be of interest to the legal mind. Amongst the **chief events** of the year '88 may be noticed the **reception** given in London to Mr. F. D. Sullivan, M.P., and other Irish members, on their release from prison on **February 7th**; the **resignation** of Lord Dufferin from the Viceroyalty of India, and the appointment of Lord Lansdowne, whose place as Governor General of Canada was taken by Lord Stanley of Preston; the mistaken arrest of Irish members in London shortly after the opening of Parliament by Royal Commission; and the visit of Mr. Morley and Lord Ripon to Dublin, when the freedom of that city was conferred upon them. In **March** the death of the Emperor William occurred, an event that profoundly impressed the people of this country, and occupied the attention of the press to the almost total exclusion of other topics. In this month Prince Oscar of Sweden was married to Miss Munk at Bournemouth. On **March 20th** the Local Government Bill (see Session '88, sect. 26) was introduced by Mr. Ritchie in a masterly speech, which attracted much attention. On the 27th H.M.S. *Nile*, the armoured twin-screw double-turret ram, sister ship to H.M.S. *Trafalgar*, was launched. News was this month received of an extraordinary blizzard in New York State; the withdrawal of the Italian troops from Abyssinia; the burning of the Baguet Theatre at Oporto, by which over a hundred lives were lost; the culmination of the Wilson scandals in Paris, and the removal of General Boulanger from the French army. In **April** Her Majesty the Queen visited the late Emperor Frederick at Berlin, and was accorded a most enthusiastic reception by the German people. The Boulanger agitation and disturbances of April were keenly watched in this country. During the month there was a serious colliery explosion at Workington, attended with loss of life. The remains of the late Mr. Camille Roth, of the London Stock Exchange, were cremated at Woking—the event being noticeable inasmuch as Mr. Roth was

the first man of Hebrew faith who left instructions for cremation of his remains. In **May** there was an imposing demonstration in London against the Van and Wheel Tax, and there was a strong agitation throughout the country on the subject of the tax. In this month an agitation was raised on the subject of national defences; the Southampton election, too, by which Mr. F. H. Evans (G.L.) was returned by majority of 88, created considerable political excitement. On the 31st there was a great fire at a draper's in the Edgeware Road, by which five female assistants lost their lives. Part of the English fleet was at Barcelona in **May**, and contributed to the formation of perhaps the most remarkable naval display and gathering ever seen in the Mediterranean. On **June 15th** the Emperor Frederick died, and there was a renewal of the exhibitions of sympathy that had followed the decease of his illustrious father in **March**. The disputes of the doctors who attended upon His Majesty were much discussed by the English press. Sir Morell Mackenzie's (*q.v.*) work in reply to charges made against him by the German doctors, and which was published in October, closed this painful controversy so far as the public were concerned. During this month news was received of the killing of Col. Batye, of the 5th Goorkhas, and Capt. H. B. Urmston, of the 5th Sepoys, by the tribes of the Black Mountain territory. This led to an expedition being sent to punish the natives, a task successfully accomplished in the autumn. In **July** the Vandeleur evictions occupied the attention of politicians; a Royal Commission, presided over by Lord Herschell, investigated the charges made against the Metropolitan Board of Works; a Select Committee of the House of Commons inquired into the circumstances attending the formation of the Hyderabad Decan Mining Co. (*q.v.*); the naval manœuvres (*q.v.*) commenced; and the Pan-Anglican Conference (*q.v.*) was held. In mining circles much attention was aroused by the De Beers mining disaster, by which twenty-four whites and over two hundred blacks lost their lives. The bicentenary of the defeat of the Spanish Armada was celebrated in various ways. **August** opened with a railway accident at Hampton Wick, by which four persons were killed and twenty-five injured. In this month the final report of the Education Commissioners was issued; Edison's phonograph (*q.v.*) was introduced by Colonel Gouraud to the English press by a series of receptions at No. 10; and the Warwick Bank scandals were ended by G. C. Greenway being sentenced to five years' imprisonment, and Kelynge Greenway to twelve months. The opening of the International Railway, giving direct communication between Paris and Constantinople, took place during this month, and its importance to us as a travelling people was discussed in the press. Her Majesty the Queen visited Glasgow, Retnew, and Paisley towards the end of the month, and was most heartily received. The rejection of the Fisheries Treaty by the United States Senate was the subject of warm political controversy. Mr. Simmons, the aeronaut, met his death on a balloon accident in August. On **September 17th** the Special Commission of Judges appointed by Act of Parliament to investigate and report upon the charges made against Mr. Parnell and the Irish party in the *Times* articles and in

the speech of the Attorney-General during the hearing of the action of *O'Donnell v. Walter* and another, met at the Law Courts for the first time, resuming its sittings after settling preliminary matters on October 22nd (see PARNELL COMMISSION). Throughout the year there had been trouble in Sikkim, and on September 23rd the Thibetan forces were totally routed. During September intelligence was received of the death of Mr. Jamieson, a naturalist, and the murder of Major Barttelot, both of the Stanley expedition. On the last day of this month what have become known as the Whitechapel murders reached their culminating horror in the discovery in the streets, at different spots, of two murdered women, the victims bringing the number whose death is attributed by some to the same undiscovered hand to six. These crimes caused a profound sensation, and some newspapers violently attacked the police and Mr. Matthews, the Home Secretary. Exhaustive coroners' inquiries were held in each of the six cases, but all ended in a verdict of wilful murder against some person unknown. Many startling theories were put forward to account for the crimes, but despite the efforts of the police the mystery of their commission remains, at the time of writing, unelucidated. An autumn session of Parliament commenced on November 6th; but during the last two months of the year public interest centred in the Parnell Commission (*q.v.*). An interesting exhibition of Almada relics was held in Drury Lane Theatre in November. The improvement in trade, which commenced in January, continued during the year, and has been especially beneficial to the shipping interest (see TRADE). In October continued improvement was rendered improbable by a threatened gigantic strike in the coal trade; but the masters conceded an advance of 10 per cent. to the men, and the trouble passed away. The financial event of the year was the conversion of the New and Reduced 3 per cents. into 2½ per cent. stock, with the provision that in ten years the interest shall be further reduced to 2½ per cent. The operation, which was practically unopposed in parliament, and the country, was successful beyond expectation, holders of 3 per cents. readily assenting to the change. The principal feature of the budget was the separation of local from imperial finance, necessitated by the introduction of the Local Government Bill. The system of grants-in-aid was abolished, and in place of them the Treasury handed over to the local authorities one-third of the probate duty, and the produce of certain new licence taxes. The imposition of additional taxes upon public companies caused a great rush of company promotion to escape the new taxes; and the year was remarkable for the unusual number of new issues of limited liability concerns. Most prominent among these was the Salt Union, which united the greater number of the salt manufactories in the kingdom in one trust. The gigantic operations of the French Copper Syndicate call for passing notice (see SYNDICATES). The past year has been one of much eventful interest.

United Right, The. See FRENCH POLITICAL PARTIES.

United States. A confederation of thirty-eight sovereign states united together by a federal bond for imperial objects, the local

administration being reserved to each state. By the constitution of 1787 and subsequent amendments the government is intrusted to three separate authorities—the executive, the legislative, and the judicial. The first is vested in a president elected for four years by electors appointed by each separate state. He is commander of the national forces, and has a veto on all laws passed by Congress, although a bill may become law in spite of his veto, on afterwards being passed by a two-third majority of each House of Congress. The administration is conducted under immediate authority of the president by seven ministers chosen by him, and holding office at his pleasure though confirmed by the senate. A vice-president is also chosen in the same manner; he is *ex officio* president of the senate, and in case of the death or resignation of the president he assumes his office for the remainder of the term and the senate elects a temporary vice-president. The legislative power is vested in Congress, which consists of (1) a senate of 76 members—viz., two chosen by each state legislature for six years—who confirm or reject all appointments by president, and its members constitute a court of impeachment, with power only to remove or disqualify from office; (2) of a house of representatives of 325 members, chosen every two years by all duly qualified male citizens and apportioned among the states according to population. In addition to the representatives, delegates from "territories" (not yet organised into states) are entitled to debate on matters pertinent to their interests, but must not vote. The Congress may propose an amendment to the constitution if two-thirds of both houses deem it necessary; and such amendment shall be deemed to be incorporated in constitution when ratified by the legislatures of three-fourths of the several states. The judicial power is confided to a supreme court (the members of which are nominated by the president for life) with power to interpret the constitution, to decide all disputes between the federal government and the individual states, and to hear all causes arising under the federal laws, etc. Perfect equality is accorded to all religions; education free and general, although backward in some of the former slave states—the cost being met from state or local funds, and the federal government contributing a portion. The power to enact municipal laws is reserved to the states of which the constitutions and modes of administration bear a close resemblance to each other—the executive being confided to a governor and the legislative to one or two chambers, as the case may be. Roughly speaking, each state has voluntarily surrendered to the central government all federal matters, including taxation for federal purposes only, while reserving the right to administer all local affairs and to impose local taxes at its pleasure. The soil of the United States not included within the boundaries of an individual state are divided into eight "territories," the districts of Columbia, Alaska, and three Indian territories. When duly qualified by population, etc., it is competent for the confederacy to form the territories into new "states" and admit them into the Union. There is also a "district of Columbia," a neutral territory under the direct government of the confederacy, in which is situated the capital, Washington. The total area of the Union is 3,602,990 sq. miles; the population, by census of 1880, was 50,497,057; it

may now be estimated at about 63,000,000. Estimated revenue for '88-89, \$371,403,977; expenditure, \$366,932,180. The national debt in '88 amounted to \$1,700,771,028. There also exist local debts in nearly all the states, amounting in '86 to about \$228,347,467. The army is limited by Act of Congress to 25,000 men and 2,155 officers; the actual strength is about 26,430. In addition, each state is supposed to have a militia, in which all men from eighteen to forty-five, capable of bearing arms, should be enrolled. (For army and navy see ARMIES AND NAVIES, FOREIGN.) Imports (June '88), \$723,957,114; exports, \$683,862,104. Of the imports nearly one-fourth came from the United Kingdom, and of the exports more than one-half went to the United Kingdom. Chief exports to Great Britain, breadstuffs and raw cotton; chief imports from Great Britain, wrought and unwrought iron, and manufactured cotton, linen, and woollen goods. The principal industry is agriculture, timber trade, and mining—the iron and cotton manufacturing industry is large, though fostered by protective duties; the shipping industry is practically confined to the coasting trade through the operation of the tariff. (For concise description, geographical, political, statistical, to end of January '88, see ed. '88.) The year '88 has been one of special importance in the American republic for several reasons. During that year the Democratic Party (from which so much was expected (see AMERICAN POLITICAL PARTIES) through the administration of Mr. Grover Cleveland (*q.v.*), elected President in '84, the first Democratic President in twenty-four years) was defeated, and the Republicans once more achieved possession of affairs by the election of General Benjamin Harrison (*q.v.*), of Indiana. It is probable that this election will have the effect of completely altering many of the ardently hoped-for schemes for binding closer the bands which join Great Britain to the United States. The Fisheries Treaty (see FISHERIES QUESTION), arranged under the diplomatic agency of Mr. J. Chamberlain (*q.v.*) early in the year, and agreed to by Mr. Cleveland and his entire Cabinet, was thrown out by the Republicans in both Houses of Congress. The Interstate Commerce Bill, a democratic measure which gave some slight advantage to Canadian railroads, was bitterly opposed by the Republicans, who continued throughout the year to push for additions and amendments which should affect in an untoward manner the Canadian interests. Finally, the abrupt and unexpected withdrawal of Lord Sackville, the British Ambassador, was entirely due to a trap laid for his lordship by the wire-pullers of the Republican electioneering campaign, and was forced upon the President by the same men. The "Mills" Bill, a measure for the partial reduction of the exorbitant tariff duties levied on imports, was also a Democratic measure. This was defeated by the Republican majority in the Senate Chamber at Washington, the principal reason given for opposing it being that its passage would benefit England.—The year has been one of unusual interest and sensation, for reasons other than political. In February, a terrific cyclone almost completely destroyed the city of Mount Vernon, State of Illinois, killing over one thousand inhabitants, the fires which followed the storm destroying two-thirds of the business portion of the city. Owing to the bad condition of the iron trade,

the steel and iron factories of Messrs. Andrew Carnegie & Co., and of Messrs. Edgar & Thompson, of Pittsburgh, Pennsylvania, were closed, and over eight thousand persons were in one day thrown out of employment.—In New York City on February 28th the Union Square Theatre was completely destroyed by fire, the water and flames doing considerable damage to the Star Theatre, where Mr. Henry Irving and Miss Ellen Terry were at the time performing. On the same day, at Vallejo, California, the boiler of a steam ferry-boat exploded, killing seventy persons and injuring many others. On February 29th a case which had been pending for some weeks against the millionaire, Jay Gould, for larceny on account of alleged misappropriation, came up before the grand jury, but was quashed by the jury failing to find an indictment.—March opened with Mr. President Cleveland's sending to Congress the documents relating to the Fisheries Treaty, which, after discussion lasting over several weeks, was rejected. Owing to a heavy decline in prices of cotton, an excitement arose in the cotton market at New York, which quickly reached the nature of a panic, and several large failures occurred. On the 6th Miss Louisa M. Alcott, the authoress of "Little Women," died at the age of fifty-five years. Trouble with France threatened, owing to the prohibition by the French Government of the importation of American pork into France. President Cleveland, however, instructed Foreign Secretary Bayard to communicate with President Carnot, and a favourable settlement was shortly afterwards reached. Sir Thomas Esmonde, the Irish baronet, traversed the country, speaking in favour of the Irish Nationalist cause. Mr. Memminger, who was Secretary of the Treasury for the Confederate States during the Civil War, died on the 8th. The city of New York and most of the eastern states were visited (12th) by a "Blizzard"—*i.e.*, an exceptionally severe snowstorm accompanied by an intensely cold wind. The streets were blocked with snow, the railway lines were closed to all travel, and for three days traffic and business of all kinds was nearly suspended. A great deal of damage was done to life and property, and nineteen boats of the New York Pilot fleet were destroyed with all hands. On the same day died Henry Bergh, the well-known philanthropist and founder of the Society for the Prevention of Cruelty to Animals in the United States. During this month Congress passed a bill prohibiting Chinese immigration for twenty years, and making it necessary that any Chinaman leaving the country and wishing to return must prove either that he has a family, or property to the value of one thousand dollars in the country. General Adam Badeau brought suit against the widow of the late General U. S. Grant for compensation for assisting to prepare the deceased general's memoirs. The courts decided the case in favour of Mrs. Grant. Congress passed a bill (15th) to prevent the undervaluation of imports which are taxed at a *pro rata* duty. The strike of the Philadelphia and Reading Railroad employés was declared off by the Knights of Labour (*q.v.*), a virtual acknowledgment of defeat, while at the same time three thousand Chicago house painters went out on strike. St. Patrick's Day (17th) was observed all over the United States. The Irish in the city of New York were very incensed at the action

of the Mayor, Abram S. Hewitt, in refusing to allow the green flag bearing the harp of Erin to fly over the City Hall. Mr. Hewitt said New York was an American city, not an Irish, and he would permit none but American flags to fly from his executive building. Besides, he would not be party to an insult to a friendly kingdom by a virtual acknowledgment that one of its dependencies is a separate and independent nation. At a meeting of Germans in New York City to express sympathy for the death of the Emperor William, Carl Schultz, the German Socialistic reformer, now settled in America, eulogised the deceased monarch in a graceful speech. Later in the year Mr. Schultz paid a visit to Germany, from which country he was a political exile, and was received in friendly manner by Prince Bismarck. On the 17th, the "Cuban" mail train, from New York to Jacksonville, Florida, was wrecked while crossing the "Hurricane Trestle" Bridge over the Alabama river. Thirty-four people were killed and a number were injured, mostly by the fires in the railway carriages. Laws were afterwards passed making the heating of railway cars by other means than stoves a necessity. Morrison R. Waite, Chief Justice of the Supreme Court of the United States, appointed by President U. S. Grant, died (17th).—A remarkable speech was made at the Steinway Hall, New York, on April 13th, by the Hon. James Russell Lowell, on "The Independent in Politics," advocating reform. The occasion was the opening of a new Democratic Club and Society. On the 4th the strike and boycott of the Chicago, Burlington, and Quincy Railroad ended. Claus Spreckles, the Californian "sugar king," determined to build an enormous refinery at Philadelphia, at a cost of over half a million of dollars, in order to fight the "Sugar Trust" monopoly, and he entered into a "combine" with the Canadian Pacific Railroad. Strikes among the brewers took place in Chicago, New York, Buffalo, and St. Louis—over 10,000 men going out. The strikes continued for some weeks, when the men gave in. On April 13th, some Nova Scotia fishermen were refused a landing at Boston under the "alien contract" law. On the 17th the celebrated "Mills" Tariff Bill was introduced to the House of Representatives at Washington, by Roger Q. Mills, of Texas. This bill proposed a general all-round reduction of duties on imports amounting to nearly 40 per cent. It was bitterly opposed by the Republican Party in Congress, the Press, and on the platform. Finally, after nearly six months' discussion, it was forced through the House in a considerably modified condition; but when it went before the Senate it was thrown out by a small majority. The birthday of the late General U. S. Grant was celebrated throughout the country on the 27th, particularly notable gatherings being held in Boston and Pittsburgh. During the month floods in the valleys of the Connecticut, Merrimac and Kennebec rivers in New England, and in the states of Wisconsin and Minnesota did a great deal of damage.—On May 6th the "Chace" Copyright Bill passed Congress. On the 13th lightning struck several oil tanks at Oil City, Pennsylvania, creating an immense fire, which lasted for several days, and almost devastated the entire city. Early this month died one of America's greatest lawyers and most brilliant men—Roscoe Conkling, ex-Senator—from injuries received during

exposure to the inclemency of the blizzard on the 12th March.—On June 1st, the High License Law went into effect in the state of Pennsylvania, with the result of closing 75 per cent. of the liquor saloons throughout the State. During this month the National Democratic Convention was held at St. Louis, and nominated Grover Cleveland for a second presidential term, and Allan G. Thurman for the vice-presidency. The Republican National Convention was also held at Chicago, nominating General Benjamin Harrison for President, and Levi P. Morton for vice-president. The presidential campaign began, and continued to the end, on November 6th, with an intensity of fervour never before equalled in the United States, where these elections are invariably carried on with the keenest and bitterest party feeling. It ended, on the day mentioned, by the election of General Benjamin Harrison, whose party carried the State of New York against the Democrats, thus giving him thirty-six clear votes more than Cleveland at the Electoral College. For the benefit of the un-informed the following account of the presidential elective method is given in brief. Each state, according to its population, has the privilege of sending a certain number of delegates, named electors, to the convention or Electoral College, charged to register their votes for the candidate their constituents have declared for by majority of votes. (See AMERICAN POLITICAL PARTIES for number of the electoral votes.) Each party in each state nominates and elects first of all their electors or delegates to the Electoral College. When the day of election comes round the votes of the people are polled, but they do not count for the presidential candidate, but for the representatives to be sent to the College to vote. These delegates, of course, are in honour bound to vote for the man their constituents desire, but there is nothing in the Constitution of the United States to prevent them from voting in direct opposition. They are free agents, however, only in name.—Returning to our summarised history of the year, early in July died one of America's grandest and bravest soldiers, General Philip Sheridan, Commander-in-Chief of the United States Army, after a painful and lingering illness. He was the hero of Thomas Buchanan Reed's famous poem, "Sheridan's Ride." A proposal was made in the House of Representatives (13th), at Washington, to subsidise certain Ocean Steamship Companies, in order to improve trading facilities for the United States mercantile marine, which at present labours under disadvantages not common to the ships of foreign nations. For example, while every American vessel leaving an American port is obliged to carry a stated complement of boats, buoys, etc., this rule does not apply to foreign vessels, which can ply back and forth in American waters subject in this respect only to the legislation of their own nationalities. The Personal Rights League was incorporated in Chicago (10th), as the beginning of a national movement against prohibition. Plots discovered to destroy portion of the Chicago, Burlington and Quincy railroad. Dynamiters and anarchists apprehended in Chicago, and informed against by Frank Chleborn, one of their number, afterwards found to be a detective. Heavy storm at Wheeling, West Virginia: more than twenty persons killed; houses and bridges washed

way. 20th. \$500,000 appropriated by Senate at Washington for a new harbour at Philadelphia; 500,000 for a dry dock at League Island, Delaware River, Philadelphia; \$75,000 for a sea wall at same place, and \$250,000 for a State Home for disabled soldiers and sailors. Government investigators discovered extensive frauds practised in New York by importers, in weighing and sampling sugar. The manufacturing committee of the House of Representatives at Washington, reported (30th), that "Trust" monopolies (see SYNDICATES) cannot be reached by the restrictive legislation proposed. The Senate appropriated \$250,000 for investigating means for redeeming arid lands in the United States by irrigation. The Atlantic cable companies all agreed to advance their rates to 25 cents (one shilling) a word on and after Sept. 1st. Maxwell, the murderer of Preller, after numerous appeals and the intervention of the British minister, was hanged at St. Louis.—Aug. 2nd. The Fisheries Treaty was rejected by Congress. Collision between the Atlantic liner *Geiser* and *Thingalla* near Halifax, Nova Scotia (14th): 105 crew and passengers drowned, 31 saved. Total appropriations for Fiscal year stated to be \$421,000,000. Cyclone in Delaware, Maryland, and Pennsylvania, 22nd: many lives lost, much property ruined. President Cleveland's "Retaliation" message sent to Congress (23rd). Sept. 6th. Death of **Lester Wallack**, the celebrated actor, at Long Island, New York. Mr. Cleveland's letter accepting the nomination for President published (8th). **Edwin C. Burleigh**, Republican candidate for Governor of Maine, elected by majority of 20,000 votes (10th). 12th, **David B. Hill** renominated for Governor of New York by the Democrats (re-elected Nov. 6th). Great damage to crops reported in South Carolina and Georgia, by floods. Floods all over the country, south and west.—In October the "Mills" Tariff Bill, after passing the House of Representatives, was rejected by the Senate. During the Fiscal year ending Oct. 7th, title to 8,605,194 acres of land was conveyed from the Government either by letters patent, or by certification under specific grants. On the 8th **Melville Weston Fuller**, of Illinois, whose appointment by President Cleveland was confirmed by Congress, July 20th, took the oath at Washington, and his seat as Chief Justice of the Supreme Court of the United States, *vice* Morrison R. Waite, deceased. The bakers of New York announced their intention to reduce the size of their loaf, on account of the advance in the price of wheat consequent on the "corner" at Chicago. Serious rioting in Chicago, where several thousand persons mobbed the tramway cars, and many shots were fired by car officials, on account of the importation of cheap labour from other States (10th). Fearful railroad disaster at Mud Run, near Wilkesbarre, Pennsylvania, 64 persons killed (17th). During the months of June, July, August, September, October, and November an epidemic of yellow fever raged in and around Jacksonville, Florida. Several hundred people died, among them many prominent journalists and medical men, including Professor Richard A. Proctor, the eminent astronomer. Congress appropriated \$100,000 for the prevention and mitigation of the disease, and subscriptions from all parts of the State were sent to aid the quarantined sufferers. The epidemic relaxed in fury as the frosts of winter approached. On the 30th, in consequence of the

seizure of a U.S. merchant steamship, the *Haytien Republic*, at St. Marc, Hayti, Foreign Secretary Bayard sent the U.S. man-of-war *Kearsage*, under Commodore Harmony, to Hayti, to protect American interests.—It is necessary to make a slight reference to what is known as "The Sackville incident." On Sept. 4th, Lord Sackville (p. 10), the British Ambassador, received a letter from a person calling himself "Murchison" from Los Angeles, California. The writer stated that he was a newly naturalised citizen of English birth, and he asked, for his own and friends' guidance, Lord Sackville's advice as to which presidential candidate he should vote for. Lord Sackville replied, in a private letter, in which he decidedly recommended his correspondent to vote for Cleveland as the better friend to England of the candidates, and referring in not very complimentary terms to the Cleveland administration. It appears that the "Murchison" letter was a decoy, and that Lord Sackville took the bait only too readily. It was a political party trick arranged by the Republicans to throw an unfavourable impression upon Mr. Cleveland for the Irish voters. In order to counteract this Mr. President Cleveland, after a very brief correspondence with the British Government, rather abruptly informed Lord Sackville that his services at Washington were no longer desirable or desired. This action, instead of having the hoped-for effect, brought a certain amount of discredit upon Mr. Cleveland, for want of courtesy and diplomatic savoir faire. It was agreed on all sides that Lord Sackville had merely been made a scapegoat for political purposes, and on Nov. 6th this action of Mr. C. contributed to his defeat. On Dec. 3rd the session of Congress was opened at Washington. The message of the President reiterated his former views on surplus taxation and tariff reform, and made special reference to the relations existing between Great Britain and the U.S.A. respecting the Fisheries Question and the "Sackville incident."

Universities, British. See under separate headings.

Universal Prime Meridian and Universal Day, The. See ed. 86.

Universal Review, The (monthly, 2s. 6d.). The first number appeared May 15th, '88. The *U.R.* contains articles on art, literature, and politics—a special feature being its illustrations. Its staff of contributors includes some of the most distinguished writers of the day. The *U.R.* is published on the 15th of each month. Editor, **Mr. Harry Quilter**. Office, 24, Warwick Lane, E.C.

Universities, Law on. A somewhat singular dispute arose in the Queen's Bench Division (Feb. '88), with respect to the office of examiner in natural science at Oxford University. **Professor Ray Lankester**, the holder of the office, objected to going to Oxford to hold a preliminary *visa-voce* examination in animal morphology, on the ground that it was useless, and not required by the statute. The University authorities, on the other hand, held that it was an integral part of the examinations as required by the statutes, and must be carried out accordingly. They therefore removed Professor Ray Lankester from his position. The Professor obtained a rule to compel the authorities to restore him to his office, but, after argument, the Queen's Bench Division ordered the rule to be discharged.

Universities' Settlement in East London.

This is the outcome of a project formed by members of the Universities of Oxford and Cambridge for planting a colony in East London. "To provide education and the means of recreation and enjoyment for the people, to inquire into the condition of the poor, and to consider and advance plans calculated to promote their welfare." The project took definite shape in 1884 in the establishment of **Toynbee Hall** in Commercial Street, under the direction of the Rev. S. A. Barnett, vicar of St. Jude's, Whitechapel. A number of members of both universities have taken up their residence in the Hall, which has become the centre of educational effort and social life in the overcrowded district in which it is situated. See ed. '87.

University College School. Gower St., established 1832, prepares specially for the London matriculation and other public examinations. **Pupils, 620. Head Master, H. W. Eve, M.A.** Amongst its alumni is the Rt. Hon. Joseph Chamberlain.

University Expenses. In both Oxford and Cambridge, there is now a system of residence, called **non-Collegiate**. As the name indicates, the students who thus reside are in no way connected with any particular college; but they have *all* the privileges of the University exactly the same as other students. They pass the same examinations, and take the same degrees. The chief object in reviving this system was to lessen the great expenses which have gathered round college life. This has been achieved, as will be seen from the following tables—

| OXFORD. (1) Cost of Matriculation. | | £ | s. | d. |
|--|--|----|----|----|
| 1. Matriculation fee to the University | | 2 | 10 | 0 |
| 2. Entrance fee to the Delegacy | | 2 | 10 | 0 |
| 3. Caution money (returned on removal of name) | | 2 | 0 | 3 |
| 4. Entrance fee to library | | 0 | 10 | 0 |
| 5. Dues for first quarter | | 1 | 7 | 6 |
| 6. Lodging-house delegacy fee | | 0 | 3 | 6 |
| Total | | 9 | 1 | 0 |
| <hr/> | | | | |
| (2) Lowest average cost per year. | | £ | s. | d. |
| Board and lodging for 24 weeks at 30s. a week | | 36 | 0 | 0 |
| University and Delegacy dues | | 6 | 0 | 0 |
| Examination fees (on the average) | | 2 | 0 | 0 |
| Tuition | | 6 | 6 | 0 |
| Total | | 50 | 6 | 0 |
| <hr/> | | | | |

This cost is usually exceeded because men wish to join clubs, take part in sports, etc.

CAMBRIDGE. (1) Cost of Matriculation, covering the same expenses as detailed under Oxford, is £12 12s. (2) The minimum annual expenditure is £54. Full details of these remarkable systems of modern education can be obtained by writing, in either case, to the Rev. the Censor.

University Extension. The object of this movement is to provide "the means of higher education for persons of all classes and of both sexes engaged in the regular occupations of life." It commenced in '72 with the University

of Cambridge; about four years later Oxford took it up—abandoning it, however, until '85; and in '76 was formed the **London Society for the Extension of University Teaching** within the Metropolitan area. **Dublin University** is associated with Cambridge in forwarding the work in Northumberland and Durham; **Owens' College, Manchester**, is also in the field; and the **Scottish Universities** are making a similar plan for laying siege to the north. The **University of Sydney**, New South Wales, adopted the scheme in '87; and the **Chautauqua Home Reading Club**—the largest organisation of the kind in America—is promoting a similar system of higher education. Such is a general view of the present position of this movement; an insight into its working is afforded from the following details regarding the Cambridge, London, and Oxford schemes.

CAMBRIDGE. This scheme is controlled by a syndicate of thirteen, appointed by the University senate. Under it there are **two terms** in the year—October to December, and January to March—and a course of twelve lectures given in each term. Preceding each lecture a class is held for about an hour, during which students are orally examined by the lecturer, who also goes over the written papers done at home by the more advanced students every week. At the end of each term a **special examination** is held and **certificates awarded** on the results. Six certificates so won entitles the winner to the **Vice-Chancellor's Certificate**—the highest distinction as yet attainable by the students. During 87-88 courses of instruction were given, in the term October to December, at 45 centres to 5,980 students; in the term January to March at 29 centres to 3,599 students, the attendance of students and the number of centres being always much larger in the former term. Of the centres 10 were under the joint management of Cambridge and Durham, while 5 others are affiliated to Cambridge. These **affiliated centres**—Derby, Hull, Newcastle-on-Tyne, Scarborough, and Sunderland—are a new feature in the scheme, and in '89 three more centres are to be added. The **privileges of students at these centres** are—(1) entrance to Cambridge University without submitting to the "previous" or "little go" examination; (2) remission of one year's residence before proceeding to the degree examination; (3) assumptions of the title "Students affiliated to the University of Cambridge." A town may come under the operation of this educational scheme in providing a place of meeting for the classes and a fee of £45 per term to the University for teaching. All the **local expenses** are met by the local committee, who also fix and receive the fees. In '85 four mining students were able to visit Cambridge for a month's study through winning each a £10 prize offered for that purpose. In '87 this experiment was repeated with satisfactory results; and it is likely that the next development in University Extension will be in the direction of enabling students to visit the University and to have access to the laboratories and museums with a view of finishing off the instruction begun in the local centres. Full details of the scheme and how to proceed in forming a new centre will be given on application to the Secretary of the Local Examinations and Lectures Syndicate, Syndicate Buildings, Cambridge.—The **LONDON Organisation** comprises a council of 32 members; President, the Rt. Hon. G. J. Goschen. Bedford College,

Birkbeck Institution, City of London College, College for Men and Women, King's College, London Institution, Queen's College, Royal Institution, University College, and Working Men's College, each nominate a member of the council; the remaining 22 are elected by members of the society. Any one may become a member of the society by paying an annual subscription of two guineas, or £50 for a life membership. These subscriptions and voluntary subscriptions constitute the society's revenue. The council is assisted and advised on educational matters by the **Joint Board**, which consists of three representatives from each of the Universities of Oxford, Cambridge, and London. The Joint Board nominates the lecturers and awards certificates to the students. The scheme of work is similar to the Cambridge scheme—two terms in the winter, each of three months, weekly lectures with oral and written examinations. Instead of the Vice-Chancellor's certificate, students under this scheme with six ordinary certificates are awarded **Certificates of Continuous Study**, which are recognised by the **Science Department** as a teaching qualification. The **Local Centres** are managed by local committees, who fix and receive the students' fees. The society simply provides lecturers and examiners, the charge being £27 10s. for a course of 10, and £32 10s. for a course of 12 lectures. The students' fees vary from 1s. to half-a-guinea, according to the locality and the discretion of the local committees. The (Dec. '88) courses are being delivered at 33 centres in different London districts. During the corresponding term of '87 courses were delivered at 26 centres, and the students numbered 3,155. **Sec. to the Council:**—R. D. Roberts, M.A., D.Sc., Charterhouse, E.C.—**OXFORD**. The work accomplished under the auspices of this University in the past year has shown a marked advance on the previous results. The number of **courses** delivered were 87; the **lecture towns** numbered 53; and the **students** attending the lectures were 13,076. More than one of the band of experienced lecturers has travelled no less than 8,000 miles in visiting the various centres. The unique idea of inviting several hundreds of students to visit **Oxford**, in August last, and whilst residing there for ten days, to attend various short courses of lectures given by men most eminent in their individual studies, proved very successful, and—if we may believe the students themselves—most delightful. Nine hundred, the majority of them being ladies, thus had the advantage of listening to a charming lecture by the **Bishop of Ripon** on "**Novels**," and other lecturers not less distinguished. It is already proposed to hold a

similar gathering in '89. **Home-Reading circles**, under the direction of a leader, are now about to be established; and other developments will no doubt take place in this excellent movement. **Sec.**, M. E. Sadler, M.A., Examination Schools, Oxford.

Upper Canada. Former name of **Ontario** (*q.v.*)

Uppingham. Archdeacon Johnson's School, founded 1584; reorganised 1875; income, £1,000. Three exhibitions of £60, £50, and £40 offered every year to some place of higher education; and 16 of about £30 each to Cambridge. **Head-Master**, Rev. E. Carver Selwyn.

Uruguay. Formerly called **Banda Oriental**. A republic on the east coast of South America, south of Brazil. Area, 72,150 sq. m.; pop. ('86), 596,463. Capital, **Monte Video**, pop. 104,472, at the mouth of the Rio de la Plata. Government vested in a president elected for four years. Legislature is composed of a Senate, elected for six years by departments, and a Chamber elected for three years, one for each 3,000 of population. In the recess a permanent committee of two senators and five deputies assume legislative power and control of general administration. State religion Roman Catholic, but all others tolerated. Education fairly good: about one in twenty of inhabitants attend school. **Estimated revenue** for '88, £3,135,960; **expenditure**, £2,847,400; **debt** ('87), £15,360,000. **Imports** ('86), £4,296,735; **exports**, £5,066,380. The rearing of cattle and sheep is the chief industry of the republic, and the bulk of the exports consists of animal products—dried and salted meat, preserved meat, extract of meat, hides, bones, tallow, wool, and sheep-skins. Nearly the whole of the commerce passes through **Monte Video**. In '87 there were 338 miles of railway and 1,162 miles of telegraph. Army about 3,500, with reserves about 23,000.—With the exception of the Blanco unsuccessful insurrections in 1871-2 and a rising in **Monte Video** in 1875, peace has been fairly well maintained during the last fifteen years; although an insurrection headed by General Arredondo broke out on March 29th, 1886. The revolution was, however, suppressed by the Government. The Chamber of Representatives in September '88 passed a decree proroguing for the space of two years the terms for ratifying marriages contracted in the Republic by non-Catholics, and legitimating the children in conformity with the '78 laws. For Ministry, etc., see **DIPLOMATIC**.

Usagara. A territory belonging to the German East African Company (*q.v.*).

V

Vaccination Acts ('67-74). These Acts constitute the several boards of guardians of the poor vaccination authorities for their respective unions. Each union is to be divided into as many vaccination districts as convenience requires; and in each district a duly registered medical practitioner is to be appointed public vaccinator, and to receive for each vaccination a minimum fee varying from 1s. 6d. to 3s., according to the distance which he has to go. Contracts made by a board of guardians with a public vaccinator require confirmation by the Local Government Board. Within seven days after registration of the birth of a child the registrar must serve upon the parent notice requiring the child to be vaccinated within three months, and stating when and where the public vaccinator will attend to perform the operation. When the child has been vaccinated, it must, upon the same day in the following week, be taken before the public vaccinator for inspection. If the vaccination has been unsuccessful it must be repeated; but if it should be thrice unsuccessful, or if the child has had small-pox, the public vaccinator is to give the parent a certificate exempting the child from further vaccination. If the vaccination has been successful he must transmit to the vaccination officer (whose function it is to see the law enforced) a certificate to that effect. The public vaccinator, if of opinion that the child is in a state not allowing of successful vaccination, is to transmit to the vaccination officer a certificate to that effect available for two months, and renewable if circumstances so require. Where the vaccination is performed by any other medical man, the parent is charged with the transmission of certificates. No charge is to be made by the public vaccinator. Vaccination at the public expense is not to be considered poor relief for purposes of disqualification. A justice of the peace may make an order for the vaccination of any child under fourteen years, if he find that the child has not previously been vaccinated. The penalty for any offence against the Acts is a fine not exceeding 20s. The wilful signing of a false certificate or duplicate is punishable as a misdemeanour. For further details consult the text of the Acts and the General Order of Oct. 31st, 1874, made by the Local Government Board. In the year 1880 Government introduced a bill to exempt from any further penalties under these Acts any parent who had already paid one full penalty of 20s., or had been twice adjudged to pay any penalty. The bill was dropped.

Vaccination, Anti. This name is loosely applied both to the opinions of those who maintain the worthlessness of vaccination in itself, and of others who, while either favourable or indifferent to vaccination, oppose enforcing it by penalties against anti-vaccinators proper. **Against vaccination** itself it is urged (1) That it does not prevent small-pox, as shown by—(a) In 1871 91·5 per cent. of the patients of the Highgate Small-pox Hospital, and in 1881 96 per cent., had been vaccinated, at a time when only 90 per cent. of the London population was claimed as vaccinated; (β) In the small-pox epidemic of 1871, the first 173 cases in Cologne and the first 224 in

Liegnitz had all been either vaccinated or re-vaccinated, thus showing that small-pox can and does originate among the vaccinated; in Sheffield in '87, and in Preston in '88, small-pox has assumed almost the form of an epidemic, though these cities are vaccinated up to over 90 per cent. of the birth-rate. (2) That it does not mitigate small-pox, since (a) in the 1871-3 epidemic in Cologne the mortality amongst vaccinated infants was 80 per cent. of cases; amongst unvaccinated infants it was 66 per cent. (β) In Perth in '87, of 8 cases, including 4 nurses, in the City Infirmary, whereof 2 were fatal, all had been re-vaccinated. (3) That vaccination is itself a grave danger to life and health, as inferred from (a) the great increase, since the enforcement of vaccination by law, in infant mortality from diseases confessedly inoculable,—skin diseases having increased 187 per cent., scrofula 259 per cent., syphilis more than 300 per cent., in children in the first year of life; whilst the fatal cases of vaccino-erysipelas—which between 1859 and 1860 averaged 8 annually—rose to an average of 27 between 1870 and 1880; (β) That for the six years 1881-6 the deaths of 328 children have been registered as due to "cow-pox and other effects of vaccination"; (γ) That in August 1882 a public inquiry held at Norwich found that 4 children had died and 5 more were seriously diseased through vaccination in the preceding June. **Against the enforcement of vaccination by law** it is urged (1) That sanitary measures succeed where vaccination fails; as in Leicester and Keighley, where vaccination has been entirely neglected for some years without any outbreak of small-pox. (2) That vaccination either (a) protects from taking small-pox, or (β) mitigates it when it has been taken, or (γ) does neither of these things. If it neither protects nor mitigates, then it is useless, and ought not to be enforced by law. If it only mitigates, then, since the mildest small-pox is admittedly as contagious as the most severe, vaccinated small-pox is no less dangerous to the community than unvaccinated; therefore there is no reason, and therefore no right, to enforce vaccination by law. If the doctrine be that it protects from taking small-pox, those who believe this doctrine will go and be vaccinated, and then, being themselves safe, have no reason, and therefore no right, to enforce vaccination upon others by law. (3) That this law is compulsory only on the poor, and that a law compelling a choice between money and the love of children can only fail to be demoralising when it ceases to be effective. **Sec. London Society for the Abolition of Compulsory Vaccination**, Mr. W. Young, 77, Atlantic Road, Brixton, London, S.W.

Valetta. The capital of Malta (*q.v.*).

Value, Double Standard of. See BIMETALLISM.

Vambéry, Arminius. The eminent Hungarian traveller, geographical explorer, and writer, b. 1832 at Duna-Szerdahely. He studied at Pesth. In '48, having joined the national Hungarian movement, he on its suppression by Austria left his native country and sought refuge in Constantinople, where he studied Oriental languages. When there he formed the idea of visiting Central Asia, and was the first European to succeed in making

his way through the Turcoman provinces. Starting in '63, he traversed the Turcoman desert, visiting Khiva and Bokhara. In the last-mentioned place he had an interview with the Emir without being recognised as a foreigner. After visiting many other places, he returned by the south of the desert. This remarkable expedition was fruitful in geographical, philological and ethnological information, contained in a work entitled "Relation of Travel in Central Asia (62-64) by a Pretended Dervish," published in Hungary, in Germany, and in England. On his return to Pesth, Vambéry was appointed Professor of Oriental Languages in the University of Pesth. He has written several other important works on his travels. In December the Professor wrote an article in the *Pester Lloyd* respecting Great Britain's new commercial relations with Persia.

Vancouver City. A young town and port on the mainland of British Columbia, terminus of the *Canadian Pacific Railway*.

Vancouver Island. A large island on the Pacific coast of Canada, at one time a distinct colony, but now part of *British Columbia (q.v.)*.

Van Diemen's Land. Former name of *Tasmania (q.v.)*. The island was discovered in 1642 by Tasman, and named after Van Diemen, the governor of the Dutch East India Settlements, the friend and patron of the great navigator. Name changed about 1851.

Vanua Levu. Second largest island of the *Fiji group (q.v.)*

Vegetarianism. See ed '86.

Venezuela. A republic in South America, governed by a president, assisted by Senate, three members nominated by each province, and a House of Representatives, elected directly, one member to every 35,000 of population. Roman Catholicism is the state religion, but private exercise of all others is permitted. Education is in a backward state, but efforts have been recently made for its improvement. Area 632,695 sq. miles; pop. in '86 2,198,320. Capital, *Caracas*, pop. 70,500. Revenue in 1885 about £1,172,950; expenditure about the same amount. In 1881 the debt, which formerly amounted to nearly £11,000,000, was consolidated; it is now estimated at about £4,000,000. Army about 2,500, exclusive of militia about 60,000 strong. The principal occupation of the people is agriculture. The chief exports are cacao and coffee, with a little cotton, indigo, sugar, and tobacco. Gold, copper, and coal exist. In '87 the relations between Venezuela and England were suspended, owing to a boundary dispute. Some valuable gold deposits were found on territory which was claimed by the authorities of Venezuela and also by those of British Guiana (*q.v.*). In July '88 information reached England of the commencement of a revolution; the United States were still continuing to watch the course of events—not, however, as yet intervening. Matters towards the end of the year gradually became once more quiet. A cable was laid between Venezuela and Curaçao in '88. For Ministry, etc., see *DIPLOMATIC*.

Venue. See ed '88, and consult "Sweet's Law Dictionary."

Verdi, Giuseppe, until the rise of Arrigo Boito, was the only Italian opera composer of eminence, and his works still dominate the Italian stage. He was the son of an innkeeper at Roncola, in the duchy of Parma, was b. 1814, and studied at Milan. His first work of any importance was the incidental music to a drama,

"Oberto di San Bonifazio" (1839), but he quickly rose to supremacy on the opera stage with such works as (to name only the chief of them) "I Lombardi" (1843), "Ernani" (1844), "Rigoletto" (1851), "Il Trovatore" (1853), "La Traviata" (1853), "Un Ballo in Maschera" (1859), "Aida" (1871) and "Montezuma," produced in 1878. In "Aida," written for Ismail, Khedive of Egypt, and produced at Cairo, Verdi has adopted much of Wagner's style. A fine dramatic gift and a love for showy, taking melodies, lie at the root of Verdi's remarkable success. In 1874 he composed the "Requiem" for Alessandro Manzoni. His latest work, "Otello," was produced at Milan, Feb. 5, 1886. Consult "Verdi, Milan, and Othello," by Blanche Roosevelt.

Verne, Jules. French romancer, b. Feb. 8th, 1828, at Nantea. He studied law, both there and at Paris. He began writing short pieces for the stage, and in 1863 commenced his series of marvellous stories, which have made his name almost a household word. His best known stories are "Five Weeks in a Balloon"; "Twenty Thousand Leagues under the Sea"; "A Floating City"; "Adventures of Captain Hatteras"; "The Mysterious Island"; "Michael Strogoff, the Courier of the Czar"; "Dick Sands, the Boy Captain"; and "Le Pays de Diamants." His works are characterised by a combination of scientific knowledge and imaginative power. An unsuccessful attempt on his life was made in March 1886. A new book by M. Verne, entitled "The Flight to France," appeared in '88.

Vice-Chamberlain. The, assists the Lord Chamberlain (*q.v.*), and acts for him in his absence. Both are Privy Councillors (see *MINISTRY*).

Vichy. A most fashionable bathing resort in France, beautifully situated on the river Allier, in a fine valley surrounded by picturesque mountains, 35 miles south of Moulins by rail. Population 6,256. Its hot alkaline springs, which rise at the foot of the volcanic mountains of Auvergne, are the most efficacious of the kind that are known. They vary in temperature from 60° to 112° Fahr., are used both for drinking and for bathing, and are resorted to in cases of indigestion, chronic catarrh, gout, etc. The *Etablissement Thermal* is perhaps the largest edifice of the kind in Europe, casino, theatre, assembly and reading rooms, etc.

Victoria. The smallest of the colonies in the Australian continent. Occupies the south-eastern corner. Divided from New South Wales on north by Murray river, and from South Australia on west by 141st meridian of E. long. Extends 420 miles E. to W., and 240 miles N. to S., containing 87,884 sq. miles. Pop. 1,003,043, besides about 12,000 Chinese and 780 aborigines. Capital *Melbourne*, pop. 380,000, situated on Port Phillip and river Yarra. In 1836 it consisted of half a dozen huts; now it is a splendid city, and rivals Sydney. Among its chief institutions are the university, museum, mint, botanical gardens, observatory, public library, and hospitals. Other cities are Ballarat, 41,000; Sandhurst or Bendigo, 40,000; Geelong, 21,000; Castlemaine, 8,600. Leading towns, Creswick, Echuca, Hamilton, Kyneton, Maryborough, Portland, Sale, St. Arnaud, Stawell, Warrnambool, etc. Victoria is divided into 37 counties, within which there are at present 60 cities and boroughs and 123 shires or rural municipalities. The whole colony is also

divided into four great districts. These are **Gippsland**, 13,898 sq. m., part mountainous, part rich alluvial soil, heavily timbered, much farming and grazing, gold, silver, copper, iron, tin, lead, coal, marble; grows oranges, fruit, hops, tobacco, opium; lake fishing, shooting, picturesque; **Murray**, mountainous, forested, much grazing country; gold, vines, tobacco; **Wimmera**, 25,000 sq. m., pastoral, sandy plains, scrub, badly watered; **Loddon**, pastoral, auriferous. Climates generally healthy, pleasant, but warm. Hot north winds, and cold winds from south, rather distressing at certain seasons. The great Australian Cordillera, the dividing range, passes into Victoria on the north-east, and traverses it from east to west. It is known as the Warragong and Muniyong Mountains, sometimes erroneously styled Australian Alps. The chief river is the Murray, forming the greater part of the northern boundary. The only other navigable streams are the Yarra-Yarra and some small rivers in Gippsland. There are various lakes, mostly salt, some on the sea margin. One-fifth of the land of the colony consists of mallee scrub, lakes, lagoons, etc. Nearly a quarter is mountain forest. Less than half has been alienated. About 17,000,000 acres of available land still remain open for selection, as leasehold runs, purchased farms, or fifteen-acre free homesteads. Gold is found both in quartz and in alluvial deposits. Besides gold, the minerals worked have been copper, tin, iron, antimony, limestone, marble, coal, slate, ochre, silver, kaolin, magnesite, gypsum, diamonds, and sapphires—the last two to a small extent. **Executive** is vested in Governor and responsible Ministry. Two Houses of Parliament: upper, Legislative Council; lower, Legislative Assembly. Council consists of 42 members, of whom 14 retire every two years. Members must possess estate worth £100 per annum. Electors must occupy property worth £10 per annum if their freehold, £25 if rented, except they are university graduates, clergy, schoolmasters, doctors, lawyers, or officers of army or navy. Legislative Assembly of 86 members elected triennially on manhood suffrage. Clergy of all denominations and convicts excluded from both Houses. Victoria is represented in the Federal Council of Australia. Port Philip is defended by forts. The colony possesses 2 ironclads, 3 torpedo boats, and 2 gunboats; 5 armed launches, and naval reserve of 480 officers and men, with 85 guns. There is a volunteer militia of 5,382, cavalry, infantry, engineers, artillery, with 95 guns. The paid staff, artillery and torpedo corps, number 217. Education is compulsory, and is free and secular. There is a Minister of Education, who is responsible for appointments and school properties. There are colleges and grammar schools, and numerous private or religious denominational establishments. For financial statistics see **BRITISH EMPIRE**, etc. (table). Revenue derived from customs, land tax, sales of land, stamps, railways, and telegraphs. Wool is the staple production, other than minerals. In round numbers the Colony possesses 10,700,000 sheep, and wool crop 120,000,000 lb.; 300,000 horses, 1,300,000 cattle, 250,000 pigs, and 70,000 goats. Agriculture now improving: 1,100,000 acres under wheat, 185,000 under oats, 9,700 acres under vine, producing 1,003,827 gallons of wine and 3,875 gallons of brandy; tobacco, 1,866 acres, producing 13,734 cwt. Olive and

mulberry also planted and grown successfully. In 1886 there were 2,417,582 acres in cultivation. The output of gold since 1851 is estimated at value £212,000,000. About 1,753 miles of railway completed, 316 constructing; connection with New South Wales system open, that with South Australia nearly finished. About 4,000 miles of telegraph line. Manufactures advancing with rapid strides. There are 2,813 factories and works, of which 1,400 employ steam power: aggregate horse-power 20,000, and 50,000 hands. Capital so invested represented as £10,900,000. There are over 1,200 squatting and grazing runs, averaging 20,000 and 5,550 acres respectively. Originally a part of New South Wales. Settlement begun in 1834, by a few shepherds and stockmen. Then known as "**Australia Felix**" and afterwards called **Port Philip Settlement**. Remained part of New South Wales till 1851, when separated, and received representative government as colony of Victoria. Pop. then about 76,000. Existence of gold known previous to this year, but kept secret, Government endeavouring to suppress all search for it. In 1851 many finds, resulting in great rush of gold-seekers to the colony. In 1854 population risen to 312,000. Then occurred **Ballarat riots**, and a serious battle between military and diggers. Responsible government granted the same year, and a constitution formed. Representation and electorate for legislative council reformed in 1881, after much party political strife. **International Exhibition** in 1880-81. Victoria is the smallest colony of the Australian group, but is probably the most important at present in regard to wealth and population. Public opinion in Victoria was very much disturbed by the question of **Chinese immigration** during '88, and a conference of the Australasian colonies took place, at which Victoria was represented. In July, the **Budget** of the colony was brought forward by the Premier, and the extraordinary surplus of £837,415 was found to exist. The actual revenue was £8,235,000, including balance from previous year; and the expenditure amounted to £7,398,000. For Ministry, etc., see **DIPLOMATIC**. Consult Gordon and Gatch's "Australian Handbook for 1888," Hayter's "Victorian Year-Book," Blair's "Cyclopædia of Australasia," Walch and Turner's "Victoria," Wallace's "Australasia," etc., and official publications.

Victoria. The city and capital of **Hong Kong** (q.v.); pop. about 40,000. Is being fortified. A naval station and commercial emporium.

Victoria. Capital of **British Columbia**, a province of the Dominion of Canada. Situated on Juan de Fuca Straits, on south of Vancouver Island. Pop. 14,000.

Victoria and Albert, Royal Order of, was instituted in 1862, and enlarged in '64, '65 and '80; is for Ladies, and consists of four classes. Registrar, Sir A. W. Woods.

Victoria Alexandrina, Queen of Great Britain and Ireland and Empress of India, was b. at Kensington Palace May 24th, 1819. She is the only child of the late Duke of Kent, third son of George III., by Louisa Victoria, Princess of Saxe-Coburg, and sister of Leopold I., King of the Belgians. The young princess, whose father died when she was only nine months old, was brought up under the care of her mother and of the Duchess of Northumberland, who superintended her education. She succeeded her uncle William IV. June 20th, '37, and was crowned in Westminster Abbey, June 28th, '38. She married,

Feb. 10th, '40. **Prince Albert of Saxe-Coburg Gotha**, who died of gastric fever Dec. 14th, '61. Her mother, the Duchess of Kent, died March 16th in the same year. For many years after the death of the Prince Consort, H.M. lived in seclusion, though she regularly performed her official duties. On Jan. 1st, '77, H.M., in accordance with an Act of Parliament adopted during Mr. Disraeli's administration in the previous session, was proclaimed **Empress of India** by the Viceroy at Delhi. On several occasions prior to her marriage the Queen was subjected to annoyance at the hands of insane admirers; and several other attempts have at different times been made upon H.M.'s life. In '69 she published "*Leaves from the Journal of Our Life in the Highlands*," an interesting account of the happy days spent at Balmoral with her husband and family. In '85 a second volume was issued by her under the title of "*More Leaves from the Journal of our Life in the Highlands*." In April '88 Her Majesty visited Italy, Austria, and Germany. After her return to England she attended a special performance of Sir A. Sullivan's "*Golden Legend*" at the Albert Hall, on May 8th. She met with an enthusiastic reception on the occasion of her visit to **Paisley** and **Glasgow**, where she opened the new Municipal Buildings in August, and visited the Glasgow Exhibition (*q.v.*). Her Majesty was the guest of Sir Archibald Campbell of Blythswood on this occasion. In November Her Majesty received her daughter, the widowed **Empress Frederick**, at Windsor, where she purposes remaining for some while. (For an account of the chief events of H.M.'s reign, the jubilee of which was celebrated in '87 with great rejoicing, see **QUEEN VICTORIA'S JUBILEE**, ed. '88; for list of members of Royal Family see **ROYAL FAMILY**.)

Victoria Cross, The, was instituted in Feb. '56 at the termination of the Crimean war, for the purpose of rewarding conspicuous acts of bravery performed by soldiers, sailors, or marines. The decoration consists of a Maltese cross of bronze having the royal crest in the centre, with a scroll bearing the words "For valour." Soldiers upon whom it has been bestowed wear it with a red ribbon, and sailors with a blue ribbon, upon the left breast. Non-commissioned officers and men receive with the V. C. a pension of £10; and each additional act of valour, besides being recorded by a bar placed upon the suspending ribbon, entitles the hero to a further pension of £5.

Victoria Harbour. The port and town of **Labuan** (*q.v.*).

Victoria University, founded and incorporated by royal charter '80, grew out of **Owens College**, Manchester, which was established '51. Besides Owens College it now comprises **University College**, Liverpool ('81), and the **Yorkshire College**, Leeds ('74); and aims at becoming a federation of colleges, not like Oxford and Cambridge, but wherever efficient colleges may arise. Chancellor, the Duke of Devonshire; Vice-chancellor, A. W. Ward, Litt. D., LL.D. Undergraduates exceed 400 in number. Grants certificates of proficiency to women and examines schools. Its Degrees with their hoods are:—**B.A.** (*h.* black cloth or silk with an edging of pale blue silk); **M.A.** (*h.* black cloth or silk with a lining of pale blue silk); **B.Sc.** (*h.* black cloth or silk with an edging of pale red silk); **M.Sc.** (*h.* black cloth or silk with a lining of pale red silk); **LL.B.** (*h.* black cloth or silk

with a broad edging of violet coloured silk); **M.B.** (*h.* black cloth or silk with a broad edging of red silk); **M.S.**, Master of Surgery (*h.* black cloth or silk with a lining of red silk); **Litt.D.**, **Ph.D.**, **D.Sc.**, **M.D.** (*h.* alike—viz., velvet or satin serge of a gold colour, lined with silk of a lighter shade of the same colour).

Village Communities. See **LAND QUESTION**, ed. '88.

Village Communities of India. See ed. '87.

Vincent, Charles Edward Howard, M.P., son of the late Rev. Sir Frederick Vincent, Bart. b. at Slinfold 1849. Educated at Westminster School and Royal Military Coll., Sandhurst. Entered the 23rd Royal Welsh Fusiliers in '68, but retired with the rank of lieutenant '73. He subsequently became correspondent of the *Daily Telegraph* at Berlin '71, and its military commissioner during the Russo-Turkish War. Appointed **Director of Criminal Investigations** '78, and resigned in '84. He was returned as **Conservative member** for **West Sheffield** in '85 and re-elected in '86. He succeeded in passing through Parliament the **First Offenders Act** (*q.v.*), giving magistrates discretionary powers to release young prisoners on a first conviction. He has recently identified himself with the **Fair Trade movement**.

Vincent, Sir Edgar, K.C.M.G., b. 1856; son of late Rev. Sir F. Vincent. Educated at Eton; joined Coldstream Guards; attached to Mr. Goschen's Embassy at Constantinople '80; Director of Turkish Indirect Revenues '82-4; **Financial adviser to Egyptian Government** since '84. Sir Edgar has shown very considerable financial ability, and during his four years of office has successfully steered Egyptian finance through difficult times to a position it has never before occupied. His chief characteristics are financial ingenuity and tact.

Violin. See ed. '87.

Virgin Gorda. A West Indian island of the Virgin group, belonging to the Presidency of the **Virgin Islands** in the British federal colony of the **Leeward Islands**. Area 10 sq. m. It is hilly and barren for the most part, but is not hot, and is healthy. Suffers from hurricanes. There has been but little cultivation since the fall in the price of sugar. A copper mine is worked, and it is said there is gold.

Virgin Islands. An archipelago in the West Indies, lying immediately to the east of **Puerto Rico**. Of the principal islands Spain holds **Culebra** and **Bieque**, Denmark possesses **Santa Cruz**, **St. Thomas**, and **St. John**, and England owns **Tortola**, **Virgin Gorda**, and **Anegada**. The latter form a presidency of the British federal colony of the **Leeward Islands**. Total area of the presidency 64 sq. m.; total pop. 5,500. For details see under the name of each island, and **BRITISH EMPIRE**, etc. (table).

Visp-Zermatt Railway. It was reported, in Oct. '88 that the ground for a new line of railway—to cost 6,000,000 francs—between the above-mentioned places had been staked out, following generally an existing bridle-path. The line, which is to be ready for passenger traffic in '91, will be of narrow gauge, without cog wheels, and will cross the Visp torrent five times. The length is 28 miles, rising 3,160 feet to Zermatt; there will be several rather sharp curves, and six small tunnels. It is stated that hitherto the scheme had been considered impracticable, but when the line is completed tourists will be placed at the foot of the Matter-

horn in two and a half hours after leaving the main line in the Rhone Valley.

Viti Levu. Largest of the Fiji islands (*q.v.*).
Vivisection is practised as a means of investigation, by direct experiment upon animals, of the laws which govern life, the processes of disease and the action of therapeutic remedies. See ed. '87.

Vivisection, Anti-. A movement against vivisection or the performance of painful surgical and medical experiments upon the inferior animals, whether in search of knowledge or for purposes of demonstration. See ed. '87.

Volapük is the outcome of an attempt by the late **Herr Schleyer**, of Constance, to provide the world with what would undoubtedly be a most useful medium of communication—namely, a universal language. It is the result of twenty years' labour on the part of this celebrated polyglot German scholar, who believes that men of science and letters, as well as bankers and traders, in all parts of the world, will, by the adoption of his tongue, be able to converse and correspond with one another with ease, lucidity, and accuracy. The word **Volapük** is derived from *puk*, language, and *vol*, universal, literally "universal language." The basis of the system is that each letter, whether vowel or consonant, shall have one and the same sound. The orthography is rigidly phonetic, the words being invariably pronounced as they are written, and *vice versa*. The principle of the French pronunciation has been adopted, and the accent is invariably placed on the last syllable. The new language, so far as construction is concerned, also follows the French, which Professor Schleyer regarded as the simplest and clearest of all European languages. (See more fully ed. '83.) Consult "**Volapük** the Universal Language," a Grammar, Reading Book, and Vocabulary, by Prof. Kirchhoff.

Volga and Don Canal. During the past summer, according to the *Times* correspondent at Odessa, writing under date Aug. 26th, two French engineers have been making investigations as to a projected canal to connect the rivers Volga and Don at Tsaritsyn and Kalatch. The result apparently arrived at is that first of all the Don will have to be placed under better control by the construction of embankments, the channel deepened, and a regular line of steamers established. The Government have already undertaken the improvement of the Don and northern Donetz channels, and it is said that the large grain and timber merchants of Rostoff are much interested in the canal scheme.

Volkskunde. See **FOLK LORE**.

Volkspartei. The GERMAN POLITICAL PARTIES.

Volunteers. The movement originated in 1859, when the following letter of service was addressed to the Lords Lieutenant of counties: "War Office, Pall Mall, May 1859.—Her Majesty's Government having had under consideration the propriety of permitting the formation of volunteer rifle corps under the provisions of the Act of 44 Geo. III., cap. 54, as well as of artillery corps and companies in maritime towns in which there may be forts and batteries, I have the honour to inform you that I shall be prepared to receive through you and consider any proposal with that object which may emanate from the county under your charge. The principal and more important

provisions of the Act are, that the corps be formed under officers bearing the commission of the Lieutenant of the county; that its members must take the oath of allegiance before a Deputy-Lieutenant or justice of the peace or a commissioned officer of the corps; that it be liable to be called out in case of actual invasion, or appearance of an enemy in force on the coast, or in case of rebellion arising out of either of those emergencies; that while thus under arms, its members are subject to military law, and entitled to be billeted and to receive pay in like manner as the regular army; that all commissioned officers disabled in actual service are entitled to half-pay, and non-commissioned officers and privates to the benefits of Chelsea Hospital, and widows of commissioned officers killed in service to such pensions for life as are given to widows of officers of Her Majesty's regular forces; that members cannot quit the corps when on actual service, but may do so at any other time by giving fourteen days' notice; that members who have attended eight days in each four months, or a total of twenty-four days' drill and exercise in the year, are entitled to be returned as effectives; that members so returned are exempt from militia ballot, or from being called up to serve in any other levy; that all property of the corps is legally invested in the commanding officers, and subscriptions and fines under the rules and regulations are recoverable by him before a magistrate. The conditions on which Her Majesty's Government will recommend to Her Majesty the acceptance of any proposal are: That the formation of the corps be recommended by the Lord-Lieutenant of the county; that the corps be subject to the provisions of the Act already quoted; that its members undertake to provide their own arms and equipments, and to defray all expenses attending the corps, except in the event of its being assembled for actual service; that all rules and regulations which may be thought necessary be submitted to me, in accordance with the 56th section of the Act; that the uniform and equipments of the corps may be settled by the members, subject to your approval, but the arms, though provided at the expense of the members, must be furnished under the superintendence and according to the regulations of this department, in order to secure a perfect uniformity of gauge. The establishment of officers and non-commissioned officers will be fixed by me and recorded in the books of this office; and in order that I may be enabled to determine the proportion, you will be pleased to specify the precise number of private men which you will recommend, and into how many companies you propose to divide them. I may only add that I shall look to you as Her Majesty's Lieutenant, for the nomination of proper persons to be appointed officers, subject to the Queen's approval.—I have the honour to be, etc., Your most obedient servant, J. PEELE." In the last fifteen years the force has steadily increased in numbers. In '68 the total enrolled were 199,194; in '69, 195,287; in '70, 193,893; in '71, 192,608; in '72, 178,279; in '73, 171,937; in '74, 175,387; in '75, 181,080; in '76, 185,501; in '77, 193,026; in '78, 203,213; in '79, 206,265; in '80, 206,537; in '81, 208,308; in '82, 207,336; in '83, 209,305; in '84, 215,015; in '85, 224,012; in '86, 226,752; and in '87, 228,038. The latest return showed the distribution of arms to be: Light Horse, 239; Artillery, 42,196; Engineers

(including submarine miners), 11,101; **Mounted Rifles**, 57; **Rifles**, 173,695; **medical staff corps**, 750. The **largest return** is that of the Northern District—70,319; the North British (whole of Scotland) giving 44,491, the Home District 32,112, Western District 22,880, Eastern District (Colchester) 11,471, South-Eastern (Dover) 7,527, Southern (Portsmouth) 6,904, and Woolwich 1,556. There was by last returns a total of 6,129 officers, and 12,792 sergeants qualified as such, and therefore drawing the Government proficiency grant of 50s. The ages of enrolled members on Nov. 1st, '87, were: under 17 years 805, under 18 years 8,517, under 19 years 18,082, under 20 years 21,880, under 21 years 22,065, under 22 years 19,453, under 23 years 16,720,

under 24 years 14,517, under 25 years 12,347, under 26 years 10,661, under 27 years 9,620, under 28 years 8,451, under 29 years 7,647, under 30 years 7,170, 30 to 35 years 20,410, 35 to 40 years 13,195, 40 to 45 years 8,348, 45 to 50 years 5,592, upwards of 50 years 2,558. There were accounted for as having passed through the ranks, and being available on **emergency service**, 228,038 men. Of these there were: under 1 year's service 45,940, under 2 years' 37,593, under 3 years' 33,406, under 4 years' 25,491, under 5 years' 17,120, under 6 years' 11,933, under 7 years' 9,122, under 8 years' 7,610, under 9 years' 6,133, under 10 years' 5,518, under 15 years' 14,272, under 20 years' 7,434, and upwards of 20 years' 6,466.

W

Wace, Rev. Henry, D.D., one of the most eminent of living theologians, was b. in London 1836. Graduated in honours at Brasenose Coll., Oxford, '60. Ordained '61. After holding successive curacies at St. Luke's, Berwick Street, and St. James's, Piccadilly, he was in '75 appointed **Professor of Ecclesiastical History in King's Coll., Lond.**, and in '83 **Principal** of that institution. He is a prebendary of St. Paul's and hon. chaplain to the Queen. Boyle Lecturer '74, '75, on "Christianity and Morality," and Bampton Lecturer at Oxford '79 on "The Foundation of Faith." He is joint editor with Dr. Wm. Smith of the "Dictionary of Christian Biography, Literature, Sects and Doctrines," and editor of the "Speaker's Commentary on the Apocrypha."

Waddington, William Henry, French diplomatist, antiquary, and archaeologist, son of a naturalised Englishman, b. at Paris Dec. 11th, 1826. He received his education at Rugby, and Trinity College, Cambridge, where he took the second place in the first class of the Classical Tripos in 1849. He was also bracketed for the Chancellor's Medal. On coming of age M. Waddington was naturalised. Minister of Public Instruction in the cabinet of M. Jules Simon (1876-7), and was appointed **Minister for Foreign Affairs** (1877-8), under the ministry of M. Dufaure. During this period of office he represented France with credit at the **Congress of Berlin**. In 1880 M. Waddington refused the London Embassy, but in July 1883 he succeeded M. Tissot at the Court of St. James's. The speech delivered by M. Waddington on the **Paris Exhibition** (*q.v.*), in '88, produced a strong feeling that British manufacturers should be there represented.

Wadi Raian Reservoir Scheme Between Cairo and Thebes there occurs a canal which quits the Nile on its western bank, which it follows, however, for 150 miles, and then turning to the west, spreads into irrigation streams, cultivating the province of **Fayoum**. Mr. Cope Whitehouse, after calling attention to the fact that 1,000 sq. m. of Fayoum lie beneath the level of the Nile, and that over 130 sq. m. are 130 ft. below the level of the sea, some time since announced the **discovery** that to the south of the Fayoum province, and only about 70 m. south-west of Cairo, there exists another depression. **Surveys** made by competent engineers, and topographical observations by Dr. Schweinfurth, Col. Ardagh, and Major Surtees, prove that this basin has a surface of 1,000 sq. m. at

the Nile level. If at the flood season the water could be turned into this depression, there would be a water space larger than the Lake of Geneva. Mr. Cope Whitehouse, in directing the attention of the Egyptian Government to the high importance of thus utilising and controlling the waters of the Delta, seeks to identify the **Lake Moeris** of the Ptolemaic maps with the now dried up Wadi Raian. Col. Scott-Moncrieff directed Major J. H. Westen, F.E., Director-General of Works in Egypt, to report upon the matter, and that officer did so under date May 12th, '87. The report was an exhaustive one, and in favour of the feasibility of the project. The cost, it is thought, cannot exceed a million sterling, for which outlay the area and productive capacity of the Delta may be nearly doubled. It is pointed out that the revenue of Egypt exceeds £1 sterling per acre, and the value of the Wadi Raian scheme may therefore be easily appreciated. The question was mentioned by Mr. Woodall in the **House of Commons** on July 15th, but Sir J. Fergusson, Under Secretary for Foreign Affairs, said that the report in question had not yet been officially received. It was reported from Alexandria, under date April 8th, '88, that Col. Moncrieff had reported favourably on the Whitehouse scheme, considering Wadi Raian convertible into a great reservoir with a surface of 256 square miles, and capable of augmenting the Nile volume by 20,000,000 cubic metres daily during the hundred days of low Nile. His estimate of the cost was £287,000, and he considered the realisation of the project would be a distinct benefit to Egypt.

Wakefield Rt. Rev. William Walsham How, D.D., **First Bishop** of; b. at Shrewsbury 1823. Educated at Shrewsbury School and at Wadham College, Oxford, where he graduated, '47. He held successively the curacies of St. George's, Kidderminster, and Holy Cross, Shrewsbury; the rectory of Whittington, the rural deanery of Oswestry, and the rectory of St. Andrew Undershaft with St. Mary Axe, London. Prebend of St. Paul's Cathedral, '79, and **Bishop Suffragan of Bedford** in the same year. Dr. H. devoted himself energetically to the work of promoting the spiritual and social well-being of the overcrowded population in the East of London. He was translated to the new see of Wakefield (Feb. '88), which includes such populous towns as Halifax, Birstal, Wakefield, etc. He has written several works of a pastoral, exegetical, and devotional character, and

his well-known "**Pastor in Parochia**" has passed through many editions.

Walderssee, Count, the recently appointed Chief of the General Staff of the German army, was b. 1832. Married an American lady, who had received the title of *Princess Maria von Noor* as the morganatic consort of the late Prince Frederick of Schleswig-Holstein-Sonderburg-Augustenburg. Entered the army in '50, and served with much distinction through the war of '66. After the war with France in '70, Count W. received a colonelcy as a tribute to his conspicuous services during the great campaign. In '82 he became Quartermaster-General, and acted as Deputy-Chief of the General Staff, on behalf of the aged Count von Moltke (*q.v.*). On the resignation of the latter, in August '88, Count W. succeeded to the position of Chief of the General Staff.

Wallach Bay. A harbour of refuge on the coast of Damaraland, south-west Africa, in 23° S. lat. Formerly a great resort of the American South Sea whalers, whence its name. Acquired by Great Britain in 1878. With Penguin Island area of territory about 450 sq. m., pop. 800. Annexed to Cape Colony, and administered by a Resident Magistrate. Disputes with the German settlers occurred during the past year ('88).

Wallace, Alfred Russell, LL.D., F.L.S., distinguished ethnologist, b. at Usk 1822, educated at Hertford Grammar School. In '48 he accompanied Mr. Bates to the Amazon, and embodied the results of his observations in the regions of that river in "**Travels on the Amazon and Rio Negro**." He subsequently proceeded to Southern Asia, and spent eight years among the Malays, collecting material for his valuable work "**The Malay Archipelago**." His other important scientific works are, "**Tropical Nature**," "**The Geographical Distribution of Animals**," "**Island Life**," and "**Contributions to the Theory of Natural Selection**." Of late years, Dr. W. has turned his attention to the study of the **Land Question**; and the publication of his "**Land Nationalisation, its Necessity and its Aims**," led to the establishment of the **Land Nationalisation Society**, of which he is President. He was awarded the **Royal Medal of the Royal Society** in '68, and in '70 the **Gold Medal of the Société de Géographie de Paris**. Dr. W. has also distinguished himself by his opposition to compulsory vaccination.

Walter, John, principal proprietor of the *Times*, was born in London, 1818. Educated at Eton and Exeter Coll., Oxford, where he graduated in honours. Entered Parliament as member for **Notingham** in '47, and represented that constituency till '59, when he was returned for Berkshire. He failed to secure re-election in '65, but was again returned in '68, '74, and '80. He retired from Parliamentary life in '85. On Jan. 1st, '88, Mr. Walter celebrated the centenary of the *Times* (*q.v.*), which was started by his grandfather and continued by his father. The Walter family have introduced many improvements in the printing press, and their name is inseparably associated with the history of journalistic enterprise. Mr. W.'s name has been prominently before the public in connection with the Parnell Commission (*q.v.*).

Walsh, Rt. Rev. Dr., Roman Catholic Archbishop of Dublin, was born in that city in 1841. Educated at Maynooth and Dunboync. In '67 he was elected Professor of Theology at Maynooth, of which institution he became President in succession to the late Dr. Russell. He

was appointed Archbishop of Dublin in '85. Dr. W. is an ardent Nationalist, and has exerted great influence in the promotion of the Parnellite movement. He visited Rome last year, and unsuccessfully exerted his influence with His Holiness in the interest of the Irish Nationalist Party.

War Office. Under this Department are the military factories for the manufacture of arms, gunpowder, etc., and the army clothing depot at Pimlico. The parliamentary chief of the Department is the **Secretary for War**, who is aided by a **Parliamentary Under-Secretary**, a **Permanent Under-Secretary**, a **Financial Secretary**, and the **Surveyor-Gen. of Ordnance**. The **Commander-in-Chief** has charge of the combatant personnel of all regular and irregular forces, and is immediately responsible for their discipline and efficiency; and he makes appointments and promotions so far as they may be made by the Crown, but these are countersigned by the Secretary of State, who is responsible to Parliament. The employment and disposal of the forces come within the province of the Secretary of State. A committee formed to inquire into a possible reorganisation of the War Office has recently held its sittings. See **SECRETARY OF STATE, MINISTRY, ARMY, MUTINY ACT**.

Warburton Lectures. These were founded by Dr. William Warburton, an eminent divine and controversialist, who was born, in 1698, at Newark-upon-Trent, where, after having been articled to an attorney, he practised for a very short time, previous to the abandonment of his profession, in order to devote himself to the service of the Church. Having taken orders in 1723, he became successively vicar of Gristley, Notts, in 1726; rector of Brant Broughton, Lincolnshire, in 1728; Preacher of Lincoln's Inn, 1746; Prebendary of Gloucester, 1753, and of Durham, 1755; Dean of Bristol, 1757, and Bishop of Gloucester, 1759. He died at Gloucester June 11th, 1779. By an indenture (July 21st, 1768), Dr. W. transferred the sum of £500 Bank Four per cent. Annuities Consolidated, to certain trustees, for the purpose of founding a lecture, in the form of a sermon, "to prove the truth of Revealed Religion in general, and of the Christian in particular, from the completion of the Prophecies in the Old and New Testaments which relate to the Christian Church, especially to the apostasy of Papal Rome." He further ordains that "the Trustees shall appoint the Preacher of Lincoln's Inn for the time being, or some other able Divine of the Church of England, to preach this Lecture; that the Lecture shall be preached every year in the Chapel of Lincoln's Inn (if the Society give leave), and on the following days—viz., the first Sunday after Michaelmas Term, the Sunday next before and the Sunday next after Hilary Term; that the Lecturer shall not preach the said Lecture longer than for the term of four years, and shall not again be nominated to preach the same; and when the term of four years is expired, that the said Lecturer shall print and publish, or cause to be printed and published, all the Sermons or Lectures that shall have been so preached by him." The first series of the Warburton Lectures was delivered by Dr. Richard Hind, who was at the time of their publication (1772) Preacher to the Honourable Society of Lincoln's Inn, and who afterwards became successively Bishop of Coventry and Lichfield, 1775-'81, and of Worcester, 1781-1808.

Dr. Hind's volume was entitled "An Introduction to the Study of the Prophecies concerning the Christian Church, and in particular concerning the Church of Papal Rome." Dr. Hind's immediate successor in the Warburton Lectureship (1772-76) was Dr. Samuel Hallifax, "Chaplain in Ordinary to His Majesty," and afterwards successively Bishop of Gloucester (1784-89) and St. Asaph (1789-90); who was followed, at two or three removes, by Robert Wares, A.M., F.R.S., F.A.S., Archdeacon of Stafford, a philologist and lexicographer, who in the period 1800-1804 delivered the Lectures, afterwards in 1805 published as "A Connected and Chronological View of the Prophecies relating to the Christian Church." In 1807-11, the Warburton Lecturer was Edward Pearson, D.D., Master of Sidney College, Cambridge, and Christian Advocate in that University; and in '33-36, Dr. Frederick Nolan, F.R.S., M.R.S.L., vicar of Prittlewell, Essex, delivered a series, which he published in '37, on "The Chronological Prophecies; as constituting a Connected System, in which the Principal Events of the Divine Dispensations are determined by the Precise Revelation of their Dates." The roll of recent Lecturers includes the names of Dr. Alexander McCaul, Professor of Divinity, King's College, London, Prebendary of St. Paul's '37-40; of Frederick Denison Maurice, M.A., chaplain of Guy's Hospital, and one of the Professors of Divinity in King's College, London, who in '46 published the substance of three of his Warburton Lectures in a volume bearing the title of "The Epistle to the Hebrews," which were thus separately issued because they were believed to "have a direct reference to one of the leading controversies of our day, namely, of Development;" and the late Benjamin Harrison, M.A., Archdeacon of Maidstone, who died March 25th, '87, and who published in '49 the twelve lectures he had distributed over the period of his lectureship, as "Prophetic Outlines of the Christian Church and the Anti-Christian Power, as traced in the Visions of Daniel and St. John."

Ward, Mrs. Humphry, who has recently acquired considerable popularity as the authoress of "Robert Elsmere," a novel of agnosticism, is a daughter of the late Thomas Arnold, author of the well-known "Manual of English Literature," a niece of Matthew Arnold, and granddaughter of Dr. Arnold, of Rugby. She married in '72 Mr. Thomas Humphry Ward, at that time a tutor of Brasenose Coll., Oxford, now art critic of the *Times* and editor of *Miscellany of the Time* and of a well-known edition of the English poets. "Robert Elsmere" was reviewed by Mr. Gladstone in the *Nineteenth Century*.

Warren, Col. Sir Charles, R.E., G.C.M.G., F.R.S., son of Sir Chas. Warren, K.C.B., was b. 1820. Educated at Cheltenham, Sandhurst, and Woolwich. Lieutenant (1857); Captain (1869). Employed in excavations at Jerusalem (1867-70). In 1876 and afterwards he was employed in various administrative and military capacities in Cape Colony. Made C.M.G. for laying down boundary line of Griqualand West (1877). Lieut.-Col. for distinguished services in Kafir war (1878), and administered government in Griqualand West (1879-80). Was in Egyptian campaign (1882-3), and was employed under the Admiralty in Arabian desert to search for Professor Palmer and his party (K.C.M.G.). Sir

Charles received the honour of G.C.M.G. Jan. '88. In 1884-5 he was sent into Bechuanaland as H.M. Special Commissioner and Major-Gen. commanding troops, restored tranquillity in that country without bloodshed, and erected it into a British Protectorate (G.C.M.G.). In recognition of his various services received the thanks of the Home and Colonial Governments on several occasions. Was appointed, Jan. 16th, 1886, Major-Gen. commanding troops and Governor-General Red Sea Littoral, Suakim, and was recalled to take up appointment of Chief Commissioner of Metropolitan Police. Sir Charles has incurred much commendation on the one hand and obloquy on the other for the manner in which he has exercised the powers vested in him for the regulation of open air meetings and processions, especially in Trafalgar Square (*q.v.*). In consequence of an article which Sir C. W. contributed to *Murray's Magazine*, a discussion arose in the House of Commons as to the propriety of its publication. Tension between the Home Secretary and Sir Charles Warren led to the resignation of the latter in November.

Watches. See ed. '88.

Water Colours. See ROYAL SOCIETY OF PAINTERS IN WATER COLOURS, and ROYAL INSTITUTE OF PAINTERS IN WATER COLOURS.

Water Companies (Regulation of Powers) Act, '87, limits the powers of the water companies to cut off the tenant's water supply where the rate is paid by the landlord. See ed. '88.

Water Supply (Legal Cases '88). Legal disputes between consumers and water companies seem to have become more frequent since the victory of Mr. Dobbs. In July the owner of a house at Highgate sued the *New River Water Co.* for damages under novel circumstances. The Company had given notice to the plaintiff to alter his fittings, as they intended to give Highgate a constant supply of water, and the plaintiff had accordingly made alterations which were subsequently approved by the Company's inspector. The Company, however, failed to give a constant water supply to the top of the house, and the plaintiff thereupon sued for a portion of the expense he had been put to. The action, which was tried in the City of London Court, ended in a verdict for the plaintiff.—In another case, heard in the Queen's Bench Division, it was laid down that a water company have no right to sue the owner of an empty house for arrears of water rate, when they have not supplied, but have only remained in readiness to supply water. Where, however, a landlord contracts to pay his tenant's rates, and the tenant neglects to pay his rent, the landlord has power to cut off the water supply, notwithstanding the Water Companies Act of 1887.—In the case of *Cook v. The New River Company* (February) a question arose as to the right of the owners of business premises to have water supplied them by meter and paid for according to the quantity consumed, as distinguished from a charge made upon the rateable value of the house. The case turned upon the construction of the *New River Company's* Special Act. It appeared that the supply of water was required, among other things, for a hydraulic lift; and the Court of Appeal decided that, whether the plaintiff's premises constituted a dwelling-house or not, under sect. 35 of the Act the plaintiffs had no right to require a supply of water for all purposes by meter.—The question whether the owners of unoccupied

house property are liable for water supplied after the expiration of the current quarter, was raised in the case of the **British Empire Assurance Co. v. The Southwark and Vauxhall Water Co.** (Queen's Bench Division, April). The Court decided the point in the negative. It was stated that the decision would affect the water companies of the country to the extent of some £60,000 a year.

Waterhouse, Alfred, A.R.A., b. 1830. Studied architecture at Manchester. His first important work was the Manchester Assize Court, and he has been the architect of the County Gaol, Owens College, and the Town Hall, in the same city. In London Mr. Waterhouse has designed the Natural History Museum, the Prudential Assurance Company's Offices in Holborn, the New University Club, the **New St. Paul's Schools**, and the **City and Guilds Institute** in the Exhibition Road. Balliol College, Oxford, and Caius and Pembroke, Cambridge, have been partly rebuilt from his designs. Elected A.R.A. (1878). Mr. Waterhouse has chiefly adapted the Gothic and Romanesque styles of architecture to modern requirements.

Waterloo Cup. See COURSING.

Watkin Range-Finder. The It has long been known how difficult it is to properly estimate with the eye the distances that in long ranges are covered by rifled guns. Should the target happen to be a moving one, the difficulty is thereby increased. The question has occupied the attention of the army authorities for many years, and varying trials have been made with the object of determining how the proportion of hits on given target at various distances could be increased. **Colonel Wray** was appointed president some years since of a committee for working out the question of "mechanical range-finding" for the British army. In 77 experiments were conducted at Woolwich with a range-finder, and it was demonstrated that the results of those who were firing without one, as against a party of men using a range-finder, stood in the score of hits as fourteen to sixty-three. The committee was also charged with the question of "a thoroughly practical and efficient system for determining the position of objects at sea in relation to coast batteries." The practical solution of this question has been attained by **Major Watkin, R.A.** His position-finder has been for some fifteen years under consideration, but it has now, in a perfected form, received official recognition, and substantial reward has been accorded to the inventor of this all-important apparatus. Major Watkin has been granted by the Government a sum of £25,000, together with a retaining fee of £1,000 a year for ten years. The nature of the developed invention is properly a secret. As originally designed, an accurate chart of the anchorage or approaches to be defended was divided into squares, each having recorded on it its distance from the fort, together with the elevation and deflection due to such range. The chart was then placed under the arms of an instrument at the "directing station." Well-hidden "observing stations" giving half a mile of base, were also established on each side of the fort, and a man at each station followed with a telescope the movements of the object to be fired at. The telescopes being electrically connected, moved two corresponding arms on the face of the chart at the "directing station"

in such a manner that the point of intersection of the arms showed the exact position of the target on the squares. On the number of any square being telegraphed from the "directing station" to the battery, it was reproduced on a dial placed between every two guns; and the gunners had simply to train and elevate their pieces accordingly. The squares are abolished in the perfected apparatus, and the act of laying the telescope from the directing station indicates to the batteries the training and elevation. It is not necessary for the target to be visible; and firing may take place over a hill. The importance of the invention is without doubt of the very first character, and fully warrants the recognition, though long deferred, accorded by the Government.

Watts, George Frederick, R.A., b. 1830. In 43 his cartoon of "Caractacus led in Triumph through the Streets of Rome" obtained one of the three highest-class prizes of £300 at Westminster Hall. Three years later, in a similar competition, his colossal oil pictures, "Echo" and "Alfred inciting the Saxons to prevent the Landing of the Danes," secured him one of the three highest-class prizes of £500. Mr. Watts executed one of the **frescoes** in the Poets' Hall of the Houses of Parliament, and painted in fresco the west end of Lincoln's Inn Hall. His "Judgment of Paris," contributed to the Grosvenor Gallery in '87, was a canvas of remarkable power and originality of treatment. Elected R.A. '68. Mr. W. exhibited "The Angel of Death" at the New Gallery last year. He very generously lends his best pictures to local exhibitions, and has recently presented several of them to the nation.

Way Right of. A right of way may be defined as the right of passing over land not one's own. Rights of this kind are public, if enjoyed by everybody; private if enjoyed only by a certain person or description of persons. Wherever there is a public right of way there is a highway. The origin of a highway is a dedication thereof by the owner to the public; and such dedication may be either express or implied. It will be implied from use of the highway by the public for a moderate number of years. But it is not generally known, and ought to be remembered, that the property in the land occupied by a highway is usually in the owners of the land adjoining such highway. Should the highway have been legally closed, its area would again be at the discretion of the owner. A private right of way is either a customary right or an easement, a customary right if not annexed to the ownership or enjoyment of any particular tenement; an easement if so annexed. The customary right has its origin in long use; the easement either in long use (twenty years' enjoyment giving a qualified, and forty years' enjoyment an absolute right of way) or else in express grant by deed. Private rights of way are variously limited. The right to use a footway does not give a right to drive carts or cattle along it. The right to use a path for the purpose of going to church or market does not include the right to use it at all times or for all purposes. The right annexed to a tenement to use a way to that tenement cannot be enlarged merely because the tenement has been put to a totally new use. The obstruction of a public way constitutes a public nuisance, and is a ground of indictment; the obstruction of a private way is a disturbance, and is a ground

for an action for damages. But if the obstruction of a public way occasions special loss to a particular person (*e.g.*, if, besides the inconvenience to which he is put, his horse or cart is injured) he has also an action for damages.

Ways and Means. The Committee of Ways and Means of the House of Commons (1) considers any proposals relative to old or new taxes and duties submitted to it by the Chancellor of the Exchequer (see FINANCE), and (2) votes sums of money from the Consolidated Fund sufficient in amount to make good the supplies granted for the maintenance of the services of the year. Resolutions relative to taxation may be acted upon by the proper officers as soon as passed. Thus, in 1885 Mr. Childers' Budget resolutions increasing the spirit duties were agreed to in Committee of Ways and Means, and the higher duties were collected on the following day, and until the bill embodying the resolutions, and the Government which had framed them, were defeated, when the old duties were reverted to. At the end of the session a measure which on the one hand applies out of the Consolidated Fund the whole sum granted to Her Majesty for the service of the financial year, and on the other hand appropriates the supplies in accordance with the votes already passed in Committee of Supply, is passed, and is known as the Appropriation Bill.

Ways and Means, Chairman of. See CHAIRMAN OF WAYS AND MEANS.

Wellington. Capital of New Zealand (*q.v.*), pop. 27,800; on Port Nicholson, North Island.

Wellesley Province. Part of Straits Settlements (*q.v.*).

Wellington College, Berks. Founded 1853, in memory of the great Duke of Wellington, and for the education of the sons of deceased officers. Scholarships—one each of £50 and £30, tenable at either University. Pupils, 425. Head Master, Rev. E. C. Wickham, M.A.

Welsh National League. See ed '88.

Wesleyan Methodists are the followers of the Revs. John and Charles Wesley. John was born at Epworth on June 3rd, 1703, and Charles at the same place on December 18th, 1707. They were both educated and became tutors in the University of Oxford, at which place, in 1729, they began a strict religious movement which led to their being designated "Methodists." In 1735 John Wesley went, under the direction of General Oglethorpe, to the new colony of Georgia, in South America, to be a missionary to the colonists and the Indians. He was then a high churchman of the strictest type. His mission was a failure. He returned to England early in 1738, and in the May following, having been instructed by certain German Moravians, both the brothers were converted within four days of each other. They began a new course of life, and amid abounding wickedness they preached justification by faith alone in all churches to which they had access; and when these were closed to them, they preached in the open air, first near Bristol, then in London, on both Moorfields and Kennington Common, to assemblies of from five to twenty thousand, and hundreds of persons were converted. In December 1739 a few of Wesley's converts came to him asking for spiritual counsel, and he appointed a weekly meeting for them. The numbers who attended increased rapidly, and the old ruined foundry was taken in Moorfields (now Tabernacle

Street), where the first Methodist society was organised. Their work prospered and spread. Both the brothers began to itinerate over England and Wales; Scotland and Ireland were soon included in their journeys, and societies were established in all the populous parts of the country. The Foundry was the central home of Methodism for nearly forty years; City Road Chapel was opened 1778. The first Methodist chapel John Wesley built was in the Broadmead, Bristol, and he continued to form new societies to the end of his long life. Charles Wesley at his death left some 6,500 hymns and sacred poems, some of which are sung in every Christian country. Charles Wesley died March 20th, 1788, aged 80; John Wesley died March 2nd, 1791, aged 87, leaving 61,463 persons as members of his Society in Great Britain, and 382 preachers.—In 1797, owing to the expulsion of Alexander Kilham from the Methodist ministry, a new society was formed, which began with 5,000 members, and was denominated the "Methodist New Connexion." It has missions abroad, especially in China, and its total membership by last returns was 34,254, with 214 ministers.—In 1811 another society was commenced, as the result of expelling from membership Hugh Bourne and William Clowes; they are called the "Primitive Methodists" (*q.v.*); they have foreign missions, and a membership of 191,662, with 1,938 ministers.—In 1815, the "Bible Christian" Society was originated by the expulsion of William O'Bryan. they have a mission in Australia, a membership of 30,034, and 251 ministers.—The Methodist Free Churches were formed out of members expelled from Methodism in 1828, 1835, and 1849, all of which amalgamated in 1857. they have foreign missions in Africa and Australia; their total membership is 85,049, with 421 ministers.—There are also two other small societies, known as the "Wesleyan Reform Union" and the "Independent Methodists," their united membership being 14,410. The Methodists in Ireland number 25,369, with 236 ministers. All above enumerated are those who are church members, not merely attendants at divine worship.—In connection with British Methodism there are affiliated Conferences in France, South Africa, West Indies, and Australia, and foreign missions. The Wesleyans have four colleges for the training of ministers—at Richmond, Didsbury, Headingley, and Handsworth; and colleges at Sheffield, Cambridge, and Taunton. There are also high-class schools at New Kingswood (Bath) for the sons of preachers, and at Southport and London for preachers' daughters; in addition to several proprietary colleges which are not connexional; also a Children's Home and Orphanage, in six branches, under the direction of the founder Dr. Stephenson. The Primitive Methodists have two colleges, and the New Connexion, Methodist Free Churches, and Bible Christians have one college each. Each of these societies has a "book room," from which are issued many thousands of hymnbooks, magazines and other publications every year. John Wesley's cheap publications, in the last century, were the pioneers of good and cheap books for the English people.—The greatest development of Methodism has been in the United States of America, where it is now the leading denomination, numerically and financially. Methodism began in New York by two Irish families in 1766; the

original promoters were **Barbara Heck** and **Philip Embury**. In Dec. 1784 it was organised by **Dr. Thomas Coke** as a Methodist Episcopal Church, who at that time ordained **Francis Asbury** its second bishop, **Dr. Coke** being the first. Their churches and societies are now divided into North, South, and Coloured; the church North has a membership of 1,900,000; the church South has nearly 1,000,000 members, and the other branches are smaller. The following is a tabulated summary of the Methodists throughout the world, as represented by the official returns published immediately preceding January of the present year:—

| | Min-
isters | Class
Members. |
|-------------------------------------|----------------|-------------------|
| English Wesleyans in— | | |
| Great Britain | 1,982 | 505,156 |
| Ireland | 234 | 25,951 |
| Foreign Missions | 353 | 37,176 |
| French Conference ... | 29 | 1,541 |
| South African Conference | 166 | 38,529 |
| West Indian Conferences | 87 | 48,659 |
| Australian Conferences | 600 | 80,632 |
| Methodist New Connexion | 189 | 35,474 |
| Primitive Methodists | 1,041 | 192,874 |
| Bible Christians | 256 | 31,455 |
| Methodist Free Churches | 410 | 85,259 |
| Wesleyan Reform Union .. | 19 | 8,997 |
| Independent Methodists .. | | 6,159 |
| In United States of America— | | |
| Methodist Epis. Ch., North | 12,032 | 1,934,084 |
| Methodist Epis. Ch., South | 4,406 | 990,904 |
| Methodist Protestant Church | 1,340 | 129,263 |
| Evangelical Association | 1,060 | 132,508 |
| United Brethren Church | 1,348 | 173,265 |
| American Wesleyan Church | 179 | 17,727 |
| Free Methodist Church | 373 | 12,114 |
| African Meth. Epis. Church | 2,550 | 405,000 |
| African M. E. Zion Church | 2,110 | 314,000 |
| Colored Meth. Epis. Church | 1,729 | 165,000 |
| Union American M.E. Ch | 40 | 3,660 |
| Other Methodist Churches | 70 | 26,000 |
| In Canada— | | |
| Methodist Church in Canada | 1,610 | 199,479 |
| Totals | 34,222 | 5,601,666 |
| Total Ministers and Members | | 5,635,888 |

These are duly accredited members of the Methodist Society, heads of families mostly. Take the low average that there are four adherents to Methodism for every member of society, we have a total of persons who attend Methodist worship constantly of 28,779,440, all of whom properly belong to Methodism. For foreign mission statistics see **MISSIONARY SOCIETIES**.

West End Mission. See **LONDON WESLEYAN MISSION**. Superintendent, **Rev. Hugh Price Hughes** (*q.v.*), who now preaches every Sunday at St. James's Hall. The annual meeting ('88), held to celebrate the establishment of the mission, showed that the enthusiasm manifested at its commencement had not diminished.

Westcott, Rev. B. P., D.D., Canon of Westminster and Regius Professor of Divinity at Cambridge; was b. 1825. Educated at Cambridge, where he graduated with honours. Assistant-master at Harrow (52-69); Canon

of Peterborough (69); Regius Professor of Divinity (70); Canon of Westminster (84). Canon Westcott is distinguished for his critical acumen, and, besides his well-known work on the Canon, is known for his Commentaries on the "Gospel and Epistles of St. John," and his "Greek Testament," issued in conjunction with **Dr. Hort**.

Western Africa. British Possessions. See **GAMBIA, SIERRA LEONE, GOLD COAST, LAGOS, NIGER DISTRICTS, and WALFISCH BAY**; and for Executive Council see **DIPLOMATIC**.

Western Australia. A colony comprising all the western half of Australia beyond the 129th meridian of E. long. It is 1,280 miles N. to S., and 800 E. to W., including area of 1,060,000 sq. m.; pop. 42,488. Divided into thirteen electoral and five land districts; also twenty-six counties in S.W. Land districts are Central, Eastern, Central, South Eastern, Northern, and Kimberley. Capital Perth, pop. 10,000; chief port Fremantle, pop. 5,000; other towns Albany, Geraldton, Roebourne, York, Northampton, etc. Carnarvon on the Gascoyne, and Delby on the Fitzroy, are new port-townships in the north. Settlement almost entirely confined to S.W., though enormous tracts of rich grass recently discovered in N. now being taken up. Interior and S.E. sterile, scrubby, with salt marshes. South-west covered with immense forest of giant timber; jarrah, kari, tuart, and sandalwood especially valuable for export. Many rivers: the Swan, Fitzroy, Glenelg, De Grey, Gascoigne, Murchison, etc.; but none navigable at all seasons. Resources of the colony enormous, but undeveloped as yet. Lead and copper are worked; gold, coal, tin, zinc, and iron exist. Forest wealth incalculably vast. Pearl fisheries rising in value. The Kimberley and northern districts contain boundless pastures, and much land suitable for sugar, tobacco, wheat, etc. A gold-field was discovered and opened here in 1886, and a great rush to it ensued. By last accounts it had proved generally disappointing. In other parts are regions and climates admirably suited for silk-growing, vitnage, olive, etc., as more than experiment has already demonstrated.—Ruled by Governor and officials, and Legislative Council, 9 nominated and official members, and 17 elected on £10 suffrage for five years. Is represented in the Federal Council of Australasia. The Church of England takes half the population, and nearly half the remainder are Roman Catholics. Education provided for and compulsory. Volunteer force of 588, and one torpedo-boat. There are 274 miles of railway open and 557 constructing, 700 of road, 2,404 of telegraph. Great efforts are being made to promote the construction of railways on a grand scale on the "land-grant system," and so to open up back country. For financial statistics see **BRITISH EMPIRE**, etc. (table). Exports consist of timber, wool, lead, copper ore, whale-oil, guano, sandal-wood, pearls, and pearl-shell. There are in the colony 86,248 acres under cultivation, of which wheat occupies 24,043 acres, oats 1,766 acres, barley 5,185 acres, vines 624 acres. Average produce 15 12 bushels of wheat per acre, and about 16 of oats and barley. Wine made, 59,488 gallons. The stock consists of 38,300 horses, 88,254 cattle, 1,809,071 sheep, and 24,655 swine.—Land of good class may be taken up at 10s. per acre for fee simple, payable in ten annual instalments. Free grants are made conditional on all being fenced and one-fourth

cultivated within ten years. Founded in 1829 as **Swan River Settlement**. Till 1850 struggled for existence, having scanty population, no capital, and no market. Then made a convict station, till transportation ceased in 1868. Since, has been making slow advance. Only capital and labour required to raise Western Australia to a position equal to the eastern colonies. It is gradually acquiring more attraction for immigrants than has hitherto been the case. Speculators and others are turning their attention to the colony, in view of the immense natural wealth it contains, while the Government is desirous of promoting immigration in every possible way. Such are the inducements offered that ere long it is probable Western Australia will receive additional population and make rapid advance. In '88, in common with the other Australian colonies, public opinion in Western Australia on the question of immigration was much aroused. Consult Nicolay's "Handbook for Western Australia." Gordon and Gotch's "Australian Handbook." Forrest's "Explorations in Australia." Giles' "Geographic Travels in Central Australia," etc.

West Indies. The name given by Columbus to the islands surrounding the Caribbean Sea. They are divisible into the Bahamas, the Greater Antilles, and the Lesser Antilles. The last are also divided into Windward and Leeward groups; and to them may be added islands off the Venezuelan coast. The total area is estimated at upwards of 90,000 sq. m., and the total pop. at 5,000,000, of whom two-thirds are negroes. Politically the various islands are divided among five European Powers, with the exception of Hayti, which is independent, and the small islands appertaining to Venezuela. The possessions of Spain cover an area of 46,770 sq. m.; pop. 2,275,097; consisting of Cuba, Puerto Rico, Pinos, Bieoque, and Culebra (*q.v.*). Great Britain holds a large number of islands, whose total area covers 13,487 sq. m., pop. 1,289,882. They are grouped into six Governments: **Bahamas, Jamaica, Windward Islands, Leeward Islands, Barbados, and Trinidad** (*q.v.*). The islands belonging to France are **Guadeloupe and Martinique**, with their dependencies: area 1,769 sq. m., pop. 350,330. Holland holds **Curacao, Oruba, St. Martin, Buen Ayre, St. Eustatius, and Saba**: united area 403 sq. m., pop. 44,734. Denmark possesses **St. Croix, St. Thomas, and St. John**: united area 118 sq. m., pop. 33,763. Hayti is divided into the two republics of **Hayti and San Domingo**. Whole area 28,249 sq. m.; estimated pop. 1,100,000, entirely of negroes and mulattoes, there being only a few score whites. For further details see under the name of each island respectively, and **COLONIES OF EUROPEAN POWERS**. Consult "Her Majesty's Colonies," and Layard's "Through the West Indies."

Westminster Assembly. The. See ed. '88. **Westminster.** Very Rev. **Geo. Granville Bradley, D.D., Dean** of, was b. 1821. Educated at Rugby, where Dr. Arnold was then head master, and at Univ. Coll., Oxford, of which the late Dean Stanley was then tutor. He graduated First Class in Classics '44, and was elected a Fellow of his College the same year. He was subsequently assistant master to Dr. Tait, at Rugby, and **Head Master of Marlborough Coll.**, where he introduced the study of modern languages and science. He was elected **Master of Univ. Coll., Oxford**, in '70, appointed

Hon. Chaplain to the Queen '74, **Chaplain in Ordinary** '76-81, **Canon of Worcester** Feb. 81, and, in the following August, **Dean of Westminster**. He is the author of "Recollections of Arthur Penrhyn Stanley," "Lectures on the Book of Ecclesiastes," "Lectures on the Book of Job, delivered in Westminster Abbey" ('87), and of a standard work on Latin prose.

"Westminster Review" (quarterly, 6s.) was founded (1824) under that title, changed (1835) to the **London Review**, then named the **London and Westminster Review** (1836); on commencing a new series in its present form (1852) reverted to its original title. The **Westminster Review** treats of political and social subjects, and has long maintained a philosophical high-class reputation. The essays by **Mrs. Mona Caird** (*q.v.*), which appeared in the **Review** during '88, were the occasion of much controversy. In April '87 a monthly series was commenced, and the scope of the magazine extended. Office, 57, Ludgate Hill, E.C.

Westminster School, or the **Royal School of St. Peter's, Westminster**. Founded 1560, reorganised 1868. Founders, 40; 10 annual vacancies. The **Westminster Play**, an annual representation of a Latin comedy by the scholars, is of some celebrity. There are a number of close scholarships and exhibitions at **Christ Church, Oxford**, and of exhibitions at **Trinity College, Cambridge**. **Head Master**—Rev. W. Gunion Rutherford, M.A. Motto—"Dat Deus incrementum." Most distinguished alumni: **Poets**—Ben Jonson, Dryden, Cowper, Southey, George Herbert, William Cartwright, Prior, Rowe, Cowley, Giles Fletcher, Churchill, John Dyer, the two Colmans, Bonhill Thornton, Cumberland, Charles Wesley, Toplady, and others. **Historians**—Gibbon and Froide. **Statesmen**—Warren Hastings, Elijah Impey, Lord Halifax, the Duke of Newcastle, and six other Prime Ministers. **Lawyers**—John Glyn, Judge Jeffries, Earl Mansfield, Sir David Dundas, and many others. **Divines**—Too numerous to mention; 15 pupils of Busby at one time on the bench of bishops. **Soldiers**—Charles Mordaunt, the great Earl of Peterborough, Lord Raglan, Earl Lucas, etc. Richard Hakluyt, the **Geographer**. Christopher Wren, **Architect**.

Wharfedale Meeting. See ed. '88.

Wheat, Average Price of. The average price of wheat per quarter during the half-year ending Lady Day was in 1878, 51s. 7d.; 79, 39s. 7d.; '80, 46s. 7d.; '81, 42s. 7d.; '82, 45s. 8d.; '83, 40s. 11d.; '84, 38s. 11d.; '85, 32s. 2d.; '86, 30s. 3d.; '87, 32s. 8d.; '88, 30s. 4d.

Whitaker's Almanack. Mr. Jos. Whitaker's first almanack was issued in 1850. It was published at a penny, but only survived two or three years. The present almanack first appeared in 1868 (for 1869), and has steadily increased in its circulation. In 1878 the half-bound edition was enlarged by the addition of supplementary sheets, and a further extension was made in '87, the price being advanced to half a crown. The design on the familiar cover of the shilling almanack was executed by John Leighton. Office, 12, Warwick Lane, E.C.

White, Sir William Arthur, K.C.M.G., b. 1824. Educated at Trinity Coll., Camb. After holding various diplomatic appointments, he was summoned to Constantinople as **Envoy Extraordinary and Minister Plenipotentiary** during the Conference ('76-77). Created C.B. ('78). Mr. White proceeded to the Turkish capital as

chargé d'affaires (April 23rd, '85). The Bulgarian crisis developing many complicated features, Sir W. White retained the post until Sir E. Thornton could take up his new appointment, having been succeeded at St. Petersburg. Created (Jan. 30th, '86) K.C.M.G. On Feb. 25th he received his letters of recall from Constantinople; but the rapid succession of events in the Levant and the Balkans kept him almost constantly at the Porte, and eventually it was decided to appoint Sir William the Ambassador Resident, and to recall Sir E. Thornton. On Jan. 8th, '87, it was stated that Sir William had been definitely named Ambassador Plenipotentiary at Constantinople. Sir W. W. received the order of G.C.B. in '88. On the occasion of his daughter's wedding, the Sultan sent a diamond tiara to the bride.

White Books. See BLUE BOOKS.

White House, The. Official residence in Washington of the President of the United States. Built of white stone, whence the name originates.

Whitehead, Alderman, Lord Mayor of London, is a native of Raibach, Westmorland, and claims descent from George Whitehead, the friend of William Penn. Alderman Whitehead removed to London and successfully engaged in the Bradford trade, from which he retired a few years ago. He has twice contested his native county as a Gladstonian Liberal, and in '85 was defeated by the Hon. William Lowther by only six votes. His lordship has interested himself in Technical and Commercial Education, and celebrated his installation by leaving out the "circus element" from the mayoral procession.

Whitman, Walt, American poet, a native of Long Island, New York, was b. 1819. In his youth he was apprenticed both to the printing and carpentering crafts. He abandoned these, however, for scholastic and journalistic pursuits. In his younger days he was a great walker, and made long journeys on foot through the United States and Canada, receiving inspiration by the way for his remarkable poems, which are characterised by strong individuality and a disregard for literary conventions. The best known of his works are "Leaves of Grass," "Drum Taps," and "Democratic Vistas." During the Civil War he devoted himself to the care of the wounded in the hospitals of Virginia and Washington. He subsequently entered the Government service at the latter city, where he remained till '74, when he retired to Camden, New Jersey. In '87 his English admirers presented him with a timely testimonial in the form of a purse of gold; amongst the subscribers being Lord Tennyson.

Whittier, John Greenleaf, b. 1807, at Haverhill, Massachusetts, U.S.A. In '29 he became editor of the *American Manufacturer*, a Boston newspaper; afterwards editor of *New England Weekly Review*, entered the legislature of Massachusetts in '35; became secretary of the American Anti-Slavery Society in '36, at Philadelphia; edited *Pennsylvania Freeman* in '38-39, when his office was sacked and burnt by a mob; returned to his native State ('40), and became correspondent of the *National Era*, an anti-slavery paper published at Washington in '47; contributed anti-slavery and other lyrics to this paper, and has lived for years in literary retirement, publishing some volumes of poems, which have given him a

prominent place among American authors. The best edition of his poems is the "Centennial edition," published in '76.

Wilde, Oscar, poet, art-lecturer, and literary critic, second son of Sir W. R. Wills Wilde, the eminent surgeon and archaeologist, and of Lady Wilde ("Speranza"), was b. in Dublin, '55. Educated at Trin. Coll. Dublin (where he gained the Berkeley gold medal for Greek), and Magdalen Coll., Oxford (two first-classes moderations '75, Lit. Hum. '78). Awarded the *Newdigate Prize* for his poem on "Ravenna." Mr. W. on coming to London became known as the leader of the æsthetic movement. In '81 he published his volume of "Poems" (David Bogue), which attracted considerable attention. The same year Mr. W. accepted an invitation to lecture on the æsthetic movement in the United States. In '83 his play of "Vera" was produced in New York. Became ('87) Editor of "The Lady's World," which he converted into "The Woman's World," an artistic illustrated monthly magazine.

"Wilde," The. See GERMAN POLITICAL PARTIES.

Will and Codicil. A will is an instrument disposing of property, as from the death of the owner. In order to be valid in English law a will must be in writing, and signed at the foot or end thereof by the testator, or by some other person in his presence and by his direction; such signature to be made or acknowledged by the testator in the presence of two or more witnesses present at the same time. The witnesses must attest and subscribe the will in the presence of the testator. If any beneficial interest whatsoever is given by the will to any one of the witnesses, or to the wife or husband of such witness, the witness is none the less good; but the gift of the beneficial interest is void. Creditors are admissible witnesses. A will is revoked by subsequent marriage, or by the burning, tearing, or otherwise destroying the same by the testator, or in his presence and by his direction; or by writing executed in the same manner as a will and declaring an intention to revoke; or by a subsequent will executed in the same manner. A will speaks from the death of the testator without reference to the time of its execution. The Courts, in interpreting wills, have endeavoured to ascertain the testator's intention, without observing the same strict rules as are applied to the interpretation of other legal documents. The result has been an accumulation of rules and decisions which are extremely perplexing and defeat their own end. A will of real estate operates as a conveyance needing no further sanction. But if the real estate be situated in Middlesex or Yorkshire, a memorial of the will must be registered within six months of the testator's death if he dies in Great Britain, and within three years if he dies elsewhere. A will of personal estate must be proved; that is to say, the executors must deposit it in the Probate Division of the High Court, receiving a copy called the probate, which is the only proper evidence of the rights of the executors. The will is proved by the oath of the executor that he believes it to be what it purports to be; but in particular cases the evidence of one or of both of the attesting witnesses is necessary. A codicil (Lat. *codicillus*, dim. of *codex*=a book or writing) is a supplement to a will. The law relating to the execution, interpre-

tation, etc., of codicils is in all respects the same as that which applies to wills. But a codicil, if it does not expressly revoke a will, will not be construed to do so. In cases of **Intestacy** there are certain well defined rules under which the property of deceased persons is distributed. As regards **personal estate**, where the intestate dies leaving a widow and children, the widow takes one-third and the children the remainder. Where the wife only survives, and there are no blood relations, half goes to the wife and the other moiety to the Crown. A surviving husband, however, takes the whole of his deceased wife's property. Where there is a widow left, and no near relations, half goes to the wife and the rest to the next-of-kin. Where there is a father, and brother or sister, the whole goes to the father. Where, however, there is a mother, or brother or sister, the property is divided amongst them equally. A wife and father divide, as do a wife and mother. The distribution of **real estate** where the owners have died intestate follow a different rule, the heir taking the property. The old local customs relating to the estates of intestates have been abolished.

Willemstadt. Capital of **Curacao** (*q.v.*).

William I., late Emperor of Germany, son of Frederick William III., King of Prussia, b. March 22nd, 1796. His military career dates from 1813, when he played a part in the War of Freedom. While Governor of Pomerania ('48) the revolution broke out, and he had to fly to England. He became member of the Constituent Assembly sitting at Berlin ('48). He commanded the forces operating against the revolutionists in Baden. He was Regent of Prussia ('58-61), and came to the throne in '61. Under the reign of the Emperor William the war with Denmark added the duchies of Schleswig and Holstein to the kingdom of Prussia. Next followed the war with Austria, which ended at Sadowa in favour of Prussia the feudal contest existing between the two nations as to which should be supreme in Germany. The war was brought about through the diplomacy of Prince Bismarck, with the view to establish a North-German Confederation, under the leadership of Prussia, and an offensive and defensive treaty of alliance was concluded with Bavaria, Baden, and Württemberg. France saw with uneasiness the rising military power of Prussia, and the Emperor of the French, whose government was failing at home, endeavouring to restore his prestige by a bold stroke, entered upon the war with Germany ('70-71), resulting in the fall of the Empire, and the subjugation of France. The Prussian King besieged Paris, and forced it to surrender (armistice signed Jan. 19th, '71). After the signature of the treaty of peace (Feb. '71), by which France lost the provinces of Alsace and Lorraine, and had to pay Germany an indemnity of £200,000,000, King William of Prussia was crowned as the first Emperor of Germany in the Hall of Mirrors in the Palace of Versailles. The life of Emperor William was several times attempted. Died Mar. 7th, '88. (See GERMANY.) Consult Barnard Smith's "Life of William I." and Archibald Forbes' "William of Germany."

William II., King of Prussia and Emperor of Germany, is the eldest son of the late Emperor Frederick III., by Victoria, Princess Royal of England. He was b. Jan. 27th, 1859. He succeeded his father June 15th, '88. His

early education was entrusted to private tutors, one of whom, writing in *Murray's Magazine*, has described him as "a frank, well-mannered, genial boy." He devoted himself to his studies with great industry, and "could write English and knew English history and English literature as well as boys of fifteen at an ordinary public school." In '74 he proceeded to the gymnasium of Cassel, and submitted to the ordinary discipline of that establishment until '77, when he entered the University of Bonn, where, it is said, he formed those predilections for the army which have characterised his subsequent career. After leaving the University he applied himself assiduously to his military duties, and almost daily took part in the exercises of the troops for about five hours. He also paid much attention to home and foreign affairs, and was a frequent visitor to the Reichstag. He also initiated himself into the business of diplomacy under the direction of Prince Bismarck and Count Herbert Bismarck at the Foreign Office. He married on his twenty-second birthday in '81 the Princess Augusta Victoria, of Schleswig-Holstein-Augustenburg, a niece of Prince Christian. Their son, the present Crown Prince, Frederick William Victor, was b. May 6th, '82. The energy with which the young Emperor devoted himself to the affairs of the army previous to his accession created the impression that he would favour a policy prompted by military ambition. Referring to the reports as to his warlike proclivities, he made a speech at Brandenburg in February last in which he repudiated the statement that his proclivities were warlike. Also in acknowledging the expression of sympathy by the German people on account of the events which had put the Imperial family in mourning, he gave the assurance that, "like my ancestors, I shall direct my serious endeavours exclusively to advancing and increasing the welfare of the country in undisturbed and peaceful labour." Immediately after his accession the Emperor issued a **General Order** both to the army and to the navy. In the former he declared "the confidence with which I step into the place to which God's will calls me is immovably strong, for I know what a sense of honour and duty my glorious ancestors have implanted in the army, and I know in how great a measure this feeling has always and at all times been manifested in the army firm and inviolable attachment to the War Lord is the inheritance which is handed down from father to son, and from generation to generation, and in the same way I refer you to my grandfather, who stands fresh in all your memories as the personification of the glorious and venerable War Lord such as could not be more finely conceived. I refer you to my beloved father, who as Crown Prince already won a place of honour in the annals of the army, and to a long line of glorious ancestors whose names shine brightly in history, and whose hearts beat warmly for the army. Thus we belong to each other, and the army. Thus we are born for one another, and thus we will stand together in an indissoluble bond in peace or storm as God may will it. You will now take the oath of fidelity and obedience to me, and I swear ever to remember that the eyes of my ancestors look down upon me from the other world, and that I shall one day have to render account to them of the glory and honour of the army." On June 27th he

opened the Prussian Diet in person, and in his speech from the throne, said that his policy would be to follow in the lines laid down by his grandfather and his father in the government of Prussia, and also with respect to Imperial policy. Much importance was attached to the visit which His Majesty subsequently paid to the Tzar at Peterhoff. After several interviews between their Imperial Majesties the Emperor William left Cronstadt for Stockholm, where he arrived on July 26th, on a visit to King Oscar. He subsequently visited the Emperor Francis Joseph in Vienna early in October, and from thence proceeded to Rome on a visit to King Humbert on October 11th, and was enthusiastically received. On the following day he paid a visit to the Pope at the Vatican, proceeding thither from the house of the Prussian Embassy.

William III., Prince of Orange-Nassau, Grand Duke of Luxembourg, King of the Netherlands (Holland), b. 1817. He succeeded his father, the late King William II., '40. His mother, Queen Anne Pauline, was the sister of the late Tzar Nicholas I. of Russia. In '27 he put an end to the Concordat with the Holy See. He married twice; his first wife being the Princess Sophia Frederica Matilda, daughter of William I., Duke of Wurtemberg. She died in 1877. He married, in 1879, the Princess Emma Adelaide Wilhelmina Theresa, daughter of Prince George Victor of Waldeck and Pyrmont, and sister of the Duchess of Albany. King William by his first wife had issue, Prince William Nicholas Alexander Charles Henry, b. 1840, d. 1879, and Prince William Alexander Charles Henry Frederick, Prince of Orange, b. 1851; died at Paris June 21st, 1884. His Majesty suffered from a serious illness last year, which caused much anxiety, and a Council of Regency was appointed by the States General (see NETHERLANDS). The heir presumptive is Princess Wilhelmina, b. 1880.

Williams, Mr. Montagu, a distinguished member of the criminal bar, and now one of the police magistrates for Greenwich, was at various times a tutor, soldier, playwright, actor, critic, and journalist. Called to the bar in 1862, Mr. Williams devoted himself entirely to criminal practice. Within the last few years Mr. Williams' voice unfortunately gave way, and for this reason probably he accepted a police magistracy.

Williamson, Alexander William, Ph.D., LL.D. Dublin and Edin., b. May 1st, 1824. Studied in the universities of Heidelberg and Giessen, under Gmelin and Liebig. Appointed Professor of Practical Chemistry in University College, London ('49). For important researches on "Etherification and the Constitution of Salts," Professor Williamson was awarded in '62 the Royal Medal of the Royal Society. President of the British Association ('73). He is a member of the Senate of the University of London. He took an active part in promoting the establishment of degrees of science at the University of London, and has written numerous works, amongst others being his "Handbook of Chemistry." In November '88 Prof. W. delivered an interesting address on agriculture at Haslemere.

Willis, Law on, '88 *In re Newdegate* was an action to determine the construction to be put on the will of the late Mr. Newdegate, M.P. The plaintiff, General Newdegate, claimed to

be entitled to annuities of £500 and £100 as first tenant for life under the will, and also to a legacy of £5,000 given to him personally by a codicil. The defendants, who were the remaindermen and trustees, contended that the legacy was given by way of substitution for the annuities. The plaintiff also claimed the right of immediate occupation of the mansion-house and park of Arbury, which the defendants alleged they had a right to let on lease for 21 years, to pay off incumbrances. On May 7th Mr. Justice Chitty delivered judgment in favour of the plaintiff on both points.—On the same day an action relating to the *Chantrey bequest* was decided by Mr. Justice North. Sir Francis Chantrey, a famous sculptor, died in 1841, and by his will directed that, subject to the life interest of his wife and certain small annuities, the income of his personal estate should be paid to the president and treasurer of the Royal Academy, to be expended in purchasing works of art of the highest merit executed in Great Britain. They were forbidden to purchase anything but completed works; in other words, they might not give orders for works of art to be executed on commission. The opinion of the Court was now asked as to whether the terms of the bequest permitted the purchase of plaster or wax models of statuary to be afterwards executed in bronze or marble. It was shown that sculptors invariably sold their work at this stage to ordinary customers, that the creative part was really finished then, the rest of the work being merely mechanical, although demanding great manual dexterity, and that it would be a great hardship to make a sculptor incur the expense of executing his work in the bronze or marble, without knowing whether he would find a purchaser for it. The Court held, however, that such purchases could not be made, the judgment resting chiefly on the fact that the testator, himself a sculptor, must have known of the distinction between sculpture and painting in this respect, and yet had expressly forbidden the purchase of anything but completed works of either kind.—*Abdallah v. Rickards*, tried before Mr. Justice Chitty on the 5th and 6th of June, was a will suit arising out of the following remarkable circumstance. The testator was a Mr. Henry Selby Rickards, a native of Colchester, born about the year 1814. In 1840 he went to Egypt and settled there. He dropped his English name and took the Turkish one of Abdallah. He became a Turk in all his customs and habits, and adopted the Mohammedan religion, even to the extent of being circumcised and making a pilgrimage to Medina. In '41 the testator married Fatoom Hanim, the daughter of an Egyptian Sheikh of Cairo, and descended from the prophet. The marriage was performed according to the Mohammedan rites, and the children of the marriage, of whom there were seven surviving, had been given Mohammedan names, and had been brought up as Mohammedans. In '69 Fatoom died, and in the same year the testator went through a form of marriage with his own brother's daughter, Catherine Rickards. He returned to England in '70, and lived at a house he had purchased at Sydenham till '75. From that year till his death, in '86, he resided in a house belonging to himself at Beyrout, in Syria. It was abundantly proved that up till '70 the testator lived and behaved as a learned and devout Mussulman—praying, fasting, and attending mosques in an open and

public manner. On the other hand the evidence was as clear that from '70 he attended Christian places of worship with considerable regularity, and that his four children by Catherine Rickards were brought up as Christians. By his will made in '85 testator left the bulk of his real and personal property to his wife Catherine Rickards, and after her death to his children by her, £800 only being bequeathed to "my children by an Egyptian mother, Anim Bey." These children by Fatoom or Anim Bey now claimed that they were entitled to the bulk of testator's property on the ground that they were his heirs according to Mussulman law, and that he was only entitled according to that law to leave away from them by his will one-third of his own property and one-fourth of their mother's. They also rested their claim on a compromise which had been agreed to and executed before the British Consul-General at Beyrout, between the executors of the will and Anim Bey Abdallah, eldest son of the testator, acting for himself and by powers of attorney for all his brothers and sisters. By this agreement the plaintiffs were to have one-third of testator's property and withdraw all other claims. The issues raised were these: Firstly, was the compromise valid and binding? and, if not, secondly, was the testator a domiciled Mussulman at the time of his death, and therefore restricted in his testamentary dispositions by that law? The first point turned on the construction of sect. 37, subs. 2, of the Conveyancing Act '81, which empowers executors to settle claims for debts. Mr. Justice Chitty held that the agreement in question was bad, and not within the terms of the section, because it essayed to deal with the real as well as the personal property of the testator, and was therefore *ultra vires*, executors having nothing to do with realty. He refused to separate the terms of the compromise and hold it valid as to the personal estate only. The view he took was that the agreement was to be looked at in its entirety, and that as it purported to effect a compromise which was *ultra vires*, the plaintiff was unable to enforce it. As to the second point his lordship considered that the testator resumed his domicile of origin when he lived in England as a Christian from '70 to '75, and that the onus of showing that he again intended to change his domicile when he went to Beyrout and stayed there till his death, was on the plaintiffs. They had failed to prove the change of domicile, and therefore the testator was to be considered as a domiciled Englishman at the time of his death, and his will was unrestricted by the provision of Mohammedan law. Judgment for the defendants, the executors of the will; no order as to costs.—*Reg. v. Rev. Canon Douglas* figured for some time in the daily papers as the "Abduction by a Canon" case. One Brinniloy, an Italian organ-grinder, living at Nottingham, married an Englishwoman, who was probably a Protestant, and had eight children by her, of whom Pleasance Brinniloy, the girl said to be abducted, was one. Brinniloy had his children baptised as Roman Catholics, but allowed them to attend the parish church, and attended there himself occasionally. In '85 his wife died, and in Oct. '87 he went to Canon Douglas and stated that he wished his younger children brought up in his own faith. Thereupon, at the canon's suggestion, a will was drawn up appointing the canon guardian of the children who were minors. Brinniloy, being

unable to write, affixed his mark to this document in the presence of witnesses. In December of the same year he died, and the canon played Pleasance, one of the younger children, in a convent at Nottingham. Jemima, the elder sister, called one day at the convent and obtained permission for Pleasance to attend a brother's funeral, promising, of course, to bring her back. Having thus gained possession of the child, she refused to restore her, and she had her placed in a Protestant Orphanage. While walking out one day with the other children of this school, Pleasance was carried off by some of the inmates of the convent whence her sister had removed her, and was now detained there. A rule was obtained for a writ of *habeas corpus*, and an issue was directed to be tried at Derby, whether Canon Douglas was properly appointed testamentary guardian to Pleasance Brinniloy. The case came before the Lord Chief Justice, and the jury found for the will on all the issues raised, namely:—(1) That the deceased knew and understood the effect of the will; (2) that he intended it to operate as his last will and testament; (3) that there was no fraud; (4) that there was no undue influence; (5) that the testator was of sound mind and memory. The Divisional Court accordingly discharged the rule.

Wills, Sir Alfred, a judge of the Queen's Bench Division, was b. in 1828, and after a distinguished academical career, entered at the Middle Temple, by which Inn he was called to the bar in '51. He obtained a solid reputation as a junior. Q.C. ('72). His appointment to the bench enriched the judicature with the presence of an able lawyer and a man of the highest personal character. Mr. Justice Wills never took any great part in politics, but has published one or two little works about Alpine scenery. Appointed towards end of '86 President of the Railway Commission.

Wills, William Gorman, dramatist, b. in Kilkenny, Ireland, 1828. Educated at Trin. Coll. Dublin. He subsequently became a student at the Royal Irish Academy, and devoted himself to portrait painting. He is the author of a large number of plays and adaptations, of which the best known are "The Man o' Airie," "Charles I." (which ran for 200 nights at the Lyceum in '72-'73, and which first brought out the tragic powers of Mr. Henry Irving); "Ninon" (run for eight months at the Adelphi); "Olivia," "Claudian" (in conjunction with Mr. Wilson Barrett) at the Princess's, '85; and the adaptation of "Faust," in which Mr. Irving and Miss Terry achieved their most brilliant successes. The play, produced in Nov. '85, ran for 188 nights. The same play, on the return of Mr. Irving from America, was revived, and had another prolonged run in '87-'88.

Wimbledon Meeting. A meeting held annually under canvas at Wimbledon, under the auspices of the National Rifle Association, for the encouragement of rifle shooting among the volunteers. Various prizes are competed for; the principal event being the Queen's Prize, value £250, with the badge of the Association, won in 1888 by Lieut. Fulton, Queen's Westminsters. Owing to the necessity for seeking a new home, consequent on the notice to quit given by H.R.H. the Duke of Cambridge, on the ground of the danger yearly occasioned to the neighbourhood of Wimbledon, there has, during '88, been much discussion with respect to the future meeting-place of the N.R.A.

Various suggestions have been made from time to time advocating such places as Cannock Chase and Brighton for this purpose. In Dec. '88 the position most favoured seemed to be that of Brookwood, near Woking, Surrey.

Winchester, Rt. Rev. Edward Harold Browne, Lord Bishop of. The see was founded 635, and has an income of £6,500. In precedence bishops of this diocese rank after London. His lordship, the 84th bishop, and prelate of the Most Noble Order of the Garter (1873), is the son of Lieut.-Col. Robert Browne, J.P., M.L., of Morton House, Bucks, and was b. 1811. Educated at Eton, and Emmanuel College, Cambridge, he graduated as Wrangler (1832), took the Crosse Theological Scholarship (1833), the Tyrwhitt Hebrew Scholarship (1834), and the Norrisian prize (1835). D.D. (1864), Hon. D.C.L. of Oxford (1877), Hon. D.D. (1885). Ordained deacon (1836), priest (1837), by the Bishop of Ely, he was consecrated Lord Bishop of Ely (1864), and translated to the diocese of Winchester (1873). Formerly was Fellow and Tutor of his College (1837-40), curate of Stroud, Gloucester (1840); perpetual curate of St. James's, Exeter (1841); perpetual curate of St. Sidwell, Exeter (1841-43), Vice-Principal and Professor of Hebrew in St. David's College, Lampeter (1843-49), prebendary of St. David's (1848-50), vicar of Kenwyn and prebendary of Exeter (1849-57), Norrisian Professor of Divinity at Cambridge (1854-64), vicar of Heavitree (1857), Canon of Exeter (1857-64), Proctor in Convocation for the clergy of the diocese of Exeter (1852-64). As an author his lordship is best known by his learned "Exposition of the XXXIX. Articles" (1850: 12th edition 1882).

Winchester College, the oldest of our public schools, founded (1327) by William of Wykeham, as a nursery for the "New College" he had recently founded at Oxford. Until 1854 the scholars were nominated without examination, but in that year the old system was exchanged for open competition. About a dozen vacancies yearly occur for foundationers, who are elected by the governors. Her Majesty gives two gold and two silver medals to be competed for. Tenable at the Universities are 4 exhibitions of £50 for four years, and at New College, Oxford, 6 scholarships. **Head Master**—Rev. W. A. Fearon, D.D. **Motto**—"Manners maketh man." **Alumni**—Lloyd, Turner, and Ken (three of the "seven bishops" of 1688); Lord Selborne, Addington (premier 1801), Lord Sherbrooke, Diddin, Sidney Smith, Dr. Arnold, G. E. Buckle (q.v.), present editor of the Times.

Windsor, Military Knights. See ARMY.

Windthorst, Dr. Ludwig. The leader of the Roman Catholic party in the parliament of Prussia, b. in 1812. He studied at the Universities of Göttingen and Heidelberg. After having filled several posts in the legal profession, he became, in 1863, Minister of Justice under the Hanoverian Government, being also a member of the Hanoverian Estates of the Realm. In 1867 he entered the Prussian Parliament, and constituted himself the champion of the Catholic Church of Germany. At the present time he occupies a prominent position in the Reichstag.

Windward Islands. The southern section of the Lesser Antilles. Politically the name is applied to the British Colony, whose constitution was remodelled in 1885, and now consists

of the islands of Grenada and the Grenadines, St. Vincent, St. Lucia, and Tobago. Area 635 sq. m., pop. 148,735. These islands previously formed separate colonies, and possessed other forms of government. They now together form one Crown colony, with a Governor, Executive and Legislative Councils, wholly un elective. Each island has a subordinate Administrator and staff. Before the new arrangement the Governor of Barbadoes was vested with supreme authority over the Windward Islands; but now that connection has been severed. St. George, in Grenada, is the capital, and seat of government. See under the several islands. Consult "Her Majesty's Colonies," Layard's "Through the West Indies," etc.

Winnipeg. The capital of Manitoba (q.v.), pop. 30,000. At the junction of Red and Assiniboine rivers, some miles above their outflow into Lake Winnipeg. Mere hamlet 71, pop. 240; now a fine city.

"Winter, John Strange" (Mrs. Henrietta E. V. Stannard), author of "Cavalry Life," "Boots' Baby" and many other popular novels, is the only daughter of the late Rev. Henry Vaughan Palmer, and was born at York in 1856. Was recently eulogised by Mr. Ruskin as "the author to whom we owe the most finished and faithful rendering ever yet given of the character of the British soldier." Most of her works appear in one shilling volumes, all of which have had enormous sales both in England and America. A dramatic version of "Boots' Baby" was played for four months during last summer at the Globe Theatre with marked success. Was married in '84 to Mr. Arthur Stannard, a civil engineer.

Witnesses' Expenses. A witness may refuse to give evidence unless his expenses are previously paid. The judge at the Westminster County Court (March) fined a man £5 who declined to take the oath until he received his expenses; but the fine was subsequently remitted, on the discovery that the witness was right in his contention.

Wolff, Sir Henry Drummond, P.C., K.C.B., son of the celebrated traveller Dr. Samuel Wolff, was b. at Malta 1830. Educated at Rugby. Entered the Foreign Office at the age of 17. Was made attaché to the British Legation at Florence 1852. Subsequently transferred to the Colonial Office. Sent to the Ionian Islands as secretary to the Lord High Commissioner, an appointment which he held until their cession to Greece in '62 (K.C.M.G.). He first entered Parliament in 1874, as member for Christchurch, and in 1880 was elected member for Portsmouth, for which borough he continued to sit up to the election of '85. On his entry into parliament he showed an early capacity for dealing with foreign affairs, and in particular he gave valuable aid to the administration of Lord Beaconsfield in all matters relating to its Eastern policy, which led to his appointment, in 1875, as British High Commissioner for the delimitation and organisation of "Eastern Roumelia" (K.C.B.). In parliament he became a member of the "Fourth Party," and took a prominent and authoritative part in all debates on the Eastern Question, including Egypt. His acquaintance with Egyptian and Turkish affairs led to his being sent (1883) by the Salisbury administration to Constantinople, as Plenipotentiary for the settlement of the affairs of

Egypt, in accordance with the Ottoman Government. Appointed as **Ambassador to Tcheran** Jan. '88, where he has already achieved success.

Wolseley, General, K.P., G.C.B., G.C.M.G., 1st Visct. (creat. 1885); b. 1833 in county Dublin. Entered the army in '52. Ensign Wolseley served with the 80th Regiment in the latter part of the **second Burmese war**. He was dangerously wounded at the head of a storming party in the last and most critical action of the war. Lieutenant W. served in the **Crimes** from December '54 with the 90th Light Infantry, and as assistant engineer, and was twice wounded. Captain W. served in **India** with the 90th, and on the staff in the campaigns of '57-59, and received a brevet majority. Lieut.-Col. W. served in the **China** war of '60. Col. W. served in **Canada** from '62-70, and commanded the **Red River Expedition** in '70. Major-Gen. Sir G. W., K.C.M.G., commanded the troops in the **Ashantee War** in '73-74. Lieut.-Gen. Sir G. W. also held the command of the troops in the **South African War** in '79. As General he commanded the army in the **Egyptian War** of '82, and was raised to the peerage, and took the command of the troops in the **Soudan campaigns** of '84-85, and was made a Viscount and K.P. Lord W. received £25,000 for services in Ashantee, and £20,000 for Egypt. He has held many staff appointments, and has been **High Commissioner to Natal** and to **Cyprus**. He was appointed **Adjutant-General of the Army** in '82, and has held that appointment, with two intervals of active service, ever since. He has received a large number of medals and orders. Lord W. contributes occasionally to periodical literature; his "**Soldier's Pocket-book**" is well known, and several editions have appeared. He made several speeches during the past year in advocacy of **army reform**, and was generally regarded as having inspired a sensational article in the *Daily Telegraph* on the alleged inadequacy of the national defences. A speech delivered by him at a public dinner in denunciation of the general administration of the army provoked a severe rebuke by the Prime Minister in the **House of Lords**. Lord Salisbury, however, subsequently declared himself satisfied with Lord Wolseley's explanation. He was afterwards appointed **Ranger of Greenwich Park**, where he now resides.

Women's Rights. See ed. '86.

Wood, F. P. See **CYCLING**.

Wood, Major-Gen. Sir Henry Evelyn, V.C., G.C.M.G., K.C.B., b. 1838. Was in the **Royal Navy** 1852-55. Served in the **Crimea**, including the battle of Inkerman, and was severely wounded in the assault on the Redan. Joined the army in September '55, and was transferred successively to several regiments. Lieut. W. was engaged in many actions in the **Indian Mutiny** campaigns of 1858-9, and gained the **Victoria Cross**. He was brigade-major and afterwards commanded 1st Beaton's Horse. Lieut.-Col. Wood raised and commanded a native regiment in the **Ashantee War**, in which he was wounded. Col. W. served in the **Kafir** and **Zulu** campaigns of '78-81, and commanded the troops in several actions. Sir F. W. served in the **Transvaal** campaign of '81, and succeeded to the command on the death of Sir George

Colley. Maj.-Gen. Sir E. W. commanded a brigade in the **Egyptian War** of '82. He served also in the **Soudan** campaign of '84-85. Sir E. W. has received thirteen medals and orders in recognition of his services. In Dec. '88 Sir E. W. was appointed to the command of the troops at Aldershot.

Woolner, Thomas, R.A., b. 1825, showed an early talent for sculpture, and was placed in the studio of William Behnes. Exhibited remarkable skill in producing models of a poetical and historical character. His "**Death of Roderick**" (1843) attracted much attention, and gave promise of his subsequent eminent career. Mr. Woolner, who favoured the ideas of the "pre-Raphaelite" school (*q.v.*), visited Australia in 1854. Amongst his latest works are statues of Captain Cook for Sydney harbour, of Sir Stamford Raffles for Singapore, and of Bishop Fraser of Manchester, and the monument to Sir Edwin Landseer in St. Paul's Cathedral. Elected R.A. (1874); he was for some years **Professor of Sculpture in the Royal Academy**.

Worcester, Right Rev. Henry Philpott, D.D., 102nd Bishop of (founded 679); b. at Chichester 1807. Educated at St. Catharine's Coll., Cambridge (senior wrangler and Smith's prizeman); elected a Fellow, and (1845) Master of his College and Canon Residentiary of Norwich; ordained deacon (1831), priest (1833); was subsequently chaplain to the late Prince Consort; consecrated to this see (1860).

Working Men's Clubs and Institutes. See ed. '88.

"World, The" (weekly *6d.*). This well-known journal "for men and women" has been the forerunner of many society papers. It has always made a special feature of its interviews with celebrities "at home," among the earliest notabilities thus interviewed being H.R.H. the Prince of Wales. More recently the popular Princess Mary (Duchess of Teck) was the subject of an interesting interview, which took place early in '88. Editor, **Mr. E. H. Yates** (*q.v.*). Office, 1, York Street, Covent Garden.

Wrangler. The title given to some thirty of the most successful competitors in the highest mathematical examination at Cambridge, answering to the first class in the final mathematical schools at Oxford; the men of the second class being styled senior optimes, and the third class junior optimes. The term wrangler (verb "to wrangle," used in its older sense, "to argue") was adopted from the fact that the candidate used at one time to undergo *viva-voce* examination only. The student who heads the list is called "**Senior Wrangler**," the others being placed second, third, etc., according to merit. The examination, formerly held in January only, takes place twice in the year, the Tripos list being also issued in June.

Wreck Commissioner, The, assisted by two or more assessors, of nautical, engineering, or other special skill or knowledge, chosen by the Home Office from a list of assessors appointed by the Secretary of State, holds a formal investigation, at the request of the Board, into the loss or abandonment of any ship, or into any shipping casualty, and may suspend the certificates of masters and mates. The Wreck Commissioner is also Judge of all the Courts of Survey. These courts hear appeals against orders of the Board of Trade in cases where ships have been detained by

their officers for being unseaworthy or overladen. **Chief Clerk**, also **Registrar** of the Court of Survey for London, W. E. S. Thomson (£600). Owing to the death of the Wreck Commissioner (Mr. Rothery) the appointment is vacant, and there is some doubt as to whether the office will not be reorganised altogether.

Wreck Statistics. See **LOSS OF LIFE AT SEA**.

Writs. Should a seat become vacant during a session, from any one of the causes mentioned under the head of **HOUSE OF COMMONS**, a new writ is moved for at the commencement of an ordinary sitting, generally by one of the whips of the party to which the late member belonged. Provision is also made for the issue of writs during the recess without the intervention of the House, it being enacted that the Speaker may, on the production of a certificate signed by two members that a member has died, or accepted an office held direct from the Crown, or has been called to the House of Lords, or that the seat has become vacant by the bankruptcy of a member, order a writ to be issued for a fresh election to fill the vacancy

thus caused. But a writ may not be issued during the recess on the acceptance of the Chiltern Hundreds or of the like offices. The Lunacy (**Vacating of Seats**) Act, 1886, provides a procedure by which the seat of any member who may have been received into a lunatic asylum shall be declared vacant.

Wyndham, Charles, actor, made his first appearance in a small part at New York in 1861. Shortly afterwards he served as surgeon in the Confederate army during the civil war. Coming to this country, he began his theatrical career on the London stage in 1866, and has always maintained a high reputation as a leading comedian. For many years Mr. Wyndham has been lessee of the **Criterion Theatre**. In Feb. 37 Mr. W. was the recipient of a massive **loving cup** from the **Prince of Wales** as a souvenir of a performance of "**David Garrick**" at **Sandringham**, Jan. 87. Early last year Mr. W., in company with Miss Mary Moore, performed in the above named play, in German, at the **Residenz Theatre, Berlin**, and won great applause from the German critics. On his return he played in the same piece at his own theatre.

Y

Yachting. Of the thirty-six leading Yacht Clubs in the United Kingdom the oldest is the **Cornwall**, which was established at Falmouth as far back as 1720, although the date of the Admiralty warrant is the same as that of the **Northern**, stationed at **Rothsay**. The **Prince of Wales** is commodore of the **Royal Yacht Squadron** (Coves), the **Albert** (Southsea), the **Alfred** (Kingstown), and the **Thames**. Yachts of fifteen tons and upwards, **Government measure**, must be registered at the Custom House in London, or at one of the ports, and owners are not allowed to fly the colours of the club to which they belong without first having obtained the proper Admiralty warrants. The sailing rules, scale of time allowances, and measurements, are guided by the code arranged by the **Yacht Racing Association** in 1880, and regattas are held at various points of the coast during the summer months, whilst in the month of August the waters of the Solent are thickly studded with yachts of varying rig, tonnage, and nationality. The season of '88 proved comparatively tame after the eventful contests of the preceding year, but the customary regattas furnished some enjoyable racing. In two or three instances accidents, unfortunately attended with loss of life, marred the enjoyment of yachtsmen; and two of the crew of the yawl **Iona** were drowned through collision with the steamer **Indian Prince**, off **Prawle Point**, on the evening of Sept. 15th. Much interest was shown in the racing qualities of the cutter **Yarana**, designed by Mr. G. L. Watson, for Mr. P. A. Ralli, and built by Messrs. D. and W. Henderson, of Glasgow, this being the first serious attempt to fit a yacht into the new rating rule. Her strong points in sailing were found to be in light to moderate breezes, and during the season she

gained several winning flags. The **Irex** almost maintained her prestige, Mr. Jameson's cutter securing some of the most coveted prizes of the year. A famous schooner is the **Alarm**, 24 tons, which, in the 30 years it was before the public, from 1830 to 1869, won 20 out of 37 matches, the value of the prizes which she secured amounting to over £2,000. She was broken up in '88. Her original owner was Mr. Joseph Weld, of **Lulworth Castle**, who was one of the fifty gentlemen who met at the **Thatched House Tavern, St. James's**, in 1815, to establish "**The Yacht Club**," which was partly formed at **Cowes** three years earlier, and which is now known as the **Royal Yacht Squadron**. Another celebrated yacht, the **Cambria**, was in the early part of the year sold as a trader for the **West Coast of Africa**, and of the many victories gained by this schooner may be mentioned those over the American yacht **Dauntless** in the **Atlantic race**, and **Sappho** in the **International meeting** of '68 on the Solent. The **Cambria** was also the first yacht to pass through the **Suez Canal**. At a meeting of the Council of the **Yacht Racing Association**, held on July 11th, **Rule VIII.** was expunged, and 27 clubs voted in favour of admitting centre-boards without any restriction whatever. According to "**Lloyd's Yacht Register**," the number of yachts owned in **England** at the close of '87 was 2,867, with an aggregate tonnage of 130,912; and the number owned in the **United States** is by the same authority estimated at about 1,100.

Yates, Edmund Hodgson, editor and proprietor of **The World**, was b. 1831. After completing his education, he obtained an appointment in the Post Office, from which he retired in '72. Mr. Yates early distinguished himself. He was "**The Flaneur**" of the **Morning Star**, and subsequently dramatic critic to the **Daily**

News, and London correspondent of the *New York Herald*. Mr. Yates has also held various editorships, including *Temple Bar*, *Tinsley's Magazine*, and *Time*. He is the author of many novels, of which the most popular, perhaps, are, "Broken to Harness," "Running the Gauntlet," "Kissing the Rod," "Black Sheep," "Land at Last."

Yellow Books. See BLUE BOOKS.

Yeomen of the Guard. A bodyguard to the sovereign, first instituted by Henry VII., and the oldest corps in H.M. Service. Its headquarters are at the Tower; and the men, who wear the picturesque dress of Tudor days, are better known as "beef-eaters" (*buffetiers*). The captain is always a peer and a privy councillor. See MINISTRY.

"Ye Sette of Odd Volumes." See ed. '87.

Yeomanry, Old English. See LAND QUESTION, ed. '88.

York August Meeting. See TURF.

York, Rt. Hon. and Most Rev. William Thomson, F.R.S., Lord Archbishop of, and Metropolitan, and one of the Lords of the Privy Council. He see dates from 625, and has an income of £10,000. His Grace, the 86th Arch-

bishop in succession, was b. at Whitehaven 1819, was educated at Shrewsbury and Queen's College, Oxford, where he entered as a foundation scholar, and graduated B.A. (1840), D.D. (1856). Ordained deacon (1842) by the Bishop of Oxford, and priest (1843) by the Bishop of Winchester. Consecrated **Lord Bishop of Gloucester and Bristol** (Dec. 15th, 1861), translated to York (Feb. 1863). His Grace became successively Fellow, Tutor, Dean, and Bursar of Queen's College (1847-55), Provost of Queen's College (1855-62), was Hampton Lecturer (1853), Select University Preacher (1856), Preacher at Lincoln's Inn (1858); Chaplain-in-ordinary to the Queen (1860), and rector of All Saints', Marylebone (1855). As an author and editor, his Grace is well known. He is the author of several sermons, addresses, and pamphlets published at various times, and has written more important works, among which may be mentioned, "The Atoning Work of Christ," **Hampton Lectures** (1853); "An Outline of the Necessary Laws of Thought" (1849).

Yorkshire Anglers' Association. See ANGLING.

Young England Party. See ed. '88.

Younghusband, Lieut. See GEOGRAPHICAL PROGRESS.

Z

Zambesi and Shiré Rivers. The Zambesi is the largest of the African rivers flowing into the Indian Ocean. It rises in the Barot-se country, running south and then east, with a course of 1,500 miles. Its banks were the scene of Livingstone's earlier wanderings, and he discovered the famous **Victoria Falls**, more sublime than Niagara. Native traders descend to the Portuguese settlements on the lower river. South of the Zambesi lie the countries of **Monomotapa**, **Mashona**, and **Manica**, where are many ancient ruins, testifying to the presence of a civilised people. The most recent explorers seem to have found proof that these were Phœnician. Gold is said to be plentiful. The Shiré drains Nyassa and Shirwa lakes, falling into the Zambesi about 90 miles from the sea. By the Zambesi, the Shiré, and Lake Nyassa English enterprise is finding its way into Central Africa. Though navigation is broken by falls, there are steamers on the Shiré and Nyassa, and an increasing English settlement, whose trade already amounts to £200,000 per annum. But the traveller Hinkelmann was killed by natives near Moepa on the Shiré in 1886. These rivers form a natural waterway and means of access to vast populous regions, rich in gold, iron, ivory, and many native products. See NYASSA, BLANTYRE, MOZAMBIQUE. Consult a paper by H. E. O'Neill, in "Proceedings R. G. S.," July 1885.

Zanzibar. A territory on the east coast of Africa. Consists of the island of Zanzibar, 55 by 25 miles, area 625 sq. m.; pop. 200,000.

the isles of Pemba and Mafia, and some points on the **Suaheli coast**. In 1886-7 a Joint Commission representing Great Britain, Germany, and France, fixed the boundaries of the Seyyid's dominions on the mainland, with reference to those of native chiefs and those acquired by Germany. To the last Power was assigned the country inland from the Rovuma river to **Kilimanjaro**, which is administered by the **German East African Co. (g.v.)**, together with Vitu and Manda Bay and Port Durnford. Great Britain acquired a protectorate over the country from Kilimanjaro north to Tana river, with port of Mombasa. Zanzibar is lict with a strip of coast extending ten miles inland, and from Cape Delgado to Kipini and the Ozi river, north of which it has only the isolated points of Lamoo, Kismayu, Brava, Merke, Mukdusha, and Warshikh. The town of Zanzibar has a population of 100,000, and is the emporium of a large trade. The islands are excessively fertile, producing cloves, rice, sugar-cane, manioc, millet, cocoanut, oranges, etc. Of the rivers descending to the Suaheli coast, the Juba, Kingani, Wami, Rufiji, and Rovuma, are more or less navigable, the last two for many miles up. The whole coast is said to be capable of producing unlimited quantities of such valuable commodities as cloves, sugar, cocoa, coffee, nutmegs, cinnamon, Guinea pepper, sesame, indigo, cotton, tobacco, the oil-palm, etc. Cattle thrive well in some districts. Zanzibar was conquered in 1784 by the Imam of Muscat. It is now independent, and is ruled by a sultan or Seyyid, **Bargash ben Said**, son of

the Imam of Muscat, who succeeded in 1870. Caravans start to the interior and the Great Lakes from Mombasa, Pangani, Saadani, Bagamoyo, Dar-es-Salam (whence a road is being cut to Nyassa), and Quilwa. They carry arms, cotton, beads, and brass-wire, returning with gum copal, cloves, ivory, wax, indiarubber, cocoanut oil, oil-seeds, etc. The population of Zanzibar island consists of Arabs, intermixed with various East African races, Hindu and Malagasy traders, and numerous foreigners. Chief are the Arab land-holders and slave-employers. The *slave-trade* (*q.v.*), nominally suppressed by treaty with the Seyyid, is still carried on secretly. There is an army of some 1,400 men. Industries are chiefly the extraction of cocoanut oil, and, now, sugar-boiling. The Seyyid's revenue is £220,000. Imports in 1880 £709,900; exports £870,350; imports in 1883 £1,220,000; exports £800,000. The trade is with Great Britain, Germany, America, France, India, and Arabia. Chief imports, raw and bleached cotton and manufactured goods; chief exports, ivory, caoutchouc, skins, sesame seed, cloves, and orchilla. The commercial importance of Zanzibar has been recently increasing, and there is no doubt will now tend to progress vigorously. Trouble between Zanzibar and Portugal occurred early in '87, with reference to the possession of territory at Cape Delgado and Tungi Bay. The dispute was peaceably terminated through the intervention of Great Britain and Germany. During '88 the death of the Sultan occurred (March) and was succeeded by his son, the Sultan Seyyid Kalijah. Difficulties arose between the Germans and some of the other Powers, fighting taking place. In consequence of the revolt of the coast-towns against the German Company, blockade of the Zanzibar coast to suppress slavery, in which England, Germany, Italy, and Portugal joined, is at present (Dec. 6th) in progress. Consult report of Consul Kirk, in "Reports of H.M.'s Consuls," Part xiii., '82; Keith Johnston's "Africa"; H. Johnston's "Kihima-Njaro"; Burton's "Zanzibar"; Thomson's and Stanley's various works, etc. See DIPLOMACY.

Zebehr Pasha, at one time one of the greatest leaders, particularly of slaves, in the Soudan. He obtained much authority there, and acting under the Government at Cairo suppressed several revolts in Darfour and adjoining provinces. During Gordon's first administration Z.'s son rose in revolt, and being defeated by the Egyptian troops was afterwards shot, along with several of his officers. After this there was always supposed to be a blood-feud between Gordon and Z., who was ultimately, about '73, sent to Cairo, where he remained in dignified exile. After Gordon reached Khartoum in the beginning of '83, he pressed with great vehemence on the English Government to send Z. to Khartoum as his successor, and with instructions neither to go to Darfour nor the Bahr-Gazelle provinces, to keep the peace with Abyssinia, and to pursue no one who had been engaged in suppressing his son's revolt. Gordon had a high opinion of Z.'s courage, administrative ability, and personal influence; but the English Government declined to follow his advice, chiefly because they feared that Z. would revive the slave trade, turn traitor, and probably kill Gordon instead of assisting him. Some time after the fall of Khartoum, Z. was arrested at Cairo and charged with being engaged in a conspiracy against the Khurri, and was

removed to Gibraltar; but was released some months ago. A letter appeared in the *Times* (Dec. 8) from Sir John Aclay, eulogising Zebehr and advocating the employment of his services.

Zeilah. A town and port on the north Somali coast of the Gulf of Aden. It forms part of the British Protectorate established in 1885 on this coast. It is a market for the exchange of produce from the interior with European goods. In the seventh century, and for long after, Zeilah was the capital of the Arab empire of the same name. It was in Egyptian hands before England took it. See BERBERA, ADEN, and SOMALILAND.

Zhob Valley Expedition. See ed. '86.

Zola, Emile. Born April and 2nd, 1840, in Paris. Educated at the Lycée St. Louis, in Paris, he began life at Messrs. Hachette's, the distinguished French publishing firm. He devoted much of his leisure to literary work, and soon appeared as a novelist in "Les Mystères de Marseille," and "Thérèse Raquin," exhibiting his remarkable power of critical analysis of human nature. "*L'Assommoir*," perhaps his most popular work, has gone through fifty editions. On the stage Zola has not had much success, but a dramatised version of "*L'Assommoir*" ran for two hundred nights, and an English adaptation, "*Drunk*," had a great success. He is also the author of "*Nana*," "*Pot Bouille*," and many other works. As a critic, Zola has contributed much to the *Vollaine* and the *Figaro*. He is a writer of remarkable power and industry. His last novel is "*Le Toréador*." The book has been prohibited in Austria and England (Oct. '88) on account of its alleged indecency. M. Zola was appointed a Knight of the Legion of Honour last year.

Zollverein. See ed. '88.

Zorrilla, Leon Manuel Ruiz, Spanish Republican leader, was b. at Burgo de Osma, in Old Castille, in 1834. Practised law in Madrid, and entered the Cortes in 1858 as a Progressist. For participation in the June rising of 1866 he was exiled, but soon returned to Spain, and became Minister of Public Instruction and Commerce under the provisional government of 1868. In all, Señor Zorrilla has been three times a Minister of State. He was twice Prime Minister, and once during the reign of Amadeo, President of the Cortes. Among the more notable of Señor Zorrilla's political acts was the abolition of slavery in Porto Rico; and he also assisted in removing the differential duties upon English goods, in granting freedom of worship, and in instituting civil marriage. After the resignation of Amadeo, Señor Zorrilla left Spain, and has since lived abroad, chiefly in London and Paris, whence he has carried on an active Republican propaganda.

Zululand. A country in South Africa, north-east of Natal, now a British possession. Area about 10,000 sq. m.; pop. probably 200,000. Is well watered and capable of cultivation, with 140 miles of seaboard. St. Lucia Bay, the best harbour, proclaimed British (1885), is full of shoals, and very unhealthy. The coast is damp and hot, but suitable for sugar and other semi-tropical products. The interior is rugged and intersected with rapid rivers, but being high, is cooler, drier, and more healthy than the coast. At the beginning of

this century, Chaka, a Zulu chief, organised his people into an army on a European plan. He became master of the whole country between the Limpopo and Cape Colony. In 1838 his brother Dingaan succeeded him. Sundry of Chaka's generals became independent, forming kingdoms far to the north and west; and under Panda, the successor of Dingaan, the Zulu kingdom became reduced to the territory now called Zululand. In 1873 Panda was succeeded by Cetewayo (pron. Ketchwy'o), who reorganised the Zulu regiments. Cetewayo became embroiled with the Natal government, and in 1879 British troops entered Zululand in three columns. The centre, under Lord Chelmsford, suffered a terrible reverse at Isandhlwana, where 1,000 British troops were slain. In spite of the heroic defence of Rorke's Drift, it had to retreat. On the south Col. Pearson defeated a Zulu force, but was beleaguered in Etchowe for some months. On the north Sir Evelyn Wood suffered some reverses, but defeated the Zulus at Kambula Kop. Eventually the Zulus were utterly overthrown at Gingihlova and Ulundi, and Cetewayo made prisoner. Zululand was then partitioned into thirteen chieftainships; but disorder soon ensued. In 1882 Cetewayo was restored to a part of the country, with a Native Reserve, under a British Resident, between him and Natal. But he was soon overthrown by the chief Usibepu, and obliged to fly to the Reserve, where he died. In 1885-6 many Boers trekked into Zululand from the Transvaal, seizing land and "squeezing" out the Zulus. The influx of Zulu refugees into the Reserve and Natal,

and the formation of a new Boer Republic, in defiance of treaties and native rights, caused great excitement in Natal. The British Government eventually deputed Sir Arthur Havelock, Governor of Natal, to negotiate with the Boer leaders. He allowed their claim to the part of Zululand they had chiefly settled, and recognised their republic, while forbidding further encroachment. The "New Republic," as the Boers have named it, is now regularly constituted. It occupies the western part of Zululand, and does not reach the coast. Its area is 1,380 sq. m.; capital Vryheid. In 1887 the British Government, being strongly pressed, thereto both at home and in South Africa, formally annexed the whole of Zululand except the New Republic. The area of this acquisition is 8,220 sq. m. It is to be governed as a separate Crown colony, and is at present administered by a Resident Commissioner under the Governor of Natal. Late in 1887 the Zulu chiefs Dimizulu and Undabuko were cited to appear before the Governor, in consequence of their having sought Boer aid against the British. During the year '88 a rebellion of Dinizulu, arising out of cattle thefts and the attempt to arrest the offenders with too weak a force, was magnified into a British defeat, in spite of subsequent successes by British troops and auxiliaries. After protracted operations Dinizulu was conquered, and was sent under escort (Nov.) to Etchowe, where, it was understood, he would be placed on his trial. Etchowe appears to be the capital of the new British possession. See NATAL, TRANSVAAL, SWAZILAND, and AMATONGALANI.

OCCURRENCES DURING PRINTING.

Agriculture. (Dec. 10) The annual show of the Smithfield Club was opened, and appeared to not only equal those in previous years, but even surpass them. The exhibits from the Queen's farms, and also from those of H.R.H. the Prince of Wales, again secured a large measure of success. Her Majesty's list of prizes included two 1st, five 2nd, and three 3rd prizes—only three of the animals sent for exhibition being unsuccessful.

Aquatics. (Dec. 11) Searle proved the winner in the four days' International Sculling contest on the Brisbane river.

Austria-Hungary. (Dec. 10) An exchange of telegrams took place between the German Emperor and the Emperor of Austria, on the occasion of the 40th anniversary of the accession of the latter.

Births.

(Dec. 3) **Carmarthen**, the Marchioness of, *d.*
(Dec. 6) **Flavel**, Mrs. S., the Mayoress of Leamington, *s.*

(Dec. 6) **Tancock**, w. of the Rev. C. C., headmaster of Rossall School, *d.*

Bolivia. (Dec. 10) The Antofagasta railway, 400 m. in length, is to be proceeded with. It will bring Bolivia into communication with Europe.

Bright, Mr. (Dec. 11) The bulletin issued in the evening was to the following effect—"Mr. Bright has had a fairly good day, and has fully maintained the strength he had gained this morning, although the state of the lungs is not quite so good as yesterday."

Bulgaria. (Dec. 5) The Sobrane has agreed to the proposal of the War Minister to raise the effective strength of the Bulgarian army in time of peace from 22,400 men to 27,400.

Cricket (Dec. 10) The County Cricket Council's annual meeting took place at Lord's, and was attended by many delegates from the various counties. The Local Government Act affects cricket as well as more serious subjects; and Lord Harris therefore moved the following resolution (which was carried unanimously)—"That for purposes of cricket, county boundaries are not affected by the Local Government Act."—The following are the dates of the five leading matches for '89:—July 1, 2, and 3, Oxford *v.* Cambridge, at Lord's; July 4, 5, and 6, Gentlemen *v.* Players, at Kennington Oval; July 8, 9, and 10, Gentlemen *v.* Players, at Lord's; July 12 and 13, Eton *v.* Harrow, at Lord's; and July 11, 12, and 13, North *v.* South, at Manchester.

Elections. (Dec. 11) The two candidates for the seat at Maidstone—Mr. Cornwallis (C.) and Mr. John Barker (L.)—formerly held by the late Major Ross, are busily engaged in the contest, which promises to be a close one.—It was announced that Lord Brooke had consented to champion the Conservative cause at Colchester,

while Sir W. B. Gurdon in all probability would be the Liberal candidate.

France. (Dec. 4) M. Numa Gilly was suspended by M. Floquet from the mayoralty of Nîmes, in consequence of the publication of a book entitled "Mcs Dossiers." (Dec. 9) Capt. Driant, son-in-law of General Boulanger, was ordered 30 days' arrest by the Minister of War for publishing "La Guerre de Demain." (Dec. 10) The French share of the new Russian loan was subscribed several times over in Paris.

Germany. (Dec. 5) Prince Bismarck sent a letter of thanks to the University of Giessen, which recently conferred the degree of D.D. on him. (Dec. 8) The Emperor, it was stated, had abandoned proceedings against the newspaper which had published what purported to be the Emperor Frederick's diary. (Dec. 9) White Book on East African affairs presented to Reichstag. (Dec. 10) The preliminary examination of Prof. Geffcken was concluded, and it was understood that the Professor would soon appear on trial before the Supreme Court of the Empire. It was announced that Prince Alexander of Hesse was lying at the point of death.

India. (Dec. 10) Lord Lansdowne formally assumed charge of the government of India. Lord Dufferin, the late Viceroy, received ovations on his departure from Calcutta. An important conference of delegates from Madras, the N.W. Provinces and Bengal, is expected to assemble shortly to discuss the relations of provincial to imperial finance.

Italy. (Dec. 10) The new penal code, as well as other laws recently passed by the Italian Government, are considered so unusual as almost to warrant the departure of the Pope from Rome.

Marriages.

(Dec. 8) **Donkin**, Dr.—Auguste Margarethe, widow of the late Prof. E. H. Palmer, of Cambridge.

Obituary.

(Dec. 3) **Shestakoff**, Admiral, Russian Minister of Marine, 68.

(Dec. 7) **Wake**, Richard F. R., artist on the *Graphic* staff, shot while sketching at Suakin, 23.

(Dec. 8) **Angyalics**, Monsignor, the Patriarch of Carlovitz, 72.

(Dec. 8) **Butterworth**, Joseph, of the Stock Exchange, 68.

(Dec. 10) **Churchill**, Lady Alan Spencer, at Twickenham.

(Dec. 10) **Galliera**, The Duchess of, a lady famous for her great wealth and benevolence. The total sum of her various gifts is said to be not far short of 90,000,000 fr., which she bestowed in both Italy and France on various public objects: 72.

Obituaries—continued.

(Dec. 10) **Paley**, Prof., grandson of the author of "Evidences of Christianity." Graduated M.A. (42). Joined the Roman Catholic Church (46). Classical Examiner to the University of London.

(Dec. 11) **Rylands**, John, head of the firm of Rylands and Sons (Limited), at Longford Hall, Manchester. The company has given employment for many years to 12,000 persons. Mr. R. was reputed to be a millionaire. 88.

Panama Canal. (Dec. 10) The Commission held another meeting in Paris, and came to the decision that measures should be taken which would enable the Company to postpone some of its liabilities until the time when the Canal should be *un fait accompli*.

Parliamentary. (Dec. 10) The House has been engaged during the last few days in passing the Estimates in Committee of Supply; but, in consequence of the disposition to discuss many questions arising from the Irish policy of the Government, progress has been slow. (Dec. 11) The Irish Land Purchase Bill was passed in the House of Lords, the Commons' amendment to the Lords' amendment being agreed to. In the House of Commons, the attention of the House was mainly directed to the consideration of the Scotch Civil Service Estimates and the Irish Estimates.

Parnell Commission. (Dec. 11) The witnesses examined were Mr. George Carter, owner of an estate in co. Mayo; and Miss Lucy A. Thompson, who stated that she had been boycotted ever since the establishment of the League.

Patti, Mme. (Dec. 11) A great reception was accorded to the *prima donna*, fresh from her triumphs in Paris, at the Albert Hall, when she sang with great effect "Ave Maria," and other selections.

Persia. (Dec. 9) The report was circulated that a note, indicating a threatening attitude, had been addressed to Persia by the Russian Government. (Dec. 10) The Persian authorities have gone so far as to prohibit the sale of corn to the Russians, and this action seems to have fostered in the minds of the latter a strong anti-Persian feeling.

Pope, The. (Dec. 8) The Pontifical Secretary of State has interrogated the various Papal Nuncios abroad as to the Pope's proposal to hold a European Congress relative to the abolition of slavery.

Russia. (Dec. 8) It was reported that a group of French financiers were about to found a Russian mining company, with a capital of

70,000,000 fr., in Russian Poland, the project being patronised by the Russian Government. (Dec. 11) The Minister of War, it is reported, demands that the artillery in Poland shall be increased and placed on a war footing.

Salisbury, Lord. (Dec. 11) In the House of Lords, Lord S. delivered a speech dealing with England's relations to Persia, expressing the desire that the new measures undertaken, with regard to that country, might be beneficial not only to the people of England, but "above all things beneficial to the Persian people themselves."

Servia. (Dec. 9) The returns of the rural elections show that out of 540 seats the Progressists have only 60, the Liberals about 150, and the Radicals the rest. (Dec. 11) The abdication of King Milan was, in St. Petersburg, considered imminent, unless the interference of Austria takes place. Should such an event occur, Queen Nathalie might return to Servia.

Spain. (Dec. 10) The new Ministry was announced to be constituted as follows:—Premier, Señor Sagasta; Minister for Foreign Affairs, The Marquis de la Vega de Armijo; Minister of Finance, Señor Venancio Gonzalez; Minister of the Interior, Señor Capdepon; Minister of Justice, Señor Canalejas; Minister of Commerce, Count Xiquena; Minister of War, Gen. Chinchilla; Minister of Marine, Admiral Arias; Minister of the Colonies, Señor Becerra.

Suakin. (Dec. 10) A telegram from Gen. Grenfell announces that Osman Digna is stated to be at Handoub, with a force of 2,000 men. (Dec. 11) Great activity is still being displayed by the enemy, and troops in Cyprus and at Malta are now placed at Gen. Dormer's disposal.

United States. (Dec. 6) Completed returns of the popular vote registered in the recent presidential election show that Mr. Cleveland received 5,526,503 votes, and General Harrison 5,428,299. Therefore Mr. Cleveland, though beaten owing to the present electoral system, in reality received a majority of 98,204 votes.

Zanzibar. (Dec. 10) It was reported that Bagamoyo and Dar-es-Salaam were held by means of military blockhouses. The Indians hope that the Germans will confine their warlike operations to these places. A meeting was held by the British Indians for the purpose of formulating means for the release of those who are in the hands of the Arabs at Pangani and other places. (Dec. 11) It was announced in the House of Commons that Bagamoyo, which is destroyed, was by no means the most important post on the East Coast of Africa.

CASSELL & COMPANY'S MAGAZINES.

The SPECTATOR says :—" So much trouble is taken with these periodicals, so much ability is at the disposal of the conductors, that it is difficult to bestow the praise which is really deserved without seeming extravagant."

CURRENT ACCOUNTS are kept in conformity with the practice of London Bankers. In cases where a remunerative Balance is not maintained, a Charge for Commission is made. Parties keeping Current Accounts have the facility of having approved Bills discounted—of obtaining Loans upon negotiable Securities—of depositing Bills, Coupons, etc., for collection—and of lodging with the Bank Bonds and other valuable property in Fireproof Strong-Rooms for safe custody.

DEPOSIT ACCOUNTS—Money, in amounts of £10 and upwards, is received from the public generally, subject to seven days' notice of withdrawal, and Interest is allowed thereon at the current rate of the day; the Bank notifies any change in the rate of Interest by Advertisement in one or more of the leading London Newspapers. If the money be withdrawn within a fortnight, no Interest is allowed. Persons having Current Accounts can transfer any portion of their Credit Balance to Deposit Account.

THE AGENCY OF COUNTRY AND FOREIGN BANKS, whether Joint Stock or Private, is undertaken by the Bank. LETTERS OF CREDIT, payable at any of the chief Commercial Towns and Cities of the World, are granted; also Mercantile and Marginal Credits. CIRCULAR NOTES are issued by the Bank, addressed to all, and payable at any of the places on the Continent where the Bank has an appointed Correspondent. DIVIDENDS, etc., on Government and other Stocks, Annuities, Pensions, etc., are received for customers of the Bank without charge; the Purchase and Sale of Stocks, Shares, and Securities are also undertaken, and every description of Banking business is transacted. Officers and Clerks of the Bank are pledged not to disclose the transactions of any of its Customers.

DIRECTORS—Richard James Ashton, Esq.; Otto August Benecke, Esq.; John Nutt Bullen, Esq.; Bonamy Dobree, Esq.; Frederick J. Edlmann, Esq.; Augustus Wm. Gaddesen, Esq.; Wilmot Holland, Esq.; F. Marshall Huth, Esq.; Chas. Edward Johnston, Esq.; Sir Penrose Goodchild Julyan, K.C.M.G., C.B.; Right Hon. Lord Magheramorne, K.C.B.; Henry John Norman, Esq.; Howard Potter, Esq.; Henry Parkman Sturgis, Esq.

TRUSTEES—Otto August Benecke, Esq.; John Nutt Bullen, Esq.; Frederick J. Edlmann, Esq.; Augustus William Gaddesen, Esq.; Wilmot Holland, Esq.

MANAGERS—City Office (41, Lothbury), W. Astle; *Country Department* (41, Lothbury), H. F. Billingham; Westminister Branch (1, St. James's Square), G. R. Hemmerde; Bloomsbury Branch (24, High Holborn), H. E. Keene; Southwark Branch (6, Borough High Street), J. T. Wallis; Eastern Branch (130, High Street, Whitechapel), C. Fisher; St. Marylebone Branch (4, Stratford Place, Oxford Street), C. Buttar; Temple Bar Branch (17, Strand), B. R. Ketchlee; Lambeth Branch (91, Westminister Bridge Road), C. D. Millett; South Kensington Branch (1, Brompton Square), P. N. Herbert; Victoria Street Branch (Victoria Street, S.W.), W. H. Alexander; Bayswater Branch (Westbourne Grove, W.), A. H. Daws; Holborn Circus and Hatton Garden Branch (114 and 115, Holborn, E.C.), H. R. S. Massey; Islington Branch (269 and 270, Upper Street, Islington, N.), I. G. London; Tottenham Court Road and Hampstead Road Branch (44 and 46, Hampstead Road, N.W.), A. P. Plante; *Secretary*, Tressilian P. Shipp; *Inspector of Branches*, H. L. Rutter.

The present Subscribed Capital of the Bank is £14,000,000, in 140,000 Shares of £100 each, held by upwards of 7,000 Shareholders. The sum of £280 has been paid on each Share, thus making the paid-up Capital £2,800,000. The Rest or Surplus Fund is £1,855,620 4s. 9d. Current Accounts are opened with, and the usual Banking facilities granted to, persons properly introduced. The Bank takes the Agency of Private Country Banks, Joint-Stock Banks, and other Public Companies in England or the Colonies, attends to the purchase and sale of British and Foreign Stocks, collects Dividends on Government Funds, Railway Stock, Foreign and other Securities, payable in England or abroad, acts as Agents for the receipt of Military and other Pay and Allowances, and generally transacts every description of Banking business. Sums of £10 and upwards may be deposited, repayable at call, sums of £500 and upwards may be deposited upon seven days' notice of withdrawal. Interest is allowed thereon, according to the class of Deposit, but subject to alteration by public advertisement in the *Times* newspaper. Cheques cannot be drawn against Deposit Accounts, nor will Depositors be entitled to any of the usual Banking facilities of a Current Account. A receipt is given for each deposit, which is not transferable, and must be surrendered on repayment of the amount according to the conditions printed thereon. Circular Notes of £10, £25, and £50 are issued for the use of Travellers, payable in the principal towns of Europe, Asia, Africa, and North and South America. They are issued free of expense, and are payable by the Agents abroad, at the exchange of the day, without any deduction whatever for commission. Letters of Credit are also granted, payable at all the Chief Towns and Cities abroad. They may be obtained at the Bank in Lothbury, or any of its Branches. *The Officers of the Bank are not allowed to receive any Christmas Boxes or Gratuities*

The General Reversionary and Investment Company.

Office:—No. 5, WHITEHALL, LONDON, S.W.

ESTABLISHED 1836. Further Empowered by Special Act of Parliament, 14 & 15 Vict. cap. 136.

CAPITAL £500,000.

The business of this Company consists in the PURCHASE of, or LOANS upon—

REVERSIONARY INTERESTS, vested or contingent, in well-secured property; also LIFE INTERESTS in Possession, or in Expectation.

LOANS UPON REVERSIONS may be obtained either at an Annual Interest, or in consideration of redeemable deferred charges, payable upon the Reversions falling in.

PRESENT INCOMES are likewise granted upon the latter principle to persons entitled to Reversionary interests, who may thus obtain an income until their property falls into possession, without being called upon for any payment until that event.

Prospectuses and forms of proposal may be obtained from the Secretary, to whom all communications should be addressed.

In Patients in 1887-8 8,260

Out Patients in 1887-8 95,760

Average Cost per In-Patient, £5 4s. 9d.

The House Committee most earnestly appeal for Subscriptions, as Funds are urgently needed. The Expenditure annually is £51,000; the assured Income only £16,480.

BANKERS: ROBERTS & CO.; GLYN & CO.

G. O. ROBERTS, *Secretary*.

THE METROPOLITAN DISCHARGED PRISONERS' AID SOCIETY.

(Certified under Act 25 and 26 Vict., Cap. 44)

ESTABLISHED 1864.

15, Buckingham Street, Adelphi, W.C.

President—THE LORD CHIEF JUSTICE OF ENGLAND.

Chairman of the Committee—CAPT. A. P. H. HELBY, R.N. (Governor of Pentonville Prison).

Secretary—T. RALPH PRICE.

THE Committee of Management earnestly appeal for help to enable them to carry on the operations of the Society, which are almost at a standstill for want of funds.

The object of the Society is to afford to short-termed prisoners an opportunity of retrieving their character, and obtaining honest employment on their discharge from prison.

The following is a summary of the Society's work from the 1st of January to the 31st of December, 1887.

| | | | | | |
|---|-----|-----|-----|-----|-----|
| Sent to Sea | ... | ... | ... | ... | 38 |
| Placed with former Employers | ... | ... | ... | ... | 19 |
| Enlisted | ... | ... | ... | ... | 1 |
| Sent Abroad | ... | ... | ... | ... | 3 |
| Supplied with Artificial Limb and Work | ... | ... | ... | ... | 1 |
| Sent to Friends in the Country | ... | ... | ... | ... | 32 |
| Assisted with Work, or Stock and Clothes, or Tools | ... | ... | ... | ... | 289 |
| Temporary Assistance (travelling expenses, food, etc.) given to | ... | ... | ... | ... | 31 |

Total for the year ... 414

Cheques should be crossed "Messrs. Drummond, 49, Charing Cross, S.W.," and made payable to "The Secretary."

Communications requiring immediate attention should be sent to the "Discharged Prisoners, Home" (which is under the superintendence of Mr. WM. LANGMAID, the Society's Agent), 22, Stock Orchard Crescent, Caledonian Road, N.

LONDON CITY MISSION.

FUNDS URGENTLY NEEDED.

Bankers : BARCLAY, BEVAN & Co., 54, Lombard Street. E.C.

THE OBJECT OF THIS SOCIETY, established 1835, is to evangelise the masses in the Metropolis, by carrying the Gospel to every house, garret, and cellar, and beseeching men to be reconciled to God through our Lord and Saviour Jesus Christ. The number of Missionaries is now 491. Every Missionary visits once a month about 650 families, or 2,900 persons. They also meet constantly about Half a Million Working Men in Factories and elsewhere.

Special Missionaries have been appointed to various classes; amongst others, to the Bakers, night and day Cabmen, Omnibus Men, Canal Boatmen, Soldiers, Sailors, and the Criminal Classes, besides Foreigners from all parts of the world.

SUMMARY OF WORK, MARCH 1887-8.

| | | | | | | | | |
|--|-----|-----|-----|-----|-----|-----|-----|-----------|
| Visits and calls paid | ... | ... | ... | ... | ... | ... | ... | 3,288,763 |
| Induced to attend Public Worship | ... | ... | ... | ... | ... | ... | ... | 5,447 |
| New Communicants | ... | ... | ... | ... | ... | ... | ... | 2,068 |
| Adults visited who died | ... | ... | ... | ... | ... | ... | ... | 7,773 |
| Of whom visited by the Missionary only | ... | ... | ... | ... | ... | ... | ... | 1,954 |
| Public-houses regularly visited | ... | ... | ... | ... | ... | ... | ... | 6,746 |
| Drunkards reclaimed | ... | ... | ... | ... | ... | ... | ... | 1,975 |

A large addition to the number of Missionaries is needed at once. It is estimated that about a Million of the Working Classes in London never attend any place of public worship.

Office : 3, Bridewell Place, London, E.C.

F. A. BEVAN, *Chairman.*

FRIENDLESS AND FALLEN.

London Female Preventive and Reformatory Institution.

OFFICES : 200, EUSTON ROAD, N.W.

Patrons—Rt. Hon. the EARL of ABERDEEN; Rt. Hon. LORD EBURY. *Treasurer*—THOS. SALT, Esq.
The following Homes are sustained by the General Funds of this Society:—

REFORMATORIES :

200, EUSTON ROAD, N.W.

Cheques, and Post Office Orders payable at General Office, should be crossed.

FORM OF BEQUEST.—"I give and bequeath to the Treasurer of the London Female Preventive and Reformatory Institution, to be applied towards the benevolent purposes of the Institution, the sum of £ , to be paid free of Legacy Duty, out of such part of my personal Estate as by law is applicable to the payment of Charitable Legacies."

THE SALVATION ARMY.

REV. WM. BOOTH, General.

International Headquarters: 101, QUEEN VICTORIA ST., E.C.

Telephone No. 1906. Telegrams: "Salvation, London."

Trade and Publishing Departments: 56 & 96, SOUTHWARK ST., S.E.

Junior Soldiers' Headquarters: 36, UPPER THAMES ST., E.C.

This work is rapidly developing; there are now over 800 Junior Corps.

The **17 RESCUE HOMES** report a vast and ever-increasing work, with the exceptional success of 75 per cent. of the cases dealt with turning out satisfactory.

There are **21 SLUM CENTRES**, worked by officers living, helping, and testifying in the midst of poverty's squalor; branches have been established in various large provincial towns.

The **FOOD and SHELTER DEPOT**, supplying farthing meals, and Supper, Bed, and Breakfast for 3d. This winter ('88-89) three or four more dépôts will be opened.

HOMES OF REST for SICK OFFICERS are established at Pentre, Brighton. Hackney, and Clacton-on-Sea.

7,000 Officers—i.e., men and women wholly employed in the work of the Army—hold annually 2,300,000 meetings in 35 languages in 32 countries and colonies, visiting 3,000,000 houses in the United Kingdom alone.

The annual circulation of the War Cry is 31,000,000, 26 different editions being published in 17 languages.

2,600 Corps and 800 Outposts are established.

700 Cadets are in training, 100 per month
being commissioned for the field.

HELP OF EVERY KIND IS NEEDED.

BANKERS:
City Bank, London.

Cross Cheques and
P.O's.

AUDITORS:
Messrs. Josiah Beddow
& Son,
2, Gresham Buildings,
London, E.C.

St. Giles' Christian Mission.

Four Special Branches of the Work now Needing Help:—

RELIEF OF GENUINE DISTRESS

(Persons known to our large band of District Visitors).

RESCUE OF FALLEN WOMEN

(The present is a most favourable opportunity for this work).

CHRISTIAN WORK among DISCHARGED PRISONERS

(Daily widening in extent and usefulness).

RESCUE OF BOYS FROM A FIRST CONVICTION

(Most important to save from Prison taint).

DONATIONS in aid of either of above should be sent to the Treasurer, F. A. BEVAN, Esq., 54, Lombard Street, E.C.; or to the Superintendent,

Mr. GEORGE HATTON, 4, Ampton Street, Regent Square.

THE SURGICAL AID SOCIETY.

Office: SALISBURY SQUARE, FLEET STREET, E.C.

President: *The Right Hon. the Earl of Aberdeen.*

This Society was established in 1862, to supply Trusses, Elastic Stockings, Artificial Limbs, etc., and every other description of mechanical support to the poor, without limit as to locality or disease.

WATER BEDS and INVALID CARRIAGES are lent to the Afflicted.

It provides against imposition by supplying the appliance on the certificate of a Surgeon only. By special grants it insures that every deserving applicant shall receive prompt assistance.

11,819 APPLIANCES WERE GIVEN LAST YEAR.

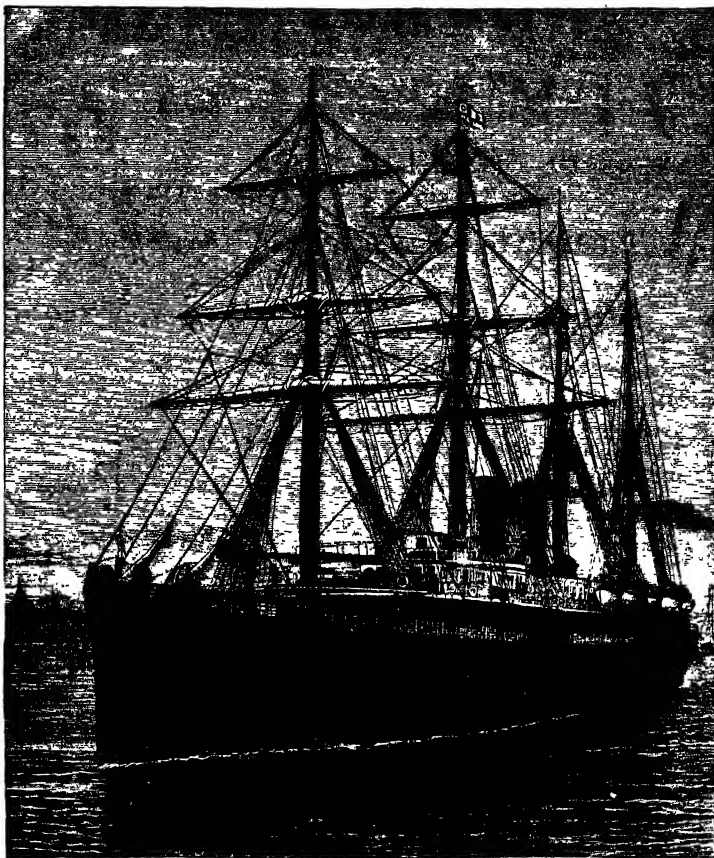

| | |
|--------------------------------|---|
| Annual Subscription of £1 10 6 | Entitles to two recommendations
per annum. |
| Life Subscription of 5 5 0 | |

Contributions are earnestly solicited. Bankers—Messrs. BARCLAY & Co., Lombard Street.

WILLIAM TRESIDDER, *Secretary.*

STANDARD ENGLISH DICTIONARIES.

THE IMPERIAL DICTIONARY of the ENGLISH LANGUAGE.

A Complete Encyclopædic Lexicon, Literary, Etymological, Scientific, Technological, and Pronouncing. By JOHN OGILVIE, LL.D. New Edition, carefully revised and greatly augmented. Edited by CHARLES ANNANDALE, M.A., LL.D. Illustrated by about 3,000 Engravings on Wood. In 4 Vols. Imperial 8vo, cloth, £5; or half-morocco, £6 6s.

"It will be for many years the most serviceable and most highly valued of English dictionaries."—*Saturday Review*.

A CONCISE ENGLISH DICTIONARY: Literary, Scientific, Etymological, and Pronouncing. Based on the New Edition of Ogilvie's "Imperial Dictionary." By CHARLES ANNANDALE, M.A., LL.D. Fcap. 4to, cloth, 10s. 6d.; half-morocco, 15s.

"The 'Concise Dictionary' stands first—and by a long interval—among all the one-volume English dictionaries hitherto published."—*Academy*.

THE COMPREHENSIVE ENGLISH DICTIONARY: Explanatory, Pronouncing and Etymological. Containing all English Words in present use, numerous Phrases, many Foreign Words used by English Writers, and the more important Technical and Scientific Terms. By JOHN OGILVIE, LL.D. Illustrated by about 800 Engravings on Wood. Super royal 8vo, cloth, 25s.; half-morocco, 32s.

THE STUDENT'S ENGLISH DICTIONARY: Etymological, Pronouncing, and Explanatory. In which the Words are traced to their ultimate Sources, the Root, or Primary Meaning inserted, and the other Meanings given fully, according to the best usage. By JOHN OGILVIE, LL.D. Illustrated by about 300 Engravings on Wood. Imperial 16mo, Roxburgh, 7s. 6d.; half-calf, 10s. 6d.

A SMALLER ENGLISH DICTIONARY: Etymological, Pronouncing, and Explanatory. Comprising all purely English Words in Common Use; also Lists of Affixes and Prefixes, Abbreviations, and Latin, French, and Italian Phrases. By JOHN OGILVIE, LL.D. Imperial 16mo, cloth, red edges, 2s. 6d.; Roxburgh, 3s. 6d.

London: **BLACKIE & SON**, 49 and 50, Old Bailey.

THE "CEYLON OBSERVER."

The largest and oldest Daily Paper in the Colony. It is the Official Medium for all Government announcements, and through its Office the Proceedings of the Ceylon Legislative Council are published. Its telegraphic and special correspondence is complete. Its circulation is far ahead of any local print, and it is seen practically by every one who takes an interest in English affairs. In less than a three years' agitation it forced the Government into a progressive policy as regards railways.

THE "OVERLAND CEYLON OBSERVER"

is a general Mail *résumé* of Ceylon intelligence, relating to Planting, Shipping, Governmental, Civil, and Military matters.

THE "TROPICAL AGRICULTURIST"

is the leading Tropical Magazine, and has a wider circulation than any other Monthly publication of a similar kind.

It contains specially written information for Planters of Tea, Coffee, Sugar, Cacao, Cinchona, Rice, and other Tropical Products.

It circulates throughout India, Burmah, Straits, Java, Sumatra, Borneo, Northern Australia, Queensland, Fiji, Mauritius, Natal, West Indies, South and Central America, California, Southern States, Continent, and England.

The only Local Publication published in the East devoted to the interests of the Tea industry.

THE CEYLON HANDBOOK AND DIRECTORY

is an annual volume of about 1,000 pages, containing complete Civil and Official Directory information, as well as statistical particulars of the Tamil and Sinhalese residents of the colony. Also tabulated statements and reviews relative to Agriculture, the Planting Enterprise, and Export and Import Trade of the Colony.

HARPER'S ♦ MAGAZINE.
 PROGRAMME FOR 1889.

The purpose, character, and uniform excellence of the MAGAZINE are so well known that its publishers need only to point to its last year's record as an example of its accomplishment, and to make their usual promise—always kept hitherto—that the record for next year shall surpass it. The scope and character of the works in preparation, and the class of writers and artists engaged in these undertakings, fully justify the promise. The publishers will, therefore, confine their announcements for 1889 to a few prominent features.

A new novel by CONSTANCE FENIMORE WOOLSON, Author of "Anne" and "East Angels," will begin in the January Number. CHARLES DUDLEY WARNER will contribute a characteristic serial, which, beginning in the April Number, will run through the year. "COMMODUS," a play, by Gen. LEW WALLACE, the Author of "Ben-Hur," will be published in the January Number, with illustrations by J. R. WEGUELIN.

The January Number will contain an illustrated article on MANUFACTURING INDUSTRY IN IRELAND, by JOHN GEORGE MACCARTHY.

The great art feature of the year will be the illustration of Shakespeare's Comedies—by EDWIN A. ABBEY, the accompanying text to be furnished by ANDREW LANG.

The distinctively American quality of HARPER'S MAGAZINE, both as to matter and manner—a quality which has secured for it the readiest welcome in Europe—will continue to be its principal and characteristic attraction. The "Studies of the Great West," and the illustrated articles on Western cities, the Great American Desert, Western journalism, etc., which have already appeared, have not exhausted the programme announced at the beginning of the year. The series of articles on INDIVIDUAL WESTERN STATES is in preparation. It has been unavoidably delayed because of the very magnitude of the undertaking. The February Number will contain a thorough and exceedingly interesting paper on DAKOTA, by Mr. P. F. McCURE, illustrated. CHARLES DUDLEY WARNER will contribute two interesting papers on the DOMINION OF CANADA, and LAFCADIO HEARN some characteristic West Indian Sketches.

"NORWEGIAN STUDIES"—three papers by BJÖRNSTJERNE BJÖRNSON, illustrated by T. DE THULSTRUP and H. W. RANGER—will appear in early Numbers. These will be followed by an important series of papers on Russia, of a social rather than of a political character, illustrated by T. DE THULSTRUP. The series will consist of two papers by the Vicomte EUGENE MELCHIOR DE VOGÜÉ, recently elected Member of the French Academy, on SOCIAL AND COURT LIFE IN RUSSIA; an article on the RUSSIAN ARMY by a Russian general; papers on the NIJNI-NOVGOROD FAIR, MOSCOW, RUSSIAN ART, etc. Among other Eastern papers of special interest will be articles from eminent artists, illustrated from their own drawings: "TANGIER AND MOROCCO," by BENJAMIN CONSTANT; "STREET SCENES IN INDIA," by EDWIN LORD WEEKS, and "A FIG HARVEST IN SMYRNA," by TRISTRAM ELLIS.

Important papers on John Ruskin will be contributed; a personal sketch by ANNE THACKERAY RITCHIE (illustrated), and more critical articles by Dr. CHARLES WALDSTEIN. An early Number will contain a description of ABBOTSFORD, from the pen of Sir WALTER SCOTT (never before published), with picturesque illustrations.

The Editorial Departments—"Editor's Easy Chair," by GEORGE WILLIAM CURTIS, "Editor's Study," by WILLIAM DEAN HOWELLS, and the "Editor's Drawer," conducted by CHARLES DUDLEY WARNER, will continue to be, as heretofore, the most interesting portion of the MAGAZINE, always fresh, timely, and entertaining.

DR. PARKER'S PEOPLE'S BIBLE.

NOW READY, VOLUME IX. Price 8s.

1 CHRONICLES X.—2 CHRONICLES XX.

DISCOURSES ON HOLY SCRIPTURE.

By JOSEPH PARKER, D.D.

CHRISTIAN WORLD.—"These discourses are remarkable specimens of germinal power, containing in a small space very much more than huge commentaries often furnish."

BRITISH WEEKLY.—"The ninth volume of Dr. Parker's People's Bible shows the same freshness and fertility as the first. The 'Handfuls of Purpose' are fuller than ever, and have in them the seed of countless sermons. They are very different from the dead and unprolific bones generally offered as outlines."

SCOTSMAN.—"The present volume shows no falling off as compared with its predecessors, the stream of talk flowing on as swiftly and brightly as ever."

FREEMAN.—"We can but express our surprise at the freshness, the fertility, and the force of the mind which has produced it."

SCOTTISH LEADER.—"The insight is still as keen, and the application as forcible as ever. The Doctor's fertility is indeed perfectly amazing."

BAPTIST MAGAZINE.—"His bold realism, his stalwart sense, his delicious humour, and his genuine pathos have rarely been more strikingly displayed. His 'Handfuls of Purpose' will produce many a golden harvest."

ENGLISH CHURCHMAN.—"One of the most useful commentaries on this portion of the Bible, and one of the best of the series. . . . It will form a *vade mecum* of sanctified common sense to many a Christian teacher."

Fourth and Cheaper Edition. Crown 8vo, cloth, 5s.

THE LIFE OF SAMUEL MORLEY. By EDWIN HODDER, Author of the "Life and Work of the Seventh Earl of Shaftesbury," etc. With Etched Portrait by MANESSE.

PALL MALL GAZETTE.—"Should biography-writing ever take the rank of a professional art, the author of the book we have just closed will be one of the Royal Academy. His work is an admirable portrait."

SIR J. WILLIAM DAWSON'S NEW BOOK.—In crown 8vo, cloth, 9s.

MODERN SCIENCE IN BIBLE LANDS. By Sir J. W. DAWSON, F.R.S., with Maps and Illustrations.

SR. JAMES'S GAZETTE.—"It would take a long essay to do justice to the many topics handled in Sir William Dawson's profoundly interesting work."

BY THE SAME AUTHOR.

Fifth Edition. Crown 8vo, cloth, 7s. 6d.

THE ORIGIN OF THE WORLD ACCORDING TO REVELATION AND SCIENCE.

NEW WORK BY "GAVIN OGILVY."—Crown 8vo, buckram, gilt top, 6s.

WHEN A MAN'S SINGLE: A Tale of Literary Life.

By J. M. BARRIE ("Gavin Ogilvy").

SR. JAMES'S GAZETTE.—"Mr. Barrie's bright and entertaining novel."

BY THE SAME AUTHOR.

Second Edition. Crown 8vo, buckram, gilt top, 6s.

AULD LIGHT IDYLLS.

SPECTATOR.—"In its fidelity to truth, its humour, and its vivid interest, it is a complete and a welcome contrast to the paltry 'duds' which are nowadays printed by the dozen as pictures of humble and religious life in Scotland."

Crown 8vo, cloth, 6s.

TENANTS OF AN OLD FARM: Leaves from the Note-Book of a Naturalist. By HENRY C. MCCOOK, D.D. With an Introduction by Sir JOHN LUBBOCK, M.P., D.C.L., F.R.S. With Illustrations.

DAILY CHRONICLE.—"His teaching, while possessing the highest scientific value, is made admirably simple and clear."

Crown 8vo, cloth, 6s.

THE GOSPEL IN NATURE: Scripture Truths derived from and illustrated by Facts in Nature. By the same Author. With an Introduction by W. CARRUTHERS, F.R.S.

LONDON: HODDER & STOUGHTON, 27, PATERNOSTER ROW.
